

TWELVE-MONTH PROGRESS REPORT

Tunisia: progress report, 2025-08-01 to 2026-08-09

Edition of 2026-08-13 · 59 systems and instruments tracked, 9 of them not held

Compiled 2026-08-10 from the Data Landscapers source base. Sections follow the status report. Each opens with a movement ledger comparing the position at the start and end of the period, which runs to the date of issue rather than to the last month's close.

Of 59 systems and instruments on this place's ledger, 34 changed position between 2025-08-01 and 2026-08-09, 8 did not, 8 carry no stated baseline, and 9 are **Not held** at both ends.

Shape check, run before the comparison: 58 sources for this place in the window — 15 in the earlier half (2025-10 to 2026-02), 43 in the later (2026-03 to 2026-08). The two halves are comparable, so the comparison is made over the whole window.

Movement values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a measured position worsened. *Closed* — the programme ended. *No change* — the position at both ends is the same. *Baseline not held* — the base carries no position at the start of the period, so no movement can be stated. A value may carry a qualifying clause after a comma, as in *Advanced, slipped*.

Summary of the period

Two things changed in this period that change what the Tunisian state can do. Digital identity went from voluntary to [compulsory for two classes of public-service user on 1 July 2026](#), and a [national health identifier that did not exist a year ago](#) now joins health, civil-status, social-affairs and education records. The interoperability platform that will carry those joins [moved from a five-ministry pilot to the business economy](#).

The instrument that would govern all of it did not change. The [2004 organic law is still in force](#); its replacement entered committee in February 2026 and has not passed, and the supervisory authority it would strengthen appears in none of the year's new systems.

Physical capacity moved once and decisively: the [Medusa cable's Bizerte landing went into service on 3 June 2026](#). Hosting did not move at all — the data centres named in the plan and the memoranda are at the same prospective stage at both ends of the window.

Infrastructure

Connectivity

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
5G commercial service	In service across all three operators since February 2025, under fifteen-year licences awarded in November 2024 (2025-08)	In service; the regulator's fixed-wireless obligation carries a 30 Mbps floor and a 50% contractual-speed guarantee, and fixed-wireless lines rose from 9,425 at launch to 319,554 by May 2026 (2026-08)	ADVANCED, IN REACH
Medusa submarine cable landing at Bizerte	Under construction; the hosting agreement was signed in May 2023 and the cable had not landed (2025-08)	Landed 31 October 2025 as the cable's first African landing and in service from 3 June 2026, with Orange Tunisia owning and operating the landing station and the roughly 1,050 km Tunisian segment at up to 24 Tbps (2026-06)	ADVANCED
Tunisie Telecom dedicated Medusa fibre pair	Contracted at 20 Tbps in February 2025, not in service (2025-08)	In service on the operational cable; the operator's claim of an eightfold capacity increase is about its own purchased capacity, not the cable (2026-06)	ADVANCED
Starlink satellite service licence	Application pending since January 2023, with technical trials run in 2023 and no licence (2025-08)	Still unlicensed after three years; the operator opened US\$9 refundable pre-order deposits in February 2026, and a March 2025 feasibility study recommended a time-limited competitive licence, deferred to let 5G and fibre consolidate (2026-06)	NO CHANGE

Data Storage

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Data centres as a state investment priority	Named one of two core priorities at the Investment Authority's 22nd Strategic Council, with recommendations to modernise data-protection law, expand renewables and create a cloud special economic zone (2025-10)	Carried as a named project line in the statutory development plan alongside artificial intelligence and digitalisation, with no budget line, no sequencing and no delivery agency stated (2026-06)	ADVANCED
SoleCrypt Bizerte data centre	Did not exist	A 20 MW artificial-intelligence data centre planned at the landing point of three subsea cables, to be powered from the developer's own 60 MW solar site; the memorandum is non-binding and no financing, permit or construction start is published (2026-02)	ADVANCED
Sovereign cloud for national health data	Did not exist	A stated intention to host national health data on Tunisian cloud solutions, with no amount, date, named agreement or provider (2026-02)	ADVANCED

Energy

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Renewable power for data-centre capacity	Did not exist	A 60 MW solar site is to power the planned Bizerte facility, its base camp operational from November 2025; no grid connection or power purchase arrangement is published (2026-02)	ADVANCED

Cybersecurity

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
National cybersecurity agency advisory function	BASELINE NOT HELD	Issuing public advisories against a live campaign harvesting banking and personal data; its offered verification test is that Tunisian government sites use only the .tn domain, and no takedown power, enforcement action or role for the data-protection authority is on record (2026-07)	<i>Baseline not held</i>

International capacity is the period's real gain. A year ago the Medusa cable had a signed hosting agreement and no landing; it [made its first African landing at Bizerte on 31 October 2025](#) and [entered service on 3 June 2026](#), with the landing station and the roughly 1,050 km Tunisian segment owned by Orange Tunisia at up to 24 Tbps, and Tunisie Telecom's [contracted 20 Tbps pair](#) live with it. One party gained an asset; the other gained capacity on someone else's.

Mobile went the other way on the measure that matters to users. 5G was already running at both ends of the window; what the period added is the first independent measurement, and it is [not flattering](#) — the 5G median down 30% by month six and the combined 4G and 5G median below the pre-launch baseline, against fixed-wireless lines up from 9,425 to 319,554. Reach advanced; measured experience did not. The measurement is cited, not absorbed.

Hosting is where a year produced no capacity. Data centres went from an [investment-council priority in October 2025](#) to a [named line in a statutory plan in June 2026](#) — a change of instrument, not of concrete. The flagship is still a [non-binding memorandum](#) and the health cloud still an intention. That matters against the investment authority's own list, which put modernising data-protection law among the preconditions for attracting exactly this investment.

Digital public infrastructure

Data Exchange

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
National interoperability platform (UXP)	Phase 1 live as a proof of concept across five ministries, with a central governing authority established (2025-08)	Phase 2 contracted, extending the platform to the business register, the investment authority, the industry and export promotion agencies, the finance ministry and the central bank; completion 2027 (2026-05)	ADVANCED

Digital Identity and CRVS

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
e-Houwiya mobile identity	Live and voluntary, at 200,000 subscribers as of March 2025, with no legal obligation to hold one (2025-08)	Compulsory for investment-project declarations and for access to the business register from 1 July 2026; no subscriber figure has been published since March 2025 (2026-07)	ADVANCED
National Health Identifier	Did not exist	In pilot in university hospitals since June 2026, bound to the national identity card, the social security number and school and university identifiers; over 15,000 numbers issued as at 22 June 2026 and roughly 100,000 medical files linked as at 27 July 2026 (2026-07)	ADVANCED

Digital Payments and Fintech

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Kashy wallet (Tunisie Telecom)	Did not exist	Launched with a licensed payment partner, offering transfers, collections, top-up and cash withdrawal by phone (2026-03)	ADVANCED
Licensed payment service providers	368 (2024)	435 (2025)	ADVANCED
TUNPAY national payment label	Did not exist	A national label that banks, payment institutions and the postal service must integrate into wallet applications, interfaces and acceptance points, including merchants and agents (2026-05)	ADVANCED
walletii (Ooredoo Fintech)	Did not exist	Licensed with a Gulf banking group and the national payments operator, targeting the underbanked over an agent network; no launch date or user figure published (2026-03)	ADVANCED
Mobile payment transactions	Not separately published for 2024	8.4m transactions worth TND 1,769m in 2025, up 81% year on year, with peer-to-peer transfers 50.7% of operations and merchant payments 17.8% (2025)	BASELINE NOT HELD

Registries (population, land, address, etc.)

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Digital birth declaration platform	Did not exist	202 births registered, each assigned a health identifier automatically at birth, tied to the mother's and wired into civil-status registers and social-affairs platforms (2026-07)	ADVANCED
National Business Register digitalisation	Paper filing in use (2025-08)	The whole company-creation chain online with no physical travel, access requiring a digital identity, and electronic documents carrying the same legal value as paper; online tax-identity-card issuance targeted for end-September 2026 (2026-04)	ADVANCED
AMEN social registry	Over 333,000 poor households on monthly cash transfers and over 620,000 low-income households on free or subsidised healthcare, with 44.4% of cash transfers digitalised (2023-12)	Unchanged; no coverage or digitalisation update has been published since (2026-08)	NO CHANGE

Sectoral management information systems (HMIS, EMIS, etc.)

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Sahetna.tn health portal	Did not exist	Cleared its technical gate and not launched; it is to expose medical records, appointments and treatment tracking against the health identifier, and no legal basis, retention rule or data-protection authority is named for the linked dataset (2026-07)	ADVANCED
Digital hospital project	BASELINE NOT HELD	Phase 1 reported delivered by end-2025 and the project carried in the statutory development plan; no facility count, budget or completion date published (2026-06)	Baseline not held

Other GovTech and e-Gov

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
National register of community companies	Did not exist	Live, covering formation, filings and tracking of ministry responses; the launch disclosed 230 companies created, 15,000 participants, 60 operational and 380 jobs, with personal-data storage described as secure and no legal basis, retention rule or regulator named (2026-07)	ADVANCED
Online business tax registration	Did not exist; the declaration of existence required a visit to a tax office	Filed remotely with real-time tracking, correction of the tax file and download of the tax identification card, available at all hours; announced by video capsule rather than by gazette, and the confidentiality assurance names neither an instrument nor a supervisory authority (2026-08)	ADVANCED
Education platform (tarbia.tn)	Live since January 2024; the target of connecting 3,300 schools to broadband by end-2024 had no published outcome (2025-08)	Unchanged; the broadband target still has no published outcome (2026-08)	NO CHANGE
Single administrative services portal	BASELINE NOT HELD	Reported delivered among a portfolio of 192 tracked projects, alongside remote vehicle-tax payment, the electronic fiscal stamp, a building-permit platform and a citizenship system; no usage figure is published for any of them (2026-02)	Baseline not held

National statistics

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Internet use	Not measured on this series	85.9% of respondents using the internet, 95.4% holding a mobile line, 84.3% a smartphone and 41% a computer, with 70.4% connecting principally over mobile (2026)	BASELINE NOT HELD
Use of online public administration	Not measured on this series	26.5% of internet users, last of the four uses measured, behind artificial-intelligence applications at 47.9%, e-services at 41.3% and online shopping at 36.9% (2026)	BASELINE NOT HELD

The identity layer changed in kind, not in size. A year ago the mobile identity was voluntary, at [200,000 subscribers as of March 2025](#), and the minister who built it noted there was no obligation to hold one. It is now a condition of [declaring an investment](#) and of [reaching the business register](#), which discontinued paper filing on the same date. No subscriber figure has been published across the whole window, so the take-up effect of compulsion cannot be measured.

Underneath it, a second identifier appeared from nothing. The [national health identifier](#) entered pilot in June 2026 and is bound to the identity card, the social security number and school identifiers; its portal [cleared technical validation and a security audit in July](#) and a births platform now assigns the identifier automatically. Its coverage cannot be compared at either end, because no national figure has been published at either end.

Registers advanced and their governance did not. Three went live or online inside the window — [community companies](#), [business tax registration](#) and the business register — and each describes its handling of personal data as secure without naming an instrument or an authority. The [AMEN social registry](#), the one register with detailed published figures, has published nothing new in the period.

Payments standardised without measurable growth on file. The [national label](#) did not exist a year ago and now binds banks, payment institutions and the postal service; licensed payment providers rose from 368 to 435. The transaction series behind that — [8.4m mobile payments worth TND 1,769m in 2025](#) — has no comparable earlier figure on file, and the wallet count is carried in two irreconcilable versions.

Governance and regulation

Legislation and regulation

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Compulsory e-invoicing (Article 53)	Legislated to take effect 1 January 2026 for all service providers regardless of invoice value or firm size (2025-08)	Under amendment: parliament's memo records that no unified national e-invoicing system yet exists and that mass e-invoicing raises serious personal- and professional-data protection issues, and the amendment mandates a 30-day joint ministerial report on readiness and data-protection compliance before a phased timeline (2026-02)	ADVANCED
Development Plan 2026-2030 (loi n 2026-16)	Did not exist as an adopted instrument	Promulgated as the binding reference for public policy to 2030 under articles 75 and 77 of the Constitution, adopted by the Assembly on 10 July and the Council of Regions on 17 July (2026-07)	ADVANCED
Organic Laws 22 and 23 of 2024 on biometric identity	In force; use was targeted for the first half of 2025 and unconfirmed (2025-08)	In force; nothing held confirms issuance has begun, and an amendment to prohibit a centralised biometric database held by the interior ministry was introduced the day before the vote and dismissed (2026-08)	NO CHANGE

Strategies, plans and policies

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Digital content of the development plan annex	Not held; the plan's digital content was known only from official statements about it (2025-08)	Held in full: the sectoral volume mentions digital or digitalisation 414 times, artificial intelligence 119, data 72 and cybersecurity 9, makes the digital economy a pillar of human-capital development, and commits to integration into the global digital landscape while preserving digital sovereignty (2026-06)	ADVANCED
Digital Tunisia 2020-2025	In force in its final year (2025-08)	Lapsed; no extension, repeal or outcomes report is held, so what it delivered against its own objectives is unestablished (2026-08)	CLOSED
National digital transformation vision	Did not exist; the sectoral strategy that preceded it was in its final year (2025-08)	A chapter of the five-year development plan coordinated by the economy and planning ministry rather than a sectoral strategy owned by the communication technologies ministry, with 192 digital-transformation projects under cabinet follow-up (2026-02)	ADVANCED

Regional collaboration

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
African Telecommunications Union council seat	Did not exist	A 2027-2030 seat on the administrative council, giving a vote on continental direction across digital transformation, artificial intelligence, cybersecurity and capacity building; no statement of what Tunisia intends to press for is reported (2026-07)	ADVANCED

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Algeria-Tunisia telecommunications cooperation	Did not exist	Expanded cooperation announced across telecommunications and information technology; no instrument, amount or workplan published (2026-06)	ADVANCED
Triangular startup ecosystem programme with Japan	Did not exist	A 2026-2028 programme convening African participants in Tunis on building startup ecosystems, with Tunisia's own Startup Act as the curriculum and the first session in December 2026 taking representatives of eight countries; the signing date is given only as recent and no amount or cost share is disclosed (2026-07)	ADVANCED

Data protection

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Draft organic law on personal data protection	Did not exist	123 articles across six titles under committee review, introducing a data protection officer role, obliging public institutions to obtain authorisation for any processing, shifting enforcement to financial penalties through a sanctions department, and naming the press, surveillance cameras, algorithms and cross-border transfers as the uncovered domains; not passed (2026-02)	ADVANCED
National authority for personal data protection	Constituted under the 2004 law, with no enforcement action, decision or annual report held (2025-08)	Unchanged; the sponsors of the replacement bill cite its limited role as the institutional gap the bill exists to close, and it is named in none of the year's new data-concentrating systems (2026-08)	NO CHANGE
Organic Law 2004-63 on personal data protection	In force and described by civil society as unfit for the processing the state now does (2025-08)	Still the governing instrument; a 123-article replacement is in committee and has not passed (2026-08)	NO CHANGE

Open data

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Agrifood sector data portal	Did not exist	Live and free after registration, centralising regulatory monitoring, market movement, export opportunity and sector-trend data under three public bodies; built inside a German- and EU-financed project with no amount disclosed and no statement of what happens when the project ends (2026-07)	ADVANCED

The framing instrument was replaced and the protective one was not. [Digital Tunisia 2020-2025](#) lapsed at term with no outcomes report, and the [Development Plan 2026-2030](#) was promulgated on 20 July 2026, carrying the digital programme as a chapter of a whole-of-government plan rather than as a sectoral strategy. Its [annex went from unheld to held in full](#) inside the window, which is a change in what can be said about Tunisian digital policy rather than in the policy.

Against that, the [2004 data-protection law is in force at both ends of the period](#) and its 123-article replacement is in committee at the end as it was in February. So is the supervisory authority's position: unchanged, and named in none of the systems built during the year.

The one instance of the guardrail arriving first is [the e-invoicing amendment](#), which halted a blanket mandate pending a readiness and data-protection report. The mandate it halted had been legislated to take effect on 1 January 2026.

Regionally the period added two positions that did not exist: a [seat on the continental telecommunications council](#) and [cooperation with Algeria](#), neither yet carrying a stated agenda or workplan.

Artificial intelligence and the technology sector

AI

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Livre Blanc on artificial intelligence for Tunisia	Did not exist	A 2030 vision authored by an association and offered to the state for debate, naming the absence of large-scale data centres and sovereign compute, brain drain and under-equipped small firms as the constraints, and prescribing frugal compute investment sized by measured demand; declared open source but not posted anywhere reachable, so its content is held at press-summary precision (2026-08)	ADVANCED

ICT Industry

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Telecommunications market structure	Three mobile operators, mobile internet and subscriptions rising and voice plateauing under displacement by internet services (2025-04)	Unchanged in structure; the state operator is being modernised under a European development loan and the market's two private operators are foreign groups (2026-08)	NO CHANGE

Innovation ecosystem

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Startup Act and Startup Tunisia	In force, with over 40 firms reported as having expanded into Europe, the Middle East and sub-Saharan Africa (2025-08)	In force and being circulated as a replicable model rather than as one country's statute, through a triangular programme with Japan (2026-07)	ADVANCED
Tunisia Digital Summit	BASELINE NOT HELD	Tenth edition held with about 2,000 participants and 80 exhibitors, the minister setting a goal of a regional digital hub and pledging continued legal and regulatory development on artificial intelligence and data protection (2026-04)	Baseline not held

Tunisia began the period with an artificial-intelligence strategy scheduled and ended it with one published by somebody else. The [Livre Blanc of August 2026](#) is the most specific AI roadmap on the record for the country, and a diaspora association wrote it. No state strategy appears at either end of the window.

The startup law moved in status without changing in text. It was [adopted as the curriculum of a Japanese-financed programme for other African states](#) in July 2026 — an export of a statute rather than of a service, and a use it did not have twelve months ago.

The telecommunications market's structure is unchanged: three operators, mobile broadband dominant, and a state incumbent whose modernisation is externally financed.

Inclusion and capacity

Access to services

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Affordability of digital services	BASELINE NOT HELD	A digital basket at 1.53% of gross national income per head, about US\$5.31 a month, second in the Maghreb and under the two-percent international threshold; the figures are the international union's, reported by the regulator (2026-07)	<i>Baseline not held</i>

Training and skills

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
Digital skills in the development plan	Did not exist as a statutory commitment	Artificial intelligence, data analysis, programming and cybersecurity named as the skills base of a digital economy made a pillar of human-capital development; no programme, budget, target or delivery agency is stated (2026-06)	ADVANCED

Skills acquired a statutory home. Artificial intelligence, data analysis, programming and cybersecurity are [named in the plan annex](#) as the skills base of a digital economy made a pillar of human-capital development — a commitment that did not exist a year ago and that still has no budget or delivery agency behind it.

Finance

New investments

SYSTEM OR INSTRUMENT	AT 2025-08-01	AT 2026-08-09	MOVEMENT
EBRD loan to Tunisie Telecom	Approved by the board and not announced; no drawdown on record (2025-08)	Announced at up to EUR 190m in four tranches with a first committed tranche of EUR 50m, funding a 4G-to-5G upgrade, fibre to 200,000 households, backbone and core modernisation, energy investment and the operator's connection to the submarine cable, with a complementary EUR 11m European Union grant and a first-loss guarantee (2026-01)	ADVANCED
EU CEF Digital grant for the Tunisian cable segment	In implementation (2025-08)	Closed; EUR 9.6m against a EUR 32m project budget, exactly 30%, buying the Bizerte landing station and the roughly 1,050 km Tunisian segment that Orange owns (2025-08)	ADVANCED
AfDB economic and social reforms grant	Closed (2025-08)	Closed; no evaluation or successor operation is held (2026-08)	NO CHANGE

The period's financing movement is disclosure rather than money. The [EBRD facility of up to EUR 190m](#) had been board-approved in July 2024 and unannounced at the start of the window; its announcement in January 2026 is what made its four tranches, its components and its EUR 11m companion grant citable. The [European grant that built the cable landing closed in August 2025](#) at EUR 9.6m of a EUR 32m project.

Domestic financing did not move, because there is nothing to move: no appropriation line for the digital programme exists at either end of the period, and the [2027 budget orientations name the digital transition without attaching a figure](#).

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Domestic technical capacity to operate the national digital estate	A staffing plan, skills audit or operations report covering who runs the interoperability platform, the identity layer and the health identifier.	not yet probed
Issuance of the biometric identity card and passport	An interior ministry statement, an issuance figure or a gazette notice. The enabling organic laws passed in March 2024 and use was targeted for the first half of 2025; nothing held states whether issuance has begun.	2026-08-09
Active digital wallet count	The central bank's own payments bulletin. The wiki carries 815,000 for 2025 from an aggregator; reporting attributed directly to the bulletins gives roughly 469,000 at end-2025, a divergence of about a factor of 1.7, and only the aggregator's side is held.	not yet probed
Use of satellite data	An earth-observation programme, a land or agricultural monitoring system, or a national mapping arrangement using satellite imagery.	not yet probed
Legal basis for the linked national health dataset	A decree, ministerial order or data-sharing instrument stating the basis, retention rule and supervisory authority for a dataset joining health, civil-status, social-affairs and education records. The ministry asserts only that data is stored confidentially and securely.	not yet probed
United States digital cooperation with Tunisia	A bilateral agreement, a financing commitment or a programme document. The only American-linked item held is a satellite operator's unlicensed market entry, carried under connectivity.	not yet probed
National artificial intelligence strategy	An adopted strategy, a cabinet decision or a published roadmap. A national AI strategy was scheduled for 2025 and none is held; the only roadmap of comparable specificity was written by a diaspora association and offered to the state.	not yet probed
Indian digital cooperation with Tunisia	A bilateral memorandum, a line of credit, or a technology cooperation programme document naming Tunisia.	not yet probed
Budget allocation for the digital transition	An appropriation line in the 2027 finance law or the 2026 budget showing what the state spends on the digital programme. The 2027 draft names acceleration of the digital transition as a structuring axis with no allocation, target or named programme attached.	not yet probed

These carry no reliable position at either end of the period. Two of them bear directly on what moved: the legal basis for the linked national health dataset, built inside this window, and the issuance of the biometric identity card and passport, whose enabling laws predate it by two years and whose rollout is unestablished.

The third is fiscal, and it frames the rest. In a year in which the state made identity compulsory, promulgated a five-year plan naming digital as a pillar, and put its digital transition into the 2027 budget orientations, the base holds no appropriation figure for any of it at either end.

ABOUT THIS DOCUMENT

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
