PROGRESS REPORT

Kenya: progress report, September 2025 – September 2026

Edition of 2026-09-09-2 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the base tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the base holds nothing on that indicator. **That is a statement about this base, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-09-01 to 2026-09-09.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	The digital public infrastructure roadmap is the section's central coordinating instrument and the base holds no text of it. It is under development on five pillars, launched at an inaugural inter-ministerial steering committee (roadmap, launch). A technical-assistance tender was issued in July 2026 with offers closing 1 September, a German development agency having funded a work package inside a European service contract to develop a bankable national project; no roadmap document, timetable or cost is published (tender). The digital programme is named a priority sector in the FY2027/28 budget process, with no ceiling, figure or timetable published (budget process).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**ICT strategy**	A business process outsourcing policy is claimed delivered with no text or adoption date on file, and the authority bill behind it is unwritten. Both sit on the ministry's forward legislative list, the outsourcing policy claimed as delivered and the authority bill named as a priority with no text, sponsor or stage held (legislative push). A harmonised county wayleave framework was agreed between the information technology and devolution departments, to be tabled at the intergovernmental sector forum, with no framework text, timetable, cost or wayleave figure published (wayleave framework).	NO CHANGE
Strategies, plans and policies	**Broadband strategy**	Against a target of 100,000km of fibre, 37,000km was installed as at September 2026, leaving 63,000km outstanding before the 2027 deadline. The ICT Cabinet Secretary gave the installed figure against a target serving 53,000 government facilities. The programme was announced in November 2022 and split in 2023 into 52,000km for government and 48,000km for private companies, with Sh940.6m paid to the power utility by June 2025 for design, supply and installation (programme). FY2026/27 carries KSh 1.3bn for backbone maintenance and KSh 528m for last-mile county connectivity (allocations). The base holds no independent verification of the 37,000km and no route or county breakdown behind it. 2026-09-04 - coordination was stepped up rather than the schedule revised: two principal secretaries began co-chairing a standing review of the implementing agencies, framed against taking the technology industry from US$7bn to US$100bn. No revised delivery date accompanied it.	ADVANCED 63,000km short with months to the deadline
Strategies, plans and policies	**Data storage / cloud strategy**	Cloud policy implementation guidelines opened provider accreditation in August 2026 and give state organs 24 months to migrate non-exempted systems. The 99-page document is signed by the Cabinet Secretary and cover-dated June 2026, grading providers into four accreditation classes with a register on the ministry website and a supplier-and-buyer marketplace administered by a cloud adoption committee (guidelines). Accreditation opened before that committee had been constituted (accreditation). The cloud policy the guidelines implement is itself not held: it carries a cloud-first mandate for the public sector and is cited as anchoring domestic data-centre demand, and the base dates it 2024 in one source and 2025 in another (policy, demand).	ADVANCED
Strategies, plans and policies	**Data interoperability framework / roadmap**	The enterprise architecture and interoperability framework is the standing roadmap, in its second edition since 2023. The framework was approved by the ICT Authority as a second edition and is the country's standing instrument for government enterprise architecture and interoperability (framework). A workshop in November 2025 took it to institutions under the digital economy acceleration project (workshop). A national data governance policy is still in validation (validation). The framework predates it, so the architecture standard is in force while the policy that would set the rules for the data moving across it is not.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**AI strategy**	The national strategy's roadmap is costed at KSh 152bn over five years with no dedicated allocation in the FY2026/27 budget. The roadmap was published in February 2026 with an 80 per cent fifth-generation population-coverage target by 2030 (roadmap); the strategy document itself is not held and its publication date is not established (roadmap, costing, governance politics). A 226-page draft policy is out for consultation with a risk-based lifecycle model, effects-based extraterritorial reach, binding worker standards and a disclosure duty, high risk undefined and penalties unstated; it proposes a national council and a safety institute, and a civil-society submission urges institutional independence for the council and mandatory human-rights impact assessments (draft policy, submission, worker standards). A standing Cabinet committee was established on 30 June 2026 to steer the strategy and coordinate policy across ministries, with no membership, meeting record or output published; it reaches the base through a university analysis rather than a gazette (Cabinet committee).	ADVANCED
Strategies, plans and policies	**Data localisation policies**	No localisation requirement is held; the 2021 general regulations and cross-border guidance govern transfers instead. The general regulations under the Data Protection Act have been in force since January 2022 and are the operative subsidiary instrument (regulations). The Data Protection Commissioner issued guidance notes for the public sector in 2025, applying the data-protection principles to public bodies and their processing (guidance). The regime regulates transfers abroad rather than requiring local storage; a sovereign cloud market has grown up beside it commercially rather than by mandate. No instrument requiring state or personal data to be held in country is held.	NO CHANGE
Strategies, plans and policies	**Data governance policy**	A draft national data governance policy of May 2026 schedules implementation from July, with the personal and non-personal boundary undefined. The pricing method is deferred, and the draft text is not held (draft policy, monetisation question). It was workshopped with the United States State Department on 10 July 2026 (workshop). It remains on the information technology principal secretary's forward list as still to be completed, which is a different position from the implementation start the draft itself schedules.	ADVANCED
Strategies, plans and policies	**Open data policy**	A state-run data marketplace is proposed at KSh 396m to build and operate, offering more than 1,000 datasets over five years. It would be overseen by a proposed national council, with pricing deferred to a later phase and no valuation method stated (marketplace, draft policy). The proposal is to sell state data rather than to open it, and it sits inside the same draft policy that leaves the personal and non-personal boundary undefined, which is the question a marketplace would have to answer first.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Data protection legislation**	The 2019 Act is in force, and a court awarded eleven petitioners KES 900,000 each for a sustained compromise of subscriber data. The regulator is now stretching the Act's cross-border-transfer duties to reach offshore artificial-intelligence processing (the Act, quality standards). The judgment of 13 May 2026 found a sustained and systematic compromise; the telco is not named in the account held and the judgment text is not on file (judgment). On the receiving side, 15 of 224 betting and gaming firms were fully registered as both controller and processor, with 185 unregistered and given 40 days or licence cancellation, and no follow-up is on file after the deadline expired (registration ultimatum). The gambling regulator has an open investigation into three licensees, with the criminal investigations directorate requesting its entire record back to 2018 — the first move against recipients of leaked subscriber data rather than the leakers (investigation).	ADVANCED
Legislation and regulation	**Cybersecurity legislation**	The Court of Appeal struck the false-publication sections and a shutdown power, the National Assembly has appealed to the Supreme Court, and cyber cafe logging rules take effect in September 2026. The 2018 statute is narrowed by litigation, with the false-publication offences and the non-judicial website-shutdown power struck and a conservatory order blocking a national internet shutdown; the base does not date the judgments, so whether the narrowing falls inside the twelve months is unestablished (litigation). Operators of public access centres must capture each customer's name and identity number, the terminal used and session times, and retain the records at least three years, on pain of fines of up to 0.2 per cent of annual turnover with a minimum of about US$3,860 (rules). The regulator clarified on 13 August 2026 that the conditions do not require operators to track browsing history; the conditions were gazetted on 7 August and take effect on 7 September 2026 (clarification). 2026-08-31 — the National Assembly asked the Supreme Court to restore sections 22 and 23, which carried fines of up to KSh 5m and up to ten years' imprisonment. The Court of Appeal held the wording too broad, Parliament argues it reaches only knowing publication presented as authentic. The statute's reach is contested, not settled. Accession to the Council of Europe cybercrime convention is planned, with public views invited by 11 September 2026 (accession).	MIXED the cybercrime statute was narrowed by litigation while new logging duties were imposed on public access centres
Legislation and regulation	**Legislation covering digital id**	The High Court recognised a registered phone number as a personal digital identifier and gave the Attorney-General six months to legislate. The judgment also bars recycling of dormant numbers without consent; the window was still open as at 12 August 2026 with nothing tabled and closes about September (judgment). Analysis of it argues the judgment should produce a coordinated number-recycling policy binding banks, savings societies and platforms that keep relying on numbers after reassignment (analysis). It is the only instrument in the base that defines a digital identifier in law, and it arrived through litigation rather than through Parliament.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Digital payments legislation**	Virtual asset regulations were gazetted in July 2026 with joint licensing across ten categories, and existing operators have until November to transition. The 2025 Act commenced on 4 November 2025, giving pre-existing operators a year to comply (the Act). The regulations set capital by licence class from KES 300m for stablecoin issuance to nil for advisers, with a seizure and freezing framework; the draft ownership cap was dropped between draft and gazette, and the Finance Bill replaces a proposed 3 per cent transfer tax with a 10 per cent excise duty on provider fees (regulations, compliance cost). Six named exchanges have said they intend to apply, and the regulators had not announced the application process as at 7 August 2026 (applicants). On mobile money the position is different in kind: the central bank's pricing principles operate through voluntary operator alignment, with no gazetted tariff rule or determination to cite, appeal or extend to a competitor, reversible at the operator's discretion (pricing principles).	ADVANCED
Legislation and regulation	**Legislation enabling data interoperability**	Interoperability duties are arriving sector by sector: the Digital Health Act in 2023, an agricultural information bill in 2026. The Digital Health Act of November 2023 is the clearest statutory basis for data exchange in a sector, carrying its own data exchange regulations (act). A Digital Agricultural Information Bill published in March 2026 would establish a centre for digital agricultural information with statutory functions (bill). A national data governance policy remains in validation (validation). What the base does not hold is any general statute establishing a duty to share data across government; each instrument enables one sector.	ADVANCED
Legislation and regulation	**AI legislation / regulations**	Two tracks run in parallel: a governance act under debate and an artificial intelligence bill before the Senate transplanting the European statute. The Senate bill is a self-declared transplant with a presidentially appointed commissioner and fines capped at KES 5m, on a separate legislative track from the ministry's draft policy; the bill text is not held (Senate bill, copyright and AI). A human-rights organisation argued on 24 August 2026 that the governance act carries no child-specific protections and no consultation mechanism, setting it against the country's membership of a children's protection coalition and against a global drive to age assurance that the analysis argues adds data trails and surveillance risk rather than closing the harms it names; the act's text, sponsor and date remain unestablished (critique). A four-country legal review published in 2026 reports that neither the constitution, the labour code nor the data-protection act names automated hiring decisions in Kenya or in the three states it compares. Whether the general data-protection statute's automated-decision provisions reach recruitment is left open.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**E-commerce legislation**	A copyright bill and an intellectual property bill are both out for comment, alongside an adopted inter-agency piracy enforcement framework. The copyright bill would create a copyright authority and a disputes tribunal, and carries the 2001 computer-generated-work authorship rule forward unchanged; its comment window's closing date is not on file (copyright bill). The intellectual property bill would merge the industrial property institute, the copyright board and the anti-counterfeit authority into one regulator with a tribunal, replace the 2001 and 2008 statutes, and set rules distinguishing artificial-intelligence-assisted from artificial-intelligence-generated inventions (property bill). An inter-agency digital piracy enforcement framework was adopted on a steering committee's hundred-day report, with the ministry coordinating the copyright board, the regulator, the media council and the tribunal; a national policy on digital piracy is announced as the next step with no draft, drafter or date (framework, losses).	ADVANCED
Legislation and regulation	**Statistics legislation**	The Statistics Act of 2006 is under replacement by a 2026 bill establishing a statistics authority with stated professional independence. The Act of 2006 has governed official statistics for two decades (act). A bill published in April 2026 would replace it, establishing a Kenya Statistics Authority whose guiding principles include professional independence (bill). Sector statistical obligations continued to be made under other statutes: regulations of November 2025 require statistical returns from petroleum licensees (regulations). The bill is published and not enacted.	ADVANCED
Legislation and regulation	**Access to information legislation**	An amendment bill would criminalise sharing classified information through personal messaging or email, on four classification tiers. No sponsor, stage or timetable is on file (bill). It is the only access-to-information instrument in the base, and it narrows rather than widens: the record holds no compliance figure, request statistic or enforcement action under the existing regime against which to read it.	REGRESSED
Data protection	**Data protection authority**	The regulator took a first separate appropriation of KSh 917.3m, on a caseload last stated at 7,128 complaints in March 2025. The appropriation is projected to KSh 1,328m by 2028/29, and through FY2025/26 the regulator had no separately visible line (appropriation). The caseload figure carries 215 determinations, and the regulator self-reports 97 per cent of complaints resolved, penalties on 10 entities, 103 compensations and 39 alternative-dispute resolutions (caseload); no later caseload, determination count or penalty total has been published (caseload, restatement). A five-year privacy plan launched at KES 12.6bn in July 2025 has produced no spend, milestone or progress statement since (plan), and a quality management system launched in July 2026 with donor support still awaits its external certification audit (quality system). No national count of registered controllers and processors exists at any date; only the betting-sector subset is held (registration). The regulator gave data controllers and processors holding expired registration certificates 14 days to renew or face enforcement action, in a notice of 28 August 2026 (notice).	MIXED the regulator gained its first separate appropriation while its published caseload has not moved in eighteen months

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data protection	**National data protection readiness**	Three draft guidance notes issued in July 2026 read the Act onto artificial intelligence, emerging technologies and privacy-enhancing technologies. Three guidance notes issued in July 2026 extend the Act into new ground. The artificial-intelligence note would require a lawful basis and adequacy assessment for offshore transfers, registration of deployers, an impact assessment before high-risk deployment, and lifecycle obligations binding procured systems as tightly as built ones (artificial intelligence note). The others cover the internet of things, cloud, blockchain, biometric recognition classified three ways, extended reality and connected vehicles (emerging technologies), and read privacy-enhancing technologies as a statutory obligation under privacy by design (privacy technologies). None states a commencement or says whether it binds or guides. Draft notes on biometrics and age assurance from May 2025 remain drafts (biometrics and age assurance). Penalties under the Act had passed KES 26 million by October 2024, on a practitioner's tally, not a commissioner's return. The High Court blocked the transport authority from compelling ride-hailing platforms to retain passenger and driver data for three years, finding unconstitutional continuous surveillance in breach of Article 31 and the 2019 Act, and gave the state twelve months to run a regulatory impact assessment and re-align the rules — the clearest instance here of the Act enforced against the state rather than controllers.	ADVANCED
Regional collaboration	**Regional policy collaboration**	Eight cooperation agreements with Tanzania were signed in May 2026, under a community treaty in force since 1999. The treaty establishing the East African Community, signed in November 1999 and since amended, is the standing framework for regional policy cooperation (treaty). Eight cooperation agreements with Tanzania were signed in May 2026 to deepen regional integration (agreements). A technical coordination mechanism on border governance was established with the regional development authority and the African Union border programme in September 2025 (mechanism). None of the three accounts names a digital or data instrument among what was agreed.	ADVANCED
Regional collaboration	**Regional legal harmonisation**	The country has neither signed nor ratified the continental cyber and data convention, though the Cabinet approved a process step towards accession in September 2025. The data protection commissioner led national stakeholder consultations closing 6 October 2025 and the formal accession process was still open at January 2026, having stalled twice on cabinet reshuffles after the Attorney-General cleared the Convention; twenty African Union member states had ratified as at March 2026 (policy brief). A high-level parliamentary dialogue on accession was called for 7 September 2026 (dialogue). The base holds no instrument of accession and no parliamentary vote, so what has moved is the process rather than the treaty position.	ADVANCED
Regional collaboration	**Shared regional infrastructure**	Four states opened a joint account to fund a feasibility study for a regional communications satellite, with deposits due 30 September 2026. The account takes partner-state contributions under a roadmap settled at an April 2026 meeting, and neither the study's cost nor each state's share was disclosed (joint account). On terrestrial infrastructure the cross-border link with Tanzania was launched in July 2026, integrating the neighbour's backbone with the Mombasa landings (link).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Cross-border data transfers**	A United States health framework signed in December 2025 was frozen by injunction, with a final ruling reported due at end-October 2026. It runs five years with US$1,631,470,000 of planned United States support across FY2026 to FY2030 including US$175,000,000 for health data systems (framework); the US$2.5bn headline is that figure plus the country's own pledged increase in domestic health spending, not a competing number (framework, litigation). The signed text makes audit information subject to Kenyan law and to the data-protection regulator's concurrence, and makes specimen testing and data sharing subject to Kenyan law rather than the template's five-day transfer; the subsidiary data sharing agreement has not been published. The suspension of the data-transfer component was reversed on appeal in May 2026 (appeal). A rights organisation reading the seven signed memoranda places this country outside both the three committing to hand over data without explicit privacy safeguards and the five requiring unilateral specimen sharing (assessment). In the other direction the country is one of the first three selected to implement shared cross-border rails for identity, payments and trusted data exchange, chosen on political commitment, regulatory alignment, technical capacity and system maturity; no national implementation plan, budget or timetable is published (continental pilot). The data protection commissioner issued a guidance note on cross-border transfers in April 2026.	ADVANCED
Standards	**National interoperability standards**	Two health interoperability implementation guides were published in August 2026, both served as continuous builds rather than authorised publications. A core guide stands at version 1.0.0 and a patient summary guide at 0.1.0, and both pages state they are not authorised publications; no gazettement, conformance requirement or implementer list is held (core guide, patient summary). Four foundational digital-health governance documents were launched at a health summit on 21 August 2026, together establishing the architecture for governing, connecting and using health data that three decades of collection had left without a shared framework; the documents are not individually named in the record and no commencement or compliance date is stated (foundational documents).	ADVANCED
Standards	**National quality standards**	Equipment vendor and public access centre licence conditions were gazetted in August 2026, and a distributor licence made mandatory before type approval. The vendor conditions carry a twelve-month minimum warranty, returns, after-sales support and record-keeping duties, and both categories were gazetted in the same notice after public consultation, effective 30 days from it and published for free download (gazette notice, consumer protection). A separate distributor licence is mandatory before equipment type approval and customs clearance, at KSh 1m or three years for non-compliance; fee, holding threshold and grandfathering are unestablished and the gazette notice is not held (distributor licence).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	**Adoption of international standards**	Cooperation with the European delegation was reaffirmed across artificial intelligence, cybersecurity, digital identity, interoperability and digital governance. The reaffirmation came at a principal-secretary-level meeting, and no agreement text, workplan, timetable or funding figure is published (meeting). It is the only standards-alignment engagement in the base, and the country's own standards work — cloud accreditation classes, health interoperability guides, equipment licence conditions — is domestic and not framed against any international instrument on the record.	NO CHANGE
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	A EUR 1.3m digital-rights project closed after 30 months, its 49-member coalition continuing unfunded. It reported 18,000 reached directly, 9.4m through campaigns and 133 defenders trained (close-out, grant). Civil society is the constituency that made the running on this ledger — the submissions on the artificial-intelligence policy, the warnings on metered billing, the petitions on automated decisioning and on borrower data — and the funded structure that carried much of it has closed. The same constituency is still publishing: a 2024 brief on fair and inclusive digital-tax reform (brief) was carried in September 2026 into a public campaign against the withholding tax on video-platform earnings (campaign) — unfunded advocacy continuing after the funded structure closed.	REGRESSED
Public debate and participation in policymaking	**Open discussion of government policy**	A joint framework for digital platform governance is in drafting that would replace safe-harbour immunity with earned protection. It was reviewed technically with an international body and the regulator in July 2026 and would add a joint regulatory oversight committee; no draft text, sponsor department or timetable is held (framework). The nineteenth Kenya Internet Governance Forum met under the Africa Tech Policy Summit with more than 300 participants and published its report on 27 August 2026, confirming Kenya as host of the global forum for the first time since 2011 (forum). 2026-09-04 - the programme's procurement went to court and lost. The High Court quashed the 2024 advisory opinion of the Attorney-General that had cleared payments connected to the Sh15bn Nightigale tender, referring the conflict-of-interest question to the anti-corruption commission, on a challenge by a consumer federation to two 2022-23 tender awards and the payment made to the communications regulator's former chairperson on the strength of that opinion. The judgment is not held and no response from the agencies is on file.	ADVANCED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The information technology vote fell to KSh 12,763.8m for FY2026/27 from KSh 16,188.8m, and the digital thematic to KSh 8.6bn from KSh 16.3bn two years ago. FY2025/26 was itself revised down to KSh 12,215.1m at the first supplementary (estimates, prior year). The thematic allocation fell to KSh 8.6bn for FY2026/27 from KSh 12.7bn, a second consecutive cut (thematic, prior thematic). Inside it, KSh 400m is appropriated for establishing digital hubs and KSh 528m for last-mile county connectivity maintenance, against an Auditor-General finding that 70 per cent of sampled county connectivity offices had no internet at all (hub and connectivity lines).	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
MoUs and other agreements	**Strategic relationships**	A European digital partnership committed KSh 15.3bn including EUR 37m to a submarine cable, and a justice-innovation memorandum was signed in August 2026. The partnership's instrument type, disbursement schedule and implementing channel are not established (partnership). The judiciary signed a memorandum with a Netherlands justice-innovation institute at the Supreme Court, with an intergovernmental development-law organisation and the Netherlands embassy participating, building on the country's access-to-justice blueprint; no value, term or deliverable is stated (memorandum).	ADVANCED
New investments	**Mobilisation of non-state finance**	Four development-finance transactions closed in mid-2026, from a US$25m tower facility to a US$24.2m first-loss guarantee. The tower facility sits inside a US$30m multi-currency package financing new macro towers and expanded mobile capacity (tower debt). A EUR270m senior facility across 21 obligors in eight jurisdictions includes a local-currency tranche of up to EUR20m equivalent funding fibre-infrastructure modernisation here, with an uncommitted EUR100m for future acquisitions (telecom facility). The guarantee committed US$24.2m across three lenders with US$11m of concessional backing, expected to catalyse about US$144.4m in local-currency lending to micro-enterprises (guarantee); it is the programme's first transaction anywhere in Africa, only one counterparty is a digital lender, and the catalysed figure is an expectation rather than a disbursement (guarantee, announcement). Separately, about KSh38.8 billion of planned investment in towers, smart cities, data centres, fibre, cloud and green digital technologies was stated by a principal secretary as a Chinese group's plan, with no agreement, timetable, site or financing instrument (stated plan).	ADVANCED
New investments	**Development-partner project financing**	The US$390m digital acceleration project had disbursed US$33.93m in its third year, and takes KSh 4.3bn of the FY2026/27 estimates. The operation closes in October 2028 and the portal reading is from June 2026 (project). Its FY2026/27 appropriation of KSh 4.3bn is half the entire digital thematic, up from KSh 3.7bn, and equips more than 10,000 junior secondary schools (appropriation, devolution partnership). So a single donor operation carries half the sector's budget line while having disbursed under a tenth of its own commitment three years in.	ADVANCED

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	The dominant operator took a 25-year unified licence in May 2026, consolidating spectrum and authorisations against a historic ten-year term. Licence-related costs were about US$126.7m in the year to March 2026, and the prior position was a temporary two-year unified permit (licence). A twenty-five-year term is the longest regulatory commitment in the base, and it was granted to the operator the base separately records as dominant in mobile money and designated systemically critical.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Internet usage**	Broadband subscriptions reached 52.85 million by March 2026 against 22.08 million in June 2020, and smartphone connections passed 50m for the first time. The regulator puts fixed internet subscriptions at 2.66 million, 4G population coverage at 73.4% and 5G at 3.04% (subscriptions). Smartphone connections stood at 48.7m in December 2025 and passed 50m in March 2026, with feature phones falling to 28.5m (devices). The statistics office's own chapter, a year behind, puts fixed and wireless internet subscriptions at 57.8m in 2024 (survey). The two series are not on the same basis and the base holds no reconciliation of them.	ADVANCED
Connectivity	**Mobile affordability**	A bill proposing consumption-based internet billing drew warnings from two providers that per-megabyte metering would force deep packet inspection into their networks. They told Parliament it would hand subscriber-level usage to the regulator, raise consumer prices, break fixed-speed broadband pricing and conflict with data minimisation, and a jurists' commission warned the central store could be used to monitor activists, journalists and political opponents; the reporting establishes no precedent for the regime in any national market (submissions, assessment, warning). The Bill's own gazetted text runs to four clauses, of which one brings internet service providers inside the definition of telecommunication operator and another preserves existing licences until expiry; the only verification duty in it is the user's verification of an invoice, and the subscriber-verification duty reported from the commentaries is not in the text (the Bill).	REGRESSED
Connectivity	**National fibre backbone**	A cross-border terrestrial link with Tanzania was launched in July 2026, and two coastal and regional routes were announced in September 2026. It was delivered by the information technology authority with the Tanzanian state operator at two border points; no capacity, cost or route length is stated (link). A 2,000-kilometre Paratus terrestrial route from Goma to Mombasa via Kigali, Kampala and Nairobi was announced live and carrying traffic on 9 September 2026, giving eastern DRC access to subsea capacity at the Kenyan coast (route). A 500km LuLu Coastal Cable System linking five landing points from Mombasa to Lamu was presented on 9 September 2026, pairing a seabed cable with a parallel protected terrestrial route and targeting ready-for-service in the second quarter of 2028 subject to contract execution (cable); no project value, financing structure or regulatory approval is stated. It is the only completed backbone build in the base with a date on it, against a national target of 100,000km measured at about 2,193km delivered.	ADVANCED
Connectivity	**International internet bandwidth**	Two new submarine systems are expected, taking the country from seven landings to nine. A 10,000km France to Middle East system routed through Africa is expected by a research firm to land in 2027, which is a forecast rather than an operator or landing-party statement (forecast). A 4,108km system with 24 fibre pairs from Salalah to Mombasa at US$23m was ready for service in 2026 on its announcement, with the incumbent named landing and operating partner (cable); nothing held records landing, testing or service readiness (cable).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Internet Exchange Points**	A foreign-operated exchange runs in Nairobi alongside the association-run exchange active there since February 2001. Connected networks include a major video platform and a satellite operator (exchange). The baseline is inferred from the stated twentyfold growth rather than separately published, so the direction is firmer than the level. The country's own exchange, managed by the technology service providers' association, has been active in Nairobi since February 2001 on Ethernet with two subnets. The third-party registry record carries no participant count, traffic figure or facility list, so its size is not established and the base cannot compare the two exchanges.	ADVANCED
Connectivity	**Satellite broadband licensing and availability**	Satellite broadband reached 24,999 subscribers and 0.9 per cent of fixed share, with new orders in seven counties diverted to a waitlist. It stood at 17,425 subscribers and 0.8 per cent share in the quarter to June 2025 on 359 net adds (earlier quarter); by March 2026 it was a top-ten fixed provider with median speed of 34.55 Mbps, down 26 per cent year on year, and sign-ups in seven counties were suspended to a deposit-backed waitlist (cap). A direct-to-handset pilot with the second mobile operator was declared complete and awaits regulator approval; it would be the country's first such service on compatible handsets with no extra module or charge (pilot). A spectrum-interference audit opened in March 2026 with its conclusion put at mid-year had produced no finding, clearance or refusal as at August (audit). Separately a hyperscaler's constellation has applied for a fifteen-year international gateway licence covering an earth station and network control centre, the wholesale route into the market rather than the household one; neither the regulator's decision nor a determination date is held (gateway application).	MIXED subscribers grew while new sign-ups were capped in seven counties and two approvals stalled
Data Storage	**Local data centre capacity (all providers)**	The largest operating campus targets 22.5MW, while a 44MW build slipped to July 2027 and a 100MW geothermal project stalled on commercial terms. The operating campus is the anchor site for a hyperscaler cloud region, two sovereign clouds and an artificial-intelligence lab, with 11 acres bought for a second Nairobi campus (expansion, anchor role). The 44MW build runs in two phases at US$150m with a dedicated 135 MVA substation in a special economic zone and on-site solar (deferral); anchor-tenant talks with four hyperscalers rest on the operator's word alone (deferral, groundbreaking). A foreign firm has separately proposed a US$1.5bn offshore facility designed to bypass the grid, with no capacity, timeline or site disclosed (proposal). 2026-09-07 - a build did open: 6.4MW added to the operator's Nairobi campus, alongside the retirement of the iColo brand in Kenya and Mozambique. The figure is critical IT load rather than delivered live load, and no occupancy or campus total is published. The regulator proposed a standalone Data Centre licence category for co-location operators, out of the Network Facilities Provider-Tier 2 category, and opened comment for 30 days. The notice itself is not held, so the closing date is unestablished. A Nigerian public cloud provider opened a Nairobi availability zone on 9 September 2026 (zone); no capacity figure is stated.	MIXED one campus is financed and building while the two largest announced projects have stalled or slipped

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Local data centre capacity (national providers)**	The state data centre runs 706 kW certified capacity against about 300 kW actual load, hosting 145 of 451 government institutions. It has 144 racks with 100 in use and is certified to the third tier in design and construction; expansion to 288 racks and 1 to 2 MW is being structured as a public-private partnership, and no allocation for it was disclosed at FY2026/27 budget day against KSh 3.1bn the year before (capacity, budget). Three sovereign clouds run on commercial premises instead: one billing in shillings with zero egress and in-country residency (sovereign cloud), a graphics-processor platform for artificial-intelligence workloads with no capacity or customer figure published since launch (artificial intelligence cloud), and a hyperscaler region confirmed at more than 20MW when fully built and up to 50 kW per rack, still listed as coming soon (cloud region, announcement)).	REGRESSED the state facility's expansion moved to a partnership route with no allocation disclosed
Data Storage	**Off-site backup capacity**	The national disaster recovery site is in dispute, a court award growing at 12 per cent a year with no settlement plan. The Auditor-General records that a court award of Kshs 4,099,636,848 made in December 2022 over Phase III of the national disaster recovery site stood at Kshs 4,091,619,712 outstanding on 30 June 2025 after part payment, interest accruing at 12 per cent a year, with no settlement roadmap provided to the audit (report). Commercial capacity grew in the same period: an operator cloud launched inside a Nairobi data centre in September 2025 (cloud), and a 44MW facility broke ground at Tatu City (groundbreaking). The state's own recovery site is the half in dispute.	REGRESSED
Energy	**Sufficient energy and water for data centres**	About 3GW of installed supply stands against a 10GW-by-2030 target, and a single 1GW facility would take a third of it. Every power arrangement the base holds is bilateral: no published regulator or utility data-centre tariff, and no gazetted large-load connection rule exists (power arrangements). The absence has a cost the base can name. The largest announced build stalled after its sponsors asked the state to guarantee capacity uptake, and a separate proposal is designed to bypass the grid entirely with its own gas generation. The absence is now dated against the regulator's own page rather than inferred: the energy regulator's tariff overview sets out its retail and bulk tariff mandate and names no data-centre or large-load category.	NO CHANGE
Energy	**Grid reliability**	A 400/220kV substation was commissioned in May 2026; the distributor warned in August that variable renewables must be moderated. A fully energised 400/220kV substation at Mariakani was commissioned in May 2026 as a strategic transmission node (commissioning). The distribution utility stated in August 2026 that the quantum of variable renewable generation being brought onto the system must be moderated to protect grid stability (statement). The two point in opposite directions on the same question. No curtailment rule, connection standard or published reliability figure sits behind either, and the data-centre load the grid is being asked to carry is tracked separately in this ledger and remains unmeasured.	MIXED transmission capacity commissioned while the distributor warns that renewable connections must be moderated

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	**Rural electrification**	Last-mile connectivity is being funded county by county — Kshs 1.8 billion for nine constituencies in one county. The Energy Act of 2019 is the governing statute for electricity supply, rural electrification included (act). The rural electrification authority named Kshs 1.8 billion set aside for nine constituencies in Bungoma county, with Kshs 138 million to one constituency for 86 projects connecting close to 2,700 people (allocation). The Senate energy committee received a status report on the off-grid solar access project in August 2026 and sought assurances on delivery (review). No national connection rate or delivery figure against target is held.	ADVANCED
Technical Capacity	**Robustness of government hardware and software**	A broadcast logger and monitoring room completed nationwide deployment, with joint regulator and classification-board training concluded in July 2026. No cost, coverage or channel-count figure is disclosed (training). It is the only completed government technical deployment in the base with a nationwide claim attached, and its purpose is monitoring broadcast content rather than delivering a service.	ADVANCED
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	An advanced institute of science and technology has its charter issued and its operationalisation under review, with no FY2026/27 allocation disclosed. KSh 2.3bn was appropriated in FY2025/26 for continued construction at the technopolis, and the review with a foreign export-import bank states no commitment amount (review, prior appropriation). It is the country's only named institution for building the technical capacity its own systems require, and it has a charter and no operating budget on the record.	STALLED
Cybersecurity	**National cybersecurity readiness**	A national cyber security agency was established as an autonomous state corporation, against 2.36 billion threat events in the quarter to June 2026. Its mandate covers critical-infrastructure audit and certification, an operations centre and incident coordination, where cyber duties had been split across four bodies; the inaugural non-executive chair was announced on 24 August 2026, and whether the delegated legislation committee approved before the ministry announced it is contested (chair, approval, contest). The regulator logged 2,355,938,192 threat events in April-June 2026, down 30.03% on the previous quarter, while web application attacks rose 43.68% to 17,406,495 with state systems and internet service providers the primary targets (regulator report). KSh 457.2m was appropriated for cyber space management plus KSh 382m for programme cybersecurity (appropriation), a EUR 3m European-funded project runs to 36 months (project), and a bilateral partnership is running with no funding, deliverable or date stated (partnership, review). 2026-09-07 - the standards under the new agency were put to their users: the technology authority tested the National Information Security Framework's audit, risk-management and certification mechanisms at a Nairobi workshop to establish whether they are practical for national implementation, ahead of certifying critical information infrastructure. The framework text and the certification criteria are not published.	MIXED a dedicated agency was established while web application attacks on state systems rose 43.68%

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	A health tender makes eight cross-government systems day-one mandatory interfaces, the clearest written interoperability baseline the base holds. Financial management, central bank interfaces, tax, health insurance, pensions, payroll, laboratory systems and identity management are all mandatory from day one, with primary hosting required in an approved government or health-sector environment (enterprise addendum, laboratory addendum). It is a tender document rather than a national standard, which is the finding: the country's firmest interoperability requirement is a procurement condition on one ministry's system. Separately the Treasury is rolling out a system to consolidate development-partner commitments, disbursements and funded programmes, with launch expected before the end of 2026 and no supplier, cost or statement of whether the consolidated data will be public (Treasury system). An Estonian supplier piloted an interoperability platform for the ICT ministry and the ICT Authority from April 2024 to June 2025, funded through a German development agency, the European Union and the Estonian development centre, against the ten-year Digital Master Plan. A supplier case study is the whole of the record: no government statement, evaluation, connected-agency list or adoption decision after the pilot closed is held.	ADVANCED
Data Exchange	**Use of digital id in other systems**	Biometric health identification was extended to dependants aged 7 to 17, each issued a national identifier linked to their health record. It launched at a teaching hospital in August 2025 with 29 biometric devices and is operational in all level four to six public facilities (launch, extension). Enrolling children into a biometric health register against the national identifier is the deepest integration of the identity system in the base, and no impact assessment, consent model or retention rule for the children's biometrics is on the record.	ADVANCED
Data Exchange	**Interoperability of health systems**	Data exchange regulations designate the shared health registries as critical information infrastructure and make access to them fee-bearing. The designated resources are the national health data dictionary, client registry, facility registry, health worker registry, the health enterprise architecture and the national logistics system (regulations). The Health Cabinet Secretary stated on 4 August 2026 that the charge is 2 per cent of each transaction capped at KSh 5,000, payable to the digital health agency (the charge); the schedule setting the fee is served as a heading with no table under it, so the rate cannot be read from the gazetted text (the charge). A per-transaction fee on access to the national health registries is the base's only instance of interoperability priced rather than mandated.	NO CHANGE
Data Exchange	**Interoperability of education systems**	The education management system's validation engine is operational, checking learner records against official examination data. A multi-agency team was named in May 2025 to consolidate every student register from foundation learning to university into a single database (team). County directors were instructed in August 2025 to verify education data for primary, junior and secondary schools (circular). A learner validation engine is now operational, automatically comparing learner records against official examination records (guidance). Validation against one other register is the whole of the interoperability the base records; the consolidated single database announced in 2025 is not reported as delivered.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of social protection systems**	The Social Protection Act 2025 gave the sector a statutory framework, with grievance and case management guidelines issued in October. The Act commenced in August 2025, establishing the National Board for Social Protection and a framework for non-contributory interventions (act). The second social economic inclusion project issued enhanced grievance and case management operations guidelines in October 2025 (guidelines), alongside an environmental and social management plan (plan). The project runs across three state departments, which is where the interoperability question actually sits. Nothing in the base records a data exchange between the social registry and the identity, civil registration or payment systems.	ADVANCED
Digital Identity and CRVS	**Robustness of system**	The digital identity rollout was ruled on by the High Court in August 2024; no audit or availability figure is held. A constitutional petition against the rollout of the digital identity system was ruled on by the High Court in August 2024 (ruling). The directorate responsible was renamed in 2025 and mandated to manage, maintain and operate the integrated population register (directorate). What the base does not hold on this indicator is any security audit, penetration test, availability figure, incident record or continuity plan for the identity system. The evidence available is litigation and a mandate, neither of which speaks to whether the system works under load.	NO CHANGE a ruling on the challenge with the system unchanged
Digital Identity and CRVS	**Registration of entire population**	More than 42m identity records were digitised in FY2025/26, with enrolment extended to dependants aged 7 to 17. KSh 15.13bn was committed in FY2024/25 for 7.5m cards and unique personal identifier rollout, and first-time fees were scrapped in March 2025 (commitment, fees scrapped); no dated series of cards issued, applicants enrolled or backlog is held (digitisation). The population management vote holds near its supplementary peak at KSh 10,993.0m for FY2026/27, against KSh 8,085.6m in the prior year's original estimates (vote, prior year). Government is procuring a system to cut card issuance to ten days and passports to a week, on a headline-only source with no contract, vendor or value held (procurement). Application charges for the identity card were scrapped and the KSh1,000 replacement fee waived for six months by gazette under the Registration of Persons (Amendment) Rules 2025, and the interior cabinet secretary said in June 2026 that a digital Maisha Card carried on a phone would follow. Against that, an analyst compilation puts 2.3 million adults without a card, 80.5 per cent of them aged 18 to 25 - the exclusion concentrating on the adults most often asked to prove identity to enter formal work or finance. No official count of the unregistered is published.	ADVANCED
Digital Identity and CRVS	**National maintenance of id and credentials systems**	600 live capture devices were procured and issuance reported at ten days, on a statute dating from 1947. The Registration of Persons Act, assented in December 1947 and commenced in 1949, remains the statute providing for registration and the issue of identity cards (act). 600 digital live capture devices were procured, with new identity cards reported issued in ten days (procurement), and administration officers trained on the revised registration system (training). An anti-corruption commission opened talks in August 2025 on integrating its systems with the population register (integration). The ten-day issuance figure is the ministry's own.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Authentication**	Talks opened with a foreign secure-identity provider on a platform letting citizens reach public and private services on one digital identity. Both sides agreed to deepen technical and policy collaboration towards an interoperable identity architecture under ministry-wide governance; no contract, procurement, value or timetable is stated (talks). A verifiable-credential wallet proof of concept was completed for the public service commission after an audit found over 2,000 fake certificates, with no single credential database and no production decision or funding on file (proof of concept).	ADVANCED
Digital Identity and CRVS	**Digital id from birth**	A statute mandates a civil-registration office in each of 290 sub-counties, with the identifier issued at birth feeding automatic identity at 18. The amendment Act was assented in February 2026, shifting vetting to birth registration (statute, reform direction). A digital birth-notification system links hospitals to the registry against the national identifier, live in one county and one hospital, with no national rollout date or facility count on file (notification).	ADVANCED
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	Civil registration and the identity system were presented as integrated at a regional registrars-general meeting in July 2026. Amendment rules under the Births and Deaths Registration Act were made in October 2024 (rules). Kenya presented its civil registration and national identity integration to the annual regional expert group meeting for registrars-general in July 2026, under a session on interoperability (presentation). Administration officers were trained on the revised registration system in June 2026 (training). The presentation is the only account of the integration held, and it states no volume, coverage rate or date from which the link has operated.	ADVANCED
Digital Identity and CRVS	**Use by other systems**	The High Court barred discontinuation of physical vehicle logbooks pending a petition on public participation and data-protection assessments. The electronic system stands but cannot replace the paper one while the order holds; the petition argues it was introduced without public participation and without adequate data-protection and cybersecurity impact assessments (order). A compulsory digital seller identifier for electronic commerce was proposed by the trade ministry and is still a proposal with nothing on record being built (proposal).	MIXED an electronic logbook was suspended by court order while a seller identifier remains a proposal
Digital Payments and Fintech	**Governance role of central bank**	The central bank is designing a fast payment system and national switch amid heavy lobbying, with no award. Three contenders are named and no design document, timetable or award is on file (contest). The bank's other principal act in the window was to set mobile-money pricing principles that operate through voluntary operator alignment, so on both the switch and the tariff the regulator's position rests on negotiation rather than on an instrument.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**G2P functionality**	The state micro-loan fund has disbursed Sh90 billion to 28 million registered borrowers, against state funding down from KSh 20bn to KSh 300m. Sh76 billion has been repaid with Sh13.7 billion outstanding, Sh7 billion saved by borrowers and 10 million repeat borrowers; the figures are the fund's chief executive and the president's own, and the claim that 4.5 million customers moved to better credit scores is not independently held (four-year account). Default runs at 15 per cent, about KSh 12.5bn, and the Auditor-General found 104,631 loans worth KSh 116.5m issued to borrowers with no identity details on file (default and audit). Repayment through a privately issued loyalty balance went live in July 2026, five points settling one shilling, recovering KSh 3m in the first week — a private loyalty currency converting into public-money recovery at a rate the issuer sets (loyalty repayment). The Treasury extended the payroll database, in place since 1998, to pensioners from the end of August 2025 so that salaries and pensions are disbursed through one system, which the cabinet secretary put as a measure against ghost workers, duplicates and erroneous payments. No pensioner count moved, duplicate removed or saving realised is published.	REGRESSED
Digital Payments and Fintech	**Revenue collection**	Electronic procurement carries more than 1,500 entities against a projected Sh86 billion of savings, and electronic invoicing became comprehensive in January 2026. The platform ties treasury disbursement to procurements actually made and carries budgeting and procurement plans together; the savings figure is a government projection from full uptake rather than a measured outturn, and no transaction volume is published (procurement, appropriation). Electronic invoicing moved to comprehensive income and expenses validation across the entire commercial sector from 1 January 2026 — the opposite approach to the phased sector-by-sector rollouts two neighbours adopted, so three regional revenue administrations run unharmonised regimes; the underlying instruments are not held here and no compliance or coverage figures are stated (invoicing).	ADVANCED
Digital Payments and Fintech	**B2B and B2G functionality**	An equity-trading service on the dominant wallet reportedly took 40 per cent of trades by number in its first days. It launched in February 2026 with a brokerage, opening exchange equities to wallet customers without a conventional brokerage account, and accounted for about 5 per cent of daily trading value (service). A wallet becoming the largest retail route into the securities exchange by transaction count is the clearest instance in the base of payments infrastructure carrying a function it was not built for.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	The dominant wallet's business tariffs were cut from 7 August 2026, with merchant payments fee-free to KES 500 and transfer bands down by up to 49.5 per cent. Merchant receipts are fee-free to KES 500 from KES 200, and the small-trader product to KES 200 from KES 100 with fees capped for 90 days; it was delivered as voluntary alignment with central bank pricing principles, with no legal notice or gazetted schedule to cite (tariffs). A single application replaced the separate wallet and account apps in April 2026, with the standalone apps to be decommissioned six months after launch (single app). The second operator launched a dedicated business wallet, free to fund and returning half of transaction fees as in-wallet cashback, on a 10.9 per cent mobile-money share (business wallet). Alongside the mobile-money rails, a bank-owned scheme runs account-to-account instant transfers around the clock across more than 80 financial institutions, reached through internet banking, bank applications and short codes, with a ceiling of KSh999,999 a transfer. The interoperability claim is the operator's own and no transaction volume, value or pricing schedule is published on the page held.	ADVANCED
Digital Payments and Fintech	**Population uptake**	94.09m registered mobile-money accounts and 564,330 active agents in May 2026, with the dominant service on 40.99m 30-day-active customers. Registered accounts rose from 87.46m and agents from 451,157 in August 2025, with agent cash movement of KSh 681.45bn in the month (central bank release). The dominant service reported KES 182.7bn revenue, KES 41.68tn transacted and 89.1 per cent market share in the year to March 2026, from 35.82m active customers and about 98 per cent share a year earlier (results); the central bank classified it systemically critical in January 2026 (results, designation). Formal financial inclusion is put at 83.7 per cent of adults against 26.7 per cent in 2006, on operator disclosure rather than an independent survey (inclusion), and a record KSh 1.4tn was disbursed through the overdraft product with the repayment ratio flat year on year (overdraft).	ADVANCED
Digital Payments and Fintech	**Cross-border functionality**	A national switch links more than 80 institutions to the pan-African settlement system, the first such national-switch pilot. A commercial bank group went live on 11 August 2026, adding its branch network to instant cross-border transfers in local currencies (go-live). Online card acceptance for one international network extended to nine African markets, settling in local currency, dollars or both, with nearly 900 participating merchants across the nine and no country-specific count given (card acceptance). Consumer access to the same corridors narrowed over the past year. An international payments provider imposed restrictions, a domestic dollar-banking service withdrew that product, a remittance operator paused its wallet and a streaming platform cut monetisation (platforms) — four separate commercial decisions rather than a regulatory change, with no user numbers, values or regulator response held.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Consumer protection**	Phone-number masking went live on person-to-person transfers in March 2026, with extension to merchant and bank transfers targeted for end-2026. Masking had previously been limited to the small-trader product (masking). It is a design change made by the operator rather than a regulatory requirement, and it addresses the same exposure — a phone number functioning as an identifier — that the High Court has since recognised in law.	ADVANCED
Registries	**Population register**	An integrated population registration service runs under the immigration and citizen services department, with nothing published about what it holds. The population registration service is run by the State Department for Immigration and Citizen Services (service). The held capture is the department's own service page, whose substantive content did not render to the fetch. No record count, participating-agency list, query volume or access rule is established. That matters more here than elsewhere, because the base separately holds an electoral commission engagement with the registration bureau on identity verification and a planned civil-register link to police facial recognition, both of which would query this register.	NO CHANGE
Registries	**Civil register**	Birth certificates became downloadable and printable online after application, where collection had required a visit. The change was announced by the Interior Cabinet Secretary in June 2026 (announcement). It completes online delivery for one document at the point where the statute now requires a civil-registration office in each of 290 sub-counties, so the register is being made both more local and less visited at once.	ADVANCED
Registries	**Address register**	A national addressing system has been under development by the communications regulator since 2023, with nothing on it since. The framework sits under the regulator's numbering and addressing mandate, made under the Kenya Information and Communications (Numbering) Regulations 2010, and provides for the naming and numbering of streets and the numbering of buildings and land parcels so that a parcel or dwelling can be identified and located on the ground (system). The regulator's project page is the whole of the held record. It carries no coverage, timetable or completion figure, and nothing after May 2023 is held, so whether any street or parcel has been numbered under it is unestablished.	NO CHANGE
Registries	**Business register**	A one-stop registration service carries the companies, collateral and hire-purchase registries with name reservation and registration merged into one online step. It was signed in August 2026 between the chamber of commerce and the council of governors, with a national digitisation strategy called for to track growth, output and employment (memorandum). No budget, milestone or data-governance arrangement for the pooled enterprise data is stated, which matters because the pooling would cross all 47 county jurisdictions. The service carries the companies registry, the official receiver in insolvency, the movable property security rights collateral registry and the hire purchase registry, with name reservation and business registration merged into one online application taking three preferred names. No registration volume, processing time or register size is published on it.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Social protection register**	The register gained a statutory framework in 2025, with general regulations out for comment and backed by a lending operation. The Social Protection Act commenced in August 2025, establishing the National Board for Social Protection (act). Draft general regulations went out for public participation in February 2026 (notice). A USD 750 million development policy operation approved in June 2026 names those regulations among the actions it supports (operation). The register itself is not described anywhere in the base: no enrolment figure, no coverage rate and no account of how households enter or leave it.	ADVANCED
Registries	**Electoral register**	KSh 74.8bn was appropriated for 2027 election technology, while two bills would remove the duty to livestream polling-station results. The Treasury allocated KSh 41.3bn and Parliament approved a further KSh 33.5bn; it is an appropriation and not a spend, with no procurement or equipment breakdown published (appropriation). The two bills would remove the commission's statutory duty to create a livestreaming mechanism; neither is enacted and the base does not establish how they relate procedurally (bills). A clause vesting ownership of the election technology's intellectual property and access to the election servers in the commission passed the Senate in December 2024 and has sat in committee with no report since February 2025; it is set against the 2017 refusal to open commission servers hosted abroad and a vendor's 2022 refusal of server access on intellectual-property grounds (server access). Optional iris capture was added to voter-registration kits under a roughly KSh 7bn upgrade, with nothing on file since October 2025 on deployment or enrolment (iris). Sector guidance issued in 2024 binds every organisation that touches voter data, from the commission down to civil-society registration groups, with no enforcement action under it on record as unsolicited political messaging spreads (guidance, messaging). The commission confirmed an engagement with the registration bureau on voter data and identity verification, with no data-sharing agreement published.	MIXED the appropriation nearly doubled while two bills would remove the livestreaming duty and one to vest server ownership has stalled
Registries	**Tax register**	The revenue authority's online tax service carries the verification checkers the tax identification number and the electronic invoicing regime run on. The service carries verification checkers for the personal identification number, tax compliance certificates, exemptions and excise licences, withholding certificates and agents, application status, and the control-unit serial and invoice numbers that the electronic invoicing regime turns on (service). The held capture is the platform's public landing page. No registered-taxpayer count, filing volume or availability figure is published on it, so the register's size is not established.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Land register**	The land platform has been unavailable since 1 September 2026, stalling searches, transfers, registrations and valuations, with no cause and no restoration timeline given. The platform went down on 1 September 2026 and the advocates' professional body demanded its restoration, saying conveyancing and land transactions had stalled with no adequate communication on the cause or on when services would resume; it asked for an explanation of the outage's nature and extent, a restoration timeline, contingency measures for time-sensitive transactions, an assurance that users incur no penalties or loss of priority, and an incident-notification protocol (outage). The body notes that the State migrated essential land services to the platform while in some instances restricting manual alternatives, so the outage has no fallback (outage). No county-rollout update has been on file since July 2025 and no national coverage count is held (rollout).	REGRESSED
Sectoral management information systems	**Health**	The health information system reaches 1,500 public facilities against a 2,000 target for 2026, while claims authorisation failures send members away to pay cash. Commitments run to 4,000 facilities by 2027 and 8,000 by 2028, with more than 50 per cent of clinical encounters to be loaded into the electronic record within one year of a facility's rollout and 90 per cent within two (framework). On the claims platform the Auditor-General found a KSh 104.9bn procurement that was unbudgeted and non-competitive with intellectual property ceded to the consortium (audit); the President denies a lump-sum contract and puts the figure at a ten-year total service fee (denial, reconciling term), which makes the denial one of a lump-sum procurement rather than of the arrangement or its value. No contract text is held. 2026-09-03 - the settlement side of the claims platform was quantified for the first time: 78% of claims settled across all 47 counties, KSh 159.3bn paid, with reconciliation and sign-off completed for legacy insurance-fund claims. It is the ministry and counties' own joint figure, with no denominator, ageing or rejection breakdown, and it is not on the same basis as the authorisation failures reported at facility counters.	MIXED the record system is deployed against rising targets while the claims platform fails at the counter
Sectoral management information systems	**Education**	Registration on the education management information system is now mandatory for capitation, after 98 per cent of 32,000 schools submitted enrolment data. The pilot was due in July 2025 and full go-live promised by September, with a unique identifier for every child; nothing is on file as at August 2026 (system). It is the one national register that would connect the identity system to schooling, and the donor project that takes half the sector's budget is meanwhile equipping junior secondary schools. The education ministry directed in June 2026 that every school, government and private, must register on the system or lose capitation for the third term. The verification exercise behind it, run to remove ghost learners and schools so that capitation is disbursed accurately, had enrolment data from 98 per cent of the country's 32,000 primary and secondary schools by September 2025. Funding is conditioned on being in the register, so a school missing from it loses money rather than being chased. No appeal route, correction procedure or count of the schools left out is published.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Social protection**	The child protection information system recorded cases rising from 20,235 in 2016/17 to 54,583 in 2021/22, its most recent figure four years old. It is credited with cutting duplication and improving real-time case coordination across agencies, on an academic review rather than an operator's account (review). The system is recorded as American-funded, which places it inside the aid wind-down this ledger records elsewhere, and no figure since 2021/22 exists to show whether it survived it.	NO CHANGE
Sectoral management information systems	**Justice**	A civil-registry link to a six-city facial-recognition network is out to tender at up to KSh 25bn, with no award, contract or legal basis on file. The tender would link the civil-registry database to a closed-circuit television and facial-recognition network across six cities (tender). A separate KSh 10bn tender covers cameras, police monitoring and vehicle-detection systems at 60 junctions in the capital under a 30-month design-build contract on a foreign development loan, with the bid deadline pushed back two weeks; no data-protection authorisation, retention rule or oversight arrangement for the camera and detection systems is reported (traffic tender). The police information management system was presented in design in July 2025, consolidating fragmented systems with role-based access and a digital chain of custody, and has no build, procurement or go-live status on file thirteen months later (design). A digital Occurrence Book is entering service to modernise crime reporting, with the interior cabinet secretary stating that future police recruitment will prioritise artificial-intelligence skills. Ahead of the 2027 election the Inspector General told a parliamentary committee the service is investing in body cameras, digital occurrence books and closed-circuit television alongside training and infrastructure. No procurement, supplier or retention, access and disclosure rule for the footage is published.	ADVANCED
Sectoral management information systems	**Tax**	The tax invoicing platform was down for three days (outage) in the month it was made a precondition of government supplier payment. The revenue authority and the Treasury completed the integration of electronic tax invoicing with the government financial management system: suppliers to government entities must generate a valid electronic tax invoice before submitting for payment, invoice details must correspond precisely with the invoicing system's record, and government transactions are subject to automated validation (integration). No commencement date, transitional arrangement or exception for suppliers outside the invoicing regime is stated. The invoicing platform was itself down for three days in the same month (outage), and the filing portal degraded on deadline day (column). Making one platform a precondition of payment on another raises the cost of an outage on either; no availability target or service level is published for either system.	MIXED the invoicing and filing platforms both failed while the invoicing system was wired into government payments
Sectoral management information systems	**Customs**	An advanced cargo declaration system entered service in August 2026, taking more than 1,000 applications in its first five days. It moves document lodgement and verification to before loading at the port of export (system). A smart gate pilot opened at one gate of the main port on 3 August 2026, integrating the customs management system with the systems of other government agencies; no cost, vendor, timetable or evaluation criterion is published.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Land**	The stamp duty module went countrywide in February 2026, and the land platform has been unavailable since 1 September 2026. Regulations of July 2020 are the legal basis for electronic land transactions (regulations). The National Stamp Duty Module reached every land registry in the country in February 2026, the state department stating faster and more transparent transactions (rollout). Further registration services were brought onto the land platform in Mombasa in July 2026 (expansion). Neither account gives a transaction volume, a registry count or a measure against the claimed improvement in speed.	MIXED the stamp duty module went countrywide while the land platform went down with no fallback
Other GovTech and e-Gov	**e-government services**	Draft regulations would vest ownership of the platform in the Treasury (regulations), and the Auditor-General found Sh36.5bn of 2023/24 collections unsupported by bank statements. The eCitizen payment platform failed for much of 26 August, leaving transport authority services unusable, transactions abandoned or paid for twice and invoices missing, with the authority confirming the fault and dispatching a platform team (outage). The tax invoicing platform reached through eCitizen was then down for three days to 31 August, taxpayers able to generate invoices but not download them, stalling payments that revenue rules make conditional on such an invoice (outage). Against that, the Treasury presented draft regulations on 27 August that would replace the convenience fee with a statutory access fee and vest ownership, hosting, administration, maintenance and security in the Treasury (regulations), and members of parliament demanded clarity on who owns the platform (demand). The base holds no uptime figure for the platform, so its reliability is measured only by the outages that get reported.	MIXED the platform's legal footing advanced while its availability regressed and Sh36.5bn of its reported collections went unsupported

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	All 47 counties were scored on digital services, from 98.3 to 28.8, and one county completed 102.4km of fibre across its sub-counties. The assessment covers citizen experience, revenue and back-office systems, data use and employment creation, with seven counties at the top grade and six at the bottom; it is a desk review rather than a survey of users, and the report's own band percentages do not reconcile with its counts (assessment). One county connected all five sub-counties with 102.4km of fibre, nine public hotspots live and 80 further sites surveyed (county fibre).	ADVANCED
Digitalisation of sub-national government	**Digitalisation of local government records**	Binding standards for county revenue automation were gazetted in July 2026, covering the system lifecycle from procurement through audit. They require data ownership and portability safeguards to reduce vendor lock-in, and were issued by the revenue allocation commission; no compliance date, county baseline or enforcement mechanism is stated (standards). They are the first instrument in the base that addresses the vendor-dependency problem the Auditor-General flags at the national platform, and they address it at the county tier rather than the national one.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural health clinics**	A county telemedicine network reached 170 public health facilities with 302 more due before end-2026, from a 35-facility pilot. Fifteen doctors at a central hub handle 450 to 600 patients a day (network). It is the only rural clinical deployment in the base with a facility count and a throughput figure attached, and it is a county's rather than the health ministry's.	ADVANCED
Rural digital data capture	**Digitalisation of rural primary schools**	Three school-connectivity commitments totalling about EUR 19.6m and GBP 4.77m are unchanged, with no outturn or schools-connected update published. One commits EUR 9.8m (last-mile schools) and another EUR 9.8m to connect 1,000 schools reaching 369,400 children across all 47 counties with per-school cost cut about 60 per cent, again with no disbursement or update (school connectivity). A bilateral programme committed GBP 4.77m to March 2027 with no outturn published (access programme). The one delivered figure is a satellite operator's: 30 schools across 30 districts reaching more than 32,000 students and about 1,000 teachers at the start of the 2026 academic year, financial terms undisclosed (satellite schools).	NO CHANGE
Rural digital data capture	**Digitalisation of rural registry offices**	Registration is being pushed to the localities: an identity registration drive from October 2025 and countrywide land-registry rollout in February 2026. Amendment rules under the Births and Deaths Registration Act were made in October 2024 (rules). A decentralised identity registration drive was under way by October 2025, the minister touring the registration bureau and urging citizens to acquire national identity cards (tour). The stamp duty module reached every land registry in the country in February 2026 (module). No count of registry offices connected, equipped or digitised is held, so the reach of either programme cannot be read off the base.	ADVANCED
Rural digital data capture	**Digitalisation of rural police stations**	Tablets for every chief were announced in December 2025 for delivery within six months, alongside occurrence-book digitisation. A police digitisation committee presented to the Inspector General in January 2025 (presentation). Digital occurrence book and case management were put to station commanders at a consultative conference in September 2025 (conference). The President announced in December 2025 that all chiefs would receive tablets within six months to report incidents digitally (announcement). All three are announcements or presentations: no station count, delivery figure or rollout schedule is published, and the six-month window has passed without a completion statement.	ADVANCED

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	A national computing platform is to be established at the technopolis with graphics-processor infrastructure for researchers, universities and startups. Progress was agreed with a development agency in July 2026, and no processor count, cost, capacity or commissioning date is published (platform). No deployed government system, model inventory or procurement is held anywhere in the base, so the state's applied position is a planned facility and a Cabinet committee. The interior minister announced on 28 August 2026 that an artificial-intelligence and data-analytics system would decide police deployment nationwide by the end of the year, alongside a digital occurrence book linked to police systems (announcement). No procurement, supplier or safeguard is named.	ADVANCED
AI	**Use of AI in sectoral management information systems**	Nearly 45 per cent of commercial banks use the technology in credit risk assessment, on a central bank figure with no published document behind it. The account's own non-performing loan series is internally inconsistent, so only its March 2025 figures are relied on (banking use). One bank adopted its own policy during 2025 and is piloting a proprietary agent for deepfake detection at account opening; all figures are the bank's own and none is independently verified (bank policy). Both readings are from the financial sector, and neither the health, education nor revenue systems on this ledger records a deployment of its own.	ADVANCED
AI	**Development of national / regional AI systems**	The country is one of five governments pooling datasets for an open-source African-language template, and hosts a sovereign artificial-intelligence cloud. No national funding commitment, language list or delivery date is stated for the pooling (launch, declaration). A platform marketed as the country's first sovereign-hosted cloud for such workloads runs them without sending data offshore, with no customer count, capacity or revenue figure published (sovereign cloud, partnership context). A proposed centre of African excellence for applied artificial intelligence with a bilateral partner is still at preliminary-consultation stage with no formalised agreement and nothing on file since February 2026 (centre). A digital media city and an artificial-intelligence data centre at the technopolis had a foreign export-import bank complete a due-diligence mission in August 2026, with no commitment amount, financing instrument or construction date stated (due diligence, earlier agreement).	ADVANCED
AI	**Control of AI abuse**	A constitutional petition challenges automated payments decisioning for offering no guaranteed route to a human agent and no disclosure of decision logic. It also alleges algorithmic discrimination in credit scoring; respondents had not filed responses at publication and nothing is on file since (petition). Pre-parliamentary proposals would amend the sexual offences statute to cover sextortion, stalking, voyeurism and artificial-intelligence-generated or altered intimate imagery, with an institutional duty to report; no bill text, sponsor or timetable is on the record (proposals).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
ICT Industry	**National capacity in DT-related production**	1,108 content-moderation and annotation jobs were cut after a platform ended its contract, while the state platform's operator pitched its registries abroad. No source after April 2026 confirms completion of the redundancies, and no figure for the country's total data-labour workforce is held (redundancies). The platform's operator holds registry deployments in two neighbouring countries and in August 2026 pitched a third on digital company registries, beneficial-ownership traceability and real-time revenue tracking, citing 40-plus digitised services; the claims are the vendor's own, made in a sales meeting, and its domestic position is separately recorded as under challenge (export pitch). Two domestic firms are named: one with products for detecting falsified content and for consent management, with no customer, deployment or revenue figure published (media verification), and one building humanoid robots rendering speech into sign language in real time with recycled-plastic casing cutting costs by over 60 per cent and delivery working over second-generation networks, every figure the founder's own (sign-language robots). A bilateral commitment to technology transfer and digital solutions for the main port carries no instrument, value or timetable (port digitalisation).	MIXED the platform operator is exporting while the data-labour sector lost more than a thousand jobs
Innovation ecosystem	**Technology hubs**	A technopolis statute gives innovation cities a standalone legal framework, and three infrastructure agreements were signed at the flagship site in August 2026. The statute is in force with a development authority and a disputes tribunal, and its regulations are named as still to be finalised with no draft on file (statute, regulations). A hyperscaler signed a collaboration agreement providing technical leadership for a hybrid-cloud outpost and a startup and innovation centre of excellence, with cloud-adoption support for public bodies, certification courses for staff and young people, and credits for startups; it was signed five days after the talks were reported as exploratory, with no capacity, site, investment figure or delivery date stated and no procurement disclosed (agreement, talks). A Chinese network group signed a framework memorandum covering planning, investment, financing, design, development and maintenance of digital infrastructure at the same site, with the financing models themselves stated as still to be explored (memorandum). An African research and development lab is to be hosted at the largest commercial campus on sovereign compute, on an announcement with no opening date, funding, capacity or membership figure (lab).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Innovation ecosystem	**Tech startup ecosystem**	Startup funding fell to US$126m in the first half of 2026, the weakest half since early 2021, from US$1.04bn raised in 2025. Equity was US$46m of the half-year total and the country ranked third in Africa, against first place and 72 per cent year-on-year growth in 2025 (half-year); trackers disagree on both the 2025 total and the 2026 rank (half-year, full year). About US$500m was raised across a named set of companies that have since shut down, on a publication's retrospective across five firms with no full sample, period or methodology stated (failures). The country placed 96th of 133 economies in the Global Innovation Index 2024, 6th of the 27 ranked in Sub-Saharan Africa. A continental census of AI startups published in May 2026 counts 34 firms located in Kenya, out of 224 across 22 countries and a Pan-African category founded between 2002 and 2025. The deposit's 2022 and 2025 editions are not held, so no direction can be read from it. A platform matching freelancers to work through local cybercafes reports more than 1,650 registered users, over 500 of them freelancers, and 200 partner cybercafes, with escrow settlement over mobile money and expansion into five other markets; the counts are the company's own.	REGRESSED

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	A successor programme opened in July 2026 training 150 justice-sector officials on digital evidence, with no value disclosed. It follows a closed digital-rights project (programme). It is the only civil-service digital training in the base, it covers one sector, and it is donor-funded rather than carried on any government vote.	ADVANCED
Literacy	**Digital literacy (general population)**	97.5 per cent of online adults report using an artificial-intelligence tool monthly, on a base whose school device programme has published nothing since 2022. The ranking is first globally ahead of two other countries, on a commercial compiler's survey of online adults rather than a population measure, and self-reported (survey). The national literacy programme's last published milestones are 1,170,846 devices installed in 22,891 public primary schools and 216 schools connected, carried in a 2022 government-steered review that found device use limited and learning outcomes unimproved (review); no device, school or outcome figure has been published since (review). The regulator reports supporting 23 educational institutions recently with no quantity, value or connectivity provision disclosed (donations, further donations), and an operator reports reaching over one million young people across six counties, on a self-report where reached is undefined (youth programme). Private money reached where the state programme has not: three laboratories opened at Kholera Primary, Moody Awori Primary and Ralak Girls High in the weekend to 25 August 2026 under a philanthropic global grant, taking that programme to at least 13 schools on a stated USD 91,650, against a state literacy programme running since 2016 that has not reached every school equally (laboratories).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**DT-related training in secondary education**	Three vocational-education commitments totalling EUR 32.9m are unchanged, with no outturn or disbursement published against any of them. One commits EUR 9.9m from 2023 to 2028 (vocational digitalisation), one EUR 18m as a concessional loan from 2025 to 2030 with no disbursement published (vocational loan), and one EUR 5m from 2020 whose scheduled end year has been reached with no closure statement held (earlier loan). Against them, an education-technology fellowship selected its fourth cohort of 12 companies in July 2026, running 18 months for early-stage firms with up to US$100,000 each in equity-free funding and scoped to learners with disabilities, refugee and rural communities, and girls and young women (fellowship); 36 companies have taken part since 2023 (fellowship). 2026-09-04 - a teacher-training centre ran an international workshop for 100 teachers on digital literacy for competency-based science teaching, its acting chief executive warning against dependence on artificial intelligence in classrooms. A two-day workshop rather than a curriculum change: no guidance document, cascade plan or reach target is published.	NO CHANGE
Training and skills	**DT-related university facilities and qualifications**	Three university facilities opened inside the window, most recently an ICT research hub on a KES 64.6 million grant. A university ICT research and innovation hub was established with five laboratories covering digital forensics, software development, mobile computing, e-learning and a data centre, on a KES 64.6 million research fund grant (hub). A centre for artificial intelligence, modelling and digital trust was launched by a university school of science with a private cybersecurity partner in January 2026 (centre). A third cohort of tiered training launched across six universities in August 2026 (cohort). No qualification framework entry, enrolment figure or graduate count is held for any of them.	ADVANCED
Training and skills	**Graduates entering DT ecosystem**	The enablement programme reports more than 140,000 young people trained and 41,000 linked to opportunity, on hub counts that do not reconcile. The commissioning series reaches 117 hubs and the installed-base series about 350, on mutually inconsistent counts with no published register (117th hub, installed base). The throughput figures are the implementer's own and not independently evaluated (throughput). For the other national programme the only first-hand document held is a 2025 survey-based case study, and the state publishes no enrolment or outcome figure at any date (case study). A bill would establish a national database of qualifications maintained and published by the qualifications authority, extending to foreign qualifications, with awarding institutions required to notify within 90 days of issuing one; no enactment date, hosting arrangement or access rule is settled (bill, provisions).	ADVANCED
Research institutions	**Think tanks and academic departments contributing to DT policy**	Civil-society bodies made two formal submissions on artificial-intelligence instruments inside a year, to the Senate and to the ICT department. A network annual report for 2024 sets out a standing programme of policy work and community convening (report). A memorandum on the Artificial Intelligence Bill was submitted to the Clerk of the Senate in May 2026, welcoming the bill and putting comments to it (memorandum). A separate submission on the draft artificial intelligence and emerging technologies policy went to the ICT state department's committee in August 2026 (submission). What the base does not hold is any record of a submission changing a published draft.	ADVANCED

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	Escalated consumer complaints to the regulator rose to 670 in the quarter to June 2026 from 362 two quarters earlier. They were 563 in the prior quarter, with 548 or 82 per cent resolved (returns); data services drew 195 complaints against 44 for voice, data billing and charges was the largest single category at 75, and the regulator separately logged 19 data-breach complaints (returns). These are escalated complaints only and no comparable series before October 2025 is held, so the rise measures escalation rather than dissatisfaction. On the other side of the counter, a diaspora portal went live on the national platform for registration, missing-person and death reporting, crisis mapping and a 24-hour response centre, with no user or transaction figure held (diaspora portal).	REGRESSED
Access to services	**Citizen participation in policy**	A riders' association petition on borrower data and vehicle tracking was committed to the Public Petitions Committee in August 2026. It alleges that an asset financier breaches data-protection law in its collection, processing, storage and sharing of borrowers' personal data and in the tracking devices fitted to financed motorcycles (petition). No finding, regulator action or company response is held. It is the base's clearest instance of a constituency reaching a digital-rights question through Parliament rather than through the regulator.	ADVANCED
Access to services	**Gender equity**	Internet use runs at 37.8 per cent of men against 32.2 per cent of women, with rural mobile ownership at 48.6 per cent against 64.6 urban. Urban internet penetration is 56.5 per cent against 25 per cent rural, and more than 42 per cent of women micro-entrepreneurs who own a device use it mainly for personal communication rather than business (figures); the figures are attributed to the statistics bureau and the regulator but cited in a training write-up rather than taken from a published release (figures). A women's digital accelerator opened trainer-of-trainers cohorts in the capital on 19 August 2026 for a first 100 women instructors and in a second county on 24 to 26 August, against a goal of 15,000 women trained across three counties by 2028 (second county); participants are certified after a post-training evaluation, and the organisers state that funding partners scaled back support after aid cuts, forcing a reduction in the project's original scope (second county, first cohort).	MIXED a training accelerator opened its second county while the measured gaps in use and ownership persist
Access to services	**Inclusion of persons with disabilities**	The 2025 disability statute is in force setting no artificial-intelligence accessibility standards and no enforcement mechanism. The gap is named in an academic analysis rather than by the regulator (analysis). It matters against what this ledger records elsewhere: automated decisioning is running on the country's largest payments rail, three draft guidance notes read the data statute onto the technology, and none of them carries an accessibility requirement.	NO CHANGE
Access to services	**Inclusion of refugees and IDPs**	A GBP 2.3m programme across eight arid-lands counties including two refugee-hosting counties passed its March 2026 completion date with no report held. Activities were to start in late 2025 (programme). Against it, American-funded inclusion and connectivity programming including work in remote counties slowed or stopped after the 2025 wind-down, with no replacement funder named (withdrawal).	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital divides	**Bridging of digital divides**	588 digital hub sites are committed against a target of one per ward, and smartphone connections passed 50m for the first time. Forty-six centres of excellence and forty standard hubs are under construction, with 10,000 locally assembled desktops procured for the first 100 pilot hubs and another 10,000 in final stages (hubs) — committed sites rather than completed hubs, unreconciled against the enablement programme's installed-base series. A separate plan for 100 county centres of excellence broke ground at Kikuyu on 21 August 2026, with no budget, timetable or site list, and nothing on how the two programmes relate (county hubs). The universal service fund connected 20 sub-locations in FY2024/25 and 155 cumulatively, reaching about 508,012 people, and started construction at 32 of 47 centres (fund); no FY2025/26 account, levy rate or balance is held. A fund skilling project targets 120,000 people in 19 counties over three years, with nothing published on budget, partner, counties or start date (skilling). Smartphone connections reached 50.2m in March 2026 with feature phones down to 28.5m (devices), while American-funded inclusion programming slowed or stopped after the 2025 wind-down (withdrawal) — a women's digital-rights accelerator lost its grant and reached three of ten counties, its partners carrying it (accelerator). Internet use stands at 35.0 per cent, men 37.8 to women 32.2 on the 2023/24 housing survey.	MIXED hub programmes expanded while the fund's own delivery account stopped and donor programming withdrew

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	A second national statistics strategy was published in July 2025, followed by a gender sector plan under it. The second strategy for the development of statistics was published in July 2025, the government stating the role of data and statistics in legislation, policymaking, resource allocation and service delivery (strategy). A gender sector statistics plan for 2024 to 2028 was published in March 2026 (plan). A bill published in April 2026 would replace the governing statute with one establishing a statistics authority (bill). The strategy is published and no implementation or mid-term report under it is held.	ADVANCED
National statistics	**Censuses and surveys**	A mini demographic and health survey went into the field in October 2025 and the annual economic survey published in April 2026. The Statistics Act of 2006 is the governing statute for official statistical collection (act). Fieldwork for the 2025/2026 mini demographic and health survey was launched in October 2025 by the statistics bureau with the health ministry and partners (launch). The 2026 economic survey was published in April 2026, recording real gross domestic product growth of 4.6 per cent in 2025 against 4.7 per cent in 2024 (survey). Neither publication reports a response rate or a coverage figure in the captures held. The communications regulator and the University of Nairobi began reviewing preliminary findings from a joint national survey on child online protection and safety on 9 September 2026, agreeing the report structure and thematic areas ahead of validation (survey); no sample size or fieldwork period is stated.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**Statistics from administrative data**	The statistics office's ICT chapter runs to 2024 and a year behind the regulator's quarterly returns, with no 2026 edition held. It puts mobile subscriptions at 71.4m and 136.1 per 100 inhabitants in 2024, fixed and wireless internet subscriptions at 57.8m and mobile-money subscriptions at 42.3m (survey). A collaboration to explore anonymised aggregated mobile data for population, mobility and socio-economic insight was announced in June 2026, with no scope, governance terms or start date (partnership).	NO CHANGE
Open data	**Use of open data**	The ministry asked that electronic legal deposit and a national digital knowledge repository be written into the library service bill. The requests were made at a Senate committee hearing on 4 August 2026 and also cover digital preservation of public records, artificial-intelligence-supported cataloguing and interoperability with government digital infrastructure; the bill is held only as an unreadable image, so its own provisions cannot be stated (hearing). Against that, the state's other open-data instrument is a proposal to sell rather than publish: a marketplace of more than 1,000 datasets at KSh 396m to build and operate (marketplace).	ADVANCED
Use of satellite data	**Agricultural use of satellite data**	A crop measurement initiative launched in February 2026, joining an observatory platform reported to serve over 700,000 farmers. The crop measurement and evaluation initiative was launched in February 2026 to apply space technology and artificial intelligence to agriculture, hosted with the agricultural research organisation (launch). The agricultural observatory platform was extended with a national data hub integrating climate, soil, market and crop information, reported as serving over 700,000 farmers (hub). A partnership with a French remote-sensing firm was signed in May 2026 to predict crop yields (partnership). The farmer figure is the programme's own, and no amount or deliverable is stated for the partnership.	ADVANCED
Use of satellite data	**Meteorological use of satellite data**	A national framework for climate services was published in March 2025 and a modernisation agreement signed in May 2026. The environment ministry and the meteorological department published a national framework for climate services in March 2025 as the guide to improving national climate services (framework). A space-based early warning project under the Africa-EU space partnership programme was published in October 2025 (project). A non-binding agreement was signed in May 2026 with a French meteorological firm to modernise weather and climate monitoring, flood risk management and services to users (agreement). The agreement states no amount and no timetable, and the base holds no account of satellite reception capacity.	ADVANCED

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	An academy proposal is unsigned and a cloud collaboration is unchanged, with no expansion, spend figure or workload detail published. The academy would be the region's first and was disclosed at a summit sideline, with no agreement, funding, cohort size or date (proposal). The cloud collaboration covers fraud detection, customer-service automation and engineer upskilling and has not moved since June 2025 (collaboration). The substantive American engagement on this ledger is elsewhere: a health cooperation framework under litigation, and an aid withdrawal that stopped inclusion programming.	NO CHANGE
China activities	**Chinese MoUs, engagements and commitments**	Two delegations were received in eight days on broadband, smart cities and technology investment, with nothing signed, valued or scheduled. The second was a provincial service centre's delegation on investment, connectivity and innovation partnerships, a week after a network group's visit; two courtesy calls in eight days is a pattern of approach and not an investment (talks, first visit). A vendor states student training under way and an East Africa research and development centre planned, framed by the ministry around all-optical networks and sixth-generation readiness; the account is a vendor event and a ministry statement at it, with no contract, value or date stated (vendor). An electronic-commerce cooperation memorandum is cited as the basis for dispatching eighteen officers to a Chinese province for a trade matching activity, its signature date, terms and text not held (memorandum).	ADVANCED
EU activities	**EU MoUs, engagements and commitments**	A European data-adequacy decision is described as in prospect, on a third party's passing reference with no application or timetable stated. No European Commission or government statement is on file (reference). Cooperation was separately reaffirmed at principal-secretary level across artificial intelligence, cybersecurity, digital identity, interoperability and digital governance, with no agreement text, workplan, timetable or funding figure published (cooperation).	ADVANCED
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	Seven memoranda were signed with the United Arab Emirates in May 2025, and consultations with Qatar were institutionalised in 2026. Seven memoranda of understanding were signed at head-of-state level with the United Arab Emirates in May 2025 (signing). Consultations in Riyadh in July 2026 addressed frameworks to support diaspora welfare, rights and economic engagement (consultations). Bilateral political consultations with Qatar were institutionalised as annual in August 2026, the inaugural round led at principal secretary level (consultations). None of the three accounts names a digital instrument, a committed amount or a project among what was agreed.	ADVANCED
India activities	**India MoUs, engagements and commitments**	A trilateral sovereign artificial-intelligence partnership targets 100 deployment programmes by 2030 on multilingual low-bandwidth voice systems. It was launched at a summit in February 2026 as a three-country arrangement, and no programme delivery, budget, participating institution or first deployment has been reported anywhere since (partnership).	NO CHANGE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
CA spectrum-interference audit, direct-to-cell	a published CA determination or gazette notice would settle it; probed 2026-08-05, no CA determination or gazette notice on interference published; trade reporting only	2026-08-05
Data-centre power tariff or grid-connection framework	a published EPRA or Kenya Power data-centre tariff, or a gazetted large-load connection rule, would settle it; probed 2026-08-05, EPRA tariffs and open-access regulations carry no data-centre category and no large-load connection rule	2026-08-05
National earth-observation data programme	a Kenya Space Agency strategy or national earth-observation data policy would settle it; every satellite-data source the place holds is continental or vendor-side; probed 2026-08-05, KSA Strategic Plan 2023-2027 located; the EO Data Sharing Framework 2026 itself is a landing page only	2026-08-05
Registered data controllers and processors	the ODPC register or its annual report would settle it; probed 2026-08-05, the statutory register is public and live; a total needs pagination traversal, not a single fetch	2026-08-05
Installed AI compute capacity	no held source states Kenya's installed GPU or accelerator capacity; a ministry or regulator inventory would settle it; probed 2026-08-05, no ministry or regulator inventory exists; the nearest official statement is a Konza transaction document giving 0.7MW IT capacity, 144 racks and no dedicated GPU clusters; on ingest the Konza transaction document proved to be dated 2026-04-13, not 2020, so its 0.7MW / 144-rack / no-GPU-cluster statement is current rather than historical	2026-08-05
Ajira Digital Programme	the state's other flagship digital-work programme is effectively absent from the base; probed 2026-08-05, no official programme report retrievable and ajiradigital.go.ke renders only a broken interface; an SSRN case study is the only first-hand document reached	2026-08-05
Rules governing automated decisions in hiring	a statute, labour-code provision, data-protection guidance note or regulator determination naming automated or algorithmic decisions in recruitment would settle it; probed 2026-09-08, a four-country comparative legal review finds none in the constitution, the labour code or the data-protection act	2026-09-08
