

MONTHLY UPDATE

Somalia: monthly update, August – September 2026

Edition of 2026-09-01 • 16 systems and instruments tracked

Developments summarised from sources published between the beginning of last month and today.

SUMMARY OF THE MONTH • GOVERNANCE • ICT INFRASTRUCTURE • DPI • TECHNOLOGY • CAPACITY

Summary of the month

Registers and identity documents moved. Cabinet [approved a third-generation e-passport plan on 6 August](#), the health ministry [launched the country's first unified national registry of health facilities](#), and the mobile identity application [passed 50,000 downloads on a renewed public adoption call](#) – a figure that measures how marginal it still is.

The Auditor-General supplied the month's hardest finding. The 2025 annual audit [puts seven government revenue and financial-management systems outside the state financial management information system, and records 66 legal-compliance breaches across 22 audited bodies covering 60.1% of the national budget](#). Against that, the cybersecurity bill [had its first reading in the Upper House on 29 August](#), and accession to the continental free-trade area [is to be deposited in September](#).

Governance

Legislation and regulation

The Cybersecurity Law is not yet through parliament. The Upper House [gave a six-chapter, 33-article cybersecurity bill its first reading on 29 August 2026](#), at the first sitting of its eighth term, alongside a separate bill establishing a national meteorological agency. The chamber's [own published procedure requires three readings](#) before a bill passes it.

The House of the People [approved a Cybersecurity Law on 26 January 2026](#), assigning policy to the communications ministry, technical oversight to the regulator and obligations to critical-infrastructure operators. Nothing on file states whether the bill now before the Upper House is that instrument, and neither text is held.

Regional collaboration

Accession to the continental free-trade area reached its last procedural step: the [instrument of ratification is to be deposited in September 2026](#), with a first shipment named as the test that follows it. No implementation roadmap, tariff schedule or customs-systems requirement is published alongside it.

Standards

The auditor general's office and a partner supreme audit institution [completed the third phase of a cooperation programme on auditing government information systems](#). No audit report, scope or next-phase date has been published.

Public debate and participation in policymaking

A former prime minister published an argument that [the country cannot afford another term of lost wealth](#). It is a signed opinion on resource governance rather than a policy position, and it carries no digital component of its own. It is held because public argument of this kind is otherwise absent from this ledger, and the absence is itself the finding: a base that records instruments and no debate about them cannot show a reader where the pressure on those instruments comes from.

ICT Infrastructure

Data Storage

The national data centre went backwards in the telling. A facility described at a ministerial inspection in May 2025 as nearing completion was, on 7 August 2026, [described by the state minister for communications as planned](#), to strengthen digital infrastructure — said at the launch of an artificial-intelligence product by a private centre. Nothing in the record reconciles the two accounts, and the ministry's stated rationale, ending reliance on data storage outside the country, remains its own statement that government data sits offshore.

DPI

Data Exchange

The Auditor-General put a number on how far the state's own systems are from talking to each other. The 2025 annual audit finds [seven government revenue and financial-management systems not integrated with the state financial management information system](#), and records 66 legal-compliance breaches across 22 audited bodies covering 60.1% of the national budget, including US\$18.5m of contracts awarded without following committee procedures. It also finds that a [port and airport revenue-share operator's reporting of US\\$38.08m, of a combined US\\$42.24m, could not be verified](#). The audit report itself is not held, the seven systems are not named, and no remediation plan or timetable is reported against any of it.

Digital Identity and CRVS

Cabinet [approved a third-generation e-passport plan on 6 August](#). No issuance date is published, and it follows the clearance in February to adopt and print the East African Community e-passport.

Registries

Somalia [launched its first unified national registry of health facilities](#) in Mogadishu, to underpin health-sector planning; no facility count, update cycle or public access route is stated. In Somaliland, the central bank and the International Finance Corporation [agreed a path forward on a credit registry project](#), with no design, timetable or funding figure yet on file.

Sectoral management information systems

Health information gained a project and a set of funders. The health minister [launched a Pandemic Fund project in Mogadishu to strengthen prevention, preparedness, detection and response for infectious disease and public health emergencies](#), with multilateral and regional partners named alongside it. What is not published is the part that would make it a system: no budget, no duration, and no specification of the surveillance and reporting infrastructure the project is meant to build.

Other GovTech and e-Gov

A national single window is named as planned within a regional trade project, alongside a trade information portal and the existing customs and livestock traceability systems it is to connect to. It is stated in an agenda piece by the national trade facilitation coordinator rather than in an instrument, and no design, timetable or budget is published.

The federal electronic visa is running and contested: a fee exemption for one region is under negotiation. A national travel system whose terms are settled region by region is a federal question before it is a technical one, and no agreed text is held.

Technology

AI

The Somali National University launched an AI centre on 20 July for research and digital skills. No funding, staffing or research programme is stated, and the country still holds no national artificial intelligence policy of any kind.

August added a product and an assessment. A private artificial-intelligence centre launched Garad.ai on 7 August alongside the communications and technology ministry; the record describes the launch rather than the product, and states no capability, language coverage, user base or hosting arrangement for it. Separately a national AI readiness assessment is under way, led by the same ministry with UNESCO and joined by a private university on 17 August, examining artificial-intelligence policy, data governance and higher-education capacity. No methodology, participant list, score or publication date is stated — so the assessment is, for now, the closest thing the country has to a policy position on the subject.

Capacity

Training and skills

In the north, the Somaliland administration launched fixed-asset training for public financial accountability on 4 August. No participant total, system or completion date is stated, and the base carries no earlier position for it.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
