PROGRESS REPORT

Ghana: progress report, September 2025 – September 2026

Edition of 2026-09-08 · 268 systems and instruments tracked

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the base tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the base holds nothing on that indicator. **That is a statement about this base, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-09-01 to 2026-09-08.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	A second public-sector reform strategy was validated in July and August 2026 on seven pillars, with the identity credential as its spine. The draft runs to seven pillars, 27 programmes and 135 activities and is expected at cabinet and Parliament by the end of 2026 (reform strategy). It was validated again at a stakeholder workshop on 12 August 2026, one pillar being digitalised public-sector systems, with no text, budget or adoption date published (validation). Phase-one lessons are stated candidly: delayed fund releases, fragmented coordination and weak performance management (service delivery).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**ICT strategy**	The digital economy policy and strategy is the standing instrument, and a mid-term review sharpened the financed project onto it. The Cabinet-approved digital economy policy and strategy is the successor to the 2003 policy and runs on four pillars of infrastructure, skills, trust and innovation. 2025-09-03 - the minister launched a national digitalisation study described as a roadmap for the country's digital journey and restated the four pillars; the study itself is not published. 2025-12-09 - a development bank mid-term review mission concluded with an agreed roadmap sharpening the financed acceleration project onto high-impact activities and aligning it more closely with the national strategy. The roadmap is not published either, so what was sharpened is stated and not shown.	ADVANCED
Strategies, plans and policies	**Broadband strategy**	A 5G spectrum award is under way on eleven lots and a US$230m reserve, against a 70 per cent coverage target for 2028. The request covers eleven lots across 700 MHz, 2.3 GHz and 3 GHz on a US$230m aggregate reserve with 15-year licences, amended in seven places by a consolidated response of 31 July 2026 and its deadline moved to 27 August, with no award made (spectrum award, deadline). Every licensee must reach 70 per cent of the population on or before 6 March 2027 against the 2021 census, verified at 90 per cent of localities, extension refused outright and the regulator conceding an incumbent meets it substantially from existing deployment (consolidated response); a 40 per cent uplift applies to the dominant operator's 700 MHz and 3 GHz reserve prices, recharacterised in writing as a price rather than a remedy, with the valuation model withheld during a live assignment (consolidated response). That operator's rural schedule was rewritten from licence-relative years to fixed dates so that buying spectrum does not accelerate an existing commitment: 40 per cent of the rural population by December 2029, 60 per cent by December 2032 and 80 per cent by December 2035 (rural schedule). The ministry separately projects 70 per cent coverage by the end of 2028 alongside a spectrum-policy review, with no delivery mechanism named (ministerial projection).	ADVANCED
Strategies, plans and policies	**Data storage / cloud strategy**	A data centre and cloud regulatory framework went to a validation workshop in June 2024 and has not been issued, alongside a proposed transfer of the country-code domain to a state registry. The domain has been privately managed since 1996 and no transfer had been proposed before (announcement). No instrument, date or transfer step is on record, and the base holds no cloud or data-storage policy of any kind beside it, so a naming registry is the whole of the sovereignty-over-infrastructure record. There is a policy in development, two years unfinished. A regional digital body and the technology agency convened a stakeholder validation workshop on data centre and cloud regulation in Accra in June 2024, the communications minister stating alongside it that government data held abroad would be brought onto domestic hosting to cut operating cost and grow the domestic sector. No framework text or issue date is published, and nothing on file states whether it was ever made.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data interoperability framework / roadmap**	The interoperability framework is the whole-of-government instrument and is labelled a draft for stakeholder review, with no approval held. The technology agency's whole-of-government interoperability instrument updates an ineffectual 2008 predecessor and is labelled a draft for stakeholder review. No formal approval and no operative successor appears anywhere on this ledger. The document carries no printed date and the held capture stops in its chapter two of twelve, so what it obliges beyond its principles is not established here. What has moved is around it rather than in it: a government data exchange hub, a data exchange Act and a data harmonisation bill are all separately on this ledger, and none of them is stated to be made under this framework.	NO CHANGE the framework has stood as a draft for stakeholder review with no approval on record
Strategies, plans and policies	**AI strategy**	The National Artificial Intelligence Strategy 2025-2035 was approved in April 2026 and carries a fund of GHS 5bn scaling to GHS 15bn. The text was published in December 2025 by the communications ministry and is held in full; it corrects two things launch reporting carried, giving the range as 2025-2035 and the body proposed as an authority rather than an office. Cabinet approved it in April 2026 and it was launched publicly on 24 April, the President announcing US$250m for a compute centre and US$20m for implementation, neither of which is the strategy's own GHS 5bn fund. A ten-year implementation plan on measurable annual milestones is being built with United Nations partners, with no plan text or milestone list on file. 2026-09-07 - the country is one of 77 to have run UNESCO's readiness assessment methodology, its draft findings stating that the country lacks binding AI-specific regulation and comprehensive data governance frameworks. Three datings of the strategy are in circulation and none is reconciled: the held text is titled 2025-2035 and dated December 2025, a ministerial statement puts Cabinet approval in the week before 26 February 2026, and the readiness report gives it as 2023-2033, approved on 24 April 2026. The frame follows the held text.	ADVANCED
Strategies, plans and policies	**Data localisation policies**	A 125-section draft Act would repeal the 2012 statute outright and require domestic storage of data critical to national security, civil registration and sensitive personal data. The draft text is now held in full. It would establish a Data Protection Authority and repeal the Data Protection Act 2012 (Act 843), replacing the Commission constituted under it, and covers civil registration data and sensitive categories including children's, biometric, health and genetic data. It carries no month within 2025 and no commencement date, and no localisation instrument is in force.	ADVANCED
Strategies, plans and policies	**Data governance policy**	The National Data Strategy was validated in July 2024 and nothing has followed in the two years since. European partners enabled the strategy and a national validation workshop was held on 2 July 2024, since when no adoption, publication or implementation step is on file (validation workshop). The silence is the finding: a strategy validated with donor support and then left is a different thing from one still being written, and the base cannot distinguish abandonment from delay.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Open data policy**	The open data initiative dates to 2012 and its national data sharing policy, drafted under a 2018-2019 revamp, is still described as being finalised. The initiative dates to 2012 and is led by the technology agency; a draft national data sharing policy incorporating open data was produced under a 2018-2019 revamp and is still described as being finalised. The draft policy itself failed to fetch twice and is not held, so the agency's own description is what stands. 2026-03 - the statistical service announced an upgraded public statistics catalogue for release that month, with improved discovery, navigation and exploration tools. A catalogue upgrade is not a policy. No dataset count, licence, publication schedule or reuse figure for the initiative appears on this ledger.	NO CHANGE a fourteen-year-old initiative whose policy is still described as being finalised
Legislation and regulation	**Data protection legislation**	The Data Protection Act 2012 is in force and unamended, with a 125-section draft replacement that would repeal it outright not enacted. The 2012 statute remains the sole general data-protection law, reaching controllers and processors rather than the data-broker layer an operator names as the source of leaks (the Act). The replacement is held in full: 125 sections establishing a Data Protection Authority and repealing the 2012 Act, so the Commission constituted under it would go with the statute. It carries no month within 2025 and no commencement date. Fourteen years after commencement the base holds no amendment, no commencement instrument for a successor and no parliamentary timetable.	NO CHANGE
Legislation and regulation	**Cybersecurity legislation**	The Cybersecurity Act 2020 produced its first published penalties in August 2026, three totalling GH¢720,000, of which two are already unsettled. The Act establishes the cyber security authority and a fund, provides for designation, registration and compliance audit of critical information infrastructure, and licenses cybersecurity service providers, with no licence register, designation list or enforcement record held before this month (the Act, in application). The authority fined the companies registrar GH¢240,000 for engaging an unlicensed provider and that provider GH¢120,000 for operating without a licence (first penalties). The registrar contests its sanction as premature and procedurally unfair, dating its procurement to a commitment authorisation of 28 November 2025 and a tender advertised on 4 December and evaluated on 22 December, before the directive it is said to have breached, and has asked the Attorney-General to intervene (challenge). The largest penalty, GH¢360,000 against an accounting firm's Ghana practice, was announced and declared satisfactorily resolved in a joint statement the same day, with no statement of whether it was paid, reduced or withdrawn (penalty, resolution).	ADVANCED
Legislation and regulation	**Legislation covering digital id**	Amendment regulations in force from June 2026 make biometric-only verification law and bar visual inspection and photocopying of the card. The regulations were signed on 2 March 2026, gazetted on 27 March and came into force on 9 June, with penalties running to 2,000 penalty units for an organisation (regulations); the gazetted artefact is an image scan with no text layer, so the regulation is not machine-readable (regulations, agency statement). A fee schedule made under separate 2025 regulations took effect on 2 February 2026: first registration free below 25 and GH¢30 at 25 and over, replacement GH¢200 and record updates free, across 276 district offices, the agency stating it was approved by Parliament rather than introduced by the agency (fees).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Digital payments legislation**	The Virtual Asset Service Providers Act 2025 passed in December 2025, and a digital banking framework is complete and awaiting consultation. Before it there was no statute, against more than 3 million virtual-asset users and over 100 service providers recorded in a July 2025 registration exercise, with regulated institutions directed not to facilitate virtual-asset activity at all. On the regulator's account the Act is risk-based and technology-neutral, splits supervision between the central bank and the securities regulator by activity, and attaches licensing to the service rather than to holding; the gazetted text is not held, so every characterisation is the central bank's own. 2026-09-03 - the coordinating committee is constituted and chaired by the central bank governor, joining the securities regulator, the finance ministry, the cyber security authority and the financial intelligence centre, working towards having the Act fully in force by 2027. 2026-09-04 - a second sandbox cohort of ten was admitted by the securities regulator with the central bank, one a stablecoin infrastructure provider testing payment, fiat settlement and wallet infrastructure under supervision. The cohort list and exit criteria are not held.	ADVANCED
Legislation and regulation	**Legislation enabling data interoperability**	A data harmonisation bill was consulted on in November 2025 and a separate data exchange Act was named in July 2026; neither has been laid. The harmonisation bill went to public consultation from 19 to 27 November 2025 and would make the information technology agency both regulator and technical enforcer of the standards; it was renamed an Act in the July 2026 artificial-intelligence plan and has not been laid before Parliament (bill). The ministry names a data exchange Act as a statute distinct from harmonisation, carrying interoperability and inter-agency sharing, with no draft or timetable (exchange Act). Two instruments have been named for the same problem and neither exists as a text the base can read.	ADVANCED
Legislation and regulation	**AI legislation / regulations**	An emerging technologies bill is the chosen vehicle instead of a standalone artificial-intelligence Act, and the oversight body it needs does not exist. The draft would create an emerging-technologies agency for cross-functional compliance across artificial intelligence, blockchain, connected devices, cloud and quantum, with voluntary startup registration, and was to be laid before Parliament in 2026; no text is held (bill). A responsible artificial-intelligence body was proposed at a national consultation in April 2025 and provided for in the launched strategy within its first year, and sixteen months after first proposal it has no establishing instrument, budget or staff (oversight body). Sources differ on whether it is one body or an authority plus a ministry office (consultation, approval). A third draft would overhaul the 2008 law governing the information technology agency, licensing every technology business, certifying professionals, regulating artificial intelligence and blockchain, levying 1 per cent on services and splitting the agency's regulatory and commercial arms (agency bill); the minister's answer to critics is that detail comes in a later legislative instrument (agency bill, critics, response).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**E-commerce legislation**	An electronic transactions bill dated October 2025 would mandate age verification, ban targeted advertising to children and impose duties on very large platforms. The draft is published on the ministry's site and would replace the 2008 Act, requiring risk assessments and semi-annual transparency reports from very large platforms (draft bill). The 2008 Act remains the standing baseline until it is enacted, and no parliamentary date is held.	ADVANCED
Legislation and regulation	**Statistics legislation**	The 2019 statute is still the governing statistics law and a stakeholder engagement opened on a replacement bill in July 2026. The founding statute came into force on 27 September 2019, establishing the statistical service as the central statistics-producing and co-ordinating institution for the national statistical system and repealing the 1985 law; the service's own page carries it as the currently governing framework. 2026-07-26 - the service opened a stakeholder engagement with ministries, development partners, civil society and academia on a proposed replacement bill. It is a consultation: no bill is shown as introduced, read or passed, and no draft text is held. The held capture of the Act itself stops at section 19 of a longer statute, so its offences and miscellaneous provisions are not on the base.	ADVANCED
Legislation and regulation	**Access to information legislation**	The information commission fined 254 public bodies GHS 20,000 each in August 2026, while institutions kept refusing releases. The fines were imposed under section 77(1) of the 2019 Act after reminders published in the Gazette, and the sanction count is the commission's own (fines). No collection figure, appeal outcome or compliance rate is published, so whether the fines were paid is not established, and the enforcement action itself is the only measure of the regime the base holds. 2026-09-03 - a newsroom's own tally counts 21 public institutions failing to release information on 24 separate requests between January 2025 and July 2026, the finance ministry, the attorney-general's office, the communications regulator and the highways authority among them, 17 months into an administration elected on a pledge to operationalise the Act. It measures what one requester asked for rather than a national refusal rate, and it is the only account of outcomes the base holds against the commission's account of sanctions.	ADVANCED compliance contested

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data protection	**Data protection authority**	The regulator declared 2026 a year of enforcement, brought a fee schedule into force and bought field vehicles, and has still published no fine. It operates from a single head office with a size-banded fee schedule in force from 2 February 2026, two field-enforcement vehicles bought from internally generated funds, and regional offices intended in five regions by the end of 2026 with none yet opened (vehicles). Children's data, health data and national-security-relevant data are the named enforcement priorities (enforcement year), and a new governing board was sworn in tasked with a national data-governance framework (board). Twelve months on, no fine, prosecution or registered-controller count has been published and the only quantities published are awareness ones (enforcement record). An upgrade of the regulator to an authority was announced in August 2025 with no bill, timetable or further mention in the twelve months since (upgrade). 2026-09-07 - the Commission's own first-half figures reach the base for the first time: a 51.5 per cent rise in regulatory activity and a 98.4 per cent rise in newly registered data controllers over the first half of 2026, with its public campaign put at an estimated 25 million people reached. The controller registration rate is a growth figure without the base it grew from, and still no fine or prosecution is published.	ADVANCED
Data protection	**National data protection readiness**	An amendment sent to Parliament would grant security agencies defined access to the biometric citizen database and place the identity agency under the interior ministry. The amendment was reported sent to Parliament in August 2025 (amendment). The base carries nothing after that date despite the civil-liberties objections it drew, so neither passage nor withdrawal is established, and the access it would create has no published safeguard, oversight body or logging requirement attached to it.	REGRESSED
Regional collaboration	**Regional policy collaboration**	A joint venture was signed in Accra to build the continental digital trade corridor (agreement). The continental trade secretariat and a Ghanaian technology company signed a joint venture in Accra on 31 August 2026 to establish a digital trade corridor to facilitate, track and settle cross-border transactions (agreement), pitched as ending the routing of African payments through third countries (remarks). It is a signed venture, not a system in service. The fifteenth Africa Internet Governance Forum runs at Accra from 2 to 5 November 2026 with youth, parliamentarian and preparatory tracks and a regional school on internet governance; session times, venues and speakers were unpublished when the schedule was read (forum schedule). The communications ministry partnered a policy-intelligence platform in August 2026 to bring regulatory-analysis tools to the artificial-intelligence strategy, data-governance work and the coders programme, with no funding, duration or deliverables stated (partnership). A Malawian delegation came to Accra to structure digital-government cooperation under which more than a dozen Ghanaian technology companies would help build its systems, the identity card cited as the reference at more than 19 million holders (delegation), and the cyber security authority reports discussions with the British High Commission on cyber-enabled crime, child online protection and capacity building (discussions).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Regional legal harmonisation**	A fintech licence-passporting memorandum with Rwanda signed in February 2025 remains unpublished by either central bank. Which licence categories are recognised and on what conditions is therefore unestablished as at July 2026 (memorandum, compliance cost). Separately, an anti-illicit-flows policy tracker piloted here over eighteen months alongside five other states has been endorsed for continental roll-out from diagnostic pilot to standing self-assessment instrument, the finance ministry reporting it contributed to recovering millions of dollars in revenue; no Ghana-specific score, findings or reform list is published (tracker).	NO CHANGE
Regional collaboration	**Shared regional infrastructure**	A three-country identity pilot would recognise a digital identity issued in one state in the other two, and a frequency agreement was finalised with Burkina Faso. The pilot runs with Rwanda and Benin, presented as the first step to a single African digital market by 2030 with eighteen further countries said to be joining, and is run through a continental alliance with German development cooperation; no scale, service, date or governing instrument is stated (pilot). A cross-border frequency coordination agreement with Burkina Faso was finalised in August 2025 with agreed signal-strength thresholds in response to consumer interference complaints, and nothing has been filed since on the thresholds set or compliance with them (agreement).	ADVANCED
Regional collaboration	**Cross-border data transfers**	A United States health data-sharing agreement was refused in April 2026, and the medical regulator is pressing for an African verification exchange. On the data-protection regulator's account the five-year agreement covered not only health data sets but metadata, dashboards, reporting tools, data models and data dictionaries, gave ten United States entities access requiring no prior Ghanaian approval, required 25 years of citizens' health records, and settled disputes under United States law against US$109m subject to congressional appropriation (refusal). The terms are the regulator's executive director quoted by a state news agency rather than a published text, and a further reported demand to integrate the national identity database with American systems in real time is attributed to another agency citing unnamed sources. In the other direction the medical and dental council is pressing African health regulators for shared infrastructure to verify qualifications, licence status and disciplinary records of health workers moving across borders; nothing is built (proposal).	ADVANCED
Standards	**National interoperability standards**	A national data exchange hub was named again in July 2026 for standardised sharing between institutions, with no design, cost or timetable. A hub was launched in 2009 and stalled on funding and unclear mandates (the 2009 system). The communications minister named a National Data Exchange Hub the government plans to establish, without saying whether it revives that system or replaces it (re-announcement). The interoperability legal base is being rebuilt through the harmonisation bill in parallel, so a standard, a platform and a statute are all announced and none is in force.	NO CHANGE an old system re-announced with nothing new behind it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	**National quality standards**	The standards authority Act of 2022 is in force, and a metrology institute project entered its second phase. The founding statute came into force on 30 June 2022, establishing the standards authority and its mandate for national standardisation, conformity assessment and metrology, and was amended by the accreditation service Act of 2023. 2026-03-19 - the authority and a German partner institute held a steering committee on the second phase of a project to modernise the metrology system toward a self-sustaining, internationally recognised national metrology institute. The Act's operative text is not held - the legal database's viewer failed on two attempts and only the citation and history page was captured - so what the mandate obliges in detail rests on the citation rather than the text.	ADVANCED
Standards	**Adoption of international standards**	A tier IV data centre hosting the customs system took information-security certification, and metrology modernisation aims at international recognition. 2026-02-24 - a new tier IV data centre in the second city hosting the integrated customs management system secured information-security certification, engineered for high availability, fault tolerance and business continuity on a near-zero-downtime migration. It is a certification of a facility hosting a government system rather than of the government's own estate. 2026-03-19 - the standards authority and a partner institute opened the second phase of a project aiming at a self-sustaining, internationally recognised national metrology institute. No count of international standards adopted nationally, and no conformity-assessment output, is published against either.	ADVANCED
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	A fifth open-government action plan for 2024-2028 was co-created from March 2023, and a community media cyber project is training about 60 media houses. The standing channel is the open government partnership, joined in 2011. The fifth national action plan, published in December 2023 for 2024 to 2028, was co-created from March 2023 through consultative meetings with a multi-stakeholder forum and civil-society organisations working in fisheries, health and power, and a review of the fourth plan, which ended in June 2023. It is organised on accountability, transparency, participation and technology, and carries commitments on asset declaration, beneficial ownership, right to information and the open data initiative. Its own diagnosis of what went wrong before is the useful part: misalignment between workplans, budgets and commitments, implementing agencies unaware of what they had agreed, and broad unrealistic commitments. The capture holds front matter and introduction only, so no commitment text, milestone or lead agency is on file. A Czech-funded community media cyber project runs with the cyber security authority and a digital-transformation centre, in Accra through August 2026 and Kumasi in September, certifying those who complete every session (project). A session on 19 August put newsroom devices to journalists as deliberate targets (training). The press corps is proposed rather than constituted, with no budget published (press corps).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	**Open discussion of government policy**	Citizens reporting demands for unofficial payments rose to 69 per cent in the second half of 2025 from 51 per cent, with digitalisation named as the response. The statistical service's governance series names digitalisation, fee transparency and public education as its remedies, citing a marked fall in bribery at the passport office after digitisation, a comparison asserted without a before-and-after figure (governance series). The Office of the Chief of Staff has directed the ten institutions the series flagged as high-risk to report back on remediation. It is a survey series rather than a case count, and the base holds no published response from any of the ten. 2026-09-01 — the civic education commission named misinformation, disinformation, hate speech and synthetic media a threat to democratic stability and social cohesion, its chair saying citizens can no longer treat seeing and hearing as proof; external support was announced at the same event for a verification and investigative skills programme (engagement). The commission states a threat; nothing on the ledger measures it.	REGRESSED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The 2026 appropriation carries GHS 729,947,850 for ICT infrastructure and regulation, of which GHS 591,947,850 is domestically funded. A further GHS 100,000,000 goes to ICT capacity development (appropriation); the domestic figure resolves to GHS 536,745,448 for the information technology agency, GHS 25,346,198 for the cyber-security authority, GHS 17,308,560 for the capacity centre, GHS 9,720,400 for the data-protection regulator and GHS 2,827,244 for the domain registry (appropriation, agency vote). The regulator's GHS 9,720,400 is entirely its own internally generated funds with no Consolidated Fund allocation, and the mid-year fiscal review names none of these lines (mid-year review). Parliament separately approved multi-year commitments for three revenue platforms with published benefit projections and no disclosed cost, duration or termination terms (approval), the opposition alleging the cross-border operator takes up to 3 per cent of collections, which it estimates at about GH¢690m a year (objection).	ADVANCED
MoUs and other agreements	**Strategic relationships**	A trade-facilitation country programme was renewed in August 2026, covering digital customs systems at a joint border post. The renewal continues trade-facilitation and continental free-trade readiness work, including digital customs systems at the Akanu-Noepe joint border post and support for more than 1,250 women and small-scale cross-border traders (renewal). No financing sum, term or workplan is stated, and the same border post is the subject of a regional interoperability dialogue recorded on a neighbouring ledger.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	**Mobilisation of non-state finance**	The dominant operator's capital expenditure fell 36.3 per cent to GHS 2,100.4m in the half-year, while startup equity rose to US$41,225,000 in 2025. Capital intensity fell from 29.1 per cent to 14.0 per cent, roughly US$185m at the report's own June 2026 rate against a stated US$380m tranche for the year (half-year accounts). The programme behind it is US$1.1bn equivalent over 2026 to 2028 with a first tranche of US$380m, a restatement of a retired five-year pledge rather than a second programme (programme, tranche). Startup equity reached US$41,225,000 across eight startups in 2025 from US$9,715,000 across seven in 2024, seventh in Africa and 2.5 per cent of the continental total, in a report that calls the market in steady decline as a funding destination since 2022 (funding report, venture report). Parliament approved a 20-year public-private toll concession for nationwide electronic collection, with no concession value, revenue split, corridor count or build timetable stated (concession). 2026-09-07 - a Ghanaian remittance startup moving money from the United States to Ghana raised US$333,000 from a blockchain foundation's community fund, to launch an international payment card usable online and in stores. The commitment date is not stated in the source and no valuation, corridor volume or user count is published.	MIXED operator capital fell by more than a third while startup equity more than quadrupled
New investments	**Development-partner project financing**	The US$200m digital acceleration project has made no disbursement since September 2024, against US$18.3m drawn, and two distance-learning loans have lapsed. The US$200m digital acceleration project had disbursed US$18.3m (project), and two concessional distance-learning loans have passed their completion dates with nothing recorded against them (tertiary, local government). A UN capital development fund partnership with a Ghanaian microcredit company began a second phase on a US$200,000 grant the fund expects to catalyse US$1 million in loans and savings, after a first phase on a US$30,000 grant that engaged 470 enterprises across three regions and recorded 1,988 youth loans totalling GHS494,760 and 1,762 new youth savings accounts holding GHS382,040 (partnership). 2026-06-08 - the project has not been drawn on for nearly two years. A June 2026 account states no disbursement has been made since September 2024, that reports in 2025 said the project had been suspended, and that it stalled in February 2025 after key staff contracts were terminated. Neither the lender nor the government has published a statement the base holds, and the land-registry workstream it carries is the visible cost.	MIXED a new small-business partnership entered a second phase while the largest project has not disbursed for nearly two years

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	The latest regulator bulletin records 38.47m mobile voice subscriptions at 116.84 per cent penetration, against a stated shortfall of about 6,000 cell sites. The July-September 2024 bulletin is still the latest held, recording 38.47m mobile voice subscriptions at 116.84 per cent penetration, 25.56m mobile data subscriptions and one operator on 75.09 per cent of the market - a rate above parity because it counts subscriptions rather than people. 2026-09-06 - the minister puts the requirement at about 6,000 additional cell sites against roughly 1,100 in the current build, completion of that round set for 2027. Behind it are 800 sites committed by the dominant operator with 180 already active, and a 2026 plan of 2,698 sites at the second operator of which 1,890 are live within a network of roughly 9,000. 2026-09-07 - voice over LTE has risen from about 7 per cent of traffic to 22.43 per cent on 8.4 million subscribers, the minister's figures with no regulator series behind either end. 2026-09-03 - the state operator behind the AT Ghana brand got a board, releasing spectrum in three bands and core-network access that had waited almost two months for one, both conditional on audited accounts. The first shared 5G wholesale network was activated in March 2026 and its operator's exclusivity deleted from 15 July 2026.	ADVANCED
Connectivity	**Internet usage**	37 per cent of the population used mobile internet in 2024 against near-total coverage, leaving a usage gap of 62 per cent and a coverage gap of 1 per cent. The gap is now measured rather than asserted. An industry measurement puts mobile internet use at 37 per cent of the population in 2024 against near-total network coverage, a usage gap of 62 per cent and a coverage gap of 1 per cent, against a 2015 position of 15 per cent connected, a 70 per cent usage gap and a 15 per cent coverage gap. Nine years of build-out closed the coverage gap almost entirely and the usage gap by eight points. The same body projects the usage gap at 46 per cent by 2029 if a named set of spectrum, infrastructure, device-affordability and skills reforms is adopted, against 55 per cent without them - a forecast by the party proposing the reforms. The last household survey was fielded in June 2019 and not repeated: 16.8 per cent of households had internet access and smartphone ownership ran at 58.4 per cent urban against 28.1 per cent rural. An unlimited 100 Mbit/s fibre package fell from GH¢987 to GH¢299 a month, extracted by ministerial pressure rather than by licensing change. Of 78 authorised internet and public-data providers, 42 are operational, the single rural one not among them.	MIXED coverage and price both moved the right way while the usage gap has closed slowly against near-total coverage

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile affordability**	An independent index puts the market among the ten cheapest in Africa for a one-gigabyte basket, and the regulator has opened a consultation on roaming wholesale rates. 2026-02-28 - an independent index for the fourth quarter of 2025 places the country among the ten cheapest African markets for a one-gigabyte monthly mobile data basket, attributing it to state-supported infrastructure rollout, infrastructure sharing and stronger competition, while cautioning that the results are converted to dollars and sensitive to exchange-rate movement. 2026-03-11 - the regulator opened a four-week consultation proposing a regulator-led wholesale-rate framework for national roaming to replace bilateral operator arrangements, following its significant-market-power declaration. The regulator's own quarterly bulletin is the primary domestic series, but the held capture stops before its average-tariff section, so no national tariff figure is on this ledger and the affordability position rests on the independent index.	ADVANCED
Connectivity	**National fibre backbone**	Fibre cuts are projected at 8,578 nationwide in 2026, 4,289 of them already in the first half, at roughly US$2,045 a repair. The 2022 peak was 10,034 cuts costing US$17.4m, and the operators logged 4,289 cuts in the first half of 2026, the only period-stated figure held (repairs, backbone under strain). One operator recorded sabotage affecting 157 sites (sabotage). A dig-once policy drafted with the roads ministry is finalised and awaiting cabinet approval, targeted for implementation in the third quarter of 2026 and claimed to cut fibre rollout cost by up to 60 per cent (dig once); no cabinet decision, instrument or commencement is on record (dig once). 2026-09-07 - the minister's own account puts 8,578 cuts projected nationwide for 2026, 4,289 already recorded in the first half, at roughly US$2,045 per repair and more than US$20m spent on repairs in 2025, with major corridors averaging 72 cuts a month and uncoordinated excavation under the government's own road programme accounting for about half of road-related cuts. The 2026 number is a projection, not an outturn. The dig-once answer to it has slipped: a joint Cabinet memorandum with the roads ministry now awaits Cabinet, the third-quarter 2026 implementation target having passed with no instrument or commencement on record.	REGRESSED
Connectivity	**International internet bandwidth**	The regulator names five submarine cable providers on an undated page, against an analyst count of six cables and about 2.5 Tbps in use. The landing licence rests on section 3(8) of the 2008 Act and the regulator's list carries no date, so it predates later landings; the six-cable count and the capacity estimate are an analyst's, not the regulator's (landing page, market brief). A separate five-year renewable authorisation lets consortium members sell capacity directly to users, charging 1 per cent of revenue annually, lapsing if not operated within two years and requiring three years' notice of non-renewal (carrier authorisation); the document held is the template with the grantee left blank (carrier authorisation). The 2008 Act is the statute under which both landings and 5G licences are granted, and it sources the universal-access fund from contributions stipulated in each licence rather than from any rate set in the Act (the Act).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Internet Exchange Points**	The Accra exchange is past 200 Gbps, but only 4 of 39 connected networks peer at all three exchanges, so most local traffic still transits abroad. The fragmentation is the finding rather than the traffic figure: an exchange's value is the traffic it keeps local, and three partly-overlapping exchanges keep less of it than one would (exchange traffic). No membership list, peering policy or retained-traffic percentage is published for any of the three, so the base can see the overlap and not what it costs.	MIXED the main exchange grew while three exchanges keep splitting the traffic between them
Connectivity	**Satellite broadband licensing and availability**	29 satellite licences have been issued, eleven of them last-mile, and subscriptions reached 15,384 by mid-2025 from 2,666 before licensing. The framework has operated since the end of August 2024 and nothing has been published on it since (framework). Subscriptions ran at 11,982 in the first quarter of 2025 and 15,384 in the second, from 2,666 before satellite licensing, on a regulator presentation to the international union (subscriptions). No figure has been published for any quarter after mid-2025, so a fast-moving series stops eighteen months before this report.	ADVANCED
Data Storage	**Local data centre capacity (all providers)**	About 4.8 MW of live critical load across 8 to 10 commercial facilities in 2024, against a campus with 30 MW committed and expansion designed to 150 MW. The 2024 estimate carries 7 MW in construction, about 60 per cent occupancy and about US$12m of annual commercial revenue, and is an analyst's own modelled figure written for a European investment facility (market brief). The largest facility by committed capacity is a logistics-park campus at 30 MW designed for expansion to 150 MW, known only from a regional trade round-up with no Ghanaian primary (campus). A carrier-neutral facility connected to a subsea landing was commissioned in late 2025 at up to 1.7 MW and 500 racks, the two held accounts dating it a month apart (commissioning, opening). A 10 MW facility expandable to 30 MW on about US$100m was announced in 2023 with construction due in 2024 (announced facility); no operational date, delay or cancellation is on file and the whole record is that press release (announced facility).	ADVANCED
Data Storage	**Local data centre capacity (national providers)**	The state's own data centre is said to be being modernised for artificial-intelligence workloads, with no capacity, location, cost, contractor or timetable stated. The statement was made at an artificial-intelligence summit in July 2026 and is the entire holding on the national facility (modernisation). Against a commercial estate the base can size to the megawatt, the state's own capacity is unmeasured, which matters because the sovereign-hosting argument rests on it.	NO CHANGE one sentence in one source is the whole holding
Data Storage	**Off-site backup capacity**	Government cloud storage runs to 1,289 terabytes split between two cities, and a second-city tier IV facility was certified in 2026. A closed project's completion report records a cloud storage system installed with a capacity of 1,289 terabytes, 703 in the capital and 586 in the second city, improving accessibility, efficiency and disaster recovery. It is the clearest documented geographically separated government storage figure the base holds. 2026-02-24 - a new tier IV data centre in the second city hosting the integrated customs management system secured information-security certification, engineered for high availability, fault tolerance and business continuity. Neither source states how much of the capacity is used, what is replicated to it, or whether any recovery has been tested.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	**Sufficient energy and water for data centres**	No power purchase or on-site generation arrangement is published for any named facility, though the tariff any of them pays is gazetted. An analyst brief puts installed capacity at about 6 GW of which roughly half reaches the end user, electricity at about US$0.12 per kWh and independent producers at more than 60 per cent of capacity, all 2024 modelled estimates (market brief). Nothing facility-specific is published, and the country-level figures are the analyst's rather than a utility return (capacity round-up). What is published is the price rather than the arrangement. The regulator gazetted electricity tariffs on 13 March 2026 effective from 1 April, under section 19 of the Public Utilities Regulatory Commission Act 1997, with a lifeline residential rate of 52.14 pesewas per kilowatt-hour to 30 units, 118.13 from 31 to 300 and 156.09 above 300, an all-in residential top rate of 260.15, and a bulk generation charge set as the weighted average at which the three distribution companies procure electricity. It amends a gazette of 27 January 2026 whose rates are not held, so the direction of the change cannot be stated.	NO CHANGE
Energy	**Grid reliability**	Two nationwide outages fell in three weeks, on a system disturbance in July and a transmission line fault in August. The transmission operator's planning report for 2025 reports congestion in the eastern, northern and western corridors and a stated need to reinforce the interconnected system. 2026-07-29 - a power system disturbance at about 0311 caused simultaneous tripping of generating plants and a nationwide outage; the operator activated restoration procedures and opened a technical investigation. 2026-08-20 - a major fault on the Akosombo-Volta transmission line at about 0430 tripped the Akosombo units and some thermal plants, causing a second nationwide outage in three weeks; the operator said further measures were needed to strengthen network reliability and resilience. No interruption-duration or frequency index is published for either event, so the direction is clear and the magnitude is not.	REGRESSED
Energy	**Rural electrification**	Population access stood at 89.03% in 2024, and a GHS598m project was launched for 206 communities. The energy commission's bulletin puts the 2024 national population access rate at 89.03% and the household rate at 87.9%; its rural-urban breakdown is map figures whose labels did not extract, so the rural gap itself is not stated. An earlier sector brief holds the baseline it moved from: 83.5 per cent national access, 93.8 per cent urban and 70 per cent rural, with about 5.02 million people without a connection, mostly in island and lakeside communities and parts of the north. 2026-08-28 - the ministry launched a GHS598m project to connect 206 communities across all 18 districts of one region within six months, part of a programme targeting four regions this year and four more annually until 2030. No connection under it is yet recorded. 2025-05-30 - a renewable programme launched to reach more than 70,000 people, with 35 mini-grids and 1,450 solar home systems across three regions and 12,000 net-metered rooftop systems nationwide; no completion figure is published. It works through 55 licensed private solar companies, against a 2019 master plan targeting about 1,360MW of renewable capacity by 2030 on a US$5.6bn investment plan, whose universal-access target had already slipped from 2020 to 2025 unmet.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	**Robustness of government hardware and software**	Tax payments through the government portal have been intermittently failing since 14 August 2026, with no restoration date given. The revenue authority states the fault is limited to payment processing and does not affect the filing of returns, and was still working to restore normal service a week later (restoration, fault). The portal's redesign, due in the fourth quarter of 2025, has not launched, and no service count has been published since July 2025, when about 1,500 to 2,000 services were live against a 16,000 target (redesign, service target).	REGRESSED
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	35,516 public-sector workers were trained in 2024 against a 60,000 target, while US$457m is owed for identity verification services. The ministry's own budget reports 35,516 public-sector workers trained in 2024 against a 60,000 target for 2025, delivered through its capacity-development centre and its technology agency. No 2025 or 2026 figure is published against that target. 2026-04-16 - a programme launched with a development agency and a bilateral partner explicitly builds a cadre of local trainers and experts so government technical capability is sustained and scaled internally rather than remaining externally dependent. Against that, the identification authority discloses US$457m owed by the revenue authority, the health insurance scheme and the passport office for biometric verification services, with disconnection threatened, and a further US$64m to US$68m owed to the technical partner behind the system - a financing risk to maintaining the country's foundational system, stated by its own operator.	MIXED a training programme scaled while the identity system's own maintenance is unfunded
Cybersecurity	**National cybersecurity readiness**	The national response team handled 3,363 incidents between January and June 2026, the first incident count the base holds for it. 2026-09-07 - the response team handled 3,363 incidents between January and June 2026 and ran vulnerability assessments across 25 critical information infrastructure institutions. It is the first incident statistic the base holds for it, with no breakdown by type, sector or outcome, so it establishes volume and nothing about disposition. The team is a unit of the cyber security authority with a constituency of eight sectoral response teams and the general public, affiliated to the Budapest Convention; its published profile is five years old and records its own policies as under review. An apex coordination committee of eighteen institutions is chaired by the authority, with no terms of reference, membership list, meeting cadence or output held. Losses of GH₵19.3m are reported for 2025 on 14,425 reports and 3,286 confirmed incidents recorded from January to September, so the loss total and the counts are not on the same period; they reach the base through a university white paper rather than an authority series. The minister says all central-bank-licensed entities will soon be designated critical information infrastructure, with no instrument, date or designation list published.	ADVANCED

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	The national data exchange hub is announced and not built, so no shared layer exists for the interoperability the reform strategy assumes. The minister named the hub in July 2026 as something the government plans to establish for standardised and interoperable sharing between institutions, with no design, cost or timetable (hub). What the absence costs is visible elsewhere: a student whose service record does not match the identity card must resolve it on paper, and two digital registers are reconciled by affidavit.	NO CHANGE
Data Exchange	**Use of digital id in other systems**	Photocopying the card is barred from 2 November 2026 with verification compulsory, while record mismatches are still cured by affidavit. Photocopying the identity card is barred from 2 November 2026, with electronic verification compulsory for institutions relying on it (verification). Where the national service register and the identity register disagree, the citizen still buys the remedy: a sworn affidavit or a Gazette publication. Two correction windows ran inside eight days - one closing 26 August 2026, a second of three days from 1 to 3 September 2026 at the service authority's Kumasi regional office, staffed jointly by the service authority, the identity agency, the state publisher and Commissioners for Oaths (second window, first window). No count of affected students is published, so the scale of the mismatch between the two registers is not held.	MIXED biometric verification becomes compulsory while a mismatch between two registers is still fixed on paper
Data Exchange	**Interoperability of health systems**	The health information strategic plan diagnosed the absence of interoperability standards; its term ran to 2025 and no successor is held. The sector's own instrument diagnoses the absence of interoperability standards across agency electronic systems, designates the district health information software as the national repository, and sets improving data sharing, dissemination and use as its second objective. Its term ran 2022 to 2025 and no successor appears on this ledger. 2026-08-23 - the health service launched a strategic plan to 2030, a handbook, standard operating procedures and workforce plans for public health emergency operations, with a national roadmap intended to connect health agencies, emergency services, laboratories and animal-health agencies through integrated dashboards and shared situational awareness. No connection is recorded as made under it.	NO CHANGE the sector plan diagnosed the gap and its own term has expired
Data Exchange	**Interoperability of education systems**	A ministry dashboard consolidates four education systems and exposes programming interfaces for attendance, schools and enrolment rates. The education ministry's dashboard consolidates the education management information system, the school report card, the curriculum council's standards tests and the inspectorate's licensing system, and exposes structured programming interfaces for attendance, locations, test scores, school statistics, schools and enrolment rates. It is a working sectoral exchange layer rather than a policy for one. The specification states only a year, not a finer date, and nothing on this ledger dates a change to it inside the window. No consumer of the interfaces outside the ministry is named, and the education management system it draws on has no unique school codes, which is the join key an exchange across systems would need.	NO CHANGE a working exchange layer with no dated movement in the window

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of social protection systems**	Terms of reference were issued for a platform linking the household registry, cash grants, health insurance, the payment switch and the identity register. 2026-08-29 - the gender ministry issued terms of reference for a cross-system data-exchange architecture linking the household registry, the cash-grant programme, the welfare case and information systems, the health insurance scheme, the payment switch and the national identity register through a unified platform. It is a procurement, not a build. 2026-01-29 - a technical working group convened with donor support to assess fragmented social-protection data coordination and develop an integrated coordination and sharing framework across ministries, regional councils and assemblies - the governance track alongside the build. 2025-10 - a development bank mission reviewed progress toward full integration of the ministry's management information systems.	ADVANCED
Digital Identity and CRVS	**Robustness of system**	The system runs a distributed real-time architecture with about four-second biometric verification, and every district office was suspended for security updates. The authority's own technical synopsis describes a decentralised, distributed real-time architecture protected by public key infrastructure, biometric verification at about four seconds, and central storage sized for 40 million facial, 80 million iris and 400 million fingerprint templates, delivered under a public-private partnership. It is the clearest architecture statement held and it dates from 2018. 2026-04-23 - services were suspended at every district office nationwide while the public key infrastructure team carried out system updates described as a critical security measure, with restoration expected on 10 May 2026. No confirmation of restoration, and no availability or uptime figure, is held. No penetration test, audit or incident record for the system appears on this ledger.	MIXED the architecture is documented while services were suspended nationwide for security updates
Digital Identity and CRVS	**Registration of entire population**	19.2m people aged 15 and over are registered with 262 institutions integrated, and enrolment of 3.1m children aged 6 to 14 resumed in May 2026. A backlog of 640,000 cards was cleared and distributed by September 2025, with instant issuance nationwide and eleven overseas missions (registration); the institutions-integrated count moved from 95 in September 2025 to 262 in early 2026 (registration, backlog cleared). Child enrolment resumed on 5 May 2026 against a target of 3.1m, phased at 21 days per region and run jointly with the health insurance authority (child enrolment, biometric verification). A paid tier has operated around the clock on three shifts at an Accra centre since 1 August 2026, which the agency states is optional and does not replace its 276 district offices; no throughput, staffing or fee schedule is published, and there is no equivalent extension of the free daytime service (paid centre, 24-hour centre).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**National maintenance of id and credentials systems**	The authority is mandated to maintain the card and register and secure its data, while US$457m is owed to it for verification services. The mandate is statutory: to create, maintain, provide and promote the card and the national identity register, including the accuracy, integrity, confidentiality and security of the personal data it holds. The financing model is a partnership, not an appropriation. The authority states a 15-year public-private partnership under which its own component is US$124m and the private partner's US$169m, against a life cost of US$1.2bn with US$176m of tax exemption laid before Parliament in 2018, with no government money paid to the partner and costs recovered from project proceeds at US$5.40 a chip card and US$1.50 a barcode card - its own figures, published against a parliamentary demand for a forensic audit. Cost recovery predates the 2026 regulations: registration inside the country was free while diaspora registration was charged at US$55 in the sub-region, US$75 in the rest of Africa and US$115 beyond it, and the card expires ten years from issue. 2025-09-21 - against that, US$457m is owed by the revenue authority, the health insurance scheme and the passport office for biometric verification services, with disconnection threatened from 1 October 2025. Nothing records whether it happened.	MIXED the mandate and a cost-recovery schedule are in place while US$457m of arrears stand against the service
Digital Identity and CRVS	**Authentication**	Biometric-only verification is law from June 2026, and Parliament has now passed the instrument for biometric SIM registration. The amendment regulations bar visual inspection and photocopying and make biometric verification the only lawful check (regulations). The SIM drive was announced for the first quarter of 2026 with liveness detection and 80 per cent self-service specified, and no start date is on file (re-registration); the 2021 to 2023 registration has been declared invalid and the 2022 biometrics confirmed never authenticated against the identity database (re-registration, never authenticated). The legislative instrument that would carry it was stated ready to be laid on 5 December 2025, has not been laid, and its first-quarter start date passed with a later-in-2026 rollout restated in February (instrument). 2026-09-07 - Parliament has passed the legislative instrument governing SIM registration, and the minister states the biometric verification phase will be introduced before the end of 2026. The same account puts completion of the 2021-2023 exercise it replaces at 44.28 per cent of subscribers. No start date, enrolment route or subscriber deadline is published and the instrument itself is not held, so what has moved is the authority to act rather than the exercise.	ADVANCED the instrument passed but the drive it authorises has not begun
Digital Identity and CRVS	**Digital id from birth**	A renewed registration application for children aged nought to five was tested at health facilities in August 2026, resuming a programme launched in 2024. 2024-03-14 - the number-at-birth system was launched, integrating the health service tracker, the births and deaths registry and the identification authority so newborns receive a unique personal identification number linked to the mother's identity and to a birth-registration number. It was then suspended after a technical fault. 2026-08-11 - the authority, the registry and the health service successfully tested a renewed registration application for children aged nought to five at health facilities, with nationwide issuance at health facilities expected to follow. No rollout date, facility count or issuance figure is published, so what the base holds is a working test two and a half years after the launch it resumes.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	The number-at-birth system joins the health tracker, the registry and the identity authority, and a credential wallet is proposed to carry certificates digitally. The working join is the number-at-birth system, which integrates the health service tracker, the births and deaths registry and the identification authority so a newborn receives a personal identification number linked to the mother's identity and to a birth-registration number the registry generates; it was suspended on a technical fault and tested again in August 2026. 2026-06-25 - the technology agency held an early market engagement on a proposed secure, interoperable digital-credential layer using public key infrastructure, intended eventually to let birth certificates and other credentials be issued, shared and verified digitally. It is a proposal, not an implemented interoperability.	ADVANCED
Digital Identity and CRVS	**Use by other systems**	The card has been the sole identification for transactions at regulated financial institutions since 1 July 2022, is an optional travel document within the sub-region, and carries no payment function. The banking requirement is older than the base carried. The central bank directed, under regulation 7 of the National Identity Register Regulations 2012, that from 1 July 2022 the card be the only identification accepted for transactions at all institutions it licenses and regulates. The January 2026 guidance added biometric and liveness checks to a position already in force, and rests on a supervisory guidance note of June 2022 directing accountable institutions on use of the card, held here in full. The immigration service has admitted returning citizens and dual nationals on the card since 1 March 2022, following its recognition as compliant with the international civil aviation standard, verified against the identity register at designated airport booths. It cannot be used to leave the sub-region until bilateral agreements are signed, so the credential is accepted at the border it was issued behind and nowhere else. The card carries no payment function, and the base holds nothing on one being added (payment).	ADVANCED
Digital Payments and Fintech	**Governance role of central bank**	The central bank revoked an electronic money issuer's licence in July 2026 and opened enforcement against unlicensed digital credit apps. The framework the enforcement runs inside was renewed in 2024: the 2019-2024 national payment systems strategy expired and the bank introduced a 2025-2028 successor after reviewing it, alongside a programme to certify the real-time gross settlement system to the ISO 20022 messaging standard. Neither the strategy text nor the review is published. Authorisation volume nearly doubled in the same year, at 50 payment products and services authorised in 2024 against 27 in 2023. A licence was revoked on 14 July 2026 for electronic money not fully cash-backed, with premises access restricted (revocation). A September 2025 directive on digital credit providers took effect from 1 November 2025; the 30 June 2026 deadline elapsed and twenty unlicensed apps were named on 3 August 2026, the notice setting the deadline not held (enforcement, earlier notice). Structural separation of the dominant operator's mobile-money subsidiary completed in the first quarter of 2026, the subsidiary filing its own statements and declaring its own interim dividend (separation).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**G2P functionality**	The cash-grant programme paid GH¢485m in the first half of 2026 on mobile-money rails, against a full-year allocation of GH¢1.1bn. The allocation is the highest since inception (fiscal review). A recent cycle released about GH¢139m to roughly 350,580 households (payment cycle), and the stated expansion to 400,000 households in 2026 has no delivery figure on file. 2025-08-11 - the rails themselves are recent. The gender ministry began piloting mobile-money payments to beneficiaries across 50 districts, aimed at those in hard-to-reach areas and run through the payment switch, a year before the half-year disbursement figure above.	ADVANCED
Digital Payments and Fintech	**Revenue collection**	Electronic invoicing took effect with the 2025 value-added tax Act, while the electronic transfer levy was abolished and with it the case for the system built to collect it. The standing instrument for digital revenue collection requires mobile-money issuers, payment-service providers and banks to connect transactions to the levy system for real-time calculation, capture, reconciliation and remittance to the government account. 2026-01-01 - electronic value-added tax invoicing took effect with the new Act: free or integrated invoicing installed by the revenue authority for registered businesses, generating signed electronic receipts verifiable by code. 2026-06 - the tax administration system's pilot had more than 400 taxpayers onboarded at one office, with an August 2026 target for full migration and a second phase to integrate the companies registrar, the social security trust and the identification authority. No revenue attributed to any of the three is published. 2025-11-13 - presenting the 2026 budget, the finance minister said the removal of the electronic transfer levy had not weakened revenue, attributing the offset to compliance, digital revenue systems and a broader tax base. The levy management and assurance system, which required issuers, providers and banks to connect transactions for real-time calculation and remittance, has no purpose left; no statement of its decommissioning is held, and no repealing enactment is on file either.	MIXED invoicing and the tax platform advanced while the levy the collection system was built for was repealed
Digital Payments and Fintech	**B2B and B2G functionality**	The central bank puts the small-business financing gap at US$4.8bn a year and proposes digital transaction data as the underwriting route to close it. The figure is the bank's own, published in speeches rather than in a series, with no methodology, sample or date range given (financing gap, digital lending). The proposal attached to it, lending underwritten on mobile-money and other digital transaction records rather than collateral, is stated as a direction and carries no instrument, timetable or participating lender.	NO CHANGE a first measurement with no earlier figure behind it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	GH¢492.9bn moved on 954m transactions in June 2026 alone, up about 52 per cent on June 2025, with interoperable traffic at about 1.3 per cent of value. The full year 2023 carried 6.81bn transactions worth GH¢1.92tn, so a single month of 2026 is a quarter of that year's value (June data, oversight report). Interoperability has been live since 2018 and carried 33.5m transactions worth GH¢6.2bn in June 2026, about 1.3 per cent of total mobile-money value; the share, not the volume, is the measure of it. The interbank switch, carrying the bank-side traffic mobile money sits beside, processed 530m transactions worth GHS 1.73tn in 2025 against 402.5m worth GHS 1.15tn in 2024, with the clearing house at 18.82m worth GHS 915.61bn and the near-real-time service at 3.21m worth GHS 357.70bn. Value grew faster than volume in every line, the signature of higher-value transactions moving onto digital rails rather than more small ones. The dominant operator's platform moved onto a cloud-native vendor platform, the vendor reporting cuts of up to 86 per cent in processing and database load, its own figures. A rival launched an agent commission structure paying more for higher transacted value, the bands unpublished (agent scheme).	ADVANCED
Digital Payments and Fintech	**Population uptake**	84.6m registered wallets and 26.4m active at 90 days in June 2026, with float at a record GH¢40bn from GH¢28.9bn. Registered wallets rose from 76.4m in June 2025, and there are one million registered agents of whom 546,000 are active (central bank data); the inclusion figure is the 26.4m active, under a third of registered wallets (central bank data). The dominant operator reports 19.3m active users at 31 December 2025 against 18.3m at 30 June 2026, with neither source stating the definition, so the direction cannot be read against the national series (operator accounts). The dominant operator's chief executive put daily transactions at over 26 million while stating that fewer than 0.3% of the user base is actively investing and only a small proportion saves regularly. The gap between volume and depth is the operator's own framing, given in an interview and not tested against the central bank's series.	ADVANCED
Digital Payments and Fintech	**Cross-border functionality**	Twenty institutions are live on the pan-African settlement system as send-and-receive participants, and direct renminbi settlement opened in August 2026. A second bank went live in-app and a naira corridor opened from February 2026, from a fintech-routed connection under a six-month central-bank pilot; nothing is quantified, with no volumes, tariff, corridor list or designation date (gateway, in-app, pilot). Direct settlement in renminbi from cedi accounts, in real time or batch and without correspondent-bank intermediation, was announced on 4 August 2026 following central-bank approval (renminbi). Online card acceptance for one international network extended to nine African markets, settling in local currency, dollars or both, with nearly 900 participating merchants across the nine and no country-specific count given (card acceptance). The central bank digital currency remains at pilot stage with its focus pivoted to cross-border settlement for sub-regional trade and no rollout date (pilot, not abandoned). The operator's June 2026 coverage schedule names 20 institutions in the country live as send-and-receive participants and places it in both the participant list and the extended network for incoming payments, one of six countries reachable both ways. It is a participant list, not a throughput figure: no volumes, tariff or designation date is published.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Consumer protection**	A register of licensed digital credit providers is still unpublished, a twenty-name blacklist standing in its place. A borrower can check twenty names and cannot check whether the twenty-first is licensed; publication was undertaken in July 2026 in due course, with no date given (blacklist, notice). A centralised real-time layer able to block suspicious transfers as they move between networks is described as under discussion with nothing built and no operator, funder or timetable named (fraud layer, silos). Expansion of the financial industry security operations centre to all financial institutions including fintechs and microfinance was announced in March 2026, and four months later a digital-economy forum still listed complete onboarding as a recommendation (operations centre).	MIXED a fraud layer and an operations centre are proposed while the register a borrower would need is still unpublished
Registries	**Population register**	The mass-registration phase for those aged 15 and over closed at about 20 million captured, and registration of children aged 6 to 14 began in May 2026. 2026-05-05 - registration of children aged 6 to 14 began in two regions against a nationwide target of about 3.1 million children, with children's health-insurance records integrated into their card data and guardian records linked as an anti-fraud and tracing mechanism; the mass-registration phase for those aged 15 and over closed at about 20 million captured against a target of about 19 million. The authority publishes live registration statistics, stated as updated at 19 May 2026, but the page is a counter rather than a dated report, so the base carries the fact of publication and not a figure from it. What no source states is the register's coverage against population - the denominator - or how many of those captured hold an issued card.	ADVANCED
Registries	**Civil register**	A civil registration strategic plan for 2025-2030 was validated in July 2025, above a registry that received 181,000 security papers against a 881,000-copy backlog. Printing is decentralised across 470 offices in 261 districts with electronically signed certificates, the registry having received 181,000 security papers against a 881,000-copy backlog. Nothing dated has followed, so whether the backlog cleared is not established, and the base holds no registration completeness rate, no digital birth record count and no link between the registry and the identity card. 2025-07-31 - the registry validated a civil registration and vital statistics strategic plan for 2025-2030, drawn up with the United Nations children's and population funds and the regional economic commission; it is validated, not approved, and no publication or funding statement has followed. 2026-09-07 - a privately operated platform launched in Accra on 28 August lets users search and verify registered marriage and divorce records drawn from the registrar-general's department, the courts, district assemblies and the Gazette. It reads state records rather than being one: no data-sharing agreement, fee schedule, coverage figure or record count is published.	MIXED a strategic plan has been validated while the certificate backlog it sits above is unresolved

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Address register**	The national digital address system is live and its application added ride and delivery ordering keyed to an address in October 2025. The system is live and publicly reachable through its own application; the page carries no internal publication date, so the date is proxied to capture. 2025-10-15 - the application added ride and delivery ordering keyed to a digital address - the first third-party service on this ledger built on the address as an identifier rather than on the map. No address count, coverage figure, update cadence or public-sector use of the register appears anywhere on the base, so what is established is that the register exists and is being built on, not how complete or how used it is. The one independent assessment on file is unfavourable: a peer-reviewed design-reality gap study, six years into implementation and finding no outward evidence that the announced goals had been met, sets out to judge the likelihood of success or failure and reads the rollout as a partial failure. It is held as abstract and front matter; its remedial measures did not extract.	MIXED the register is live and being built on while an independent evaluation reads its rollout as a partial failure
Registries	**Business register**	A business registration platform is in pilot for end-to-end filing with no physical submission, integrating with national identification. It covers name search to certification, and a companion beneficial-ownership verification service pilots with banks on a subscription basis (platform). Launch is given only as the coming months, and no registration volume, processing time or fee is published, so the pilot's scale is unmeasured. What it replaces is a service catalogue rather than a paper office: the registrar publishes name search and reservation, business-name and company registration, amendments, professional bodies, mergers and divisions, annual returns and liquidation under the Companies Act 2019, with no end-to-end online filing route stated.	ADVANCED
Registries	**Social protection register**	The household registry publishes registered-household figures by region as at May 2026 and is the system of record behind the cash-grant reassessment. The registry publishes its registered-household figures by region, stated as at May 2026. The region-by-region tables are served as an interactive tool and did not render as text at capture, so the national total is not held. 2026-04 - a registry-based nationwide reassessment enrolled 400,000 newly eligible households into the cash-grant programme - the registry working as the targeting instrument it exists to be. What is not published is the registry's own coverage: how many households it holds against how many there are, when each region was last enumerated, or how a household corrects its record. The registry describes itself as a single national household database collected by trained enumerators on electronic devices and serving as the primary platform for targeting the cash-grant programme, school feeding and national health insurance - three programmes off one enumeration, which is what makes its coverage the question it does not answer.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Electoral register**	The certified 2024 register held 18,774,159 valid voters, all but 1,870 with biometric data, and a reform programme was set out in August 2026. The certified 2024 register carries 18,774,159 valid voters, 18,640,811 of them with biometric data, 131,487 special voters and 1,870 without biometric data. The commission's page did not render its own table as text; the figures come from a same-day wire account of the release. The register is a funded outcome indicator in the commission's budget, rising from 17.03m in 2023 to 18.77m in 2024. 2026-08-12 - the commission set out a medium-term reform programme of upgraded biometric registration equipment, an election-technology inventory system, continuous registration procedures and detection of deceased and duplicate records. None of it is recorded as delivered.	ADVANCED
Registries	**Tax register**	The revenue authority maintains the taxpayer identification number system under the 2016 revenue administration Act; no register size is published. The authority's own page is the operative description: the taxpayer identification number system is maintained under sections 10 to 12 of the revenue administration Act, which authorise the commissioner-general to keep it. It carries no register size, no coverage rate and no active-taxpayer count. What is moving is the system the register sits in rather than the register itself: the tax administration system's pilot had more than 400 taxpayers onboarded at one office by June 2026, with a second phase to integrate the companies registrar, the social security trust and the identification authority. That integration is where a register's completeness would be tested, and it has not happened yet.	NO CHANGE the register's statutory basis is stated and no size or coverage figure is published
Registries	**Land register**	A US$85m mapping contract announced in 2023 is still unsigned, while a commission portal handles applications, payment and receipts. 2026-06-08 - the US$85m five-year agreement with a private land-administration company, announced in September 2023 to map the country digitally and build a national spatial data infrastructure, was still in legal review in February 2024 and remains unsigned; the lender-backed acceleration project carrying the land workstream has made no disbursement since September 2024. Two decades of successive platforms have left manual processes running alongside the digital ones. The commission's own portal is live for checking the status of an application, paying for land services other than stamp duty bills, generating an electronic receipt and estimating costs, with no usage or uptime figure published. In the space the state register has not filled, a member of parliament launched a private land acquisition and management platform on 22 October 2025; a petition dated 9 January 2026 accuses him of using it as cover to appropriate land in a neighbouring municipality. The dispute is unresolved on the record. The planning system is separately being redeveloped into a web-based platform for spatial planning, development control and street addressing, inside a sub-programme appropriated GHS 36,454,968 for 2026 from which no digital share is separable, with no launch date or contractor published.	MIXED transactional services are live while the financing behind the cadastre has not moved for two years

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Health**	A national health management information system was directed for rollout in November 2025, replacing a failed US$77m contract with about 15m records reconstructed. A vendor was engaged and the rollout directed, and no completion, facility count or coverage figure has been held since (health system). The reconstruction of 15m records after a failed contract is the base's only measure of what the predecessor cost, and no evaluation, cost or timetable for the replacement is published. 2025-10-29 - the health minister named a state-owned replacement for the failing, foreign-hosted management system after a forensic audit found only 450 of 950 contracted facilities connected despite more than 70% of a US$100m contract having been paid. The outgoing system's cloud infrastructure was hosted abroad, which the minister framed as the state lacking control of its own health data. No build date, facility target or cost for the replacement is published.	NO CHANGE
Sectoral management information systems	**Education**	The national system is digitalised but weak, collecting 104 of 124 indicators with no unique school codes, while a secondary dashboard covers 720 schools. The sector's own account of the national system: digitalised since 2022 and disaggregated by sex and disability, but weak - data collected for only 104 of 124 indicators, no unique school codes, no internal server and delayed publishing - with strengthening it a funded grant window including sub-national capacity building for school-level data entry. 2025-12-18 - its indicators were revised to capture ICT infrastructure, teachers' digital competencies and learners' access to digital tools, for integration into the next national school census. Against that a secondary-schools dashboard has been live since 2024 covering more than 720 schools, 68,000 teachers and about 1.5 million learners, integrating professional-learning attendance, the examinations council's transcript portal, lesson observations, school improvement plans and tablet-usage tracking, with more than 60 million transcript records uploaded.	MIXED a working secondary dashboard against a national system the sector calls weak
Sectoral management information systems	**Social protection**	The household registry is the system of record and terms of reference were issued for a platform integrating it with five other systems. The household registry publishes registered-household figures by region as at May 2026 and is the system of record behind the cash-grant reassessment. 2026-08-29 - the gender ministry issued terms of reference for a cross-system data-exchange architecture linking the household registry, the cash-grant programme, the welfare case and information systems, the health insurance scheme, the payment switch and the national identity register. A technical working group had convened in January 2026 to assess fragmented coordination and develop an integrated sharing framework. The build is a procurement and the framework a work programme; neither is delivered. The registry that the architecture is being built around describes itself as a single national household database collected by trained enumerators on electronic devices and serving as the primary platform for targeting the cash-grant programme, school feeding and national health insurance - three programmes already drawing on one enumeration before any exchange layer exists.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Justice**	The court case management platform is reported stalled seven years after launch, against more than 700 police digital enrolment stations announced for the end of 2026. The court side has not kept pace. A December 2025 account reports the electronic justice platform stalled: launched in 2019 inside a lender-funded transformation project at a stated cost of US$3m, carrying 61,000 cases in 2022 against 58,495 the year before, its pilot scope reset to 2022 and readiness now given as 2026, with early users reporting it unusable on unreliable connectivity. It rests on a fund governance report and a 2022 judicial service document, neither held, and its figure for the parent project does not match the base's. The interior minister told a command conference on 21 August 2026 that police will deploy more than 700 enrolment stations nationwide, with no cost or data-governance arrangement stated, and three days later that the criminal biometric system is to reach 751 centres by the end of 2026, with no figure for centres already live. An electronic number plate instrument has been in force since 28 May 2026 after a court challenge, with a pilot stated for August 2026 and rollout from January 2027 and no pilot size or retention rule published (number plates).	MIXED police enrolment and biometric systems are being announced while the court platform has not moved in three years
Sectoral management information systems	**Tax**	An integrated tax administration system entered pilot in April 2026, and the revenue authority disclosed that only about half of expected value-added tax is collected. The pilot runs at one taxpayer service centre for selected large-taxpayer filers, covering pay-as-you-earn, value-added tax and the two withholding regimes, replacing the domestic division's fragmented legacy systems; it was built to terms of reference drawn with the Fund after two 2019 tenders were cancelled, and integration with the identity authority and the companies registrar is intended and not yet on record (tax system). At its August 2026 analysts' seminar the authority disclosed that only about half of expected value-added tax is being collected and that corporate income tax is also underperforming, and set analysts to deliver data-driven revenue initiatives before the end of 2026 (analytics). A Korean-backed modernisation master plan covering income tax, value-added tax and electronic tax administration was presented in August 2026 with no cost, timetable or implementing schedule published (master plan).	ADVANCED
Sectoral management information systems	**Customs**	A customs valuation system analysed about 366,000 declarations to July 2026, with collections up 17.5 per cent against a 6.3 per cent rise in declared value. The advisory group overseeing the customs artificial-intelligence system reviewed five months of implementation publicly, alongside wider developments in the port and trade environment (statement). It was piloted in January and February 2026 and fully deployed from March; 24 per cent of declarations triggered more than one valuation risk indicator, on the finance ministry's own unaudited figures, and importers have contested the rollout (valuation system, fiscal review). A cross-border electronic commerce tax platform piloted in April 2026 with a named private operator was approved by Parliament on 28 July for a September start, on a first-full-year projection of GH¢3.2bn which is a projection and not an outturn, with model, total cost, duration and termination terms undisclosed (platform, approval).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Land**	The land information system is operational in nine regional offices with electronic registration and online searches. 2026-07-15 - the minister's accountability presentation records the enterprise land information system operational in nine regional offices with electronic land registration and online official searches, and a strategic land administration reform project carrying a named digital transformation workstream for the lands commission and the stool lands administrator, spatial data infrastructure and a national cadastre. 2026-06-03 - a digital client service access unit was inaugurated at one regional office. The audit that sits behind this identifies the earlier system and its upgraded successor as the commission's own, on fieldwork across five regions covering 2019 to 2023. No registration volume, turnaround time or parcel count is published for any of it. Against the operational claim, a June 2026 account states the private mapping contract is unsigned and the lender-backed project behind the land workstream has not disbursed since September 2024, having stalled in February 2025 after key staff contracts were terminated. The system that is running and the programme meant to extend it are not in the same condition.	ADVANCED
Other GovTech and e-Gov	**e-government services**	Electronic procurement is mandatory for all state institutions, while the services portal is still at about 2,000 services against a 16,000 target. The finance minister directed all state institutions onto end-to-end electronic procurement with pre-disclosed evaluation criteria, integrated with the national payment system; the authority's claim is substantial reduction, not elimination, of procurement corruption (procurement). The citizen portal's fourth-quarter 2025 relaunch target passed with nothing recording delivery and no service count published since July 2025 (relaunch, target), and the online passport service went down on 25 August 2026 with neither cause nor restoration date named. A fiscal electronic device pilot ends in August 2026 with 40,000 devices approved on a projection of GH¢7.2bn a year, unit cost not disclosed to Parliament; an automated fire-safety compliance system rolls out from late August 2026 with no scope or operator named; and salaries of employees whose identity details do not match the payroll will be suspended from 15 September 2026. Two platforms are being introduced: a labour market information system bringing vacancies from government, private employers and regulated overseas recruitment into one place, alongside employment centres now complete in all 16 regions; and a government-branded farmer platform built and run by a private operator, piloting from 15 March 2026. Neither has a published cost or contract text.	MIXED procurement and fiscal devices advanced while the citizen portal's redesign slipped and its payments broke

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	A memorandum covering all 261 assemblies is the first infrastructure commitment the base holds for local government, against a reform strategy that names local government only as an integration target. The Office of the Head of the Local Government Service signed a memorandum on 3 September 2026 with a Ghanaian networks company to build a digital backbone across all 261 metropolitan, municipal and district assemblies, spanning waste management, public safety, education, healthcare, environmental monitoring and citizen engagement, and intended to raise internally generated funds as well as to connect offices (memorandum, signing). No contract value, financing structure, term or delivery timetable is stated by either party. A non-governmental citizen-reporting platform launched in one district on 3 September 2026 routes service-delivery complaints to the assembly and keeps the reporting citizen informed until resolution (platform); it is a civil-society instrument, not an assembly system, and no user or case count is stated. The public-sector reform strategy still names local government only as an integration target (strategy).	ADVANCED
Digitalisation of sub-national government	**Digitalisation of local government records**	Assemblies are mandated to process all financial transactions through the integrated system, and revenue software training reached about 500 staff. The legal basis is a standing mandate: regional coordinating councils and district assemblies must process all financial transactions through the integrated financial management information system, under the public financial management Act and its regulations. No compliance rate is published. 2026-02 to 2026-07 - 350 staff from 35 municipal assemblies were trained on the district revenue software, then about 150 information, finance, budget and coordinating staff across two further zonal workshops. 2026-04 - one assembly went live: a cashless revenue-payment system for business operating permits, property rates and market tolls was piloted in a zonal council with a data-capture exercise. Training counts are published and adoption counts are not.	ADVANCED
Rural digital data capture	**Digitalisation of rural health clinics**	Telehealth scales to about 500 facilities across seven regions, while 36 per cent of 86 surveyed community zones upload assessment results to the national platform. What reaches the national platform from the community tier is a third of it. A survey of 86 community-based health planning and services zones across six northern districts found 36 per cent uploading facility assessment results into the district health information system and 46.5 per cent implementing the resulting recommendations, with training reaching 41 per cent of community health officers, against routine reporting into the same platform described as strong across most districts. The platform is reached for routine returns and not for community-generated indicators - a workflow and training gap rather than a connectivity one. The third phase of the telehealth strategy scales to about 500 facilities across seven regions, including 300 health centres and community compounds plus 100 hospitals and 100 pharmacies as collection points, integrating with the insurance scheme's short-code application for low-connectivity access. 2026-03-16 - staff across the four northernmost regions were trained on the digital backbone for the free primary health care rollout, on a code reachable by short code, portal or staff assistance and explicitly supporting offline verification. No figure for facilities actually connected is published.	MIXED telehealth is scaling to rural facilities while community-level reporting into the national platform reaches barely a third of the zones surveyed

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural primary schools**	A satellite operator's social programme began connecting 30 rural and underserved schools in one region. 2025-09-13 - a satellite operator's social programme with two partners began a phased rollout of high-speed internet to 30 rural and underserved schools in one region, framed as bridging the technological gap in rural schools and prioritising underserved areas first. No completion, cost or per-school bandwidth is published, and nothing records how many of the 30 are connected. It is a donated rollout by a commercial operator rather than a state programme, and the base holds no national figure for school connectivity to place it against - the education system's own indicators were only revised in December 2025 to capture ICT infrastructure and learners' access to digital tools, for a census not yet run.	NO CHANGE one phased rollout to 30 schools with no national programme behind it
Rural digital data capture	**Digitalisation of rural registry offices**	An action pairs the births registry with the health service in six low-coverage regions, finding the registry short-staffed in many districts. 2026-08-25 - a European Union-funded action pairs the births and deaths registry with the health service to close registration gaps in six regions where coverage is lowest, with more than 200 registry and health-service staff trained across three joint sessions; it finds the registry short-staffed in many districts, limiting how quickly registration services reach remote communities. That staffing finding is the clearest statement the base holds of why district offices do not reach further. 2026-01-20 - separately, a rural district assembly launched a business-registration drive covering all 55 communities in the district, building a centralised digital database of commercial entities from agro-processing plants to small rural retail kiosks - a district office capturing records digitally in the field.	ADVANCED
Rural digital data capture	**Digitalisation of rural police stations**	The criminal data bureau receives fingerprints and crime details on paper forms from stations including rural and district ones. The service's own page describes a criminal data service bureau at investigations headquarters that receives fingerprints and crime details on paper forms from police stations, including rural and district ones. The digitisation is at the centre; the stations feed it on paper. The interior ministry's own sector plan sets digitisation, retooling and capacity improvement as its overarching goal, and names weak inter-agency data interoperability and inadequate technology infrastructure, plus limited logistics particularly in rural and border communities, as the constraints. It is the clearest official bridge the base holds between national digitisation intent and the reality at a district station, and it names no target, budget or date.	NO CHANGE capture is at the centre and the stations feed it on paper

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	A disaster-management chatbot was handed to the national agency in May 2026, and automated traffic enforcement replaces roadside checks from September. The chatbot answers on floods, fires, storms, droughts, earthquakes, epidemics and localised hazards in several international and local languages and issues automated responses during an emergency; officers from ten regional offices were trained online in June, six regions still have no emergency operations centre, and connectivity was intermittent during the training itself (chatbot). From September 2026 more than 47 traffic offences are to be enforced by face, mobile, in-vehicle and handheld cameras and radar, captured for review in a back-office control room before an electronic notice is sent to the offender's phone, with officers to stop checking licences, seatbelts and insurance by hand; no procurement, cost or appeal route against an automated notice is stated (traffic enforcement).	ADVANCED
AI	**Use of AI in sectoral management information systems**	A health artificial-intelligence policy was drafted in August 2026, and customs valuation attributes more than GH¢300m to its own system. The health draft is anchored on the Constitution's health provision and covers approval, procurement, validation, human oversight, monitoring and accountability across public and private facilities, barring patient data from leaving the country without safeguards; the ministry's own survey reports 44 per cent of respondents already using or piloting the technology and 88 per cent concerned about patient data privacy, and the draft names unreliable electricity and connectivity among four risks (health policy). Customs attributes monthly figures of GH¢73.44m, GH¢51.63m, GH¢72.5m, GH¢55.82m and GH¢35.17m to 17 July 2026, the finance ministry's own and unaudited; the series declines after March, unremarked in the source, and causal attribution is asserted rather than demonstrated (attributed revenue). A United Nations project on using the technology to improve health outcomes while addressing human-security risks convened its steering committee in August 2026, with no budget, duration or milestone published (health project).	ADVANCED
AI	**Development of national / regional AI systems**	US$250m was announced for a national compute centre at the strategy launch, with no site, operator, procurement route or date. It is the larger of two dollar commitments totalling US$270m made that day, the other being US$20m earmarked for short-to-medium-term implementation with no appropriation, disbursement or managing body named (announcement); neither is the strategy's own GHS 5bn fund (announcement). The compute centre was reaffirmed at the July 2026 summit, at which a United Nations official called unfunded, unexecuted artificial-intelligence strategies shell documents from the same platform (summit).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Control of AI abuse**	A cyber and information security directive launched in March 2026 is the first comprehensive governance framework for the technology in financial institutions. It carries cloud-security rules, proportionality by size and risk and mandatory board-level accountability, replacing an earlier directive whose text and date are not held, and the governor states the industry was consulted before issue (directive). It is the only binding instrument in the base that governs the technology's use in any sector, against a national strategy, an implementation plan and an emerging-technologies bill that are all outside the financial sector and none of them in force (framework). What the directive requires of a regulated institution using a cloud service is set out in a practitioner guide: board approval before use, alignment with recognised security practices, end-to-end encryption in transit and at rest with keys held by the institution rather than the provider, incident reporting to the central bank with a post-incident review within seven days, and exit arrangements covering retrieval, migration and secure deletion. The directive text is not held, and the guide draws partly on a 2025 exposure draft rather than the issued instrument.	ADVANCED
ICT Industry	**National capacity in DT-related production**	The sole satellite account puts ICT gross value added at GHS 2,489.3m in 2014, on a share of output falling every year of the series. The share fell from 3.1 per cent of gross domestic product in 2010 to 2.2 per cent in 2014 (satellite account); the study reports gross value added exceeding the published sector total, which it calls a plausible underestimation, carries no employment figure and was never repeated (satellite account). Live firms the base names include a micro-enterprise tax platform deployed nationwide with the revenue authority targeting about 530,000 small enterprises in its first year on the vendor's own projections (tax platform), a freight platform handling booking, payment, tracking and customs formalities with no volume or revenue figure stated (freight platform), and a commercial security and digital-forensics centre operating since May 2025 with no client count or incident figure published since (security centre). A domestic firm has sued the dominant operator over authorship of the mobile-money platform, dating its claim to a 2007 commission; the case is live before the commercial division and no monetary figure is pleaded (claim, filing).	NO CHANGE the only measurement of the sector ends in 2014
Innovation ecosystem	**Technology hubs**	A three-month fintech accelerator launched in August 2026 across three cities, alongside a university innovation centre running to 2027. The accelerator was launched by the dominant mobile-money operator with a domestic technology firm as official technology partner, running across Accra, Kumasi and Tamale; no cohort size, selection criteria, funding or equity terms are stated (accelerator). An advanced technology innovation centre at a public university runs on a US$9m grant from a foreign development agency from 2022 to 2027 and is recorded as active, with no progress or outturn report held at any date (innovation centre).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Innovation ecosystem	**Tech startup ecosystem**	An innovation and startup bill has been under development since at least September 2024 with no draft published and none laid. A three-year programme reported 12 prototypes and 18 digital solutions adapted for informal entrepreneurs (report), and a facility announced US$500,000 of new investments in Ghanaian startups (announcement). The bill is tied to a national financial-technology fund it would give a legal base; the fund has no size, source or date (bill and fund). A scouting programme identified 12,000 young innovators against a 5,000 target by working through chiefs, women's groups and disability advocates across all 16 regions rather than online applications; no independent evaluation is held. The one external reading has not moved. The 2025 innovation index places the country 101st of 139 economies, 8th of 32 in sub-Saharan Africa, with innovation inputs at 108th - unchanged on the previous year - and outputs at 93rd. Outputs ahead of inputs is the shape of a country producing more than it is resourced for. A continental census of AI startups published in May 2026 counts 15 firms located in Ghana, fourth of the 22 countries it surveys. Its earlier editions are not held, so no direction can be read from it.	ADVANCED

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	A regional youth leadership programme completed its first cohort of 91 public-sector leaders in Accra in August 2026. The programme takes 200 participants from five West and Central African countries across online training, in-country sessions at a public administration institute and a funded 14-day study visit for top performers; the first cohort of 91 completed a two-week Accra session on 17 August 2026 (first cohort). The donor's stated US$34m African governance-training footprint is undated and its Ghanaian share is not disclosed (programme). A digital parliaments project launched at the Parliament of Ghana in August 2026 with a cohort of six African legislatures, and no funder, budget, duration or work programme is stated (parliaments project).	ADVANCED
Literacy	**Digital literacy (general population)**	A virtual-asset literacy campaign opened its regional phase in August 2026, and a privacy campaign in all sixteen regions ends the following month. The virtual-asset campaign is led by the central bank and the securities regulator, anchored on a co-authored education manual and delivered in schools, markets and churches, described as a template for national rollout with no funding, timetable or nationwide launch date stated (literacy campaign). The privacy campaign launched in September 2025 for a one-year run across all sixteen regions in English and five Ghanaian languages, and ends within two months of this report with no reach figure, evaluation or extension statement held (privacy campaign).	ADVANCED
Training and skills	**DT-related training in secondary education**	A revised basic-education curriculum carrying coding and artificial intelligence is complete and awaiting the President, cabinet and Parliament. The curriculum council completed the revision in July 2026 and it is announced rather than adopted (curriculum). No adoption date, cost, device provision or teacher-training plan is published, so the base holds a completed revision and nothing about how it would be taught.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**DT-related university facilities and qualifications**	Two universities hold subgrants to teach a foreign research curriculum on a train-the-trainer model, a teacher-training memorandum was signed in August 2026, and three universities completed a European innovation and digital skills pilot. One holds US$45,864 and the other a three-year award whose value is not published, both giving them an artificial-intelligence research foundations curriculum across a four-country programme (subgrant, second award). The education fund and a United Nations agency signed a memorandum on 5 August 2026 to train teachers and instructors in technical and vocational institutions in digital and artificial-intelligence skills, through a three-month master-trainer cascade ending in examinations with commercial partners named; no commitment amount, cohort size or funding split is published (memorandum). Three universities completed the first pilot of a European-funded blended-learning course in entrepreneurship, innovation and digital skills from late June to July 2026, run as a quality-assurance exercise before pilots in Kenya and Tanzania in September 2026 (pilot). No participant count, budget or grant number is published, and the account is the project's own.	ADVANCED
Training and skills	**Graduates entering DT ecosystem**	The coders programme held 141,954 registered accounts against 5,812 logged completions at 2 August 2026, on a target of one million by 2030. 2026-09-07 - the programme database held 141,954 registered accounts, 27,782 admitted learners and 5,812 logged course completions as at 2 August 2026, cybersecurity the largest track at 8,570, with 30,444 admitted through one commercial platform, 10,143 through a second and 24,394 learners self-paced. It is the first time the funnel has been published rather than a single throughput number, and the 5,812 completions sit against 141,954 registrations - registration is not admission and admission is not completion. 2026-08-31 - a five-day training of trainers opened at the national centre of excellence, each completing trainer expected to train at least 20 members of the public: the first statement of how the programme intends to reach one million, through a multiple rather than direct delivery. A separate government-funded scheme took 2,000 of the 3,000 places allocated to Africa for vendor-certified microdegrees, with 600 paid internships, its cost undisclosed. A survey of technology professionals found more than half earning under US$3,000 a year, self-selecting rather than official and the only pay measurement held.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Research institutions	**Think tanks and academic departments contributing to DT policy**	A GH¢100 million national research fund and a US$30 million grant for a science and technology university put public money behind research capacity for the first time in this base. The Ghana National Research Fund (fund), established under Act 1056 and launched in June 2026, carries GH¢100 million, about US$8.88 million, for 2026 across competitive research grants, doctoral and postdoctoral programmes and priority research projects, with 2026-2030 priorities of research talent, competitive funding and industry partnerships; it is separate from the US$250 million committed to a national artificial-intelligence computing centre (fund). A planned university of science and technology at Damongo, intended as a centre for robotics, digital sciences and artificial intelligence, has a US$30 million Chinese government grant (grant) against a cost the education minister puts at more than US$100 million to complete and equip (shortfall). No construction timetable is stated. A university white paper written with a professional institute and the cyber-security authority remains the base's only academic contribution to policy itself (white paper).	ADVANCED

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	The central services portal carries a live feedback function and a sectoral complaints portal launched in March 2026. 2026-05-30 - a ministerial statement establishes that the central digital-services portal is operational with a live feedback function and is being redesigned under the financed acceleration project into a citizen-centred one-stop shop, the redesign still at planning and stakeholder alignment. 2026-03-16 - the civil aviation authority launched a self-service digital feedback channel for air passengers, reachable from its website and from codes at airport terminals, with automated acknowledgement by email and text, replacing manual complaint channels. Neither publishes a complaint volume, a response time or a resolution rate, so what these channels receive and what happens to it is not on the record.	ADVANCED
Access to services	**Citizen participation in policy**		NO EVIDENCE
Access to services	**Gender equity**	A women's business bundle passed 54,000 subscribers against a 20,000 target for 2028, on a base where women are 14 per cent less likely to use mobile for business. The bundle launched in April 2025 for women business owners and had more than 54,000 female subscribers by May 2026 (bundle). The same industry research finds women micro-entrepreneurs 14 per cent less likely than men to use a mobile phone for business and 17 per cent less likely to use one across three or more business use cases, naming affordability of data, low perceived value, weak skills and confidence, and limited access to internet-enabled handsets as the barriers (research). A long-running girls' programme has reached about 18,000 girls and 1,800 teachers since 2012 on a two-week residential model, and added an artificial-intelligence module as its largest curriculum expansion after a vendor agreed free training for 3,000 girls (girls programme); the 18,000 is cumulative rather than annual, and no start date, cohort or delivery report has followed in five months (girls programme).	MIXED a business bundle beat its target while the measured gap in business use of mobile persists

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Inclusion of persons with disabilities**	An exposure draft directive on financial inclusion for persons with disabilities has been outstanding since October 2024, and two assistive devices are in pilot. The devices are smart glasses and an ultrasonic obstacle detector, developed from a prototype that came out of a 2024 hackathon (pilot). It is the only disability-specific digital provision the base holds, and no accessibility standard, procurement requirement or service-design rule applies to any government platform on the record. One accessibility rule has been drafted and not issued. The central bank published an exposure draft directive for banks, specialised deposit-taking institutions, finance houses, non-bank financial institutions and payment service providers, setting minimum requirements for a disability policy, accessibility, non-discrimination and staff training in October 2024. Two years on, nothing on file states whether it was issued, so the financial sector is the only one for which an accessibility standard has even been written.	MIXED a sector accessibility directive was drafted two years ago and has not been issued while the only provision on file is a device pilot
Access to services	**Inclusion of refugees and IDPs**	Refugee registration appears as a line in the identity authority's fee schedule; no refugee population or registration figure is held. The identity authority's fee schedule carries refugee registration as its own line, alongside the foreigner identity system and separate regional, continental and rest-of-world tiers - the clearest statement the base holds that refugees are inside the identity system at all. 2026-08-25 - a European Union-funded action on birth registration and legal identity pairs the births registry with the health service in six low-coverage regions, framed around refugee protection as well as registration gaps. No refugee or displaced population figure, no registration count and no service-access measure appears anywhere on this ledger, so the position is that the systems name this group and the base cannot say how many of them the systems reach.	NO CHANGE a fee line and a registration action with no population figure behind them
Digital divides	**Bridging of digital divides**	The universal access fund is slated for conversion, while its rural telephony project reaches 1,400 of 2,016 sites and is directed to 4G. 2026-09-05 - the project's own numbers reach the base for the first time: 1,400 of 2,016 rural telephony sites are live and the fund carries a GHS 30m allocation for the project in 2026, with the minister directing every site be upgraded to at least 4G, repeated on an Eastern Region inspection. The directive carries no timetable, cost or contracting route. 2026-09-07 - smartphone penetration is put at 71.8 per cent in June 2026 against 27.5 per cent a decade earlier; a household survey the base holds put smartphone ownership at 58.4 per cent urban, a different measure on a different base. A draft bill would convert the access fund into a digital-infrastructure, innovation and skills fund, with levy rate, governance and the fate of the rural-access earmark all unestablished. The rural project runs on a EUR 140.8m buyer's credit whose last disbursement figure held is 60.2 per cent as at May 2022. American-funded inclusion programming slowed or stopped after the 2025 wind-down.	MIXED the access fund is slated for conversion while its flagship project runs on and donor programming was withdrawn

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The third statistics strategy is a funded commitment carrying GH207m for rebasing and is named among three forthcoming instruments. 2025-11-13 - the budget carries GH207m for rebasing gross domestic product and the consumer price index by 2026, explicitly aligned with the forthcoming third national statistics strategy for 2026 to 2030 - the budget-line evidence that it is a live commitment. 2025-12-09 - at the first national data producers forum the deputy finance minister announced a GH209m 2026 allocation for statistical operations covering rebasing, surveys and real-time measurement tools, and plans to integrate administrative data systems using the national card identifier, projected to cut future census costs by over 70%. 2026-03-12 - the strategy is named among three forthcoming policy instruments alongside a data quality assurance framework. No text is held.	ADVANCED
National statistics	**Censuses and surveys**	The governance series published its third six-monthly wave in August 2026, while quarterly employment statistics remain unpublished. The series is a repeat panel run by the statistical service across all 16 regions, its findings put by the Government Statistician to remedies that are digital ones, among them digitising public services and publishing official fees; the report text is not held and the wave figures come from the launch as reported (third wave). The finance minister asked the service in July 2026 to develop a methodology for quarterly employment statistics; none is published and no timetable is given (employment statistics). Fieldwork began in the week to 7 September 2026 on the Global Development Network's five-country DPI Inclusivity Survey, with the University of Ghana as the partner research team in Ghana, engaging more than 5,000 households through to April on how people experience digital identity and digital payment systems. No results are published.	ADVANCED
National statistics	**Statistics from administrative data**	The statistical service signed data-sharing memoranda with 25 ministries and agencies in March 2026, operationalising its statutory coordination powers. 2026-03-12 - the service signed memoranda with 25 ministries, departments and agencies - the health service, police, immigration, environment agency, disaster organisation and births and deaths registry among them - operationalising its statutory powers to coordinate administrative-data sharing, with designated focal persons, technical interoperability standards and review mechanisms; about 17 already had draft data-sharing policies. 2026-07-22 - the service, the education ministry, the education service and the identity authority discussed a pilot to replace periodic surveys with continuous statistics drawn from trusted administrative records tracking learners across their education journey, with the education minister to chair its steering committee. No statistic published from an administrative source under either arrangement is yet on the record.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Open data	**Use of open data**	A fisheries information system launched in June 2026 is the only open data platform held, and it is underfunded. It was built by the fisheries ministry with the national multi-stakeholder group, with inadequate funding constraining the wider transparency commitment it sits under, and talks on reviving a fisheries funding mechanism reported as under way and nothing concluded (fisheries system). No open-data policy, portal, licence or dataset inventory exists anywhere in the base; the nearest record is a data-literacy week at the planning commission.	ADVANCED
Use of satellite data	**Agricultural use of satellite data**	An agricultural information and monitoring system and a forest monitoring system with a deforestation tracker are named as live deployments. Both were named by a firm's co-founder at a university lecture reported in August 2026, the forest system built toward European deforestation-regulation compliance for cocoa and gold supply chains (deployments). No coverage, accuracy, user or funding figure is published for either, so the base records that they run and nothing about what they cover.	NO CHANGE two live systems named at one lecture and nothing measured
Use of satellite data	**Meteorological use of satellite data**	A donor gap assessment of the meteorological agency was delivered in August 2026, with the implementation roadmap it recommends still to be written. The assessment reports gaps across the agency's infrastructure, digital systems, data governance and cybersecurity framework, and was run under a bilateral sector cooperation on weather and climate and presented to the communications ministry; neither the text nor any cost, timetable or funding line for the roadmap is held (assessment). A flood intelligence agent is named as in development at the same lecture that named two live systems, with no launch date, scope or funding figure published (in development).	ADVANCED

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	An applied artificial-intelligence lab opened applications in July 2026, hosted at a research centre carrying US$37m of cumulative investment. The research and community centre has operated since 2018, and the US$37m is the company's own cumulative aggregate rather than a new commitment (research centre); no further country investment figure has been published since (research centre). Applications for the lab opened on 1 July 2026 and closed on 31 August, with research and venture partners named and the first cohort not yet selected; no cohort size, funding figure or country-specific spend is disclosed (applications, announcement).	ADVANCED
China activities	**Chinese MoUs, engagements and commitments**		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
EU activities	**EU MoUs, engagements and commitments**	The 2021 to 2027 programme gives digital no priority area of its own, with EUR 136m supplied for 2025 to 2027 at the mid-term review. The EUR 203m for 2021 to 2024 is followed by EUR 136m split between green growth for jobs at EUR 42m, smart and sustainable cities at EUR 45m, good governance and security at EUR 40m and support measures at EUR 9m (programme, amendment). The document's own diagnosis is that the information technology agency lacks both the technical capacity for integrated digital-government planning and the funding to implement the platforms government envisages, which is the sharpest external assessment of the delivery problem the base holds.	NO CHANGE
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**		NO EVIDENCE
India activities	**India MoUs, engagements and commitments**	An energy-transition memorandum was signed with an Indian company; no bilateral technology instrument is held. 2026-03-07 - the economy secretariat signed a memorandum with an Indian energy-transition company targeting up to 2,000 megawatts of renewable power over five years and 160,000 jobs through a special-purpose vehicle, with a first project of a 20-tonne-a-day biofuel plant, a 100-megawatt solar installation and 500 to 1,000 electric buses within 24 months. It is a commercial commitment with an Indian company rather than a state-to-state instrument, and no financing close or delivery against it is recorded. The bilateral technology relationship itself remains *Not held*: the base carries no sourced Ghana-India technology cooperation instrument, only the absence.	NO CHANGE a commercial energy memorandum with no technology instrument behind it

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Data-centre power arrangements	this subject is effectively empty for the country; probed 2026-08-05, no power purchase or supply arrangement is published; an analyst market brief maps the facilities and their power constraints	2026-08-05
Ghana Card payment functionality	probed 2026-08-05, trade press reported an activated card wallet in early April 2026 and the issuing authority denied it on 8 April 2026	2026-08-05
Local government electronic services	a district service platform, or a local-government digitisation report, would settle it; probed 2026-08-05, the ministry's programme-based estimates document the district data platform and MMDA integration	2026-08-05
National open-data instrument	a published policy or a live inventory would settle it; probed 2026-08-05, the 2016 open data policy located; the live inventory exists separately; the 2016 policy acquired on 2026-08-05 turned out to be the GHEITI extractives policy, not a national instrument, so a national open-data instrument remains unestablished	2026-08-05
Ghana-India technology cooperation instrument	a bilateral memorandum, a line-of-credit record or an Indian vendor contract would settle it; probed 2026-08-05, a joint trade committee discussed a possible digital MoU in May 2024; no signed instrument was located	2026-08-05
Ghana-Gulf technology investment instrument	a sovereign-fund agreement, or a data-centre or AI memorandum, would settle it; probed 2026-08-05, the May 2025 innovation hub memorandum is reported with a component breakdown but its text is not published	2026-08-05
Community network licensing framework	a civil-society policy lead places four other African states ahead of Ghana on enabling frameworks; probed 2026-08-05, no dedicated community-network licence exists; the authorised-ISP list defines the classes such a network must fit	2026-08-05
Distance-learning loan for tertiary institutions	connects satellite campuses to fibre; borrowing terms unknown; probed 2026-08-05, the loan agreement is unpublished; terms appear only in a research database, which is a lead rather than a source	2026-08-05

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Distance-learning loan for a local government institute	the country announced sovereign default in December 2022; probed 2026-08-05, two attempts surfaced no distance-learning loan to a local-government institute	2026-08-05

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
