PROGRESS REPORT

DR Congo: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	A sectoral digital economy policy 2026-2030 was validated and referred to the Council of Ministers, uncosted and unpublished. 2026-08-04 - the policy was presented and validated by government on axes covering infrastructure, digital transformation of the administration, the digital economy, innovation and start-ups, cybersecurity and data governance, and referred to the Council of Ministers for adoption. It is not published, not costed and not budgetable, and the validators' own conditions name what is missing: reliable baseline data and a completed costing. Behind it sits a national digital plan carrying a US$1.5bn envelope, US$1bn of treasury investment over five years plus US$500m of external partner support; no finalised plan document is locatable and the treasury half is an announcement rather than an appropriation. 2026-07-29 - a governance framework was launched with a digital maturity diagnostic and a proposed six-to-twelve-month timetable. The government's programme for 2024-2028, costed at US$92.9bn, commits to finishing the national digital plan and adds a digital identity and 50,000 km of fibre.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**ICT strategy**	The 2019 plan set four pillars to a 2025 horizon that has now passed; its successor for 2026-2030 has no finalised published document. The plan of record was validated at a national workshop in September 2019 under the head of state's authority, on four strategic pillars — infrastructure, content, applicative uses, and governance and regulation. No separate enacting decree was found; the plan records only the decision creating its own validation workshop's organising committee. Its horizon has passed. The successor plan for 2026-2030 carries an announced envelope of treasury investment over five years plus external partner support, with no finalised published plan document locatable. 2026-08-04 - a sectoral digital economy policy for 2026-2030 was validated and referred to the council of ministers for adoption, on axes covering infrastructure, digital transformation of the administration, the digital economy, innovation and start-ups, and cybersecurity. Seven years after the last adopted plan, what the repository holds is two documents awaiting adoption and one whose term has run out.	MOVEMENT
Strategies, plans and policies	**Broadband strategy**	A National Connectivity Strategy 2026-2035 was published with a target of 3,000 localities and 16 million people by 2030. 2026-08-13 - the strategy was published on a shared-infrastructure model led by a tower company, with subsidy agreements signed with the four mobile operators to extend service to 40 underserved localities covering about 258,000 people, against a target of 3,000 localities and 16 million people by 2030. The fund publishes its selection framework: a 100-point priority index weighting strategic class 30, coverage deficit 20, population density 15, public infrastructure 15, local economic potential 10 and feasibility 10, with localities above 60 points classed for immediate deployment, subsidy confined to sites where an operator shows a negative return over four years, and national roaming imposed on sites above 70. The strategy text is not held, and the index did not select the first 40 localities. 2026-09-09 - studies on infrastructure sharing, national roaming and telecom taxation were presented, recommending lower equipment duties and a central infrastructure database.	MOVEMENT
Strategies, plans and policies	**Data storage / cloud strategy**	A sovereign government cloud is named among ministry projects to be ordered and made executable, with no hosting location or operator stated. 2026-07-29 - the sovereign cloud was named as an existing ministry project alongside the digital and data strategies, the identity platform and a certification authority, with no hosting location, operator, procurement, budget line or date stated. The repository carries no statement about a sovereign cloud before that date, so its opening position is unknown rather than zero and no direction can be stated. What exists in the meantime is a budget line for a national data centre and two privately owned facilities, neither of them a state cloud, and no hosting, classification or residency rule to govern what would sit in one.	NO CHANGE a first appearance in the record with nothing earlier behind it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data interoperability framework / roadmap**	The e-government strategy's master plan, governance framework, enterprise architecture and interoperability framework are all still to be defined by a consultant. The strategy is named but not operational: its strategic priorities, master plan, governance framework, enterprise architecture and interoperability framework are all still to be defined by a consultant not yet appointed. It is dated 2025 to 2030 and its defining work was still being tendered in mid-2026, which is the whole of the movement here. No standard, reference architecture or connection obligation on any public body exists on file, and the minister's July 2026 statement of common bases on a national architecture reference framework is the same object restated at ministerial level with nothing built.	NO CHANGE the framework and the architecture are still deliverables of a consultant not yet appointed
Strategies, plans and policies	**AI strategy**	A national AI strategy was validated at a Kinshasa ceremony on 4 August 2026. The Strategie nationale de l'intelligence artificielle and the sectoral digital economy policy were validated at a ceremony in Kinshasa on 4 August 2026, developed with UNESCO support including an AI Readiness Assessment Methodology report. A mixed AI commission had been created by order in October 2025. Validated is not adopted: no decree bringing either instrument into force is held, and neither text was reachable.	MOVEMENT
Strategies, plans and policies	**Data localisation policies**	The rule is a hosting duty: the law requires all public-administration data to be hosted in the state data centre, and some data still sits on private servers. The government's own account of the state data centre records both halves of the position: the law requires all public-administration data to be hosted there, and some data nonetheless still sits on private servers. No compliance figure, migration plan or enforcement action against that duty is published, and the instrument imposing it is not itself held. The replacement named for it is a sovereign government cloud, listed as an existing ministry project alongside the digital and data strategies, the identity platform and a certification authority, with no hosting location, operator, procurement, budget line or date. No rule reaches private-sector or personal data at all: nothing states where a bank, an operator or a platform may hold data on Congolese residents.	NO CHANGE a standing position the repository holds for the first time
Strategies, plans and policies	**Data governance policy**	A national data governance strategy was validated and handed to government on 13 November 2025. The Strategie Nationale de Gouvernance des Donnees was nationally validated and formally handed to the government on 13 November 2025 after a three-day ECA-led process, on six pillars: institutional leadership, the legal, regulatory and ethical framework, interoperability and data infrastructure, security and integrity of critical data systems, data skills and literacy, and evidence-based use of data; the digital economy ministry named a national implementation committee as the next step. No decree adopting the strategy is held, so it is validated rather than in force, and no implementation committee is reported constituted.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Open data policy**	No open-data policy instrument exists; a national open-data platform was launched on 23 February 2026 and an access-to-information bill is in commission. 2026-02-23 - the statistics institute launched a national open-data platform publishing datasets across demography, economy, health, education, public finance, agriculture and infrastructure. A platform is not a policy: no licence, release calendar or publication duty sits behind it. 2026-03-28 - a bill on access to information and transparency in public life was ruled admissible and sent to commission; it sets access as the norm and limitation the exception, applies to public services and some private actors, and requires a simple, fast and free request procedure alongside proactive publication. It is not enacted. 2026-08-17 - the central bank relaunched its website as a public economic-data portal carrying exchange rates, inflation, interest rates, statistics and indicators. Publication is proceeding institution by institution, with no rule requiring any of it and none of the reciprocal work — a state moving the other way on geological data, vesting it in itself and charging for access.	MOVEMENT
Legislation and regulation	**Data protection legislation**	The Digital Code is now enforced on the state's own initiative, prosecutors instructed to open cases without a complaint. The 2023 framework law was in force at the window's opening, its third book governing personal data, with no data-protection authority operational. 2026-08-17 - the attorney general at the Court of Cassation instructed judicial police officers to open Digital Code cases on their own initiative and forward them for summary hearing, and the audiovisual regulator's president is contemplating closing a video platform outright after it did not act on a request to block more than 2,000 accounts. The enforcement now running is criminal rather than regulatory: the law's personal-data book has no supervisor, so what has moved is prosecution under it, not protection through it. 2026-09-28 - the Senate declared admissible a bill amending the Digital Code to bar children under 13 from social platforms and make age verification mandatory.	MOVEMENT
Legislation and regulation	**Cybersecurity legislation**	The Digital Code of March 2023 covers the security and criminal protection of information systems, and the national cybersecurity authority was created by ordinance in May 2026. The statute is one code covering the whole field: its first article scopes it to digital activities and services, electronic writings and trust-service providers, digital content, and the security and criminal protection of information systems, alongside a digital tax, customs and exchange regime, and its definitions include cybercrime, cybersecurity, electronic commerce, cryptology and interoperability. 2026-05-16 - an ordinance under it creates the national cybersecurity authority, with powers to audit public institutions and operators of vital importance and to certify cybersecurity products. Enforcement of the code began on the state's own initiative in August 2026, the attorney general instructing judicial police officers to open cases proprio motu. A code that reaches content offences and is enforced without complaint is a different instrument in practice from one that protects systems. 2026-09-12 — a national deputy announced a bill amending the penal code and the Code du numérique to punish diffusion of intimate content without consent with five to ten years' imprisonment; it is not yet tabled. 2026-09-21 - a second deputy filed a bill on protecting minors in the digital environment, to sit beside the Code du numérique and the child-protection law; its text is not published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Legislation covering digital id**	A bill on the identification of natural persons was tabled at the National Assembly bureau on 12 June 2026. 2026-06-12 - the bill was tabled: it would set one legal frame for identification data and its collection, processing, retention and protection, impose security and interoperability requirements, and connect civil-registry, migration and health databases. No committee report or plenary date is held. It runs alongside rather than through the twenty-year identity concession already signed, and nothing on file connects the two. A statutory frame arriving after the platform it would govern is the sequence here, and no source states which would prevail on retention, access or foreign processing. 2022 and 2023 - a prime-ministerial decree of 2022 created a biometric national identity card compulsory from 18, and an interior ministry order of 15 November 2023 set its rules, opening its electronically readable data to security staff, public agents and private persons under unspecified regulations; no card had been deployed nationally by late 2025.	MOVEMENT
Legislation and regulation	**Digital payments legislation**	The 2018 statute governs payment systems, payment instruments and electronic money and makes the central bank the supervisory authority; the bank legislates under it by instruction. The statute runs to 139 articles across eight titles; its third article defines electronic money and the electronic payment instrument, and it makes the central bank the supervisory and regulatory authority over payment systems and instrument issuers. The bank continues to add to it by instruction rather than by amendment: a pricing-schedule notice of 31 October 2025 applies to financial intermediaries including electronic money establishments, and the notice's own operative text is not held, the regulator's page exposing only its title, date and scope. What the statute has not produced is a modernisation programme: the bank instructed its technical services in September 2026 to draw up a roadmap for modernising the national payments system, eight years on.	NO CHANGE a standing position the repository holds for the first time
Legislation and regulation	**Legislation enabling data interoperability**	The Digital Code defines interoperability among its terms; the platform it would govern is specified on paper only. The code's definitions include interoperability alongside cybercrime, cybersecurity, electronic commerce and cryptology. A definition is not a duty: nothing in the repository shows the code compelling any administration to expose data or to consume another's. What would run under it does not exist. The data-sharing platform and government payment gateway are specified on paper only, with no architecture, pilot, operator or date, and the interoperability framework is itself a consultant deliverable. The one place a conformance duty is actually imposed is sectoral: hospital information systems must demonstrate conformity to named health data-exchange, imaging and interface standards and to the national health identifier and enterprise architecture.	NO CHANGE a standing position the repository holds for the first time

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**AI legislation / regulations**	There is no artificial-intelligence instrument: the national strategy was validated on 4 August 2026 and not adopted, and officials say the bodies acting on it have roles not yet articulated in a common steering architecture. The strategy was validated together with the sectoral digital economy policy at a ceremony on 4 August 2026, developed with support from the United Nations education and culture agency including a readiness-assessment report, with a mixed commission established by ministerial order in October 2025. Validated is not adopted, and a strategy is not a regulation. Its own draft rests on four pillars — governance, ethics, trust and regulation; data, digital and energy infrastructure; human capital, research and innovation; industrialisation and value creation. 2026-07-23 - officials put on the record that bodies already acting across digital, research, data, cybersecurity and regulation have roles not yet sufficiently articulated in a common steering architecture — the state's own account of why no instrument has issued. The Digital Code, the only statute in the field, does not reach artificial intelligence in its scoping article.	NO CHANGE a standing position the repository holds for the first time
Legislation and regulation	**E-commerce legislation**	Electronic commerce is scoped and defined by the Digital Code of March 2023, with the authorisation regime for digital services set by order in March 2026. The code scopes itself to digital activities and services, electronic writings and trust-service providers and digital content, and defines electronic commerce among its terms. It is the whole of the primary law. 2026-03-17 - an order sets the authorisation regime for digital services and activities, and the regulator separately published procedures for authorisation and declaration of personal data processing in May 2026. The trust layer the code provides for is not built: the national electronic certification authority is named and not established, while a July 2026 interministerial order already prices qualified trust services at US$30,000 for foreign and US$10,000 for local providers — a fee schedule for a service no domestic body can yet supply. 2026-09-28 - the minister said the Prime Minister had signed the decree creating the certification authority; no decree number or operating date is given.	NO CHANGE a standing position the repository holds for the first time
Legislation and regulation	**Statistics legislation**	An ordonnance-loi organising statistical activity, the country's first legislation on the subject, was signed and its ratification bill adopted on 11 September 2026. The Council of Ministers adopted draft ordonnances-lois organising statistical activity on 28 August 2026, presented as the country's first legislation on the subject and as adapting the legal and institutional framework (adoption). The texts are drafts adopted by the executive; the repository holds no promulgation and no published text. 2026-09-11 — the Council of Ministers adopted the bill authorising ratification of the ordonnance-loi, which the President has signed; it names the Institut national de la statistique principal statistical authority and keeps existing databases valid subject to progressive compliance.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Access to information legislation**	A bill setting access as the norm was declared admissible on 27 March 2026; a classification regime was presented two weeks earlier. 2026-03-27 - the bill was declared admissible and referred to a joint commission with ten days to report: it sets access as the norm and limitation the exception, applies to public services and some private actors, and requires a simple, fast and free request procedure, proactive publication, reasoned refusals and a right of appeal. Four months past that ten-day deadline, no commission report, plenary date or adoption is held. 2026-03-13 - an information note to the Council of Ministers set out four levels of classification with access limited to cleared agents, traceability of transmissions, reinforced archiving and a ban on sending sensitive documents over private messaging, tied by its own account to the security situation in the east.	MIXED an access-to-information bill was declared admissible while a four-level classification regime was put to the Council of Ministers
Data protection	**Data protection authority**	A network of data-protection officers launched in March 2026, while the authority required by article 262 is still not created. The authority is required by article 262 of the code and the decree defining its organisation and functioning was never drafted or signed, leaving the body non-operational - now two years of the same finding, running alongside a twenty-year exclusive foreign concession over citizens' identity data. It was named again in July 2026 as a link in the cybersecurity chain. 2026-03-12 - a national network of data-protection officers was launched with two civil-society bodies, framed as alignment with the continental convention. It is the first concrete step under article 262 since 2023, and it moves the enforcement gap without closing it: a professional network is not a supervisor with sanctioning powers. A ministerial order of 17 August 2024 provisionally transferred the authority's prerogatives to the telecoms regulator, which a legal critique holds contrary to the digital code.	MIXED a national network of data-protection officers was launched while the authority the code requires is still not created
Data protection	**National data protection readiness**	A drone and citizen-reporting project in Kinshasa was announced with a private company, and a ministry memorandum names digital identity in scope. 2026-01 - a drone surveillance and citizen-reporting project was announced by the provincial government with a private company, with the reporting outlet itself raising privacy and operator-integrity concerns and no procurement value, legal basis, data-retention rule or oversight arrangement held. 2026-08-13 - the digital economy ministry signed a memorandum with a commercial bank to modernise financial services and accelerate banking inclusion, covering digital identity and artificial-intelligence integration, with no term, value, workplan or data-protection provision published. Both process personal data, neither states a safeguard, and no supervisor exists to ask.	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Regional policy collaboration**	The African Telecommunications Union's return to Kinshasa was ratified on 23 July 2026 after arrears were paid. 2026-07-23 - the union's seventh Plenipotentiary Conference ratified the return of its headquarters to Kinshasa after arrears were paid, with no date for the move stated, and a bid for an ITU Administrative Council seat for 2027-2030 pending. The arrears figure and the account are the posts and telecommunications minister's own, given marking a year in office, and no union document, decision text or move timetable is held. Hosting a continental body is the clearest regional position the repository records for this country in the window. 2026-09-10 — the country signed the international declaration on space-based scientific data, one of 49 states with the European Space Agency committing to open access to satellite observation data save justified exceptions, open licences and harmonised exchange standards; it names no implementing measure.	MOVEMENT
Regional collaboration	**Regional legal harmonisation**	A regional free-roaming resolution mandating implementation by 30 June 2026 passed its deadline with nothing on record. 2026-02-24 - regional regulators adopted a resolution mandating effective free roaming across Central Africa by 30 June 2026, at a session hosted in Kinshasa. The deadline has passed with no implementation, tariff or country-specific measure held. Nothing states whether Congolese operators were consulted, what a compliant tariff would look like, or what follows a missed regional deadline; the resolution is the only harmonisation instrument on this ledger and it has produced nothing measurable.	STALLED
Regional collaboration	**Shared regional infrastructure**	A fibre route linking Goma to Mombasa was reported lit, and a cable across Lake Tanganyika to Tanzania is to be fast-tracked. 2026-10-08 — ministers agreed on the need to carry out a fibre interconnection with the Central African Republic, without timetable or financing. 2026-02 - the route was reported lit, tying eastern DR Congo into the East African terrestrial corridor to the Indian Ocean. The event date is not separately established from the publication date and both held accounts are trade press. No capacity, pricing, operator agreement or traffic figure is published, and the route serves the same eastern provinces where mobile and internet service has been cut for months at a time, so what it delivers on the ground is not established by anything on file. 2026-09 - the two foreign ministries reaffirmed that they would fast-track a fibre-optic cable from Kigoma to Kalemie through Lake Tanganyika, alongside a railway link through Burundi and a joint economic commission. No route survey, cost, financing or delivery date is published, and no Congolese ministry statement is on file. The 2,000-kilometre Goma-to-Mombasa terrestrial route through Kigali, Kampala and Nairobi was announced live and carrying traffic on 9 September 2026, with access to subsea capacity at Mombasa (route).	MOVEMENT
Regional collaboration	**Cross-border data transfers**	A regional expert panel recommended terrestrial gateways inside the region and citizens' data kept on the continent, at a session hosted in Kinshasa. 2026-02-24 - the panel recommended that non-geostationary satellite providers establish terrestrial gateways within the region's jurisdiction, meet obligations equivalent to traditional operators and keep citizens' data on the continent. It is a recommendation, not an adopted instrument, and the country is the host rather than its author. No national rule on transferring personal data abroad exists on this ledger, which matters because the identity platform running here is operated under a twenty-year concession by a foreign party and no source states where its data sits.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	**National interoperability standards**	The only conformance duty is sectoral: hospital information systems must be homologated against named health data-exchange, imaging and interface standards. No national standard exists. 2026-06-16 - the health digital agency made homologation of hospital information systems mandatory under a ministerial order of 11 March 2025, requiring candidate systems to demonstrate conformity to named standards for health data exchange, medical imaging and application interfaces, and to the national health identifier and the digital health enterprise architecture. It is the only instrument in the repository naming a standard and requiring conformity to it. Nothing equivalent exists across sectors. The interoperability framework is a consultant deliverable inside a project whose consultant is not yet appointed, and the Digital Code carries interoperability as a definition rather than an obligation. The nearest thing to a cross-cutting standards act is classification rather than exchange: a national regime of four classification levels with access limited to cleared agents, traceability of transmissions, reinforced archiving and a ban on sending sensitive documents over private messaging.	MOVEMENT
Standards	**National quality standards**	The regulator installed service-quality monitoring equipment and the minister ordered operators to return units consumed without justification (order). The posts and telecommunications minister ordered the four mobile operators to return units and megabytes consumed abnormally or unjustifiably by their subscribers (order), after inspecting monitoring equipment acquired to trace service-quality failures (inspection). A 2023 decree created a successor regulator, but a joint press investigation reports it has never been installed, leaving the older authority to police service quality it is accused of failing to enforce.	MOVEMENT
Standards	**Adoption of international standards**	The Kinshasa carrier-neutral facility holds information-security, continuity and payment-card certifications, unchanged in the window. The facility has been live since August 2024 as the country's first Tier III certified data centre, certified to information-security, continuity and payment-card standards, and now also hosts the internet exchange's second presence. The certifications are not re-verified in the repository and no recertification date is held. They are also the only international standards adopted by anything on this ledger: no national standards body, conformity regime or certification requirement appears anywhere, so a private facility's commercial certifications are the whole of the position.	NO CHANGE
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	A standing state-industry consultation mechanism was agreed on 6 August 2026 after the dispute over the digital-sector tariff. 2026-08-06 - a working session between the digital economy minister and the sector network agreed a permanent consultation framework after the dispute over the digital-sector tariff, and announced a strategic barometer to give government figures on firms' scope of activity, turnover, growth and job creation. No constituting text, membership or meeting schedule is stated for the framework, and no operator, methodology or first-issue date for the barometer. Both were proposed by the industry body rather than instituted by the state, and both follow a tariff dispute in which an order took effect, was said to be suspended, and was then said not to be.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	**Open discussion of government policy**	The Council of Ministers adopted a government-wide strategy against abusive platform content on 28 August 2026, with a citizen alert mechanism and a review of regulation. The strategy was adopted at the Council's 97th session and carries an interministerial task force chaired by the communication ministry, a citizen alert mechanism, integration of media literacy into the school curriculum, and a technical and legal review of how the sector is regulated (strategy). The strategy text is not held; what is held is the Council's own account of what it adopted. Neither the account nor anything else on file defines abusive content, names who decides, or says what follows a citizen alert. It lands on a base that already records the digital code being enforced on the state's own initiative, with the attorney general instructing judicial police officers to open cases proprio motu (code). A reporting channel and a prosecutorial instruction are the two halves of the same mechanism.	REGRESSED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The digital economy section rose to FC 81,698,223,741 for FY2026, but only 51.7% of the FY2025 revised credit was paid. The 2026 finance law renamed the digital section digital economy and appropriated FC 81,698,223,741 domestic, up 34.8% on FY2025 and still 6.2% below the FY2024 appropriation, and renamed the other section posts and telecommunications at FC 53,840,917,417. Credits moved from FC 145.7bn to FC 55.1bn on one section and from FC 60.6bn to FC 226.7bn on the other, so combined the two are almost flat and the rise is substantially a transfer of mandate. Execution is the weak point: FC 31,358,784,468 was paid, 51.7% of the revised credit, against FC 68,457,537,329 engaged, or 112.9%. National identification received FC 20,654,178 for FY2026, a figure that cross-foots exactly and is not a transcription error.	MIXED both digital sections were appropriated higher for FY2026 while the rise is substantially a transfer of mandate and only 51.7% of the prior year's credit was paid
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE
MoUs and other agreements	**Strategic relationships**	The central bank signed a card-network memorandum on payments and inclusion, and the digital ministry signed one with a commercial bank. 2026-04 - the central bank governor and a card-network executive signed a memorandum on three pillars: technical capacity building, financial inclusion and literacy, and secure resilient payment systems, aligned to the bank's 2026-2030 plan. No monetary value is attached and the signing date is not given separately from the report date. 2026-08-13 - the digital economy ministry signed with a commercial bank on modernising financial services and accelerating banking inclusion, covering digital identity and artificial-intelligence integration under the 2019 national digital plan and the 2023 Digital Code, with no term, value or workplan published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	**Mobilisation of non-state finance**	A US$179m upsized senior facility funds 728 new towers, alongside a US$100m investment convention. Vodacom Congo said at its forum in Kinshasa on 8 October 2026 that it plans a long-term US$670m network investment programme, against an average of US$140m a year, and put its 4G coverage at 46.1%. The repository holds no schedule or financing for it. The repository's earlier position was a US$30m commitment in 2023 supporting tower purchase and development, with the network at 1,072 active towers. 2026-08-05 - a development fund committed US$32.8m inside an upsized US$179m senior secured facility funding 728 new passive towers to take the network to 1,800, 70% of them rural, plus solar and battery upgrades. A further US$34.35m debt facility to the same recipient sits at pipeline stage, and whether the two are linked is not established. 2026-03-31 - a separate tower operator signed an investment convention of more than US$100m with the investment-promotion agency, stating more than 4,000 jobs already created; the convention text and any disbursement figure are not held.	MOVEMENT
New investments	**Development-partner project financing**	A US$200m IDA additional financing was adopted in draft ratifying ordinance-law on 14 August 2026. 2026-08-14 - the Council of Ministers adopted a draft ordinance-law ratifying a US$200m IDA additional financing extending the enterprise project into the Lobito corridor, its loan agreement concluded on 22 June 2026, taking the parent project approved in 2022 at US$300m to US$500m in total. The financier's own project paper splits the US$200m into a US$176m credit and a US$24m credit. The ordinance-law is not promulgated and no disbursement is on record. 2026-08-07 - a separate financial-sector package announced a modernised credit-risk registry and an electronic movable-collateral registry to be built with the central bank, alongside a deposit-guarantee fund and 10,000 point-of-sale terminals, with no instrument, custodian or timetable stated.	MOVEMENT

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	Mobile subscriptions reached 73.93m at 67.8% penetration in 2025, from 63.96m and 60.5% in 2024. 2026-10-09 — the minister presented a commercial 5G launch to the Council of Ministers, with no operator, spectrum assignment or date stated. The first regulator-submitted regional dataset the repository holds puts the country at 73.93m mobile subscriptions and 67.8% penetration in 2025, against 63.96m and 60.5% in 2024. It is a regional compilation of the national regulator's own returns rather than a published national series, and the regulator itself publishes nothing comparable that the repository holds. The same return reports no mobile-money transaction value at all, so a country with tens of millions of wallets contributes no payment volume to the regional statistics it now files into. The next generation is not moving: a public consultation on introducing 5G opened in March 2025 and seventeen months later no consultation report, spectrum award, licence or revised timetable has been published. An independent tower company reached 3,000 sites on 3 September 2026, 673 of them rural, and claims coverage for more than 40 million Congolese. The count and the claim are the company's own; no regulator figure stands against them.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Internet usage**	Mobile-internet subscriptions stand at 36.98m, 33.9% penetration, with mobile-internet revenue of US$970.2m in 2025. The regional dataset records 36.98m mobile-internet subscriptions at 33.9% penetration and mobile-internet revenue of US$970.2m in 2025, nearly matching voice revenue. The earlier position the repository holds is a Council of Ministers record of 30.79% mobile-internet access and under 0.02% fixed access, which is close enough to the 2025 figure to say the level is stated rather than a movement measured. Fixed access remains statistically absent, and no household or individual usage survey exists on this ledger.	MOVEMENT
Connectivity	**Mobile affordability**	Bundle validity was cut without notice: 1GB at 1,500 francs fell from 48 hours to 24, and the 2GB bundle was replaced. Subscribers in Bukavu and the eastern provinces report that a 1GB bundle at 1,500 Congolese francs, formerly valid 48 hours, is now valid 24 hours, and a 2GB bundle at 2,000 francs valid 48 hours has been replaced by 1GB valid 72 hours at the same price. Both ends are subscribers' and resellers' accounts; no operator or regulator statement is on record and the changes are reported as unannounced. It is the only affordability evidence on this ledger, and it comes from the same eastern provinces where service has been cut outright for months at a time.	REGRESSED
Connectivity	**National fibre backbone**	7,000 km of backbone is deployed against a target of more than 18,500 km, leaving 11,500 km outstanding to 2030. 2026-08-03 - the 95th ordinary Council meeting was told 7,000 km had been deployed against a target of more than 18,500 km, leaving 11,500 km outstanding, tied to connecting 145 territories by 2030. The minister cites budget constraints and a low disbursement rate on external financing, and the remaining distance over the 2030 horizon implies about 2,900 km a year. 2026-07 - a memorandum was signed with a Chinese supplier for about 2,100 km along and beside the Congo River at a stated US$1.5bn, more than US$400m of it required for the first phase, with no financing close, contract or works. Both figures are company-reported. 2026-09-26 - procurement information sets out four 20-year concessions for 11,600 km of backbone, let by international tender with gap financing for unprofitable routes; no tender is yet on record.	MOVEMENT
Connectivity	**International internet bandwidth**	International bandwidth stood at 6 kbit/s per internet user in 2020; one operator activated an initial 200 Gbps of submarine capacity on 18 December 2025. No later per-user figure is published. The reference statistical profile is the only per-user measurement the repository holds: international bandwidth 6 kbit/s per internet user in 2020, mobile network coverage 75 per cent in 2022 and 27 per cent of individuals using the internet in the same year. 2025-12-18 - one operator became the first in the country to bring the first phase of a submarine cable into service, activating an initial 200 Gbps of international capacity. 2026-09-09 - the eastern half of the country was tied into a terrestrial corridor to the Indian Ocean: a 2,000 km route is live and carrying traffic. Two new routes and no updated per-user figure: the improvement is real and cannot be sized against the 2020 baseline.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Internet Exchange Points**	One exchange became distributed across two carrier-neutral facilities and another moved into a Tier III facility. 2026-05 - an exchange established in 2023 and operating from a single presence added a second presence at a Kinshasa carrier-neutral facility, making it the country's first distributed exchange, open to licensed operators, service providers, mobile networks, cloud and content providers. 2026-08-20 - a second exchange relocated its infrastructure into a carrier-neutral Tier III data centre, the operators stating it connects more than 20 networks with over 1 Tbps of available capacity and expecting more than 2 Tbps after the move, as one of three points under a national exchange project managed by the internet service providers association. Capacity and network counts are the operators' own and no traffic measurement is held for either.	MOVEMENT
Connectivity	**Satellite broadband licensing and availability**	A satellite direct-to-cell service launched commercially on 14 August 2026, while the sovereign satellite programme is unchanged. The satellite provider has been licensed since May 2025, reversing a March 2024 prohibition, a decision civil society welcomed as a corrective to incumbent monopoly abuse; the licence conditions and any enforcement outcome are not established. 2026-08-14 - a satellite-to-mobile service launched commercially, the first African operator to take such a partnership out of testing: a compatible handset with a clear view of the sky reaches messaging and voice where there is no terrestrial coverage, with no dish or router, on a phased rollout the regulator has confirmed. A free 30-day trial is the only access term published. The sovereign satellite programme has no contract, operator selection, build or launch date twelve months on.	MIXED a satellite-to-mobile service launched commercially while the sovereign satellite programme did not move in twelve months
Data Storage	**Local data centre capacity (all providers)**	The largest facility is unchanged at 400 racks and 1.5 MW, and a university data centre with high-performance computing opened in Lubumbashi on 27 June 2026. The facility has operated since August 2024 as the country's largest, Tier III certified, at 400 racks over 1,542 square metres and 1.5 MW, on US$30m invested. No utilisation, capacity-sold or expansion figure is held, and its position did not move in the window. What moved is its parent's balance sheet: committed capital rose from US$350m to US$380m, with six times as much power contracted in the first half of 2026 as a year earlier. That is group-level across six live markets and none of it is allocated to this country in the source, so it says nothing about capacity here. 2026-06-27 - a private university inaugurated a data centre of about thirty servers with high-performance computing on its Lubumbashi campus, for research, artificial-intelligence and industrial data. No power or cost figure is published.	MOVEMENT
Data Storage	**Local data centre capacity (national providers)**	The enacted 2026 finance law carries FC 26,756,546,346 for national data-centre acquisition, with no procurement or site held. No national data-centre appropriation is established at the window's opening. The enacted 2026 budget carries FC 26,756,546,346 for national data-centre acquisition. No procurement, site, operator, specification or execution evidence is held, and no 2026 execution data has been published at all, so an appropriation is the whole of it. Set against the prior year's payment rate of just over half the revised credit on the same section, an appropriation on this line is a weaker signal here than it would be elsewhere.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Off-site backup capacity**	No separate government recovery site is evidenced; the state data centre at about 400 kVA is the only facility, and a health data centre with a backup site went to expressions of interest in June 2026. The government's own account of the state facility gives its capacity at about 400 kVA and records that the law requires all public-administration data to be hosted there while some data still sits on private servers. No operational, geographically separate government backup or disaster-recovery site is evidenced anywhere in the record. 2026-06-16 - the health digital agency opened an expression-of-interest notice for a national health data centre built as a public-private partnership, specifying a main site in the capital plus a backup site, 99.9 per cent availability and a redundant architecture, closing 12 July 2026. It is the clearest movement toward off-site backup anywhere in the public estate and it is at procurement. The commercial market is further ahead than the state: a carrier-neutral facility in the capital is tier-certified at 400 racks over 1,542 square metres and 1.5 MW, and the sovereign government cloud has no hosting location, operator, procurement or date.	MOVEMENT
Energy	**Sufficient energy and water for data centres**	Installed capacity reached 3,646.5 MW in 2024, 88.2 per cent hydroelectric, and the state pitched its largest hydro site as a location for artificial-intelligence data centres. No data-centre standard exists. The regulator's 2024 annual report states installed capacity reached 3,646.5 MW in 2024, up from 2,972 MW in 2020, 88.2 per cent hydroelectric, with a further 4,125.1 MW of approved projects pending. No data-centre-specific power or water sufficiency standard is stated anywhere in it. 2025-10 - at a Washington investment forum the hydropower development agency pitched the country's largest hydro site, 44 GW of theoretical potential against under 2 GW currently produced, together with river cooling water and nearby fibre, as a location for artificial-intelligence data centres, a financier confirming a US$1 billion commitment to the next phase. At the same forum a memorandum was signed for a 1,150 km, US$1.5 billion, 1,200 MW cross-border transmission line from Angola targeted for 2029, aimed principally at the mining belt. Both are prospectuses. No data centre in the country has a published supply arrangement, guaranteed capacity or tariff.	MOVEMENT
Energy	**Grid reliability**	Two commissionings — a 178 MW turbine ramped to full output by 25 November 2025 and a substation energised at Kikwit in May 2026 — against no published national interruption index. 2025-11-25 - a refurbished 178 MW turbine at the second Inga plant, following a decade-long partnership between the state utility and a mining company, was synchronised in the fourth quarter of 2025 and ramped to about 180 MW delivered into the national grid, feeding both a mining complex and general supply. 2026-05 - the utility energised a 66/33 kV substation at Kikwit from a hydroelectric plant, attended by the head of state, intended to reduce outages in that city. Against them there is no measurement. The regulator's 2023 report lists a section on performance indicators for operators in its own contents and the capture does not reach its body, so no consolidated national interruption index is confirmed at any date. Rural provision runs on a separate track: 22 of the rural electrification agency's 65-project portfolio moved from construction into operation.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	**Rural electrification**	22 of the rural electrification agency's 65 plants moved into the operating phase. 22 of ANSER's 65-project portfolio of rural power plants moved from construction into the operating phase, after a ministerial order validated in Council made the agency the contracting authority able to recruit private operators for exploitation and maintenance. Its Mwinda Fund became operational in October 2025. This is rural generation rather than a supply position for telecom sites or data centres, which the repository still does not state. 2026-09-24 - a philanthropic accelerator announced a demonstration adding computing load to an underused solar plant serving more than 30,000 people, to test whether compute demand can make mini-grids pay. Site, operator and start date are not stated.	MOVEMENT
Technical Capacity	**Robustness of government hardware and software**	A public-administration reference file went to procurement, and a 2026-2028 public-enterprise digitalisation plan was disseminated. 2026-08-19 - the public finance reform committee notified its intention to award the equipment lot for a public-administration reference file and opened the standstill period, funded by an IDA credit and grant. The notice carries no contract value and does not describe what the reference file will hold. 2026-07-15 - a dissemination seminar opened on a 2026-2028 public-enterprise plan with digitalisation as its backbone, covering transaction traceability, automated validation circuits, real-time alerts and data reconciliation across state enterprises; no system, budget line or deployment date is named.	MOVEMENT
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	The project unit had core staff in place with recruitment and key deliverables still in progress and several moderately satisfactory ratings; an accelerated timetable was set in February 2026. The project's steering committee held its first session on 8 October 2026 and validated the 2026 annual work plan and budget, reviewing delays component by component and setting priorities to 2027. 2025-07 - the financier and a development agency's implementation-support mission recorded the project unit with core staff in place — coordinator, finance, accounting, technical — while recruitment and key deliverables, the fibre backbone strategy, the government network, the electronic government architecture and digital skills, were still in progress, with several performance ratings of moderately satisfactory and documented delays. 2026-02-17 - the prime minister's office and a financier delegation set an accelerated implementation timetable targeting fibre reinforcement and internet extension to underserved zones by September 2026. Capacity is being measured only through one project's delivery. No count of technical staff in the administration, no vacancy rate and no skills assessment is published, and the national technical-capacity base is not held. 2026-10-01 - the regional programme's half-year report records the project unit operational and names delays in validating the backbone investment strategy, with a US$190m backbone tender a priority for 2026.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Cybersecurity	**National cybersecurity readiness**	A presidential ordinance of 16 May 2026 creates the national cybersecurity agency. Ordonnance 26-033, signed on 16 May 2026 and published in the Journal Officiel, creates the Agence Nationale de Cybersecurite under the 2023 Digital Code, with powers to audit public institutions and operators of vital importance and to certify and homologate cybersecurity products and services, and tasks it with standing up a national security operations centre and a CERT; covered entities must notify it of attacks and intrusions. It is the clearest movement from legal framework to institution the repository holds. Neither the operations centre nor the CERT is reported operating, and no incident report or advisory from the agency is on the record.	MOVEMENT

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	A data-sharing platform and payment gateway are consultant deliverables, and the decree creating a certification authority has been signed. The platform and gateway are specified on paper only: no architecture, pilot, operator or date, and the interoperability framework is itself a consultant deliverable. The electronic certification authority is named among the instruments to be articulated into the governance framework but is not established, while a July 2026 interministerial order already prices qualified trust services at US$30,000 foreign and US$10,000 local. A fee schedule exists before the institution does. Neither had a position in the repository at the window's opening, so what is stated is where they now stand rather than a direction. 2026-09-28 - the minister said the decree creating the certification authority had been signed by the Prime Minister. No operating date is given.	MOVEMENT a decree creating the certification authority was signed while the exchange platform is still a consultant deliverable
Data Exchange	**Use of digital id in other systems**	A memorandum of 13 August 2026 envisages integrating the national identity platform into a bank's customer-identification journeys, subject to regulation. It is a framework, not a live integration. The platform it would plug into launched on 13 June 2026 on a phased rollout that trains agents before registering citizens, offering authentication, electronic signature, document verification and bank and mobile-money identity as its service set, with no enrolment figure published. 2026-08-13 - the digital economy ministry and a commercial bank signed a memorandum envisaging integration of the identity platform into banking customer-identification and verification journeys, subject to regulation, and covering digital identity and artificial-intelligence integration. It is a cooperation framework with no committed sum and no live integration. Nothing else consumes it. No public service, no operator and no other bank is stated to verify identity against the platform, and the data-sharing platform that would carry such a query is specified on paper only.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of health systems**	Health is where exchange actually happens: an analysis application was integrated directly into the national health data platform and an outbreak tracker was configured within 24 hours in May 2026. 2026-02 - a donor-funded analysis application was built and integrated directly within the national health data platform, letting any user analyse HIV data in granular real time without exporting to a spreadsheet, first adopted as the primary provincial analysis tool in one province with training planned for 112 managers across all 26 provinces. 2026-05 - after an Ebola outbreak was declared, the national implementing partner adapted and made operational a tracker configuration within 24 hours for alert notification, case investigation, laboratory-result management and contact tracing, and a joint standardised surveillance and outbreak-response toolkit was validated with the continental health agency, unifying disease-surveillance data flow across countries. The same outbreak pulled in a source outside the health system entirely: anonymised mobile-phone call records are being used to map population movement and anticipate where the outbreak will spread. That is the repository's clearest instance of cross-sector data reaching a health decision, and it runs through an international non-profit rather than a state exchange layer. 2026-10-02 - the continental health agency said it was deploying the platform for Ebola outbreak data and had sent more than 150 internet devices to affected health zones.	MOVEMENT
Data Exchange	**Interoperability of education systems**	The education system was assessed against continental norms and standards over three days in May 2026, with gaps identified and a national roadmap still to be defined. 2026-05-12 - a workshop under the continental education institute ran a self-assessment of the education management information system against continental norms and standards, establishing that the system exists and was still being measured against them, with gaps being identified and a national roadmap still to be defined. The national health data platform was being explored as a possible platform for education-data interoperability and is not adopted. Underneath the assessment there is a working collector: the national school-data application was used for the 2022/23 school census across ten project provinces, and a three-week digital enrolment pilot across 20 primary schools in April 2026 registered 8,634 students. Collection is not exchange. No flow between the education system and any other government system is evidenced, and no standard has been adopted for one.	MOVEMENT
Data Exchange	**Interoperability of social protection systems**	A decree of December 2025 creates a single social register with interoperability provisions, over management systems an earlier project already built. Decree number 25/041 of 4 December 2025 creates a single social register, centralising beneficiaries' biographic, demographic and biometric data under a steering committee and a technical management unit, with interoperability provisions (decree, adoption). The financier's closure report for the eastern recovery project records that operation as the one that built the country's social-protection management information foundations under the social affairs ministry (closure report). No operator, household enrolment figure or link to the identification office is held for the new register, so what the interoperability provisions connect to is not established.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Robustness of system**	The national digital identity platform launched on 13 June 2026, valued at US$97.1m, with no enrolment figure published. At the window's opening a twenty-year exclusive electronic know-your-customer partnership signed in June 2025 was in phased deployment. 2026-06-13 - the platform launched at a state ceremony, valued at US$97.1m by the planning ministry, with US$2.6m raised by the concessionaire for initial rollout and rollout to begin with technical audits and pilot testing. No enrolment figure is published, and the financing was already unclear when the valuation was reported in January 2026.	MOVEMENT
Digital Identity and CRVS	**Registration of entire population**	The identification office held its first board meeting and adopted a roadmap to accelerate registration (roadmap). 2026-05-29 - the office announced the start of operations as imminent with the partner withheld, the 2026 finance law giving national-identification acquisition FC 20,654,178 and revised provisions sitting in a supplementary budget before the Assembly. The last national identification was in 1984 and no enrolment figure is held. 2026-08-17 - separately, forty agents finished training at Gbadolite for a provincial operation identifying Mbororo herders, on a digital tool recording identity, ties to the country, weapons and cattle, with no legal basis, retention rule or data controller stated. 2026-09-12 — the diaspora ministry said an OKAPI card for Congolese by origin holding another nationality is in place and a diaspora digital identification system is being developed, with no issuing body or launch date. 2026-09-13 — the population is to be counted twice at once: an identification operation launches in mid-December 2026 under one ministry while a census is planned for 2027 under another, the office declaring its preparations complete on 16 September, with the data protection authority not installed. 2026-09-27 - the minister delegate for the diaspora launched the pilot phase of diaspora identification in Paris and presented the registration platform in Brussels.	MOVEMENT
Digital Identity and CRVS	**National maintenance of id and credentials systems**	Identification is run under a twenty-year exclusive partnership while the state appropriated FC 20,654,178 for it. The identity platform operates under a twenty-year exclusive partnership signed in June 2025, and the state's own appropriation for national identification acquisition in the enacted 2026 finance law is FC 20,654,178 - a figure that cross-foots exactly against its group total and is not a transcription error. It corroborates the identification office's own account that the allocation obliged recourse to a partnership. No transfer milestone, revenue share, performance standard, exit arrangement or data-custody rule is published for the twenty-year concession, and no state body is named as holding the register at its end. 2026-08-31 — a Brussels court referred fourteen defendants to trial over the contract under which a Belgian firm produced the country's biometric passports from 2015 to 2025, on charges of bribery of foreign public officials, money laundering and tax fraud; the civil parties, 51 citizens who filed in 2020 with a coalition of anti-corruption organisations, put the diversion at close to US$60 million (referral, report). The ministry picked 50 pilot registration agents from more than 9,000 candidates, training from 15 September 2026; no citizen has been enrolled on the record. 2026-09-15 — the first 50 enrolment agents began training.	NO CHANGE the identity layer runs on a twenty-year exclusive concession while the domestic appropriation for identification is negligible

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Authentication**	RDC-PASS launched on 13 June 2026 as the national digital identity and authentication platform. RDC-PASS is online following its presidential launch on 13 June 2026, on a phased rollout that trains agents before registering citizens, and lists authentication, electronic signature, document verification and bank and mobile-money identity as its operative service set. Agent training was under way at launch. No registration count, relying-party count or uptake figure is held, and nothing states how it keys to the general population register.	MOVEMENT
Digital Identity and CRVS	**Digital id from birth**	A rural eastern sector has had no birth registers for several months and newborn registration has stopped outright. 2026-07-25 - a sector chief told the provincial interior division that his civil-status office has had no birth registers for several months, that newborn registration has stopped outright, and that the province promised resupply with no date. The stated consequences are exclusion from school enrolment and from proof of nationality. It is the concrete measure of how far civil-registry modernisation reaches into rural territories, and it runs in the same year a national digital identity platform launched in Kinshasa. No registration rate, register-stock figure or resupply programme appears anywhere on this ledger.	REGRESSED
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	A consultancy tendered in April 2026 will assess civil registration digitalisation and design integration with health and education data. Nothing links a birth registration to the identity platform. 2026-04-25 - a United Nations tender for a national consultant frames civil registration and vital statistics systems as foundational digital public infrastructure for legal identity, and scopes a rapid assessment of the country's current digitalisation status, design of digital tools including mobile registration and integration with health and education data, and engagement with the interior ministry and civil-status authorities. It is a consultancy at tender. The identity platform it would connect to launched in June 2026 with no enrolment figure published, and the population file beside it is digitalising the capital's register from November 2025, with communal agents being trained on digitalised enumeration by August 2026. At the registration end the position is worse than partial: one rural eastern sector went several months without birth registers and stopped newborn registration outright. A link cannot be built to a registration that does not happen.	MOVEMENT
Digital Identity and CRVS	**Use by other systems**	The biometric passport stands at US$75, 2,400 a day across 100 stations, with no later figure held. The passport price was cut to US$75 with a new supplier and online enrolment, on 50 fixed and mobile stations plus 50 at missions and a stated 2,400 a day, against prior prices of US$185 then US$99, under a 2022 contract worth US$48m. No later price, volume or station figure is held, so the position is unchanged through the window. Nothing states whether the passport draws on, or will draw on, the identity platform launched in June 2026, which is the question the indicator asks and which no held source addresses.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Governance role of central bank**	The central bank set 9 April 2027 as the date from which no foreign-cash transaction of any amount is permitted. 2026-05 - the central bank set 9 April 2027 as the date from which no foreign-cash transaction of any amount is permitted. The deadline stands with no implementing instrument, exemption schedule or enforcement mechanism held. It runs directly against the dollar-denominated rails proliferating around it, including a stablecoin settlement use case live on a card-network partner's rail whose peg is inferred rather than disclosed. No held source reconciles the two, and no supervisory statement addresses what a de-dollarised retail payment system would settle in.	MOVEMENT
Digital Payments and Fintech	**G2P functionality**	A rural payroll arrangement was to start in pilot territories including three named ones, while Kinshasa agents demonstrated over two months of arrears. 2026-07 - a state bank and the payroll monitoring committee settled technical and organisational terms for rural payroll, with a new core banking system installed and new ATMs in test; payments were planned from August 2026 in pilot territories including three named ones, the bank's director-general saying a fixed date is premature and formal contracting with the state still ahead. The bank's reach is reported at both around 40 sites and about thirty territories, and that reach is the whole rationale for the arrangement. 2026-07-23 - Kinshasa urban administration agents demonstrated over two months of unpaid salary, beneficiary listings already transmitted to the paying bank but neither bank staff nor payroll agents attending the appointed payment - a failure at the last mile of an otherwise complete digital chain. The biometric civil-servant registry stands at more than 118,000 cards across 26 provinces with no updated figure in twelve months.	MIXED a rural payroll route was scoped while Kinshasa's urban administration went two months unpaid and the biometric civil-servant register published no new figure
Digital Payments and Fintech	**Revenue collection**	Standardised electronic invoicing is mandatory since 1 December 2025, with monthly VAT collection above FC 320bn against an FC 280bn average. The system was initiated in 2017 and operationalised on 1 August 2025. It is mandatory since 1 December 2025 for all firms liable to VAT after a two-month moratorium and a further 30-day grace period, the state having bought more than 4,000 billing units and fiscal devices made available free to liable firms, with three-month VAT mobilisation risen from an FC 280-290bn average to FC 340bn, which the finance minister still calls very largely below potential. Fiscal clinics closed in August 2026 with immediate targeted sanctions ordered against non-compliant taxpayers and revenue staff alike. The figures are the minister's own and unaudited. 2026-09-03 - the finance minister put monthly value-added tax collection above FC 320bn against an FC 280bn average, about US$141.4m a month, attributing the rise to generalised e-filing and the phased rollout of the standardised invoice. The attribution is his own. 2026-09 - the tax directorate alleged deleted and back-dated receipts on the revenue platform, which the central bank denies. 2026-10-09 - the tax directorate began nationwide checks of the standardised invoice on 5 October 2026, after the moratorium ended.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**B2B and B2G functionality**	A partnership agreement covers connecting microfinance institutions and cooperatives to the national switch across 145 territories. 2026-04 - a payments firm and two sector associations signed on core banking, enterprise resource planning and card modules, 10,000 payment terminals with biometric authentication, chip cards, and connection of microfinance institutions and cooperatives to the national switch across 145 territories. Nothing is deployed on file. The switch connection is the load-bearing item and no go-live is held; the arrangement is externally financed, and no source names the operator of the switch, the connection standard or what an institution must meet to join.	MOVEMENT
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	The state bus operator opened a QR-code ticketing trial in Kinshasa (trial). The state bus operator opened a trial of QR-code electronic ticketing in Kinshasa on 31 August 2026 (trial). No fare volume, route coverage or payment provider is named. The interoperability service has been live since the fourth quarter of 2025 and is now the rail on which a stablecoin settlement use case runs; no transaction volume, merchant count or user figure is held. 2026-04-30 - a palm-vein payment technology launched in Kinshasa, stated as integrated into national payments infrastructure and named against the 2023-2028 financial-inclusion strategy, with no deployment count or transaction figure. 2026-07-14 - a card network and a domestic payments company announced physical and virtual prepaid card issuance, the domestic partner serving more than three million customers through 4,000 agents and 160 agencies; no issuance date or card volume is stated.	MOVEMENT
Digital Payments and Fintech	**Population uptake**	The most precisely dated figure is 29m accounts at 34.6% penetration; the repository holds 24m, 29m, 30m and 35m. The only dated, attributable count is 29m accounts and 34.6% penetration, from a payments aggregator's fourth-quarter 2024 figures. An operator cites about 35m users in April 2026, and the repository holds 24m, 29m, 30m and 35m across sources. The divergence is the finding: four counts, none reconcilable, and no published central-bank series. The nearest official figure is about 58% financial inclusion against 25 to 30% bank-account penetration, the gap attributed to mobile-money use without a bank account, with no earlier dated rate held. 2026-09-14 — a deadline is forcing the shift: microfinance institutions are seeking support to move to digital payments before the April 2027 ban on US dollar cash transactions, warning it could strain smaller institutions.	NO CHANGE four counts of mobile-money accounts circulate and none is reconcilable to another
Digital Payments and Fintech	**Cross-border functionality**	The central bank signed accession to the continental payment and settlement system in September 2026, and a live use case settles M-Pesa wallet top-ups in stablecoins. 2026-07 - a card-network executive confirmed on record a live use case settling M-Pesa wallet top-ups in stablecoins in the background, through Visa Pay and a partnership with Onafriq. The dollar peg is inferred rather than disclosed, and a joint pilot-launch framing was downgraded on reconciliation. It runs against the central bank's own de-dollarisation deadline of April 2027, and no supervisory position, licence or reporting obligation for stablecoin settlement is on file. No corridor volume or value is published. 2026-09-18 - the central bank governor signed the country's accession to the Pan-African Payment and Settlement System and, the same day, the East African central banks' memorandum on currency convertibility and repatriation. No connection date, participating bank or corridor is stated.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Consumer protection**	The standing instrument is a 2021 central bank instruction on handling customer complaints; a national complaints platform covering banks, telecoms and other regulated sectors launched in May 2026. The instruction to credit establishments and microfinance institutions is the principal complaints and redress instrument for banks, microfinance institutions and electronic money issuers, applicable pending a standalone consumer-protection law for financial technology. The regulator's page exposes its title, date and applicable-entity categories and links to a document whose operative text is not held, so the duties it imposes are not established. 2026-05 - the competition commission under the national economy ministry launched a chatbot and digital complaints-management tool expressly covering banks, insurance, telecommunications, air transport, pharmaceuticals and food, public health and electricity. It is a redress channel reaching the sectors digital payment runs through. No complaint volume, response duty or resolution figure is published for either, and no standalone consumer-protection statute for financial technology exists. 2026-10-05 - the national economy ministry announced the official national launch of the LOBA consumer-protection platform from 6 October 2026, through the competition commission and the sector regulators.	MOVEMENT
Registries	**Population register**	Digitalisation of the Kinshasa population register began in November 2025. Digitalisation of the population register began in Kinshasa in November 2025, under the general population file instituted by Decret 22-07 of 2 March 2022. Communal agents were being trained on digitalised enumeration by August 2026. No enrolment count, coverage figure or completion date is held for any commune.	MOVEMENT
Registries	**Civil register**	The register runs under the Family Code as amended in 2016, which structures the civil status offices and governs the birth, marriage and death registers. Delivery is not uniform: one sector stopped newborn registration outright. The statute creates and structures the principal and secondary civil status offices at commune, sector, chiefdom and diplomatic-post level, and governs the birth, marriage and death registers themselves. The capture runs through the opening of the register-keeping provisions. What it provides for is not uniformly delivered. One rural eastern sector went several months without birth registers and stopped registering newborns outright, the province promising resupply with no date — a register that has run out of paper is not a partial register but an absent one. 2026-04 - the movement toward digitalisation is a consultancy: a tender to assess the current digitalisation status, design mobile registration and integration with health and education data, and engage the interior ministry and civil-status authorities. No registration rate, office count or digitised-record figure is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Address register**	There is no national address register: a postal-code directory was launched in 2021-22, a utility database of over 800,000 households was shared with the capital in April 2026, and one commune began fixing numbered plates with codes. The postal operator set up an addressing plan and launched a postal-code directory during a period it dates 2021 to 2022, the article giving no more precise date than that window. 2026-04-24 - the capital city and the water utility signed a convention to share and mutualise the utility's database of over 800,000 households and dwellings for property, land and rental-income tax identification, brokered by the presidency's digital development agency — an operational utility database converted into a cross-institutional addressing asset, and a tax instrument before it is a civic one. 2026-07-31 - one commune of the capital began fixing parcel-numbering plates carrying a scannable code, stated purpose rapid address identification, traceability and administrative management, aiding emergency services and delivery. Three partial arrangements, one city. No national coverage figure exists because no national register does.	MOVEMENT
Registries	**Business register**	A single-window portal and application now issue sole-trader attestations in under 48 hours, but full online company creation is not possible. 2026-07-28 - a ministerial inspection presented a portal that proposes a legal form and tracks a file in real time and an application that issues sole-trader attestations in under 48 hours, while full online company creation remains impossible, the chain still spanning the revenue directorate, a collecting bank, the notariat and verification. The 48-hour figure describes the attestation segment, not the registration process. 2026-08-07 - a financial-sector package announced a modernised credit-risk registry and an electronic movable-collateral registry to be built with the central bank, with no instrument, custodian, timetable or access rule stated, and no data-protection provision reported for the credit file. 2026-09-07 - a second registry-shaped system was announced on the certification side: the standards control office plans a national QR-code system letting consumers scan a product, medicines included, to verify its certification status, with checks stated as opening within weeks and resting on 88 laboratories across 29 sites. No launch date, register, cost or enforcement route is published. 2026-09-25 - the President gave the government three months to define a single identifier for businesses recognised across administrations.	MOVEMENT
Registries	**Social protection register**	A draft decree creating the single social register was adopted in Council on 25 July 2025 and signed as Decree n°25/041 on 4 December 2025. 2025-07-25 - the 53rd Council of Ministers adopted a draft decree creating and organising the register. 2025-12-04 - Decree n°25/041 created the register, centralising beneficiaries' biographic, demographic and biometric data under a steering committee and a technical management unit, with interoperability provisions. The decree text is held only as a summary, and no operator, household enrolment or link to the identification office is on file. It creates a second population register beside the identification office's, and nothing on file states how the two would relate.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Electoral register**	The statute assigns the commission the mandate to establish, publish and maintain the register; its own renewal roadmap had not been executed a year after publication. The coordinated text of the 2004 statute as amended in 2016 assigns the electoral commission the mandate to organise voter identification and enrolment and to establish, publish and maintain the register, makes registration a civic duty and sets eligibility and operational structures. 2026-03-15 - the renewal has not happened. The commission's own 2025-2029 roadmap planned identification and enrolment in a pilot province between April and October 2025, and as of March 2026 it had not been executed, on the record of two election-observation coordinators, with the constitutional timetable for 2028 named as the risk. No register size, revision result or enrolment figure is published at any date, so the gap between the statutory duty and the delivery cannot be measured, only observed. 2026-09-28 - the electoral commission launched a programme to digitise the electoral archives produced since 2005 into a single document repository.	STALLED
Registries	**Tax register**	The tax number instituted in 2003 is the sole identifier for tax purposes; the directorate confirmed in December 2025 that registration is free and online, denying claims it was being sold. The founding decree institutes the number and makes it the sole identifier for tax purposes, delegating the conditions of its attribution to ministerial order. It underlies the general taxpayer register and today's online registration service. 2025-12-02 - the tax directorate issued a communique confirming that registration is free, transparent and accessible, directing applicants to the online platform or to tax offices, and formally denying circulating claims that the number was being sold. A registry integrity statement of that kind is itself evidence of what was happening at the counter. The register's role widened at the same moment: standardised electronic invoicing became mandatory from 1 December 2025 for firms liable to value-added tax, carrying a QR code and the tax number, which extends the register from identification to transaction-level traceability. No count of registered taxpayers is published. 2026-10-09 - the tax directorate began nationwide checks of the standardised invoice on 5 October 2026, after the moratorium ended.	MOVEMENT
Registries	**Land register**	Loi 25-062 on the land and property regime came into force in December 2025, with a national land plan to 2040. Loi 25-062 on the land and property regime was enacted on 30 December 2025. A national land plan for 2026 to 2040 followed in June 2026, a national land and property register went to Senate reform discussion, and digitalisation of the land registry was reported in August 2026. No parcel count, coverage figure or completion date for the digitalisation is held. 2026-10-08 - the land affairs minister said implementation of the land law had begun, with digitisation directorates created, more than 350 officials trained and three of Kinshasa's nine land districts in the first phase.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Health**	Anonymised operator call records are being used to anticipate where the Ebola outbreak will spread, the first such use in an Ebola response. The World Health Organization and the non-profit Flowminder are mapping population movement from anonymised Vodacom records to direct surveillance; the first analysis, published in early June 2026, tracked travel out of Bunia, Mongbwalu and Rwampara between 3 and 23 April, and by end-June all ten largest destination areas had confirmed cases, while a mid-June reading on Kisangani let responders reinforce the river hub before its first case (Reuters). Coverage is capped at one operator's roughly 35% market share and stops at the border, and no legal basis, consent regime or retention rule for the arrangement is published.	MOVEMENT
Sectoral management information systems	**Education**	A higher-education portal and first national digital library went live for student identification, transcripts and equivalences. 2026-04 - the portal and library went live under external financing, carrying student identification, transcripts and equivalences. No registration, usage or institution-coverage figure is held, and the scientific-output archive that would make it a research instrument is announced rather than built. It is the only sectoral management system on this ledger with a live date, which places every other sector - health, justice, social protection - at no evidence rather than at a stated position.	MOVEMENT
Sectoral management information systems	**Social protection**	The systems were built under the eastern recovery project, whose closure report is dated 12 December 2025; the register they produced was created by decree on 4 December 2025, with no operator or household enrolment published. The financier's closure report records the eastern recovery project as the operation that built the country's social-protection management information foundations under the social affairs ministry, including the single social register. The capture reaches the front matter and project-history sections and not the results and registration-count sections, so no enrolment figure is held from it. What the project left behind is thinly documented: the register has a decree of 4 December 2025 held only as a summary, and no operator, household enrolment figure or link to the identification office is on file. Payment of the people it would identify runs on a separate and unfinished track: rural civil-servant payroll is to start in pilot territories including three named ones, with August 2026 named as a target and formal contracting with the state still ahead.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Justice**	Four justice systems are institutionalised rather than piloted, with case-management use made mandatory by the judiciary's governing council; 33 commercial-court procedure maps were validated in July 2026. UNDP, the UN mission and Korean police handed the judicial police a building housing a crime-analysis office with computer equipment on 28 February 2024. The repository holds no caseload and no reach beyond the office. The standing position covers magistrates, judicial-activity case management, detainee records and the criminal record, institutionalised rather than piloted, with the judiciary's governing council making case-management use mandatory. 2026-06-18 - the justice minister met an anti-organised-crime fund on a justice modernisation programme and announced the pilot launch of digitalisation at one peace tribunal in the capital and its attached prosecution office. 2026-07-15 - magistrates, lawyers, clerks and bailiffs validated 33 procedure maps for the commercial courts over three days, the preparatory step before building a digital commercial-court case-management platform. Two court systems being digitised by two different projects, and no case volume, clearance rate or processing-time figure published for any of the four standing systems.	MOVEMENT
Sectoral management information systems	**Tax**	The finance inspectorate's 2026-2028 plan makes automated cross-checking of customs, tax, standards and freight records a pillar of systemic control. 2026-08-20 - the plan was disseminated to public administrations, making automated cross-checking of customs, tax, standards and freight-management records a pillar of systemic control. The inspectorate states that what limits it is the reliability of the data the administrations produce rather than the technology, and commits to help the revenue agencies improve it. No platform, interface or timetable is named. The worked example given is a consignment imported at US$10,000 and declared to customs at US$1,000, which is the case cross-checking would catch and which nothing on file shows being caught yet. 2026-09-03 - the minister named the interconnection of the three revenue agencies and the data warehouse behind it as under way, alongside a digital public-finance programme he put at more than US$150m to be built with a Chinese network vendor. No contract, procurement route, scope document or timetable is published for either.	MOVEMENT
Sectoral management information systems	**Customs**	Electronic transmission of the documentary file between the single window and customs became compulsory in January 2026. Transmission of the documentary file between the single window and the customs administration became compulsory and electronic in January 2026, after the Prime Minister launched digitalisation of the documentary file in December 2025. Customs run SYDONIA. No declaration volume, clearance time or revenue figure from the system is held. 2026-09-17 — the single window's concessionaire took the Guichet Unique Integral du Commerce Exterieur to Mbuji-Mayi in Kasai Oriental, presenting its services to provincial authorities, administrations and traders, framing provincial establishment as territorial equity. No transaction volume, coverage list or clearance-time figure is published. 2026-09-17 — the foreign trade minister told the WTO Public Forum that 93 of the 98 documents required for foreign-trade operations are paperless, the other five due by the end of 2026; the figure is the government's own.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Land**	Digitisation begins with paper: 250 officials, 50 of them title conservators, entered training in archive management on 10 August 2026, which the ministry calls the operational start of land-record digitisation. 2026-08-10 - the land affairs minister launched the first phase of training 250 officials, including 50 conservators of property titles, in archive management, stated as the operational start of land-record digitisation: organising and cleaning paper archives as the precondition to full cadastral digitisation. 2026-08-25 - a companion course ran about a month for 50 conservators of property titles drawn from several provinces, with the national school of administration. The legal frame arrived first: the land and property statute has been in force since December 2025, with a national land plan for 2026 to 2040 and a national land and property register under Senate reform discussion. No cadastre platform, parcel count, digitisation target or completion date is published. What the repository holds is a statute, a plan and archivists. 2026-10-08 - the land affairs minister said implementation of the land law had begun, with digitisation directorates created, more than 350 officials trained and three of Kinshasa's nine land districts in the first phase.	MOVEMENT
Other GovTech and e-Gov	**e-government services**	The digital government platform's first-quarter 2026 target passed with neither launch nor delay announced. A functional digital government platform was targeted for March 2026, announced alongside an interbank payment platform, an online tax portal and a customs system. No platform, revised date or announced delay is held, and none of the companion systems is established as live. 2026-06-24 - technical training closed for ministry staff on a platform to authenticate documents against forgery for economic inspections; training completion is the only milestone on file and whether the platform is in production is not established. 2026-09-28 - the minister said the Prime Minister had signed the decree creating a Guichet numérique for online administrative services. No service is reported live.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	A US$400m credit funds backbone tenders, rural access-network gap financing and pre-purchased connectivity for public institutions; the first national forum targeted the 145 territories. The financing agreement of November 2024 authorises broadband-backbone tenders, rural and peri-urban access-network gap financing and pre-purchased connectivity for public institutions, alongside an electronic government portal, a secure government intranet and centralised government data hosting. 2026-02-17 - the prime minister's office and a financier delegation set an accelerated timetable targeting fibre reinforcement and internet extension to underserved zones by September 2026. 2026-04-27 - the head of state opened the first national posts and telecommunications forum, explicitly targeting connectivity of the 145 territories and the urban and rural divide on a 2030 horizon. Against those commitments the backbone stands at 7,000 km deployed against a target of more than 18,500 km, leaving 11,500 km outstanding. No territory-level connection count is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**Digitalisation of local government records**	A digital property-tax system was handed to Kasai Central in April 2025, and Tshopo opened a computerised revenue counter in June 2025. The Moptax system, covering property identification, valuation, billing, mobile-money payment and enforcement, was configured for Kananga and handed over in April 2025. Tshopo province opened a computerised one-stop revenue counter in June 2025 and launched province-wide taxpayer identification. The repository holds no revenue figure for either.	NO CHANGE a first record with no earlier position behind it
Rural digital data capture	**Digitalisation of rural health clinics**	Two donor pilots: patient-record digitisation across a church health network from March 2026 and an offline surveillance configuration in three eastern health zones cutting notification from days to under 24 hours. 2026-03-10 - a project funded by a pharmaceutical company and coordinated by a national health non-profit launched digitisation of patient records for diabetes and hypertension care across a church health network's facilities. 2026-04 - an offline-capable surveillance configuration on the national health data platform ran in three health zones of one eastern province, with offline data capture for low-connectivity rural facilities and community relays, cutting case-notification time from three to five days to under 24 hours. That measured reduction is the clearest statement in the repository of what digitisation buys at the rural end. Neither states a facility count against the rural health network, and no national rollout is on the record. What runs nationally is the platform they connect to, not the capture at the clinic.	MOVEMENT
Rural digital data capture	**Digitalisation of rural primary schools**	The national school-data application ran the 2022/23 school census across ten provinces, and a three-week pilot in 20 primary schools registered 8,634 students in April 2026. The working system is a census collector: the national school-data application was used for the 2022/23 school census across ten project provinces, on data dated June 2023 — an actual digital school-data collection system rather than a policy statement. 2026-04 - the national student-data service ran a three-week digital enrolment pilot across 20 primary schools in one disadvantaged province, replacing paper forms with application-based capture and registering 8,634 students, including previously invisible disabled and pregnant or mother students. Making previously uncounted pupils visible is what the pilot is for, and 20 schools is its whole extent. No national rollout, device count or connectivity provision for rural primary schools is published, and the connectivity that would carry it sits inside the backbone still 11,500 km short of its target. 2026-09-28 - a tower company and UNICEF announced a multi-year school-connectivity partnership under Giga starting in the country; no funding figure or school count is published.	MOVEMENT
Rural digital data capture	**Digitalisation of rural registry offices**	Rural registration went backwards: one eastern territory ran months with no birth registers, while digitisation is still at assessment stage. A rural eastern territory went several months with no birth registers and stopped newborn registration outright, with the province promising resupply and naming no date (territory). Digitisation of civil registration has not reached design: a United Nations tender for a national consultant frames civil registration and vital statistics as foundational digital public infrastructure and is an assessment rather than a build (tender). No count of rural registry offices, digitised or otherwise, is held.	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural police stations**	Biometric identification of police personnel entered its operational phase on 9 July 2026, to be deployed across all 26 provinces. It is a personnel reform, not station digitisation. 2026-07-09 - the identification entered its operational phase, to be deployed progressively across all 26 provinces with the capital piloting first, executed by a private contractor and aimed at a single reliable biometric police-personnel file. It reaches provincial and rural posts as an administrative personnel reform rather than as digitisation of what a police station does: no station count, case-record system, reporting channel or enrolment figure is published. Nothing else in the repository touches a rural police station. The one policing system on file is surveillance planned for the capital: drone surveillance and a citizen-reporting application announced with no procurement value, legal basis, data-retention rule or oversight arrangement held.	MOVEMENT

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	A state guarantee fund launched an assisted business-plan platform, and the employment agency put AI modules out to tender. 2026-02 - a state guarantee fund launched a public platform giving step-by-step business-plan drafting, financial projections, export and direct submission with real-time file tracking, built by a domestic firm. No usage figures, model or vendor disclosure and no data-protection arrangement are stated. 2026-08-01 - the national employment agency's existing platform went out to tender for artificial-intelligence modules to be developed, integrated and deployed, offers due 7 September 2026. It is procured by a foreign development agency rather than by the state, and no contract value, award or delivery date is on record. 2026-09-18 - the central bank set out a position rather than a deployment: its governor told a conference convened by the Kenyan central bank that integration would be progressive and prudent, with an internal audit of the country's financial system before any major deployment. No instrument, budget or timetable accompanies it.	MOVEMENT
AI	**Use of AI in sectoral management information systems**	An award citation records artificial intelligence used to mark the 2024-25 state examination, alongside electronic diplomas. The only sectoral use on file is artificial intelligence used to mark the 2024-25 state examination, named among the education ministry's reforms alongside electronic diplomas and decentralised scanning centres. It reaches the repository as an award citation. The marking belongs to the 2024-25 session and no date is established for it; no scope, vendor, model, accuracy figure or human-oversight arrangement is held. A national examination marked by machine with no published accuracy check and no appeal route stated is the position as the repository holds it.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Development of national / regional AI systems**	A Lingala training-data collection project launched in August 2026, and a student facility was announced. 2026-08-06 - the digital economy ministry launched a project with UN development programme support to build Lingala training data for artificial-intelligence models; no corpus size, licence, host or publication date is stated. 2026-02-20 - a student artificial-intelligence facility was announced alongside state-data migration and a government cybersecurity centre, with no design, budget line, site or date established and the event date itself unestablished. Both are announcements. No compute, model, dataset or research output exists anywhere on this ledger, so the country's artificial-intelligence capability is a strategy, an academy on paper and a language corpus not yet collected.	MOVEMENT
AI	**Control of AI abuse**	Officials say bodies acting across digital, research, data, cybersecurity and regulation have roles not yet articulated in a common steering architecture. 2026-07-23 - the digital economy ministry convened a governance, ethics and regulation panel at which officials went on the record that bodies already acting across digital, research, data, cybersecurity and regulation have roles not yet sufficiently articulated in a common steering architecture. The repository carries no statement of the country's artificial-intelligence governance position before that date, so the direction is withheld and what is stated is where it now stands. No rule, complaint route, audit power or penalty exists for any system operating in the country, including the machine marking of a national examination.	NO CHANGE a first statement of the institutional position with nothing earlier behind it
ICT Industry	**National capacity in DT-related production**	Two regulators began work on a common reading of the subcontracting texts and coordinated inspection teams, with scope beyond telecoms. 2026-07-22 - a first working session at the telecommunications regulator's headquarters worked towards a common reading of the legal texts, coordination between inspection teams and closer checks on large operators' compliance with subcontracting rules, with scope stated beyond telecoms to digital services and electronic commerce. No written protocol, order or joint communique is held and the account is a news report of the meeting. No inspection has been conducted, no reporting obligation is established, and nothing records an enforcement action since. It is the only instrument on this ledger addressed to what is produced domestically rather than to what is imported or licensed. The state's own operator is in structural crisis: a directorate-general communique states that on current finances the company could theoretically pay salaries only every four months, management saying rigour has brought the cycle to every two to two and a half months, after the telecoms minister, proposing a national conference in October 2025, named the sector the state's second-largest revenue source and asset spoliation a problem to fix.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Innovation ecosystem	**Technology hubs**	A fourth edition of the Kinshasa digital innovation summit was held on 25 and 26 November 2025, renamed and locally organised. Three prior editions ran under a different name in partnership with a Moroccan firm. The fourth was renamed and localised, organised by a Congolese firm with a fintech-association partnership, an innovation village, free student entry and presidency backing, and held on 25 and 26 November 2025. No dates are held for the three earlier editions and no 2026 edition is held. The repository carries no incubator, accelerator, fab lab or technology park for this country at all, so an annual conference is the whole of what the indicator can be answered with. 2026-10-08 - the digital economy minister visited a Russian innovation centre as a model for a planned technology park and sovereign data centre in Kinshasa.	MOVEMENT
Innovation ecosystem	**Tech startup ecosystem**	Start-ups are fully exempted under Digital Code article 384, while the Startup Act's implementing texts remain in preparation. An interministerial order took effect on signature on 20 July 2026 with a two-tier dollar schedule keyed to whether a provider is judged dominant: cloud services US$5,000 local and US$15,000 foreign in the first tier against US$2,500 and US$10,000 in the second, data-centre declaration from US$25,000 to US$100,000 by tier, and one startup line at US$100. A suspension announced on 1 August was denied on 6 August, neither position resting on a published text, and the ministry's 8 August statement confirmed registered start-ups are fully exempt. The four draft decrees adopted in May 2025 to operationalise the 2022 ordinance-law are still in preparation, so no exemption regime for start-ups is in force fifteen months on. 2026-09-18 - the digital transformation project agreed to run a grant competition for digital start-ups, SMEs and incubators on an existing business-plan competition's platform; eligibility, amounts and the opening date are not yet published.	MIXED start-ups were exempted from the new digital-sector duty schedule while the Startup Act's four implementing decrees stayed in preparation

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	One ministry ran a fifteen-day digital tools training for central-office staff from 9 September 2025; another opened sessions for 580 of its own agents in August 2026. No national figure exists. 2025-09-09 - the education ministry opened a fifteen-day digital tools and microcomputing training series for central-office managers and staff, tied to its own five-year plan. 2026-08-24 - the digital economy ministry opened the first of a planned series of five-day sessions for 580 of its own agents and managers, with no curriculum, completion target or budget line on file. Two ministries training their own staff is the whole of what the repository holds. No national digital literacy rate or skills baseline of any kind is published, so neither programme can be set against the size of the administration or against a starting level.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (general population)**	A 30-day digital code awareness campaign mobilised 2,000 young volunteers, and a cyberviolence ambassadors network launched. 2026-08-06 - a campaign mobilised 2,000 young volunteers for 30 days at two publications a day on the code's provisions on cybersecurity, data protection and responsible internet use, carried by the digital economy ministry with UN development programme support. The code was promulgated in March 2023; no budget for the campaign and no measure of its effect is stated. 2026-08-20 - a national police network of youth ambassadors against digital gender-based violence launched with UN Police and a regional youth leadership chapter, its first session training and certifying 46 people aged 18 to 30 as community prevention relays; no budget, coverage target or reporting route is stated. 2026-10-06 - a private survey of 2,280 adults in the 26 provincial capitals found 61% aware of artificial intelligence in March 2026, against 54% a year earlier.	MOVEMENT
Training and skills	**DT-related training in secondary education**	A national policy on information technology in education was adopted by the 92nd Council of Ministers, on 19 operational principles. 2026-06 - the Council of Ministers adopted a common reference framework for integration, governance, use and regulation of information technology across education, higher education, research, vocational training and literacy, on 19 operational principles in six normative families. The policy document itself is not held, and no budget, target or implementation step is attached to it in any source held. It is the first education-technology instrument the repository records for this country, and nothing since reports a school, a teacher cohort or a device programme delivered under it.	MOVEMENT
Training and skills	**DT-related university facilities and qualifications**	The national curriculum framework specifies degrees in software engineering, computer systems and artificial intelligence; a first master's in digital law opened in January 2026 and fabrication facilities went to 40 institutions. The instrument is the ministry's national curriculum framework, released for implementation by circular in February 2022, specifying bachelor's and master's qualifications in software engineering, computer systems, artificial intelligence, network and telecommunications engineering and digital communication across public and private institutions. 2026-01-06 - the country's first master's degree in digital law opened at a private university, covering data protection, cybersecurity, electronic commerce, platform regulation and digital governance. 2026-05-26 - a national rollout of three-dimensional printing fabrication facilities to more than 40 universities and higher institutes was launched, with the first deployments at two institutes. No enrolment, graduate or staffing figure is published for any of them, so provision can be listed and not sized.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**Graduates entering DT ecosystem**	A jobseeker and employer platform went live, while the plan's 250,000-youth training target has no enrolment on record. 2026-07 - the employment office launched a portal and mobile application on which jobseekers register profiles and skills and employers post needs, intended to build a national skills database; no user, vacancy or placement figure is held. The plan's human-capital pillar sets 250,000 young people to be trained in artificial intelligence, cybersecurity and programming, at least 3,000 in advanced digital skills, about 1,000 teachers in digital literacy and 30,000 cybersecurity jobs, all to 2030. Six months on, no source establishes a single enrolment against any of them and no budget line funds them. The measured training on file is 41 certificates awarded at one ceremony, on a programme running since 2017 with about 1,000 girls trained in total.	MIXED an employment and skills platform went live while the digital plan's training targets have no enrolment against them
Research institutions	**Think tanks and academic departments contributing to DT policy**	The national university created a centre of excellence in artificial intelligence and geomatics in 2024 and awarded its research prize to an applied traffic-governance tool in August 2026. No domestic research funding line is held. 2024-08-17 - the national university's rector signed a memorandum creating a centre of excellence in artificial intelligence, geomatics and climate change, confirming its existing master's programmes in artificial intelligence and in geomatics, run under a regional academic mobility programme with six other institutions. 2026-08-29 - its transdisciplinary research programme awarded its excellence prize to a project developing an artificial-intelligence and spatial-analysis decision-support tool for traffic governance in the capital — locally produced applied research from a national department. 2026-07-09 - a research institute launched a citizen barometer tracking government commitments and their implementation. All three run on external programmes or their own resources: no domestic public funding line for digital or artificial-intelligence research is held at any date.	MOVEMENT

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	The regulator set a binding complaint escalation path by communique of 22 July 2026: 30 working days with the operator, then referral. 2026-07-22 - a communique signed by the regulator's president set a binding escalation path: complain to the operator first and allow a maximum of 30 working days, then refer to the regulator by a free line, an online form or physical filing, with a reasoned opinion undertaken within 30 days. The communique itself is not held; the regulator's site is script-rendered and exposes no document path. No complaint volume, opinion or enforcement outcome has been published since, and the tariff changes subscribers report in the east went unannounced without any complaint under the new path reaching the record.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen participation in policy**	Two civil-society platforms launched in 2026 — an anonymous oversight platform for extractive revenue on 22 January and a citizen barometer on 9 July. Neither is run by the state. 2026-01-22 - three non-governmental organisations launched an anonymous citizen-oversight platform for monitoring the use of extractive-sector revenue on social projects, providing citizen reporting and dialogue with public authorities. 2026-07-09 - a research institute launched a citizen barometer tracking government commitments and their implementation. The state's own participation duty sits in a 2022 decree fixing the rules for budget-policy formulation, discipline and transparency across central government, provinces and decentralised entities; the capture reaches its first eight articles only, so any citizen-involvement provision in it is not confirmed. A standing consultation mechanism for the digital sector was agreed with an industry network after a tariff dispute, with no constituting text, membership or meeting schedule stated.	MOVEMENT
Access to services	**Gender equity**	An operator foundation certified 49 women after a nine-month digital skills and entrepreneurship programme on 9 July 2026. No sex-disaggregated connectivity or usage figure is published. 2026-07-09 - the certification ceremony in the capital, with participants also in one eastern city, marked 49 women completing a nine-month digital skills and entrepreneurship programme, attended by the gender, family and children minister. It is the only dated gender-focused digital programme outcome in the window. The national project that would move the number states its objective as increasing inclusive access to and use of the internet, without a sex-disaggregated target under it. Forty-nine women is what the repository can count. No gender-disaggregated connectivity or usage figure exists at any date, so neither the gap nor the effect of any programme on it can be stated.	MOVEMENT
Access to services	**Inclusion of persons with disabilities**	The 2022 organic statute is in force over a population its own memorandum puts at 13.7 per cent; two donor builds reach it — a rehabilitation worker application and an offline-first identity model. The statute implements the constitutional right of persons with disabilities to protective measures and the State's duty to promote their presence in national, provincial and local institutions, on a six-title structure, its explanatory memorandum carrying a national disability prevalence estimate of 13.7 per cent. The articles reported to require accessible public information, communication and technology sit beyond the captured text, so the accessibility duty itself is not established from the repository. 2025-11 - a mobile application piloted in one eastern province equips community-based rehabilitation workers with disability-assessment and client-management tools. 2026-07-07 - an offline-first system using text-menu access and phonetic verification rather than smartphones, broadband or biometric scans was presented as a model for identity and social-protection payments to persons with disabilities, backed by a coalition including the telecommunications ministry, the ministry delegated to persons with disabilities and the national solidarity fund. It is a forum presentation of a model, not evidence of national deployment.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Inclusion of refugees and IDPs**	Fizi Territory has been off calls, SMS and internet since 3 July 2026, and soldiers seized four broadcasters' satellite kits. At the window's opening one territory centre was off all networks because generator fuel could not reach tower sites, with other eastern areas reconnected in February 2026. 2026-07-03 - Fizi Territory including Baraka went off calls, SMS and internet and was still cut more than six weeks later amid fighting; soldiers seized the satellite kits of four community broadcasters on 8 July, telling journalists the equipment would be returned only when the war ended, and some outlets have suspended news bulletins, an account given from Baraka itself. No licensing or administrative decision for occupied territory is held, and no restoration date is stated.	REGRESSED
Digital divides	**Bridging of digital divides**	The fund signed subsidy conventions with four operators for 40 localities, against about 4.3m people with no mobile coverage. The fund was created by law in November 2020 and, per a named civil-society officer, still not available at the window's opening. 2026-08-08 - it signed subsidy conventions with the four operators for a first tranche of 40 localities covering about 258,000 people, with a second phase of 300 sites and a 2030 target of 3,000 localities and 16m people; passive infrastructure stands at fewer than 5,500 towers against an estimated need of at least 30,000. The phase-0 sites were operator-nominated, ten each, rather than scored on the fund's published index. A national diagnostic finds about 4.3 million people in nearly 3,000 localities without mobile coverage, national 2G coverage 77%, 3G 68% and 4G 57%, from about 98% in Kinshasa to 14% in Tshuapa. And a rural solar base-station commitment of up to 2,000 sites was restated sixteen months on with no sites-built count.	MIXED the universal service fund signed its first subsidy conventions while about 4.3 million people remain uncovered and eastern territories were cut off entirely

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The only strategy on file expired with no successor formally adopted; what has moved is the normative frame, with the continental statistics charter authorised for ratification in September 2025. The country's own strategy, prepared by the statistics institute, is the only one the international statistical partnership records on file, expired with no successor formally adopted as of its January 2026 status table. The capture covers the title page, contents, acronyms and opening context section. 2025-09-03 - the head of state authorised ratification of the continental statistics charter, the planning minister stating that the statistical system had operated on an obsolete normative framework inadequate to international standardisation requirements — the government's own account of the gap. 2026-08-28 - the council of ministers adopted draft ordinances modernising the legal and institutional framework for statistical activity, covering collection, processing, production, dissemination, conservation and protection of official data, presented as the country's first legislation on the subject. A new legal frame is being built over a strategy that lapsed nine years ago.	STALLED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**Censuses and surveys**	The second population census reached its cartography phase, run with digital tools and satellite imagery (broadcast). The census cartography phase is being operationalised with digital tools and satellite imagery, on the central census bureau's technical coordinator's account (broadcast). 2026-08-20 - the statistics institute launched training of trainers in census mapping, with general enumeration scheduled for July 2027. It would be the first census since 1984. No budget line, financing source, implementing contract or cartography completion figure is held, and the exercise is framed by the institute as the basis for reliable planning data. Every population-denominated figure in this report - coverage rates, penetration, inclusion - currently rests on projections from a census forty-two years old. 2026-09-28 - census cartography was launched, the operation costed at USD 192 million with enumeration from July 2027.	MOVEMENT
National statistics	**Statistics from administrative data**	Administrative data systems are assessed as weak, production fragmented, with no population census since 1984; a first statistical compilation from state personnel records was published on 14 May 2026. The most recent authoritative statement confirms that the statistics institute coordinates a system founded on legal and institutional reforms of the late 2000s, and describes weak administrative data systems, fragmented production and no population census since 1984. That absence is the frame everything here sits in: administrative data is what the country has instead of a census, and the systems producing it are assessed as weak by the body proposing to fund their repair. 2026-05-14 - the public service ministry's reform unit published the first edition of a statistical compilation covering nine categories of central-government personnel drawn from state payroll and human-resources records. No periodicity commitment for further editions is stated. The legal frame is being rebuilt around it: draft ordinances covering collection, processing, production, dissemination, conservation and protection of official data were adopted in council in August 2026.	MOVEMENT
Open data	**Use of open data**	The statistics institute launched data.gouv.cd on 23 February 2026. The Institut National de la Statistique launched data.gouv.cd, the national open-data platform, on 23 February 2026, publishing datasets across demography, economy, health, education, public finance, agriculture and infrastructure in CSV, XLSX and JSON. It is a platform without a governing instrument: no open-data decree, licensing statement, microdata release policy or access-to-information law is held, and no dataset count or usage figure is on the record. 2026-09-06 - the gap the portal does not cover was named: the national academy of sciences called for a national policy on the management and security of environmental data, setting the absence against an observing network that carried more than 125 synoptic weather stations and 400 hydrometric stations in the 1960s, few of which still work. An academic call, not a government commitment: no draft, sponsoring ministry or timetable exists. 2026-09-13 — the state moved to hold its geological record itself: mapping, aerial survey and archive digitisation are building a single national bank of geological data on critical minerals. No completion date or access policy is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	**Agricultural use of satellite data**	A contract to supply the RDC-SAT earth-observation satellite was signed in Kinshasa on 16 June 2026. SPACEBEL signed a contract with the higher education, universities, scientific research and innovation ministry on 16 June 2026 to supply, commission, service and maintain the RDC-SAT earth-observation satellite in support of the National Centre for Remote Sensing, framed as supporting agriculture, mining and forestry monitoring. MapBiomas land-cover mapping launched separately in August 2026. The satellite is a contracted future capability rather than an operating source: no launch date, cost or data-access arrangement is held.	MOVEMENT
Use of satellite data	**Meteorological use of satellite data**	The 2012 decree establishes the agency for meteorological observation and satellite remote sensing; an observations financing project launched on 4 June 2026 and forecasters were trained on satellite-derived products in October 2025. The decree establishes the agency as the public technical and scientific body for meteorological observation, climatology and satellite remote-sensing data collection, succeeding an entity created in 1991. The capture reaches the general provisions and the opening of the governance title. 2025-09-29 - a five-day training at the agency's premises built operational forecasters' capacity to use satellite-derived numerical weather prediction and guidance products from three international and regional providers, under a severe weather forecasting programme. 2026-06-04 - the agency launched an observations financing project aimed at strengthening the national observation network and its integration into the global basic observing network. No station count, forecast accuracy or product output is published, so capability can be described and not measured. The country's own earth-observation satellite is under contract and not in orbit.	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	A partnership covering data centres, connectivity, cybersecurity and artificial intelligence was signed in Washington, while a fintech sued the state. 2026-04 - a strategic partnership was signed on the margins of the spring meetings covering data centres, connectivity, cybersecurity, financial technology and artificial intelligence, with no value, instrument type, milestones or delivery established and the exact signing date not stated in either account. 2026-01 - a fintech filed in a United States federal court against the state and senior officials over the collapsed banking and payments modernisation project, seeking up to US$400m on a stated investment of more than US$72m against an agreed US$20m state contribution never paid, with bribe-demand allegations, the government calling the signed documents a non-binding memorandum and denying the claims. No ruling, docket or government response document is held. 2026-09-22 - the digital economy ministry announced that Anthropic's Claude is officially available in the country for consumer and commercial API use, citing its own approaches to the company; no terms were given.	MIXED a digital infrastructure and cybersecurity partnership was signed while a US federal claim over a collapsed payments project seeks up to US$400m

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
China activities	**Chinese MoUs, engagements and commitments**	A US$1.5bn Congo River fibre memorandum was signed, and a police cooperation accord names cybercrime. 2026-07 - a memorandum with a Chinese supplier covers about 2,100 km, 1,700 km along the river plus nearly 400 km terrestrial, at a stated US$1.5bn with more than US$400m required for the first phase, with no financing close, contract or works. Both figures are company-reported. It is the country's largest single tracked non-state digital commitment, and it is a memorandum. 2026-05 - an accord signed in Beijing by the interior vice-premier and China's public-security minister gives Chinese technical assistance to the national police naming cybercrime alongside urban crime and mining fraud, with a standing joint working group. No text, value, equipment or software list, and no data-handling or oversight arrangement is held.	MOVEMENT
EU activities	**EU MoUs, engagements and commitments**	Over EUR 180m in new EU and Team Europe investments was announced at the Global Gateway Forum on 9 October 2025. President von der Leyen met President Tshisekedi at the 2025 Global Gateway Forum on 9 October and announced over EUR 180 million in new EU and Team Europe investments across the Kivu-Kinshasa Green Corridor, Lobito Corridor value chains, Kisangani electrification and critical raw materials cooperation, building on a 2023 memorandum on critical raw materials. None of it names digital regulation, data adequacy or a digital governance instrument, and the repository holds no EU financing agreement or delegation statement on any of those.	MOVEMENT
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	The digital economy minister met a Gulf-based delegation on data-centre proposals in February 2026; talks only. 2026-02 - the minister met a Gulf-based delegation on data-centre proposals, with a proposed technical-specification working group and no memorandum, site, capacity or follow-up recorded six months on. It is the whole of the relationship as the repository holds it. No investment, agreement or presence has followed, and the working group that was proposed has produced nothing on record, so what is stated is an exploratory meeting rather than a commitment.	MOVEMENT
India activities	**India MoUs, engagements and commitments**	India's consolidated brief records visits, peacekeeping and solar cooperation, and one 2022 digital study visit. India's Ministry of External Affairs brief records decades of ministerial visits, MONUSCO troop contributions, early Congolese signature of the International Solar Alliance Agreement and a March 2022 visit by a Congolese presidential adviser's delegation to NPCI, UIDAI and the Election Commission of India. It is India's own authoritative statement of the relationship's standing state, and it names no digital instrument: no line of credit, training placement or supplier contract touching the digital estate is held.	NO CHANGE the relationship is on the record and its only digital content is a 2022 study visit
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
National technical-capacity base	a named compute or high-performance computing facility, a national technical or testing institution with a dated status, or a skills-for-infrastructure programme with enrolment figures	2026-09-04
FY2026 budget execution	the budget ministry's monthly or quarterly execution statements for the 2026 exercise	2026-09-04
Audited outturn for the digital sections	the audit court's general report or the settlement law for FY2024, at section grain	2026-09-04

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Gender-disaggregated connectivity or usage	a mobile-industry gender-gap country cut, or a statistics-institute or central-bank survey with sex-disaggregated tables	2026-09-04
National digital literacy rate or skills baseline	an international digital-skills indicator for the country, a household survey module, or the sectoral policy's baseline annexe	2026-09-04
Domestic public funding for digital and AI research	a finance-law section or programme line for scientific research, or the AI strategy's costed roadmap	2026-09-04
Internet service quality in Kinshasa and the regulator's response	A regulator quality-of-service measurement, a published complaint series, or a determination or sanction against an operator on service quality.	2026-12-17
Hosting, jurisdiction and end-of-term ownership of RDC-PASS data	the RDC-PASS public-private partnership contract with Trident, or a ministry or regulator text, stating where biometric data are hosted, under whose law, who owns the file at the end of the twenty-year term and the early-exit terms	2026-09-25
Source-code, operation and exit terms of the E-Finance programme with Huawei	the finance ministry's contract with Huawei for the E-Finance programme or the ICT modernisation loan, or an audit of it, stating ownership of source code, operating arrangements and exit clauses	2026-09-25
