

PROGRESS REPORT

Congo: progress report, September 2025 – September 2026

Edition of 2026-09-08 · 119 systems and instruments tracked

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY ·
INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the base tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the base holds nothing on that indicator. **That is a statement about this base, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-09-01 to 2026-09-08.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Digital transformation strategy	A ministerial roadmap of five ambitions and nine programmes was published while the 2030 strategy still awaits a decree. The 2030 national digital strategy was completed with external support and is under general-secretariat review awaiting adoption by presidential decree; no adoption instrument is on file, the base holds nothing on it dated before October 2025, and the predecessor strategy has expired. 2026-07-28 - a roadmap was set out publicly with five ambitions and nine programmes, delivery placed in an interministerial task force under the Prime Minister rather than the ministry acting alone, on a presidential instruction of May 2026. The roadmap reaches the base through a signed opinion piece by an adviser rather than an adopted instrument, and a separate nine-point ministerial list of 10 July 2026 is not reconciled with it.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	ICT strategy	Decret 2019-150 approved the national digital economy strategy, gazetted 4 July 2019. Decret 2019-150, gazetted on 4 July 2019, approves the national digital economy strategy — the instrument behind Vision Congo Digital 2025. UNESCO's 2026 assessment of internet development sets the adoption of that strategy and of the legal frameworks against insufficient enforcement of the cybersecurity and data-protection laws, high connectivity costs, persistent rural-urban disparities and limited public participation in internet governance. No mid-term evaluation of the strategy against its own targets is held.	NO CHANGE a standing instrument the base holds for the first time
Strategies, plans and policies	Broadband strategy		NO EVIDENCE
Strategies, plans and policies	Data storage / cloud strategy		NO EVIDENCE
Strategies, plans and policies	Data interoperability framework / roadmap		NO EVIDENCE
Strategies, plans and policies	AI strategy	Drafting began in May 2026 with a technical committee on a six-month mandate and a budget of FCFA 150m to 200m still to be secured. 2026-05-06 - drafting was launched with external support and a technical committee seated on a six-month horizon, eleven deliverables, a budget of FCFA 150m to 200m still to be secured, and a national-languages flagship digitising two languages. Conferences in January 2026 set priorities to feed it; no draft text is held. At 2026-08-06 no deliverable is published and nothing confirms the budget was secured, so a strategy with a six-month mandate has three months of it left and nothing on the record to show.	ADVANCED
Strategies, plans and policies	Data localisation policies		NO EVIDENCE
Strategies, plans and policies	Data governance policy	A landscape assessment and national reform priorities are under way after consultations at Brazzaville in June 2026. 2026-06-02 to 09 - consultations and capacity-building were held at Brazzaville under a continental data-governance initiative, with a landscape assessment and national reform priorities under way across government, regulators, academia, civil society and the private sector, and no draft, timetable or adoption route published. The only account held is wire copy reading as the sponsoring body's communications, and its own release is not on file. Nothing on this ledger states what data the state holds, who may access it or on what basis, so an assessment is the first step rather than a policy.	ADVANCED
Strategies, plans and policies	Open data policy		NO EVIDENCE
Legislation and regulation	Data protection legislation	Loi n. 29-2019 remains in force, its institutional framework completed by a decree of 31 December 2025. The law was promulgated on 10 October 2019 and stood in force at the window's opening with an incomplete institutional framework and no supervisory authority constituted; a decree of 31 December 2025 completed that framework. The statute itself did not move. Its text is not held, and its number and date reach the base only through a secondary outlet's account of the commission's first session, so what it obliges a controller to do is not checkable from anything on file - including whether registration or notification is required at all.	NO CHANGE
Legislation and regulation	Cybersecurity legislation		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Legislation covering digital id		NO EVIDENCE
Legislation and regulation	Digital payments legislation	An order of 22 May 2026 makes all public revenue payable exclusively through one national platform, with payment outside it void. The order was signed on 22 May 2026 and gazetted on 11 June with a 60-day conformity window: all public revenue is payable exclusively through one national platform, defined in the text as a national and sovereign payments switch, payment outside it is void and non-discharging, and administrations must suppress every parallel circuit. Derogations are limited to technical unavailability, absence of access to electronic means, or duly established exceptional circumstances. It is the most categorical digital-payments instrument on this ledger, and it obliges the state rather than the market.	ADVANCED
Legislation and regulation	Legislation enabling data interoperability		NO EVIDENCE
Legislation and regulation	AI legislation / regulations		NO EVIDENCE
Legislation and regulation	E-commerce legislation	Certified electronic invoicing became compulsory for every economic agent from 1 July 2026, with four implementing orders gazetted. A voluntary pilot group ran at the window's opening. A decree signed 31 March 2026 and gazetted 9 July made invoicing mandatory from 1 July for every economic agent except the state, local authorities on public-service missions and diplomatic bodies, with terminals, software and enterprise modules homologated jointly by the tax directorate and the security agency, after a sensitisation campaign in June. Four orders gazetted 16 July set a four-stage homologation with a 30-day decision deadline, mandatory cryptographic certification, a penetration test under twelve months old, a sworn no-backdoor attestation, ten-year invoice retention and real-time tax-directorate data access, at FCFA 5,000,000 per terminal model and per software version. No phase-in by firm size and no assisted or offline route is stated.	ADVANCED
Legislation and regulation	Statistics legislation	Loi 36-2018, gazetted on 18 October 2018, governs official statistics. Loi 36-2018 on official statistics was gazetted on 18 October 2018, and the national statistical development strategy for 2022 to 2026 runs under it. No implementing decree, statistical council record or compliance assessment under the statute is held.	NO CHANGE a standing statute the base holds for the first time
Legislation and regulation	Access to information legislation		NO EVIDENCE
Data protection	Data protection authority	The data protection commission was installed on 22 January 2026 after members were appointed by decree of 31 December 2025. A bill creating the commission was approved in council of ministers in July 2024, with no members appointed and the body not constituted. 2026-01-22 - members appointed by decree of 31 December 2025 held the inaugural session and elected a president, vice-president and rapporteur, with powers stated as advising, warning and sanctioning. Installation is the whole of it: no decision, sanction, registration regime, guidance, budget or annual report is on file in the six months since, and nothing states whether controllers must register or notify, what fees or deadlines apply, or whether any enforcement has occurred.	ADVANCED installation is the whole of the movement

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data protection	National data protection readiness	The data protection commission's members were appointed by decree gazetted on 29 January 2026, seven years after the statute provided for it. Decret 2025-538 names the members of the Commission nationale pour la protection des donnees a caractere personnel, drawn from the Presidency, Parliament, Government, the judiciary, the Cour des comptes, the bar, the national human rights commission and non-governmental organisations. Loi 29-2019 had provided for a supervisory authority since 2019. Loi 43-2020 separately authorised ratification of the African Union Convention on Cyber Security and Personal Data Protection, deposited on 23 October 2020. The legal half is settled and the institutional half has only just been constituted: no registration, notification, deliberation, guidance note or enforcement action under the law is held.	ADVANCED
Regional collaboration	Regional policy collaboration	The two Congolese media regulators agreed to align platform regulation, and a bilateral ICT memorandum was approved on the counterparty's side. 2026-08-19 - a round table in Kinshasa agreed alignment on how the two states regulate media and digital platforms, one regulator calling for joint mechanisms across a shared digital frontier and the other pressing for cooperation on online hate speech and disinformation while insisting regulation must not curtail freedom of expression. No instrument was signed. 2026-07-27 - a bilateral information-technology memorandum was approved by the counterparty's cabinet and its minister authorised to sign, with no scope, financing, signature date or Congolese step published. A first Central African cybersecurity agencies conference was announced for 2 to 5 June 2026 and nothing records whether it convened.	ADVANCED
Regional collaboration	Regional legal harmonisation	The community interoperable QR-code standard went live across the six member states under an April 2026 regulation. 2026-07-29 - the standard launched at Douala under an April 2026 regulation, letting any bank, microfinance or mobile-money application scan any merchant code across the six member states, routed and settled through the regional switch. It is a regional instrument the country sits inside rather than one it made. The country is second in the region by mobile-money volume, at 22.76% of it in 2024, and no country-specific adoption figure, merchant count or transposition step is held, so what the standard has changed here is not established.	ADVANCED
Regional collaboration	Shared regional infrastructure		NO EVIDENCE
Regional collaboration	Cross-border data transfers	A twenty-year continental customs digitalisation concession was signed at Abuja, covering 50 African countries. 2026-08 - a twenty-year, US\$3.1bn concession was signed to digitalise customs procedures across 50 African countries, harmonising border formalities and enabling real-time cargo tracking, following an earlier-August memorandum at Lagos. It is a continental secretariat instrument the country sits inside as a state party. The country-by-country schedule and the concessionaire's payment terms are not published, and no Congo-specific participation date, engagement or data-handling arrangement is stated - for an instrument that would move consignment data across fifty borders.	ADVANCED
Standards	National interoperability standards		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	National quality standards	The regulator's two-month deadline for completing subscriber identification expired around end-2025 with no result on file. Registration is mandatory. A survey of 18 localities found cards sold pre-activated and without identity documents in twelve named towns, with only two localities fully compliant, and the regulator gave the two operators two further months to complete identification. The two-month deadline expired around end-2025 and no compliance result, sanction, follow-up survey or extension is on file. Operators blamed distributors' resellers and undertook to sanction them, and the base holds no evidence any sanction followed. Quality enforcement went the other way: 2026-04 - the regulator served formal notices on both mobile operators after drive tests in 20 interior localities, with a six-month clock and per-department scores published, one operator absent from fourth-generation service in five named localities against eleven interior localities now covered where none was at end-2024, the next campaign falling due around October 2026.	STALLED
Standards	Adoption of international standards	The state operator became the first telecommunications operator in the country to hold the international quality-management standard. No operator held the standard at the window's opening. In March 2026 the state operator was certified, the first telecommunications operator in the country to hold it. It is company-reported and carried by a wire outlet, with no certification date distinct from the publication date and no auditor named. It is also the only international standard adopted by anything on this ledger: no national standards body, conformity regime or certification requirement for digital systems appears anywhere else, the one exception being the invoicing homologation the security agency now runs.	ADVANCED
Public debate and participation in policymaking	Non-governmental contribution to national policy		NO EVIDENCE
Public debate and participation in policymaking	Open discussion of government policy	An international observatory recorded continued judicial harassment of a named human rights defender and the opening of his trial (report). An international observatory recorded continued judicial harassment of a named human rights defender and the opening of his trial. UNESCO published a national assessment of internet development in April 2026 using the ROAM-X indicators, whose findings set the adoption of legal frameworks and of the Vision Congo Digital 2025 strategy against insufficient enforcement of the cybersecurity and data-protection laws, high connectivity costs, persistent rural-urban disparities, barriers for people with disabilities and limited public participation in internet governance. That assessment is the only sustained published argument about data governance the base holds, and it is an external one: no Congolese civil-society, academic or parliamentary contribution to it is on the record.	REGRESSED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	Sustainable domestic financing of digital transformation	The sector vote rose to FCFA 30,139,589,283 for 2026, while 2025 execution was FCFA 3,158,525,582, 13.5% of the revised figure. The programme vote went from FCFA 23,093,583,163 appropriated for 2025, revised to FCFA 23,348,037,007, to FCFA 30,139,589,283 for 2026, up 30.5%, against 2025 execution of FCFA 3,158,525,582 or 13.5% of the revised figure - a floor, on a numerator that excludes personnel and a denominator that does not. The treasury banking-function account more than doubled to FCFA 5,968,000,000 from FCFA 2,810,000,000, while the public-finance information systems account stayed at FCFA 3,500,000,000 for a second year. A rectifying law adopted unanimously in July 2026 names consolidating revenue through digitalisation first among four objectives, publishing no revised digital vote. A tax on newly imported SIM-capable terminals took effect on 1 June 2026, earmarked for connectivity and infrastructure, with no rate or yield published.	MIXED the sector vote rose 30.5% and the treasury banking account doubled while 2025 execution ran at 13.5% and the public-finance systems account stayed flat
MoUs and other agreements	Strategic relationships	An accord signed at Pointe-Noire covers energy and digital nexus projects and a feasibility study for a data centre attached to a gas plant. 2026-06 - an accord was signed at Pointe-Noire covering energy and digital nexus projects, a regional think tank, and a feasibility study for a regional data centre attached to a gas plant. No financing figure or timetable is stated. It is the only strategic relationship on this ledger that starts from power rather than from connectivity or money, which matters in a country where nothing at all quantifies energy cost or grid availability for digital infrastructure.	ADVANCED
New investments	Mobilisation of non-state finance	A mobility platform raised US\$30m of equity and debt and launched in Brazzaville in November 2025. Consultancy forecasts reported by the state agency attribute more than 800 billion of gross domestic product to the digital economy within five years (forecast). It is a projection, not a measurement. 2025-11 - a series B round of US\$30m combining equity and debt funded a super-application spanning mobility, delivery, mobile payment and financial services, with operations beginning in Brazzaville. It is the only non-state digital deal in the base with a 2025 start year, and the only private-sector-beneficiary one since a 2022 mobile-money guarantee. The round is announced in dollars by the parties with no local-currency figure and no country-specific allocation, and no later source reports fleet size, driver numbers or the promised financial and delivery layers.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	Development-partner project financing	The European limb launched its first named procurement, while data-centre works were suspended at 95% over an unpaid state tranche. The acceleration project ran on US\$100m committed to a 2027 horizon with 20 of 76 sites fully operational at an October 2025 mid-term review and a 2026 work plan of FCFA 21.872bn. The European phase, launched June 2025 with EUR 36.3m of loan and FCFA 10bn of grant, opened its first named procurement in July 2026, against a European component of FCFA 27bn. The data centre went the other way: 95% complete, works suspended and withdrawal threatened if the final tranche foreseen in the funding protocol was not released by month end, after inauguration had been announced for November 2025. A research-centre limb awaits final validation before disbursement, with no amount published. The consolidated envelope is EUR 136.5m across a World Bank loan, an EU grant and a European bank loan to a 2027 horizon, on three axes - rural connectivity, a multimedia centre and interior-ministry applications.	MIXED the transformation project's European limb began procuring while the national data centre's works were suspended over an unreleased state tranche

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Mobile penetration	The regulator's first market report holds 3.757m mobile-internet subscribers at December 2024, up 9.4%. The regulator's 2024 mobile-internet market report, the first Congolese telecom market data the base holds, records 3.757m mobile-internet subscribers at December 2024, up 9.4%, against an over-15 population of 3.738m. Subscriptions now exceed the addressable over-15 population, so the count no longer measures people. It is an older source arriving late, which makes it a baseline rather than news, and no later regulator market report is held - so the most recent penetration position the base can state is twenty months old.	ADVANCED
Connectivity	Internet usage	Traffic ran at 90.904bn megabytes on FCFA 63.569bn of revenue in 2024, on the regulator's first market report. The 2024 market report records 90.904bn megabytes of mobile-internet traffic on FCFA 63.569bn of revenue. Against that, an industry country report puts unique mobile-internet use at about 19% against about 86% national coverage - a usage gap of some sixty-seven points between where service reaches and who takes it. No household survey, no fixed-broadband count and no gender or income disaggregation exists anywhere on this ledger to explain it.	ADVANCED
Connectivity	Mobile affordability	Backhaul spectrum fees run at about 5% of operators' total revenue against a sub-Saharan median of 0.5%. An industry country report puts mobile backhaul spectrum fees at about 5% of operators' total revenue against a sub-Saharan median of 0.5%, alongside delayed spectrum assignments, cross-border interference and technology-neutrality restrictions. Backhaul is the default rural link where fibre does not reach, so the premium falls hardest where coverage is weakest, and no regulatory response is on file. The only retail price the base holds is a weighted FCFA 0.70 a megabyte in 2024, with nothing later to compare it against.	NO CHANGE a first published price position with nothing earlier behind it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	National fibre backbone	The backbone's first three phases were contributed in kind to the state operator at FCFA 143,878,429,945, staged to prepare a listing. Earlier phases were held by the operator as usufruct with no formal contribution and no capital entry. A council of ministers decree contributed assets valued at FCFA 143,878,429,945 in kind against a capital increase, raising share capital to FCFA 157,297,453,418 and absorbing accumulated losses of just over FCFA 20bn, staged explicitly to prepare a listing, recorded in the council of 6 May 2026. The backbone whose outages the regulator's own enforcement file blames for northern coverage failures is the asset being readied for market. A co-regulation accord on shared fibre and pylon infrastructure, announced as imminent in March 2025, has no signature, text or implementation sixteen months on.	ADVANCED
Connectivity	International internet bandwidth	A switch to an alternative submarine cable was stated to be three weeks away in July 2026; no source confirms any new cable carrying traffic. The country has relied on one cable since 2012, and after weeks of outages sought a new subsea connection in January 2026. 2026-07-14 - the regulator stated a connection to another cable could be operational within three weeks, with one alternative cable delayed. No source since confirms any new cable carrying traffic. Single-cable dependence is the structural fact under every connectivity row here, and no capacity figure, landing station or redundancy arrangement is published for the cable actually in service.	STALLED
Connectivity	Internet Exchange Points	CGIX has served as the African Union's Central Africa sub-regional hub since August 2017. The Congo Internet eXchange Point was initiated by the regulator and launched in May 2013 with seven connected operators, and was selected by the African Union in August 2017 to serve as the Central Africa sub-regional hub; its own portal states 4 connected members, 1 point of presence and 70 Mb/s of traffic an hour. The counters are the exchange's own and carry no date on the page, and the fall from seven operators at launch to four members is not explained anywhere in the base.	NO CHANGE
Connectivity	Satellite broadband licensing and availability	The regulator completed low-orbit specialist training and met a satellite operator; no licence or service authorisation is on file. 2025-10 - the regulator's network-services directorate completed three days of specialist training in France on constellations, transmission security, spectrum management and regulatory adaptability, and held a strategic meeting on low-orbit and high-altitude platform regulation. Regulatory capacity was built and nothing has been licensed. No licence, service launch or authorisation is on file at 2026-08-06, experimental satellite terminals require express regulator authorisation, and the satellite thread runs to European operators rather than to the American one that has been licensed in most neighbouring markets.	ADVANCED
Data Storage	Local data centre capacity (all providers)	A feasibility study opened on a regional data centre attached to a gas plant, and a sovereign hosting programme was named. 2026-06 - a centre of excellence and a non-governmental body signed a protocol opening a feasibility study on a regional data centre attached to a gas plant, framed as an energy and digital nexus, with experts assessing the site's energy potential. No cost, timetable, capacity or financier is named: a study, not a build. 2026-07-28 - a published roadmap named sovereign hosting and connectivity infrastructure at the two highest tiers as one of nine structuring programmes, with no budget, site or date attached and no published national data-centre programme distinct from the regional backbone build.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	Local data centre capacity (national providers)	The state operator showed the minister a security operations centre across three data centres, after works were suspended at 95%. 2025-10 - the contractor suspended works at 95% completion and threatened withdrawal if the final tranche foreseen in the funding protocol was not released by month end, after inauguration had been announced for November 2025. No amount is stated for the unpaid share and no position later than October 2025 is held on the financing. 2026-08-10 - the state operator showed the minister a real-time security operations centre running across its Brazzaville, Pointe-Noire and Oyo data centres, alongside nationwide fibre connectivity. It is an assertion made in passing at a ministerial visit; no capacity, certification, utilisation or independent account of any of the three sites is held, and a minister had already referred to a data-centre inauguration as an accomplished fact in January 2026.	MIXED the state operator asserted three data centres in operation while the national build's own works were suspended over an unpaid state tranche
Data Storage	Off-site backup capacity		NO EVIDENCE
Energy	Sufficient energy and water for data centres		NO EVIDENCE
Energy	Grid reliability	A US\$100m electricity-services loan was appraised in 2024 and the base holds nothing after the appraisal. The World Bank appraised a EUR 92.8m loan, about US\$100m, for the Strengthening Electricity Services Project on 7 May 2024, to be implemented by the national electricity company with the energy and hydraulics ministry and to run to 2028 (appraisal). It is carried as a pipeline operation: no approval, signature or disbursement follows it on the record, so the base cannot say the project started. No outage statistic, availability figure or supply guarantee for the sites the digital estate runs on is held either, which is why the reliability question is answered here by a financing document.	NO CHANGE
Energy	Rural electrification		NO EVIDENCE
Technical Capacity	Robustness of government hardware and software		NO EVIDENCE
Technical Capacity	Local capacity to maintain, manage and develop government systems		NO EVIDENCE
Cybersecurity	National cybersecurity readiness	The agency gained a statutory levy-share basis in the 2026 finance law, while the national strategy is only now out to tender. The regulator dismantled two further telecommunications traffic-fraud sites at Massengo (operation). The agency, created by law in October 2019, had FCFA 800,000,000 stated for 2025 operations on trade reporting alone, tied to no instrument and with no agency line in any appropriation or execution document. It now holds a statutory levy-share basis alongside the four resource streams of its founding statutes, and its largest operational mandate arrived through tax legislation: the invoicing decree and orders put it into joint homologation of every terminal, software and enterprise module, awarding the security label and taking 15% of homologation fees. The strategy is out to open international tender with bids due 2 September 2026, seven years after the agency was created. An audit-provider qualification standard is a consolidated draft with no adoption instrument, and a national operations centre and response team are named as a roadmap programme with no standing-up instrument.	ADVANCED

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	National data exchange system	The ministry published a national DPI architecture naming X-Road, MOSIP and Mojaloop. The ministry's statement of the national digital public infrastructure architecture names X-Road for secure federated exchange between the interior, justice, finance, health and higher education ministries with each administration keeping its own data, MOSIP for a unique digital identifier built on existing civil-registry records, and Mojaloop for a national payments switch across MTN MoMo, Airtel Money, the commercial banks and the Treasury under central bank supervision. It is a published architecture and not a deployment: nothing states that any of the three components is in service, and no procurement, timetable or budget for them is held.	ADVANCED
Data Exchange	Use of digital id in other systems		NO EVIDENCE
Data Exchange	Interoperability of health systems		NO EVIDENCE
Data Exchange	Interoperability of education systems		NO EVIDENCE
Data Exchange	Interoperability of social protection systems		NO EVIDENCE
Digital Identity and CRVS	Robustness of system	A secure digital identity framework and wallet are named again as a roadmap foundation, with no legal instrument, wallet or pilot on file. The framework was committed at a July 2025 workshop owned by the interior ministry, with a vendor cited and no legal or institutional framework adopted, the workshop's own case being that many citizens hold no valid identity document - asserted by the responsible ministry and not sized. 2026-07-28 - it was named again as one of three digital public infrastructure foundations, with still no legal instrument, no wallet and no pilot on file. Twelve months, two statements of intent and no instrument is the whole of the movement.	NO CHANGE
Digital Identity and CRVS	Registration of entire population	Production of the biometric unique-identifier card was relaunched, after a proximity distribution campaign for uncollected cards. Production was halted at the window's opening, with 10,506 identity cards and 25,549 number cards uncollected in one city alone, prompting a proximity distribution campaign. 2025-10 - production was relaunched. The prior suspension is inferred from the word relaunch: no suspension date, cause or duration is on file, and no national coverage or issuance figure exists at either end of the window, so what moved is production capacity rather than any measured count of people registered.	ADVANCED
Digital Identity and CRVS	National maintenance of id and credentials systems		NO EVIDENCE
Digital Identity and CRVS	Authentication		NO EVIDENCE
Digital Identity and CRVS	Digital id from birth		NO EVIDENCE
Digital Identity and CRVS	Interoperability of birth registration and digital id		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	Use by other systems	The unique identification number is now the authentication key for the public-revenue platform and mandatory for thirteen formalities. The number is now the authentication key for the public-revenue platform and for real-time invoice validation, and mandatory for eight economic and five administrative or social formalities. That is a substantial dependency built on a credential whose coverage is unpublished: no national issuance figure exists, and the base records cards going uncollected in the thousands in a single city. Nothing states what a person without the number does when a formality requires it, or whether any alternative route remains open.	ADVANCED
Digital Payments and Fintech	Governance role of central bank	The treasury single account at the regional central bank was still being finalised on the day the payment platform went live. 2026-08-03 - the finance ministry stated the opening convention was still being finalised on the day the payment platform went live, so the single account intended to centralise the receipts the platform routes is not in place. The base holds no earlier position on the account, so the direction is withheld. The related special treasury account is voted FCFA 5,968,000,000 for 2026, more than double the prior year, which is the only quantified signal on the treasury's banking function held.	NO CHANGE a first statement of the account's position with nothing earlier behind it
Digital Payments and Fintech	G2P functionality	The public service minister disclosed fraudulent duplicate payroll numbers and deceased or retired staff still drawing salaries to the Senate. 2026-08-07 - the minister disclosed to the Senate that fraudulent duplicate payroll numbers exist and that deceased or retired staff are still drawing salaries. No count, value, remediation date or incident detail is stated, and the disclosure is the minister's own. The platform itself is running, with three standing user complaints recorded by the ministry that operates it. A payroll system in production whose operator minutes three failure modes and whose supervising minister reports fraud on it to the legislature is the position as the base holds it, with no audit, no count of affected agents and no remedy on file.	REGRESSED
Digital Payments and Fintech	Revenue collection	The public-revenue platform went live for online payment of taxes, levies and customs duties, with all taxpayers targeted by end-2026. Nothing on file names the platform before the order of May 2026; tax payment ran through a single window at the postal bank. It is now live on the national payments switch, with payment following a declaration on the tax or customs system, authenticated, reconciled in real time and routed to the treasury against a secured electronic receipt, rolling out at large then medium enterprises with all taxpayers targeted by end-2026. Wave dates for the two cohorts are not published, and the order makes it the sole lawful channel. The filing front end is the tax portal, whose user guide fixes filing regimes, delegation and irreversible submission, one delegate at a time with the legal representative's rights removed for the duration and no correction route stated. 2026-07-15 - a steering committee chaired by the finance minister and seating the directors-general of the revenue authorities held a first meeting on three objectives: improving revenue collection, securing public funds and raising the quality of public spending.	ADVANCED
Digital Payments and Fintech	B2B and B2G functionality		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	P2P, P2G and P2B functionality	A payment aggregator was licensed for a unified interface across mobile operators, banks and microfinance institutions. 2026-06 - a regulator licence was secured for a unified interface across mobile operators, banks and microfinance institutions, the first concrete test of the mobile-money co-regulation question the industry has flagged. No transaction volume, pricing or count of connected institutions is published. The co-regulation question it tests - which regulator supervises a service that is at once telecommunications and payment - has no answer on this ledger, and no memorandum between the telecommunications and financial regulators appears anywhere.	ADVANCED
Digital Payments and Fintech	Population uptake		NO EVIDENCE
Digital Payments and Fintech	Cross-border functionality	An instant-transfer application opened a corridor from two European countries, targeting the international cost cap. 2026-05 - an application launched on a remittances-as-a-service model, live from two European countries into this country and its neighbour, targeting the international cost cap, with the payment institution licensed by a European central bank. No volume, achieved price or user figure is published, so whether the cap is met is unestablished. It is the only cross-border retail instrument on this ledger, and it is licensed abroad rather than here - no domestic authorisation, reporting obligation or supervisory position is on file for it.	ADVANCED
Digital Payments and Fintech	Consumer protection		NO EVIDENCE
Registries	Population register		NO EVIDENCE
Registries	Civil register	An integrated civil-status system's three modules were validated and presented to the Senate as the fix for document fraud; deployment is unfunded. The system was named as the civil-status reform vehicle at a July 2025 workshop with no build state published, and validation closed with recommendations in February 2026. 2026-08-07 - three modules - birth, marriage, death - plus exceptional-procedure paths were validated and the system named before the Senate as the remedy for document fraud, with deployment still unfunded. It is built in-house by the state information-systems agency. The interior minister told the Senate that ministry and municipal staff are among those selling forged civil-status documents, and no funding decision for deployment is on file. 2026-09-06 - control arrived before the system did: a circular of 1 September 2026 from the territorial administration bans antedating of civil-status acts and changes of identity or filiation without a court decision. It is an administrative control placed on a paper process while the validated software waits for deployment funding, and no volume of irregular acts is published.	ADVANCED
Registries	Address register	The addressing project has sat at the regulator for two years untransferred to the postal operator, with no deployment on file. A postal codification decree was adopted in council of ministers in July 2025, presented as bringing the country to international postal standards. 2026-07-14 - the minister recorded that the regulator has run the addressing project for two years and the ministry has not taken it up for deployment at the postal operator, so the project is still held at the regulator with no deployment, code range or address database on file. His own framing is that without the handover the work done has not had the expected impact.	STALLED

Registries	Business register		NO EVIDENCE
Registries	Social protection register		NO EVIDENCE
Registries	Electoral register		NO EVIDENCE
Registries	Tax register		NO EVIDENCE
Registries	Land register		NO EVIDENCE
Sectoral management information systems	Health	E-health and laboratory equipment was handed over at Oyo, and an obstetric digital reference project was piloted. 2026-08-07 - e-health equipment, a biosafety laboratory and a secure biomedical-waste management system were delivered to a hospital at Oyo for early disease detection, patient data management and health-service coordination. It is a single-site donation; no value, system name, national rollout or interoperability with any other health system is stated. 2026-05 - an obstetric project was deployed at one integrated health centre using digital connectivity and real-time coordination to manage emergencies, with stated plans to extend to the two main cities and reach 50 maternity units nationally. It reaches the base as corporate social-responsibility copy with no separate launch date.	ADVANCED
Sectoral management information systems	Education	An education management information system was instituted by Decret 2023-1751, gazetted 16 November 2023. Decret 2023-1751 institutes the systeme d'information et de gestion de l'education, and state examinations are separately managed on the ExaTrust platform from March 2026. No enrolment, school or teacher count from the system is held, and nothing states whether it is in operation.	NO CHANGE a standing instrument the base holds for the first time
Sectoral management information systems	Social protection		NO EVIDENCE
Sectoral management information systems	Justice		NO EVIDENCE
Sectoral management information systems	Tax		NO EVIDENCE
Sectoral management information systems	Customs		NO EVIDENCE
Sectoral management information systems	Land		NO EVIDENCE
Other GovTech and e-Gov	e-government services	A task force was gazetted under the Prime Minister on 6 August 2026, with four priority services committed within two years. 2026-08-06 - a decree created a task force under the Prime Minister with four organs: a strategic committee chaired by the Prime Minister seating thirteen ministers and meeting at least four times a year, a steering committee under the Vice-Prime Minister, a technical committee chaired by the digital-economy minister seating five agency directors-general, and an investment committee chaired by the finance minister, with interoperability of public information systems a standing objective. Its first listed task is to audit the level of digitisation across the administration, so no baseline is stated. The roadmap commits civil status, passport, criminal record and company creation as digitised priority services within two years. The one service actually compulsory is certified electronic invoicing, mandatory for every economic agent.	ADVANCED

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	ICT infrastructure for local government		NO EVIDENCE
Digitalisation of sub-national government	Digitalisation of local government records	A local-authority revenue platform's three modules were validated in February 2026, with no deployment at any local authority since. 2026-02-14 - a final validation workshop closed on three modules: a back office, a collection tool for market controllers, and a public web and mobile face, stated to open the way to operational deployment. No deployment at any local authority has been recorded since. It is built in-house by the state information-systems agency with an explicit sovereignty claim on the build - the same agency that built the civil-status system, which is also validated and also undeployed. Validation without funded deployment is the pattern this ledger repeats.	ADVANCED
Rural digital data capture	Digitalisation of rural health clinics		NO EVIDENCE
Rural digital data capture	Digitalisation of rural primary schools		NO EVIDENCE
Rural digital data capture	Digitalisation of rural registry offices		NO EVIDENCE
Rural digital data capture	Digitalisation of rural police stations		NO EVIDENCE

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Use of AI in government administration		NO EVIDENCE
AI	Use of AI in sectoral management information systems		NO EVIDENCE
AI	Development of national / regional AI systems	The research centre joined an international alliance, with foreign financing for its third and fourth phases under negotiation. The centre was created by law in May 2024 with statutes approved in council in July 2025, built with a Chinese counterpart and showcased at a summit. 2026-04 - it was integrated into an international alliance, with Russian financing for phases three and four under validation through a debt-conversion mechanism and a university memorandum carrying a three-year action plan. Dual-patron construction, Chinese and Russian, in a programme framed domestically as digital sovereignty; no research output, staff count or budget is held. A joint artificial-intelligence laboratory was announced as a component with no source recording it built, staffed, equipped or operating.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Control of AI abuse	Five days of conferences closed with priorities for a national strategic framework for digital and artificial-intelligence regulation. 2026-01 - conferences at Brazzaville closed with priorities for a national strategic framework for digital and artificial-intelligence regulation, capacity-building for regulators and administrations, and a standing public, private and academic collaboration framework, the regulator having convened the seminar. The outputs are recommendations rather than instruments. No rule, complaint route, audit power or penalty exists for any artificial-intelligence system operating in the country. At the close the minister referred to a data-centre inauguration and a fifth-generation launch as accomplished facts, both asserted in passing and in no primary the base holds.	ADVANCED
ICT Industry	National capacity in DT-related production	The state operator held meetings in the neighbouring capital on interconnection, wholesale capacity trading and international roaming. 2026-06 - a state-operator delegation held meetings in the neighbouring capital on interconnection, wholesale capacity trading and international roaming, with no interconnection agreement, financing commitment or capacity contract on file. The account is a wire item reading as corporate communications and is company-reported throughout. The transit-hub ambition rests on a backbone the operator has just taken onto its balance sheet and on a single submarine cable whose outages the regulator has been trying to route around since January 2026.	ADVANCED
Innovation ecosystem	Technology hubs		NO EVIDENCE
Innovation ecosystem	Tech startup ecosystem	A ride-hailing and delivery platform began operating in Brazzaville, while the labelling regime has not moved. 2025-11 - a platform began operating in Brazzaville with geolocated taxis, premium vehicles and hourly rentals, funded from a US\$30m round of equity and debt, entering a market a competitor had left. No later source reports fleet size, driver numbers or the promised financial and delivery layers. The startup labelling regime, with award and withdrawal procedures and a labelling commission established in council in July 2025, is unchanged: no source records a commission sitting, a label awarded or withdrawn, or any count of labelled startups. It is the only startup-specific instrument the base holds for the country.	MIXED a ride-hailing platform entered the market while the startup labelling regime has not produced a single labelled firm

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	Digital literacy (civil service)		NO EVIDENCE
Literacy	Digital literacy (general population)		NO EVIDENCE
Training and skills	DT-related training in secondary education	An education sector digital roadmap was validated at a Brazzaville workshop on 19 August 2026. 2026-08-19 - a digital roadmap for the education system was validated by sector stakeholders at a Brazzaville workshop, for a concerted update of the sector digital document. It is validated rather than adopted, and no text, budget or implementation timetable is published. Nothing else on this ledger touches technology teaching in schools: no device programme, no curriculum change, no teacher cohort and no connected-school count exists at either end of the window.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	DT-related university facilities and qualifications	A national cybersecurity training plan is out to open international tender, bundled with the strategy on a 24-month mission. 2026-07-23 - a 24-month mission bundling the training plan with a national strategy and national conferences went to open international tender, externally financed through the transformation project, with scope covering skills development across public and private actors and no contract value published. The country has neither a national cybersecurity strategy nor a national training plan, and both are being outsourced under a donor-financed project. Bids close on 2 September 2026, so nothing is contracted, and no university, faculty or qualification in the field appears anywhere on this ledger.	ADVANCED
Training and skills	Graduates entering DT ecosystem	The project's 1,200-trainee target was carried forward unchanged into the 2026 work plan with no trained figure published in either year. The 2025 work plan set 1,200 young people to be trained; the 2026 plan carries the same 1,200 by 2027, with no trained figure published in either year, in a project whose 2025 budget its own coordinator described as re-running unfinished 2024 activity. A five-month certified cybersecurity course, part of a commitment to train 25,000 African young people across 24 countries, has no national enrolment, cohort size or completion figure published since March 2025, and the research centre's training platform remains in pilot with about 3,000 free online courses against a 10,000-youth target and no published outturn fourteen months on.	STALLED
Research institutions	Think tanks and academic departments contributing to DT policy		NO EVIDENCE

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Citizen feedback portals		NO EVIDENCE
Access to services	Citizen participation in policy	A citizen watch of 75 observers reported the polling-day telecommunications shutdown at the March 2026 presidential election, the base's only independent monitoring of it. A Congolese association presented a citizen-monitoring report on the March 2026 presidential election in Brazzaville on 25 July 2026, built on 75 citizen observers deployed across several departments using field observation, interviews, social-media analysis and official documents. It named the polling-day telecommunications shutdown among its main findings, alongside difficulties with the reliability of the electoral rolls, questions over the equity of media coverage and the circulation of false information on social networks, while concluding the election was broadly calm (report). The same association ran a third public session on social media and disinformation on 11 August 2026 at a francophone digital campus of the national university (session). Both are civil-society work financed by a foreign embassy's media and information-integrity fund. No official response to the shutdown finding is on the record, and no duration, scope or legal basis for the shutdown itself is published.	ADVANCED
Access to services	Gender equity		NO EVIDENCE
Access to services	Inclusion of persons with disabilities		NO EVIDENCE
Access to services	Inclusion of refugees and IDPs		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital divides	Bridging of digital divides	20 of 76 rural sites are fully operational, against almost 80% of the rural population outside fourth-generation coverage. 2025-10 - the ministry reported 20 of 76 built-and-equipped sites fully operational at a mid-term review, with 56 in advanced stages, an additional US\$3m allocated to upgrade sites to fourth-generation service and 16 rural localities across six departments commissioned. No later site count is held, so the position has not been restated in ten months and whether the end-2025 target was met is unestablished. The universal fund was appropriated at FCFA 1,000,000,000 for 2026, its first figure on file, flat for three consecutive years and spent entirely as transfers, and two further towns were connected in January 2026 against 2025 targets of ten multimedia centres and 100 connected sites whose achievement is not established. Rural coverage stands at 33% for third-generation and 21% for fourth-generation service, with half the rural population outside any coverage. The US\$3,000,000 upgrade allocation is stated by the minister as the government's own, distinct from the project envelope, with the fiscal year unstated and no local-currency figure published.	MIXED twenty rural sites came into service and two towns were connected while the 76-site end-2025 target has not been restated in ten months

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	National strategy for development of statistics		NO EVIDENCE
National statistics	Censuses and surveys	A quarterly labour-market and informal-sector survey is in preparation, a first for the country. Earlier surveys produced one-off data only. The statistics institute and the labour organisation are now harmonising concepts to international standards with four series of indicators a year planned, a first for the country. 2026-08-19 - a nine-day regional workshop opened at Pointe-Noire with forty statisticians from the six member states to validate a harmonised regional methodological guide, the organisers stating that no member state currently runs a regular labour force survey and putting informal employment above 65 per cent of jobs across the bloc, with the workshop running to 27 August. No fieldwork date, first-publication date, sample or budget is stated.	ADVANCED
National statistics	Statistics from administrative data	Balance-of-payments collection ran at 41.81% for 2025 against 98% for 2024, while an insurance data platform launched. 2026-04-21 - the regional central bank's national director launched the 2026 collection and disclosed 41.81% for 2025 against 98% for the 2024 balance of payments on a sample of 136 declarants, calling the fall a collective concern. The 2025 figure is a running total at the launch date rather than a closed-year rate, so the comparison is indicative. 2026-06 - a public-transport insurance data platform launched under the financial-institutions directorate, centralising sector data with real-time transaction visibility, with insurer participation hoped for rather than mandated. No coverage or participation figure is published, and the launching official publicly asked what the centralisation saves the end user.	MIXED an insurance-sector data platform went live while balance-of-payments collection fell from 98% to 41.81%

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Open data	Use of open data	The statistics institute's Open Data Portal has begun loading ministry and agency data alongside its own. The economy, plan and statistics minister signed a partnership convention for the statistics institute on 5 June 2026, at which the institute's director general described the Open Data Portal loading not only its own data and outputs but those of sectoral ministries and other national agencies, with access, download and re-use in several formats. That is an operating state rather than an announced launch, and it is the closest thing the country has to open data. No founding instrument, dataset inventory, licence statement or usage figure for the portal is held.	ADVANCED
Use of satellite data	Agricultural use of satellite data		NO EVIDENCE
Use of satellite data	Meteorological use of satellite data		NO EVIDENCE

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	USA / hyperscaler MoUs, engagements and commitments	The President activated Congo's connection to Meta's 2Africa cable at Pointe-Noire in February 2024. The ministry's own account records the President activating Congo's connection to Meta's 2Africa submarine cable at Pointe-Noire, the cable landed under the public-private Congo cable consortium, and commissioning the regulator's Tier 3+ data centre of 54 racks, connected to both WACS and 2Africa. It is the one realised United States hyperscaler engagement on the record. No signed memorandum with Meta was located, and no digital engagement with the State Department, USAID, the DFC, EXIM or the Brazzaville embassy is held.	NO CHANGE a standing position the base holds for the first time
China activities	Chinese MoUs, engagements and commitments	A five-year private telecom network was contracted at an oil field, and satellite navigation on the ocean railway was discussed. 2025-08 - a five-year contract was announced for an operator to design and deploy a private network at a Kouilou field, described as the first private network of its kind in the country. It was announced through a corporate social-media post with no separate signature or commissioning date, and no source records the network built or in service. 2026-03 - a Chinese delegation received at the launch of railway rehabilitation works discussed integrating satellite navigation and communications, with pilots proposed and welcomed, no contract, amount or timetable, and a return visit announced. The Congolese side committed only to providing a regulatory framework favourable to innovation and investment security.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
EU activities	EU MoUs, engagements and commitments	The European limb of the transformation project began procuring, and a member-state development bank channel opened. A bank loan was agreed in December 2022 and a grant in December 2023, on a consolidated envelope of EUR 136.5m. The same envelope is now procuring: a 24-month cybersecurity strategy, training plan and national conferences mission is out to open international tender with bids closing 2 September 2026, the notice publishing no value. 2026-07 - an exploratory working session at the digital agency opened a channel with a member-state development bank under the European gateway programme, on institutional capacity, structuring digital projects, public-service modernisation and the innovation environment, with no instrument signed and no commitment, sum or timetable named - notable for putting a member-state development bank rather than the Commission at the front of the approach.	ADVANCED
Gulf/UAE activities	Gulf MoUs, engagements and commitments	A UAE Comprehensive Economic Partnership Agreement names the digital economy among its priority sectors. The finance minister signed a Comprehensive Economic Partnership Agreement with the UAE foreign trade minister at Abu Dhabi on 12 April 2025, alongside presidential talks at the 14th Annual Investment Forum, and named the digital economy among the free-trade area's priority sectors, undertaking to have the agreement ratified and made operational. It is a trade and investment framework rather than a technology instrument. No Gulf sovereign-fund or telecom investment, data-centre commitment or technology memorandum naming Congo follows from it on the record.	NO CHANGE a standing position the base holds for the first time
India activities	India MoUs, engagements and commitments	India's presence is a Pan-African e-Network node in Brazzaville and Airtel's 2010 market entry. India's own country brief records tele-education, telemedicine and a VVIP connectivity node set up in Brazzaville under the Pan-African e-Network Project, and Bharti Airtel's 2010 acquisition of Zain Communications Network, which established its Congolese telecom operations. The brief is the current standing statement of the relationship and it dates nothing digital after 2010: no line of credit, export-bank facility, IT services contract or capacity programme naming Congo is held.	NO CHANGE nothing dated after 2010

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Agency annual report on the state of national cybersecurity	any single published annual report, or a board deliberation showing the statutory obligation waived	2026-09-04
National cybersecurity and ICT workforce stock	the national training plan now out to tender, an agency or regulator annual report, or an international index country profile with workforce data	2026-09-04
Energy cost and reliability for digital infrastructure	the industry report's underlying cost tables, a regulator cost-of-service study, or the gas-plant data-centre feasibility study output	2026-09-04
Electronic-communications framework law of 2009	the 2009 law's number and gazette text, and any bill or ordinance revising it	2026-09-04
Audited outturn for any digital line	a settlement law later than exercise 2020, with its annexed tables reproduced	2026-09-04
National digital-literacy programme	a national digital-literacy programme document, a fund or project training outturn broken out by literacy rather than skills, or a published digital-literacy rate	2026-09-04

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
