

MONTHLY UPDATE

National statistics: monthly update, July 2026

Edition of 2026-08-17 · compiled from the Data Landscapers source base

29 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.

The place reports do not share one window; the period above is the range they span.

Angola

The statistics office [launched a census portal and a mobile application on 2 July](#), both built by its own technical staff, carrying census indicators by geographic level and macroeconomic series; no open-data licence, bulk download or programming interface is stated.

Benin

The digital agency published these exchange-usage figures on 11 July.

Cameroon

The fourth population and agriculture census is still in the field: a [complementary enumeration period runs from 1 August to 15 September to reach households, persons and agricultural holdings missed by the 29 May close](#). Enumeration ran with [32,059 agents at a budget of FCFA 13.28bn against FCFA 64bn initially projected](#), and no results are published. It is the first census in over twenty years, with population and agriculture merged into one questionnaire.

Cape Verde

The statistical record produced the month's other development, and it was an absence made public. The World Bank presented a poverty estimate in Praia on 14 July microsimulated from the 2015 household survey, because the survey fielded from December 2022 has published no definitive results more than three years on. The statistics institute has stated that an under-reporting of food expenditure was identified and corrected and that a new fully digital survey was planned for July 2026; no source records that survey starting.

Central African Republic

The statistics institute [deployed enumerator teams nationwide on 20 July](#), opening six months of collection across [about 7,000 households in three two-month waves, entirely by tablet](#), with a public commitment to statistical secrecy and aggregates only. The field period ends around January 2027; no results date is stated and no prior harmonised survey is held.

Chad

The third general population and housing census [closed its main enumeration on 6 August after a decree of 20 July extended it expressly for sweeps](#), coverage having been acknowledged incomplete at the original deadline. Days from the close, [one nomadic district had still not seen an enumerator](#). Neither census decree is held — Chad has no reachable online gazette — and no results, preliminary or otherwise, are published.

Comoros

The statistics institute ran a [sensitisation campaign across the archipelago's governors, prefects, mayors and village chiefs and held a five-day donor-funded training-of-trainers workshop on survey methodology, questionnaire design and electronic data-collection tools](#), ahead of the annual agricultural survey's rollout. It follows the second general agricultural census, whose results were published in April, and no first survey round or results date is on record. The source dates the workshop inconsistently with its own reference to the previous week, so only the campaign's dates are internally reliable.

Congo

One statistical build opened: the [quarterly labour-market and informal-sector survey entered its preparatory phase](#), with four series of indicators a year planned — a first for the country — and no fieldwork date, sample or budget stated.

DR Congo

The planning minister [announced recruitment of mapping agents and fixed general enumeration for July 2027](#), which would be the country's first census since 1984. No budget line, financing source, implementing contract or cartography completion figure is held. Separately a [digital sector barometer was announced after a working session on 6 August](#) to give government figures on firms' activity, turnover, growth and job creation — proposed by the industry body rather than imposed by the state, with no operator, methodology or first-issue date stated.

Egypt

The 2027 census is [designed as a register-based exercise](#), matching electronic field enumeration against digital registers and state databases keyed on the unified national property number, with the property-wealth map and secure data exchange to be finalised *before* a presidential decree authorises the count — the exchange a precondition of the census rather than a product of it, and no data-protection regulator role named. A [Senate proposal for a national labour-market data platform](#) was welcomed by the labour minister, who pointed to his own ministry's forthcoming one; neither has a launch date, budget or lead body, and nothing states they are the same thing.

Equatorial Guinea

INEGE opened a three-day validation workshop on 27 July at the Ministry of Finance, Budgets and National Planning on the project document, resource-mobilisation advocacy strategy and social-communication strategy for the [fifth population census and the first agricultural census](#), with UNFPA and FAO technical support and around fifty representatives of ministries, the National Assembly, the UN system, the AfDB, the World Bank, WHO and CEMAC. Decree 25/2025 of 3 March 2025 authorises both operations; the last population census was in 2015.

Eswatini

The central bank [launched the FinScope Eswatini 2026 Consumer Survey on 24 July](#) with ESEPARC, the Central Statistical Office and FinMark Trust. [Its governor said the 87% access rate recorded in 2018 measured access rather than use, and that the 2026 round will cover access, usage and quality — the first measurement since the Consumer Credit Act, the payment switch and the FinTech Strategy changed the stack.](#) No fieldwork dates, sample size or publication date were given.

Gabon

On 21 July an interministerial committee fixed the terms of a second census of economically weak Gabonese, with preparation through July and August and fieldwork from September 2026, drawing on the population census and health-insurance records; its stated purpose is that the existing social file is not reliable enough to target protection ([terms](#)).

Gambia

Statistics had the period's clearest institutional step. The Bureau of Statistics [disseminated the fifth labour force survey in late July 2026](#) with a [companion volume comparing the 2023, 2025 and 2026 rounds](#) — participation at 54.5% against 43.6% in 2023, unemployment at 6.2% against 7.6%. The [findings report puts the agriculture share of employment at 17.8%](#), which reflects the 19th ICLS standard excluding own-use food production and is not comparable with earlier rounds. The Central Bank had [convened producers and users two days earlier](#), naming data gaps, inconsistency and inaccessibility as the constraints.

Ghana

The statistical service [published the third wave of its six-monthly governance panel on 6 August](#), run across all sixteen regions, with the Government Statistician putting its findings to digital remedies — digitising public services and publishing official fees among them. The report text is not held. Separately the finance minister [asked the service to develop a methodology for quarterly employment statistics](#); none is published and no timetable is set.

Guinea-Bissau

The Instituto Nacional de Estatística released RGPH4 preliminary results on 23 July 2026, putting resident population at 2,191,202 — cut from a raw collected base of 2,246,300 after correction for repeated names, against 1,449,230 in 2009. [50.7% are women and 45.7% urban; 304,939 households, 559,303 dwellings and 376,258](#)

[buildings were enumerated, using computer-assisted personal interviewing throughout](#). UNFPA and the World Bank financed the census; demographic, social, economic and housing tabulations are to be released progressively over the coming months.

Libya

On 5 August the Central Bank put [electronic transactions at LD 643 billion for the first seven months of 2026](#), and forecast that they would exceed LD 1 trillion by the year's end.

Madagascar

The statistics institute runs a [registration-gated platform advertising household surveys for 2020 to 2022, an enterprise survey and census microdata](#). The datasets sit behind account registration and were not retrieved, so no dataset documentation, sample size, licence or reuse terms is established beyond the landing page.

Mali

The statistics institute runs a [microdata archive under its own domain holding 107 studies](#), led by the 2022 census and near-annual agricultural surveys since 1996/1997. It is a first-party statistical archive rather than a whole-of-government open-data portal, and the base holds nothing of the latter kind.

Mauritania

The Ministry of Youth Empowerment presented the reference document for a [first National Youth Empowerment Index](#) on 29 July: five domains built from 43 secondary indicators, a preliminary 2026 score of 60.5 out of 100, education and training strongest at 69.5% and health and sport weakest at 46.1%, with disaggregation by wilaya, sex and age band held out as a later capability.

Mozambique

The statistics institute opened enumerator training on 27 July for a census pilot running 1-15 August, testing procedures for a 2027 census it states will be the first run entirely in digital format ([training account](#)).

Namibia

At the inaugural statistics awareness day at Gobabis on 27 July the central bank governor said the identity card presents an opportunity to establish a statistical system enabling secure data matching across administrative databases ([awareness day account](#)), and on 30 July an international statistician told the same event that poor-quality data could weaken public trust and undermine policymaking ([second account](#)).

Niger

Traditional chiefs at Diffa were [trained as mobilisers for the fifth population and housing census](#).

Nigeria

An inclusive-data initiative brought the national statistics office into a five-country programme.

Senegal

The statistics agency [hosted the first peer exchange of an inclusive-data initiative's second phase in Dakar, widening it from three countries to five](#). The exchange's exact dates are not published, so the position carries month precision only.

South Sudan

On 23 July the National Bureau of Statistics [published a demographic projection putting the population at about 16.36 million by end-2026 and 19.99 million by 2030, against 13.2 million in 2021](#), of which some 2.2 million is attributed to migration from the Sudan conflict.

Tunisia

The regulator's observatory [published its 2026 survey on 27 July](#): 85.9% internet use, 84.3% smartphone ownership against 41% for computers, and a ladder that puts [artificial-intelligence applications at 47.9% of internet users and online public administration last at 26.5%](#). Its sampling frame, size and field dates are not stated in the reporting held.

Uganda

The statistics bureau [commissioned 80 field data collectors on 4 August](#) for the ninth national household survey, deployed in 16 language-based teams after fifteen days' training, for twelve months of collection. No sample size, budget, funder or publication date was stated.

Zimbabwe

The 2025 household survey, released on 20 July, reported household internet access at 75.5% against 50.1% in 2020, mobile handset ownership at 96.4%, and household computer ownership down to 11.2% from 14.2%, at 21.2% urban against 4.7% rural ([survey account](#)).

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
