PROGRESS REPORT

Domestic budget appropriations and expenditure: progress report, September 2025 – September 2026

Edition of 2026-09-10-2 · compiled by Claude Opus from the documents in the Corpus repository

> *53 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has* **No evidence** *on it in its own report.*

Progress values. *Movement* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Sustainable domestic financing of digital transformation

COUNTRY	DEVELOPMENTS	PROGRESS
Angola	The communications programme was cut 30.5% for 2026 and cybersecurity by 54%, while US$275m and US$218.5m supplementary credits opened. The president authorised US$210.91m for an integrated set of state digital services (authorisation), with US$13m for the public administration interoperability platform (authorisation) and US$4.6m to strengthen state cybersecurity (authorisation). These are authorisations to spend, not disbursements. The recurrent lines fell. Kz 159.2bn was appropriated to the communications programme for 2026 against Kz 229.3bn for 2025, a cut of 30.5%, with fourth-generation expansion down 42% to Kz 62.7bn and the third-generation coverage line deleted. The cyber-security line fell from Kz 70.5bn to Kz 32.3bn, about 54%, read at draft stage before enactment. The identity programme was financed outside the budget cycle instead. US$218,500,000 of supplementary credit was gazetted to the justice ministry for identity-card universalisation, and US$275,000,000 was opened inside the 2026 budget for the adult-citizen database proof-of-life update, more than doubling the territorial administration ministry's allocation. Execution is the weak point. The first per-organ table published shows 3% first-quarter execution, with 20 of 50 programmes below 5%. No released, actual or audited figure is held for either budget year.	MOVEMENT
Benin	The digital budget programme executed 0.62% of credits by 30 April 2026 against 15.43% across all programmes, and the agencies running the estate carry no budget line of their own. 2026-06-22 — the first per-programme execution figures the country has published put the digital programme at 0.62% of credits ordered at 30 April 2026 against 15.43% across all programmes, and 1.32% on the domestically financed portion alone, on a rectifying finance law whose presentation note carries the detail and whose arbitrations covered video protection. The whole of that execution is domestic, because the programme's external loan tranche had drawn nothing, and the ministry's own steering programme ran at 20.12%, so this is programme-specific rather than ministry-wide. The institutional reading is the second half. The data protection authority carries its own line across three volumes while the agency running the response team, the data centre and the public-key infrastructure has no visible line in any of them, and the identity agency carries no programme of its own; the ministry's own four flagship projects were presented separately. Quarterly execution reporting exists and does not reach this level: reports are published at each quarter-end with a citizen version, and the citizen edition carries no per-programme breakdown.	STALLED

COUNTRY	DEVELOPMENTS	PROGRESS
Botswana	Three digital capital lines were cut for the new year after outturns of 38.7%, 9.0% and nil; one small line rose and was fully spent. The pattern is appropriation followed by non-execution followed by a cut. The communications ministry ICT project falls to P251,000,000 after P369,079,545 appropriated and P142,712,599 spent, 38.7%, a third consecutive cut from P736.6m two years earlier. The research and development project falls to P213,700,000 after a 9.0% outturn; its scope spans satellite, nuclear and biotechnology as well as digital. Basic education computerisation falls to P253,000,000 after P270,000,000 was appropriated, revised to P38,819,833 and nothing at all was spent — the vote behind the largest learning-technology award in this report. Two lines hold. Higher education computerisation rises to P16,000,000 after a full spend of P3,950,000, the only clean-scope digital line with a 100% outturn, and the shared digital services recurrent vote is broadly flat at P587,310,850, the largest single recurrent line. Outside the estimates entirely, P4.13bn was sought for revenue-service modernisation under the twelfth development plan, inside a P8.8bn digital ask, with no appropriation trail because the revenue service appears in no budget organisation. No audited outturn exists for any digital line in any year.	REGRESSED
Burkina Faso	Tracked domestic digital appropriations fell to FCFA 9,609m for 2026 from FCFA 13,563m, while FCFA 9,113m was authorised for the ministry by fast-track route in one April sitting. Six tracked lines total FCFA 9,609m for 2026 against FCFA 13,563m for 2025, back below the 2024 level; the total is this base's own compilation across the enacted volumes rather than a published aggregate. Within it, the digital transformation programme falls to FCFA 1,916,611,000 with the chapter named after a foreign software vendor gone and the ministry's whole domestic capital down 72.7%, the connectivity programme to FCFA 1,187,169,000 in a third consecutive fall, the cyber agency to FCFA 489,236,000 and identity documents, the largest tracked line and the one funding mass biometric enrolment, to FCFA 5,025,702,000. Procurement runs beside the budget rather than through it. FCFA 9,113m of specific projects was authorised for the ministry in April 2026, five times its whole 2026 domestic capital, after FCFA 5,895m in July 2025, and the fast-track route's conditions of recourse were tightened by decree at the same council that used it again. Which credits these draw on is never stated. Execution reporting diverges: 78.05% physical at 30 November 2025 with no financial rate for the year, against 10.80% financial and 43.61% physical at mid-year, on a review that is not a settlement account.	REGRESSED
Burundi	The ICT ministry vote rose to BIF 131.7bn and BIF 16.0bn was proposed for the identity card, against 76.79% revenue realisation. 2026-05-13 — the settlement law put the communications and ICT ministry vote at BIF 131.7bn for 2024/25 against BIF 43.1bn the year before. The same instrument records whole-budget revenue realised at BIF 3,234bn, 76.79% of a revised target that had itself been cut from BIF 5,076bn to BIF 4,732bn. 2026-06-11 — BIF 16.0bn was proposed in the draft 2026/27 budget for the biometric identity card, the first domestic state digital line this base tracks for the country. A universal service fund appropriation of BIF 11.40bn was revised in for dedicated transit to health facilities and schools, on an own-source levy. The reason a voted line is not a spent line is on the record: a mid-year work plan showed credits shifted between programmes with a 2.7% overrun, and the 2026/27 budget was adopted with expenditure above BIF 7,020bn against revenue of BIF 6,296.03bn, with the audit court telling senators it lacked clarity on remaining public debt.	MIXED the ICT vote tripled and a first domestic identity line appeared while whole-budget revenue realisation fell short
Cameroon	The telecommunications ministry's merged programme was tabled at FCFA 19,494,457,000 for FY2026, while the cadastre line was cut 44.2%. The FY2026 finance bill merges the development and cybersecurity programmes into one at FCFA 19,494,457,000, a 71.5% increase on the FY2025 combined appropriation of FCFA 10,330,875,000 plus FCFA 1,037,044,000. It is proposed stage only: the enacted law is a page-image scan the base cannot read. The lands ministry's cadastre programme went the other way, FCFA 874,046,000 proposed for FY2026 against FCFA 1,567,500,000 appropriated for FY2025, a 44.2% cut and below the FY2024 level. The Special Telecommunications Development Fund, a special account funded by 3% of operators' turnover plus half the regulator's year-end surplus, stays abolished, and universal-service money is not separately traceable in FY2024, FY2025 or FY2026.	MIXED the sector programme was tabled 71.5% up while the cadastre line was cut 44.2% and the universal-service fund stays abolished

COUNTRY	DEVELOPMENTS	PROGRESS
Cape Verde	The digital ministry's vote fell to CVE 174,200,533 for FY2026, an 87.5% fall across two budgets, while a first cybersecurity line of CVE 20,000,000 was inscribed. The ministry went from CVE 1,390,965,632 in FY2024 to CVE 369,781,930 for FY2025 and CVE 174,200,533 for FY2026, an 87.5% fall across two budgets while total state expenditure rose 11.3%, leaving the digital vote at 0.18% of state spending against 1.62% in FY2024, capital printed at zero for a second year, and a reprogrammed budget of CVE 1,614,624,282 at 31 March 2026, 9.3 times the voted figure. Every digital programme was cut: the innovation platform programme to CVE 513,994,724 with no external borrowing, the state-modernisation programme by 82% to CVE 976,042,125, the statistical-system programme to CVE 290,706,686. Against that, CVE 20,000,000 was inscribed as a new cybersecurity budget unit, the first such line in the budget, at 0.02% of state expenditure, and a rectificative budget was approved on 31 July 2026 at CVE 103,888 million, naming connectivity among the priorities and giving no digital figure. The civil-identification earmark is rolled forward at CVE 306,516,802 for FY2026, identical to the escudo, while the state operator forecasts service revenue of CVE 1,094,297,000 for 2026, 6.3 times the ministry's whole vote, its state-protocol line frozen for a third year.	MIXED the first cybersecurity budget line was inscribed for FY2026 while the digital ministry's vote fell 87.5% across two budgets and every digital programme was cut
Central African Republic	Two private-invoice lines carry FCFA 1,000,000,000 and FCFA 500,000,000 for 2026, while the digital agency's transfer includes FCFA 118,000,000 for six months of unpaid salaries. The largest digital lines are unexplained. Two named private-invoice lines carry FCFA 1,000,000,000 and FCFA 500,000,000 for 2026, the first doubled in a year and quadrupled in two, the second having no predecessor in 2024 or 2025; the estimates state no purpose for either payment in any year, and together they are 21 times the digital ministry's entire investment title. The digital development agency's transfer is split into FCFA 300,000,000 for urban optical loops and FCFA 118,000,000 to clear six months of unpaid 2024 salaries, an eightfold rise in two years of which a quarter is arrears on its own staff's pay. The state also budgets FCFA 250,000,000 of telephone arrears to its own incumbent for a third year, while negotiating that operator's privatisation. Elsewhere the money is real and small: FCFA 420,000,000 for customs system deployment, the largest digital line outside the digital ministry, and FCFA 1,600,000,000 transferred to the regulator against its own draft budget of FCFA 6,200,000,000. All of it sits inside a 2026 budget carrying a FCFA 28bn deficit with public investment down 2.06%. No enacted appropriation and no outturn is extractable for any year.	MIXED the digital vote's largest lines are unexplained private-invoice transfers while the agency delivering it is budgeting arrears on its own staff's pay
Chad	The whole expenditure chain was mandated through an integrated public financial management system from the 2026 budget, with generalisation pending. The mandate runs from the 2026 budget and no coverage figure, count of entities live or implementing agency is named (mandate, orientations). It is the instrument on which the zero-cash and electronic-invoice commitments recorded separately depend, and the only measure of it is that generalisation is pending.	MOVEMENT
Comoros	The digital ministry's vote rose to KMF 338,724,932 for 2026, while the finance ministry's systems directorate took KMF 277,128,000. The digital ministry went from KMF 235,315,816 for 2025, revised to KMF 223,337,645, to KMF 338,724,932 for 2026, up 51.66 per cent, including the first appropriated state capital line for the ministry in the three-year corpus at KMF 50,000,000 - about 0.34 per cent of the ministry block, roughly EUR 690,000. The largest single digital appropriation sits elsewhere: the finance ministry's information systems directorate took KMF 277,128,000 against a revised 2025 comparator of nil on every line, 82 per cent of the whole digital ministry's vote. The digital chamber's transfer line fell to KMF 50,000,000 from KMF 73,000,000. The 2024 outturn was KMF 183,586,075, 26.89 per cent of the rectified appropriation, and the regulator, funded wholly by statutory levy, is absent from every budget instrument for a third consecutive year. The one digital line outside the digital ministry that the base can trace, a website and internet consumption line, was cut to KMF 15,000,000 by a ministerial virement six weeks before the 2024 year end and has had no published position since.	MIXED the digital ministry's vote rose 51.66% and a finance-ministry systems directorate was funded at three times it while the digital chamber's line was cut and the regulator appears in no budget at all

COUNTRY	DEVELOPMENTS	PROGRESS
Congo	The sector vote rose to FCFA 30,139,589,283 for 2026, while 2025 execution was FCFA 3,158,525,582, 13.5% of the revised figure. The programme vote went from FCFA 23,093,583,163 appropriated for 2025, revised to FCFA 23,348,037,007, to FCFA 30,139,589,283 for 2026, up 30.5%, against 2025 execution of FCFA 3,158,525,582 or 13.5% of the revised figure - a floor, on a numerator that excludes personnel and a denominator that does not. The treasury banking-function account more than doubled to FCFA 5,968,000,000 from FCFA 2,810,000,000, while the public-finance information systems account stayed at FCFA 3,500,000,000 for a second year. A rectifying law adopted unanimously in July 2026 names consolidating revenue through digitalisation first among four objectives, publishing no revised digital vote. A tax on newly imported SIM-capable terminals took effect on 1 June 2026, earmarked for connectivity and infrastructure, with no rate or yield published.	MIXED the sector vote rose 30.5% and the treasury banking account doubled while 2025 execution ran at 13.5% and the public-finance systems account stayed flat
Cote d'Ivoire	The digital ministry's vote rose 37% for FY2026 while the earmarked levy share of it fell and the fund publishes no accounts. The FY2026 finance law voted FCFA 83,275,503,595 for the digital ministry, up 37% on FCFA 60,780,440,826 for FY2025, and FCFA 104,342,019,358 across twenty lines whole-of-government. Neither year has an outturn. The earmarked operator levy fell from 65.6% of the ministry's section in FY2025 to 42.7% for FY2026, as its own programme rose from FCFA 19.03bn to 45.99bn while both levy programmes shrank, the universal service programme to FCFA 33,000,000,000 and the regulation programme to FCFA 2,580,000,000, down 43.8%. The last outturn held is FY2024, FCFA 54,052,436,801 spent against FCFA 69,673,862,396 voted, 77.6%, and no account of the levy collected or spent is published.	MIXED appropriations rose while the earmarked levy share fell and no account of the levy is published
Djibouti	The digital agency's 2026 budget was approved at 396,120,056 FDJ, down from 556.7m the year before. No domestic digital appropriation was held at the window's opening. 2025-12-30 - the agency's 2026 budget was approved at 396,120,056 FDJ, down from 556.7m FDJ in 2025, with investment of 108.1m FDJ for application firewalls, an archiving system, datacentre colocation and support renewal on the data-exchange layer, the balance largely staff costs. That is the agency's whole operating budget rather than a purpose-matched digital line, and the digital-specific component is the investment figure. No separate ministry line or e-government envelope is published, and the budget law itself carries digital obligations without appropriating against them. The arrete is not published, so a Council of Ministers record is the strongest evidence reached.	REGRESSED
DR Congo	The digital economy section rose to FC 81,698,223,741 for FY2026, but only 51.7% of the FY2025 revised credit was paid. The 2026 finance law renamed the digital section digital economy and appropriated FC 81,698,223,741 domestic, up 34.8% on FY2025 and still 6.2% below the FY2024 appropriation, and renamed the other section posts and telecommunications at FC 53,840,917,417. Credits moved from FC 145.7bn to FC 55.1bn on one section and from FC 60.6bn to FC 226.7bn on the other, so combined the two are almost flat and the rise is substantially a transfer of mandate. Execution is the weak point: FC 31,358,784,468 was paid, 51.7% of the revised credit, against FC 68,457,537,329 engaged, or 112.9%. National identification received FC 20,654,178 for FY2026, a figure that cross-foots exactly and is not a transcription error.	MIXED both digital sections were appropriated higher for FY2026 while the rise is substantially a transfer of mandate and only 51.7% of the prior year's credit was paid
Egypt	EGP 13bn of public investment was allocated to the sector in the 2025/26 plan, and up to US$860m a year is intended for data centres and state artificial intelligence. No domestic appropriation was held at the window's opening. The 2025/26 plan presented to the House allocates EGP 13bn of public investment to the communications and information technology sector, against plan targets of US$8.5bn in annual digital exports of which US$6bn from outsourcing, reported separately. It is a plan allocation, not an outturn, and no execution figure against it is held. 2026-08-21 - a ministry document relayed at second hand states an intended allocation of up to US$860 million a year from the general budget, from FY2026/27 to the end of 2030, for data centres, computing infrastructure, data security and privacy, and artificial-intelligence use inside state-owned companies, on a stated target of 0.10 to 0.15 per cent of national output. It is an intention with no appropriation line.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Equatorial Guinea	The telecommunications ministry's vote fell 23 per cent to CFA 5,802,246 thousand for 2026, 0.4 per cent of the total budget. The prior year's figure was CFA 7,556,246 thousand, and the 2026 vote includes CFA 140,000 thousand for the telecommunications school at the new capital, against a total budget of CFA 1,294,282m (budget law). It is the only domestic appropriation for the sector the base holds at any date, and it fell in the year the ministry adopted a 35-objective plan it states is not yet financed.	REGRESSED
Eritrea	No domestic budget line and no institution to raise one. The investment centre is dormant and the investment law effectively suspended. The external country assessment establishes the position directly: the investment centre created in 1998 is dormant and the 1994 investment law is effectively suspended, with what non-state finance arrives negotiated case by case rather than through any standing institution. No published budget names digital transformation as a line, and no revenue instrument is earmarked to it. What financing the base can see is external and project-shaped: the tax administration system and the education programme grants are both financed from outside, and both would stop with their grants.	NO CHANGE
Eswatini	The ICT capital line for 2026/27 is E47.5 million, of which E17.5 million is government money and E30 million is not. The first draft estimates for 2026/27 to 2028/29 give the ICT head a capital appropriation of E47.5 million for 2026/27, split E17.5 million from government funds and E30 million from other funds (estimates). Under two fifths of the capital line is domestically financed. The budget speech puts E413.9 million to the ICT ministry for its programmes (budget speech), and the largest digital programme in the country runs on E1.2 billion of external money. The revenue side is where the pressure sits: the tax gap stands at E4.4 billion, and an electronic invoicing programme was launched in May 2026 against it. Domestic financing of digital transformation is therefore falling as a share while the absolute programme grows, which is what Regressed means here.	REGRESSED
Ethiopia	Digital lines in the federal budget rose to ETB 9.05bn for FY2026/27 from ETB 3.75bn, dominated by a single university project. Thirty-four digital budget lines run across three years: ETB 1.21bn appropriated in FY2024/25 against an outturn of ETB 1.53bn, ETB 3.75bn in FY2025/26 and ETB 9.05bn in FY2026/27, the last dominated by an artificial-intelligence university line (budget lines). They sit inside a federal budget of 2.34 trillion birr for FY2026/27, ratified in July 2026 and up 21.3% on the year before (budget ratified). Execution is now published: the mid-year review for 2025/26 records ETB 704.7bn mobilised, 48.1% of the annual target, against ETB 798.2bn spent, 48.3% of the approved budget, with recurrent spending at 39.3% of its budget against 62.9% of capital (mid-year review).	MOVEMENT mostly the birr float rather than real growth
Gabon	The digital ministry's appropriation was proposed at XAF 82bn for 2026, up 156.2 per cent on the XAF 32bn the minister recounts for 2025. The proposal was presented to the National Transition Assembly across digital enterprise support, infrastructure deployment and digital literacy (appropriation). The base holds no enacted finance law and no Gabonese source under this subject, and the 2025 comparator is a minister's own comparison rather than an appropriation document, so neither figure is confirmed against a budget instrument.	MOVEMENT on a proposal presented rather than an enacted appropriation
Gambia	Tax collection rose to D25bn in 2025 from D11bn in 2022, which the finance minister attributes to digitalisation of collection. The tax-to-gross-domestic-product ratio rose from 9 per cent in 2022 to 13 per cent in 2025, stated by the minister at the Banjul master class (ratio). The authority's 2026 target is D27.5bn (target). The attribution to digitalisation rather than to rate increases is the minister's own and is an attribution, not an evaluation; no counterfactual, rate schedule or compliance analysis is published beside it. No domestic appropriation for the digital sector is held at any date.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Ghana	The 2026 appropriation carries GHS 729,947,850 for ICT infrastructure and regulation, of which GHS 591,947,850 is domestically funded. A further GHS 100,000,000 goes to ICT capacity development (appropriation); the domestic figure resolves to GHS 536,745,448 for the information technology agency, GHS 25,346,198 for the cyber-security authority, GHS 17,308,560 for the capacity centre, GHS 9,720,400 for the data-protection regulator and GHS 2,827,244 for the domain registry (appropriation, agency vote). The regulator's GHS 9,720,400 is entirely its own internally generated funds with no Consolidated Fund allocation, and the mid-year fiscal review names none of these lines (mid-year review). Parliament separately approved multi-year commitments for three revenue platforms with published benefit projections and no disclosed cost, duration or termination terms (approval), the opposition alleging the cross-border operator takes up to 3 per cent of collections, which it estimates at about GH¢690m a year (objection).	MOVEMENT
Guinea	A 3 per cent compliance fee on foreign digital services was decreed in May 2026 to finance a new digital sovereignty fund. The fee runs at a flat 3 per cent for twelve months and then 1.5 to 7 per cent by service category, with an exemption below 250m GNF of annual taxable revenue, given in the source as roughly US$28,600 (decree); a six-month transition precedes enforcement (decree). The same decree creates a digital sovereignty fund financed primarily from the fee, with no capitalisation, governance or first disbursement published, and a digital analysis and regulation platform to monitor foreign digital services, which is not on record as operating. No domestic budget appropriation for digital transformation is held at any date, so a hypothecated levy on foreign providers is the only financing instrument the base can see.	MOVEMENT
Guinea-Bissau	The 2026 budget carries a named digital transformation investment line, inside a CFA 83.2bn investment programme. The budget volume names a digital transformation line in the public investment programme covering the financial system, a data centre, communications and an enterprise system — the first identified digital allocation the base holds for Guinea-Bissau. The frame around it is tight: CFA 530.7bn in revenue and spending, a CFA 79.8bn deficit and a CFA 83.2bn investment programme. Revenue reform is the fund programme's own condition, with the payment platform and a taxpayer census named among reform actions.	MOVEMENT
Kenya	The information technology vote fell to KSh 12,763.8m for FY2026/27 from KSh 16,188.8m, and the digital thematic to KSh 8.6bn from KSh 16.3bn two years ago. FY2025/26 was itself revised down to KSh 12,215.1m at the first supplementary (estimates, prior year). The thematic allocation fell to KSh 8.6bn for FY2026/27 from KSh 12.7bn, a second consecutive cut (thematic, prior thematic). Inside it, KSh 400m is appropriated for establishing digital hubs and KSh 528m for last-mile county connectivity maintenance, against an Auditor-General finding that 70 per cent of sampled county connectivity offices had no internet at all (hub and connectivity lines).	REGRESSED
Lesotho	The 2025/26 budget appropriated M381.1 million to the sector, naming a security operations centre, an interoperability framework and fibre works. The budget speech of 19 February 2025 allocated M381.1 million to the sector and named its intended uses: a Government Security Operations Centre, a Government of Lesotho Enterprise Architecture and Interoperability Framework, a completed fibre feasibility study, 17 operational base tower stations and a 96km fibre stretch from Roma to Thaba-Tseka (budget speech). No outturn, disbursement figure or later appropriation is held, so the base records what was voted and not what was spent.	MOVEMENT
Liberia	The Universal Access Fund levy of 0.5 per cent of licensee revenue remains the only standing domestic mechanism. LTA-REG-0006 sets the licensee contribution at 0.5 per cent of annual gross revenues, allows extraordinary contributions including national-budget allocations, and requires annual legislative approval for disbursement and audited accounts. Its most recent published deployment is a satellite installation in Vahun District, Lofa County. The wider fiscal space moved in the window rather than the digital allocation: the general services tax rose from 12 to 13 per cent from 1 May 2026 under the Tax Amendment Act, a prior action the Fund's third review records as closing a US$10m gap for the 2026 fiscal year. No digital line is identified inside it.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Libya	Zero development spend on the communications authority for January-February 2026, after LYD 41.2m in all of 2025. The central bank's 2025 statement puts the communications authority's spend at LYD 41.2m against total state outlay of LYD 136.8bn — about 0.03 per cent. The statement for January and February 2026 shows no development spend on the authority at all, with salaries also short. The fiscal frame did change: the governor announced the first unified state budget in more than thirteen years in April 2026, ending dual fiscal streams.	REGRESSED
Madagascar	A digital transformation programme line sits in the 2026 supplementary finance law, with its investment credit shown as externally financed. The supplementary finance law for 2026 carries programme 226 for digital transformation of public services, whose investment credit is shown in the annexes as externally rather than domestically financed (law). The finance ministry's presentation of the initial 2026 budget named integrated digitalisation of tax and customs administration as a priority within a combined domestic and external financing architecture, stating no programme line or amount for it (presentation). The capture of the law stops before the ministry-by-ministry appropriation tables, so the domestic share of the programme cannot be read from the base.	NO CHANGE a first budget line with no earlier appropriation held
Malawi	The 2026/27 budget has no dedicated line for school internet connectivity, MWK 1.1bn for device assembly at one university, and MWK 12.4bn of the birth-registration campaign unfunded. The 2026/27 budget policy statement carries no dedicated line for school internet connectivity or digital infrastructure in primary and secondary schools; education received MWK 1.28tn, 11.7 per cent of the budget, and transport and ICT received MWK 664.4bn directed at roads, rail and aviation (budget). MWK 1.1bn was set aside for assembling laptops and tablets at the science and technology university, the nearest digital allocation to schools in that budget and directed at higher education (allocation). The birth registration campaign requires MWK 17.8bn to register about 4.6 million children across seven phases; MWK 5.4bn was allocated for phases one and two, leaving MWK 12.4bn unfunded, and the figures are the minister's rather than an appropriation document (campaign, partnership).	MIXED a device-assembly allocation and a partly funded registration campaign against no school-connectivity line at all
Mali	The universal access fund's 2026 budget was cut 32 per cent in July, days after it signed conventions to connect every secondary school by end-2027. The fund's adopted 2026 budget of FCFA 41,151,471,000 was revised down to FCFA 27,886,688,000 on 23 July 2026, after 8 per cent of the annual budget was spent in the first half and receipts ran at 56 per cent of forecast (revision). The day before, it signed two four-year renewable conventions with the education and employment ministries committing it to connect every secondary, technical and vocational school by the end of 2027, with cumulative education spend put above FCFA 17bn (conventions, partnership). The fund sits under direct prime-ministerial tutelle and named a new director-general the same week; a named-analyst investigation dates its removal from the regulator to 2012 (governance, investigation).	MIXED the universal access fund's budget cut by a third in July while it signed four-year school connection commitments
Mauritania	The digital ministry's budget reached US$24.2m for 2026, up 104.6 per cent, while the universal access fund decree was repealed for unclear object and resource allocation. The ministry's 2026 budget is US$24.2m, up 104.6 per cent on the previous year (budget). The Council of Ministers approved a decree in July 2026 repealing the fund's 2020 governing decree, on grounds that the fund's object, its resource mobilisation and allocation, and its integration into the state budgetary system were all unclear; the new terms are not published and neither decree is held (repeal). So the domestic money for digital transformation grew sharply in the same year the instrument for spending it on universal access was found not to work.	MIXED the ministry's budget more than doubling while the universal access fund's governing decree was repealed as unclear

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritius	The 2026-2027 budget names artificial intelligence thirty-five times and funds a training platform, an investment tax credit and a forensic laboratory; the Finance Bill itself is not held. The budget carries a 50,000-trainee target, a Rs 25m national learning platform, an investment tax credit of 15 per cent a year over three years, a special economic zone of 83 arpents with preferential data-centre power and thirty-year renewable leases, electronic gates, an electronic visa, an electronic judiciary and a Rs 13m cyber forensic laboratory (budget). The accompanying 128-page Finance Bill is not held: three fetch paths into the assembly's bills library returned an HTML shell rather than the document, so the enacted tax and revenue measures cannot be read against the announcements (bill).	MOVEMENT
Morocco	The ministry's own series stops at a MAD 1,758.7m investment appropriation for 2024, with no 2025 or 2026 figure published. The 2024 investment line stands at MAD 1,758.7m against MAD 85.8m for personnel and MAD 187.8m for materiel, and is the latest year in the ministry's published budget-by-chapter series (series). The same series runs MAD 11.7m in 2021, MAD 246.7m in 2022 and MAD 1,249.2m in 2023 (series), so the investment line grew by two orders of magnitude in three years and then stopped being published.	NO CHANGE no appropriation published since the 2024 line
Mozambique	The 2026 appropriations give three digital agencies no capital line, and the new Cyber Security Fund has no budget line either. The universal access fund regulation of May 2025 caps spending at 55 per cent infrastructure expansion, 14 per cent digital inclusion, 14 per cent broadcasting, 14 per cent operating costs and 3 per cent innovation, with the levy stated by the regulator at 1 per cent of each licensed entity's gross revenue (regulation, annual report). The 2026 final maps give the ICT institute MZN 73,636,370, the identification directorate MZN 230,819,650 and the statistics institute MZN 211,296,440 centrally, none of the three with a capital allocation, and salaries are between 77.5 and 93.2 per cent of each (maps). The Cyber Security Fund is provided for in statute from July 2026 with state appropriations among its revenue lines, and no line for it appears in the 2026 budget (fund).	MIXED a reformed universal access levy against three digital agencies with no capital allocation at all
Namibia	A universal service levy of up to 0.5 per cent of turnover has been in force since 2024, and the Universal Service Fund has awarded nine sites, while the regulator turned a surplus into a loss. The levy is not to exceed 0.5 per cent of annual turnover per licensee with a flat N$500 floor for non-profit licensees, invoiced on audited statements and payable within thirty days into the fund (regulations); an amendment let the fund receive donations or grants, which is what makes government funding receivable (regulations, withdrawal). A gap analysis identifies 119 locations that will remain unserved after coverage obligations, of which government funding covers the capital cost of 42 (analysis). The fund launched in March 2025 and a first bidding round awarded nine sites with almost N$31 million of capital subsidy across the five regions where 4G coverage is below 80 per cent, with free internet for schools and clinics on those sites for seven years (fund, priority, report). The government commitment is given as N$115,000,000 in the regulator's own report and N$145,000,000 in the launch reporting, and the two are not reconciled (launch). The regulator's revenue fell 23 per cent to 15.5 per cent below budget while operating expenditure rose 42 per cent, turning a N$32.8 million surplus into a N$25.5 million loss (accounts, prior year).	MIXED a universal service levy in force and a fund disbursing while the fund's own seed figure is unreconciled and the regulator ran a loss
Niger	The 2026 budget was rectified upward to 2,980.54 billion FCFA in August 2026, itemising no digital-transformation line. The Council of Ministers of 21 August 2026 rectified the 2026 finance law, raising the general State budget from 2,922.22 to 2,980.54 billion FCFA — a rise of 58.32 billion, or 2% — for security spending, the government's new configuration, oil prices, the dissolution of certain services and tax simplification. The operative appropriation act is ordonnance n°2025-44 of 31 December 2025, whose capture is the ministry's document-catalogue page rather than the text. Neither record establishes an appropriation for communications, the digital economy, the information society agency or the electronic communications regulator, so the base holds no domestic budget figure for digital transformation.	NO CHANGE the budget was revised upward with no digital-transformation appropriation identified

COUNTRY	DEVELOPMENTS	PROGRESS
Nigeria	A 50 per cent tariff reset in 2025 and removal of the 5 per cent telecom excise preceded about ₦2.13tn of sector capital spending in 2025. The tariff increase was the first in about eleven years, approved after naira devaluation drove sector losses reported at about US$11.3bn forgone over the freeze (reset, losses), and the excise duty was removed in August 2025 (excise). The operators' association puts about ₦2.13tn invested in 2025 with about ₦1.86tn planned for 2026, credits the tariff adjustment with moving the industry from severe financial pressure to reinvestment, and says a substantial share is financed from domestic capital that capital-importation statistics never capture; no regulator or statistical series corroborates the totals (capital spending).	MOVEMENT
Rwanda	The information and communications for development appropriation fell for a third year running and the programme is now 93 per cent externally financed, while the science and innovation appropriation also fell. Domestic appropriation for the development programme fell a third year running and external financing now carries 93 per cent of it and rising (appropriation, prior, baseline). The science, technology and innovation appropriation also fell in the 2026/27 finance law; the programme is broader than digital and the digital share is not separable (science, year before). The direction is consistent across the digital lines the finance law carries: the delivery record in this unit rests on external money, and the domestic share is shrinking as it does.	REGRESSED
Sao Tome and Principe	The state budget is published each year, most recently as Lei n. 3/2026, and no digital-transformation appropriation line is identified in anything the base holds. The 2025 budget document, published by the finance ministry's budget directorate, covers the year's budget, technical explanations and the balance of 2024 execution (budget), and the 2026 budget was enacted as a law gazetted in March 2026 (law). A civil-society citizen's budget for 2026 summarises how the State plans to raise and spend public resources and links to the official text (citizen's budget). None of the three identifies an appropriation for digital transformation. Every system recorded in this unit is donor-financed, and the budget documents held do not show the domestic side of that ledger at all.	NO CHANGE
Senegal	The 2026 ministry budget was set at FCFA 81.06bn with about 60 per cent to investment, while the the civil-status agency 2026 appropriation had not been notified by August. The 2026 ministry figure is an announcement rather than an appropriation: the record's own flags read unclear on stage and partial on scope, and the source says the budget was set without stating tabled or enacted (vote). At sector level only the 2024 machine budget record exists; the 2025 figure of FCFA 31.1bn is source-stated in committee reporting and is not held as a budget record, and nothing at sector level exists for 2026 (sector, baseline). The civil-status agency's director-general said on 17 August 2026 that its 2026 budget had still not been notified, and named that as the constraint on the pace of the regional phase of civil-registry digitisation (agency).	MIXED a ministry vote of FCFA 81.06bn announced for 2026 while the civil-status agency's own budget had still not been notified in August
Seychelles	The 2026 appropriation gives the ICT department R93.813 million of R11.84 billion — an annual departmental line, not a dedicated fund. The Appropriation Act 2026 authorises R11,842,682,521 of expenditure from the Consolidated Fund and appropriates R93.813 million to the Department of Information Communications Technology (Act); it was passed on 13 March, assented on 23 March and gazetted on 30 March 2026. The National Assembly Administration Act 2026 creates an autonomous Parliamentary Service with its own Office of Information Technology, Cybersecurity and Data Security at section 16, a Parliamentary Budget Office, and financial-autonomy provisions putting appropriations and retained underspend under the Commission (Act). The appropriation gives one departmental figure and no programme breakdown, so what the rest of government spends on digital transformation is not established.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sierra Leone	The FY2026 estimates carry NLe 46,808,900 for the communications, technology and innovation ministry, at proposed stage and almost entirely recurrent. The ministry's vote is Head 135, proposed at NLe 46,808,900 for FY2026 - NLe 45,746,500 recurrent against NLe 1,062,400 capital (estimates). Bilateral budget discussions for FY2026 opened in September 2025 (discussions), and the investment board separately proposed a Le 22 million budget to launch 24-hour business registration (board). One head of four is held. No vote is on record for the communications regulator, the innovation directorate or the civil registration authority, the appropriation act itself is not published, and a capital line under three per cent of the ministry's own total is the whole of the domestic capital provision the base can see.	MOVEMENT
Somalia	The 2026 budget framework funds e-government, digital signatures and payments infrastructure from the general local fund, with no standalone digital appropriation. The finance ministry's framework paper, prepared under the Public Finance Management Act, shows digital government activity — e-government, digital signatures, national payments infrastructure and an ICT infrastructure pillar — financed through the general Government Local Fund rather than a dedicated line (paper). It states domestic resourcing of these as a medium-term objective, which is an admission that they are not domestically resourced now. Every large digital programme the base holds — identity, backbone, social protection — is externally financed.	NO CHANGE
South Africa	The communications department spent R3.61bn of a R3.74bn budget in 2025/26, a near-full draw and the only domestic financing figure the base holds. The one domestic budget figure on the ledger is a spend of R3.61bn against R3.74bn appropriated for 2025/26, a near-full draw with no prior year on file to compare it against. What it cannot answer is whether the financing is sustainable, because the ledger holds no forward estimate, no capital and current split and no measure of what the money bought. The one place a shortfall is visible is elsewhere in this report: the flagship broadband programme's in-year allocation collapsed and the programme was closed rather than completed, which is a financing outcome that no departmental spend rate would have shown.	NO CHANGE
South Sudan	An SSP 7 trillion budget was approved for FY2025/26 with no digital line disclosed, above a statutory fund that has no published balance. The Council of Ministers approved the budget on 14 November 2025, and no dedicated information and communications technology or digital transformation line is disclosed in it (budget). The statutory mechanism is the Universal Service and Access Fund, constituted under the National Communication Act 2012 and funded by appropriations, licensee levies and other domestic revenue (Act); the ICT ministry's fourteenth leadership meeting in September 2025 estimated a budget to support the fund and the Access to Information Commission, without stating an amount or source (meeting). A fund with no published balance and a budget with no visible line is the whole domestic financing picture.	MOVEMENT
Sudan	A Treasury Single Account commitment was reaffirmed at a summit in August 2026, and an electronic oversight system for public bodies was announced with no scope or timetable. The state minister of finance reaffirmed the commitment to implementing the treasury single account at a summit in Abuja, with no timetable, coverage or implementation stage stated (commitment). An electronic oversight system for public bodies and government companies was announced as forthcoming, with no scope, custodian, timetable or stated relationship to the treasury single account or the procurement platform (oversight). Three public financial management systems are therefore in flight — an account, an oversight system and a procurement platform — and no source relates any of them to the others.	MOVEMENT
Tanzania	The communications vote fell 24 per cent year on year, and the whole reduction is external finance — domestic development finance is unchanged. Estimates were presented to Parliament in April 2026 (estimates, vote, forward). That the entire fall sits in external finance while the domestic line holds is the finding, and it is the opposite of the pattern most units in this frame show, where the domestic share shrinks.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Togo	Two phases of electronic-governance support to the financial administration run to 2028, the second financing fibre extension and the connection of town halls, hospitals and schools. The second phase was committed in 2025 and finances fibre extension and the connection of town halls, hospitals and schools (second phase), the first in 2024 (first phase), both at year precision and both running to 2028. A bilateral digital transformation programme was committed in 2022 and runs to 2028 (bilateral). Every financing in this unit is external. No domestic appropriation for digital transformation appears anywhere in the ledger, which is the limit on what this indicator can say about sustainability.	NO CHANGE
Tunisia	No appropriation line for the digital programme is held; the 2027 draft names acceleration of the digital transition as a structuring axis with no allocation, target or named programme attached. What is missing is an appropriation line in the 2027 finance law or the 2026 budget showing what the state spends on the digital programme (orientations). That absence sits against 192 projects under national follow-up, 114 in execution, 34 service houses built and an interoperability platform in its second phase. The delivery is countable and the money behind it is not.	NO CHANGE
Uganda	The ICT vote is wholly domestically financed and rises from UGX 105.963bn to UGX 144.696bn, inside a UGX 84.3 trillion budget over half funded from domestic revenue. 2026-01 - the ministry's own policy statement puts the ICT vote at UGX 105.963bn approved for FY2025/26 excluding arrears and UGX 144.696bn estimated for FY2026/27, rising to UGX 256.274bn by FY2030/31, with external financing at nil in every year. The development half moves from UGX 0.574bn to UGX 46.426bn across those two years, and only UGX 40.566bn of the FY2025/26 vote had been spent by the end of December. 2026-04 - parliament passed a UGX 84.3 trillion budget of which UGX 44.18 trillion is domestic revenue, allocating UGX 1.1 trillion to science, technology and innovation including ICT, against debt servicing of about UGX 33.4 trillion. The vote is the ministry's alone and the programme runs across several votes, so this is the sharpest domestic-financing figure the base holds rather than the whole picture. An arrears line larger than the substantive vote in FY2025/26 goes unexplained in what is held.	MOVEMENT
Zambia	A K255 million digital infrastructure and quality-of-service allocation was announced as approved, with the stage unclear and no funding source named. Approved is the source's word, and whether this is a cabinet approval, an appropriation or an in-year release is not stated; the amount is carried in local currency only and no funding source is named (allocation, record). It is the only domestic financing figure in this ledger. Every other instrument here is externally financed or company-reported.	MOVEMENT
Zimbabwe	Digital and information technology lines were appropriated in the 2026 Appropriation Act, and no revised, released or actual figure is held. These are original appropriations only, carried in local currency with no dollar equivalent stated (appropriation, second, revenue). A citizens budget was published for the 2025 financial year (citizens), and a parliamentary budget office was assessed in an external open budget survey round rather than by government (office). Original appropriations with no outturn, in a unit whose universal services fund publishes no balance either, is the whole of the domestic financing record.	MOVEMENT
