PROGRESS REPORT

Digital Payments and Fintech: progress report, September 2025 – September 2026

Edition of 2026-09-10-4 · compiled by Claude Opus from the documents in the Corpus repository

54 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has **No evidence** *on it in its own report.*

GOVERNANCE ROLE OF CENTRAL BANK · G2P FUNCTIONALITY · REVENUE COLLECTION · B2B AND B2G FUNCTIONALITY · P2P, P2G AND P2B FUNCTIONALITY · POPULATION UPTAKE · CROSS-BORDER FUNCTIONALITY · CONSUMER PROTECTION

Progress values. *Movement* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance role of central bank

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	A national payments committee was given its composition and working arrangements by regulation on 31 May 2026. The committee was created by the 2023 monetary and banking law with no operating framework published. A regulation of 31 May 2026 set its composition and working arrangements: an advisory body seated at the central bank, chaired by the Governor, seating seven ministries, the postal operator, the interbank card and electronic-money bodies, the banking association, two appointed experts and the internal security, gendarmerie and police directorates, owing government a published annual report on payment instruments and periodic statistics. The national payments strategy is not drafted and no annual report is published; the regulation text is not held. Digital-bank licensing was established and a binding know-your-customer instruction issued on 30 April 2026, binding on banks for anti-money-laundering and politically-exposed-person scrutiny. A digital currency is argued for in the press with no central-bank instrument, pilot, design or timetable on file.	MOVEMENT
Angola	The central bank completed migration of domestic payments to the international messaging standard on 10 July 2026, across the switch, exchange and settlement participants. 2026-07-16 — the central bank announced completion of the migration of domestic payments to the ISO 20022 messaging standard on 10 July 2026, across the switch, the exchange and the real-time settlement participants. Only the completion is dated. No programme start, scope document or cost is held, and no participant count, message volume or exception rate is published, so the base records that the migration finished and nothing about what it changed. It is the one act of payments-system governance on this ledger for the window. The instant payment scheme and the regional settlement arrangement reported below both run under this bank, and neither carries a supervisory statement, a scheme rulebook or an oversight report on the base.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Benin	The regional central bank digital currency is in pilot, against a domestic debate on crypto-asset opportunity and risk. 2026-04-29 — the regional electronic currency is in pilot, alongside a domestic debate on crypto-asset opportunity and risk. No baseline preceded it on this ledger. Monetary and payments governance for Benin is regional rather than national: the instant payment rail, the currency pilot and the union-wide account statistics all sit with the regional central bank, and no domestic instrument, supervisory statement or scheme rule appears on this ledger. The one national payments intervention in the window came from a consumer-redress body, reported under consumer protection.	MOVEMENT
Botswana	A national payment switch is funded in plan only with no build or date, but its enabling Act has been drafted. 2025-10-31 — a national payment switch is named inside a P486m ICT allocation sought under the twelfth development plan, part of a P8.8bn digital ask. The allocation covers the switch, an accounting-system upgrade, a sandbox and electronic procurement together, and the switch carries no separate figure. No build, procurement, operator or date is on the record. So domestic interbank routing has no national infrastructure and no dated plan, while the cross-border corridor reported below is live and the payments regulations were tightened in April. The central bank's visible action in the window is regulatory rather than infrastructural. 2025-07 - the legal instrument moved ahead of the build: a National Payments Switch Act had been drafted and was going through the attorney general, the finance ministry and other state organs before it could be tabled, with the central bank unable to give a date. The switch is to carry low-cost real-time retail transactions and integrate financial technology firms through open interfaces. The central bank names its own constraints in the same account: no sovereign switch, no electronic identity for online verification, no interoperability between payment instruments and low mobile-money thresholds.	MOVEMENT the law drafted while the build stays funded in plan only
Burundi	The central bank migrated the payment switch to the international messaging standard and issued five anti-money-laundering circulars. 2026-02-05 — the payment switch was migrated to the ISO 20022 messaging standard, from a position of not being migrated. It is the technical precondition for the instant payment system launched two months later and for the regional accessions reported under cross-border functionality. 2026-02-16 — five central bank circulars on anti-money-laundering and counter-terrorist financing were issued, aligned to the international standard-setter's recommendations, where no baseline was held. Both are the bank acting as scheme owner rather than as supervisor: no oversight report, scheme rulebook or published sanction appears on this ledger, and the mandatory-integration penalty reported below is the only enforcement instrument on record.	MOVEMENT
Cameroon	A tariff-grid revision went to consultation at Douala on 30 July 2026, the operator conceding that pricing penalises low-value transactions. 2026-07-30 to 31 - a consultation workshop opened and closed on revising the regional switch's tariff grid, the operator conceding that current pricing penalises low-value transactions and drives artificial splitting of payments. No revised grid, effective date or fee schedule has been published. Pricing that penalises small payments is the mechanism by which an interoperable rail stays a large-ticket rail, which the merchant-payment figures elsewhere in this report show it currently is; the consultation is the first acknowledgement of it on file.	MOVEMENT
Cape Verde	The central bank announced SPEED, a national instant-transfer system, for launch in the first quarter of 2026. The governor of the Banco de Cabo Verde announced SPEED on 5 December 2025, a national immediate-transfer system to launch in the first quarter of 2026, following a pilot completed with four commercial banks and specified to work without internet access. The bank is acting as architect and coordinator of the infrastructure rather than as its overseer, with costs shared between it, the commercial banks, the regulator and the government. SICIL, the integrated interbank clearing and settlement system, is separately described in service by the bank. No launch confirmation for SPEED is held, and the base carries nothing on the digital currency the bank said it was separately studying.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Comoros	The central bank's interbank settlement system entered service on 23 April 2026, cutting cheque settlement to one working day. The system entered service on 23 April 2026 with a presidential launch on 4 May, operating over a dedicated 120 km fibre network, with an automated clearing leg under KMF 10,000,000 and a real-time gross settlement leg above it, cheque settlement falling from two or three days to one working day. It is interbank only, with no retail leg, and was launched alongside two other systems. Volumes are more than 150 transfers a day worth about KMF 125,000,000 and 850 cheques a day worth about KMF 1,000,000,000 on the clearing leg, and about forty operations a day for KMF 3,700,000,000 on the gross settlement leg, operator-stated and published without an as-of date. A government securities market has regulations in force, actors trained and pilot tests passed but first operations not launched, after eight monetary-fund missions over three years.	MOVEMENT
Congo	The treasury single account at the regional central bank was still being finalised on the day the payment platform went live. 2026-08-03 - the finance ministry stated the opening convention was still being finalised on the day the payment platform went live, so the single account intended to centralise the receipts the platform routes is not in place. The base holds no earlier position on the account, so the direction is withheld. The related special treasury account is voted FCFA 5,968,000,000 for 2026, more than double the prior year, which is the only quantified signal on the treasury's banking function held.	NO CHANGE a first statement of the account's position with nothing earlier behind it
Cote d'Ivoire	A fourth electronic-money licence was granted in September 2025, and the central bank made instant-payment interoperability compulsory. 2025-09 - a fourth electronic-money institution was licensed, issuing a locally built wallet, against three at the window's opening. A later account names a fifth operator among electronic-money institutions, which this count does not include. 2026-04-02 - a central bank communique made instant-payment interoperability compulsory from 30 June 2026 for banks, microfinance institutions, electronic-money institutions and payment institutions. Supervision is exercised regionally and reported regionally: the only market data held is the union-wide annual report on digital financial services, and no Ivorian supervisory finding, sanction or licence withdrawal is on file.	MOVEMENT
Djibouti	The central bank licenses and supervises every payment service by law and operates the settlement system itself. The 2016 law applies to every payment service and system operated in the country and empowers the central bank to license, regulate and supervise payment-system providers, defining electronic money and electronic funds transfer. The bank is also the operator: the settlement platform combining real-time gross settlement and automated clearing has run since 15 July 2021, with the Treasury among its participants. It acts by instruction rather than by statute - from 31 August 2025 non-conforming cheques were refused by the platform and legacy stock withdrawn. No supervisory decision, licence register or sanction is published.	NO CHANGE
DR Congo	The central bank set 9 April 2027 as the date from which no foreign-cash transaction of any amount is permitted. 2026-05 - the central bank set 9 April 2027 as the date from which no foreign-cash transaction of any amount is permitted. The deadline stands with no implementing instrument, exemption schedule or enforcement mechanism held. It runs directly against the dollar-denominated rails proliferating around it, including a stablecoin settlement use case live on a card-network partner's rail whose peg is inferred rather than disclosed. No held source reconciles the two, and no supervisory statement addresses what a de-dollarised retail payment system would settle in.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Egypt	The central bank owns, operates and settles the instant payment network under rules it issued in October 2021, and has approved two digital banks that are not operating. The scheme it runs is documented for the first time: the bank issued the rules regulating the instant payment network in October 2021, six months before launch, setting licensing conditions for participants, daily, monthly and per-transaction limits with a EGP 70,000 ceiling on the consumer app, and an obligation on banks to keep tamper-proof audit trails feeding a dispute resolution system. The bank is owner, overseer, operator and settlement agent, with 35 commercial banks participating directly. The first had preliminary clearance from May 2024 with due diligence on infrastructure, banking systems and cybersecurity under way; initial approval was granted with products stated as preparing for 2026 and no launch on record, so nothing held establishes an operating digital bank in the country. 2026-08-21 - a commercial bank received preliminary approval to establish a digitally native bank under the 2023 digital-banks framework, now entering technology validation, cybersecurity testing and operational-resilience readiness under a newly appointed chief executive, launch remaining subject to final approval, with no launch date or capitalisation stated. Two approvals and no operating institution is the position after two years of the framework.	MOVEMENT
Equatorial Guinea	No mobile-money licensing decision is on record, and bank and telecom applications have launched without one being reported. The absence of a licensed operator was named by the World Bank diagnostic and nothing has changed it (diagnostic). Two wallets nonetheless entered service during 2026 (market account), so services are running ahead of the authorisation that would govern them, which is the same pattern as the data-protection statute without its supervisory body.	NO CHANGE
Eritrea	The Bank of Eritrea gave holders of cash outside the banking system until 31 July 2026 to deposit it, on pain of legal action. 2026-07-02 — a legal notice from the Bank of Eritrea ordered cash held outside banks deposited by 31 July 2026, with legal action threatened against holders who do not comply. The notice defines no threshold for the excessive holding it names and states no enforcement mechanism. It is the only central-bank action on this ledger, and it addresses the cash economy rather than any payment system: no named mobile-money or digital-payments service appears anywhere on the base for Eritrea.	MOVEMENT an instrument aimed at the cash economy rather than at payment
Eswatini	A National FinTech Strategy 2025-2030 was launched by the central bank governor and the finance minister, above a digital currency design paper published in 2024. The strategy was launched in December 2025, framed around reducing reliance on cash (strategy, cash). The design paper is not an issuance decision, and no pilot, launch date or governance arrangement follows it (paper). The central bank's annual integrated reports are held for two successive years, the later superseding a payment-switch participation series the base had carried from earlier reporting (report, prior). The settlement layer under all of it is old and undocumented since: the interbank payment and settlement system runs under a rulebook adopted by its steering committee in May 2007 (rulebook), and the central bank describes its role as facilitating development and overseeing the safety and soundness of national payment systems (mandate). No revision of the rulebook, and no volume or value statistic for the system, is published.	MOVEMENT
Ethiopia	The central bank published a five-year payments strategy in December 2025 and directed the banking system to harmonise accounts with the national identity. The strategy for 2026 to 2030 was published against 18.5tn birr a year in digital transactions (payments strategy). The following day the bank set a March 2026 deadline for full integration of the national identity with the banking system (banking integration). The bank's supervisory record is thinner than its strategy: no licensing register, supervisory report or consumer-complaint statistics are held.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Gabon	A regional interoperable QR standard took effect under an April 2026 regulation, routed through the regional switch with the Gabonese scheme as its pilot. The standard was launched at Douala under a regional monetary union regulation of 8 April 2026 and is in force across the six member states, settled through the regional switch (standard). Merchant-presented mode is the primary mode, explicitly to avoid the capital cost of terminals (launch). The national scheme is the pilot for it, which is the base's only evidence of the central bank shaping domestic payments rather than the region setting the rule.	MOVEMENT
Gambia	A payment systems advisory committee was launched under central bank chairmanship in February 2026 for a three-year term. The bank's standing instruments are old: a mobile money regulation of 2011 carrying an interoperability duty, and a cost-recovery pricing policy effective December 2013. Governance has thickened in the window: the committee was launched on 23 February 2026 for three years, and the monetary policy committee ordered deposit reserve rules and complaint tracking for fintechs in December 2025. Both records reach the base through the switch operator or the minutes rather than a primary supervisory publication.	MOVEMENT
Ghana	The central bank revoked an electronic money issuer's licence in July 2026 and opened enforcement against unlicensed digital credit apps. The framework the enforcement runs inside was renewed in 2024: the 2019-2024 national payment systems strategy expired and the bank introduced a 2025-2028 successor after reviewing it, alongside a programme to certify the real-time gross settlement system to the ISO 20022 messaging standard. Neither the strategy text nor the review is published. Authorisation volume nearly doubled in the same year, at 50 payment products and services authorised in 2024 against 27 in 2023. A licence was revoked on 14 July 2026 for electronic money not fully cash-backed, with premises access restricted (revocation). A September 2025 directive on digital credit providers took effect from 1 November 2025; the 30 June 2026 deadline elapsed and twenty unlicensed apps were named on 3 August 2026, the notice setting the deadline not held (enforcement, earlier notice). Structural separation of the dominant operator's mobile-money subsidiary completed in the first quarter of 2026, the subsidiary filing its own statements and declaring its own interim dividend (separation). A foreign payments company's local subsidiary secured an Enhanced Payment Service Provider licence on 9 September 2026, letting it collect and pay out in its own name where it had routed flows through regulated third parties (licence).	MOVEMENT
Guinea	NimbaPay launched on 22 July 2026 as the national instant and interoperable payment platform. NimbaPay was officially launched on 22 July 2026 under the Prime Minister's patronage, operated by the Guineenne de la Monetique under the central bank, letting any user send and receive money instantly between a bank, a microfinance institution and an electronic-money establishment. The governor said fragmented systems had been penalising inter-institutional transfers, and named digitisation of state payments and cross-border flows as the next steps. No transaction volume or participant count is held for the platform since launch.	MOVEMENT
Guinea-Bissau	The central bank register carries six banks, one payment institution and one electronic money issuer as at June 2026. Payment governance is the monetary union's rather than the country's. The first licensed payment institution in Guinea-Bissau appeared on the union register in September 2025, and the June 2026 register lists six banks, one payment institution and one electronic money issuer. No domestic payments regulator, national switch governance or oversight publication appears in the base.	MOVEMENT
Kenya	The central bank is designing a fast payment system and national switch amid heavy lobbying, with no award. Three contenders are named and no design document, timetable or award is on file (contest). The bank's other principal act in the window was to set mobile-money pricing principles that operate through voluntary operator alignment, so on both the switch and the tariff the regulator's position rests on negotiation rather than on an instrument.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Lesotho	The central bank's national payment switch has localised instant payments, ATM and point-of-sale transactions across four commercial banks. LeSwitch carries instant payments from 2022, ATM localisation from October 2024 and point-of-sale localisation from 11 May 2025, across four commercial banks (point of sale, central bank, switch). E-commerce and retail were named as the next steps and nothing later is held, so the switch's coverage is recorded as at May 2025.	NO CHANGE
Liberia	A directive of September 2025 routes all government mobile-money payments and collections through the national switch. Directive CBL/E-GOV/DIR/002/2025 requires every government payment to a beneficiary by mobile money — salaries, pensions, social benefits and other transfers — to route exclusively through the national switch from 27 October 2025, and all revenue collections by mobile money from 1 December 2025. The bank's 2025 annual report sets out the rest of what it governs: the payment system section, the regional settlement system, the instant payment system and mobile money, with a first series of cross-border transfers terminating into mobile wallets. Its 2026 policy statement adds continuity and resilience testing obligations for participants.	MOVEMENT
Libya	The central bank launched a national financial inclusion strategy for 2025-2029, directed banks to activate QR acceptance and launched a stand-in processing service. The governor launched a national financial inclusion strategy for 2025-2029 at the first electronic payment forum in June 2025, alongside financial-inclusion accounts for excluded groups, a banking data protection system, full digitisation of government payments, localisation of the foreign-currency payments infrastructure, a framework for digital and crypto currencies and a digital banking identity. The strategy text is not published and none of the projects carries a budget, operator or delivery date. Banks were directed to activate QR-code acceptance by 8 March 2026 (directive). Circular 9 of 2026, issued on 11 March, permitted resident foreigners to hold e-wallets on passport and residency with daily transfer caps (circular). A national stand-in processing service was launched at the EPAIX conference on 17 June 2026 to keep card payments working through communications and banking disruption (service). The bank sets the rules, the deadlines and the shared infrastructure, and no other body is recorded acting on the payment market. The industry's own cashless drive stopped for want of a rule. The banking sector development forum announced it would stop pursuing the Zero Cash initiative, for want of an executive framework from the central bank.	MOVEMENT
Madagascar	A vendor was selected in October 2025 for the central bank digital currency pilot, with the bank sole issuer and distribution private; no live pilot is reported. Testing had been announced in May 2025 with no vendor named (testing). A platform was selected in October 2025 on a model where the central bank is sole issuer and distribution is private, and no live pilot has been reported since (selection). No other supervisory act, licensing decision or payment-system rule of the central bank is held in this base.	MOVEMENT
Malawi	A National Payments Systems Vision and Strategy 2026-2030 was launched in April 2026, above a national switch operating since 2015. The strategy prioritises infrastructure expansion and affordability for low-income users, cybersecurity and resilience to power and connectivity failure, regulatory modernisation, financial technology innovation and regional integration, with the deputy governor acknowledging persistent rural gaps; no targets, budget or milestone dates are stated and the document itself is not held (strategy). The switch has linked banks, mobile money platforms and cash machines since 2015, with an instant bank transfer service live on it from June 2025, real-time to any Malawian bank up to MWK 500m by short code (transfer, infrastructure).	MOVEMENT
Mali	The regional central bank publishes the list of participants authorised to open instant payment services and extended the connection deadline in June 2026. The participant list is held as a document and the Malian entries on it are not extracted here (list); the bank's statutes are held beside it (statutes). An extended deadline is the clearest statement on file that connection to the platform is behind schedule (extension), and no transaction volume or value is published. The monetary authority here is regional rather than national, which is the position this indicator records for a member of the union.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritania	The central bank regulates payment institutions and their agents under 2022 instructions and carries a digital payment strategy for 2023-2028. Instruction 03/GR/2022 regulates payment institutions and instruction 05/GR/2022 regulates the agents of payment service providers and the protection of their customers, both issued on 31 March 2022 (institutions, agents). The bank's digital payment strategy for 2023-2028 sets five objectives, among them easing the regulation of payment and electronic money institutions to attract fintech investment and building an instant-payment system (strategy); it is presented as an extension of the financial inclusion strategy. The payment, clearing and securities settlement systems council met in May and July 2026, welcoming progress in modernising the financial system (council, progress). No register of licensed institutions, agent count or supervisory action is published, and no implementation report against the strategy is on file.	MOVEMENT
Mauritius	A National Fintech Strategy 2026-2030 was presented in June 2026, a governance committee put on a statutory footing, and a digital onboarding system is under construction. The strategy runs six pillars carrying a governance committee, open banking, an artificial-intelligence push in finance and a business facilitation bill, implemented with the central bank (strategy). The committee is provided for in a new part of the financial services statute from September 2026, minister-chaired, seating the central bank governor, the financial regulator's chief executive, two ministries, the investment board and four private-sector members, empowered to approve sector-wide standards and expressly not a body corporate (committee, account). A know-your-customer system for digital onboarding is under construction alongside alignment to an international cross-border roadmap and exploratory work on fraud detection, with no delivery date published (onboarding).	MOVEMENT
Morocco	The central bank issued its first standalone annual financial-inclusion report in April 2026, separate from the strategy implementation series it used to sit inside. The report is explicitly separate from the national inclusion strategy's implementation series, which makes measurement a standing annual duty of the bank rather than a by-product of a programme (report). It names usage rather than access as what now limits inclusion, which is a judgement about the market and not only a count of it. No supervisory decision, licensing action or payment-system rule of the bank is separately held in this base.	MOVEMENT
Mozambique	A National Payments System Law replaced the 2008 regime in July 2026, and a notice makes switch connection mandatory with sixty-minute outage reporting. The law was enacted in July 2026, extending central bank inspection and supervision over electronic-money institutions and new payment service providers; the official text is not held and its provisions rest on secondary accounts (law, passage). The notice makes connection to the single payments network mandatory to offer electronic payment products, with three months to migrate existing terminals, any unavailability lasting more than ten minutes reported within sixty minutes, annual recovery testing due 31 March and an annual incident-framework review (notice, reporting).	MOVEMENT
Namibia	The Payment System Management Act 14 of 2023 is in force, licensing is moving to the central bank, and a vision to 2030 succeeds a strategy that closed at 87 per cent implementation. The Act commenced in August 2023 and the payments association moved from a management council to a management board under it during 2025 (Act, board). Licensing and supervision of payment providers are to move to the central bank, with the association given independent governance and its own funding model; no instrument, commencement date or transition plan is published for the transfer (transfer). Licensing itself already sits with the bank: a determination on the licensing and authorisation of payment service providers took effect on 15 February 2024, setting governance, capital, risk and consumer-protection requirements for bank and non-bank providers alike (determination). The bank went to tender in November 2025 for a reconciliation and attestation tool for the instant payment operator, with no award on record (tender). The 2021-2025 strategy closed at an 87 per cent average implementation rate over five years (strategy), succeeded by a vision to 2030 whose next phase is in drafting on interoperable instant payments, the quick-response standard, open banking and cyber resilience (vision).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Niger	The central bank has authorised five Nigerien institutions to open the regional instant-payment platform to the public. The central bank's register of 31 July 2026 names BOA, BSIC Niger, Coris Bank, Ecobank and Orabank as the Nigerien institutions authorised to open the interoperable instant payment platform to the public. Its communiqué of 2 April 2026 reported 80 participants live across the union — 59 banks, nine electronic-money institutions, 11 microfinance institutions and one payment institution — with 42 more in production testing, and set 30 June 2026 as the deadline for all supervised institutions to connect. The base holds no Nigerien transaction volumes on the platform and no national oversight report from the central bank's own supervision of Nigerien providers.	MOVEMENT
Nigeria	A Payments System Vision 2028 sets 95 per cent inclusion and a 70 per cent fraud cut from a ₦1.2 quadrillion baseline, alongside market-concentration caps, a foreign-exchange tracker and a second sandbox cohort. The vision runs a three-year horizon from 2025 baselines of ₦1.2 quadrillion in electronic transactions, 5.9m active terminals and 69.5m unique identifiers, targeting 95 per cent financial inclusion, full interoperability, adult digital-payment usage from about 52 to 80 per cent, 5m code-based merchant outlets and a 70 per cent reduction in fraud losses (vision, launch). Any institution above 25 per cent of consumer issuing may not exceed 15 per cent of merchant acquiring and the reverse, on monthly market-share returns with compliance by end-2026 (caps). Every licensed foreign-exchange bureau must report purchases in real time or same-day with banks as first line of enforcement (tracker); a second sandbox cohort opened to virtual-asset and data-enabled firms (sandbox); and the retail digital currency is being redesigned toward a wholesale model rather than abandoned (currency).	MOVEMENT
Rwanda	All domestic interoperable retail payments migrated to a national instant payment system by directive in July 2026, and the interoperable transfer fee is a ceiling of RWF 20 rather than a flat charge. Consumer launch was December 2025 and interoperability completed in July 2026, when a directive migrated all domestic interoperable retail payments onto the system (migration, interoperability, design). The fee is a maximum, not a flat charge, and it prices the interoperability layer only: the bankers' association's public notice puts it as a maximum with institutions free to offer lower or zero-fee options, applying to every transfer between banks and electronic money issuers (fee, performance). The governing directive is not held: the central bank's document library was enumerated and carries neither it nor the public notice, and two sources give different issue dates for it, so its date is unestablished. What governs on-net tariffs is likewise unestablished (scrutiny, launch).	MOVEMENT
Sao Tome and Principe	A new organic law took effect in June 2025 setting the bank's payment oversight, licensing and consumer-protection mandate, over the 2018 payment system law that names it regulator and overseer. The organic law replaces the 1992 statute and sets the attributions to regulate and oversee payment systems and to license and supervise financial institutions (law). The bank publishes aggregate payment statistics and a payment systems report, last published in August and April 2026 respectively (statistics, report), which is the clearest evidence in this unit of a regulator exercising a published oversight function. It launched a financial technology sandbox in June 2025 under the inclusion strategy (sandbox); no cohort, admission or graduation has been recorded since.	MOVEMENT
Senegal	The central bank convened a governors' round table at Dakar on crypto-assets in May 2026 that announced no instrument, committee or timetable. The round table of 8 May 2026, with the governors of six central banks, recorded positions on financial stability, regulation, supervision, monetary sovereignty and consumer protection; on limiting risks from volatility, cyber threats, money laundering and operational vulnerabilities; and on payment-system interoperability. It announces no instrument, no committee, no timetable and no union rule, so what it establishes is an orientation rather than an enacted position. Where the bank does act as licensor, the record is a list: 13 Senegalese participants authorised to open the union's instant payment services to the public at the September 2025 launch, the largest count of the eight member states.	NO CHANGE a stated orientation on crypto-assets with no instrument behind it

COUNTRY	DEVELOPMENTS	PROGRESS
Seychelles	The central bank set a four-stage cheque phase-out running to May 2026, under electronic money regulations in force since 2022, and Cabinet approved widening the authorised-dealer perimeter. The phase-out runs in four dated stages: stop issuing to individuals from January 2025, stop accepting from individuals from May 2025, stop issuing to non-residents from January 2026, stop accepting from non-residents after May 2026. The cheque-volume and card figures behind it carry a proxy date caveat (phase-out, schedule). The electronic money regulations were made under the payment system Act in 2022, giving incumbents six months to comply and a year to reach the capital floor; they were acquired from the Official Gazette only in August 2026, so they are a foundational text newly added to this base rather than a new development (regulations). Cabinet approved amendments widening the authorised-dealer definition to include credit unions and licensed payment service providers (perimeter). A dated, staged withdrawal of an instrument is the most orderly payments transition in this frame.	MOVEMENT
Sierra Leone	The National Payment Systems Act 2022 is the governing statute, and the central bank went to market for a fintech strategy in September 2025. The Act is Act 8 of 2022, gazetted on 23 June 2022, with subsidiary legislation made under it (Act). The bank sought expressions of interest on 17 September 2025 for consultants to develop a fintech strategy and a fintech regulatory policy framework (notice), and separately directed banks to enforce the national identification number in all transactions (directive). Neither an award under the notice nor any text of the strategy is held. The re-platforming of the bank's own settlement and clearing systems is recorded separately and remains unestablished.	MOVEMENT
Somalia	The central bank set out the bank integration sequence for the instant payment system in July 2026, on a switch it deliberately chose to run as a joint venture rather than as central-bank infrastructure. The sequence was set out on 26 July 2026 (sequence, expansion, launch). The switch is a joint venture of the central bank and thirteen commercial banks, which the governor described as a deliberate choice over central-bank-run infrastructure. A national code-based payment standard is linked to it as the national standard (standard). No transaction volume, participant count or go-live date for the full sequence is published.	MOVEMENT
South Africa	The central bank ruled out non-bank shareholding in the payments utility it half-owns and restated that a retail digital currency has no compelling case. 2026-07-31 — the Governor told the Bank's ordinary general meeting that it would have preferred to hold all of the payments utility and is not looking at bringing others in, having acquired 50% in October 2025. The installed base around it was put at 39 participating banks and more than 480 non-bank payment service providers. 2026-06 — on digital currency the position hardened rather than moved: the Bank's published view is that a retail central bank digital currency has no compelling case yet and the everyday rails come first, with its wholesale distributed-ledger work confined to two completed projects. Both are the same posture from two directions — the central bank taking ownership of the shared retail rail while declining to issue a retail instrument of its own.	MOVEMENT
South Sudan	The central bank affirmed mobile money as legal tender, and the national instant payment system has been at roadmap stage since early 2025. The affirmation was made under a 2017 electronic money regulation; the target of 30 per cent adult usage by 2027 is the central bank's own, and economists called the declaration premature in an economy over 90 per cent cash-based (affirmation, reactions). Roadmap development for the instant payment system was announced in February 2025 after a 2023 proof of concept, and nothing has moved since (roadmap). A declaration of legal tender ahead of the rail that would clear it is the sequencing this unit repeats across identity, payments and law.	MIXED mobile money affirmed as legal tender while the instant payment rail that would carry it has not moved since 2025

COUNTRY	DEVELOPMENTS	PROGRESS
Sudan	The national payment switch launched with one bank connected, and a rival payment-switch licence was revoked days after that platform's launch with no breach disclosed. The central bank launched an electronic capital-flows system on 26 August 2026, replacing manual processing (launch). The switch went live connecting one bank as its first and only participant, with the first cash-machine withdrawal completed over it; the central bank's own framing is restoration rather than a greenfield rail (switch, tender). A separate payment-switch licence was revoked days after the platform launched, with no specific breach disclosed; a Gulf linkage was reported by domestic outlets and not confirmed by the central bank (revocation). A regulator that licenses and then revokes without stating a reason, and simultaneously operates the competing rail, is a market-structure fact the record states without explaining.	MOVEMENT
Tanzania	The central bank's sandbox reviewed 35 applications and approved five for live testing, launched a sovereign yield curve system, and a digital currency remains under study. The sandbox throughput comes from an annual report; the sandbox existed earlier but no earlier throughput figures are held (sandbox). The yield curve system was launched in August 2026, with the investor counts the governor's own given at the launch (yield curve). A central bank digital currency remains under study with no design, pilot or timetable in any held source (currency), and a national code payment standard had 27 participating providers at end-2025 (standard).	MOVEMENT
Togo	Payment governance runs through the regional central bank; the base holds its electronic-money guide and the instant platform. Togo participates in the regional instant payment platform, whose mandatory connection deadline for institutions was extended, and the regional guide to electronic-money issuance by public treasuries is the standing instrument the base holds on the central bank's role. No Togolese-specific central-bank instrument, licensing decision or supervisory report appears in the base for the period, and no national payments council or oversight framework document is held. What is held on the domestic side is fiscal rather than monetary: the revenue office's own electronic declaration and payment series to 2025.	NO CHANGE
Tunisia	The central bank launched a national payment label with the national payments operator, licensed an operator fintech wallet, and the state operator launched a wallet of its own. The payment label was launched in May 2026 with the national payments operator (label). An operator fintech wallet received its central bank licence in March 2026 (licence), and the state operator launched a wallet in the same month; the base's capture of the only source no longer carries the article, so the launch detail is not currently citable beyond the headline (wallet). Two operator wallets licensed or launched in one month, under a new national label, is a coordinated opening of the payments market rather than three separate events.	MOVEMENT
Uganda	Cash-withdrawal caps take effect on 1 January 2027 for a cash-lite economy, while the national payment switch and the settlement-system replacement are unmoved. The caps were issued by circular in May 2026 for a January 2027 start, the stated purpose being a cash-lite economy (caps). The switch was reported in progress in the central bank's 2024/25 account and has not moved (switch). The settlement replacement and standards migration had a stated go-live of November 2025 which passed unverified; absence of confirmation is not evidence of non-delivery (settlement). A digital shilling pilot was announced inside a US$5.5bn settlement-network plan in October 2025 with nothing since (pilot). Capping cash before the rail that would replace it is confirmed working is the sequence.	MIXED cash-withdrawal caps set for 2027 while the payment switch and the settlement-system replacement both stand unmoved

COUNTRY	DEVELOPMENTS	PROGRESS
Zambia	The national financial switch has its cost-reduction objective stated on record as not yet delivered, and cheque acceptance is to stop on a date sourced from a single sentence about another country. The electronic clearing house is stated as not yet live on the regional instant-payment scheme, and central bank interest in the continental system is characterised as conversation rather than commitment (switch). The cheque stop date comes from a single sentence in an article about another country, and no central bank circular is held (cheques, comparator). Ending an instrument on a date evidenced only in foreign coverage is a limit on what this report can state about the transition.	MOVEMENT
Zimbabwe	The central bank established a digital transformation and financial technology department with a sandbox and an innovation hub, and publishes a quarterly national payment systems report. The department was announced by a deputy governor at a technology forum; no separate central bank document is held (department, forum). The payment systems report is a first-party quarterly series; the first-quarter 2026 issue is not held, and the quarter-on-quarter comparison carried here is the second-quarter report's own (report, prior). Mobile money and interbank transfer limits were raised in the 2026 monetary policy statement, the bank stating the rise is intended to widen local-currency usage (limits).	MOVEMENT

G2P functionality

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The pension fund replaced the paper life certificate with facial recognition and credited arrears to more than 3.5 million accounts. 2026-05-12 - the pension fund replaced the paper life certificate with a facial-recognition verification system for pensioners - a biometric check substituting for an in-person one, with no accuracy, exception or appeal route published. 2026-05-02 - pension-increase arrears were credited to the accounts of more than 3.5 million retirees and beneficiaries, on a partnership the fund signed with a state bank in January 2026. The other transfer on the record is a solidarity allowance and its beneficiary framework, established by decree in October 2024. The flow is now sized: the fund manages about 3.6 million direct and indirect beneficiaries against a monthly pension bill of DZD 162bn, figures given by its director general alongside the facial-recognition change. It is a first count with no earlier figure behind it, and no split between direct and indirect beneficiaries is published.	MOVEMENT
Angola	The cash-transfer programme reached more than 1.3 million households and about 6.5 million citizens, against 247,000 households at the prior position. 2026-07-25 — the programme is reported at more than 1.3 million households and about 6.5 million citizens reached, with a single social register now the centralised targeting database, against a starting position of a US$320m loan building the social registry and government-to-person rails, with more than 247,000 households reached against a 1.6 million family target. That is the largest measured government-to-person payment operation on this ledger by an order of magnitude. What is not published is the payment instrument: no source states how the transfers reach households, what share is paid into a wallet or an account rather than in cash, or what it costs to deliver. No data-protection basis or governing instrument was stated for the register at launch, which is reported under registries.	MOVEMENT
Benin	A productive safety net began cash transfers in September 2025 to 20,621 beneficiaries, 85% of them women, onto free secured SIM cards. 2025-09-18 — cash transfers began to 20,621 beneficiaries, 85% of them women, paid a first monthly instalment of 208,272,100 FCFA across twelve pilot communes onto free secured SIM cards, ahead of an intended extension to all 77 communes. Eligibility was certified house by house by the statistics institute and the social affairs ministry. Nothing existed before it and no extension beyond the twelve pilot communes has been reported in the eleven months since. The house-by-house certification is the interesting detail: the targeting was done on foot, and the single social register created four months later, reported under registries, is the instrument intended to replace that method.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Botswana	Biometric grant cards stand at more than 75,000 beneficiaries and 1,200 shops, the same figure as a year ago, and the announced citizen wallet has had no follow-up. The biometric grant payment system reached more than 75,000 beneficiaries and 1,200 shops on a platform accredited by three central banks, and the same figure is all the base holds. No update has been published in the twelve months, and the figure is restated elsewhere under a 2026 heading where it reads as current. 2025-09-17 — a unified Citizen Wallet for subsidy delivery was presented to a rural development council alongside a cryptographic card. Nothing further has appeared in ten months on either. So government-to-person payment in Botswana is one closed-loop card scheme whose numbers have not moved, and a wallet that exists in a presentation.	NO CHANGE
Burundi	Social transfers reach recipients over their own mobile phones, and the beneficiary system is now connected to several payment providers. 2025-09 — a cash-transfer programme closed in one province after two years, having paid 73,600 BIF every two months over recipients' own mobile phones, 72,000 BIF net of the withdrawal charge. It is the clearest record the base holds of a government-to-person digital channel reaching a specific population, and the withdrawal charge is the part worth keeping: the recipient pays to take the money out. 2026-01 — the successor system migrated more than a million individual beneficiary records and was connected to several payment providers, which is the structural change: payment routed through a system rather than through one programme's arrangement.	MOVEMENT
Cape Verde	Salaries and pensions are processed through the state financial management system and credited to beneficiaries' bank accounts on stated value dates. No volume or value is published. The budget execution decree is the standing instrument for the year: public salaries and pensions are processed through the state financial management system and the human-resources databases and credited to beneficiaries' bank accounts on stated value dates, the public accounting directorate processes pensions, and direct transfers to families abroad run through the social pensions centre and the diplomatic representations. Nothing states how many beneficiaries that reaches, what it pays out, or what share of government-to-person payment is still made in cash. The single social registry that identifies beneficiaries is operating and querying held data directly instead of taking paper declarations, which is the enrolment side of the same question.	NO CHANGE a standing position the base holds for the first time
Central African Republic	Officials outside the capital are paid by mobile money and went unpaid for a month when one operator's network failed, against 1,702 civil servants enrolled in May 2025. 1,702 civil servants in regions without banking services were being paid by mobile money, recorded as a project achievement in May 2025. No later enrolment figure is held. 2026-07-28 — at one town subscribers reported no calls, no internet and no mobile money for close to a month, with prepaid bundles expiring unused and some officials unpaid for the previous month. Single-operator dependency with no redundancy is the mechanism. A payroll rail that fails for a month is not a payroll rail. The state has moved salaries onto a private network in places where it has no alternative, and nothing on this ledger records a fallback, a service-level obligation or a redundancy requirement on the operator.	STALLED
Chad	The finance ministry signed conventions with all four mobile-money operators in February 2026, against 0.1 per cent receiving digital state payments. The appraisal records 0.1 per cent of Chadians receiving government-to-person payments digitally (appraisal). On 17 February 2026 the finance minister chaired a meeting with the four payment establishments to build an operational framework for moving state financial flows onto mobile money, and pressed for a framework convention (meeting); on 18 February he signed partnership conventions with all four, stated as offering payment and collection services to tax administrations and covering salaries as well as revenue (conventions). No transaction count, salary volume or beneficiary figure under the conventions is published, so the 2023 digital payment rate has no successor.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Comoros	40,010 households across about 196 villages are paid up to 75,000 francs through mobile banking under the safety-nets programme. The rails were commissioned first: the central bank's financial inclusion project, closed on 30 June 2025, commissioned the automated transfer system and the interoperable payment switch. 2025-12 - the supervision mission credited the digitisation of operations, the use of electronic payments and a digitised monitoring system with the project's delivery, disbursement having reached 82.8 per cent, and recorded remediation of delayed mobile-money payments to beneficiaries on Anjouan. 2026-03 - the programme was publicly put at 40,010 vulnerable households in about 196 villages across the three islands, each eligible for up to 75,000 Comorian francs paid by mobile banking, under a 30 million US dollar financing. This is the only government-to-person channel in the base with a beneficiary count behind it.	MOVEMENT
Congo	The public service minister disclosed fraudulent duplicate payroll numbers and deceased or retired staff still drawing salaries to the Senate. 2026-08-07 - the minister disclosed to the Senate that fraudulent duplicate payroll numbers exist and that deceased or retired staff are still drawing salaries. No count, value, remediation date or incident detail is stated, and the disclosure is the minister's own. The platform itself is running, with three standing user complaints recorded by the ministry that operates it. A payroll system in production whose operator minutes three failure modes and whose supervising minister reports fraud on it to the legislature is the position as the base holds it, with no audit, no count of affected agents and no remedy on file.	REGRESSED
Cote d'Ivoire	The treasury payments platform was extended toward local authorities, with 75 collectivities and 4,500 distributors claimed. At the window's opening the platform was in operation for public-expenditure and government-to-person flows, with the expenditure module under optimisation. 2026-03-27 - it was reported extended toward local authorities, with 75 collectivities and 4,500 distributors claimed. Those figures come from the developer's own press note, not from the treasury. No payment volume, value, beneficiary count or failure rate is published for any government-to-person flow, so the platform's reach is described only by the number of institutions attached to it.	MOVEMENT
Djibouti	The state personnel file was ordered updated by article 32 of the 2026 budget law to integrate contract staff and unregularised headcounts. The file existed and its position at the window's opening is not held. The 2026 budget law orders the budget ministry, jointly with the labour ministry charged with administrative reform, to update the database to integrate contract staff and headcounts awaiting regularisation, with no completion date, budget line or headcount stated. A payroll database that a finance law has to order updated to include the staff already being paid from it is the position as the base holds it. No count of records, no audit and no remediation report follows it on file.	MOVEMENT
DR Congo	A rural payroll arrangement was scoped to three territories, while Kinshasa agents demonstrated over two months of arrears. 2026-07 - a state bank and the payroll monitoring committee settled technical and organisational terms for rural payroll, scoped to three named territories and others where no other bank operates, with August 2026 named as a target, the bank's director-general saying a fixed date is premature, the state contract unsigned and its core banking replacement still in test. The bank's reach is reported at both around 40 sites and about thirty territories, and that reach is the whole rationale for the arrangement. 2026-07-23 - Kinshasa urban administration agents demonstrated over two months of unpaid salary, beneficiary listings already transmitted to the paying bank but neither bank staff nor payroll agents attending the appointed payment - a failure at the last mile of an otherwise complete digital chain. The biometric civil-servant registry stands at more than 118,000 cards across 26 provinces with no updated figure in twelve months.	MIXED a rural payroll route was scoped while Kinshasa's urban administration went two months unpaid and the biometric civil-servant register published no new figure

COUNTRY	DEVELOPMENTS	PROGRESS
Egypt	A completion report closes a US$900m safety-net loan; no current payment channel figure is held. The arrangements are described in a country note on government-to-person payments, which sets out the flagship cash transfer programme launched in 2015. 2024-06-05 - a completion report closes a US$900m-equivalent loan strengthening the safety net. Neither states a current beneficiary count, a payment channel split or a digital-payment share, so what proportion of transfers now reach people electronically is not on the base - against a financial inclusion rate of 77.6% at the end of 2025.	NO CHANGE a first stated position with no earlier account behind it
Equatorial Guinea	Benefits are paid bank-only and a 2025 census purged 2,282 untraceable pensioners. The insurance institute's delegate told the Chamber of Deputies in September 2025 that social benefits are now paid only into bank accounts, and that a 2025 census purged 2,282 untraceable pensioners. That is government-to-person payment through the banking system rather than a payment rail of the state's own. The order banning cash collection covers the flow in the other direction. Payroll credibility is uneven: a bank was ordered to repay 182m CFA to 12,000 civil servants over an unauthorised fee scheme.	MOVEMENT
Eritrea	Eritrea is absent from the continental inventory of instant payment systems, so no rail exists for government-to-person payment (inventory). The annual continental inventory of live and planned instant payment systems, covering systems with live transactions as of June 2024, does not list Eritrea among the 31 operating systems across 26 countries, and does not identify it among those supporting government-to-person functionality (inventory). The financial system it would run on has no cash machines, cards or internet banking (evaluation). Government payments to people are therefore made in cash, and nothing on the base records a plan to change that.	NO CHANGE
Eswatini	A social grant disbursement system built with the science park moved bank-paid elderly grants to the 25th of the month from August 2026. The deputy prime minister's office introduced the system to make grant payment safer, faster and more reliable, shifting the bank-paid elderly grant date from the 20th to the 25th (system). Its own annual report gives the operational split of elderly-grant payment between mobile money and bank accounts for April to December 2024 (annual report). 35 post offices accept government-service payments, which is the counter-flow from citizen to state. No disbursement value, recipient count or failure rate is published for the new system, and the social registry that would target it has covered one region of four.	MOVEMENT
Ethiopia	Finance, the central bank and the national switch convened government institutions to operationalise interoperable government payments (report). In July 2026 the finance ministry, the central bank and the national switch convened technical teams from government institutions to operationalise a unified implementation framework for interoperable person-to-government and government-to-person payments, aligned to the national digital payments strategy (report). The rails behind it were launched at the December 2025 payments conference, which recorded both the draft national digital payments strategy and the instant payment system (conference). The national switch's own annual report for the year to June 2025 sets out its mandate over interoperability, the national payment scheme and the national payment gateway, and carries government payment work as a project under implementation rather than a live service (annual report). The base holds no volume or value of government payments actually made over these rails.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Gambia	A blockchain payment-distribution pilot is running with a United Nations agency, grouped with pilots in four other countries. The agency reports distribution costs cut from about 10 per cent to as little as 2 per cent across the five pilots, an aggregate figure not disaggregated for this country (pilots). No country-specific volume, beneficiary count or launch date is published, and the agency names governance, interoperability and trust as the remaining barriers before country-programme integration. 2026-01 - a transfer scheme runs on a private mobile money rail: a lender-funded rural scheme paying D6,000 per household has expanded to 16 districts and more than 15,000 households, delivered through a mobile money provider. No payment volume, delivery-cost share, grievance route or link to the social registry is published.	MOVEMENT
Ghana	The cash-grant programme paid GH¢485m in the first half of 2026 on mobile-money rails, against a full-year allocation of GH¢1.1bn. The allocation is the highest since inception (fiscal review). A recent cycle released about GH¢139m to roughly 350,580 households (payment cycle), and the stated expansion to 400,000 households in 2026 has no delivery figure on file. 2025-08-11 - the rails themselves are recent. The gender ministry began piloting mobile-money payments to beneficiaries across 50 districts, aimed at those in hard-to-reach areas and run through the payment switch, a year before the half-year disbursement figure above.	MOVEMENT
Guinea-Bissau	The blockchain wage bill and pensions platform remains the only government-to-person rail described. Nothing in this batch adds to the government-to-person picture beyond the wage bill and pensions platform the ledger already carries. What the window does establish is that the rails around it are thin: one licensed payment institution and one electronic money issuer in the whole country as at June 2026, and only 22 per cent of women holding a bank or mobile money account.	NO CHANGE
Kenya	The state micro-loan fund has disbursed Sh90 billion to 28 million registered borrowers, against state funding down from KSh 20bn to KSh 300m. Sh76 billion has been repaid with Sh13.7 billion outstanding, Sh7 billion saved by borrowers and 10 million repeat borrowers; the figures are the fund's chief executive and the president's own, and the claim that 4.5 million customers moved to better credit scores is not independently held (four-year account). Default runs at 15 per cent, about KSh 12.5bn, and the Auditor-General found 104,631 loans worth KSh 116.5m issued to borrowers with no identity details on file (default and audit). Repayment through a privately issued loyalty balance went live in July 2026, five points settling one shilling, recovering KSh 3m in the first week — a private loyalty currency converting into public-money recovery at a rate the issuer sets (loyalty repayment). The Treasury extended the payroll database, in place since 1998, to pensioners from the end of August 2025 so that salaries and pensions are disbursed through one system, which the cabinet secretary put as a measure against ghost workers, duplicates and erroneous payments. No pensioner count moved, duplicate removed or saving realised is published.	REGRESSED
Lesotho	The only government-to-person channel on file carries 20,000 Child Grants Programme beneficiaries on digital grant payments. Digital grant payments to 20,000 beneficiaries of the Child Grants Programme were in operation when the digital birth registration programme launched in April 2025 (programme). No later enrolment figure, payment volume or extension to another transfer is held, and no other government payment stream is recorded as digital.	NO CHANGE
Liberia	Government-to-person mobile payments have routed exclusively through the national switch since 27 October 2025. The directive names salaries, pensions, social benefits and other transfers, with settlement into the central account. The governor's launch remarks of 16 December 2025 set out what the instant payment platform is to carry, including government-to-person payments, as the first phase of the national switch. The largest live government-to-person flow runs outside it on an operator rail: the social protection project reports over 15,000 households paid and more than L$1 billion disbursed, delivered through mobile money, against a scheduled project closure in late 2026 with no successor named.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Libya	Ratibak Lahzi carried July 2026 salaries for 1.7m of 2.2m public employees, 76 per cent, up from 72 per cent in March. The real-time salary system launched in August 2025 with about 2m records collected, the eastern government refusing to share employee banking data (launch). Enrolment reached 72 per cent in March 2026 (March), 75 per cent in June (June) and 76 per cent in July, when July salaries were executed through it (July, confirmation). About 500,000 public employees remain outside it, with no published breakdown of who they are (remainder).	MOVEMENT
Madagascar	The government payment card framework was abrogated in April 2026 after technical failures and payment delays. A card to digitalise pension payment was adopted by decree in April 2022 (adoption). The audit court found 76,073 of 250,000 cards distributed and unused, with the scheme administratively suspended from July 2024 (audit); the framework decree was abrogated in Council of Ministers in April 2026, with over 110,000 cards reported in circulation among students (abrogation). A proposed USD 50 million additional financing would fund transition of cash transfers to mobile payments in partnership with mobile operators (financing).	REGRESSED
Malawi	A mobile-money operator paid about 6 billion kwacha to more than 27,760 social cash transfer beneficiaries in Mangochi. The pipeline is documented end to end. The government's urban cash intervention evaluation records transfers reaching beneficiaries through both mobile-money operators, with the beneficiary registry and cash transfer payroll behind them and cross-checking against the identity and mobile-money databases. 2026-05 - one operator disbursed roughly 6 billion kwacha in social cash transfers to more than 27,760 beneficiaries in Mangochi, which is the only district-level figure the base holds. 2025-12 - the government's fiscal policy statement commits to digitising all social-protection payments across all 28 districts to cut fraud and leakage, with no completion date. One district measured and twenty-eight promised is the shape of the record.	MOVEMENT
Mali	A bank-channel pilot for pension payment completed in July 2026 and is reported ready for phased extension to other partner banks. Mobile pension payment was already live; the bank-channel pilot with one partner bank completed on 27 July 2026 and is reported ready for phased extension (pilot). No pensioner count, payment volume or extension date is published. It is the only government-to-person payment stream recorded for the country.	MOVEMENT
Mauritania	A verification platform opened for a social transfer covering more than 2 million registered citizens, its cash component run through the interbank payment operator. The AOUN transfer covers more than 2,057,006 citizens recorded in the social register, and its cash-transfer component is run by the solidarity delegation with the national deposit and development fund and the interbank payment operator (platform, transfers). An electronic payment platform was delivered under the first safety-net project (completion). The figure is the number registered rather than the number paid, and no payment completion rate, exclusion-error estimate or grievance route is published.	MOVEMENT
Mauritius	A social contribution income allowance is administered by the revenue authority, with eligibility and payment terms published. The revenue authority publishes the allowance's terms in a frequently-asked-questions document of January 2026 (document). The 2026-2030 fintech strategy sets out the payment rails such transfers run over (strategy). No payment volume, disbursement channel breakdown or coverage rate is published for the allowance, so the base can say the mechanism exists and not how much of the population it reaches or by what route.	NO CHANGE a standing allowance with no earlier position held
Morocco	The registries served 5 million eligible households on a June 2026 account, against about half the population enrolled at the end of 2024. About half the population was enrolled when the second identity and targeting project was approved in December 2024 (project). A June 2026 account puts 22 million of 39 million registered and 5 million eligible households served (account). It is a press figure rather than a programme report, and no payment volume or transfer value through the registries is held.	MOVEMENT on a press figure

COUNTRY	DEVELOPMENTS	PROGRESS
Mozambique	More than US$14.4m has been paid to nearly 246,000 health workers by mobile money since 2024, replacing cash for vaccination and emergency campaigns. The cumulative figure to August 2026 is more than US$14.4m paid to nearly 246,000 health workers and volunteers, replacing cash and giving funders a full digital transaction record (payments). The figures are the agency's own, the payments run through commercial mobile-money operators the account does not name, and no per-campaign breakdown or failure rate is published. It is the country's only recorded government-to-person digital payment stream, and it is run by an international agency rather than by the state. 2026-09-04 - the payroll became a credit rail: a memorandum between the dominant mobile money operator, a microbank and the state financial information centre puts a salary-advance product on the operator's short code for more than 380,000 civil servants. A memorandum rather than a live product: no launch date, interest rate, advance ceiling, repayment mechanism or default treatment is published, and the payroll data path is not described.	MOVEMENT
Namibia	The first live government-to-person payments ran on 17 June 2026 to marginalised-beneficiary grant recipients, through one certified bank. The first live government-to-person payments were made on 17 June 2026 to beneficiaries in the marginalised category, facilitated by one of the first banks certified under the instant payment programme (payments). Government social grants are phase one of the platform's rollout; the operator is a subsidiary of the central bank working with an Indian payments partner, runs strictly as a payment system operator and does not serve consumers directly, and the central bank's stated plan is to withdraw from operations and hand the platform to the industry once its public-interest goals are met (fact sheet). Biometric arrangements for the system were being weighed a year before it went live (biometrics). No grant volume, beneficiary count or disbursed value through the platform is published, so the base records the channel and not what has passed through it (launch).	MOVEMENT
Niger	Scholarship payment through the Treasury application was announced in July 2026 as part of a grants agency reform, with no budget, vendor or beneficiary count published. It is stated as an intention with no budget, vendor, timetable or beneficiary count published (scholarships). It is the only government-to-person digital payment stream named for the country, and it is an announcement rather than a channel.	MOVEMENT
Nigeria	N6.6bn reached over 278,000 beneficiaries in one state while the digital currency's retail channel was withdrawn. The government disbursed N6.6 billion to over 278,000 Imo State beneficiaries drawn from the national social register, paid directly and linked to the national identification number, with the state moving from cash to direct bank-account payment — the first concrete disbursement figure the base holds on this indicator. A workshop in July 2026 validated business requirements for a unified government-to-person payment solution, a design-stage architecture rather than a live rail. Against that, the central bank digital currency whose 2021 guidelines defined government-to-person transaction types is being redesigned toward a wholesale model, withdrawing the retail leg those provisions describe.	MIXED the digital currency's retail leg was withdrawn while transfers ran through the social register and a unified rail entered design
Rwanda	Social transfer recipients now draw payments through mobile money agents rather than travelling to a savings cooperative. A campaign launched on 30 August 2025, running in three districts from 19 August, requires Vision Umurenge Programme recipients to link their Umurenge savings and credit cooperative account to a subscriber line registered against their national identity; transfers then arrive with an SMS notification and are drawn at nearby mobile money agents (campaign). Every Umurenge cooperative has been digitised and ten districts have consolidated theirs into district cooperatives running mobile banking, but the agreements between those cooperatives and the telecom operators that would allow direct transfer are unsigned (campaign). The account is the local development agency's own. It gives no count of recipients enrolled, no transfer volume, and no charge borne by the recipient at the agent.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sao Tome and Principe	Vulnerable-family transfers are executed by bank transfer through the social protection system's payments module with a commercial bank, with US$6 million in additional financing signed in October 2025. The directorate states that the vulnerable families programme transfers are executed by bank transfer using the payments module of the social protection system, in partnership with a commercial bank, and reports the amount disbursed and the households reached across the districts and the Autonomous Region in 2025 (directorate). The lender and the government signed an agreement for US$6 million in additional financing to the social protection project, the vehicle through which the transfers are delivered (agreement). The project paper describes a new electronic cash transfer payment system through a partnership with a financial institution (project paper). Government-to-person is the one payment flow in this unit with a named system, a named bank and a stated coverage.	MOVEMENT
Senegal	The social security fund opened payment of benefits through an electronic money operator in September 2026, on a state payments platform launched in 2025. The fund announced on 2 September 2026 that social benefits can be paid through a named electronic money operator directly into a beneficiary's account without travelling, enrolment by a form available in every agency. It is a named public body naming a named operator, which the surrounding evidence generally does not; it gives no beneficiary count, no first-payment date and no statement of whether the route is optional. The platform underneath was launched on 2 June 2025 to digitise state payments — salaries, allowances, social aid, pensions and scholarships — with instant receipt and full traceability, and named no beneficiary counts or amounts. The largest transfer scheme is still not on it: the Council of Ministers lists the start before end-2026 of the pilot project to digitise the payment mechanism of the family security grants among actions to follow — an announced pilot, not a working capability.	MOVEMENT
Sierra Leone	Social grants are paid through mobile money: the social action commission reports SLE 3.7 million of businesses created and recalibrated in Falaba on grants disbursed through Afrimoney. The commission reported the Falaba disbursement in July 2026, with the grants routed through the Afrimoney wallet (grants). An ECOWAS-supported project for displaced and stateless people launched in January 2026 states that beneficiary tokens will be distributed through the Sierra Leone Commercial Bank (project). Two programmes, two channels, and no national government-to-person payments architecture behind either. No beneficiary count, transfer value or reconciliation arrangement is published. 2026-09-07 - a self-service route into pensions was announced: the social security trust is to launch an application for pensioners and contributors with a short-code fallback for feature phones, biometric verification and integration with the three mobile-money services. Announced rather than launched: no launch date, pensioner count, transaction route or fee arrangement is published.	MOVEMENT
Somalia	A USD 35 million crisis-response grant scales drought-response digital and mobile cash transfers through the national social protection delivery system. The project paper approving the additional financing treats the social protection delivery system and unified social registry as the operative national channel for government-to-person payment, scaling drought-response transfers through them (paper). The underlying operation, approved at USD 112 million in September 2025, is expected to reach over 738,000 people and includes a national socio-economic survey covering 12 million (approval). The instant payment layer added in January 2025 carries government-to-person transactions across banks, wallets and terminals (description).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
South Africa	Grant card migration reached 172,146 of 463,836 replaced by 28 July 2026, and a state payment credential and wallet entered active development with testing dated November 2026. 2026-07/08 — of 463,836 active gold cards at 29 April 2026, 172,146 had been replaced by 28 July and 264,263 remained, roughly 40% of them in two provinces, against a deadline of 31 August 2026. The bank reports 306 replacement sites against a target of 300 plus nine mobile teams, ring-fences customers more than 30km from a site, and plans the rollout from monthly data on where each customer last transacted. 2026-07-31 — the state's own rail moved: the payments modernisation programme passed from conceptual design into active development of the payment credential, wallet, governance and trust capabilities, with testing against government use cases dated November 2026. The base holds no statement of how the state credential is meant to relate to the bank-owned rails it would sit beside, which is the question a G2P wallet raises before it raises any other.	MOVEMENT
South Sudan	87,867 households were biometrically registered and paid under one project, which by August 2026 had about six payment cycles pending. The beneficiary management information system, linked to biometric registration, had registered and paid 87,867 households — 615,069 people — across 15 counties by September 2025 (scale). Payments began in December 2024 in Juba and eight other counties after targeting, beneficiary validation and biometric registration, under a five-year US$199m World Bank-financed safety net aimed at 157,500 households in 20 counties (launch). In August 2026 the agriculture ministry acknowledged about six payment cycles still pending, attributed to local-currency shortages and administrative steps, after an earlier six-month backlog cleared in July 2025; no resumption date was given (statement). It remains project-scoped rather than a universal social registry (paper), and the country's only government-to-person channel of any size belongs to a donor-financed project rather than to a national payments architecture.	MIXED the country's only sizeable government-to-person channel has grown its caseload and has about six payment cycles outstanding
Sudan	A closed project's rails reached 8.7 million people; a successor safety net made a first payment to 172,388 in August 2025. The retrospective on the earlier programme records a unified registration platform and payment infrastructure reaching 8.7 million people, built in collaboration with the national civil registry and suspended after the 2021 coup, with its registries and rails reported still usable by successor programmes (retrospective). The successor's implementation report of September 2025 records targeting, identification and registration completed in five localities and a first cash payment reaching 172,388 people, over a quarter of a 602,000 caseload target, with biometric registration tracked as a management indicator (report).	MOVEMENT
Tanzania	Digital crop payments to farmers were reported by season at a national agricultural exhibition, all figures the operator's own. The figures were given at a promotional exhibition at which the operator also awarded vehicles and phones to loyal users; no farmer total, fee schedule or default rate on the linked credit is published (payments, northern, southern). Crop payment digitisation is the largest routine government-to-person flow in an agricultural economy, and the only account of it comes from the company that carries it.	MOVEMENT
Togo	Retirement allowances began digital disbursement in July 2026 with registration of payment details required by 31 August, and no alternative is stated for a beneficiary without a bank account, a handset or an identity document. No beneficiary count, disbursed value or registration rate is published (allowances). A treasury interoperable prepaid card was announced with no launch timetable; two regional precedents exist but the central bank's own register counted only two treasury issuers at end-2024, which a three-state account does not match (card). The regional guide to electronic-money issuance by public treasuries settles closed-loop issuance, a dedicated escrow for holders' funds and a complaints route, requires tariff disclosure and sets no fee cap (guide). A hard registration deadline with no stated fallback is the access question this unit does not answer.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Tunisia	A new family allowance paid its first tranche in December 2025, while the electronic-payment target moved to 2029. The first tranche of the family allowance for children aged 6 to 18, created by government decree in October 2025, was disbursed on 11 December 2025 for the first half of that year. The AMEN Social monthly allowance for poor households was raised from 260 to 280 dinars, retroactive to January 2026, by a joint order gazetted on 7 August 2026. A World Bank project paper of March 2026 reschedules to 2029 the target of 300,000 beneficiaries receiving transfers through electronic payment methods. What is not held is the present figure. The last count of AMEN cash transfers reaching beneficiaries electronically is 44.4 per cent, for December 2023, and nothing later supersedes it.	MIXED a new allowance was disbursed while the electronic-payment target slipped to 2029
Uganda	Government-to-person payment runs through the parish programme's own accounts - UGX 2.5 trillion to more than 2.5 million beneficiaries - rather than through the platform its own feasibility study assessed. 2023-11 - the gender ministry's own feasibility study assessed which government payment mechanisms could carry social protection, naming the financial management system, a bank-connect channel and an electronic cash mechanism as candidates. Nothing in the base records a decision on it since. 2025-08 - what actually moved money is the parish programme's system: it is tracking more than UGX 2.7 trillion sent to programme cooperatives, of which UGX 2.5 trillion reached more than 2.5 million beneficiaries, covering nearly 79 per cent of all households, with beneficiary identification numbers verified against the identity register. 2026-06 - the same channel took a new segment: guidelines provide UGX 4,654,147,000 in FY2025/26 as an additional grant to persons with disabilities receiving a programme loan, UGX 500,000 each on top of the UGX 1 million loan. So one programme moves money to millions of people digitally, and the cross-government mechanism the study was commissioned to choose has not been chosen.	MOVEMENT
Zambia	The social cash transfer began its July-August 2026 cycle disbursement, on the ministry's own figures with no redemption rate, provider list or exclusion figure published. The cycle disbursement began in August 2026 (disbursement). A provincial minister separately names four districts where poor network service blocks access to social cash transfers and farm input subsidies, so the exclusion figure nobody publishes is the one that would measure whether the transfer arrives.	MOVEMENT
Zimbabwe	An integrated payroll and pensions system is operational in over 60 ministries, and the social security authority pays pensions into mobile money wallets. GovPay replaces a payroll platform of thirty-two years and covers every government employee and pensioner drawing from the Consolidated Revenue Fund; electronic payslips go to government electronic mail, a portal carries payslips, leave balances, loans and service records, and the system is operational in over 60 ministries and grant-aided institutions (newsflash). Its named integration partners are the revenue authority, banks, the social security authority, the government internet service provider and the telecommunications regulator, where the platform it replaces could not communicate with any of them (newsflash). The state social security authority says pensions can be paid straight into a mobile money wallet (pensions). No disbursement value, recipient count or take-up rate is held for either channel, and whether the full GovPay launch happened inside its stated 2026 target is not on the base.	MOVEMENT

Revenue collection

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	Electronic tax payment is now mandatory for large enterprises and optional for others, with a first user guide published in August 2026. Tax data was integrated across the assessment and contribution platforms in March 2025. 2026-08-05 - the tax directorate published its first user guide for electronic payment: it is mandatory for taxpayers under the large-enterprise directorate and optional for others, covering only tax and duties from electronic declarations rather than existing debts; payment by transfer or card generates a verifiable electronic receipt, and a rejected transaction cannot be retried electronically, the taxpayer having to attend a local office instead. The guide lists seventeen rejection reasons, and no volume or adoption figure is published. The fiscal stamp-duty payment platform has been live since August 2024 and carries commercial registration duties.	MOVEMENT
Angola	Mandatory electronic invoicing reached 51,245 enrolled taxpayers and 36,341,801 invoices by August 2026, covering large taxpayers and state suppliers. 2026-08-23 — 51,245 large taxpayers and state suppliers were enrolled and 36,341,801 invoices issued, against a mandate in force from 1 January 2026 after an earlier postponement and with no enrolment figure published before this one. The figures are the tax authority's own and the mandate covers large taxpayers and state suppliers rather than all taxpayers, so this is neither universal coverage nor an independently verified count. The enforcement side is blunt and already live: a taxpayer not invoicing electronically cannot be paid by the State. It is the largest transaction volume of any government digital system on this ledger, and it runs on a public key infrastructure that has no governing law, reported under authentication.	MOVEMENT
Benin	A 1% levy on large cash payments pushes merchants onto digital rails, joined by the 2026 rectifying law's digital taxes and cashless motorway tolls. A 1% levy on large cash payments has been in force since January 2025, with mobile money the route around it, and 2026-06-11 — the rectifying finance law added digital taxes. 2026-03-19 — cashless motorway tolling went live, where none existed. Taken together these are fiscal instruments doing digital-inclusion work: the state is taxing cash and removing it from a tolled network rather than subsidising the alternative. No revenue figure, adoption rate or effect on cash use is published for either measure, and the tax directorate's own system modernisation, reported under sectoral systems, has published no delivery.	MOVEMENT
Botswana	Value added tax on non-resident digital services took effect in June 2026 with a collection target of about P450m a year, and electronic invoicing is provided for with no start date. 2026-06-01 — a 14% value added tax on non-resident digital and remote services took effect, with a stated collection target of about P450m a year, the revenue service having set out its intent to tax global digital providers, against a tax system described three months earlier as built for tangible goods. 2026-08-16 — mandatory electronic invoicing is provided for by the 2025 value added tax statute in force from 1 July 2026, with no start date, threshold or scope published. The account is a tax adviser's reading of the Act; no revenue-service notice or timetable is on record. The system that would carry both is unfunded through the estimates: P4.13bn for revenue-service modernisation, covering electronic invoicing, digital taxation and border infrastructure, sits in a development plan with no appropriation trail.	MOVEMENT
Burkina Faso	A certified electronic invoice launched in January 2026, and the national payments platform became the collection rail for automated traffic fines. 2026-01-06 — a certified electronic invoice entered operation, with control modules for firms already running invoicing software and invoicing units for those that do not, replacing a 2017 paper standard as the traceability instrument. No mandatory date and no adoption figure is stated. 2026-08-01 — the national payments platform, which already carried stamp duty, taxes and duties by application, web and short code, gained payment links for automated traffic fines, with vehicle immobilisation for non-payment within a month. That is the first case on file of a domestic payment rail carrying a coercive state obligation: the same channel that collects a tax now enforces a penalty, interconnected to the vehicle database and the enforcement cameras.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Burundi	The online tax platform took over all new taxpayer registration from 4 August 2026, while invoicing machines stop with every power cut. 2026-01-19 — the online tax platform launched for declaration and payment, reported at the time as the country's first. 2026-08-04 — all new taxpayer registration became exclusively online through it, for natural and legal persons and cooperatives, with commercial registration routed through the business agency's portal, cooperative registration through the cooperatives agency, and biometric enrolment for natural persons. 2025-12-25 — the revised finance law requires banks to transfer telepaid taxes daily, with a penalty of 100% of the amount collected for missing the deadline. Against it, 2026-08-20 — traders in one province report that electronic invoicing machines stop working whenever the power does, halting sales and invoice issuance with every outage, with operators of weak literacy or digital skills reported to struggle. Delivery had stood at 500 of 10,000 machines ordered. No national outage figure, downtime measure or offline-mode provision is published.	MOVEMENT with the invoicing machines stopping whenever the power does
Cameroon	An order of 28 May 2025 made the Treasury platform the only lawful channel for non-tax revenue, and device duties moved onto the customs platform. 2025-05-28 - an order made the Treasury's platform the only lawful channel for collecting non-tax revenue, giving named departments three months to use it exclusively, accepting mobile money, bank cards and post-office counter payments with receipt authentication and real-time tracking, against a 2025 non-tax revenue target of FCFA 361bn on an estimated potential of nearly FCFA 600bn. Nothing reports compliance after the deadline. 2026-04-01 - importers must declare each device by its identifier through the customs platform and pay duties before network use, with an amnesty for devices connected before that date, customs putting annual losses from undeclared devices at about US$21.5m. Enforcement follows: deactivation of handsets on which duty has not been paid begins 1 September 2026 under a communique of 20 August 2026, after an earlier date of 25 May 2026 was abandoned when operators objected that no test phase had preceded a full-scale deployment. A card for fully digital settlement of customs duties was reported as about to be signed in March 2026, with no launch date on file.	MOVEMENT
Cape Verde	State revenue is collected on a single paperless collection document carrying a payment reference for automatic reconciliation, payable by point of sale, cash machine, mobile telephone and home banking. The founding act approves the single instrument through which sums entering the State Treasury are collected: normally issued without paper, carrying a payment reference allowing automatic processing and reconciliation of the collection, and payable through the state network including the card rails and home banking. The 2026 execution decree restates the obligation on the collecting side: every state receiving office must hold systems adapted to the collection document and integrated with the treasury control system, with electronic reporting of payments, and revenue at collaborating entities may be paid by point of sale, cash machine, mobile telephone and home banking. No collection volume, value or digital share is published at any date, so a rail that has existed since 2012 cannot be measured.	NO CHANGE a standing position the base holds for the first time
Central African Republic	The online tax platform launched in March 2025 with four modules and 301 large and 325 medium firms in scope; no filing, payment or coverage figure has been published since. The platform launched officially after adoption and training from January 2025, with four modules including registration for the unique identification number, run by the tax directorate under a 24-month external service contract, and 301 large and 325 medium firms in scope. Nothing on it is dated inside the window, no filing, payment or coverage figure has been published, and the 2026 estimates carry no line for it. The fiscal case for it is now made from outside: a public finance review estimates that digitising the tax administration could raise up to two points of national output in the short term, reported under data governance. The system that would do it has been live for eighteen months and has published nothing about what it collects. Customs is the line with money behind it, reported under domestic financing.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Chad	The exclusive electronic state-payment regime slipped to a 1 January 2027 start, and 3,000 payment terminals were delivered with nothing showing one reaching a counter. The regime was set out in the 2026 budget as zero cash and zero paper and has been restated for a 2027 start; the slip is the finding (regime, budget). Three thousand smart terminals were delivered to the finance ministry under the lender operation, and nothing on the record shows a terminal reaching a counter (terminals). A framework agreement on mobile payment of public services was worked on with four operators in February 2026 and nothing since shows it concluded (framework).	STALLED
Comoros	Electronic filing and payment have a statutory basis and implementing texts were validated in April 2026; no activation date is set. 2025-12 - the finance law inserted a section into the fiscal-procedures code establishing electronic filing and payment of taxes, duties, penalties and fees through an official platform, with a phased obligation on large and medium taxpayers, the legal value of an electronic filing, authentication, archiving and penalties for not using it, implementation dates left to regulation. 2026-04 - the tax directorate ran a three-day workshop, financed by French development cooperation, to validate that legal framework ahead of a progressive rollout. 2026-01 - the current fund review names mobilising domestic revenue through tax and customs administration reform among its policy priorities. Nothing in the 2026 vote appropriates for the platform.	MOVEMENT
Congo	The public-revenue platform went live for online payment of taxes, levies and customs duties, with all taxpayers targeted by end-2026. Nothing on file names the platform before the order of May 2026; tax payment ran through a single window at the postal bank. It is now live on the national payments switch, with payment following a declaration on the tax or customs system, authenticated, reconciled in real time and routed to the treasury against a secured electronic receipt, rolling out at large then medium enterprises with all taxpayers targeted by end-2026. Wave dates for the two cohorts are not published, and the order makes it the sole lawful channel. The filing front end is the tax portal, whose user guide fixes filing regimes, delegation and irreversible submission, one delegate at a time with the legal representative's rights removed for the duration and no correction route stated. 2026-07-15 - a steering committee chaired by the finance minister and seating the directors-general of the revenue authorities held a first meeting on three objectives: improving revenue collection, securing public funds and raising the quality of public spending.	MOVEMENT
Cote d'Ivoire	The tax portal carried more than 78% of the tax directorate's collected revenue in 2021, with nothing published since. The portal was opened by the tax directorate in January 2017. As at 15 March 2022 it had more than 74,000 registered taxpayers, and carried over 22% of the directorate's collected revenue in its first year and more than 78% in 2021. No figure is on file since March 2022, so nothing in the window moves this indicator: what is stated is a four-year-old position on a system that is plainly still central to revenue collection. A current registration or revenue-share figure from the tax directorate would settle it.	MOVEMENT
Djibouti	Electronic customs clearance and payment are now obligatory while the tax system collects nothing. On the customs side the 2026 budget law constitutes the single window by statute, makes the electronic route obligatory for all economic operators with paper admitted only on a duly established technical impossibility, requires duties, taxes and fees to be paid electronically and requires the customs and treasury systems to be interconnected for daily and monthly reconciliation. On the tax side the share of returns filed and paid through the integrated system stood at 0% in January 2026 against a 70% target for 2029. Between them the fund's consultation records electronic payment introduced for vehicle road tax, stamp duty and licensing fees, short of an operational tax system.	MIXED customs collection made obligatory while the tax system stays non-operational

COUNTRY	DEVELOPMENTS	PROGRESS
DR Congo	Standardised electronic invoicing is mandatory since 1 December 2025, with monthly VAT collection above FC 320bn against an FC 280bn average. The system was initiated in 2017 and operationalised on 1 August 2025. It is mandatory since 1 December 2025 for all firms liable to VAT after a two-month moratorium and a further 30-day grace period, the state having distributed more than 4,000 free billing units and electronic fiscal devices to liable small and medium firms, with quarterly VAT mobilisation risen from a CFC 280-290bn average to CFC 340bn, which the finance minister still calls very largely below potential. Fiscal clinics closed in August 2026 with immediate targeted sanctions ordered against non-compliant taxpayers and revenue staff alike. The figures are the minister's own and unaudited. 2026-06-11 - a province made electronic payment of an airport levy official from July through a private technical partner with real-time tracking; whether it went live is not established. 2026-09-03 - the finance minister put monthly value-added tax collection above FC 320bn against an FC 280bn average, about US$141.4m a month, attributing the rise to generalised e-filing and the phased rollout of the standardised invoice. The attribution is his own, on a broadcast accountability programme, with no counterfactual, compliance rate or invoice-volume series behind it.	MOVEMENT
Egypt	A second facilitation package added a premium centre and a real-estate transactions app, against named defects still on the record. The tax system has run since January 2021 across returns, electronic invoices and receipts, registration, payments, automated audit, refunds, exemptions, appeals and enforced collection. 2026-08-19 - a second facilitation package added a premium services centre and a real-estate transactions app on which citizens register transaction details, upload documents, pay taxes and obtain electronic clearance certificates online, with telephone guidance for less confident users; no uptake figure is published. The defects are named by practitioners: historic credit balances never migrated so companies holding credits are shown as debtors; audit offices demanding paper copies of documents already on the authority's databases; files moved to appeal committees on timer expiry; some payments unevidenceable, creating phantom debts; and government bodies not always issuing electronic invoices while the private sector is compelled to. The 2018 transfer-pricing guide is unrevised, with appeal committees relying on the statutory requirement for a minister-approved guide and some penalties cancelled as a result, and a proposed cut of the VAT credit-refund period awaits its legislative steps.	MIXED a second facilitation package added a services centre and a real-estate app while named defects in the tax system remain on the record and the 2018 transfer-pricing guide is unrevised
Equatorial Guinea	A treasury single account has a five-phase roadmap adopted and production targeted for the first quarter of 2027, with the annual tax licence already filed online. A census of all state bank accounts is complete and the account is to be built on the regional central bank's own systems, with no cost, agency or supplier stated (roadmap). The single tax licence moved online in January 2026, with no transaction or take-up figure published (tax licence).	MOVEMENT
Eswatini	An electronic invoicing programme launched in May 2026 against an estimated E4.259 billion annual tax gap, and customs payments now clear in near real time. The programme was launched on 11 May 2026 with a Serbian technology vendor engaged to build it, presented as the answer to an estimated E4.259 billion annual leakage (launch), and rollout began with wholesale and retail businesses (rollout). The revenue service and a commercial bank integrated their payment systems in June 2026 so customs payments reflect on the trade platform in near real time, replacing manual bank-statement reconciliation (integration). An integrated revenue administration system has been running since March 2024 (budget speech). No enrolled-business count and no revenue effect is published for the invoicing programme, so the gap it was built to close cannot yet be measured against it.	MOVEMENT
Ethiopia	A mobile wallet began collecting regional tax in July 2026, described as the first of a planned series with regional revenue authorities. The service went live with one regional revenue authority in July 2026 (regional tax payment). No collection volume, taxpayer count or fee arrangement is published, and the base holds nothing on federal revenue collected through digital channels, which is the larger question.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Gabon	At least 80 per cent of tax revenue is collected through the revenue platform, and an online declaration portal went live in 2025. The tax authority's 2024 report puts at least 80 per cent of revenue through the system, live since April 2024, and no later share has been published (revenue platform). An online declaration and payment portal was announced live by the authority in August 2025 (portal). The share is self-reported by the authority, and the base holds no electronic invoicing mandate and no national platform for the payment and collection of public revenue beyond the tax system.	MOVEMENT
Gambia	A wallet was authorised to collect all government-service payments in March 2026, and a second platform was wired into revenue collection in July. The first collects identity card, passport and business-registration fees with diaspora payment and auto-generated receipts; no volume or fee structure is published (authorisation). A memorandum with the Accountant General wires a domestically built platform, distributed through the postal service, into government revenue collection, with no go-live date, volume, fee structure or list of connected banks published and no text of the memorandum held (memorandum). Two collection channels authorised in five months, neither with a published volume, is the position.	MOVEMENT
Ghana	Electronic invoicing took effect with the 2025 value-added tax Act, while the electronic transfer levy was abolished and with it the case for the system built to collect it. The standing instrument for digital revenue collection requires mobile-money issuers, payment-service providers and banks to connect transactions to the levy system for real-time calculation, capture, reconciliation and remittance to the government account. 2026-01-01 - electronic value-added tax invoicing took effect with the new Act: free or integrated invoicing installed by the revenue authority for registered businesses, generating signed electronic receipts verifiable by code. 2026-06 - the tax administration system's pilot had more than 400 taxpayers onboarded at one office, with an August 2026 target for full migration and a second phase to integrate the companies registrar, the social security trust and the identification authority. No revenue attributed to any of the three is published. 2025-11-13 - presenting the 2026 budget, the finance minister said the removal of the electronic transfer levy had not weakened revenue, attributing the offset to compliance, digital revenue systems and a broader tax base. The levy management and assurance system, which required issuers, providers and banks to connect transactions for real-time calculation and remittance, has no purpose left; no statement of its decommissioning is held, and no repealing enactment is on file either.	MIXED invoicing and the tax platform advanced while the levy the collection system was built for was repealed
Guinea	A public-payments gateway launched in December 2025 for state administrative fees by mobile, alongside social contributions at about 60 per cent online. The gateway entered service on 22 December 2025 (gateway). The social-security platform carries about 60 per cent of contribution receipts (contributions). No collection volume, value or fee arrangement is published for either, so the share of state revenue collected digitally is unmeasured.	MOVEMENT
Guinea-Bissau	The payment platform became the sole channel for the tax identification number and for value added tax on customs clearance. Two orders in December 2025 made the simplified payment platform compulsory rather than optional: the revenue directorate banned the older financial system and made the platform the sole channel for issuing the tax identification number, and mandated platform-only declaration and payment of value added tax for customs clearance, effective immediately. Staff were prepared for it: tax officials in fiscal districts and regional offices were trained ahead of the September 2025 value added tax rollout. The fund's eleventh review names the platform and a taxpayer census among reform actions.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Kenya	Electronic procurement carries more than 1,500 entities against a projected Sh86 billion of savings, and electronic invoicing became comprehensive in January 2026. The platform ties treasury disbursement to procurements actually made and carries budgeting and procurement plans together; the savings figure is a government projection from full uptake rather than a measured outturn, and no transaction volume is published (procurement, appropriation). Electronic invoicing moved to comprehensive income and expenses validation across the entire commercial sector from 1 January 2026 — the opposite approach to the phased sector-by-sector rollouts two neighbours adopted, so three regional revenue administrations run unharmonised regimes; the underlying instruments are not held here and no compliance or coverage figures are stated (invoicing).	MOVEMENT
Lesotho	Tax e-payment integration went live in February 2026 for company tax, pay-as-you-earn, value-added tax and customs duties. Revenue Services Lesotho and Standard Lesotho Bank launched the integration on 11 February 2026, reachable over USSD, internet banking and the bank's mobile application (launch). No collection figure, share of receipts taken electronically, or extension to a second bank has been published since.	MOVEMENT
Liberia	A mobile-money tax platform carries taxes and fees for 18 ministries over USSD without internet. The platform launched in July 2025 connects directly to the integrated tax administration system and carries taxes and fees for 18 ministries and agencies over USSD with a text-message receipt, so it works without a data connection. It predates the central bank's routing mandate. From 1 December 2025 all revenue collections by mobile money must route through the national switch. A compliance audit covering 2018 to 2024 found variances between bills and payments in the customs and tax systems, discrepancies between the tax system and the general revenue account, and unauthorised withdrawals in transitory accounts.	MOVEMENT
Libya	State treasuries and collecting agencies must accept electronic payment from March 2026, the first duty of its kind placed on revenue bodies. The obligation reaches treasuries and collecting agencies and was issued together with a cut in the foreign-exchange levy (mandate). No collection figure, adoption rate or list of complying agencies has been published since, so the base holds the requirement and no measure of what it has changed.	MOVEMENT
Madagascar	Two collection systems entered service in the window: non-tax revenue by mobile money and an integrated tax administration platform. A non-tax revenue system launched in May 2025 enabling 24-hour mobile-money payment of government revenues through the three mobile money operators, with progressive nationwide deployment (launch). The integrated tax administration system was confirmed tested and ready for production from the end of September 2025, consolidating electronic filing, diversified payment and traceability (production). Mandatory electronic invoicing was made law by decree of 2 July 2025, running through a central platform connected by interface to homologated third-party systems and phased from large taxpayers (decree). No collection figure under any of the three is held.	MOVEMENT
Malawi	A National e-Payment Gateway is designed as the single entry point for all government collections, under a fiscal governance programme of about US$80m. The gateway was described as a 2025 breakthrough despite integration hurdles, supported by a financial inclusion project and a development bank; no live date, transaction figure or agency coverage is stated, and one dated account is all the base holds (gateway). A fiscal governance programme of SDR 60.3m, about US$80m equivalent at appraisal, supports revenue mobilisation, budget execution and procurement modernisation including e-procurement digitalisation (programme); the base carries no implementation, disbursement or results reporting after the appraisal document (programme).	MOVEMENT
Mali	TresorPay takes identity fees and fines, and about FCFA 200m was collected digitally at civil registry centres between July 2024 and May 2026. The treasury payment service launched in March 2025 for identity fees and fines, with no transaction figure published (service). About FCFA 200m was collected at civil registry centres between July 2024 and May 2026, and every local authority has been ordered to report within thirty days (collections). That reporting order is the base's only sign that the state is measuring what its own digital channels take.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritania	A tax on electronic transactions took effect in 2026, the electronic tax platform has 66 public bodies enrolled, and electronic invoicing was announced. The 2026 finance law levies 0.1 per cent on electronic transactions above MRU 5,000 and 10 per cent on agent commissions, collected at source (tax). The electronic tax services platform has 66 public bodies enrolled, 53 filing electronically and 3 paying through it, against 642 legally constituted public bodies of which 339 are active with the tax administration; more than 500 taxpayers overall are on the platform, producing 36.45 per cent of directorate revenue in 2026 (platform). Electronic invoicing for public institutions was announced in July 2026 to handle value-added tax and withholding at source by transferring data automatically to the tax directorate, with no instrument, supplier or date published (invoicing).	MOVEMENT
Mauritius	Value-added tax on digital services from foreign suppliers is being collected, with a supplier guide now at version 2.0. The central bank's annual report for the year to June 2024 is the standing account of the payment system revenue runs over (report). The revenue authority collects value-added tax on digital and electronic services supplied from abroad (regime), and its guide for foreign suppliers is at version 2.0 (guide). No collection figure under the regime is published, and no count of registered foreign suppliers is held.	MOVEMENT
Morocco	The fund attributes a tax take of 24.6 per cent of output in 2025 to the full digitalisation of collection. Customs went first: the administration digitised revenue collection and banned cash for commercial clearance from 2019. The fund's 2026 consultation puts the result at a tax take of 24.6 per cent of national output in 2025, attributed to full digitalisation of collection — the clearest fiscal return on a digital system the base holds for any unit. The tax directorate's own procedure page shows two online routes to a tax identifier.	MOVEMENT
Mozambique	An online tax clearance certificate went live in August 2026 with a ten working-day ceiling, and a tax amendment on wallet-agent commissions is in preparation. The certificate is requested through the taxpayer portal and issued within a maximum of ten working days, with a published electronic complaints address; the authority's own communique is not held (certificate). An amendment on the taxation of mobile-money agent commissions is still in preparation, with taxation already proceeding under the existing framework and 787 wallet agents registered for tax numbers in the first half of 2025; no adoption, tabling or gazetting is held (amendment).	MOVEMENT
Namibia	The revenue agency collected N$98.9 billion gross in 2024/25 from 1.0 million registered taxpayers, 575,136 of them electronic filers. At 31 March 2025 the agency had 1.0 million registered taxpayers, of whom 575,136 were registered as electronic filers, on 1.04 million active tax accounts (annual report). Gross revenue that year was N$98.9 billion and net N$88.555 billion (annual report). The year before it recorded 477,164 electronic filers (2023/24). A trader identification number became mandatory on every import and export declaration on the customs platform from 1 April 2026, tying the customs register to the taxpayer register (notice). A tax amnesty had brought in 28,157 taxpayers and N$2.6 billion by 30 September 2025 (amnesty). The integrated tax administration system is in service, and electronic filing covers rather more than half of those registered.	MOVEMENT
Niger	Identity-fee payment kiosks were deployed at enrolment sites in April 2026, issuing receipts for the enrolment file. The kiosks went live at enrolment sites on 27 April 2026 (kiosks). They are the state's only digital collection channel on this record, and they collect for the identity programme rather than for general revenue. No transaction count or value is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Nigeria	NGN 27.1 trillion was collected between January and July 2026, credited to digitised systems, with a treasury system deducting automatically and 7.5 per cent VAT on electronic banking fees. Collection ran at NGN 27.1 trillion between January and July 2026, an average NGN 127.83bn a day and 95.76 per cent of the whole of 2025's collection, which the revenue service credits to digitised tax systems, four reform laws and an executive order closing loopholes (collection); the attribution is the service's own and no counterfactual or system-level breakdown is published (collection). The treasury management and revenue assurance system automatically deducts and remits value-added tax, withholding tax and stamp duty on vendor payments across all agencies (treasury). Value-added tax of 7.5 per cent on electronic banking fees took effect in January 2026 (tax).	MOVEMENT
Rwanda	A ministerial order of April 2026 requires financial institutions facilitating online payments to integrate with tax administration systems; collection ran at 101.9 per cent of target. The revenue authority's own annual report records 101.9 per cent of the revenue target collected in 2024/25, with electronic tax filing, billing machines, mobile declaration and online payment and refund services in continuing operation (report). The order made on 29 April 2026 requires financial institutions facilitating online payments to integrate with the tax administration's systems (order). On the consumer side, over RWF 464 million was paid to 40,905 people who requested electronic invoices, using the reward loop as a compliance mechanism (disbursement).	MOVEMENT
Sao Tome and Principe	VAT ran through computer systems from the 2019 code, and by September 2024 3,866 taxpayers were registered on the VAT system with collections at 3.32 per cent of GDP. The VAT code's preamble states that the tax operates exclusively through computer systems for both declaration and payment, which draws the economic operator into the electronic invoicing system (code). The completion report states that VAT implementation collected the equivalent of 3.32 per cent of GDP in September 2024 with 3,866 taxpayers registered on the system, and that after installation of the central bank core banking system 22 per cent of Treasury and central bank processes were digitalized as of October 2025, with commercial bank interfaces at 20 per cent and cheque compensation at 23 per cent (report). Those are the only digitalisation percentages the base holds for any part of the state, and none is above a quarter.	MOVEMENT
Senegal	The tax authority withdrew the paper fiscal stamp on 20 July 2026, and a provider suspended its free electronic stamp service on 28 July citing an administrative decision outside its control. The withdrawal made the digital service the sole recognised channel. It is removal of the analogue route rather than addition of a digital one: unused paper stamps were exchangeable until 15 August 2026, and no offline or assisted route is stated (stamp, channel). Eight days later a provider suspended its free tier, citing an administrative decision outside its control. It is the first consumer-cost consequence of state-platform exclusivity the base holds, and it is not stated whether the decision was addressed to that provider or to the distribution channel generally (suspension). A levy on mobile-money transfers was proposed under a recovery plan to raise about FCFA 220bn over three years; both sources post-date the window's start, so the proposal's earlier position cannot be stated (levy).	MIXED the paper fiscal stamp withdrawn in favour of a digital channel while the free tier of that channel was suspended eight days later
Seychelles	Customs duties have been payable online since June 2024 and Cabinet now requires electronic payment of dues of R50,000 and above. The revenue commission launched an ePayment facility for customs duties on the ASYCUDA system, delivered under the economic partnership agreement with the European Union (launch). Electronic filing of tax documents gained its legal basis in regulations made on 24 November 2025 (regulations), and from 1 April 2026 a digital acknowledgment notice replaces the paper assessment letter on lodgement (notice). In April 2026 Cabinet approved customs regulations requiring electronic or bank-transfer payment of dues of R50,000 and above (Cabinet). No share of revenue collected electronically is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sierra Leone	The revenue authority began distributing smart tax machines to 10,000 registered businesses from 31 August 2026, and put non-tax revenue on a mobile application. Nationwide distribution of smart goods and services tax machines to 10,000 registered businesses began on 31 August 2026 (distribution). The commissioner-general said they complement the existing electronic cash register system and are intended to support accurate record-keeping, strengthen compliance, let businesses issue valid receipts and reduce revenue leakages (distribution). Surveyors were trained at Makeni in July 2026 to collect service fees through the authority's non-tax revenue mobile payment application, in a provincial rollout (application). The authority's statutory basis is the National Revenue Authority Act 2022 (Act). The machines are counted against no published total of registered businesses, no distribution schedule, no cost and no baseline for the leakage they are to reduce.	MOVEMENT
Somalia	A binding circular made digital revenue receipts mandatory from January 2026, and the audited annual report records digitalisation among 2025's reforms. The finance ministry's publications register records a binding formal circular mandating the use of digital revenue receipts, released on 4 January 2026 (circular). The document is an image-only scan whose text was recovered by character recognition. The audited annual report and consolidated financial statements for 2025 describe digitalisation of public finance regulations and revenue reforms as an achievement of the year, naming a non-tax revenue portal, an electronic tax administration system and customs-to-financial-management integration (report). No collection figure attributable to the digital channel is published.	MOVEMENT
South Africa	The revenue service published a VAT modernisation consultation paper proposing electronic invoicing, an interoperability framework and electronic reporting, with feedback due 16 October 2026. 2026-08 — the revenue service released a VAT modernisation consultation paper proposing a digital VAT model combining electronic invoicing, an interoperability framework and electronic reporting, aimed at moving administration off manual processes and retrospective verification and into the systems businesses already run. It follows a 2023 discussion paper and is stated as building blocks rather than a decided design. The fuller account describes a five-corner model moving toward VAT auto-assessment, with a phased rollout from 2026/27 and stakeholder feedback due 16 October 2026. It is a consultation paper, not a rule: no cost to business, exemption threshold, accreditation regime for service providers or legislative vehicle is stated. What has advanced is a published design intention on the largest transaction flow the state touches. 2026-08-31 — the home affairs department re-advertised its revenue administration system over 275 fixed sites and 230 mobile units, replacing a generic 400-plus listing and making point-of-sale devices and mobile offices the primary transaction channels, with only suppliers on the state IT agency's RFB 1183 transversal contract eligible to bid. It is a tender, not an award: no value, closing date or bidder is held.	MOVEMENT
South Sudan	Cash payment of tax at revenue offices was barred with immediate effect in July 2026, after cash was abolished for passport and identity payments in January. The economic reform committee ordered banks to enforce cash tax payments (directive), reversing the direction the cashless measure set. The tax measure was made by resolution of a ministerial committee on economic reform, framed by the authority as a transparency and liquidity response and stated as temporary until further notice (resolution). Cash was abolished for passport and identity payments after a supply crisis in January 2026 (passports). Both are removals of the cash channel rather than additions of a digital one, in an economy widely described as overwhelmingly cash-based, and neither states an assisted or offline route for anyone without an account.	REGRESSED

COUNTRY	DEVELOPMENTS	PROGRESS
Sudan	An electronic government-collection system is named among the reforms behind a stated rise in first-half 2026 revenue, and the ministry states no figure, baseline or attribution method behind the claim. The system is contracted through a national bank (contract) and has been transferred between states (transfer), with one state's collection rate praised by the minister (praise). That state's figure of more than 90 per cent is the state's own and unverified, and the ministry states no revenue figure, baseline or attribution method behind the claimed rise (reforms, directives). A collection system spreading state by state is the most concrete delivery in this unit; the revenue claim attached to it is not testable from anything published.	MOVEMENT
Tanzania	A mandatory electronic payments order made nine scheduled transaction classes electronic-payment-only, an order under the electronic transactions Act rather than regulations, and cash remains legal tender. The order came into operation in 2026 and is widely mis-reported as regulations (order, drive). Mandatory electronic settlement for named transactions was explained to traders under the 2026/27 tax law changes; traders at the same meeting asked for cheaper electronic transaction charges, and no commencement date or penalty is stated in the record held (settlement). A central electronic ticketing system carries transport ministry figures to March 2026 alongside a companion vehicle tracking system on 13,843 buses (ticketing); the figures are the ministry's, reported at second hand, and no earlier count is held for either (ticketing). Zanzibar moved a fare box and a set of municipal charges onto one wallet: fares on the fifteen electric buses that entered service on 1 August 2026 are paid by smart card, and the same platform carries municipal parking fees, traffic fines and state payments to clove farmers (Zanzibar).	MOVEMENT
Togo	Electronic filing reached 100 per cent for large and medium enterprises and 24 per cent for everyone else in 2025. Online declaration and payment became compulsory for large and medium enterprises from 15 October 2019. The 2020-2025 series shows payment at 100 per cent for those two directorates from 2021 and 2022 and holding there, while the directorates covering the remaining taxpayers reach 24 per cent payment and 26 per cent declaration in 2025, up from 13 per cent in 2024. The 2026 finance law introduces certified electronic invoicing to counter value-added tax fraud; the gazetted text is held as an image-only scan whose substantive articles are not transcribed. An exemptions platform launched September 2025 feeds the customs system automatically.	MOVEMENT
Tunisia	Customs duties are payable electronically through the trade-formalities system, and e-invoicing reached service providers in January 2026. A decree gazetted in August 2024 sets the rules for electronic payment of customs duties, taxes and penalties to the Treasury through the integrated automated foreign-trade formalities system, settling to the Treasury's current account at the central bank. Article 53 of the 2026 finance law extended mandatory electronic invoicing to service-provision operations from 1 January 2026, and the tax administration's operating note applied it to providers already enrolled in the national e-invoicing network. No share of revenue collected electronically, and no enrolment count for the invoicing network, is published.	MOVEMENT
Uganda	Tax and government payments went nationwide on a mobile-money shortcode and non-tax revenue is centrally collected, while expressway tolls are still taken in cash. The standing arrangement is consolidation: fees once collected by individual ministries, departments and agencies are now collected and accounted for centrally by the revenue authority through its electronic tax and payment reference interface. 2025-12 - an enhanced tax and government payment menu went live nationwide on a mobile-money shortcode, stated to cut queues for individuals and businesses. 2026-03 - a bill gazetted on 27 March 2026 revises the penal tax for failure to use an electronic fiscal device or to issue an electronic invoice or receipt, tightening enforcement behind mandatory electronic invoicing. 2026-08 - against that, the Kampala-Entebbe Expressway concession remains reliant on cash, with a parliamentary committee recommending the revenue authority take over collection and introduce an electronic system. No non-tax revenue total, channel split or agency count is published, so the reach of the consolidated interface cannot be stated.	MIXED tax collection digitised while expressway tolls stayed on cash

COUNTRY	DEVELOPMENTS	PROGRESS
Zambia	The government payment gateway puts cumulative collections at over K8.8 billion with no stated start date, and the two digital revenue figures cover different periods and issuers. The collection total has no stated start date, so it is a cumulative figure of unknown period (gateway, appraisal, property). The two revenue figures cover different periods and issuers and are not a like-for-like series (revenue, investment, finances). A cumulative total of unknown period and two non-comparable figures are what the revenue record supports.	MOVEMENT
Zimbabwe	Radio-frequency toll tag express lanes opened at two of 29 plazas, with nothing stated on retention, access or legal basis for the movement record the tags generate. The first plaza was handed over in July 2026 (tolls). Nothing is stated on retention, access or legal basis for the movement record the tags generate — a vehicle-location dataset created by a revenue measure, in a unit with a licensing regime for data controllers that this system's operator would fall under. A taxpayer registration self-service portal is readying a second phase of the wider revenue management system, integrating third-party stakeholders; that detail is paywalled beyond the free lede (portal).	MOVEMENT

B2B and B2G functionality

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The tax directorate launched remote electronic payment in July 2026, completing the declare-and-pay path online. The tax portal was established under the 2022 finance law, and the directorate's own guidance on opening a tax file is the public-facing description of how a taxpayer enters the register it runs on. 2026-01-21 - remote declaration became obligatory. 2026-07-25 - remote electronic payment was launched, and a joint finance and commerce protocol had launched electronic payment of stamp duties for commercial-register formalities in December 2025. No transaction volume or take-up figure is published.	MOVEMENT
Benin	The instant-payment rail is designed to serve businesses and public administrations as well as individuals. No business or government transaction volume is published. 2025-09-30 — the rail launched with individuals, merchants, businesses and public administrations named in its own design scope. What is not held is any measure of use by those two classes: no B2B or B2G transaction count, value or share appears anywhere on this ledger, so what can be stated is the functionality and not its uptake.	MOVEMENT
Botswana	A second phase of the retail payment switch and a government cash-deposit system are named in the 2026/27 estimates. 2003 — the National Clearance and Settlement Systems Act empowers the central bank to recognise and regulate clearance and settlement systems, the statutory basis for the interbank rails. 2026-02-26 — the finance ministry named a second phase of the national retail payment switch and a new central-bank digital cash-deposit system for government revenue collection. Neither carries an operator, cost or go-live date on the record, and no business-to-government transaction volume is published.	MOVEMENT
Burundi	A national instant payment system launched in April 2026 with interoperability across banks, microfinance and payment institutions. 2025-09-18 — managers of public funds were required to obtain an electronic-billing-machine invoice from suppliers before payment, on pain of a 20 per cent penalty — a digital control placed inside the government-to-supplier payment cycle. 2026-04-23 — the national instant payment system was launched, built under the World Bank-supported foundations project and providing full interoperability between commercial banks, microfinance institutions and payment institutions. The central bank reports annually on the clearing house, the real-time gross settlement system, the national switch and electronic money, so a series exists; no transaction volume or value for the new instant system is yet published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cameroon	Interoperable merchant payments ran at 48,605 transactions worth FCFA 9.7bn in the first quarter of 2026, under 1% of switch volume. The first-quarter 2026 acquiring and issuing tables record 48,605 transactions worth FCFA 9.7bn, under 1% of the switch's 2025 volume, at an average ticket of FCFA 199,485 against FCFA 42,512 across all flows. The concentration is extreme: two mobile operators together account for 98% of issuing value and one bank for 71% of acquiring value. A merchant rail with an average ticket nearly five times the all-flows average is being used for large payments between businesses rather than for retail acceptance, which is what the tariff consultation concedes.	MOVEMENT
Cape Verde	Payment for central-administration goods and services is conditioned on electronically issued invoices, and the 2026 budget allows a 130 per cent deduction for adopting electronic invoicing and the standard audit file. 2026-01-09 - the execution decree makes central-administration procurement run on the electronic public contracting platform and conditions payment for goods and services on electronically issued invoices — a government-to-business rail with a compliance condition attached to it. The business-to-business leg is an incentive rather than a mandate. The 2026 budget law allows companies to deduct 130 per cent of spending on accounting and invoicing equipment and software in the course of adopting electronic invoicing and installing the standard audit file for tax purposes, extends the uplift to software migration, training, system parameterisation and the digital certificate, and directs the government to create a business programme easing adoption by small taxpayers. No adoption count and no mandatory commencement date is published. The procurement platform itself was re-let at CVE 70,000,000 over four years on terms of perpetual licensing, unlimited users, deployment on national infrastructure and full control of source code.	MOVEMENT
Central African Republic	An operator and a customs supplier launched automated mobile payment of the import declaration fee in July 2026. 2026-07-03 - an operator, a customs technology supplier and a state entity launched automated mobile-money payment of the prior import declaration fee, with automatic generation of the declaration reference. It is a business-to-government rail on the customs chain and the clearest one the base holds. No transaction volume, value or share of declarations paid this way is published. The other government-facing rail on the record runs the other way: mobile-money salary payment for officials outside the capital, which the same ledger carries as not held.	MOVEMENT
Chad	An interoperable payments platform partnership was announced with an international finance institution. The partnership was announced in April 2026 (partnership). No value, scope, timetable or participant list is published. It is the only business-facing payments instrument in this ledger, against three licensed wallets whose usage is unmeasured.	MOVEMENT
Comoros	A decentralised digital financial institution was licensed in February 2026, and an agent-banking network is still in test. 2026-02 - the central bank licensed a separately regulated entity under prudential supervision offering mobile nano- and micro-credit alongside the group's existing wallet, on a branchless model. It is company-announced and reproduced near-verbatim by both outlets; no central-bank statement, licence instrument or regulation establishing the category is held, and the underlying payment-services and electronic-money statute had been adopted five years earlier. The agent-banking network has been in test since June 2025 with agents identified and trained and progressive commissioning under way, two microfinance institutions not having signed the conventions - eleven months in test with no live date published.	MOVEMENT
Congo	Public revenues were put onto a single payment platform by order, which is the business-to-government leg. 2026-06-11 — an order set the payment of public revenues onto a single platform. That establishes the business-to-government direction. The ledger separately carries the CEMAC interoperable QR-code standard, which is the regional rail businesses would use. No business-to-business volume or value appears anywhere.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cote d'Ivoire	The treasury's mobile payment platform was built to digitalise all state payment and collection, and reached public hospitals in 2026. The treasury's own account of the platform's origin runs from a revenue-collection service for local authorities and a 2019 decree instituting electronic collection of revenue in communes, regions and districts, to the build of a mobile payment platform with a state financial subsidiary to digitalise all state payment, collection and receipt mechanisms. 2026-05-28 - it was extended into public health establishments for electronic collection of hospital fees on a named short code, with public accountants, hospital agents and cashiers trained. The claimed effects are reduced cash handling, automated remittance and traceability of receipts. That leg is citizen-to-government rather than business-to-government. No transaction volume, value or participating-institution count is published for the platform on any leg.	MOVEMENT
Djibouti	The settlement platform has combined real-time gross settlement and automated clearing since 2021, the Treasury a participant. The wholesale layer is in place and unchanged across the period: the central bank's platform combines a real-time gross settlement system and an automated clearing house, covering interbank settlement with the Treasury among the participants - the route by which a business pays a bank or the state. The one measure inside it is a tightening of instruments rather than of function: from 31 August 2025 cheques had to meet new format, security and encoding standards or be refused by every clearing channel. No transaction volume, value or participant list is published, and no electronic-invoicing or government payment portal appears in the record.	NO CHANGE
DR Congo	A partnership agreement covers connecting microfinance institutions and cooperatives to the national switch across 145 territories. 2026-04 - a payments firm and two sector associations signed on core banking, enterprise resource planning and card modules, 10,000 payment terminals with biometric authentication, chip cards, and connection of microfinance institutions and cooperatives to the national switch across 145 territories. Nothing is deployed on file. The switch connection is the load-bearing item and no go-live is held; the arrangement is externally financed, and no source names the operator of the switch, the connection standard or what an institution must meet to join.	MOVEMENT
Egypt	A digital factoring portal lets companies verify prior funding of an invoice electronically, enforcing a ban on double-funding a receivable. There was no electronic check on whether an invoice had already been funded. Factoring companies now verify prior funding electronically through a direct link with the finance ministry and the tax authority, the platform vetting invoices before financing and freezing them to the financing company to enforce a board resolution's ban on double-funding a receivable, with a second phase to make the full cycle electronic undated; companies were trained on it on 6 August 2026. Factored paper value rose 77.8% in 2025 to EGP 132.2bn. 2026-08-13 - the state digital financial infrastructure operator agreed the full acquisition of a non-bank lender to small and medium firms, extending its own infrastructure into direct lending, with no consideration disclosed; the record states no separation between its role building and running government payment infrastructure and the lending book it is buying.	MOVEMENT
Equatorial Guinea	Cash collection of taxes and fees is prohibited, and chamber registration is required before any state contract or payment. The presidential order of September 2025 routes all public revenue to bank accounts or electronic platforms, which makes business-to-government payment electronic by default. On the identification side, registration with the chambers of commerce became a precondition of any state contract or payment from 1 January 2026. The procurement system that would carry the transaction is still a bill.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Eswatini	All bank and non-bank participants are connected to the payment switch's round-the-clock fast-payments platform, on a wholesale system running since 2007. The interbank payment and settlement system has operated under its 2007 rulebook since then, and is the wholesale rail beneath business and government payments (rulebook). The finance minister told Parliament in February 2026 that all bank and non-bank participants are connected to the payment switch's 24-hour fast-payments platform (budget speech); the eighth and final participant went live on 15 November 2025 (remarks). The FinTech Strategy 2025-2030 targets 80 per cent interoperability by 2028 (strategy). Against the rails, more than 90 per cent of person-to-business payments are still cash (survey), and no business-to-business or business-to-government transaction volume is published.	MOVEMENT
Ethiopia	Federal public bodies must now accept payment from any licensed provider (directive), and an electronic invoicing layer was established. Directive 1069/2025, signed by the finance minister in May 2025, requires all federal public bodies to accept payment from any licensed payment service provider — cards, prepaid instruments, mobile wallets, mobile and internet banking and bank transfers — and to integrate their collection systems with authorised gateways (directive). Directive 1142/2026 established the electronic invoicing administration layer, requiring taxpayers to use an authorised electronic invoice registration system and setting rules for sales-registration system providers (directive). The national payments conference of December 2025 recorded the launch of the draft national digital payments strategy and of the instant payment system, the rails both directives depend on (conference). The base holds the obligations, not compliance: nothing counts the public bodies that have integrated.	MOVEMENT
Gambia	The instant payment switch links banks, mobile money and fintechs, and a revenue platform is unifying government collections. The switch launched in December 2025 is the country's first real-time interoperable rail across banks, mobile money and fintechs, on a phased rollout. On the government side a revenue platform to unify payments across ministries and agencies is advancing, per the State House readout of March 2026, and the revenue authority's 2023 self-assessment had already put a tax payment interface live. Six banks are live on the regional cross-border system.	MOVEMENT
Ghana	The central bank puts the small-business financing gap at US$4.8bn a year and proposes digital transaction data as the underwriting route to close it. The figure is the bank's own, published in speeches rather than in a series, with no methodology, sample or date range given (financing gap, digital lending). The proposal attached to it, lending underwritten on mobile-money and other digital transaction records rather than collateral, is stated as a direction and carries no instrument, timetable or participating lender.	NO CHANGE a first measurement with no earlier figure behind it
Guinea-Bissau	Importers must declare and pay value added tax through the platform to clear customs, from December 2025. The circular of December 2025 makes business-to-government payment electronic by compulsion: importers declare the tax they have borne on the customs declaration and pay exclusively through the platform. The cross-border trade layer is being built regionally: a Bissau workshop presented the union's paperless customs directive and a planned trade-document exchange platform in April 2026.	MOVEMENT
Kenya	An equity-trading service on the dominant wallet reportedly took 40 per cent of trades by number in its first days. It launched in February 2026 with a brokerage, opening exchange equities to wallet customers without a conventional brokerage account, and accounted for about 5 per cent of daily trading value (service). A wallet becoming the largest retail route into the securities exchange by transaction count is the clearest instance in the base of payments infrastructure carrying a function it was not built for.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Lesotho	The national e-invoicing platform is rolling out with business-to-business and business-to-government invoicing. 2023-03-14 — the revenue authority launched its e-payment and e-taxation platform, the operative business-to-government rail. 2026-02-10 — a payment gateway with a commercial bank went live for tax settlement. 2026-08-12 — the national e-invoicing platform is rolling out nationwide, carrying business-to-business and business-to-government invoicing. No transaction volume or value is published for any of the three.	MOVEMENT
Liberia	The state auditor found US$36,768 paid in full for a digital lending platform that was contractually due live in May 2025 and never deployed. The field verification was in May 2026 and the management letter issued in June (audit). The same audit found no functional project audit committee, a US$27,000 consultancy let without competitive procurement, and an agriculture commercialisation fund reporting dashboard never formally handed over to the ministry (audit).	REGRESSED
Libya	The Prime Minister ordered treasuries to accept electronic payment of all state revenues in March 2026. The decision activates electronic collection of all public revenues and dues at Libyan treasuries, which is the mandate side. The delivery side is smaller and specific: the central bank exempted point-of-sale fees for tax, customs and port payments and deployed 130 terminals as a first phase, moving toward ending cash collection. The bank's own payment and settlement page sets out the rails behind it and gives no business or government transaction figures.	MOVEMENT
Madagascar	A digital-bank strategy serving about 500,000 merchants a month was announced in November 2025, alongside a business transactions application. The fintech cluster was rebranded in November 2025 and its mobile money and payment products are being evolved toward a full digital bank across five markets, serving about 500,000 merchants a month (strategy). A competing operator launched a business transactions application in March 2025, still in service with no take-up figures published (application). No government-to-business or business-to-government payment stream is separately recorded.	MOVEMENT
Malawi	Electronic procurement became mandatory for all ministries and agencies from 1 April 2026. The business-to-government channel has run since 2018: the revenue authority's electronic payment and payment-reference service settles tax through authorised dealer banks, on the same channel corporates already used for bank transfers. 2025-11 - the authority's annual report records the customs platform upgraded with electronic payment integration for goods in transit, and continued rollout of the electronic invoicing system. 2026-03 - a government circular made use of the national electronic procurement system mandatory for all ministries, departments and agencies from 1 April 2026, under section 71 of the procurement Act. No transaction count, value or compliance figure has been published since the mandate took effect.	MOVEMENT
Mauritius	The central switch routes payments around the clock, and payment aggregators were brought under guideline in July 2026. The central automated switch is owned and operated by the central bank and routes payments among operators on a 24-hour basis (switch). A guideline for payment aggregators was issued in July 2026, bringing them under a stated supervisory expectation for the first time (guideline). Business-to-business measures were carried in the 2026-2027 budget (budget). No transaction volume through the switch is published in the sources held.	MOVEMENT
Morocco	The bill settlement rail opened to fintechs and invoicing software vendors by interface in February 2026. The platform carried 218m transactions in 2024 and offered a plug-and-play collection add-on requiring no interface work, which is the low end of the market. In February 2026 the operator opened the rail to fintechs and invoicing software vendors through an interface, on a cumulative 240m transactions and MAD 220bn since 2013. On the public side, suppliers to state enterprises file invoices and track payment delays electronically.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mozambique	The instant payment system launched on 16 March 2026 with 24/7 availability, web, app and USSD access and free interbank transfers for individuals, above a treasury service linking the state system to banks and e-money institutions. 2026-03-16 — the central bank governor launched the instant payment system, already legally created by an earlier notice, moving the rail from regulation into live operation: available 24 hours a day all year, funds available near-instantly, reachable by web, application and USSD, with interbank transfers free for individuals. The government-to-business side rests on an older service: the finance minister's address on the 2024 state accounts describes the automated state payments service interlinking the treasury system with commercial banks and electronic money institutions to collect taxes, fees and other state charges electronically. 2025-09-03 — the ICT institute met the state power utility on registering its planned online energy-payment application under the electronic services decree, a sectoral application moving toward regulatory compliance. USSD access matters more here than the launch: it is what decides whether a rail reaches people without smartphones.	MOVEMENT
Namibia	Open banking specifications are complete, with implementation named a priority under the payments vision and no date published. The specifications were reported completed in July 2026 through the payments association's annual report, which is not itself held (specifications). No participating institution, interface standard or pilot is named. Completed specifications with no implementation date are the same shape as the quick-response standard beside them.	NO CHANGE specifications complete with no implementation date published
Niger	The Treasury is now connected to the regional gross-settlement and clearing systems, on an electronic tax payment portal live since 2019. The Treasury's August 2026 seminar report records the single-account reform's advances: connection to the regional gross-settlement and clearing systems, the creation of a deposits accounting agency, and the closure of most public administrative bodies' accounts held in commercial banks. The tax authority's communiqué of 5 August 2026 confirms its electronic declaration and payment portal has been operational since 13 September 2019, with account activation running through an assigned filing number. No figure for the share of business tax payments made electronically, and no business-to-business payment rail, is on file.	MOVEMENT
Nigeria	Open banking was mandated from August 2025 across about 120m bank customers, a payments company gained direct card-network access without a bank sponsor, and embedded insurance opened to institutions. Open banking was the first in Africa, mandating consented customer-data sharing across about 120m bank customers through identifier-tied consent, a central registry and standardised interfaces, four years after the framework (open banking). A Nigerian payments company gained direct access to a global card network as a non-bank acquirer, letting it onboard licensed merchants without a bank sponsor; no merchant count, pricing or settlement arrangement is stated (access). Tier-one banks hold payments infrastructure inside the group rather than at arm's length, and the central bank has begun regulating fintech ownership as well as conduct (ownership); embedded insurance infrastructure opened to banks, fintechs, employers and merchants (insurance).	MOVEMENT
Rwanda	A bank and mobile operator launched a joint digital loan and savings product in August 2026, and the mobile money platform migrated to a cloud-native vendor platform across four markets. The credit product launched on 2 August 2026, and the announcement names no regulator, consumer-protection arrangement or credit-data arrangement (product). The platform migration completed across four markets; the performance figures are the vendor's own and no downtime, cost or subscriber-impact figure is stated (migration). A credit product built on operator data and a platform moved onto a foreign vendor's cloud in the same month is the private half of the payments picture, and neither carries a regulatory statement.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sao Tome and Principe	The 2026 budget law bars cash payments of 10,000 dobras or more between taxpayers with organised accounting, and a tax and tourism memorandum reinforces the electronic invoicing obligation. Article 9 requires such transactions to use a means that identifies the payee - bank transfer, point-of-sale and ATM terminals, nominative cheque or direct debit - and makes cash spending above the limit non-deductible (budget law). The tax directorate signed a memorandum with the tourism directorate in February 2026 creating a permanent mechanism for sharing data on licensed tourism and hospitality businesses, cross-checking registration and tax compliance and reinforcing the obligation to issue electronic invoices (memorandum). The enabling statute is the 2018 payment system law, which covers transfers between individuals, commercial entities and financial institutions (law). The window's movement is compulsion rather than capability.	MOVEMENT
Senegal	The Treasury payment platform was consolidated so taxes, fines and fees are paid by telephone in one system, with tax and customs interconnected. At one year of the technology strategy the ministry states the platform consolidated so that users pay taxes, fines and administrative fees by telephone in a unified and secured system, and that the first interoperability use cases include public finances, with an interconnection between the tax and customs directorates. The claims are the ministry's own, with no independent measurement. The business-to-government route is older and specific: the customs system integrates an application allowing electronic payment of duties and taxes, on-screen viewing of signed documents and electronic compilation of attachments, within a chain in which no goods move without payment, consignment or guarantee. Business-to-business payment runs on the regional interbank rails rather than a national instrument, and no national volume is published.	MOVEMENT
Seychelles	A domestic fintech ran its first live transaction on a virtual business-account platform, positioned against the cheque phase-out. The first live transaction ran in July 2026 on a platform offering virtual business accounts, with the company also announcing an operating layer above it (platform, cheques, funding). A domestic company building business payments directly into the gap the central bank's cheque withdrawal creates is the clearest instance in this ledger of policy and private delivery lining up. No transaction volume, customer count or pricing is published.	MOVEMENT
Sierra Leone	The national instant payment switch is in service, and a World Bank supervision report is the only published account of its build. The switch launched in February 2025 and no transaction volume, participant count or availability figure is published for 2026 (switch). The implementation status report of the financial inclusion project that built it is the base's account of the delivery (report). Business-to-business and business-to-government use is not separated out anywhere in the record; the switch is reported as a national rail without a breakdown by payer type.	NO CHANGE
Somalia	The national payment system has carried bulk salary and vendor payment since July 2021, and a reform strategy records paperless commitment-to-payment. The central bank's own description sets out automated clearing, real-time gross settlement and interbank funds transfer in service since July 2021, with the clearing house supporting bulk salary and vendor-payment processing (description). The reform strategy approved in March 2026 records daily bank reconciliation across all treasury single account balances and paperless commitment-to-payment processes as 2021 to 2024 achievements, and sets nationwide extension of the financial management system among twelve very-high-priority measures (strategy). A national single window for trade remains planned rather than operating.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
South Africa	A rand-backed stablecoin was listed on 7 August 2026 and integrated into a merchant payments infrastructure twelve days later, on the issuer's own account of use. 2026-08-07 — a rand-backed token was listed on a global exchange for customers in four African countries, issued by an authorised financial services provider with a domestic asset manager holding the reserves and a monthly attestation. 2026-08-19 — a merchant payments provider integrated the token into its infrastructure, letting its commerce partners make and receive payments in it. Two things the record makes plain and one it does not. The quoted pairs are against dollar tokens, so the on-chain liquidity of the rand token is denominated in someone else's currency; and the account of growing merchant use is the issuer's own, with no transaction count or value published. Whether any of it is business-to-business volume rather than listing activity, the base cannot say.	MOVEMENT
South Sudan	An interbank payment and settlement system launched with 13 banks and all licensed banks mandated by January 2026, and its real-time settlement component reported exceptional uptake. The system launched in October 2025 with all licensed banks mandated onto it by 31 January 2026. It is wholesale settlement infrastructure rather than a retail instant rail, and the retail framing used at launch was promotional (launch, explainer). The settlement component's uptake was reported as exceptional by the central bank and the finance ministry, with no volume or value figure attached (uptake). Wholesale settlement working while the retail rail has not started is the correct order, and the launch framing obscured it.	MOVEMENT
Sudan	The central bank linked import and export transactions to the government platform in December 2025, and the first fully electronic export contract ran through it. On 28 December 2025 the central bank inaugurated electronic integration of its import and export system with the government platform, linking foreign-trade transactions to national payment systems; the first fully electronic export contract was executed through it (inauguration). In July 2026 the standards body began taking certification fees through the same platform in coordination with the finance ministry (integration). A wallet's new recurring-debit interface explicitly covers business collections and regulatory fees (interface). None of the three carries a volume figure.	MOVEMENT
Tanzania	All 47 participating providers are connected, 113 payment service providers are licensed with the central bank described as licensing aggressively to break monopolies, and merchants accepting digital payments rose. All 47 participants are connected on the annual report's count, with no earlier participant count held (participants). The finance minister told Parliament 113 providers were licensed, with the central bank described as licensing aggressively to break monopolies and no earlier count held (licensed). Merchant acceptance comes from the central bank's national payment systems annual report for 2025 (merchants, cashless), and a credit reference data system was developed and deployed with onboarding under way — extended by regulation rather than by architecture, and its data subjects are borrowers (credit).	MOVEMENT
Togo	Business-to-government payment is compulsory by mandate, not merely enabled, for a defined class of firms since October 2019. The revenue office's notice of 7 November 2019 records that all large and medium enterprises must declare and pay their taxes online with effect from 15 October 2019, and names the three banks whose platforms were then available. It is the clearest dated evidence in the base that business-to-government payment is compulsory for a defined class. Uptake since is a two-speed picture: 100 per cent for those directorates and 24 per cent elsewhere in 2025. Business-to-business is thinner: the base holds certified electronic invoicing as a 2026 measure and no volume, value or adoption figure behind it.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Tunisia	Mandatory e-invoicing was extended to service providers from January 2026, over rails the central bank puts at 3.255 billion dinars a day. The central bank's own account of the national rails names SIBTEL clearing for transfers under 100 thousand dinars, direct debits, cheques and bills of exchange settling in 24 hours, the SMT card system with its secure online payment service, and the SGMT real-time gross settlement system in service since November 2006, moving about 722 payments a day worth 3.255 billion dinars. Article 53 of the 2026 finance law extended mandatory electronic invoicing to service-provision operations from 1 January 2026, and a tax administration note turned it into operating rules, applying it to providers already enrolled in the national e-invoicing network and keeping paper transitionally for those who had not completed enrolment. Parliament then took the article back under amendment, recording that no unified national e-invoicing system yet exists.	MOVEMENT
Uganda	A wallet insurance distribution product went live, a tokenised-asset exchange changed hands, and a bank and platform memorandum carries a credit-scoring layer with nothing on file about consent, retention or legal basis. The insurance product's first offering went live in July 2026 with no premium, policy-count or target published (insurance). A majority stake in the tokenised-asset exchange moved in April 2026 (exchange). The bank and platform memorandum's signature date is unestablished, and nothing is on file about consent, retention or legal basis for the credit-scoring layer (memorandum). A short-code micro-investing pilot reaches the base only as a comparator in a foreign-led survey, with no domestic source, provider name or launch date held (pilot).	MOVEMENT
Zambia	A 2025 Act mandates an electronic single window and single payment point for trade duties; a new payment Act is passed but not commenced. 2025-08 — the border management and trade facilitation statute mandates an electronic single window and a single payment point platform for import, export and transit duties, taxes, fees and levies — a direct business-to-government payment integration for traders. 2026-04-08 — a new National Payment System Act replaces the 2007 statute, creating licensing and market-conduct rules for payment service providers covering these rails. It is not yet commenced, which is the operative fact: the regime that would govern these payments is enacted and not in force. No transaction volume or value on either rail is published.	MOVEMENT
Zimbabwe	A digital capital-market venue was described as newly approved at the signing of a growth-capital memorandum, with no approval date for the venue itself stated. The memorandum is an intent instrument and no approval date for the venue is stated (venue). A capital-market venue described as approved, at an event about something else, with no approval date, is the whole of the record.	MOVEMENT

P2P, P2G and P2B functionality

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The domestic instant payment system announced in October 2024 has no launch date held, and a QR wallet is unconfirmed. The instant payment system was announced in October 2024 to replace settlement of up to seventy-two hours, and no launch date is held as at 2026-08-03. A mobile QR payment service was announced for a January 2025 launch by a state bank, an Islamic bank and the postal operator, and nothing held confirms it went live; the source is year-precision. So the country's card estate grew by millions of cards and hundreds of billions of dinars in the window while both of its account-to-account retail rails stayed announcements.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Angola	The instant payment scheme is wallet-led, with the largest wallet at 52.2% of transfers and 66.4% of transfers under Kz 10,000. 2026-03-05 — the monthly operator report puts the scheme as wallet-led and concentrated: the largest wallet at 52.2% of transfers, more than 12.3m registered accounts, about 24.8m active payment keys, and 66.4% of transfers under Kz 10,000, against 35m transfers and Kz 590bn over 2025 across 22 banking and non-banking institutions. The small-value share is the finding: this is retail person-to-person traffic, and the concentration in one wallet is a single point of failure the record does not discuss. The base holds no launch date and no figure dated before 2025, so the growth rate cited by the operator cannot be checked against an independent series. Nothing on the ledger covers business-to-business or business-to-government payment functionality except through the tax authority's invoicing mandate, reported under revenue collection.	MOVEMENT
Benin	The regional instant payment rail launched across all eight member states in September 2025, free domestically, with banks and mobile money fully interconnected by May 2026. 2025-09-30 — the regional instant payment rail launched across all eight member states, free for domestic transfers, with banks and mobile money fully interconnected by May 2026, against a rail that had only just launched at the start of the window. Free and fully interconnected is as complete as any payment position on this ledger gets. What is not published is use: no transaction count, value or Benin-specific participation figure appears, so the rail's reach is asserted by its architecture rather than measured. The domestic layer riding on it is a home-grown aggregator, reported under national production capacity.	MOVEMENT
Botswana	The switch's second phase is intended to connect banks and mobile-money providers, and the regulatory sandbox opened in March 2026. 2022-02 — the central bank's licensing guidelines define and license the electronic payment categories, person-to-person and person-to-business among them. 2026-02-26 — the second phase of the retail payment switch is intended to connect banks and mobile-money providers. 2026-03-04 — the central bank opened its regulatory sandbox to applicants on a theme of inclusive payments and interoperability. No retail transaction volume or value is published.	MOVEMENT
Burkina Faso	The regional instant-payment rail is live with nine domestic institutions authorised, and connection deadlines were pushed to September 2026 and June 2027. The rail was in a real-condition test phase with a union launch announced for September 2025 and became operational at the union launch. 2026-03-08 — nine domestic institutions were authorised by February 2026, with 80 institutions connected union-wide by June 2026. 2026-07-07 — connection deadlines were pushed to September 2026 for banks and payment institutions and June 2027 for microfinance. The extension is a union-wide decision rather than a domestic one, so the slippage is not the country's alone; it is still slippage against a rail that domestic uptake depends on. No domestic transaction count or value on the rail is published.	MOVEMENT with connection deadlines slipped
Burundi	The national instant payment system launched in April 2026 and had 17 of 78 licensed institutions live by August, with the four mobile-money systems interoperable. 2026-04-23 — the national instant payment platform launched publicly, connecting banks, microfinance institutions and mobile money on the international messaging standard and USSD at around 1,000 transactions per second, reported as Africa's twenty-second live instant payment system. 2026-08-06 — 17 of 78 licensed institutions were in production by 4 August 2026 — five commercial banks, ten microfinance institutions and two payment institutions — with about 224,000 users and cumulative transaction volume of about BIF 4.29bn, and integration mandatory for all licensed institutions by 5 September 2026 under a penalty of BIF 1m per month of delay. 2026-06-12 — the four mobile-money systems are named as interoperable through it, where they had not been. Fewer than a quarter of licensed institutions are live four months after launch, which is what the September deadline and its penalty exist to change.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cameroon	An interoperable QR-code standard launched at Douala in July 2026 lets any wallet or bank application scan any merchant code. 2026-07-29 - the standard went live so that any bank, microfinance or mobile-money application can scan any merchant code across the six member states, routed and settled through the regional switch. No count of merchants or applications on it has been published since. The state operator's own wallet, launched on 1 May 2025, has never published a subscriber, wallet or transaction figure and was still without one in December 2025, so the one nationally owned retail payment instrument on this ledger cannot be assessed at all. 2026-08-31 — a domestic technology company launched a payments platform carrying transfers across mobile-money networks, wallet management, bill and airtime payment, payment links and developer interfaces. It is a launch announcement on the company's own account: no user, merchant or transaction figure, licence or partner bank is named.	MOVEMENT
Cape Verde	Rede vinti4 is the national retail switch, and cards were the most-used payment instrument in 2024. The Banco de Cabo Verde's payment-systems report for 2024, reported on 24 September 2025, makes the card the most-used payment instrument in the country, at a daily average of 132,405 card operations worth CVE 553.8m. Over the 2025 Christmas period Cabo Verdeans moved more than CVE 9bn through the vinti4 network. The base holds transaction volumes and no breakdown by instrument type, merchant category or island, and no acceptance-point count.	NO CHANGE a standing system the base holds for the first time
Central African Republic	State electricity bills became payable over mobile money at an official launch in August 2026, on a contract dated October 2025. 2026-08-04 — state electricity bills became officially payable over one operator's mobile-money service, for subscribers including those in five named towns, under a contract dated October 2025. No tariff, transaction fee, volume, revenue share or exclusivity term is disclosed, the two companies are the only announcers of record and no regulator is named. The report states subscribers were already paying this way before the ceremony, so the launch date belongs to the agreement rather than to first use. It is the first person-to-government payment channel on this ledger and it is a bilateral arrangement between a utility and one operator, in a country where a single operator's month-long outage has already stopped salary payments.	MOVEMENT
Chad	The regional central bank launched an interoperable payment QR code in July 2026; no Chadian deployment is named. The regional central bank governor launched the interoperable payment QR code at Douala on 29 July 2026, with operations using the regional instruments to be routed through the community switch; it applies to Chad as a member state and no Chadian deployment is named (launch). Domestically the finance ministry's February 2026 conventions with the four mobile-money operators allow public revenue to be paid through their platforms (conventions). The operative law is regional rather than national: the central bank's register names the 2016 payment systems regulation among the instruments in force (register).	MOVEMENT
Comoros	A national interoperable payment switch went live on 23 August 2025, and a second switch launched in May 2026. The switch was awarded to a supplier on 16 February 2025 and went live on 23 August 2025 connecting commercial banks, microfinance institutions and mobile-money operators, reported by two outlets. 2026-05-04 - the central bank launched a switch on a three-phase plan - cross-bank cash withdrawal, then instant bank to mobile-money transfer, then merchant acceptance - with the first phase from July 2026 and online purchases explicitly not covered. Whether the two are the same object is unsettled: one account tags the same supplier and nothing on file names a vendor for the later system.	MOVEMENT
Congo	A payment aggregator was licensed for a unified interface across mobile operators, banks and microfinance institutions. 2026-06 - a regulator licence was secured for a unified interface across mobile operators, banks and microfinance institutions, the first concrete test of the mobile-money co-regulation question the industry has flagged. No transaction volume, pricing or count of connected institutions is published. The co-regulation question it tests - which regulator supervises a service that is at once telecommunications and payment - has no answer on this ledger, and no memorandum between the telecommunications and financial regulators appears anywhere.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cote d'Ivoire	A cross-network transfer application went live in May 2026, and school fees enter a mobile-money pilot. 2026-05 - a privately built application moving funds directly between mobile-money networks went live in six West African countries with instant cross-border transfers. Its volumes, licensing and regulatory status are not stated. 2026-07-21 - a convention opened a pilot in 200 private secular schools from August 2026: fee collection through a mobile wallet, credit lines to schools and fee pre-financing for parents up to FCFA 1 million. No fee volume, pilot duration, pricing or data-handling arrangement is disclosed, and a pre-financing facility attached to school enrolment has no consumer-credit safeguard on file.	MOVEMENT
Djibouti	The mobile wallet has been in service since June 2020, but the national instant payment system was moved from operational to in development. The wallet has been in service since June 2020, with an online payment gateway launched under the Prime Minister's patronage on 10 December 2023 and extended to the ports. Neither moved in the window and no subscriber, wallet or transaction figure has ever been published for either. The conventions signed on the gateway's launch day are named by category only and are not held. Both are the incumbent's, in a market with no competing licensed operator. The standing position was corrected downward by an external observer. The 2024 continental instant-payment landscape records that earlier reports listed the national system as operational, but funding has been secured for a payment switch and an instant payment service is not live, so the country no longer meets the inclusion requirements and has been moved to the list of systems in development. The central bank has published nothing correcting the earlier position either way.	REGRESSED the national instant payment service reclassified out of the operational landscape
DR Congo	The state bus operator opened a QR-code ticketing trial in Kinshasa (trial). The state bus operator opened a trial of QR-code electronic ticketing in Kinshasa on 31 August 2026 (trial). No fare volume, route coverage or payment provider is named. The interoperability service has been live since the fourth quarter of 2025 and is now the rail on which a stablecoin settlement use case runs; no transaction volume, merchant count or user figure is held. 2026-04-30 - a palm-vein payment technology launched in Kinshasa, stated as integrated into national payments infrastructure and named against the 2023-2028 financial-inclusion strategy, with no deployment count or transaction figure. 2026-07-14 - a card network and a domestic payments company announced physical and virtual prepaid card issuance, the domestic partner serving more than three million customers through 4,000 agents and 160 agencies; no issuance date or card volume is stated.	MOVEMENT
Egypt	The central bank launched acceptance on merchants' own phones, and a first carrier-billing licence covers government payments. Phone-based acceptance was a pilot capped at EGP 600 per transaction and is now live: merchants may use a smartphone or tablet as an electronic point of sale, accepting contactless card payments with the customer entering a PIN on the device. No merchant count, transaction volume or cap for the live service is held. 2025-12-11 - a first regulator licence for direct carrier billing was signed, letting citizens pay utility bills, traffic fines and civil-registry charges from mobile balance or the monthly bill. No transaction volume, participating operator list or live-service date is held after signature.	MOVEMENT
Equatorial Guinea	Five commercial banks and the regional central bank were pressed to expand cash machines, terminals and card issuance in February 2026. The expansion is sought for value-added tax control and tourism, and no deployment count has been published (pressure). A national plan for cash machines and terminals was launched in May 2025, with connectivity named by the banks and the state infrastructure operator as the limiting factor (plan). So the country has a plan, a ministerial push and no count of machines or terminals at either date.	MOVEMENT with no delivery figure

COUNTRY	DEVELOPMENTS	PROGRESS
Eritrea	There is no digital payment rail of any kind; a modernisation project remains prospective (mission). A development bank delegation visited in April 2026 and reviewed continued dialogue on a prospective financial sector modernisation project, with discussions covering financial-sector modernisation and data systems (mission). The project is prospective, not approved. The system it would modernise has no cash machines, debit or credit cards, or internet banking (evaluation), and Eritrea does not appear in the continental instant-payments inventory (inventory). Person-to-person, person-to-government and person-to-business payment are all cash transactions here, and the base records no exception. The absence was searched again and stands: a sector account of the country's fintech position in March 2026 names no mobile money or digital payments service, records online banking, cash machines and mobile financial applications as largely absent, and puts total online commerce at under US$10m a year. A dated search finding nothing is a different statement from an unexamined gap, and this is now the second.	NO CHANGE
Eswatini	The payment switch launched fast payments as phase one of three, and 35 post offices opened for government-service payments. Fast payments launched as phase one of three; no source held confirms whether the remaining five participants went live as expected by end-January 2025 (launch, explainer). Thirty-five post offices were opened for government-service payments in September 2025 (post offices). A rail whose participant list cannot be confirmed eighteen months after phase one, alongside a physical over-the-counter channel, is where person-to-government payment actually stands here.	MOVEMENT
Ethiopia	An instant payment system launched in February 2026 across 32 banks and 12 microfinance institutions, with merchant and cash-out services added since. The national instant payment system carries account-to-account and wallet-to-wallet transfers with a national quick-response standard and aliases (instant payments). The switch behind it links the challenger wallet to more than 30 banks and wallets in real time, with merchant payments at more than 50,000 merchants (switch integration). Cardless cash withdrawals with one bank went live in August 2026, authorised in the app before cash is dispensed (cardless withdrawals), and prepaid electricity became purchasable in the wallet in July (electricity payments). Cardless ATM withdrawal, live with one bank since August 2026, was extended to a second bank's ATM network by 8 September 2026, authorised in the wallet app and settled in real time. The date it went live with the second bank is not established.	MOVEMENT
Gabon	A national QR payment scheme launched in December 2025 with more than 1,000 codes, and the regional switch moved 20.3m transactions in 2025. The scheme was launched at Libreville by the regional switch operator, presided over by the central bank governor, with more than 1,000 codes at launch (launch, scheme). It extended to the taxi network on 28 February 2026 (taxi extension) and municipal facilitation was agreed on 3 July 2026 (municipal agreement); no transaction volume, value or merchant count above the launch codes has been published since. The regional switch itself carried 20.3m transactions worth FCFA 863bn across 153 participants in 2025, against a reconstructed 14.5m worth about FCFA 710bn in 2024 (switch figures).	MOVEMENT
Gambia	An instant payment system launched in December 2025 across banks, mobile money, microfinance and fintechs. It is built on an open-source core and operated by the national switch; no transaction volume has been published (launch). A partnership signed in June 2025 to take public transport fares by mobile money is unchanged, with no deployment, route or volume figure published in the fourteen months since (transport fares). 2024-10 - the switch beneath the instant payment system has a participant count for the first time: live with twelve participants as at October 2024. No later participant count, transaction volume or ownership statement is held for the switch itself.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Ghana	GH¢492.9bn moved on 954m transactions in June 2026 alone, up about 52 per cent on June 2025, with interoperable traffic at about 1.3 per cent of value. The full year 2023 carried 6.81bn transactions worth GH¢1.92tn, so a single month of 2026 is a quarter of that year's value (June data, oversight report). Interoperability has been live since 2018 and carried 33.5m transactions worth GH¢6.2bn in June 2026, about 1.3 per cent of total mobile-money value; the share, not the volume, is the measure of it. The interbank switch, carrying the bank-side traffic mobile money sits beside, processed 530m transactions worth GHS 1.73tn in 2025 against 402.5m worth GHS 1.15tn in 2024, with the clearing house at 18.82m worth GHS 915.61bn and the near-real-time service at 3.21m worth GHS 357.70bn. Value grew faster than volume in every line, the signature of higher-value transactions moving onto digital rails rather than more small ones. The dominant operator's platform moved onto a cloud-native vendor platform, the vendor reporting cuts of up to 86 per cent in processing and database load, its own figures. A rival launched an agent commission structure paying more for higher transacted value, the bands unpublished (agent scheme).	MOVEMENT
Guinea	A national instant payment system opened in July 2026, interoperable across banks, electronic-money institutions and microfinance. It was built in 127 days on an open-source core by the national card company with a continental payments foundation and a technical partner, and went live nationwide on 22 July 2026 (launch, opening). The separate national switch project, memorandum signed in December 2024, is not operational as a switch in its own right (project register). No transaction volume, value or participant count has been published in the month since the system opened. Bank-to-wallet movement predates the instant payment system: an operator's account-linking service had seventeen banks connected by December 2025, giving balance enquiry, mini-statement and transfers in both directions, though a customer must go to a branch to link the two (account linking).	MOVEMENT
Guinea-Bissau	The country gained its first licensed payment institution in September 2025. Retail electronic payment capacity is new and small: the first payment institution licensed under the monetary union appeared on the register in September 2025, and by June 2026 the country had one payment institution and one electronic money issuer. Person-to-government payment is the mature side, through the simplified tax and contribution payment platform the revenue directorate has made compulsory.	MOVEMENT
Kenya	The dominant wallet's business tariffs were cut from 7 August 2026, with merchant payments fee-free to KES 500 and transfer bands down by up to 49.5 per cent. Merchant receipts are fee-free to KES 500 from KES 200, and the small-trader product to KES 200 from KES 100 with fees capped for 90 days; it was delivered as voluntary alignment with central bank pricing principles, with no legal notice or gazetted schedule to cite (tariffs). A single application replaced the separate wallet and account apps in April 2026, with the standalone apps to be decommissioned six months after launch (single app). The second operator launched a dedicated business wallet, free to fund and returning half of transaction fees as in-wallet cashback, on a 10.9 per cent mobile-money share (business wallet). Alongside the mobile-money rails, a bank-owned scheme runs account-to-account instant transfers around the clock across more than 80 financial institutions, reached through internet banking, bank applications and short codes, with a ceiling of KSh999,999 a transfer. The interoperability claim is the operator's own and no transaction volume, value or pricing schedule is published on the page held.	MOVEMENT
Lesotho	A wallet investment service launched in July 2026 over USSD, from M50 for individual customers and M300 for group-savings customers. Tsetela launched in Maseru on 22 July 2026 over a USSD short code, from M50 for individual mobile-money customers and M300 for group-savings customers, with the asset manager licensed by the Central Bank of Lesotho (launch, account). It is the first investment product reachable from a wallet on record (report), and no subscriber or value figure has been published since (coverage). The dominant operator launched an electronic top-up service that drops physical vouchers, with top-ups from M1.50. No uptake figure, agent-network effect or regulator position is held, and the minimum top-up is the only price stated.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Liberia	An inclusive instant payment system launched in December 2025 in 73 business days, interoperable between the two mobile-money networks. It covers person-to-person and government-to-person payments, where mobile money had been split between two closed networks (launch, system). The central bank's own account is that it was built to a business case rather than to a regulation and sequenced government payments first, moving civil-servant salaries off cheques into wallets and so giving the integrated operators access to float, against a national target of 50 per cent of adults holding an account (central bank account). A national electronic payment switch is named as the follow-on, alongside person-to-government payments, with no go-live date or budget line published (switch, expansion).	MOVEMENT
Libya	Instant transfers ran 18.3m times in 2025, and acceptance widened to petrol stations and to phones used as terminals. LYPAY ONEPAY carried 18.3m transfers worth LD 108.7bn in 2025, the first published volumes for the service (volumes). Jumhouria Bank brought card acceptance to petrol stations on 15 January 2026, the first such service (petrol stations). SoftPOS was launched at EPAIX on 17 June 2026, letting NFC phones act as card terminals (launch, conference). No count of active wallets, or of merchants accepting by either route, is published.	MOVEMENT
Madagascar	A bank was integrated into a mobile money service in July 2026, giving bidirectional wallet-to-account transfers over short code and application. The integration gives bidirectional transfers between wallet and bank account over unstructured supplementary service data and the bank's own application (integration). It is the base's only record of a wallet and a bank interoperating in the country. No transfer volume, fee or count of participating banks is published.	MOVEMENT
Malawi	Mobile money was integrated into the agricultural marketing corporation so farmers are paid into wallets, and card e-commerce acceptance opened to merchants. The integration lets farmers be paid directly into mobile wallets and customers pay electronically for commodities across the corporation's national market and depot network; no volume, value or farmer count is held (integration). Online acceptance of an international card scheme opened to participating merchants in August 2026, settling in local currency, dollars or both, as part of an extension to nine African markets; no Malawi-specific merchant count is given (acceptance, extension). The incumbent operator's mobile-money platform reported MK51.93bn of revenue in 2025, up 77 per cent on the year, on a stated base of more than 140,000 active agents (annual report) - its first published revenue line, with no account, transaction or value figure alongside it.	MOVEMENT
Mali	Both mobile money operators now issue prepaid cards: one launched in June 2025 with transaction caps, the second in April 2026. The first telco-led prepaid card launched with a bank partner in June 2025, capped at two million francs a transaction and ten million a month (first card). The second launched at a regional technology exhibition in April 2026 (second card). No issuance, activation or spend figure is published for either, so what the base records is that the wallet has acquired a card rail and not how much travels on it.	MOVEMENT
Mauritius	The instant payment switch is a mature interoperable rail with a code standard, and the largest bank reports code payments up 67 per cent with cash down to 27 per cent of consumer spend. The switch was profiled as a mature interoperable national rail with a code standard in a 2024 instant-payments review, and no national transaction volume has been published since (switch). The largest bank's 2025 figures put cash at 27 per cent of consumer spend against 30 per cent a year earlier, code payments up 67 per cent year on year, contactless above six in ten card transactions and about 18,000 merchants accepting (adoption); they are one bank's figures rather than a national series (adoption).	MOVEMENT
Morocco	A merchant acquisition fund grant of about US$505,704 was committed for 2026 to 2028 through a continental digital financial inclusion facility. The activity was reported at pipeline stage in February 2026, committing XDR 370,023.73, about US$505,704 at the provisional annual average rate, over 2026 to 2028 (activity). It responds to challenges the activity attributes to the central bank, and no disbursement transaction is reported. No merchant acceptance count or point-of-sale estate figure is held for the country.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mozambique	An instant payment system entered production in March 2026 with free interbank person-to-person transfers, and daily transfers tripled to more than 11,000. The system runs around the clock over bank applications, websites and short codes, operated by the interbank company with wallet-operator participation mandatory and free interbank person-to-person transfers for individuals; the governing notice sets daily limits of 200,000 metical for individuals and 500,000 for legal persons and a twenty-five second fund-availability ceiling (notice, launch). Daily transfers passed 11,000 by July 2026, a tripling since production entry in March (volumes). Against a base of more than twenty-five million wallet accounts, that is a system working and barely used. The switch behind it is not new: the interbank company was established in 2011 to give all payment service providers a single clearance platform, launched a bank-to-bank instant payment system in 2012 and a cross-domain system in 2022, before which processors and switches were not interconnected, pricing was opaque and interoperability between bank accounts and mobile money was limited (case study).	MOVEMENT
Namibia	An Instant Payment Solution went live in June 2026 with three participating institutions, a declaration of intent was signed on clearing integration, and a quick-response standard is finalised. The solution became operational in June 2026 after a live pilot, with a phased national rollout; the go-live month is stated by the central bank and no day is given (launch, build). It is carried publicly as WayaMe, operated by Instant Payments Namibia under the central bank, customers transacting through their existing bank applications, wallets or USSD while the payment is routed through the national infrastructure, and it is designed to carry bank-to-bank, bank-to-wallet, wallet-to-bank and wallet-to-wallet payments (name). No participant list, volume, value or fee schedule is published. A declaration of intent was signed by the central bank, the instant payments company and the clearing house to integrate instant payments with the national clearing infrastructure through the interbank settlement system, with no deliverables, funding or timetable published (declaration). The national quick-response payment standard is finalised with operationalisation named a priority and no live deployment reported (standard).	MOVEMENT
Niger	Instant bank-to-wallet transfers went live in June 2026 between one bank's accounts and mobile wallets. The service launched on 26 June 2026 (transfers). No volume, value or count of participating institutions is published, and one bank connecting to the wallet rails is the whole of the interoperability evidence for the country.	MOVEMENT
Nigeria	Instant payments reached US$256bn across 4.12bn transactions, a National Payment Stack carries 26.55m transactions on the new standard, and short-code billing settled a multi-year dispute. Electronic payments reached US$256bn by July 2025 from US$187bn a year earlier across 4.12bn transactions, and the instant system was rated the first African instant system to achieve mature inclusivity (payments, rating). The successor stack reports 26.55 million transactions worth ₦1.4 trillion across 48 institutions in its early phase, on a multi-currency platform carrying payments, identity and data together, with its first live transaction in November 2025 (stack, first transaction). Short-code session costs are billed to airtime at ₦6.98 per 120 seconds with real-time confirmation and opt-in, ending the multi-year operator and bank debt dispute (billing).	MOVEMENT
Rwanda	The instant transfer service was launched nationally in December 2025 after reaching 2.1 million active users and RWF 37.7 billion processed by June 2025. Transaction value grew 301 per cent year on year to RWF 37.7 billion by June 2025, across 20 institutions and 2.1 million active users (report, annual report). The service was launched nationally on 5 December 2025 as a digital public good connecting banks and mobile-money platforms, framed as improving government service delivery (launch). The financial inclusion roadmap treats bulk government-to-person payments, person-to-government payments and further onboarding as an active track rather than a completed one (roadmap).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sao Tome and Principe	The instrument set is debit cards, cheques and bank transfers, cards on a single domestic network, with the central bank's payment statistics refreshed to August 2026. The central bank's own statement of instruments in use lists debit cards, cheques and bank transfers, with card use regulated by a 2012 notice on the issue and use of bank cards on the domestic network, and transfers described as intrabank, interbank and cross-border (instruments). The bank collects, compiles and publishes aggregate statistics on payment operations sent and received by providers, recording the internet banking series from 2014 and the interbank clearing series from 2013 as last published on 28 August 2026, and the card operations series from 2011 as last published on 3 July 2026 (statistics). A payment systems report describing developments in the national system was last published on 17 April 2026 (report). The series are current; no mobile money or wallet instrument appears in any of them.	NO CHANGE
Senegal	13 Senegalese institutions were authorised to open instant payment services at the September 2025 launch, the largest count in the union. The central bank's list at launch names 13 authorised participants in Senegal against 45 across the union and eight in the next largest member state; two named Senegalese electronic money issuers are on it and a third named issuer is not. The person-to-government leg moved separately: the tax directorate opened payment of taxes, duties and fees through a mobile operator's application, the user selecting a dedicated item in the payment menu; it is a news report of the announcement rather than the directorate's own publication, with no start date, scope or volumes. The issuer base behind all of it is 11 authorised initiatives at 30 September 2024 — three licensed issuers, eight banks issuing through a partner and one telecommunications operator — with no state treasury issuer.	MOVEMENT
Seychelles	The central bank licensed a payment service provider in November 2025 for digital accounts and instant payments, under the 2014 payment statute. The licence enables digital money accounts, instant and invoice payments and a cheque product, with a first live transaction reported five days after approval (licence). The statutory basis is the National Payment System Act 2014, commenced in August 2014 and since amended by the 2022 electronic money regulations and a 2023 amendment Act (Act); the December 2025 licensing amendment adds straight-through processing as a condition (regulations). The announcement is the licensee's own, and the central bank publishes no register of licensed payment institutions against which to count them.	MOVEMENT
Sierra Leone	A national instant payment switch launched in February 2025 with full integration from April, and a payments platform with a messaging chatbot and code settlement launched in April 2026. The instant phase launched on 13 February 2025 with full integration from 1 April 2025 (switch). The payments platform launched in April 2026 with a messaging-app chatbot and code-based settlement (platform). No transaction volume, participant count or availability figure is published for the switch at any date, so what the rail actually carries is unmeasured.	MOVEMENT
Somalia	The instant payment system added real-time person-to-person, merchant and government payments across banks, wallets and terminals in January 2025. The instant payment system launched in January 2025 on the 2021 clearing and settlement foundation, enabling real-time person-to-person, person-to-merchant and government-to-person transactions across banks, mobile wallets and card terminals (description). A national QR standard sits beside it, and the dominant mobile-money service carries the volume the formal rails are being built to reach. The legal framework under which all of this operates is still the 2020 mobile money regulations; the bill that would replace them passed both chambers by January 2026 and no signature is recorded (vote).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
South Africa	The instant payment rail reached 905m cumulative transactions by May 2026, a national QR code standard reached a v1.2 eight-bank cohort, and merger conditions opened one bank's rail to third parties. 2026-05 — the instant payment rail went from 461m cumulative transactions in March 2026 to 905m by May and pivoted toward merchants, having passed R100bn in value. Payments is the fastest-moving part of this ledger by a wide margin. 2026-07 — a national payment code standard reached version 1.2 with an eight-bank test cohort. 2026-08-06 — the competition authority recommended approval of a bank's R400 million acquisition of a payment provider subject to behavioural conditions: the merged entity must make its pay service available to third-party providers technically and commercially capable of integrating with it, may not use confidential information obtained through that access to compete against them, and must treat competing rails no less favourably unless objectively justified. Access to a dominant rail is being set by merger condition rather than by rule, which is a different thing from an access regime and binds only one party. 2026-08-31 — a proprietary QR scheme claimed more than 600,000 acceptance locations and more than 19 million application inclusions, and was added to a handset maker's wallet. The figures are the provider's own. Nothing on this ledger relates it to the bank-led national payment code standard, still at an eight-member test cohort.	MOVEMENT
South Sudan	A domestic financial technology company launched a multi-currency payments application in March 2026, alongside the operator mobile money services. A Juba-headquartered company founded in 2024 launched a stablecoin-backed multi-currency payments application on the App Store (application). Government revenue collection was separately routed through an electronic system by presidential order, endorsed for enforcement in March 2026 (order). No transaction volume, user count or interoperability arrangement is published for any channel, so the base can name the rails and not their use.	MOVEMENT
Sudan	The national payment switch went live in August 2026 with one bank connected, and a wallet added recurring debits two weeks later. The central bank's payments arm launched live switch services on 10 August 2026, connecting the first of the country's banks and completing a first cash withdrawal through it, with the remainder to be phased in (launch). On 24 August a mobile wallet launched an interface for pre-authorised recurring deductions, offered as an alternative to cheques for subscriptions, instalments, rent, government fees and business collections (interface). One bank connected is a switch that is live rather than a switch that is national; the dominant mobile-money service remains dominant by default.	MOVEMENT
Tanzania	Instant payment value nearly doubled year on year on calendar-2025 volumes reported to Parliament, and a US$28m mobile money core upgrade added interoperability with a global payment provider. The throughput figures were reported in the 2026/27 budget; a third figure on a different basis is held and cannot be charted with these (throughput, platform). The core upgrade launched in 2026 with wallet interoperability to a global payment provider added in May (upgrade, alliance). A school-fee payment service connected more than 800 schools (schools), a wallet-based investment platform recorded more than TZS 370bn in customer investments to March 2026 on the operator's own results (investing), and a government payments programme was described by a ministry official as still to be created (programme). 2026-08-30 — the state operator and the Zanzibar Football Federation signed a sponsorship and partnership agreement to introduce stadium e-ticketing on the operator's N-Card platform. No launch date, ticket volume or fee is stated, and the base holds nothing on the platform's other uses or acceptance footprint.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Togo	Six institutions are on the central bank's list authorised to open instant-payment services to the public, and the mandatory connection deadline moved from June to September 2026. Integrated, operational, committed and authorised to open to the public are four different claims across four accounts, and the counts are not one series (authorised, institutions, launch, sandbox, platform). The deadline moved to 30 September 2026 for banks, electronic-money issuers and payment institutions and to 30 June 2027 for microfinance institutions; the extension source is union-wide and binds domestic institutions by construction, with no national report of it held (extension, original). Four incompatible descriptions of participation and a slipped deadline are what the record supports; a single participation figure would be manufactured.	MIXED six institutions authorised on the regional instant platform while the mandatory connection deadline slipped by three months
Tunisia	Mobile payments rose 81 per cent in 2025, half of them person to person and 17.8 per cent merchant payments. Mobile payment transactions reached 8.4 million worth 1,769 million dinars in 2025, up 81 per cent year on year, with peer-to-peer transfers making up 50.7 per cent of operations and merchant payments 17.8 per cent. An operator fintech wallet took its licence in March 2026, and the state operator launched a wallet in the same month. The central bank's own payments bulletin is not held; these figures reach the base through an aggregator's repackaging, and no person-to-government split is published at all.	MOVEMENT
Uganda	Shared agent banking values rose 76.1 per cent to UGX 29.4 trillion in the year to June 2025, and one operator removed fees below UGX 5,000. 2025-10 - the central bank's own figures for the year to June 2025 show the retail rails growing and cheques receding: the shared agent banking platform carried UGX 29.4tn on 12.5 million transactions, up 76.1 per cent in value and 50.5 per cent in volume with 24 institutions signed up, while electronic funds transfers reached UGX 64.6tn and cheque values fell 3.6 per cent to UGX 4.6tn, cheques now 6.2 per cent of volume. 2025-12 - person-to-government payment widened with an enhanced tax and government payment menu live nationwide on a mobile-money shortcode. 2026-03 - the largest operator removed transaction fees on all payments below UGX 5,000 to push everyday payments off cash. The fee removal is a commercial campaign rather than a regulated tariff, with no stated duration, and the base holds no measure of what either the campaign or the shortcode did to volumes.	MOVEMENT
Zambia	Mobile wallets reached a bank's point-of-sale terminals and cash machines, and councils were onboarded for electronic fee payment. The National Payment Systems Act of 2007 established regulatory authority over the payment mechanisms underlying these rails. 2026-03 — a mobile money wallet gained interoperability with a commercial bank's point-of-sale terminals and cash machines, a concrete person-to-business and cash-out expansion. 2026-07 — local authorities including one municipal council were onboarded to the government service bus, enabling electronic payment of council fees and levies. Person-to-government payment reaching local rather than central government is the newer half, and no count of councils, transactions or value is published against it.	MOVEMENT
Zimbabwe	The instant payment interchange has run cross-domain transfers since 2011 across 17 commercial banks, and interoperable code payments are in rollout on the switch operator's report. The interchange was established in 2011 by the payments association and the central bank against cash shortages, when non-cash payment ran on cash machines, terminals and cheques that took up to seven days to settle and mobile money did not yet exist in the country; it carries real-time credit-push transfers between bank accounts and mobile wallets across 17 commercial banks, person-to-person transfer remaining its most used case (case study). The code-payment rollout is company-reported (codes, transactions). Wallet cash-out onto bank machine estates has no launch dates in the source, so the analysis date is used (cash-out). Ten cash-recycler machines are installed at retail outlets with 78 stated in the pipeline; the figures are the reporting outlet's rather than company-audited (recyclers).	MOVEMENT

Population uptake

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	Over 22m cards and 104,000 terminals were in issue at end-March 2026, with payments up 46% in 2025. Fewer than a tenth of merchants operated a terminal at the window's opening. At end-March 2026 there were over 22m cards including nearly 18m of the postal operator's, over 104,000 terminals and 4,713 cash machines, with electronic payments of DZD 939bn in 2025, up 46% year on year, and fewer than a tenth of merchants still operating a terminal. 2026-06-30 - more than 1,000 web merchants were connected, passing that threshold, alongside reported growth in online and mobile payment and in acceptance at physical shops over the first half of 2026. The half-year indicators are reported in narrative form without a published series. Behind the aggregate, internet payments rose 179% in 2025 to DZD 145bn over more than 27 million transactions while terminal payments doubled to DZD 89.5bn, the internet channel led by telecommunications and then administrative services. On the demand side the base now holds usage rather than instrument counts: 34% of the population used digital payments over the year, 44% of adults owned a formal account, and in a field survey 71% still paid mainly in cash. Those are 2021 vintages carried in a 2024 compilation, four years behind the instrument counts.	MOVEMENT
Angola	Financial inclusion stood at 51.7% in the first quarter of 2026 against a 65% target for 2027, with banking at 32% and digital payments up about 56%. 2026-07-09 — a state minister's scorecard puts financial inclusion at 51.7% at the first quarter of 2026 against a 65% target for 2027, banking at 32% or 5.7m people, and mobile and digital payments up about 56% year on year. The strategy behind the figures launched in December 2025 and no pre-strategy baseline is held, so the target is measurable and the movement toward it is not. The bancarisation figure has no series behind it either: a 2023 industry account put roughly half the population unbanked on a different base, and the two cannot be read as a trend. The next phase is stated as letting mobile and digital payment providers extend credit, which would move the same population from payments into lending with no consumer-protection instrument on this ledger behind it.	MOVEMENT
Benin	Mobile money reached 88.09% penetration on 11.65m active accounts, one operator holding about 51% of accounts and 83% of revenue. 2026-05-19 — the regulator's 2025 report puts mobile money at 88.09% penetration on 11.65m active accounts at end-2025, with one operator holding about 51% of accounts and about 83% of revenue, against 248.7m electronic-money accounts across the union in 2024. The revenue share is the finding. A market where half the accounts produce four fifths of the revenue is not a competitive one, and nothing on this ledger records a regulatory response, an interconnection remedy or a price intervention. Uptake at this level makes mobile money the effective account layer for the population, which is what the cash levy and the toll and transfer programmes reported elsewhere all assume.	MOVEMENT in accounts, with concentration unchanged
Botswana	A remittance wallet gained a card for cash withdrawal and in-store payment, and a bank and a taxi association launched card acceptance with loans conditioned on the banking history it builds. 2026-08 - two private products arrived in the last three weeks of the window, both routing the unbanked into the formal system rather than onto a public rail. A remittance wallet gained a companion card for cash withdrawal and in-store payment, and a commercial bank and a taxi association launched card acceptance for taxi operators, with access to business loans of up to P60,000 conditioned on the banking history it builds - one bank, one association, no operator count or fee schedule stated. The market beneath them moved both ways at once: mobile-money transaction value rose from P26.5bn in the year to March 2023 to P33.5bn in the year to March 2024 while subscriptions fell 33 per cent, a fall the regulator attributes in part to a clean-up separating registered from active subscribers. One operator holds 78 per cent of mobile-money customers and a second 11 per cent, against mobile-telephony shares of 43, 42 and 15 per cent - the payments market is far more concentrated than the network market under it.	MIXED transaction value rising while subscriptions fell a third

COUNTRY	DEVELOPMENTS	PROGRESS
Burkina Faso	The country holds 9.53% of the union's 248 million electronic-money accounts, fourth of eight states, and a local application aggregating all three operators passed 400,000 downloads. 2026-01-01 — the regional central bank's 2024 report puts the country at 9.53% of the union-wide 248 million electronic-money accounts opened at end-2024, fourth of the eight member states, with the national treasury one of only two treasuries among the 69 issuing initiatives. The report publishes the country share rather than a national account total, so the level has to be inferred and the base does not infer it. 2026-03-27 — a locally built application aggregating all three operators and five mobile-money wallets reports more than 400,000 downloads and a high store rating, on the developer's own figures in a promotional account. A treasury issuing electronic money is the distinctive feature here: the state is a participant in the payments market it also taxes through, reported under revenue collection.	MOVEMENT
Burundi	Cash held about 45% of digital-payment value, with about 1.6m of 7.6m mobile wallets active in the last reading the base holds. 2025-09-29 — central bank data for the second quarter of 2025 put deposits and withdrawals at about 45% of digital-payment value and about 1.6m of 7.6m mobile wallets active. No baseline preceded it and no reading has followed it. The dormancy rate is the finding: roughly four in five wallets opened are not in use, which bounds what the instant payment system reported above can reach. Its own user figure of about 224,000 sits against those registered wallets. No quarterly series, no account-ownership survey and no financial-inclusion strategy appears anywhere on this ledger.	NO CHANGE
Cameroon	The regional switch carried 20.3m transactions worth FCFA 863bn in 2025, up 40% by volume, across 153 participants. The switch carried about 14.5m transactions worth about FCFA 710bn in 2024, and 20.3m transactions worth FCFA 863bn in 2025, up 40% by volume, across 153 participants, with 84.33m transactions worth FCFA 3,624bn cumulative since service start. The figures are regional, not Cameroonian. The nearest national measure is the regulator's count of over 11m active mobile financial services subscribers in 2024, with no comparable prior-year figure held, so national uptake is a level rather than a movement.	MOVEMENT
Cape Verde	380,545 cards and 13,249 terminals against 232 cash machines, on the central bank's own 2024 report. The payments report for 2024 is the base's first consolidated coverage figure for Cabo Verde: 380,545 cards, 13,249 point-of-sale terminals and 232 cash machines, with 132,405 daily operations worth CVE 553.8m. It also records an instant transfer pilot under way, which is the next rail rather than a measure of use. No earlier comparable figure is held, so the direction of travel cannot be stated.	NO CHANGE a first published coverage count
Central African Republic	The country held 0.43% of regional payment-operation volume in 2024, the smallest but one, and no national account count or value figure is published. 2026-04-08 — the regional central bank's 2024 payment-services report puts the country at 0.43% of regional payment-operation volume, the smallest but one, against the largest member state's 65.10%. The report holds no value figure or account count for the country. That share is the only measure of payment uptake on this ledger. No wallet count, transaction total, agent network figure or account-ownership survey appears at any date, and the regulator publishes nothing. The uses that do exist are narrow and state-driven: salaries for officials outside the banking network and, since August 2026, electricity bills — both reported above, both dependent on one operator.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Chad	A second mobile-money operator obtained a payment-institution licence, joining one licensed in 2023 and a multichannel wallet licensed in 2025. The second operator's approval is dated April 2026 on its own filing and July 2026 in the trade press — two dates for one licence (licence, filing). The first operator was licensed as a payment institution in 2023 at year precision, and its launch date is not established (first, launch). A multichannel wallet is in service, licensed in 2025, with no user, agent-network or transaction figure published (wallet). Mobile-money transaction value is held from a central bank measurement for end-2024 (value), which is the only quantity in the payments record and is nearly two years old. 2026-09-04 - the market has more providers and no newer numbers: two further providers have joined the two mobile operators' services, and users report fees they consider high, with competition presented as the hope rather than the position, against 160,000 to 240,000 accounts over 2020 to 2022. No current account count, transaction volume, tariff schedule or regulator series is published.	MOVEMENT
Comoros	The central bank's 2024 report records 669,584 electronic-money accounts opened, 29.1 per cent active, and a 39 per cent banking rate. Relayed from the central bank's own 2024 annual report: 669,584 accounts opened of which 29.1 per cent active, an electronic-money float of KMF 2,700,000,000, and nine banks and financial institutions with 175 branches, twenty-six cash machines and 140 decentralised finance branches, and a national banking rate of 39 per cent against a projection of 70 per cent by 2030. The report itself is not held and the figures reach the base second-hand. No earlier dated figure exists, so no direction can be stated, and an earlier banking-rate target for end-2025 is recorded and never measured against. 2026-01 - the framework around uptake arrived: a National Financial Inclusion Strategy 2025-2030 coordinated by the central bank, on four axes covering access and needs, environment and regulation, financial education and user protection, and digital innovation, implemented through a national council, a steering committee and thematic working groups. The strategy document itself was not captured and no baseline or target from it is on the record.	MOVEMENT
Congo	The 2025 financial inclusion survey is the standing measure, and an operator reported its 2025 results. The 2025 global financial inclusion survey is the standing measure of account ownership and use. 2026-03-16 — an operator reported its 2025 results, which is a group figure rather than a Congolese subscriber count. No national mobile money account count, and no active-user rate, is published for Congo at either end.	MOVEMENT
Cote d'Ivoire	99,649,204 electronic-money accounts were open at end-2024, 40.07% of the monetary union's total, of which 26.46% active. The base's earlier position was the regulator's last published market statistics: 13,441,990 mobile-money subscribers moving FCFA 8,236bn a year on 2018 data. The central bank's annual report puts the country at 99,649,204 electronic-money accounts opened at 31 December 2024, 40.07% of the monetary union's total and the largest share in it, of which 26,370,627 active at 26.46%. The same report records 2,549,268,326 transactions, 21.4% of the union's volume and 34.7% of its value, and merchant acceptance points up from 1,131,590 to 2,719,463 in the year. The two ends are on different definitions - mobile-money subscribers against electronic-money accounts opened - so the direction is the union comparison, not the arithmetic between them.	MOVEMENT
Djibouti	A memorandum for a national digital wallet was signed on 16 September 2025, targeting a 60% cut in cash use. Nothing existed at the window's opening. 2025-09-16 - a memorandum was signed with a card network and a biometrics supplier for a national digital wallet, with nothing in service and no rollout calendar. The stated target of a large cut in cash use within three years is the parties' own. No baseline cash-use figure, account count or transaction volume exists anywhere on this ledger to measure it against, and the wallet already in service publishes none either - so the country's payment uptake is stated only as an ambition.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
DR Congo	The most precisely dated figure is 29m accounts at 34.6% penetration; the base holds 24m, 29m, 30m and 35m. The only dated, attributable count is 29m accounts and 34.6% penetration, from a payments aggregator's fourth-quarter 2024 figures. An operator cites about 35m users in April 2026, and the base holds 24m, 29m, 30m and 35m across sources. The divergence is the finding: four counts, none reconcilable, and no published central-bank series. The nearest official figure is about 58% financial inclusion against 25 to 30% bank-account penetration, the gap attributed to mobile-money use without a bank account, with no earlier dated rate held.	NO CHANGE four counts of mobile-money accounts circulate and none is reconcilable to another
Egypt	The instant payment network reached 16m users and EGP 4.2tn transacted to June 2025, alongside over 55.5m wallet accounts. The network had 12.5m users and about 1.5bn transactions worth up to EGP 2.9tn in calendar 2024, domestic transfers only. It now has 16m users and EGP 4.2tn transacted from July 2024 to June 2025, with inbound remittances credited instantly at all banks operating in the country. No figure fresher than end-June 2025 is held. Wallets stand at over 55.5m accounts transacting about EGP 1.8tn to June 2025, growth telco-led through the three operators' products; a Senate proposal of June 2026 puts the base at 45m against about 6m bank cards, an unreconciled framing of the same stock. Cards and acceptance stand at 29.1m debit cards at about 40% of the market, 34.3m prepaid and about 7m credit, with national scheme cards still stated at 43.5m from end-2024. About 16.7 million adults had no formal access to credit at June 2025. The first switch-level series the base holds runs to 2024: 1.561 billion transactions worth US$92.0bn in 2024, against 39 million worth US$3.4bn in 2022, with over 12.72 million unique users at end-2024, about 16% of the adult population. It is an industry body's case study; the central bank publishes no payment systems report the base can reach.	MOVEMENT
Equatorial Guinea	Two wallets launched in 2026, on a base holding 0.41 per cent of regional payment volume, the smallest share of six member states. The share is measured at end-2024 by the regional central bank (regional report). A bank wallet launched in February 2026 with a payment service and a prepaid card, with no user or transaction figure published (bank wallet). The state operator named a wallet of its own as part of its modernisation, again with no user or transaction figure (operator wallet).	MOVEMENT
Eritrea	More than 70% of Eritreans are estimated to remain unbanked, with cash dominating economic activity. A trade account of the country's position in 2026 estimates that more than 70% of Eritreans remain unbanked, on a highly centralised financial system of a small number of state-owned banks, one of which provides the majority of retail banking. It links that structure to limited competition, minimal innovation and heavy reliance on manual processes, with online banking, cash machines and mobile financial applications largely absent so cash continues to dominate. The digital economy it would serve is correspondingly small: total online commerce is estimated at under US$10m a year, and mobile penetration was just under 60% of population in 2022, ranked 191st of 209 economies. These are a trade publication's estimates, not a central bank or survey series, and no official financial inclusion measurement for the country is held at any date. The figure is reported for what it is.	NO CHANGE a first measurement with no earlier figure behind it
Eswatini	Account ownership rose on a global survey cited in the record, against a cash share of person-to-business payments the lender assessed as high. The account ownership figure is a reference-study figure, cited rather than absorbed (ownership), and the cash share comes from a lender assessment of digital public infrastructure (cash). The mobile money platform migrated to a cloud-native vendor platform across four markets; the performance figures are the vendor's own and no downtime, cost or subscriber-impact figure is stated (migration). Neither uptake figure is a domestic series, so what the payment switch and the post-office channel changed cannot be measured from this base.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Ethiopia	The incumbent's wallet reports 60.6m users and 4.19tn birr transacted in the year to June 2026, against 2.58m monthly active users on the challenger. The incumbent's wallet moved 4.19tn birr in the year to June 2026, about 11bn birr a day, across 60.6m users, 410,700 agents and 440,100 merchants, with 21.64m customers on digital credit and microfinance (wallet results). The challenger reports monthly active users doubled to 2.58m in the quarter to June 2026 and registered merchants up 147.7% to 89,877, while mobile money is about 2% of the unit's service revenue against 45.6% in Kenya (quarterly results); the base also holds 5.2m active users for the quarter to December 2025, and the two counts are not reconciled (earlier count). The dominant state bank reports 3.48 billion digital transactions worth more than 22 trillion birr in 2025/26, which it puts at about 70 per cent of national digital transaction value (bank figures). The Global Findex 2025 reading puts account ownership at 49 per cent of adults in 2024, up three points from 46 per cent in 2021, against more than 200 million digital accounts opened over the period, with financial literacy, limited smartphone access and physical distance named as what still excludes. Accounts opened and adults included move in opposite directions and nothing reconciles the two.	MOVEMENT
Gabon	4.5m mobile-money accounts of which 1.6m active at end-2024 remain the base's current statement, against 457,377 cardholders. The ministry's end-2024 figures were cited at a payment launch in December 2025 and nothing later has been published: 368.3m transactions worth FCFA 4,087bn in 2024, against FCFA 3,487bn in 2023 (accounts). On cards, the bank association reports 457,377 cardholders among 673,793 bank clients at end-June 2026, against 326 cash machines and 1,535 merchant terminals (card estate). Of 1,101,434 transactions in June, 62.41 per cent were cash withdrawals and 24.61 per cent terminal payments (the same return). A terminal estate 4.7 times the size of the cash-machine estate carries under half its traffic, on industry-reported figures.	NO CHANGE
Gambia	2.9m active users against 5.4m registered accounts in February 2026; the bank's own later figures disagree. The February 2026 release puts active mobile money users at 2.9m, 53 per cent of 5.4m registered accounts — a register larger than the population, so it counts accounts rather than people. The bank then contradicted itself: its May 2026 minutes put registered fintech users at 4.6m for the same March quarter its May release gave as 5.4m, and the August 2026 release dropped the count altogether while publishing quarterly cash-in of D28.2bn against cash-out of D32.1bn. The divergence stands unresolved.	MIXED use is rising while the register itself is disputed
Ghana	84.6m registered wallets and 26.4m active at 90 days in June 2026, with float at a record GH¢40bn from GH¢28.9bn. Registered wallets rose from 76.4m in June 2025, and there are one million registered agents of whom 546,000 are active (central bank data); the inclusion figure is the 26.4m active, under a third of registered wallets (central bank data). The dominant operator reports 19.3m active users at 31 December 2025 against 18.3m at 30 June 2026, with neither source stating the definition, so the direction cannot be read against the national series (operator accounts). The dominant operator's chief executive put daily transactions at over 26 million while stating that fewer than 0.3% of the user base is actively investing and only a small proportion saves regularly. The gap between volume and depth is the operator's own framing, given in an interview and not tested against the central bank's series.	MOVEMENT
Guinea	Account access rose from 4% of adults in 2011 to close to 36% in 2024 on the central bank governor's account. At the NimbaPay launch on 22 July 2026 the central bank governor put access to financial accounts at 4% in 2011 and close to 36% in 2024, attributing the rise to electronic money. The figure is the governor's own, given in a launch speech; the base holds no survey series behind it and no breakdown by sex, region or income. The regulator's own count puts mobile financial services subscribers at 3.2 million at end-June 2025 against 1.9 million in June 2022, with one operator holding 92 per cent of them and the second 8 per cent (subscribers).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Guinea-Bissau	Active electronic-money accounts grew 33.28% in 2024, the union's second-fastest rate, on a regional report published in January 2026. 2026-01-01 — the regional central bank's annual report on digital financial services records Guinea-Bissau's active electronic-money accounts up 33.28% in 2024, the union's second-highest growth rate after Togo, on a 1.94% share of accounts opened union-wide and about 1% of regional transaction value, served by two electronic-money issuing initiatives of the 69 operating across the union. The data year is 2024 and the publication falls inside the window, so what the window holds is the arrival of the figure rather than the growth itself. These are shares within a regional report and not a national release: the base holds no account total, no transaction count and no payments statistic published in Guinea-Bissau. No named mobile-money service, no interoperable switch and no consumer-protection rule for payments appears anywhere on this ledger.	MOVEMENT on the regional regulator's 2024 figures
Kenya	94.09m registered mobile-money accounts and 564,330 active agents in May 2026, with the dominant service on 40.99m 30-day-active customers. Registered accounts rose from 87.46m and agents from 451,157 in August 2025, with agent cash movement of KSh 681.45bn in the month (central bank release). The dominant service reported KES 182.7bn revenue, KES 41.68tn transacted and 89.1 per cent market share in the year to March 2026, from 35.82m active customers and about 98 per cent share a year earlier (results); the central bank classified it systemically critical in January 2026 (results, designation). Formal financial inclusion is put at 83.7 per cent of adults against 26.7 per cent in 2006, on operator disclosure rather than an independent survey (inclusion), and a record KSh 1.4tn was disbursed through the overdraft product with the repayment ratio flat year on year (overdraft).	MOVEMENT
Lesotho	Mobile money was spun into a separately constituted entity with 14,000 agents, while the second wallet has been unchanged since 2024. The mobile money business was spun off into VCL Financial Services on 13 March 2026 (spin-off) and reported 14,000 agents by June 2026 (anniversary). EcoCash completed a platform migration in October 2024 with group savings, payroll and fraud detection integrated, and wallet interest payouts stated as forthcoming; nothing later is held (migration). No account or active-user figure is published for either.	MOVEMENT
Liberia	52 per cent account ownership with more than 11m wallets in 2024 is the base's current statement, with no later figure published. The reading is two years old (account ownership). It predates the instant payment system, the interoperable fee schedule and the movement of civil-servant salaries into wallets, so the one measure of uptake the base holds is from before everything that would have moved it.	NO CHANGE
Libya	Banking apps reached 4.30m subscribers by February 2026 and electronic payment value reached LD 643bn in the first seven months of 2026. Electronic payment value ran at LD 136bn in 2024, LD 389bn in 2025 and LD 643bn between 1 January and 31 July 2026 (2026 to date, 2025). Banking-app subscribers stood at 4.30m in February 2026, and 200.7m transactions worth LD 313.6bn were recorded in 2025 (subscribers, 2025 total). Part of that movement is scarcity rather than choice: branch cash withdrawals were capped at LD 3,000 a customer, and LD 4,000 in the south, from 9 August 2026 (cash limits).	MOVEMENT
Madagascar	Six to seven million active mobile money users are reported against a population of about thirty million, and the largest platform migrated its core with outages. The active-user range is the operator's figure for the whole market, and it is not comparable with a 73 per cent usage figure in a 2025 study that measured awareness and use rather than active accounts (users). The largest platform replaced its core in May 2026, with outages and balance-display faults through May and June that the operator states were regularised (migration). The account is the operator's alone, given three months after the fact: no regulator is named, no incident report is published and no compensation is mentioned.	MIXED active users at about a fifth of the population while the largest platform's core migration disrupted service

COUNTRY	DEVELOPMENTS	PROGRESS
Malawi	Mobile money reached MWK 37.9tn in 2025, up 94 per cent, while banknote replacement is expected to cost MWK 69.8bn in 2026. Value ran at MWK 19.5tn on 1.8bn transactions in 2024 (2024) and MWK 37.9tn on 2.4bn transactions in 2025, with subscriptions at 19.9m of which 44.8 per cent were active in a thirty-day window; airtime was 42 per cent of transactions, cash-in and cash-out 33.1 per cent and merchant payments 7.7 per cent (2025). The central bank cautions that the subscription figure counts registered wallets. Replacing worn banknotes cost MWK 50.6bn in 2025 and is expected to cost MWK 69.8bn in 2026, about 38 per cent higher (banknotes); an economists' association president named government levies on digital money transfers as a reason cash use persists (banknotes).	MIXED mobile money value up 94 per cent in a year while the cost of replacing worn banknotes rose 38 per cent
Mali	The country's share of union electronic-money value fell to 11.7 per cent in 2024, and its distributor network fell 46.34 per cent, the steepest in the union. Share of union transaction value fell from 12.1 per cent in 2023 to 11.7 per cent in 2024, and share of volume stood at 10.7 per cent, on volume growth of 18.58 per cent and 7.29 per cent of accounts opened (shares). Distributor numbers fell 46.34 per cent in 2024, the steepest fall in the union (network). Volume rising while the agent network halves is the shape worth watching here: it is consistent with use concentrating on fewer, larger points rather than spreading.	MIXED transaction volume growing while the country's share of the union fell and the distributor network contracted sharply
Mauritania	Financial inclusion is put at 55 per cent in 2026 against 21 per cent in 2019-20 on the financier's own account, with one bank's transfers rising from 5,000 a year to 94,000 in a half-year. Telecompensation, real-time settlement and automated refinancing were reported delivered under a US$4.78m modernisation project, with inclusion at 55 per cent in 2026 against 21 per cent in 2019-20 and one bank's transfers rising from 5,000 in the whole of 2023 to 94,000 in the second half of 2025 (project). The figures are the development bank's account of its own project rather than a central-bank series, and a second phase targets financial technology firms. No account count, wallet figure or agent network measure is independently held.	MOVEMENT
Mauritius	The state operator's wallet reports over 130,000 active users, being built into a cross-border product, with no transaction figure published. The figure comes from the operator's 2026-2029 strategy (wallet). No earlier user count is held, so the level is recorded and the direction is not. It is the only wallet uptake figure in the base for a country whose broadband penetration is above saturation, which makes the wallet the laggard rather than the network.	NO CHANGE a first published user count with nothing earlier behind it
Morocco	Wallets grew from 6.3m to 13.7m between 2021 and 2024 and account-holding from 53 to 58 per cent, on the central bank's own series. Access points per 10,000 adults rose from about ten in 2021 to about fifteen in 2024, account-holding from 53 to 58 per cent, and wallets from 6.3m to 13.7m (report); formal savings stood at 33 per cent and formal credit at 12 per cent of adults at the end of 2024 (report). The earlier strategy series runs wallets 2.44m in 2020, 6.3m in 2021, 7.7m in 2022 and 10.4m in 2023, with savings-account penetration reaching 38 per cent against a 20 per cent target (strategy); microcredit stood at MAD 8.4bn in 2022 with active clients down 4.9 per cent to 795,000 (strategy, earlier report).	MOVEMENT
Mozambique	Mobile money reached 1,313 accounts per thousand adults in 2025 and access points rose 36 per cent, while the inclusion index held at 36.4. Mobile money holdings rose from 1,093 to 1,313 accounts per thousand adults and bank accounts from 330 to 337 between 2024 and 2025, with women's mobile money holding rising from 924 to 1,144 (accounts). Non-bank agents rose from 315,005 to 446,604 while cash machines fell from 1,391 to 1,383 and card terminals from 35,486 to 32,236, giving 482,359 access points in total, up 36 per cent (access points); the central bank attributes the terminal fall to decommissioning of inactive devices (access points). The national inclusion index held at 36.4 points across the same year (index), against a strategy targeting 60 per cent of adults with a bank account by 2031 (strategy).	MIXED wallet accounts and agents growing sharply while card terminals fell and the inclusion index did not move

COUNTRY	DEVELOPMENTS	PROGRESS
Namibia	Financial inclusion is put at 86 per cent for 2025, with an earlier 78 per cent figure dated to 2017 in one account and described as current in another. The deputy governor gave 86 per cent at the payments association's annual general meeting, with the 78 per cent figure dated to 2017 (rate). An industry executive had described the same 78 per cent as current in July 2025 (executive). The two accounts date the same figure eight years apart, which is why the direction here is recorded and the size of the gain is not.	MOVEMENT dating unreconciled
Niger	The country holds 3.92 per cent of accounts opened across the monetary union in 2024, the second smallest share of the eight member states. The figure is the union central bank's own for 2024 (share). No national account count, wallet figure, agent network measure or transaction value is separately held for the country, so its position is visible only as a share of somebody else's total.	NO CHANGE the second smallest share of the union's electronic-money accounts
Nigeria	Point-of-sale volumes fell 19.9 per cent as cash machine use rose, operator wallet revenue rose about 132 per cent, and formal inclusion stood at 64 per cent in 2023 against a 95 target. Cash machine transactions rose 6.6 per cent year on year in the first quarter of 2026 with value up 64.6 per cent, while point-of-sale volumes fell 19.9 per cent to 2.92bn under October 2025 agent-banking limits; the record carries no measure of what those limits did to access where there is no branch. Operator wallet revenue grew about 132 per cent in the first half of 2026, active wallets up 1.3m to 5m against a 30 million target. Retail investors traded ₦2.86tn of equities in five months, up 138.76 per cent, and a digital bank passed 30 million registered users in September 2026 on its own count - not an active or transacting figure. 2026-09-07 - the survey behind the inclusion figure is now held: formal inclusion reached 64 per cent of adults, about 71.7 million, in 2023 from 56 per cent in 2020, non-bank formal products moving 32 to 57 per cent, on 26,930 interviews across all 36 states and the federal capital territory, leaving about 28.9 million adults outside the formal system and the share counted financially healthy down to 16 per cent. Fieldwork ran August to October 2023, so the headline figure predates every payment-system change since.	MIXED wallet revenue and retail investing rising while point-of-sale volumes fell a fifth under new agent-banking limits
Rwanda	Active mobile money accounts rose to the first quarter of 2026, while accounts per agent rose with the agent network lagging and the second operator contracted. The account series comes from the regulator's quarterly statistics, and the earlier figure is derived from the growth rate rather than printed (accounts, rural). Accounts per agent rose because the agent network grew more slowly than the account base, and the earlier figures there are implied from growth rates rather than separately held (agents). The second operator contracted in the cash-in and cash-out layer, which is precisely the layer the new payment rail does not touch (operator). Formal financial access was reported at the payment system's national launch, and a second source puts inclusion higher on a different metric (access).	MIXED active mobile money accounts and formal financial access both rising while the agent network lags and the second operator contracts
Sao Tome and Principe	The financial inclusion index rose to 0.41 in 2025 from 0.24 in 2017, still 'moderate' on the AFI scale, while bank-account holding stagnated at minus 0.6 points. The 2021 to 2025 inclusion strategy reports the 2017 demand-side survey finding that 76 per cent of the population over 18 was excluded from the financial system, that 39 per cent of respondents and 15 per cent of women held a bank account, and that the inclusion index was around 0.24, and 0.18 for women (strategy). The central bank's second demand-side survey puts the index at 0.41 in 2025, the women's index at 0.34, the gender banking gap at 4.8 percentage points from 20, and bank-account holding down 0.6 points, which it attributes to the low income of the 30 per cent of adults at the bottom (survey). Its financial literacy barometer averages 72 per cent across seven dimensions against 39 in 2017, a rise it says is partly a refinement of method (barometer). The report does not restate the headline adult exclusion rate, so the 2017 exclusion figure has no direct 2025 counterpart in what the base holds.	MOVEMENT
Senegal	The country's share of regional mobile-money transaction volume rose on the central bank's own 2024 series, and a super-app was integrated into the rapid-transit network for ticketing. Both ends of the regional share come from the same source's own series rather than from movement in the base, and eleven electronic-money issuers operate in the country (share). A super-app was integrated into the rapid-transit network for ticketing and top-ups; the prior digital-payment figure carries no date, and the network runs up to 300,000 passengers a day (transit).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Seychelles	The most recent national survey, from 2016, found 94 per cent of adults banked — a decade-old figure with no successor. The 2016 baseline survey found 94 per cent of adults banked, the highest rate in the region at the time (survey); its detailed internet-banking, mobile-money and card figures sit in a section the held capture did not reach. The central bank's 2025 annual report, submitted on 31 March 2026, is the newest official release covering payment-system activity (report); its transaction-volume tables were not reached by the capture either. No population-level digital-payment or mobile-money uptake survey since 2016 is held, so a decade-old banking rate is the only national figure available.	NO CHANGE
Sierra Leone	A prepaid card requiring no bank account and a virtual card through an operator app both launched in 2026, and financial inclusion reaches the base only as a named-analyst assessment. The prepaid card launched in May 2026 with a bank partner and requires no bank account (prepaid), and a virtual card launched in March 2026 through an operator application (virtual). A savings product paying annual interest through an application and short codes launched in November 2025 (savings), and a multi-currency wallet and card launched in April 2025 (wallet). The inclusion rate itself is a named-analyst assessment rather than an official series, so five products can be dated and the population they reach cannot (inclusion).	MOVEMENT
Somalia	Mobile money runs about 155m transactions a month worth US$2.7bn against formal banking reaching about 15 per cent of the population. The dominant service was re-certified against the industry mobile money standard in August 2025 (certification). Nationally, mobile money runs about 155 million transactions a month worth US$2.7bn on lender figures, against formal banking reaching about 15 per cent of the population (scale). That ratio is the whole payments picture here: a private mobile-money system carrying a monetary mass many times the reach of the banks, which is the system the instant payment rail and the identity credential are both being built to sit alongside.	MOVEMENT
South Africa	One bank reported digitally active customers up 10% to 3.8m against 9.9m total, and a city is removing cash from six service counters with no stated route for the unbanked. 2026-08-18 — a large bank's interim results put digitally active personal and private banking customers at 3.8m, up 10%, against 9.9m total customers in that segment, with total technology spend of R8,779m for the half, up 7% and 28% of group expenses. These are one institution's figures, reported group-wide across seventeen countries, so they bound the cost and pace of migration at a single bank and not the sector. 2026-08-21 — a second bank reported 581 self-service kiosks handling more than half a million transactions a month across over 60 services, dispensing almost 70% of its instant-issued debit cards, 56% of them to entry-level clients. 2026-09-01 — uptake seen from the other side: a city is extending a cashless pilot to three further service offices, so cash is no longer accepted at six counters. No figure is published for how many residents at those counters paid in cash before the change, and nothing is stated about an alternative for the unbanked — which is the whole of the inclusion question a cashless counter raises. No regulator series covers any of this.	MOVEMENT
South Sudan	Mobile money operators pledged nationwide agent expansion with the central bank, and 1,225 entrepreneurs graduated from an operator training programme. The expansion pledge was made in August 2025 and no agent count, coverage figure or subsequent report is held (pledge, safeguard). The training graduation is the operator's own account, with no seed-funding total and no measure of what the training changed (training). Against an economy that remains overwhelmingly cash-based, neither a pledge nor a graduation count establishes uptake.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Sudan	One bank's mobile money application is the dominant retail rail, driven by cash scarcity rather than technology uptake, and short-code banking was launched to reach users without internet. The dominant application carries retail settlement in the capital's markets because cash is scarce and the currency has collapsed, not because of technology uptake; a war-economy analysis finds its volumes now a monetary mass outside central-bank supervision (dominance, infrastructure, cash). Short-code banking was launched jointly by the ministry, the central bank and the telecommunications regulator and works without internet access; operational details for participating banks and operators were to be announced separately and none is held (short code). An operator wallet launched in the wartime seat of government covering transfers, airtime, bills, merchant purchases and agent cash handling as phase one of three, and no later report confirms progression (wallet).	REGRESSED
Tanzania	Active mobile money subscriptions reached 87.05 million in June 2026 (report). Active mobile money subscriptions reached 87.05 million in June 2026, as the country pressed a cashless agenda (report). A bank and the stock exchange launched digital share trading through the bank's own channel (launch). The series is flattening and the regulator's own report draws that conclusion (index, usage gap). Active mobile-money accounts and the annual transaction count are on different bases and the stated growth rate does not reconcile against the earlier one (accounts). Financial access points grew through agent build-out rather than branch build-out, and the council says so itself (access points). A third national inclusion framework was reported on for 2025, with the base holding no framework position at the window's start, no text and no mid-term review (framework).	MOVEMENT
Togo	Electronic-money accounts were measured by the central bank to end-2024 and published in 2026, and mobile-money subscribers and transaction value come from regulator figures for the third quarter of 2025. The central bank observation is two years old at the point of its publication inside the window (accounts), and the regulator figures reach the base relayed through a report on an operator product launch (subscribers). A new wallet entered service in October 2025 with a partner bank under regional electronic-money rules, built on the operator's acquisition of a foreign fintech, with no user or transaction figure on file (wallet), and an operator extended its mobile-money services at a launch event in July 2026 (extension). Neither uptake measure is current and neither product carries a figure, so the direction of use here is not establishable.	MOVEMENT
Tunisia	Mobile payments rose 81 per cent in 2025 on central bank figures, and the active wallet count diverges by a factor of about 1.7 between two reporting routes. The postal operator provided digital wallets free to students for the 2026-2027 university registration (report). No take-up figure is stated. The mobile payment and licensed-provider figures are the central bank's full-year 2025 numbers, reaching the base through an aggregator's repackaging rather than the bulletin itself (payments, providers). The base carries 815,000 wallets for 2025 from that aggregator (wallets); reporting attributed directly to the bulletins gives roughly 469,000 at end-2025, and only the aggregator's side is held (wallets). A near-doubling in mobile payments and a wallet count that differs by 1.7 times between routes cannot both be read confidently, and the divergence is stated rather than resolved.	MOVEMENT
Uganda	Electronic money transaction value grew 28.6 per cent with growth in agents and handsets while both screen-based channels contracted, and active wallet users rose on the operator's own report. The growth sits in agents and handsets; both screen-based channels contracted (value). The operator's two transaction-value figures are not reconcilable and no growth rate is derived from them (users, separation). Shareholders approved separating the money business into a new financial company in July 2025 (spin-off), and the platform migrated to a cloud-native vendor platform across four markets on the vendor's own performance figures (migration).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Zambia	Financial inclusion among adults rose on a national consumer survey published by the central bank, with the survey month not stated, and securities exchange app users rose on the exchange's own registration figure. The inclusion figure is carried at year precision because the survey month is not stated (inclusion). The exchange figure is for registered users, not active traders or funded accounts (app users). Registered rather than active, and a survey with no stated month, are the two qualifications every uptake claim in this unit carries. 2026-09-05 - the account base behind the inclusion figure was stated: 14.7m registered mobile money accounts in 2024 on the monetary fund's financial access survey, of which 77% hold a balance, against a central bank phasing out cheque clearing and one adult in five holding any account in 2011. Registered accounts are not people, and the balance share is the only measure of activity held.	MOVEMENT
Zimbabwe	Electronic retail transaction value and volume rose in the first half of 2026 on figures in different currencies over different periods, and cards issued far exceed cards in use. The two transaction figures are in different currencies over different periods and are not directly comparable (transactions, growth). The cards figure is a survey quoted by the researcher with no base, sample or method published (cards), and national payment system value rose on June 2026 monthly figures, with the May volume derived from a reported fall rather than stated directly (system value). A national financial inclusion strategy runs 2022 to 2026, citing formally served adults rising from 69 per cent in 2014 to 83 per cent in 2022 against a 90 per cent target (inclusion).	MIXED electronic transaction value surging while cards issued far exceed cards in use

Cross-border functionality

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The central bank joined the pan-African settlement network as its eighteenth member on 15 August 2025; no transaction volume is held. Membership did not exist at the window's opening. 2025-08-15 - the central bank joined as the eighteenth country, with no transaction volume held. No Algerian bank is named as live on the rail, no corridor volume or value is published, and nothing states the settlement or pricing arrangement a domestic institution would face. It is an accession rather than a working corridor, and it sits in a market whose own domestic instant rail has not launched.	MOVEMENT
Angola	The kwanza became the second settlement currency in the regional payment system on 27 July 2026, against about US$3.77bn of flows with member states. 2026-07-28 — the two central-bank governors formally introduced the kwanza into the regional real-time settlement system, the second settlement currency in its history, against 2025 trade and interbank flows with the other fourteen member states of about US$3.77bn across nine currencies, after integration was announced in May. The system had cleared in one currency since 2013. No volume settled in kwanza has been published since, and no retail cross-border service appears anywhere on this ledger: this is interbank settlement, not remittances or merchant payments. What it changes is which currency regional trade can be invoiced and cleared in, and the test of it will be a settled-value series that does not yet exist.	MOVEMENT
Benin	The regional instant-payment rail launched across all eight member states; by April 2026 80 institutions were connected and serving it. 2025-09-30 — the 24/7 interoperable instant-payment platform launched across all eight UEMOA states, designed to serve individuals, merchants, businesses and public administrations. 2026-03-01 — an operator opened the service to its own customers. 2026-04-02 — the central bank reports 80 institutions connected and serving the public, 42 more in real-condition testing, and a 30 June 2026 deadline for full connection. Cross-border functionality here is a regional rail Benin sits on rather than a national instrument.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Botswana	An instant regional corridor went live inbound from two neighbours in March 2026, and card e-commerce acceptance was extended across nine markets. 2026-03-02 — an instant cross-border corridor went live inbound from South Africa and Zimbabwe, rolled through a commercial bank, where no live regional instant corridor into the country existed. No volume or value figure for the corridor is held. 2026-08-19 — online acceptance of a foreign card scheme opened to participating merchants across nine African markets, settling in local currency, dollars or both, extending a collaboration running since 2024. Nearly 900 participating merchants across the nine markets and about 7 million cards issued in Africa are the two companies' own figures, with no Botswana-specific count. Cross-border rails are ahead of domestic ones here, which is the reverse of the usual order and follows from the absent national switch.	MOVEMENT
Burundi	The central bank acceded to the pan-African settlement system with four banks authorised and expects to join the East African payment system by December 2026. 2026-08-06 — the central bank has acceded to the Pan-African Payment and Settlement System, with four Burundian banks authorised to participate as at 4 August 2026. The accession date itself is not stated, only that it has occurred, and the continental trade secretariat discussed the system as an implementation instrument during its August mission. 2026-08-19 — the bank told the region's monetary affairs committee it expects to be inside the East African Payment System by December 2026, having migrated its settlement infrastructure to the international messaging standard, and has begun connecting domestic banks, the post office and the central bank to the COMESA regional payment and settlement system through technical training. Regional acceleration of the payment system was pressed at the July governors' meeting. Two accessions and one expectation, with no go-live date, participant list or transaction volume published for any of them.	MOVEMENT
Cameroon	The regional central bank joined the pan-African settlement system in July 2026, extending it to all six member states. 2026-07-09 - the regional central bank joined the pan-African settlement system, extending it to all six member states and 72m people and taking the network to 28 countries and sixteen switches, with member-state banks to be integrated by the end of 2026. No Cameroonian bank is yet named as live on the rail, no corridor volume or value is published, and nothing states the pricing or settlement arrangement a Cameroonian institution would face. Membership is an accession, not a working corridor.	MOVEMENT
Cape Verde	Transfers to and from abroad are generally free to contract and settle under the 2018 exchange diploma, subject to authorised intermediation and central-bank supervision. The diploma is the standing legal instrument for economic and financial operations with the exterior and for exchange operations in national territory. It consolidates into one text the exchange legislation previously split across several, defines transfers to and from abroad and exchange operations, makes their contracting and settlement generally free, permits foreign-currency accounts, and subjects operations to authorised intermediation and central-bank supervision. It is the country's own instrument, not a regional one. No cross-border transaction volume, remittance digitalisation rate or corridor cost is published, and no regional interoperability arrangement is held, so what the base carries is the legality of the flow and nothing about its size.	NO CHANGE a standing position the base holds for the first time
Chad	The regional central bank acceded to the continental payment and settlement system with member-state banks to connect by end-2026, and a regional interoperable switch published 2025 figures. Accession was announced in July 2026; no Chadian bank is named and the end-2026 target is untested (accession). The regional switch presented annual figures for 2025 at a regional meeting, and no country-disaggregated figure for it exists in this base (switch, merchant). A regional interoperable code standard launched under a monetary union regulation of April 2026; no domestic bank, wallet or merchant deployment is on record, so the country is covered by the regulation rather than shown live (standard).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Comoros	Implementation of accession to the pan-African settlement system commenced in August 2024 and nothing has followed. Implementation commenced on 23 August 2024, the membership agreement having been signed in July 2024, with commercial banks to begin integrating. No bank integration, transaction volume or go-live is recorded in the base since. Two years with no follow-up source is itself the finding, in a country whose domestic interbank settlement only entered service in April 2026 - the cross-border rail was joined before the domestic one existed, and neither now has a published corridor figure.	NO CHANGE
Congo	An instant-transfer application opened a corridor from two European countries, targeting the international cost cap. 2026-05 - an application launched on a remittances-as-a-service model, live from two European countries into this country and its neighbour, targeting the international cost cap, with the payment institution licensed by a European central bank. No volume, achieved price or user figure is published, so whether the cap is met is unestablished. It is the only cross-border retail instrument on this ledger, and it is licensed abroad rather than here - no domestic authorisation, reporting obligation or supervisory position is on file for it.	MOVEMENT
Cote d'Ivoire	A privately built application moves funds between mobile-money networks across six West African countries with instant cross-border transfers. 2026-05 - a privately built application went live moving funds directly between mobile-money networks, in six West African countries, with instant cross-border transfers. Its volumes, licensing and regulatory status are not stated, which for a cross-border money movement route is the material gap. The country is the largest single share of the monetary union's electronic-money accounts, at 40.07%, and carries 34.7% of the union's transaction value - the volume any regional route would be built on. Nothing on file reports a corridor volume, a remittance figure or a bilateral arrangement with a neighbouring market.	MOVEMENT
Djibouti	A cross-border payments partnership with an Ethiopian operator was signed in September 2025; nothing is in service on record. 2025-09-21 - an Ethiopian payments operator and a Djiboutian financial-services provider signed a partnership on cross-border digital payments, remittances and merchant solutions, witnessed by the finance, innovation and defence ministers, the startup commissioner and a World Bank representative. 2026-02-11 - the regional body issued terms of reference to develop a harmonised regional payment-interoperability framework covering settlement, clearing, mobile money and fintech gateways, an enabling step rather than an operating arrangement. Neither is in service. No corridor volume, no launch date and no regulatory approval for either appears on file.	MOVEMENT
DR Congo	A live use case settles mobile-wallet top-ups in stablecoins, bypassing correspondent banking. 2026-07 - a card-network executive confirmed on record a live use case settling wallet top-ups in stablecoins in the background, bypassing correspondent banking, which carries about 8% of sub-Saharan remittance cost. The dollar peg is inferred rather than disclosed, and a joint pilot-launch framing was downgraded on reconciliation. It runs against the central bank's own de-dollarisation deadline of April 2027, and no supervisory position, licence or reporting obligation for stablecoin settlement is on file. No corridor volume or value is published.	MOVEMENT
Egypt	The continental settlement system is headquartered in Cairo with no Egyptian participation, volume or value figure published. The system has operated from Cairo since January 2022, connecting the real-time gross settlement systems of participating African central banks, with twenty-five large commercial banks connected in 2022, and no Egyptian participation, volume or value figure has been published in anything held. The lender behind it continues to frame it as the route to continental trade. The only movement on the record is diplomatic: the central bank offering its accession experience to another state in July 2026. Inbound remittances now credit instantly at all banks through the domestic instant rail, which is the cross-border function actually measurable here, and it runs outside the continental system.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Equatorial Guinea	Cross-border capability is regional and prudential: the deposit insurance ceiling rose to 8m CFA from December 2025. The base holds no Equatoguinean cross-border payment instrument. What moved is the regional safety net: the deposit insurance ceiling rose to 8m CFA for individuals and 15m for firms from 10 December 2025. The country's share of regional electronic payment volume sits on the ledger as its own measure. No participation in a continental settlement system is recorded.	NO CHANGE
Eswatini	Migration of regional low-value flows to a bloc settlement system is reported under way with no timetable, and accession to a continental payment system was discussed with a bilateral partner. The migration is reported as under way with no timetable, volume, value or mandating instrument given (migration). The central bank governor discussed leveraging another country's experience to accelerate continental accession (accession). Both are cross-border commitments stated in the same bilateral meeting account, and neither has a date.	MOVEMENT
Ethiopia	International card acceptance went live through the national switch in November 2025, and the payments strategy proposes first outbound transfers. The national switch and an international card network brought international acceptance live in November 2025 (card acceptance). The payments strategy published a fortnight later proposes the country's first outbound cross-border transfers, which are not currently permitted (payments strategy). No transaction volume, corridor or remittance figure is held, and the base records nothing on inbound remittance channels, which are the larger cross-border flow.	MOVEMENT
Gabon	The regional central bank acceded to the pan-African settlement system in July 2026, against a target of connecting member-state banks by end-2026. Accession was announced with integration work not started on the record (accession). Within the region the two Gabonese mobile-money operators lead issuing: one first with 1,969,325 transactions worth FCFA 68.1bn in the first half of 2026 and the other second with 1,950,401 transactions worth FCFA 55.8bn (issuing position). On acquiring, the first is third behind two Cameroonian operators, with 758,629 transactions (the same figures). The figures are those the outlet states it consulted, and no publication by the regional switch is held.	MOVEMENT
Gambia	Six commercial banks are live on the regional settlement system as at April 2026, with no mobile-wallet rail listed. The operator's own list names six Gambian banks live in April 2026. The rail is bank-to-bank: no Gambian mobile wallet appears on it, which is the gap that matters in a market where registered mobile money accounts exceed the population. Cross-border retail moves separately through roaming rather than payments: caps between The Gambia and Senegal start on 1 March 2026.	MOVEMENT
Ghana	Twenty institutions are live on the pan-African settlement system as send-and-receive participants, and direct renminbi settlement opened in August 2026. A second bank went live in-app and a naira corridor opened from February 2026, from a fintech-routed connection under a six-month central-bank pilot; nothing is quantified, with no volumes, tariff, corridor list or designation date (gateway, in-app, pilot). Direct settlement in renminbi from cedi accounts, in real time or batch and without correspondent-bank intermediation, was announced on 4 August 2026 following central-bank approval (renminbi). Online card acceptance for one international network extended to nine African markets, settling in local currency, dollars or both, with nearly 900 participating merchants across the nine and no country-specific count given (card acceptance). The central bank digital currency remains at pilot stage with its focus pivoted to cross-border settlement for sub-regional trade and no rollout date (pilot, not abandoned). The operator's June 2026 coverage schedule names 20 institutions in the country live as send-and-receive participants and places it in both the participant list and the extended network for incoming payments, one of six countries reachable both ways. It is a participant list, not a throughput figure: no volumes, tariff or designation date is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Guinea	The country is a participant in the pan-African settlement system with no transaction recorded, and the regional payment project was withdrawn. Participant status carries no recorded transaction on the platform (project register). The regional integrated payment project was withdrawn from the central bank's 2025 strategic priorities after a single evaluation meeting in July 2024, with no visibility on next steps. Both readings come from the same undated register, so the country's cross-border position is established entirely by one internal document.	NO CHANGE
Guinea-Bissau	Cross-border capability is the monetary union's; no national instrument is held. Guinea-Bissau's payment rails are union rails, and the base holds no national cross-border instrument. The union register of authorised establishments is the operative list. What is being built across borders is documents rather than money: the paperless customs directive and trade-document platform presented at Bissau in April 2026.	NO CHANGE
Kenya	A national switch links more than 80 institutions to the pan-African settlement system, the first such national-switch pilot. A commercial bank group went live on 11 August 2026, adding its branch network to instant cross-border transfers in local currencies (go-live). Online card acceptance for one international network extended to nine African markets, settling in local currency, dollars or both, with nearly 900 participating merchants across the nine and no country-specific count given (card acceptance). Consumer access to the same corridors narrowed over the past year. An international payments provider imposed restrictions, a domestic dollar-banking service withdrew that product, a remittance operator paused its wallet and a streaming platform cut monetisation (platforms) — four separate commercial decisions rather than a regulatory change, with no user numbers, values or regulator response held.	MOVEMENT
Lesotho	Renminbi settlement became available through a commercial bank in July 2026, while migrant workers moved to fintechs as South African rules tightened. Standard Bank extended access to China's cross-border interbank payment system beyond South Africa to five markets including Lesotho, reported on 27 July 2026 (access). Migrant workers remitting from South Africa moved from banks to fintechs as South African remittance and banking rules tightened, reported in June 2026 (remittances). No corridor volume, price or regional switch connection is published.	MIXED a new renminbi settlement route against migrant workers pushed out of bank channels
Liberia	Liberia has been live on the regional settlement system since March 2025, with the central bank as settlement agent. The governor's remarks at the rollout of 27 March 2025 record Liberia live on the Pan-African Payment and Settlement System with the central bank as the national settlement agent. The bank's 2025 annual report confirms implementation and the official launch in 2025, and publishes the first series of cross-border transfers terminating into mobile wallets — the base's first evidence of cross-border value arriving in a Liberian wallet rather than a bank account.	MOVEMENT
Libya	Foreign-currency Visa acceptance went live on local terminals in June 2026, and banks are reported set to join China's CIPS network. Visa acceptance in foreign currency was launched on local points of sale at EPAIX on 17 June 2026, giving cards issued abroad a route into the domestic network (launch). A newspaper account of 16 August 2026 reports Libyan banks set to join China's Cross-Border Interbank Payment System after talks between the two central banks; no accession date, participant list or signed agreement is stated, and no central-bank statement is held (account). 2026-09-07 - the central bank governor set out four things at once: a link to the Arab regional payments platform, a study track on a central bank digital currency and stablecoins, a cyber-skills programme, and a pilot for accession to China's cross-border interbank system targeted at early 2027. None carries an instrument, budget, participant list or delivery date. A private bank is to send payments to China through a Chinese payment platform from its own application, capped at US$5,000 a transaction and US$50,000 a year. Announced rather than in service: no launch date, licence or central bank authorisation is stated.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Madagascar	A card and cross-border partnership was announced in November 2025 across five markets, with no launch date for Madagascar. A card network and the domestic mobile money group announced a collaboration in November 2025 to launch virtual and physical cards and cross-border payment features under the domestic mobile money brands across Tanzania, Madagascar, Togo, Comoros and Senegal (announcement). What the base does not hold is a live cross-border service, a corridor volume, a regional settlement arrangement Madagascar participates in, or a date for the announced features reaching the domestic market.	MOVEMENT
Malawi	A regional retail payments corridor with Zambia is the first interoperable cross-border system in local currencies, with a scheme rulebook published in August 2026. The corridor links the two countries in local currencies without foreign exchange, supervised by both central banks, with three Malawian early adopters (corridor). The clearing house published the scheme rulebook setting operational and governance rules for instant low-cost cross-border retail payments, alongside a gender audit and strategy to 2030 drawing on research along the corridor (rulebook). No volume or value figure for the corridor is held.	MOVEMENT
Mali	A remittance integration into mobile wallets was announced in May 2025 and no volume has been published since. The integration between a cross-border payments network and a wallet operator was announced in May 2025, vendor-reported (integration). No corridor, volume, price or count of participating institutions is published, and no regional switch connection for the country is separately recorded.	NO CHANGE
Mauritius	An India payment link has run since 2024, a Seychelles corridor was announced in July 2026, and the rupee is reported as considered for regional settlement. The bilateral cross-border payments link with India was the country's first, in force since February 2024, with no volume or corridor figure published (link). A corridor with Seychelles was announced as launched by the state operator at its summit, with no corroborating record from the partner, the central bank or the counterpart central bank on file (corridor). Onboarding the rupee to the regional settlement system is reported as under consideration, potentially by the end of 2027, on a spokesperson's account from another central bank; no domestic statement is held, and the named next currencies are two others (settlement).	MOVEMENT
Morocco	The central bank acceded to the continental settlement system on 7 July 2025 as its seventeenth member country. Accession puts Morocco on the continental rail, and a global payment network launched real-time payouts in local currency two months later against a remittance market of US$11.5bn in 2023. Exchange control remains the binding rule, and it eased: the 2026 general instruction raised the electronic commerce allowance for accredited start-ups to MAD 2m and the individual ceiling to MAD 20,000.	MOVEMENT
Mozambique	Six domestic banks settled 215 transactions worth ZAR 261.79m through the regional real-time system in June 2026, and the Angolan kwanza became its second settlement currency in July. 2026-07-27 — the Angolan kwanza was added as the second settlement currency in the regional real-time gross settlement system, after the rand, which had been the only one since 2013, with further currencies to follow. The country participates as one of fifteen members. The connection is demonstrably live rather than merely established: published settlement statistics record six Mozambican participating banks settling 215 transactions worth ZAR 261.79m in June 2026. 2026-08-11 — the central bank published a notice revising the limits on bank-card payments made abroad, replacing the December 2025 notice. Regional capacity widened and outbound card capacity was recapped in the same quarter, which is the tension worth reading here.	MOVEMENT a second settlement currency was added to the regional system and outbound card limits were revised

COUNTRY	DEVELOPMENTS	PROGRESS
Namibia	The national clearing house signed to join the regional instant cross-border scheme in March 2026 and card e-commerce acceptance opened in August. The clearing house agreed with the regional scheme operator to connect local banks and authorised non-banks to the southern African immediate-clearing network, acting as technical gateway for single credit push payments to Common Monetary Area countries; settlement remains deferred, and fraud management, sanctions screening, request-to-pay and bulk real-time payments are named as later phases with no dates (scheme). Online acceptance of an international card scheme opened to participating merchants, settling in local currency, dollars or both, as part of an extension to nine African markets; no country-specific merchant count is given (acceptance). No record of participation in the continental payment and settlement system exists at August 2026, two years after a regional bank targeted central bank sign-up (system).	MOVEMENT on two channels while participation in the continental settlement system stays unrecorded
Niger	A mobile-money international transfer service opened in August 2026 on eight inbound corridors and seven outbound West African destinations. The mobile-money issuer opened an international transfer service on 25 August 2026, taking inbound transfers from the United States, Canada, Belgium, Germany, China, Turkey, Gabon and Cameroon directly into the recipient's wallet through five remittance partners, and sending outbound transfers to seven West African states (service). No volume or fee schedule is published.	MOVEMENT
Nigeria	Continental rail flows fell 53 per cent to about US$3.7m in a half-year, while stablecoin settlement rails carry 1,500 businesses and a regulated naira stablecoin went live on a public blockchain. Flows on the continental rail fell 53 per cent to ₦5.6bn in the first half of 2025, about US$3.7m, with transactions down 29 per cent to 3,246 - a narrow line item rather than national throughput. A wallet-based corridor to Ghana entered pilot. A licensed local exchange plugged into a dollar stablecoin's liquidity, reporting more than 1,500 businesses across two countries; the yield partners and rates are undisclosed (rails, settlement). The regulated naira stablecoin went live on a public blockchain in August 2026 backed one-to-one, with no supply, holder count or reserve attestation published (token, listing); remote diaspora bank onboarding launched in 2025 as remittances rose from US$3.3bn to US$4.73bn (diaspora). 2026-09-05 - the operator reports Nigeria-Rwanda volumes approaching and in places exceeding Nigeria-Ghana, and corridors with Cameroon, Niger and Benin growing on trade in Nigerian goods, with no volumes, values or period attached. 2026-09-06 - on the other direction of travel, diaspora inflows held steady at US$21.8bn in 2025 on central bank figures, against an average cost of 8.46 per cent to send US$200 to Sub-Saharan Africa and app-based rivals quoting 2-3 per cent on the London-Lagos corridor.	MOVEMENT
Rwanda	A cross-border payment corridor pilot with a neighbour advanced a proof of concept at a technical meeting, with no launch date set. A joint cybersecurity and interoperability roadmap for the cross-border instant payment proof of concept with Tanzania was advanced at a technical mission in Kigali (mission). It remains a proof of concept. The proof of concept was advanced at a technical meeting in July 2026 and no launch date is stated (pilot). It sits alongside two licence-passporting memoranda with other neighbours whose texts are unpublished. The country's cross-border payments record is three bilateral arrangements, none of them yet carrying a transaction the base can date.	MOVEMENT
Sao Tome and Principe	The 1999 exchange law makes the central bank the exchange authority and routes current transfers through the commercial banks; repatriation and surrender requirements were under review in December 2025. The law subjects exchange operations to central bank regulation and provides for sales of foreign currency and transfers abroad relating to imports and current invisibles to be carried out by the commercial banks (law). The second review under the credit facility reports on the effect of the foreign-exchange repatriation and surrender requirements on the central bank's reserve position (review). The central bank describes transfers as intrabank, interbank and cross-border (instruments). No remittance corridor volume, cost or provider is published, which for a state with a large diaspora is the gap that matters most here.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Senegal	Remittances reached FCFA 2,211bn in 2024, about 12% of gross domestic product, on a regional regulation now being implemented. The flow rose to FCFA 2,211bn in 2024 from an estimated FCFA 1,600bn in 2023, about 12% of gross domestic product and now exceeding official development assistance; the figures are attributed to the central bank through a press report rather than taken from its own publication, and establish the size of the flow rather than the channel it moves through. The governing instrument changed and is being built out: the 2024 regulation on external financial relations abrogates and replaces the 2010 one expressly and is in force from its signature on 20 December 2024, and the central bank issued an application note in April 2026 specifying how external payments by foreign nationals holding union resident status are treated. The note's own rules sit in a linked document the base does not hold.	MOVEMENT
Seychelles	The central bank signed a memorandum with an Indian payments body to bring its unified payments interface, with rollout targeted for end-2026. The memorandum was signed during a bilateral visit in June 2026 and the source is secondary, with neither party's primary held (memorandum). Adopting another country's national payments interface is a substantial architectural commitment — it decides the rails, the standards and the counterparty for cross-border retail payments — and the base holds no text stating what was agreed.	MOVEMENT
Sierra Leone	Eight Sierra Leonean banks are live on the continental cross-border local-currency rail, on the operator's own May 2025 register. The register of live commercial banks, version 015-05-25, names UBA, Sierra Leone Commercial Bank, Access Bank, Bloom Bank, Rokel Bank, GTBank, Vista Bank and FBNBank under Sierra Leone, with SN Bank shown under channels (register). Being listed is the whole of what the register establishes. It carries no transaction volumes and no corridor-level detail, so the base can say the rail is available and nothing about whether it is used.	MOVEMENT
Somalia	The central bank set connection to the continental payment and settlement system as a target for before the end of 2026. The target was stated in July 2026 (target). No connection date, participating institution or corridor is named. It would sit above an instant payment system whose own bank integration sequence was set out in the same statement, so the domestic rail has to complete before the cross-border one can carry anything.	MOVEMENT
South Africa	A domestic bank went live on China's cross-border payment system in November 2025 and was jointly authorised as renminbi clearing bank for Africa in June 2026. 2025-11-20 — a domestic bank went live and was inaugurated at the central bank as the first African direct participant in China's cross-border interbank payment system, with the central bank's governor, the People's Bank governor and the system's chairman present. It was accredited in April 2025 and licensed in June. 2026-06-26 — the same bank and a Chinese counterpart were jointly authorised as renminbi clearing bank for Africa, with operational capacity in the nineteen African countries where the group operates. It is the first clearing bank named after a continent and the first jointly operated by two commercial banks. Two qualifications the record carries. The nineteen countries are not enumerated in either account. And the designation was made by one foreign central bank, with no African regulator party to it — a continental clearing arrangement constituted entirely outside the continent's own institutions.	MOVEMENT
South Sudan	Bilateral support for financial technology was reported in August 2026, with no instrument, envelope, workstream or timetable stated. The support was reported in August 2026 (support). The base holds no domestic payment system for it to attach to: the instant rail is at roadmap stage and the payment system bill is at validation workshop.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sudan	Two enabling steps — a card-processing agreement and a SWIFT service bureau accreditation — against an assessment finding no connectivity outside Sudan. The standing assessment of April 2023 found the domestic payment infrastructure had no connectivity outside Sudan, that Sudan did not participate in the regional settlement system despite membership of the trading bloc, and that 92.5 per cent of remitting migrants used informal channels (assessment). On 19 January 2026 a bank signed a processing agreement covering end-to-end digital payments, card-scheme sponsorship and prepaid issuing (agreement). On 11 June 2026 the central bank's payments arm was accredited as a SWIFT service bureau (accreditation). Neither is a live corridor. Both are readiness.	MOVEMENT
Tanzania	The cross-border instant payment proof of concept with Rwanda gained a joint cybersecurity and interoperability roadmap (mission). A joint cybersecurity and interoperability roadmap for the cross-border instant payment proof of concept with Rwanda was advanced at a technical mission in Kigali (mission). It remains a proof of concept; nothing on the base records a live corridor. The corridor's technical meeting ran over five days in July 2026 (corridor). The card acceptance extension covers nine markets, with nearly 900 participating merchants and about 7 million cards issued in Africa given as the two companies' own figures and no country-specific count (acceptance, expansion).	MOVEMENT
Togo	An instant international payment service launched with the country as its first market, a full-service payment institution licence was granted to a domestic fintech, and a cross-border payments platform was profiled. The bank-led service launched in October 2025 with the country as first market, distinct from the central bank's platform (service). The payment institution licence was granted under the regional instruction in February 2026; the source is captured as a paywalled newsletter body (licence). A cross-border payments platform founded in 2024 was profiled by a technology outlet, and no transaction volume, corridor count, licence or customer figure is stated (platform).	MOVEMENT
Tunisia	The central bank acceded to the pan-African payment system in February 2024 and moved foreign-exchange authorisation filing onto a portal. The central bank acceded to the Pan-African Payment and Settlement System on 6 February 2024 under the continental free trade area framework, with banks and the post office required to obtain a non-objection attestation before participating directly. Circular 2025-12 of 9 October 2025 moves the filing of foreign-exchange authorisations onto a secure portal and phases out paper filing during 2026. No transaction volume, participating-bank count or corridor is published for the pan-African system, and no remittance or cross-border retail payment figure is held at all.	MOVEMENT
Uganda	One commercial bank went live on the continental payment rail, direct yuan settlement opened through one bank, and a stablecoin settlement corridor opened. A single commercial bank's subsidiary announced going live on the continental rail in August 2026 (rail). Direct yuan settlement opened for domestic businesses through one bank's service rather than a national rail, with no volume, fee or central-bank position stated (yuan). A stablecoin settlement corridor opened in July 2026 (stablecoin), and card acceptance was extended to nine African markets with merchant and card counts given as the two companies' own and no country-specific figure (cards). Four cross-border arrangements, none of them a national rail.	MOVEMENT
Zambia	A regional retail payments platform published its scheme rulebook and a gender strategy, and currency onboarding to the regional settlement system is attributed to the system's operator rather than the national central bank. The corridor with a neighbour is the one the platform runs on; no national transaction volume, participant count or fee schedule is published (platform). The currency onboarding is a statement of intent attributed to the system's operator, not to the national central bank (onboarding, switch). Card acceptance was extended to nine African markets with merchant and card counts given as the two companies' own and no country-specific figure (cards).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Zimbabwe	Participation in the continental payment and settlement system is company-reported to a payments conference, and regional settlement onboarding is attributed to the operating central bank rather than to this one. The continental participation reaches the base through the switch operator's report to a conference (participation). The regional onboarding intent, cited as potentially by end-2027, is attributed to the operating central bank and nothing establishes a domestic decision (onboarding). Card acceptance was extended to nine African markets with merchant and card counts given as the two companies' own and no country-specific figure (cards).	MOVEMENT

Consumer protection

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The travel foreign-exchange allowance moved onto a nominative card; no payments consumer-protection instrument is held. 2026-07-13 - a central bank instruction moves the travel foreign-exchange allowance onto a nominative card, quoted verbatim in the reporting; the instrument's own text is not held. That is a change to how a payment instrument is issued rather than a protection for the person using it. No complaint channel, chargeback rule, fraud-reimbursement obligation or dispute-resolution route for electronic payments appears anywhere on this ledger, and the payment service provider regime made in 2025 is not stated to carry one.	NO CHANGE a first stated position with no earlier account behind it
Benin	A financial-sector consumer redress body was stood up in July 2025 against unresolved complaints about failed mobile-money transactions. 2025-07-29 — a financial-sector consumer redress body was established, against complaints about failed mobile-money transactions going unresolved. None existed before it. No caseload, resolution rate or decision from it has been published in the thirteen months since, so the body exists and its effect does not appear on the record. That matters against a market of 11.65m active accounts in which one operator holds most of the revenue, reported under uptake: the redress route is the only counterweight on this ledger to a concentration the regulator has not otherwise acted on.	MOVEMENT
Botswana	A mandatory 60-minute crediting rule for electronic funds transfers took effect on 1 February 2026. 2019 — the central bank's payments oversight policy sets consumer-recourse and fair-disclosure objectives. 2025-12-31 — an enhancement to the clearing and settlement framework introduced a mandatory 60-minute customer crediting rule and an added settlement window, in effect from 1 February 2026. No complaints figure, redress statistic or dispute-resolution route for payment users is held.	MOVEMENT
Burkina Faso	A financial inclusion agency created in 2025 is explicitly not a regulator, and consumer education runs through a partnership with an operator across four cities. 2026-07-28 — an agency created in 2025 by merging three bodies is operating and explicitly not a regulator, its director general arguing that account counts conceal absent savings, credit and insurance. The base holds no creation decree and no budget line for it, and it also carries the project-results reporting for the closed inclusion programme. The education work is delivered with the market it educates about: a partnership with a payments operator running since 2025 and extended in 2026 to four cities, with 72-hour sessions on budgeting, savings, credit and consumer protection and participants acting as community relays. Consumer protection for a payments market delivered by a promotion agency and an operator, rather than by the financial regulator, is the arrangement the record describes, and no complaint, redress or sanction figure exists against it.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Burundi	The regulator ordered an operator to make value-added-service subscription genuinely voluntary, and the consumer association reports no significant improvement two months on. 2026-07-24 — injunctions were issued requiring genuinely voluntary subscription to value-added services and prior notification of subscribers, where no such instrument existed. The consumer association reports no significant improvement two months on, no sanction is on file, and the operator maintains that nothing activates without a customer's deliberate action. It is the only enforcement action of any kind on this ledger, and it came from the telecommunications regulator rather than from the data protection authority the January 2026 law creates, which is not on record as operating. Nothing states how many subscribers were charged, or whether any money was refunded.	MOVEMENT an injunction with no sanction and no reported improvement
Cameroon	The financial-literacy project closed on 15 July 2026 leaving its comparison platform with no funded data-update mechanism. 2026-07-15 - the digital financial-literacy project running since June 2024 closed, leaving a digital financial-services comparison platform with no funded data-update mechanism, offered to both participating states and neither reported as having accepted. No Cameroon-side trainee count, budget share or partner list is published. The separate bank-fee comparison platform launched in June 2025 covers commercial banks only, and neither committed extension has been recorded as delivered: a savings simulator promised by end-2025 and extension to microfinance and insurance promised for 2026 are both unverified.	REGRESSED
Cape Verde	Fraud complaints rose 150 per cent in 2025, from 10 to 25, and the central bank brought payment and electronic money institutions inside a binding advertising regime in February 2026. The standing regime is the 2018 payment services diploma, which governs the legal relationship between payment service providers, electronic money issuers and users, including information and transparency duties, reimbursement, and liability for unauthorised operations. 2026-02-05 - the central bank issued a binding notice that regulates the advertising of financial services and products and applies expressly to payment institutions and electronic money institutions across every medium including internet and social media: a written advertising policy with internal controls, principles of identifiability, veracity, transparency and balance, a closed list of restricted expressions such as sem juros and aceitacao garantida, minimum character sizes by medium, campaigns reported ten working days before launch, and power to order modification, suspension or rectification at the institution's cost. 2026-08-17 - the bank's behavioural supervision report for 2025 counts 278 complaints, 245 banking and 33 insurance, about 23 a month; bank accounts led with 61 and fraud came second with 25 against 10 in 2024, a rise of 150 per cent the bank attributes to the growing digitalisation of financial services and the security of digital channels. Twenty-five supervision measures were adopted, fifteen recommendations and ten specific determinations, and CVE 3,154,582 was restituted to consumers.	MOVEMENT
Central African Republic	A community fact-checking network debunked a mobile-money phishing scam; no regulator or operator response is held. 2026-07-06 - a community fact-checking network debunked a messaging-app phishing scam impersonating a mobile-money service with a fake prize contest harvesting phone numbers and personal identification codes. The response the base holds is a fact-check by a non-state body. No regulator statement, operator advisory, complaint count, reimbursement rule or remedy for a defrauded user appears anywhere on this ledger, and no consumer-protection instrument covering electronic payments is held.	NO CHANGE a first stated position with no earlier account behind it
Chad	The 2015 consumer protection law covers all transactions in goods, services and technologies and names no payments regulator. The statute, adopted on 12 December 2014 and promulgated as Loi n. 005/PR/2015, fixes the general frame of consumer protection, applies it to all consumption transactions in goods, services and technologies, lists fundamental rights and creates a national consumer council (law). It names no payment or financial-technology regulator, so payments-specific supervision rests on the regional framework the central bank's register sets out (register). No complaint, redress or sanction under the statute involving a payment service is held, eleven years after it was adopted.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Comoros	A 2017 regulation governs electronic money; a meter-crediting fault cost a presumed 200 million francs. The standing rule is the central bank's regulation setting the conditions and modalities for carrying on electronic-money activity. It is the only consumer-facing instrument in the base, and no complaint route, redress mechanism or supervisory decision under it is published. 2026-02 - a licence for a decentralised digital financial institution was granted, placing a planned mobile nano- and micro-lending entity under prudential supervision. 2026-08 - a fault between the mobile-money service and the utility's prepaid electricity meters on Moheli let subscribers credit meters without the amounts being collected, with presumed losses of 200 million francs. No remediation or regulatory response is on file.	MIXED a second regulated digital institution was licensed while a live fault went unremedied on the record
Congo	The regulator dismantled SIM box fraud networks and the financial regulator moved against illegal money transfer operators. The regional payment services regulation is the standing consumer framework. 2026-06-02 — the financial regulator moved against illegal money transfer operators. 2026-06-16 — the telecoms regulator dismantled SIM box fraud networks. Both are enforcement against suppliers. No complaints procedure, redress route or complaint volume for consumers is recorded.	MOVEMENT
Cote d'Ivoire	Retail agents have charged an unauthorised flat FCFA 100 on every counter transaction since November 2025, with no regulator position on file. Since November 2025 retail agents have charged a flat FCFA 100 on every deposit or withdrawal regardless of amount, on top of roughly 1% operator pricing on withdrawals. No operator tariff or regulator decision authorises it and the regulator's position is not on file. 2026-07-24 - the agents' union put four questions to the data-protection authority on whether kiosk agents may demand, photograph or retain customer identity documents, with no response on file as at 5 August 2026. Both run at the counter, where uptake is highest and where nothing published states what a customer is entitled to refuse or how a complaint is made.	REGRESSED
Djibouti	No payment-specific consumer regime is held: the Code covers data and commerce, the payments law licensing. This is a searched absence rather than an unexamined one. The Digital Code, published on 18 September 2025, carries titles on personal-data protection, electronic communications, cybersecurity and digital services; none of them is a payments consumer regime. The payment-system law confines itself to licensing, regulation and supervision of providers and to defining electronic money. No rule on disclosure, fees, redress or dispute resolution for electronic money or digital payments is on file, and no complaint or redress figure is published by the central bank or any provider.	NO CHANGE
Egypt	Instant-transfer fees stand where they were set in April 2025, at 0.1% of value with a EGP 20 cap. Pricing has been 0.1% with a minimum of EGP 0.50 and a maximum of EGP 20 since 1 April 2025, plus EGP 0.50 for balance enquiry beyond ten free monthly requests, and no central-bank decision altering the schedule is held. The prior free-use position rested on a board exemption effective 1 January 2025 for three renewable months rather than on an instrument, and lapsed rather than being repealed - so the country's flagship retail rail moved from free to priced without a published decision to price it.	NO CHANGE
Equatorial Guinea	A bank was ordered to repay 182m CFA to 12,000 customers after the Vice-President found an unauthorised fee scheme. The intervention of April 2026 is the base's only recorded consumer remedy in the payment system: a bank ordered to return 182m CFA to 12,000 civil servants over fees it had no authority to charge. It came from the Vice-President rather than a regulator or an ombudsman, and no standing complaints process is recorded. The regional layer supplies the other protection: a deposit insurance ceiling raised in December 2025.	MOVEMENT
Eswatini	A finance portfolio committee tabled a report on bank transaction charges and recommended the central bank report a comparative benchmark within 30 days of adoption. The report was tabled in July 2026 (report) with a recommendation that the central bank produce a comparative benchmark of charges within 30 days of adoption (benchmark). No adoption date, benchmark or central bank response is on record. Legislative scrutiny of transaction pricing is rare in this frame and worth recording as such; whether it produced anything is unestablished.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Ethiopia	The central bank moved from rule to enforcement, ordering banks and payment issuers to implement fraud-warning measures (campaign). The central bank launched a customer fraud awareness messaging campaign in March 2026, instructing banks, payment instrument issuers and microfinance institutions to implement fraud-warning measures under the financial consumer protection directive's own articles, in response to a rise in impersonation scams over messaging apps, text and telephone (campaign). It ran its first annual financial literacy week in October 2025 under a consumer-protection theme, with outreach on mobile money use and digital risks such as fraud and data misuse (launch). The operative instrument is the financial consumer protection directive issued in August 2020, which covers mobile wallets and mobile and internet banking explicitly and sets liability for unauthorised and mistaken transactions (directive). The base holds no complaint volumes, redress outcomes or fraud losses, so enforcement is visible and its effect is not.	MOVEMENT
Gabon	An ordinance of 29 January 2026 fixes the rules for digital payments, and its ratification bill was heard on 22 May. The digital economy minister was heard by the National Assembly's finance committee on 22 May 2026 on the bill ratifying ordonnance 0002/PR/2026 of 29 January 2026, which fixes the rules applicable to digital payments across Gabon; the government characterises it as filling a legal vacuum with a protective framework governing online transactions and payments, aligned to the CEMAC payment services regulation of 21 December 2018. The text of the ordinance itself was not reachable, so its thresholds, obligations and redress route cannot be read off the instrument.	MOVEMENT
Gambia	Draft complaints and consumer protection regulations were opened for comment in April 2026 and are not in force. The draft regulations were open for comment from 1 to 10 April 2026 and have not been made. Until they are, redress runs through the toll-free 148 line and its escalation flow, which is sectoral rather than a consolidated national channel. On the payments side the monetary policy committee ordered complaint tracking for fintechs in December 2025, which is an instruction to the supervised rather than a right for the customer.	MOVEMENT
Ghana	A register of licensed digital credit providers is still unpublished, a twenty-name blacklist standing in its place. A borrower can check twenty names and cannot check whether the twenty-first is licensed; publication was undertaken in July 2026 in due course, with no date given (blacklist, notice). A centralised real-time layer able to block suspicious transfers as they move between networks is described as under discussion with nothing built and no operator, funder or timetable named (fraud layer, silos). Expansion of the financial industry security operations centre to all financial institutions including fintechs and microfinance was announced in March 2026, and four months later a digital-economy forum still listed complete onboarding as a recommendation (operations centre).	MIXED a fraud layer and an operations centre are proposed while the register a borrower would need is still unpublished
Guinea	A consumer union published twelve conditions on the new instant payment system the day after launch, and they are unanswered. Neither the regulator nor the operator has responded on the record (conditions). No complaints procedure, redress mechanism, tariff transparency rule or dispute statistic exists for digital payments anywhere in the base, so an unanswered civil-society list is the whole of the consumer-protection record.	MOVEMENT
Guinea-Bissau	No payment consumer protection instrument appears in the base for Guinea-Bissau. Nothing in the base records a complaints route, a redress rule or a disclosure requirement for Guinean payment users. Authorisation is the only protection documented, and it is the union's: six banks, one payment institution and one electronic money issuer on the register as at June 2026.	NO CHANGE
Kenya	Phone-number masking went live on person-to-person transfers in March 2026, with extension to merchant and bank transfers targeted for end-2026. Masking had previously been limited to the small-trader product (masking). It is a design change made by the operator rather than a regulatory requirement, and it addresses the same exposure — a phone number functioning as an identifier — that the High Court has since recognised in law.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Lesotho	Three implementing regulations under the consumer protection Act reached Senate adoption in May 2026. 2022-06-03 — the Financial Consumer Protection Act establishes the regime and the central bank's powers under it. 2026-05-07 — three implementing regulations reached Senate adoption, four years after the Act. 2026-05-05 — the Payment System Bill would license fintech providers under one law. No complaints figure, redress statistic or dispute-resolution route for payment users is published.	MOVEMENT
Liberia	A central-bank-approved fee schedule caps interoperable charges at 1.0 per cent of value to US$2,000 and a flat US$25.00 above it. The service is available 24 hours a day (schedule). The flat cap is regressive above about US$2,500 (schedule), where it falls below 1.0 per cent of value and keeps falling, so the schedule protects small payments and cheapens large ones. 2026-09-05 - consumer protection moved out of the capital: the telecommunications regulator opened its first service centre outside Monrovia, at Buchanan in Grand Bassa County, handling consumer complaints and community-radio compliance. No staffing, opening hours, caseload target or programme of further centres is published.	MOVEMENT
Libya	Card-payment surcharges were prohibited and made enforceable by a Municipal Guard notice in August 2026, after spreads of up to 20 per cent. The Municipal Guard issued an enforcement notice on 2 August 2026 against merchants adding a surcharge to card payments, with spreads of up to 20 per cent reported before it (notice). No penalty schedule, complaint route or enforcement count has been published, and the base holds no other consumer-protection measure covering electronic payment.	MOVEMENT
Madagascar	The central bank opened audits of electronic money institutions in June 2026 after user complaints, and a reimbursement route followed in August. The banking law of September 2020 establishes the supervisor's licensing, prudential and disciplinary powers over banks and electronic money providers (law). The central bank governor told the National Assembly in June 2026 that audits of electronic money institutions were under way, covering technical compliance, platform security and whether issued electronic money is fully backed, and recalled the institutions' 24-hour complaint-handling obligation (audits). Customers who paid the same electricity bill twice by mobile money were given a reimbursement route in August 2026, with operators transmitting payment histories to the utility (reimbursement). No audit finding or sanction has been published.	MOVEMENT
Malawi	The regulator found both operators in breach of the tariff-notice requirement and ordered customer compensation, while a mobile-money interoperability order expired unreported. Both mobile operators were found in breach in respect of a notice window in mid-2026 and agreed to credit affected customers with bundles equal to the price difference by 31 July with evidence of compliance, alongside strengthened internal procedures; the approved price increase itself stands, so what was enforced is notice and not price (order, compliance, refund). The base holds no confirmation that compensation was completed. A competition order of July 2025 required a mobile-money operator to open its exclusive football ticketing platform to other providers within a year, with concurrent physical ticketing for six months and progress reports every ninety days; the compliance year expired around July 2026 and nothing held records opening, a progress report or an enforcement step (interoperability). The communications regulator issued a public alert in September 2026 naming fake social cash transfer messages, failed-payment pretexts redirecting money to a second number, spoofed transaction alerts, fake prizes and messaging-account takeovers, and stating that bodies running social cash transfer programmes do not use ordinary messaging to request money from beneficiaries. It carries no incident count, loss figure or enforcement action.	MIXED a tariff-notice breach enforced with customer compensation while an interoperability order's compliance year passed with nothing on file
Mali	The regulator framed the validity of telephone credit and the commercial practices attaching to internet bundles by decision of 6 May 2026. Decision n. 26-00074/AMRTP-P is held from the official journal (decision); the general consumer protection law of 2015 sits behind it and neither instrument cites the other on the record (law). No compliance deadline, operator response or enforcement action is published, so the rule is dated and its effect is not.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritius	The 2018 payment systems Act is the statutory base, and stablecoin guidance was issued in August 2026. The Act is at its seventh consolidated version and is the statute under which payment providers are licensed and supervised (Act). The financial services regulator issued guidance notes on stablecoins with an annexure in August 2026, as part of its fintech series (guidance). Neither instrument is a consumer redress mechanism. No complaint volume, resolution rate or compensation arrangement for payment users is held anywhere in the base.	MOVEMENT
Morocco	The card interchange cap was cut to 0.50 per cent from 1 October 2026. Protection here is competition remedy rather than complaint procedure. The competition authority extended the card processor's acquiring divestiture to January and April 2026, and the central bank and the authority together cut the interchange cap to 0.50 per cent with effect from 1 October 2026. Both act on merchant cost rather than on cardholder redress, and no payment complaints route appears in the base.	MOVEMENT
Mozambique	Law 15/2026 repeals the 2008 payments law and strengthens the central bank's licensing and supervisory powers over payment operators and fintechs, and licensing became mandatory for digital platforms from 29 December 2025. 2026-07-02 — a new National Payment System Law repealed the 2008 statute and strengthened the central bank's licensing, oversight and supervisory powers over payment operators and financial technology firms. It is the top-level instrument governing payment-system conduct and consumer safeguards. 2025-12-29 — mandatory registration and licensing began for all providers of electronic services and digital platforms serving the market, digital payments expressly among the covered services, with consumer data protection and service reliability stated as objectives of the regime. Two licensing regimes now bear on the same providers, one from the central bank and one from the ICT institute, and no statement of how they relate is published. The statute's implementing regulations are not held either, so what a consumer can actually invoke is still unsettled.	MOVEMENT a new statute replaced the 2008 payments law and platform licensing became mandatory
Namibia	A determination on fees and charges for payment services took effect on gazetting in December 2025, against banking fraud losses of N$73.9m in 2025. The determination on standards for fees and charges for payment services was issued under section 45 of the payment system statute and took effect on publication in the gazette on 24 December 2025 (determination). Losses ran at about N$8.7m a year in 2020 on the central bank's figure and reached N$73.9m for 2025, with N$65m lost between January and October; no 2026 figure is held. An inaugural fraud and cybersecurity summit was convened by the ICT ministry with the central bank, the bankers' association, the incident response team and an industry cyber council, and no second edition has been reported (summit).	MIXED a fee and charge standard was gazetted while banking fraud losses rose sharply
Niger	A prior authorisation regime for money transfer took effect in August 2026, alongside a revised usury ceiling. The finance minister's communiqué of 5 August 2026 requires prior ministerial authorisation or a mandate from a local bank for any money-transfer activity, on penalty of one month to two years' imprisonment and fines of 10 to 100 million FCFA, rising to five years and 300 million on a repeat offence — a measure aimed at unlicensed transfer and mobile-money channels. The union decision of 29 December 2025, binding on Niger, revised the usury ceiling to 14% a year for banks and 24% for credit institutions, microfinance institutions and other economic agents, effective 1 June 2026. No national complaints or redress mechanism for payment users, and no dispute volumes, are on file.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Nigeria	Fraud losses fell 51 per cent on a reporting rate down 34 per cent, the digital-lending regulations are under appeal, and about 40m airtime borrowers sit inside the jurisdiction dispute. Fraud losses fell to ₦25.85bn in 2025, down 51 per cent, on 67,518 incidents against 123,918 in 2021, with fraud reporting down 34 per cent in the fourth quarter (trust, challenge). The digital consumer-lending regulations were suspended by injunction, upheld in July 2026 and enforcement resumed, with an association's appeal before the Court of Appeal; the two regulators' positions are unreconciled, one holding airtime credit a telecommunications value-added service and the other framing the regulations as its answer to harassment and data breaches, and the communications minister has directed that the existing framework stays in place, an interim settlement by direction rather than by instrument (regulations, court, resumption). The product at the centre of it reaches about 40 million users on an industry sizing of ₦300-400bn a year, and one operator resumed at about a quarter of its first-quarter run rate at a stated cost of about ₦50bn to first-half revenue (airtime). A payment security operations centre is a 2028 target with no legal basis or funding line (centre), and a domestic cyber-insurance market is still forming (insurance).	MIXED fraud losses halved on a falling reporting rate while a digital-lending regime went to appeal and forty million airtime borrowers sat between two regulators
Rwanda	A 2023 regulation governs payment-service users, and a baseline survey found 97 per cent of users had experienced at least one risk. The regulation made in December 2023, repealing its 2019 predecessor, covers transparency, execution, unauthorised, defective and late transactions, refunds and liability, security and complaints (regulation). A baseline survey reported in December 2025 found 97 per cent of surveyed digital financial service users had experienced at least one risk and 84 per cent reported fraud, with participants agreeing to develop a national action plan (survey). A regulation in force for two years and those figures are the two halves of this indicator, and they do not agree.	MOVEMENT
Sao Tome and Principe	A new central bank organic law replaced the 1992 statute in June 2025, carrying the duty relied on for financial consumer protection and for inclusion and literacy. The law sets out the bank's attributions including regulating and overseeing payment systems, licensing and supervising financial institutions, and the duty relied on for financial consumer protection and financial inclusion and literacy (law). The capture is truncated at the fetch limit, so the later articles are not readable here. No complaints procedure, ombudsman, disclosure rule or published redress statistic sits behind the duty in anything the base holds, and the sandbox launched in 2025 has no published cohort (sandbox). A mandate stated in an organic law is where consumer protection starts, not where it is delivered.	MOVEMENT
Senegal	Financial mediation handled 475 disputed files in 2025 against 379 in 2024, with no digital-payment category broken out. The financial services observatory reports 475 new disputed files in 2025 against 379 in 2024, a rise of nearly 25%: 357 in banking, microfinance, financial institutions and the post office and 118 in insurance against 71, and the leading banking grounds are slow international transfers at 25.4%, shareholder premium claims at 19.1% and credit repayment difficulty at 17%. No digital-payment complaint category is broken out at all, which is itself the finding. A new charge on users was enacted: loi 2025-17 creates a tax on money transfers at 0.5% capped at 2,000 FCFA a transaction, applying to transfers by any means leaving a trace and notably electronically and by mobile telephony, with cash withdrawals up to 20,000 francs in 24 hours, bank transfers and salary transfers exempt. The operative recourse rule is regional and unchanged: institutions including electronic money issuers must hold a complaints arrangement under a named officer, register every complaint, answer within a period not exceeding one month and handle complaints free of charge.	MIXED the mediation caseload rose by a quarter while a new transfer tax was enacted and no digital-payment complaint category exists
Seychelles	The Financial Consumer Protection Act 2022 covers payment providers; the clearest action held is a 2026 warning about an unlicensed exchange. The Act's Schedule Part A expressly covers payment service providers and the operators of payment, clearing and settlement systems under the National Payment System Act (Act). In May 2026 the regulator identified the operator of a crypto exchange as unlicensed under the Virtual Asset Service Providers Act 2024 and warned publicly that it could neither investigate nor help recover users' funds (enforcement). The December 2025 licensing amendment makes safe and reliable IT systems a condition of licence (regulations). Four years after the statute, no complaints statistic, ombudsman route or redress figure under it is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sierra Leone	A national fraud roadmap was validated in August 2026, and no rule allocating the loss is held. The roadmap was validated at the close of a two-day workshop convening the operator, two ministries, the regulator and the central bank on registration, verification compliance and fraud reporting (roadmap, workshop, strategy). Its text, costing and timetable are not held, and the gap it addresses is unchanged: no liability rule, refund duty or reversal mechanism is proposed, so the consumer's position after a fraud is exactly where it was (alert, parliament). Two published analyses disagree on whether the problem is absent law or unenforced law, and the disagreement is unreconciled (scam, enforcement, allocation). Complaint volumes are operator-reported in a ministerial statement with no series and no earlier figure (complaints), and the operator's own scam-alert tool publishes no report volume, response time, remedy or referral route (tool).	MIXED a multi-agency fraud roadmap validated while no rule allocates the loss and the consumer's position after a fraud is unchanged
Somalia	A telecommunications consumer protection regulation opened for statutory public comment in July 2026; nothing equivalent covers payments. The regulator's consultations register shows the draft regulation published for public comment on 8 July 2026, closing 31 August, under a statutory 45-day process (register). It covers pricing and contract transparency, service quality, operator obligations and enforcement. A stakeholder review preceded it in February 2026 (consultation). For payments the operative protections remain the 2020 mobile money regulations' safeguarding and conduct-of-business provisions (regulations); the bill that would give the central bank a supervisory framework is unsigned.	MOVEMENT
South Africa	Enforcement rose to 140 public warnings and R2.89bn in penalties in 2025/26, while the licensing regime for crypto providers is stated not to reach decentralised finance. 2026-07/08 — the conduct regulator's fourth actions report put 140 public warnings and R2.89bn of penalties on 76 persons for 2025/26, against 107 warnings and R119.8m the year before. Most warnings concerned unregistered providers promoting investment offerings on social media, and about 20% involved impersonation of licensed institutions, the regulator and its own staff among them. The penalty jump is driven by one deepfake-advertising matter of over R2bn, whose reconsiderations were pending at the report date, so the total is not a run rate. 2026-08-11 — the perimeter is stated and it has a hole in it: licensing of centralised crypto-asset service providers is in force, but the regulator says the model has no purchase on decentralised finance — protocols with no company, board or natural person to hold accountable — and plans to attach obligations elsewhere. No instrument for that is published. 2026-04 — separately, amendment regulations shifted the anti-spam duty in direct marketing to the consumer commission.	MOVEMENT
South Sudan	The standards bureau is building a framework to verify mobile data billing independently - the first consumer-facing measure in this base. The bureau announced at World Metrology Day in May 2026 that it is developing a regulatory and metrology framework to measure and verify mobile data consumption, coordinating with the communications regulator before engaging operators (framework). It is at planning stage and covers data, not payments. No complaints route, refund duty, dispute mechanism or loss-allocation rule for a payments customer appears anywhere in the base.	MOVEMENT
Sudan	Two central bank circulars made in 2026 — on USSD services and on anti-money-laundering controls — set binding duties for the first time. Circular 7/2026 of 31 March sets minimum requirements for USSD financial services: fee disclosure, no debit on failed transactions, mandatory transaction notifications, a round-the-clock complaint centre, 48-hour resolution, masking of sensitive account data, two-factor authentication for high-value transactions and encryption to TLS 1.2 and ISO/IEC 27001 (circular). Circular 8/2026 of 30 April extends monitoring, exception reporting, funding and value limits and service suspension to mobile and phone payment channels (circular). Enforcement followed: a public alert against an unlicensed application in South Darfur (alert) and a licence revoked in July (revocation).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Tanzania	Per-instrument fee caps were set with card-scheme negotiations moving the card fee from payer to merchant, and the governor rejected a general price cap saying competition will cut fees within six months. The caps are per-instrument rather than a general tariff (caps, interoperability). The general cap was rejected on the ground that charges are already low; an analyst put the worked cost at about TZS 3,500 per TZS 100,000 paid and argued the mandate manufactures avoidance (rejection). Financial consumer protection amendment regulations moved the dormant-account period from five to twelve months, set complaint maxima of twelve hours for mobile money and fourteen days for credit, and fines of TZS 1m a day; the data-protection cross-reference is what wires the payments regime into the data regime (regulations).	MIXED per-instrument fee caps set and a general cap rejected while the regulations tighten complaint deadlines
Togo	A national consumer-rights outreach tour reached its seventh edition across August 2026, covering mobile-money fraud and service satisfaction, with no attendance, complaint or outcome figure published. The seventh edition ran 3 to 28 August 2026 through the regions, with stages covering mobile-money fraud and consumer satisfaction (tour, fraud, satisfaction, regions). No attendance figure, complaint volume or outcome measure for the tour is published. Seven editions of a regulator-run outreach programme with no published complaint series is the shape of consumer protection here.	MOVEMENT
Tunisia	A published analysis finds no rule allocating the loss between bank, merchant and cardholder when an electronic payment is hijacked or blocked by a cyber incident. The analysis checks the 2000 electronic commerce law, the 2023 cybersecurity decree-law and the central bank's 2024 circular and finds no text allocating the loss (analysis). It sets that against a payments market of 164.8 million transactions worth 29.5bn dinars in 2025, up 12.3 per cent, and reported cyber incidents rising from 63,000 in 2021 to more than 155,000 in 2022 (market). A market of that size with no loss-allocation rule is the same gap SLE records, and here it is identified by a legal analysis rather than by a fraud wave.	NO CHANGE
Uganda	A National Financial Inclusion Strategy 2023-2028 was published in November 2023 and nothing in the base moves it. It was published in November 2023 (strategy). No mid-term review, target position or consumer-protection instrument under it appears anywhere in this ledger, against a payments record that includes a stablecoin corridor, a tokenised exchange, buy-now-pay-later device credit with no published default figure, and digital lending regulation that exists only as a stated intention.	NO CHANGE
Zambia	The 2026 payment Act carries a dedicated consumer-protection regime, over a 2018 directive prohibiting 26 categories of charge. A central bank directive prohibits 26 categories of unwarranted charges and fees on financial services — the clearest standalone consumer-protection instrument for digital and card payments, and eight years old. 2026-03 — the central bank's journal carried a notice on registration of virtual asset service providers, moving crypto activity toward supervised status. 2026-04-08 — the new payment system Act carries a dedicated consumer-protection regime alongside market-conduct rules for payment service providers. It is not yet commenced. No complaint volume, redress statistic or enforcement action under the 2018 directive is held, so what protection currently delivers cannot be read.	MOVEMENT
Zimbabwe	Bank charge caps were directed for compliance by March 2026, with a named analyst recording the governor conceding limited enforcement capacity. The caps were set in the February 2026 monetary policy statement (caps, consumer rights, legal tender). Online payment gateways are configured to settle in United States dollars first, so local currency is not accepted on them; that is named-analyst opinion, attributed (gateways). A price cap whose own setter concedes limited enforcement capacity, and a legal tender that online gateways will not take, are the two consumer findings this ledger supports.	MOVEMENT
