

MONTHLY UPDATE

Literacy: monthly update, July 2026

Edition of 2026-08-27 · compiled by Claude Opus from the documents in the Corpus repository

18 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.

ANGOLA · BENIN · BURKINA FASO · CAMEROON · COTE D'IVOIRE · DR CONGO · GABON · GAMBIA · GHANA · KENYA · LIBERIA · MOZAMBIQUE · RWANDA · SAO TOME AND PRINCIPE · SENEGAL · TANZANIA · TOGO · ZAMBIA

Angola

School computing continued to be delivered by installation count. The telecommunications minister [inaugurated a 25-computer laboratory serving 3,051 students at a polytechnic and said the programme behind it had by then installed more than 2,000 computers across 88 schools nationwide](#). Both figures are the ministry's own, and the machines-to-students ratio at the one site it named is the part of the programme a national total cannot show. No budget, connectivity provision or maintenance arrangement is published.

Benin

A co-author of the national artificial-intelligence strategy [published a build-an-LLM-from-scratch book arguing for frugal domestic artificial intelligence](#), its sharpest claim being a scarcity of graphics processors turning artificial intelligence into a luxury good.

Burkina Faso

That agency and a payments operator opened a 72-hour financial-education campaign on 28 July, extending a partnership running since 2025 to four cities.

Cameroon

A digital financial-literacy project running in Cameroon and Senegal since June 2024 [closed on 15 July](#), leaving a digital financial-services comparison platform with no funded data-update mechanism; it was offered to both states and neither is reported as having accepted. No Cameroon-side trainee count, budget share or partner list is published.

Cote d'Ivoire

The national education digitalisation project stands at [six of eight components complete with the technical and financial agreement still unsigned](#). No cost, financier or component list is published: the project is described only by its stage count.

DR Congo

A [campaign to publicise the digital code launched in Kinshasa on 6 August, mobilising 2,000 young volunteers for 30 days at two publications a day](#) on cybersecurity, data protection and responsible internet use, carried by the ministry with UNDP support. The code was promulgated in March 2023, and no budget for the campaign and no measure of its effect is stated.

Gabon

On 23 July the validated implementing texts included a draft decree creating a basic computing and internet certificate for education, with no syllabus, awarding body, cohort target or start date attached ([workshop close](#)).

Gambia

On the demand side, an [account published on 30 July 2026](#) records 400 rural women and girls trained across four regions between September 2025 and March 2026 in safe internet use, online privacy and data protection. Its implementer names unreliable internet, high data costs and unreliable electricity as the obstacles to continued practice — the only field statement in this period on what access costs a household.

Ghana

The education council completed a revised basic-education curriculum adding coding, artificial intelligence and technical subjects, announced on 20 July and not yet adopted.

Kenya

The regulator donated computers to a school in Turkana on 30 July, one of 23 institutions recently supported, with no quantity or value disclosed.

Liberia

On 31 July, 19 young leaders took the [first of three media and information literacy sessions in Monrovia, run through the UN electoral support project with the National Elections Commission and the Press Union on Canadian funding](#). Six external funders and implementers stand behind a programme whose stated purpose is national resilience against misinformation before elections, and no budget figure is disclosed for it.

Mozambique

The month's only movement on digital literacy was a demand for it. At the launch of a UNESCO-organised dialogue series in Maputo, an NGO [called for a national digital-literacy programme for young people, arguing digital skills are now a precondition for meaningful democratic participation](#). The base holds no such programme or strategy, and a civil-society call is evidence that none exists rather than a step towards one; the absence is now dated.

Rwanda

[More than 5,000 teachers across every district were trained in the first phase of a national artificial-intelligence literacy programme, reported complete at end-2025](#). The assertion is a diplomat's, in an opinion piece, and no ministry primary is held for it.

Sao Tome and Principe

UNICEF's São Tomé office opened a tender (RFQ_03/2026, closing 12 August) for 80 tablets and 90 all-in-one desktop computers to reinforce technology in school ICT rooms, against grant SC220341 under the National Digital Learning Programme (PNAD), with delivery preferred by the second week of September 2026. No contract value was stated in the tender notice, since bidders price the supply themselves.

Senegal

A digital financial-education project closed on 15 July having trained 265 civil-society trainers across twelve organisations. Its comparison platform is left unmaintained, because no implementer can compel tariff data from financial institutions.

Tanzania

The telecoms regulator's director general put the digital clubs programme at 800 clubs from nursery to university level, funded through the regulator and anchored in the digital economy framework, alongside its sponsorship of the national schools mathematics olympiad team. No establishment dates, per-club spend, enrolment or outcome measure is published. Separately the annual report records 1,167 certified financial educators trained and about 155,730 individuals reached; no prior-year figure is held, so the count stands unbenchmarked.

Togo

A programme of school FabLabs, trained fabmanagers and regional innovation and technology centres was set out publicly, together with the vocabulary it will be run in. No site count, budget or opening date is given.

Zambia

The state ICT institute, with the International Telecommunication Union and the youth ministry, handed computers, a projector and an industrial printer to the Mpika Youth Resource Centre, with two further handovers named. No cost, contract term, procurement route or trainee count is published.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
