

MONTHLY UPDATE

Congo: monthly update, August – September 2026

Edition of 2026-09-01 · 15 systems and instruments tracked

Developments summarised from sources published between the beginning of last month and today.

SUMMARY OF THE MONTH · GOVERNANCE · ICT INFRASTRUCTURE · DPI · CAPACITY · DATA

Summary of the month

Revenue systems and the payroll carried the month. The public-revenue platform [went live for online payment of taxes, levies and customs duties after its pilot cohort completed](#), while [the treasury single account meant to centralise those receipts was still being finalised on the day it opened](#) – a collection rail running ahead of the account it collects into.

The payroll is where the record is unusually candid. Its operator's minutes and a Senate disclosure [put duplicate payroll numbers and deceased or retired staff still drawing salaries on the record](#), with an integrated civil-status system presented as the structural fix, its software validated and its deployment unfunded. Elsewhere customs digitalisation [was handed to a Nigerian firm on a 20-year, US\\$3.1bn concession signed at Abuja](#), and a public-administration digitalisation task force [was gazetted on 6 August](#) with no session yet on record.

Governance

Strategies, plans and policies

The education ministry's digital roadmap [was validated at a Brazzaville workshop on 19 August](#). Validated is not adopted: no text, budget line, sequencing or implementing body is published with it.

Regional collaboration

The broadcasting regulator and its counterpart across the river [signed a memorandum formalising their partnership after two days of work on 19 and 20 August](#). No text, scope or commencement is published, so what the base holds is that two regulators have agreed to cooperate.

ICT Infrastructure

Data Storage

The published roadmap names [sovereign hosting and connectivity at the two highest tiers](#) among its infrastructure programmes; neither exists, with no standing-up instrument, host body, budget or date.

The national data centre remains a thing asserted rather than reported. On 10 August the state operator [showed the minister a real-time security operations centre running across its Brazzaville, Pointe-Noire and Oyo data centres](#), alongside nationwide fibre connectivity for citizens, businesses and state bodies. It is the fullest description of the

operator's estate the base holds, and it is still a ministerial visit rather than an inauguration report: no capacity, certification or utilisation figure is given for any of the three sites, and nothing reconciles it with the [works reported suspended at 95% completion in late 2025](#).

Cybersecurity

It [launched an open international tender on 23 July for a 24-month mission to draft the national cybersecurity strategy, a national training plan and national conferences](#), scope covering a sector diagnostic, a strategic roadmap and a standing forum; no contract value is published. On 28 July it [validated a consolidated draft setting qualification conditions for bodies authorised to audit information systems nationally](#), with no adoption instrument, publication date or entry into force stated. Its largest operational mandate arrived through tax legislation: a [decree of 31 March, published 9 July, puts the agency into joint homologation of every invoicing terminal, software and enterprise module](#); it awards the security label and conformity identifier, audits the infrastructure and takes [15% of homologation fees](#). The same roadmap also names a [national security operations centre and response team](#) among its infrastructure programmes; it does not exist either.

What the regulator does have is an enforcement record. It [dismantled a sixth SIM box fraud network of the year on 21 August in the Massengo district of Brazzaville, seizing two 16-port SIM boxes, a modem, a laptop and an automatic battery-recharging system, recovering 30 Ugandan numbers in fraudulent use and arresting two people, and puts that network's loss at about FCFA 42m over two months on more than 422,000 diverted call minutes](#). The estimate and the method behind it are the regulator's own, and no prosecution outcome is on record.

DPI

Data Exchange

One exchange went into use, in the narrow place where the state examines itself. The national transparency commission [opened the second round of its public-finance transparency-code evaluation entirely online, covering budget years 2023 to 2025](#), focal-point training having completed in Brazzaville beforehand. No supplier, custodian or results-publication date is stated, and the platform is not publicly accessible on the record held.

The larger exchange was contracted out. Customs-procedure digitalisation under the continental free-trade agreement [was awarded to a Nigerian firm on a 20-year concession valued at US\\$3.1bn, signed at Abuja](#). No revenue share, data-ownership term or exit provision is published for a twenty-year hold over the state's customs data.

Digital Payments and Fintech

On 3 August the [public-revenue platform went live on the national payments switch](#), payment following a declaration, authenticated, reconciled in real time and routed to the treasury against a secured electronic receipt. Roll-out runs at large then medium enterprises, all taxpayers targeted by end-2026 and no wave dates published. The same account records the [treasury single account at the regional central bank still being finalised](#).

Registries

The minister recorded on 10 July that the [regulator has run the postal addressing project for two years and the ministry has not taken it up for deployment](#), his own framing being that without the handover the work has not had the expected impact. The registry that does have a system waiting for it went before the Senate. On 7 August the interior minister [said ministry and municipal staff are themselves among those running networks selling forged civil-status documents, and announced investigations to dismantle them](#), naming the integrated civil-status system as the

structural fix; the ministers [set out the platform as the way to centralise birth, marriage and death records](#). Its three modules were validated in February and its deployment is still unfunded, so what changed this month is the case made for it rather than its build state.

Sectoral management information systems

Health acquired equipment rather than a system. On 7 August the Global Fund and UNDP [handed over e-health equipment, a P2-level biosafety laboratory and a secure biomedical-waste management system at the Edith Lucie Bongo Ondimba hospital at Oyo](#), for early disease detection, patient data management and health-service coordination. It is a single site; no value, system name, national rollout or interoperability with any other health system is stated, and it sits beside a civil-service payroll platform whose own operator has minuted three failure modes. That platform gained a fourth problem in public: the public service minister [told the Senate on 7 August of fraudulent duplicate payroll numbers and of deceased or retired staff still drawing salaries](#). No count, value or remedy is stated, and the disclosure is the minister's own.

Other GovTech and e-Gov

A public-administration digitalisation task force [was gazetted on 6 August, as decree 2026-261 of 29 July 2026](#). No session of it is on record, and the decree names no deliverable, deadline or budget “an instrument creating a body, with the work still to be defined.

Capacity

Research institutions

Researchers and faculty met in Brazzaville on 21 and 22 August to [set rules for the use of artificial intelligence in research](#). No code, guideline text or adopting institution has come out of it yet.

Data

National statistics

The quarterly labour-market and informal-sector survey moved from preparation into regional alignment: a [harmonisation workshop opened on 19 August, running to 27 August, on aligning the region's labour statistics with international standards](#). Four series of indicators a year are planned, a first for the country, and no fieldwork date, sample or budget is stated.

Use of satellite data

The national mapping institute began putting its own holdings into a usable form. On 11 August it [signed a framework partnership with a local non-governmental organisation to digitise, secure and disseminate its geospatial and cartographic data](#), building a shared platform for public, institutional and research access. It is a framework agreement rather than a delivered platform: no term, funding, licence or access rule is stated, and nothing says what is currently held or in what form.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
