

PROGRESS REPORT

Liberia: progress report, August 2025 – August 2026

Edition of 2026-08-27 · 71 systems and instruments tracked

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the base tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the base holds nothing on that indicator. **That is a statement about this base, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-08-01 to 2026-08-27.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Digital transformation strategy	Digital Liberia 2025-2029 was published in February 2026 on eight priority areas across four pillars, with no costing or delivery schedule. The pillars include universal connectivity, digital addressing, cybersecurity and data sovereignty, replacing an ICT policy already past its stated period (strategy , text). A development bank's country strategy approved the same month still cites the superseded 2019-2024 ICT policy and does not mention the new strategy at all (country strategy).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	ICT strategy	A licensing and spectrum reform package was announced in July 2026, splitting infrastructure and service licences and promising first satellite rules. It also carries tower-sharing rules, a device-identity regime and repatriation of the country-code domain; none has been published as an instrument (reform package). Licensing has otherwise run unchanged under a 2007 statute with no satellite or device rules, so the package would be the first structural change to the market's licensing in nineteen years.	ADVANCED
Strategies, plans and policies	Broadband strategy		NO EVIDENCE
Strategies, plans and policies	Data storage / cloud strategy		NO EVIDENCE
Strategies, plans and policies	Data interoperability framework / roadmap		NO EVIDENCE
Strategies, plans and policies	AI strategy	An artificial intelligence priority was accepted in principle by the President in July 2026, conditioned on agriculture, transport and commerce applications. No policy, institution, budget line or date is attached, and the proposal came from the President's youth advisory council rather than from the executive (acceptance). It is the only statement of national intent on the technology the base holds, and it originated outside government.	ADVANCED
Strategies, plans and policies	Data localisation policies		NO EVIDENCE
Strategies, plans and policies	Data governance policy	A national data governance policy issued in March 2026 designates the information commission as data regulator and sets an adequacy-or-consent rule for transfers. It prescribes signature and ratification of the continental cyber and data convention, and was developed under ministry leadership with a regional civil-society body and aligned to the continental data policy framework (policy). It designates a regulator under a statute that was unenacted when the policy issued, so the policy named an authority for a law that did not yet exist; the law has since been signed and the authority still has not been constituted.	ADVANCED
Strategies, plans and policies	Open data policy		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Data protection legislation	The Personal Information Act was signed into force on 19 August 2026, with no authority yet existing to administer it. It had been referred to a House committee in June 2025 and left unpassed, drafted with a media-development organisation under a European programme and validated in December 2024 (signature , committee stage). The base holds no authority, commencement order, registration regime or enforcement route under it, so what a data subject can actually do with it is unestablished. The country is a regional data-protection signatory and had until this month struggled to enforce privacy law at all (enforcement position).	ADVANCED
Legislation and regulation	Cybersecurity legislation	The Cybercrime Act was signed on 19 August 2026, seven months after passage, alongside sector cybersecurity regulations already in force. The signature ends a delay carried since January 2026, when Senate concurrence was communicated to the House; no commencement date, implementing regulation or enforcement body is published with it, and an international index still places the country in its second-lowest maturity tier (enactment). The regulator's own 2026 regulations require telecom providers to store personal data primarily inside the country, establish an in-house cybersecurity unit within a year, notify the regulator of breaches within 24 hours and customers within 72, run annual penetration testing and keep security-event logs for at least twelve months; penalties are revenue-linked but apply only from a year after the effective date, and the penalty escalation ladder is unreadable in both held copies (regulations). A National Cybersecurity Act scheduled for the third quarter of 2025 by the strategy's own action plan is not held as a draft, bill or enactment (action plan).	ADVANCED
Legislation and regulation	Legislation covering digital id		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Digital payments legislation	The mobile money regulations are in force and unamended, and the interoperable fee schedule of 2026 was approved under them. They are the central bank's standing mobile-money framework (regulations). No payments statute, electronic transactions act or switch instrument sits above them, so a fee schedule for a national instant payment system rests on a regulation written before that system existed.	NO CHANGE
Legislation and regulation	Legislation enabling data interoperability		NO EVIDENCE
Legislation and regulation	AI legislation / regulations		NO EVIDENCE
Legislation and regulation	E-commerce legislation		NO EVIDENCE
Legislation and regulation	Statistics legislation		NO EVIDENCE
Legislation and regulation	Access to information legislation		NO EVIDENCE
Data protection	Data protection authority	The telecoms regulator fined an operator LRD 4m for issuing a subscriber's module to a third party, the first privacy penalty on the record. It was imposed by the telecoms regulator rather than under data-protection law, which had none in force at the time (fine). The reform package announced the same month does not name a data-protection function (package), and no data-protection authority exists to which such a case could now be brought.	ADVANCED
Data protection	National data protection readiness	A riders' union memorandum would build digital identity, satellite tracking and a rider database for commercial motorcycle operators, with no data-protection basis reported. It was signed in August 2026 between the union and a private digital services company, aimed at curbing vehicle theft and linking informal-sector riders to formal financial and government services (memorandum). It is a private arrangement covering location tracking of a working population: no custodian, retention rule or consent mechanism is reported, and no statutory backing is claimed. It was signed three days before the country's first data-protection statute took effect.	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	Regional policy collaboration	US\$361,151.36 in arrears was waived and voting rights restored at the continental telecommunications union in July 2026, after withholding dating to 1982. Current obligations were arranged and the ratification instrument deposited (waiver). Separately the central bank governor proposed shared cybersecurity standards, cross-border incident reporting and supervisory-technology adoption among West African regulators, citing the country's own instant-payment launch as a benchmark; nothing is adopted, funded or scheduled, and the proposal is one governor's rather than the college's position (proposal).	ADVANCED
Regional collaboration	Regional legal harmonisation		NO EVIDENCE
Regional collaboration	Shared regional infrastructure	Free roaming with two neighbours has run since May 2025, and spare fibre on a four-country power grid is agreed for commercialisation. The roaming arrangement puts a home module at local rates across the three countries, with no traffic or price data published (roaming). Regional consensus was reached in June 2026 to commercialise spare fibre on the shared transmission grid across four countries, which would give the country its first terrestrial redundancy against sole reliance on one submarine landing; no operator, tariff or date is published (grid fibre).	ADVANCED
Regional collaboration	Cross-border data transfers	A rights organisation's reading puts the country among three committing to hand over any data requested for an American audit without explicit privacy safeguards. It is also among two whose data-sharing arrangement is deferred to an unpublished appendix, and outside the five whose text requires unilateral specimen and pathogen-sequencing sharing; the signed memorandum carries no specimen clause (assessment). The same reading names the country as lacking a binding comprehensive data-protection law, which is what makes the audit-access provision acute. That law has since been signed, and the appendix is still unpublished.	REGRESSED
Standards	National interoperability standards		NO EVIDENCE
Standards	National quality standards		NO EVIDENCE
Standards	Adoption of international standards		NO EVIDENCE
Public debate and participation in policymaking	Non-governmental contribution to national policy		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	Open discussion of government policy	The telecoms regulator's own revenue is unpublished, a corruption complaint against it is under investigation, and the police answered a procurement question with a denial. Its licensing fees, spectrum charges, regulatory levies and numbering receipts are not published, nor is an audited account of them (revenue secrecy , alarm). A complaint over the replacement traffic-monitoring arrangement was forwarded to the anti-corruption commission's investigation unit on 30 July 2026, with no evidence publicly produced and no findings made (complaint). The national police stated in August 2026 that no facility uses satellite internet and that connectivity comes from the state operator under an institutional contract, and confirmed buying used vehicles from an American firm; no contract, value or procurement record is published alongside the denial (statement).	REGRESSED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	Sustainable domestic financing of digital transformation		NO EVIDENCE
MoUs and other agreements	Strategic relationships		NO EVIDENCE
New investments	Mobilisation of non-state finance	A youth entrepreneurship investment bank is put at almost US\$18m targeting 30,000 businesses and about 100,000 jobs, with no disbursement stated. A national coordinator has been recruited and a board is being constituted (the bank). It is the only domestic financing instrument in the base outside the central bank's own regulations, and it is stated by a minister at a town hall rather than in an appropriation or a charter.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	Development-partner project financing	US\$50m was committed for broadband, cybersecurity, digital governance and payments, while a bank strategy cut its sectors from four to three, dropping digital. The credit sits within a US\$137m three-country operation and was signed in June 2026 as part of US\$125m of agreements (signature , operation). The bank strategy for 2026-2031 keeps transport, energy and skills with an indicative programme of UA 129m, 36.3 per cent unfunded, and no digital lending line (strategy , approval). A US\$30m identity and digital government project is running, with a US\$2m tranche put on hold during the identity system's debt lock and no disbursement total published (project , commitment).	MIXED a US\$50m regional credit was signed while the development bank cut digital from its country strategy

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Mobile penetration	A universal licence was revoked in July 2026 after six years without operation, leaving two mobile operators of any scale. Spectrum, numbering and regulatory privileges reverted to the regulator, the licensee having been suspended for 90 days from February 2026; the market at mid-2026 is estimated at 3.2m subscribers for the leading operator, 2.3m for the second and 14,000 for the state operator (revocation). Fifth-generation services are stated as planned with investors still being engaged, and no spectrum award, licence condition or launch date is published (plans).	MIXED a dormant licence was revoked while a fifth-generation plan has no spectrum award behind it
Connectivity	Internet usage	1.84m internet users at 32.4 per cent of the population in early 2025, with about 3.8m offline and no later national figure published. The reading is a commercial compilation rather than a regulator or statistics-office release (penetration). Eighteen months on, no regulator subscription series, household survey or statistics-office chapter has replaced it, so the country's connectivity is measured once a year by an outside compiler.	NO CHANGE
Connectivity	Mobile affordability		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	National fibre backbone	The domestic backbone is reported extending south-east from one coastal city toward five counties, with no route map or kilometre figure. The line is reported reaching a border town from the capital, with private firms extending it (extension , earlier account). No completion date is published, and the base holds no national kilometre figure for the backbone at any date.	ADVANCED
Connectivity	International internet bandwidth	A second submarine landing at Buchanan is sought, with partial funding stated as sourced and investors still being found. It was announced by the minister at a technology summit in July 2026; no landing partner, cost or date is published (announcement). The country has run on one landing in the capital, which is why the agreement to commercialise spare fibre on the regional power grid matters as much as the cable does: both would end sole reliance on a single route.	ADVANCED
Connectivity	Internet Exchange Points		NO EVIDENCE
Connectivity	Satellite broadband licensing and availability	Satellite communications guidelines were issued in August 2026 setting licensing, tax and service rules, with no licence yet issued under them. The regulator frames the rules around national security and commercial transparency as space-based solutions become the route to territories terrestrial networks have not reached (market rules , guidelines). It frames them as opening licensed satellite broadband to the named constellations (framework), and no licence has yet been issued on the record.	ADVANCED
Data Storage	Local data centre capacity (all providers)		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	Local data centre capacity (national providers)	A national data centre was announced in July 2026 to hold government data domestically, with no site, cost, timetable or operator named. The announcement came from the posts and telecommunications minister (announcement). A separate facility at Buchanan is stated as under development for sovereign hosting of the identity registry and the revenue authority, again with no operator, cost or completion date published (Buchanan facility). Neither is the same project on the record, and the data governance policy that names the second sets a rule for data leaving the country that neither facility yet lets it obey.	ADVANCED
Data Storage	Off-site backup capacity		NO EVIDENCE
Energy	Sufficient energy and water for data centres		NO EVIDENCE
Energy	Grid reliability		NO EVIDENCE
Energy	Rural electrification		NO EVIDENCE
Technical Capacity	Robustness of government hardware and software	The telecoms traffic-monitoring concession is suspended, with operator funds in escrow of undisclosed amount and a corruption complaint under investigation. A joint legislative committee recommended renegotiation rather than cancellation; the original concession was ratified by the legislature in 2022 and held valid by the justice ministry in 2024 (suspension). No evidence has been publicly produced and no findings made in the complaint, so a revenue-assurance system for the whole telecoms sector is off while the arrangement that would replace it is contested.	REGRESSED
Technical Capacity	Local capacity to maintain, manage and develop government systems		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Cybersecurity	National cybersecurity readiness	The cybersecurity strategy is published and its scheduled council, act and operational deliverables are all unheld two years past their dates. Its action plan dated deliverables from the fourth quarter of 2024; the cover reads July 2024 for a 2025-2029 period while every running header reads a draft for 2024-2029, and whether the posted file is the adopted final text is not established from the document (strategy). The national cybersecurity council it scheduled for the fourth quarter of 2024 has no constituting instrument, membership or meeting record; the base holds no record of establishment rather than a stated non-delivery. A House investigation was ordered in February 2026 into an alleged breach of about 2m citizens' data across the revenue, electricity and insurance bodies, with no findings published; the revenue authority denied the breach, and the probe cited the absence of a national cybersecurity strategy (investigation).	STALLED

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	National data exchange system		NO EVIDENCE
Data Exchange	Use of digital id in other systems		NO EVIDENCE
Data Exchange	Interoperability of health systems		NO EVIDENCE
Data Exchange	Interoperability of education systems		NO EVIDENCE
Data Exchange	Interoperability of social protection systems		NO EVIDENCE
Digital Identity and CRVS	Robustness of system		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	Registration of entire population	Mass enrolment has been suspended since June 2025 on coverage below 15 per cent, with a concession to enrol all 5.3m people now before Parliament. The concession is with an Austrian firm to finance enrolment in 18 months, operate and transfer; consultations have concluded and the draft agreement has gone to Parliament, with selection and terms unpublished until legislative approval completes and the registry stating it will disclose the agreement only after ratification (concession , firm , restart). About 740,000 had enrolled by the end of 2024 at a US\$5 card fee, and about 640,000 prior registrants were locked out with issuance halted (lockout); no updated enrolment figure has been published (lockout , funding gap). Enrolment has been mandatory for citizens and 90-day residents since April 2025 under an executive order making the identification number the primary credential for banking, health, education and telecoms (order , no identity, no transaction). So a mandatory credential has been unobtainable for more than a year, on a register the state cannot afford to run and is now handing to a concessionaire.	REGRESSED
Digital Identity and CRVS	National maintenance of id and credentials systems		NO EVIDENCE
Digital Identity and CRVS	Authentication		NO EVIDENCE
Digital Identity and CRVS	Digital id from birth		NO EVIDENCE
Digital Identity and CRVS	Interoperability of birth registration and digital id		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	Use by other systems	Module registration was tied to the identity number with a July 2025 deadline, and no compliance figure or enforcement action has followed. The deadline was set under an October 2024 memorandum between the telecoms regulator and the identity registry (memorandum). No revised deadline is published either, on a register whose issuance was halted for most of the period the deadline ran, so the requirement and the credential it requires were unavailable at the same time.	NO CHANGE
Digital Payments and Fintech	Governance role of central bank		NO EVIDENCE
Digital Payments and Fintech	G2P functionality		NO EVIDENCE
Digital Payments and Fintech	Revenue collection		NO EVIDENCE
Digital Payments and Fintech	B2B and B2G functionality	The state auditor found US\$36,768 paid in full for a digital lending platform that was contractually due live in May 2025 and never deployed. The field verification was in May 2026 and the management letter issued in June (audit). The same audit found no functional project audit committee, a US\$27,000 consultancy let without competitive procurement, and an agriculture commercialisation fund reporting dashboard never formally handed over to the ministry (audit).	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	P2P, P2G and P2B functionality	An inclusive instant payment system launched in December 2025 in 73 business days, interoperable between the two mobile-money networks. It covers person-to-person and government-to-person payments, where mobile money had been split between two closed networks (launch , system). The central bank's own account is that it was built to a business case rather than to a regulation and sequenced government payments first, moving civil-servant salaries off cheques into wallets and so giving the integrated operators access to float, against a national target of 50 per cent of adults holding an account (central bank account). A national electronic payment switch is named as the follow-on, alongside person-to-government payments, with no go-live date or budget line published (switch , expansion).	ADVANCED
Digital Payments and Fintech	Population uptake	52 per cent account ownership with more than 11m wallets in 2024 is the base's current statement, with no later figure published. The reading is two years old (account ownership). It predates the instant payment system, the interoperable fee schedule and the movement of civil-servant salaries into wallets, so the one measure of uptake the base holds is from before everything that would have moved it.	NO CHANGE
Digital Payments and Fintech	Cross-border functionality		NO EVIDENCE
Digital Payments and Fintech	Consumer protection	A central-bank-approved fee schedule caps interoperable charges at 1.0 per cent of value to US\$2,000 and a flat US\$25.00 above it. The service is available 24 hours a day (schedule). The flat cap is regressive above about US\$2,500 (schedule), where it falls below 1.0 per cent of value and keeps falling, so the schedule protects small payments and cheapens large ones.	ADVANCED
Registries	Population register		NO EVIDENCE
Registries	Civil register		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	Address register	A national digital postal address rollout is stated as begun across all fifteen counties, with no completion date or addressing standard published. The statement was made at a technology summit in July 2026 (rollout). Digital addressing is one of the eight priority areas of the national digital strategy, and this is the only delivery statement against any of them.	ADVANCED
Registries	Business register	The central bank is preparing an enhanced collateral registry extending the 2010 movable-assets registry to land, buildings and fixed machinery. It forms part of a wider financial-sector reform (registry). No launch date, registration volume, fee schedule or relationship to the land registry is stated, which matters because extending a movable-assets registry to immovable property crosses into the land registry's own subject.	ADVANCED
Registries	Social protection register		NO EVIDENCE
Registries	Electoral register		NO EVIDENCE
Registries	Tax register		NO EVIDENCE
Registries	Land register	The land authority took a national spatial data infrastructure to a United Nations geospatial session in August 2026, seeking partnerships and technical support. It would build a coordinated geospatial framework for land administration, mapping and national planning (approach). It is an approach for support rather than a programme: no funding, custodian, standard or timetable is stated, and no land register, title count or digitisation figure appears anywhere in the base.	ADVANCED
Sectoral management information systems	Health		NO EVIDENCE
Sectoral management information systems	Education	Private-school operating permits are being taken online after schools were found submitting mismatched teacher-qualification records. Geographic mapping of schools is complete in five counties with donor support to extend it to ten more; the account is the education minister's, and no platform name, cost or completion date is stated (permits).	ADVANCED
Sectoral management information systems	Social protection		NO EVIDENCE
Sectoral management information systems	Justice		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	Tax	The revenue authority's five-year plan makes automation its fourth goal, against a customs system in 11 of 17 offices and a tax system at five sites. Its four objectives cover system uptime and technology risk on the tax and customs platforms, enterprise management software for internal support functions, technology governance, and integrated online self-service for taxpayers; the plan text is held as an optical transcription over an image-only file, is internally inconsistent about its own span, and succeeds a first plan that expired unreplaced (plan , launch). A regional tax administration project on a grant of about US\$5.3m launched in August 2026 with the country among six beneficiaries (regional project); the national allocation and the digital component are not itemised (regional project , launch).	ADVANCED
Sectoral management information systems	Customs		NO EVIDENCE
Sectoral management information systems	Land		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Other GovTech and e-Gov	e-government services	A coordinating office was established by executive order in April 2026, and three government platforms are in service including one now studied abroad. The office is the whole-of-government coordinator for enterprise standards, interoperability, technical clearance of technology investments and baseline cybersecurity, with twelve months to draft an institutionalising law (executive order). The electronic procurement platform launched nationally in February 2025 and began its second-phase equipment distribution in August 2026; a neighbouring country's procurement authority studied it on 6 and 7 August, the first export of a domestic government system on the record, and no transaction count, entity coverage or procurement value is published (regional model , cooperation). An automated telecom licensing and renewal platform entered service in August 2026 with in-person service kept available, and no licence count, processing time or fee schedule is published (licensing platform , rollout). A civil-service power-of-attorney platform went live in December 2025 with 5,000 enrolled across 16 government entities, tying civil-servant purchases to fingerprint verification (platform).	ADVANCED

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	ICT infrastructure for local government		NO EVIDENCE
Digitalisation of sub-national government	Digitalisation of local government records		NO EVIDENCE
Rural digital data capture	Digitalisation of rural health clinics		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	Digitalisation of rural primary schools	About 90 of 156 public high schools are connected under a satellite school programme, with no funder, cost or completion date published. The count was given in July 2026 (programme , progress). It is the only school-connectivity figure the base holds, it covers high schools rather than primary ones, and it runs on a satellite service the regulator had not then licensed.	ADVANCED
Rural digital data capture	Digitalisation of rural registry offices		NO EVIDENCE
Rural digital data capture	Digitalisation of rural police stations		NO EVIDENCE

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Use of AI in government administration	A legal-learning system over Supreme Court opinions from 1861 to 2026 launched in July 2026, built by a private law library. It also covers statutes and regulations and was built with support from a United Nations human-rights office (system). Every claim is the developer's own: no accuracy or evaluation figure is given, no model or vendor is named, and the corpus is a private compilation rather than an official publication of the country's law.	ADVANCED
AI	Use of AI in sectoral management information systems		NO EVIDENCE
AI	Development of national / regional AI systems		NO EVIDENCE
AI	Control of AI abuse		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
ICT Industry	National capacity in DT-related production	A domestic firm won the national startup competition on domestic data custody, and a ports memorandum covers automated terminal operations. The firm was selected to represent the country at a global final, projects a US\$20m return over five years and plans a domestic security operations centre (winner); it reports that over 95 per cent of local graduates at its competition lacked practical international-standard defence skills, a vendor claim rather than an independent audit (winner). A non-exclusive memorandum with a French port operator covers all four seaports across five areas including automated terminal operations, with no commitment amount, implementation date or named system (memorandum).	ADVANCED
Innovation ecosystem	Technology hubs	An innovation and digital hub operates under a continental development platform, with no commitment amount disclosed. It was named as a flagship contribution at the July 2026 technology summit (hub, investments). It is the only hub in the base, and it is a development agency's rather than the state's.	ADVANCED
Innovation ecosystem	Tech startup ecosystem		NO EVIDENCE

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	Digital literacy (civil service)		NO EVIDENCE
Literacy	Digital literacy (general population)	A digital learning platform went into service for grades 1 to 3 in local languages, and 19 young leaders were trained in information literacy. The learning platform carries curriculum-aligned video, audio and radio with sign-language interpretation on the video lessons (platform). The literacy training was the first of three sessions run by a development agency with the elections commission and the press union on Canadian funding, with no budget disclosed (training).	ADVANCED
Training and skills	DT-related training in secondary education		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	DT-related university facilities and qualifications	A master's programme in artificial intelligence at the national university is announced as the country's first, with no start date, intake or funding disclosed. The partnership was announced by a development agency in August 2026 (programme). It is the only tertiary digital qualification in the base, and the national position on the technology it teaches is a presidential acceptance in principle with no policy behind it.	ADVANCED
Training and skills	Graduates entering DT ecosystem		NO EVIDENCE
Research institutions	Think tanks and academic departments contributing to DT policy		NO EVIDENCE

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Citizen feedback portals	A youth feedback platform was relaunched in August 2026 on an encrypted messaging channel, targeting at least 8,000 reporters. It is run by two United Nations agencies with an embassy's support under a joint programme with government, letting young people answer polls on health, water and sanitation and other social issues with responses analysable by county (relaunch). The channel is tied to a single mobile operator's cards, which bounds who can take part, and no baseline participation figure or publication rule for the results is stated.	ADVANCED
Access to services	Citizen participation in policy		NO EVIDENCE
Access to services	Gender equity		NO EVIDENCE
Access to services	Inclusion of persons with disabilities		NO EVIDENCE
Access to services	Inclusion of refugees and IDPs		NO EVIDENCE
Digital divides	Bridging of digital divides		NO EVIDENCE

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	National strategy for development of statistics		NO EVIDENCE
National statistics	Censuses and surveys		NO EVIDENCE
National statistics	Statistics from administrative data		NO EVIDENCE
Open data	Use of open data		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	Agricultural use of satellite data		NO EVIDENCE
Use of satellite data	Meteorological use of satellite data		NO EVIDENCE

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	USA / hyperscaler MoUs, engagements and commitments	A health memorandum plans US\$26,133,684 for health data systems over 2026-2030, non-binding and subject to the availability of funds. The systems named are electronic medical records, a laboratory information system, disease surveillance and a national health information platform; planned American support across the whole memorandum is US\$124,418,400 against the country's own US\$50,725,704 (data systems). The signed text commits the country to an open-source medical record in 100 per cent of public health facilities by 2030 and gives the United States audit access to up to 5 per cent of facilities, with a data-sharing arrangement still to be negotiated and expected to run ten years, and no specimen-sharing or personal-data clause (memorandum). The text was published in March 2026 and then withdrawn, and is the subject of a federal freedom-of-information suit filed on 2 April 2026 (suit).	ADVANCED
China activities	Chinese MoUs, engagements and commitments		NO EVIDENCE
EU activities	EU MoUs, engagements and commitments		NO EVIDENCE
Gulf/UAE activities	Gulf MoUs, engagements and commitments		NO EVIDENCE
India activities	India MoUs, engagements and commitments		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Publication of the telecoms regulator's own revenue	The Authority's licensing fees, spectrum charges, regulatory levies and numbering receipts, or an audited account of them from the General Auditing Commission.	not yet probed
Earth observation or geospatial data programme	A national geospatial or earth-observation programme document, or an agency mandate covering satellite data.	not yet probed
Digitalisation of county and city administration	A county or municipal digital plan, a local service platform, or an administration report on digital service delivery.	not yet probed
Domestic digital research capacity	A university research programme, a published national research output, or an institutional mandate for digital research.	not yet probed

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
European Union digital cooperation with Liberia	A Global Gateway or EU delegation announcement, a financing agreement, or a programme document naming Liberia.	not yet probed
Indian digital cooperation with Liberia	A bilateral memorandum, a line-of-credit agreement, or an India Stack or ITEC programme document naming Liberia.	not yet probed
Gulf state digital investment in Liberia	An investment agreement, data-centre or connectivity commitment from a Gulf sovereign fund or operator.	not yet probed
Interoperability framework between government registers	The enterprise standards and interoperability rules Executive Order 163 provides for, or a data-sharing instrument between agencies.	not yet probed
STAR-P digital lending platform	a deployment or acceptance record for the contracted platform, a project progress report naming it live, or a recovery of the sum paid	2026-08-11

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
