

MONTHLY UPDATE

Sao Tome and Principe: monthly update, August – September 2026

Edition of 2026-09-01 · 4 systems and instruments tracked

Developments summarised from sources published between the beginning of last month and today.

SUMMARY OF THE MONTH · GOVERNANCE · DPI

Summary of the month

Four rows moved, three of them systems work and one an agreement not yet signed. The electoral commission [opened a consultation window on a provisional roll of 146,510 voters](#) after finding the automatic civil-registry derivation had omitted 1,860 eligible people — a system inheriting the flaws of the register it was built from. The social protection directorate [put the single social registry at about 12,500 households, roughly a quarter of the population](#), stating unprompted that registration is not a poverty count. A procurement agency [extended the tender for the state utility's new management-information system](#) without disclosing value or new deadline, and a UN agency [handed computing equipment to the tax directorate](#) with neither value nor schedule attached. A second information-exchange agreement with the same foreign counterpart on money laundering [is to be signed](#), with no date or text held.

Governance

Data protection

A further agreement between the two jurisdictions on [exchanging information to combat money laundering is to be signed](#). It is the second instrument with the same counterpart and the base holds no signature date or text for it.

DPI

Registries

[The National Electoral Commission opened a 1–8 August 2026 public-consultation window](#) on a provisional roll of 146,510 registered voters, ahead of the 27 September elections, after finding the automatically-compiled roll had omitted 1,860 eligible voters through a process failure — alongside 1,976 newly-eligible 18-year-olds added in the ordinary course. Address and polling-station changes can only be made in person or via WhatsApp; there is no online self-service channel, a gap the roll's own automatic-derivation design has not closed. [The Direção da Proteção Social reported the Cadastro Social Único covered about 12,500 households](#), roughly a quarter of the population, and stated explicitly that registration does not equal a poverty diagnosis — a distinction the agency drew unprompted, suggesting the figure was already being read the other way in public discussion. This update follows a mass population-registration exercise the government ran in January and February 2026, though no source held gives that earlier exercise's own separate coverage figure for a direct year-on-year comparison against it.

Sectoral management information systems

[AFAP extended the deadline of tender ref. 45-G](#) on 7 August 2026 for supply, installation, training and commissioning of a new management-information system for EMAE, the state water and electricity utility. The original terms, contract value and new deadline are not stated in the source held — a scanned procurement notice with no text layer, so only the notice's own headline could be read for this pass.

Other GovTech and e-Gov

The month's government-systems movement is hardware. A UN agency [handed computing equipment to the tax directorate under an EU-funded regional programme, to modernise tax administration and the handling of fiscal data](#). No value is stated for the equipment and no delivery schedule accompanies it, so what the base holds is a donation and an intention rather than a system with a capability attached.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
