

MONTHLY UPDATE

US / hyperscaler activities: monthly update, July 2026

Edition of 2026-08-27 · compiled by Claude Opus from the documents in the Corpus repository

14 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.

CAMEROON · CENTRAL AFRICAN REPUBLIC · CHAD · COTE D'IVOIRE · ESWATINI · KENYA · LESOTHO · MAURITIUS
· MOZAMBIQUE · NIGERIA · SENEGAL · UGANDA · ZAMBIA · ZIMBABWE

The place reports do not share one window; the period above is the range they span.

Cameroon

On 8 July the state operator held a [working session with a global cloud vendor's Africa executives and the United States embassy ICT representative](#). It is talks only: no agreement, investment commitment, timeline, or answer on where [Cameroonian data would sit](#), and it sits against the operator's own sovereign-cloud line and a regional data-residency recommendation.

Central African Republic

The [privatisation memorandum's move to an operational phase](#) is carried here because the counterparty is a United States firm. [The announced US\\$150m is the counterparty's own figure and appears in no appropriation](#).

Chad

Four priority areas were [agreed with the United States — digital infrastructure, satellite connectivity, cybersecurity and digital health — with no instrument signed](#). A supplier stated its willingness to audit and certify the national data centre, a mandate already held under the tripartite agreement of February 2026. The two accounts give different mission dates, and the [minister flagged United States visa refusals for Chadian technical personnel as a delivery risk](#).

Cote d'Ivoire

The United States announced on 16 July that a contractor had received [formal Ivorian authorisation for a US\\$170m export-credit-financed project](#) covering a sovereign national data centre, a government digitisation platform and a smart-border surveillance system, up from US\$66m approved in August 2025. The announcement was made by the United States rather than by any Ivorian instrument.

Eswatini

The [partnership with the cloud provider is operating and publicly acknowledged, with the government services application showcased at the provider's Africa summit](#). No value or term is published, so what the state has committed to, and for how long, is not established.

Kenya

A delegation from a Korean university and development institute [came to Nairobi to evaluate the outcomes](#) of South Korea's development assistance to the digital economy. No findings, envelope or successor programme has been published, and the row sits under this heading because the base holds no separate slug for Korea.

Lesotho

The [US Embassy stated](#) at the Kobong ceremony that it has facilitated US\$7.3bn of commercial partnerships in Lesotho over the previous eighteen months.

Mauritius

The summit's other announcements differ in kind. The [Amazon memorandum was executed at the opening ceremony](#) with soft scope and no disclosed value, and [its training will run initially in rented premises](#). The claim that the operator's data centre already hosts current-generation accelerators is the chief executive's own.

Mozambique

The economy minister [met satellite operator representatives to discuss connectivity, digital infrastructure and participation by smaller firms](#). No agreement, amount or timetable was announced. The operator's service already runs in Mozambique, so this is a government-level engagement rather than market entry.

Nigeria

The month's hyperscaler activity is a renewal rather than a new commitment. Google [gave students at accredited Nigerian universities, polytechnics and colleges of education twelve months of its AI Plus plan free, a subscription it prices at ₦92,400 \(US\\$68.56\)](#), the second consecutive year of the offer and one of 27 Sub-Saharan rollouts, with eligibility verified through a third-party enrolment-checking platform. No cohort figure is published for Nigeria, and the take-up of the equivalent 2025 offer is not stated, so the programme's reach is unmeasured at both ends.

Senegal

The digital minister pitched the technology strategy in Washington, holding [working sessions on financing mechanisms for digital infrastructure, data centres, digital identity and payment systems](#). No financier, amount or instrument was reported.

Uganda

The United States health-data memorandum is now held, and it is not the instrument the reporting describes. The signed text [caps the arrangement at seven years, places it under joint steering-committee governance with Uganda as data owner, binds all activity to the Data Protection and Privacy Act and the national data-governance framework, and has Uganda approve the health information architecture before any United States-financed investment; planned support is US\\$1,719,960,000 against Uganda's US\\$577,001,796, including US\\$113,102,289 for data systems](#). It provides only for a future data-sharing agreement. A [news organisation reported on 23 July that it had reviewed that agreement directly and that it grants direct, real-time login access to nine of Uganda's health data systems for seven years](#). The two accounts describe different instruments rather than contradicting each other; the agreement's own text is unpublished and not held, and no Ugandan or United States primary has confirmed or denied the account.

Zambia

The United States health financing memorandum is [reported shelved since May over data terms and a minerals precondition](#). A [leaked five-year draft offered US\\$1.012bn against commitments to hire 40,000 health workers, plus ten years of health-data access and a 25-year pathogen-data pledge](#); the Foreign Minister put the [proposed agreement at up to US\\$2bn](#), and the two values are not reconciled. No signature is on file, and the 25-year data term is reported from a leaked draft rather than a text the base holds.

Zimbabwe

Zimbabwe withdrew from the bilateral health talks, and the dispute over why was settled this month against the templates rather than the parties. Harare's account is that talks ended over long-term United States access to national health data and an attempt to fold in critical minerals; the [embassy stated the conditions were co-investment, financial accountability and specimen sharing during outbreaks, and that assertions it sought Zimbabweans' personal data are categorically false](#). Both are supportable. The [model data-sharing agreement](#) gives the United States secure, uninterrupted access, expressly including login credentials, to seven national health systems for [twenty-five years continuing ten years past termination](#) — and in the same clause tells the partner not to provide individual-level or personally identifiable data unless there is no other way. The [template memorandum](#) requires [physical specimens and related genetic sequence data of pathogens with epidemic potential within five days of detection, for twenty-five years](#). Harare is describing standing credentialled access to live systems; Washington is denying transfer of identifiable records. Neither template is the Zimbabwe draft, which was never signed and does not exist as a public document. [About 1.2m people on United States-supported HIV treatment face wind-down](#).

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
