

MONTHLY UPDATE

Togo: monthly update, July 2026

Edition of 2026-08-18 · 29 systems and instruments tracked, 39 of them not held

Developments recorded from artefacts published between 2026-07-01 and 2026-08-14 — July 2026 carried forward to the date of issue, so the report holds the nightly catch to the day it was cut. Sections follow the status report.

Summary of the month

Togo legislated more than it published this month. The Council of Ministers of 30 July [adopted a spectrum-royalty amendment and a national conformity-assessment decree](#), and the session of 4 August [authorised an Internet-of-Things licence](#) — and for all three the base holds the announcement and not the instrument: no number, no text, no entry-into-force date, and in the spectrum case a parent decree readable only as an image. Against that, the one instrument held in full is the [national frequency allocation plan](#), at 197 pages.

The month's firmest dates are obligations on citizens and firms rather than on the state: [retirement allowances stop on 31 August for anyone who has not registered payment details](#), and [fuel has carried a molecular marker since 1 July](#).

Infrastructure

Connectivity

The Council of Ministers [authorised a five-year renewable licence for Internet-of-Things networks](#) on 4 August, distinct from the incumbent mobile and internet authorisations; the decree authorises the grant rather than recording it, and no licence number, fee, coverage obligation or ownership of the licensee is published. Separately, [capacity was added on a second submarine system for route diversity](#) after three multi-country West African outages in twenty-eight months — a pan-regional arrangement in which Togo is one of eleven places named and no Togo-specific capacity, price or route figure appears.

Cybersecurity

The cyber institutions are in place and the record of what they do is thin. [The national incident-response function runs inside a joint venture of the Togolese state and a Polish group](#), so the incident record, tooling and institutional memory sit with a foreign supplier; no incident-response profile or annual report is held. The agency's director-general put [more than 333,000 incidents handled between 2021 and 2024, rising from 39,168 to 181,088](#) — a 4.6-fold increase with no figure for 2022, 2023 or 2025 and no definition of an incident. Funding arrived alongside it: [a cybersecurity component was signed with Luxembourg](#) inside a three-accord package of EUR 78,550,000, its digital and cyber share not separately quantified.

Digital public infrastructure

Digital Payments and Fintech

Payments moved on a deadline. Retirement allowances [began paying by bank transfer and mobile money in July](#), and allowances stop on 31 August for beneficiaries who have not registered payment details; no beneficiary count or registration rate is published, and no alternative is stated for someone without a bank account, a handset or an identity document. The regional [deadline to connect to the instant payment platform moved from 30 June to 30 September](#), and to 30 June 2027 for microfinance institutions. A [treasury prepaid card was announced](#) with no timetable and no confirmation that a file has been lodged with the central bank.

Registries (population, land, address, etc.)

The [second national birth-registration catch-up campaign opened at Agbandi on 31 July](#), targeting a further 6,461 children across 25 communes and taking the two campaigns to 11,461. The same report [carries the funder's figure of nearly 7,400 for the same campaign](#), and the two are not reconciled.

Other GovTech and e-Gov

Two government systems advanced without either being shown in production. [Document management and digitisation training ran at the finance ministry](#), with no statement that the system itself is live; and the volunteering agency's [mobile application is live](#) carrying four programmes for registration and record tracking, with no formal launch date and nothing establishing whether it authenticates against a national citizen account or mints a separate identity store.

Rural digital data capture

The Council of Ministers [amended the spectrum-royalty decree to price satellite and machine-to-machine traffic](#) on 30 July, so specialised operators can establish and rural connectivity extend. The amending text and its rates were unpublished at 31 July, and the parent decree is held only as an image scan, so the baseline rates cannot be read either.

Governance and regulation

Legislation and regulation

The [2023 fees-and-royalties decree was amended on 30 July](#) to price satellite and machine-to-machine spectrum use, the amending text still unpublished. Separately, [new rules on the validity and billing of mobile commercial offers entered into force in April](#) — known to the base through a single line in an operator's parent's half-year financial filing, with no instrument number, title or text held.

Strategies, plans and policies

The [government roadmap for 2026-2031 is in force](#) with headline targets of a doubling of gross domestic product per head and poverty below 15 per cent. The text is not held, no digital chapter or digital target is on record, and the three sectoral tracks at its private-sector workshop of 30 July were agro-industry, logistics and transport, and energy — none of them digital. The [regulator's head was elected president of the West African regulators' association](#) at the assembly Togo hosted in April.

Standards

The same Council of Ministers session of 30 July [adopted a decree instituting a national conformity-assessment mechanism](#) covering pre-market assessment and traceability for local and imported products, again with no number, text or entry-into-force date published. Against that, the [national frequency allocation plan is held in full](#): 197 pages transposing the 2023 world radiocommunication conference, with an explicit civil and military sharing column and new bands for 5G, high-altitude platforms and inter-satellite links.

Data protection

The data-protection body is [operating with thirty-two certified corporate correspondents by June 2026](#) and a [second international forum convened at Lome in July](#). Its organisation decree is still not held.

Artificial intelligence and the technology sector

AI

Three artificial-intelligence positions all rest on announcements rather than output. A [national-languages speech and translation project](#) targets at least fifty hours of validated recordings and 6,000 translated sentence pairs for each of fifty languages, with four data competitions carrying US\$40,000 in prizes — targets only, with no collected-hours figure, released model or completion date on file. The same laboratory runs satellite, mobility and text data for agriculture, health, education and the environment, on the single source the base holds for it. Togo is also a founding government of a [pan-African African-language coalition](#) launched with four private partners, and nothing held states how it relates to Togo's own fifty-language project.

ICT Industry

[Fuel marking and traceability began at Lome](#), the obligation having applied since 1 July: every litre through legal channels carries a molecular marker verifiable at depot, station and roadside, with sanctions running to seizure, fines of FCFA 50,000 to 10,000,000 and closure. Neither the contract amendment nor the marking regulation is held, and no contract value, duration or data-ownership term is published.

Inclusion and capacity

Access to services

An operator [added three mobile-money services](#) — insurance premium payment, withdrawal-card transfer, and gift cards for international streaming and gaming platforms. The account is the operator's own.

Finance

New investments

A further US\$20,000,000 was signed for the Togolese component of the regional unique identification programme on 16 July, inside a five-agreement package of US\$429,000,000. The implementation report the base holds gives that phase a closing date of 30 July 2026 and nothing restates or extends it alongside the top-up. A public administration service-delivery modernisation project was [named at the government's portfolio review of 28 July](#) as the digitalisation vehicle inside a portfolio of more than US\$2bn; the base holds the name and nothing else.

MoUs and other agreements

The [indicative cooperation programme with Luxembourg for 2026-2031 is in force](#), carrying a digital transformation component inside a package of EUR 78,550,000. The two accounts held date the signing a day apart.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
