

MONTHLY UPDATE

Guinea: monthly update, July 2026

Edition of 2026-08-18 · 31 systems and instruments tracked, 13 of them not held

Developments recorded from artefacts published between 2026-07-01 and 2026-08-17 – July 2026 carried forward to the date of issue, so the report holds the nightly catch to the day it was cut. Sections follow the status report.

Summary of the month

Guinea's national instant payment rail [opened on 22 July 2026](#). Six days later [Facebook, YouTube and TikTok became inaccessible](#), and were [still inaccessible on 7 August](#), unacknowledged. Between those dates the identity register's security was [contracted to a domestic vendor on undisclosed terms](#), the state's own biometric-enrolment contractor [alleged that free documents were being charged for](#), and a [World Bank-funded tender](#) established that the movable-collateral registry had been built without the legal basis it needs to operate.

Infrastructure

Connectivity

Facebook, YouTube and TikTok became inaccessible on 28 July 2026. The Association des Blogueurs de Guinée activated its monitoring protocol the same morning, ran connectivity tests through the day through independent monitors in Conakry and the interior, and [concluded that the results converge on a targeted block of those three platforms, arguing the precision of the restriction excludes an ordinary outage](#). It grounded its objection in article 19 of the constitution, article 9 of the African Charter and article 19 of the ICCPR.

The restriction [disrupted business operations and online services](#), and was [still running on 7 August, outside any electoral period or declared crisis](#), with WhatsApp also disrupted and VPN traffic passing.

Technical Capacity

A presidential decree published on the evening of 30 July [converted the distance-learning institute into the Universite Numerique de Guinee, a public scientific establishment with legal personality and an eleven-member governing board](#), its mandate covering online higher education, continuing education and digital-pedagogy support. Implementation is assigned to three ministers and no programme, budget or launch date for the online offerings is published.

Cybersecurity

The cybersecurity statute of 2016 is held and cannot be read: the agency publishes it as a 57-page image-only scan with no text layer, so its provisions — reaching cybercrime offences on Guinean territory and offences requiring collection of electronic evidence — are known from the agency's own summary rather than the statute's words.

Digital public infrastructure

Data Exchange

On 24 July, ONECI signed a memorandum with NG Tech Innovation for a national interoperability and identity-verification platform over the RNPP, under the Diamo Djigui programme, before the elections director-general and Conakry's mayors. No value, duration or scope was disclosed and the text is not public.

Digital Identity and CRVS

Four days later, Multimédia Glory Guinée — the state's own technical partner deploying the biometric civil-registration system — stated publicly that fees not provided for in the regulations were being taken at enrolment centres, that a pay-for-priority tier operated, and that citizens were unaware the documents are free. It asked two ministries for unannounced inspections, sanctions, an information campaign and a reporting line; neither had responded at publication.

On 10 August the territorial administration minister put birth registration at 72% in 2025 against 54% in 2022, and said a unique personal identification number was being put in place alongside digitalisation of the civil-status system. The figures are the minister's own, given at a commemorative event with no statistical source named, and the identification number still has no instrument, issuing authority, format or enrolment figure on record.

Digital Payments and Fintech

NimbaPay opened for operations on 22 July 2026, making banks, electronic-money institutions and microfinance institutions interoperable nationwide. The governor of the central bank put financial-account access at 4% in 2011 and about 36% in 2024, and named state payments and cross-border payments as the next phases. It was built in 127 days on Mojaloop open source by Guinéenne de Monétique, with AfricaNenda and Thitsa Works, expressly so that the state retains control of the infrastructure. The following day the central bank stated that more than 70% of payments are still made in cash even at merchants already equipped with electronic solutions, and named interoperable merchant QR codes and fiscal incentives as workstreams under study. Its project register records the RTGS migration to ISO 20022 held by unpaid invoices to the supplier CMA and customs clearance, and PAPSS participation with no transaction recorded.

Registries (population, land, address, etc.)

The terms of reference for the RETSSM movable-collateral registry, opened 27 July under IDA Credit No. 74440GN, set the objective as guaranteeing the availability, security, reliability and adoption of an operational registry — with the first work package finalising the institutional, legal and regulatory provisions it needs to function at all.

Other GovTech and e-Gov

The treasury [began rolling out Œil du Trésor](#), a platform for prefectural treasurers to submit and track fund calls. No cost, vendor or completion date was disclosed.

Digitalisation of sub-national government

Training on the Œil du Trésor platform started in five prefectures of Guinée forestière.

Governance and regulation

Legislation and regulation

Two payments instruments are at terms-of-reference stage and neither exists. The [payment systems law awaits a funder's no-objection and the national payment council has yet to be created](#), both under the same regional programme. The register recording them is undated and its latest dated entry is January 2025.

Strategies, plans and policies

A [presidential decree of 27 July 2026 reshuffled the transition government](#), keeping Mourana Soumah at the Ministère de la Communication, de l'Économie numérique et de l'Innovation, which he has held since the February 2026 merger. Djenabou Touré takes Administration du Territoire et de la Décentralisation, the ministry supervising ONECI and the biometric civil-registration programme; a Djenabou Touré was director-general of elections and attended the ONECI signing three days earlier, and the source does not confirm they are the same person. A World Bank tender published the same week still names the predecessor department, MPTEN, as supervising WARDIP.

Data protection

The day after NimbaPay opened, the consumer body AGUIDUTEN [set twelve conditions on it](#): a published complete tariff grid, fees disclosed before confirmation, a complaints mechanism with binding deadlines for handling and refund, immediate traceable receipts, data collection limited to disclosed purposes, independent audits of security and availability, guaranteed access for rural, disabled, feature-phone and low-literacy users, periodic publication of failure, outage, fraud and refund statistics, and consumer organisations seated in governance. No regulator or operator response is on file.

Public debate and participation in policymaking

Neither the regulator ARPT, the operators nor the internet service providers issued an explanation for the social-media restriction. The precedent is on the record rather than inferred: under the post-coup transition a government spokesman owned a three-month digital cut and said that in Guinea the internet is not a right.

Artificial intelligence and the technology sector

AI

Guinea joined five other Francophone West African states in [adopting shared AI governance guidelines, announced on 6 July 2026 and submitted to the United Nations' first Global AI Dialogue as a written contribution](#). The advocacy organisation Niyel led the work; the framework recommends transparent systems, stronger data protection, skills development and support for local innovation, and complements rather than replaces national strategies. The same account names Senegal and Côte d'Ivoire as the participants that have adopted national AI strategies and places the rest, Guinea included, as still developing their frameworks.

On 20 July, the digital economy minister and a Rwandan delegation [identified artificial intelligence, e-health, e-commerce and electronic invoicing as areas for cooperation](#). The article reports areas identified for exploration, not agreements signed.

Inclusion and capacity

Training and skills

The [software-engineering school Holberton](#) opened its Conakry campus on 16 July 2026.

Finance

New investments

The month's one clear statement about money is the [WARDIP terms of reference, naming IDA Credit No. 74440GN and the US\\$60m financing behind it](#) — the first document on file tying a Guinean digital programme to a credit reference.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
