PROGRESS REPORT

Cape Verde: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	The strategic bases of an Agenda Digital 2035 were approved by Resolução 72/2026 in May 2026, after the 2021-2025 action plan's horizon ended. The plan of record was presented to a lusophone interministerial meeting in March 2025 with interoperability between systems and electronic authentication as its stated components, and its horizon ended on 31 December 2025 with no extension or evaluation held. The digital economy strategy is in force by resolution for 2024-2030. 2026-05 - the Council of Ministers approved Resolução 72/2026 setting the strategic bases of an Agenda Digital 2035 on eight axes, naming fragmented initiatives and systems that do not communicate as the problems to overcome, with progress to be monitored by the information society observatory. The resolution text is not held; the account is a national newspaper's. 2026-08-06 - a strategic consultation in Praia was convened to feed a national diagnosis and the agenda's priorities. No draft, adoption date or budget is held. 2026-09-10 - the prime minister named state modernisation and digital transformation among the government's priorities for the new phase of its United Nations partnership. 2026-09-16 - a territorial programme for Maio was launched with internet-access, digital-economy and training projects, Fogo to follow; no budget is stated.	MOVEMENT the strategic bases of a 2035 digital agenda were approved by resolution after the 2021-2025 action plan's horizon ended
Strategies, plans and policies	**ICT strategy**	The digital economy strategy for 2024-2030 was approved by resolution and gazetted on 4 October 2024, and the strategic bases of a successor Agenda Digital 2035 were approved by Resolução 72/2026 in May 2026. The strategy of record was approved by resolution for 2024-2030, setting the vision of a Nacao Digital, six strategic pillars and 37 strategic objectives, with coordination, implementation, monitoring, evaluation and revision vested in the digital economy ministry through its telecommunications and digital economy directorate. Its full pillar-by-pillar text still carries implementation of an artificial intelligence strategy as a measure yet to be taken. The preceding action plan's horizon ended on 31 December 2025. 2026-05 - Resolução 72/2026 set the strategic bases of an Agenda Digital 2035 on eight axes, from digital government and fintech to cybersecurity and legal reform; its text is not held, and a strategic consultation in August 2026 was still gathering its priorities. 2026-02 - the national 5G strategy was presented on 11 February as a structuring instrument framing the phased introduction of the technology, developed jointly by the digital economy ministry and the regulator, and approved by resolution nine days later.	MOVEMENT
Strategies, plans and policies	**Broadband strategy**	A national 5G strategy was approved by resolution on 20 February 2026, targeting 90% internet penetration by 2026. The strategy was presented as a proposal at the technology park on 10 September 2025 under a World Bank-financed project and approved by resolution on 20 February 2026, targeting 90% internet penetration by 2026 and regional digital-hub status by 2030, with the economic impact put by government at more than CVE 77 billion by 2036. No spectrum assignment, licence award or network build is on file. The penetration target cannot be tested against the regulator's own series: its first-quarter 2026 report counts 511,702 internet subscriptions and 113.9% mobile penetration, and states no internet penetration rate.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data storage / cloud strategy**	There is no standalone cloud or data-storage strategy; the government cloud commitment sits inside the 2021-2024 digital governance strategy, whose annex lists a Cloud de Governo as already existing. The gazetted full text of the digital governance strategy is the only published statement of a government cloud commitment: its annex of fifty-five estruturantes lists EST-TEC7 Cloud de Governo as already existing, consumed by three measures, under the intervention area of infrastructure and security. The same annex records the integration and interoperability platform as not existing in 2021. The strategy's horizon ended in 2024 and no successor instrument carries a cloud or storage commitment. Nothing states where public data is held, on whose infrastructure, or under what retention or exit terms.	NO CHANGE a standing position the repository holds for the first time
Strategies, plans and policies	**Data interoperability framework / roadmap**	The framework is mandated and unpublished: a June 2025 resolution vests in the digital service team the competence to define it and make it mandatory, while the diploma on interoperability standards remains unadopted. 2025-06-10 - a resolution creates the Portal Unico, names identification, interoperability and payments as the digital public infrastructure building blocks, vests in the digital service team the competences to coordinate implementation of the interoperability layer and to define the interoperability framework and make it mandatory for all electronic governance initiatives, and requires the state technology operator to ensure every public administration information system carries APIs allowing articulation with the portal. No framework document has been published since. The companion diploma on interoperability standards is likewise unadopted, and no separately promulgated technical standards document exists — a mandate with no artefact under it.	MOVEMENT
Strategies, plans and policies	**AI strategy**	Drafting of a national artificial-intelligence strategy was kicked off with European Union representatives present, reported in May 2026, with no draft text held. None was published at the window's opening; a named analyst noted in April 2025 that more than sixty countries had national strategies and argued this one should adopt one. 2026-05-04 - drafting was reported kicked off with senior officials, the Secretary of State for the Digital Economy, external consultants and European Union representatives, the government stating the framework will be designed for responsible and ethical use in the public interest. No draft text, timetable or budget is held. It was paired with the data strategy in one kick-off and the two are separate instruments, so both now stand at the same stage: launched, unpublished and undated.	MOVEMENT
Strategies, plans and policies	**Data localisation policies**	No instrument requires public data to be stored in the country; what exists is a routing rule, that all data interoperability between state institutions must go through the state data-exchange platform. The health ministry's own procurement terms state the rule: the data-exchange platform is the State's principal integration and interoperability platform and all data interoperability between state institutions must go through it, any API handling personal data requires authorisation from the data-protection commission, and the authentication platform is the one an application must register with as a service provider. That is a routing rule, not a localisation rule. No government cloud, hosting or data-localisation instrument is held, and nothing states where public data physically sits.	NO CHANGE a standing position the repository holds for the first time

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data governance policy**	A data strategy was kicked off by May 2026, while the diploma announced as a 2024 deliverable is unadopted. 2026-05-04 - a development process was reported launched with senior officials, the Secretary of State for the Digital Economy, external consultants and European Union representatives, its stated goal to move government from siloed systems to integrated collection and use of data across departments. No draft, adoption date or lead institution is published. The binding instrument has not moved: a diploma regulating data governance in the public administration was announced for drafting in 2024 and is unadopted at 2026-08-06, as is a companion diploma on documentary classification announced in the same statement. It is a distinct instrument from the data-protection law the commission enforces, and its absence is what leaves the strategy without a rule to write into.	MIXED a data strategy for the public administration was kicked off while the data-governance diploma announced for 2024 is still unadopted
Strategies, plans and policies	**Open data policy**	An open-data portal named as a 2024 deliverable has not been delivered two years past its stated year. The portal was named as a 2024 deliverable to the National Assembly's First Committee, alongside a database of public bodies, an integrated public-services portal and a human-resources database. No open-data portal is held two years past that year. Of the deliverables named together, the integrated services portal did arrive in February 2026, so the failure is specific to open data rather than to the programme as a whole. No policy, licence, catalogue or publication obligation exists in its place.	STALLED
Legislation and regulation	**Data protection legislation**	Lei 133/V/2001 was last changed in 2021, to require designation of data-protection officers. The general regime closely mirrors the European standard, with administrative fines of CVE 50,000 to 3,000,000, cessation, blocking and deletion measures and criminal penalties up to two years, amended in 2013 to create the commission and in 2021 to require designation of data-protection officers. No amendment is recorded in the window. A named analyst argued in April 2025 for aligning it with artificial intelligence and adding mechanisms for algorithmic supervision; no bill is held. The commission's president said in February 2025 that several institutions had not complied with the officer obligation.	NO CHANGE
Legislation and regulation	**Cybersecurity legislation**	The cybersecurity legal regime was enacted by Decreto-Lei 9/2021 and remains unamended, with the first appropriation against it appearing in the 2026 budget. The act applies to the public administration, operators of critical infrastructure, operators of essential services, digital service providers and any entity using networks and information systems, adopts the regional cybersecurity directive, creates the national cybersecurity centre as national authority, the incident response team operating under it and a national security nucleus, and sets security requirements and incident notification duties with a sanctions regime. It was approved in council on 17 December 2020, promulgated on 27 January 2021 and entered into force 180 days after publication. No amendment, implementing regulation or repeal is held. The operating capability the act provides for was launched publicly on 29 October 2025 as a security operations centre and incident response team inside the state's private technological network, five years after the statute. No cybercrime statute of its own is held.	NO CHANGE a standing position the repository holds for the first time

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Legislation covering digital id**	The identity card was created by Decreto-Lei 19/2014, which governs its issue, replacement, use and cancellation. The card is optional from birth and compulsory from age four, its civil identification number is generated through the national civil identification and authentication system, and the data printed and encoded on it, filiation included, is drawn from the birth registration act. That link between the registration act and the card is the operative connection between civil registration and the national digital identity. The card itself is now produced domestically and renewable online through the justice portal, on the same legal basis. No amendment to the 2014 decree is held.	NO CHANGE a standing position the repository holds for the first time
Legislation and regulation	**Digital payments legislation**	Two diplomas gazetted in one 2018 bulletin carry the whole regime: Decreto-Legislativo 7/2018 for the payment system and 8/2018 for payment services and electronic money. The first enacts the Cabo Verdean payment system and confers on the central bank its governance role: policy-setting for payment-system modernisation, superintendencia over the safety and efficiency of payment systems and instruments, power to issue general rules, to inspect participants and operators, to designate systems and operators, and to provide infrastructure and settlement. The second is the codified regime for the provision of payment services and the issue, distribution and reimbursement of electronic money. The exterior leg sits in a separate 2018 diploma, which consolidates the exchange legislation and makes the contracting and settlement of transfers to and from abroad generally free. No amendment to either is held.	NO CHANGE a standing position the repository holds for the first time
Legislation and regulation	**Legislation enabling data interoperability**	The interoperability standards diploma announced for 2024 is unadopted while interoperability is asserted as working. The diploma was announced for drafting in 2024 under the state-modernisation strategy, with no adoption on record. There is no evidence it was adopted two years past its stated year, while interoperability is asserted as a working property of the government portal and of the company registry. The gap between an asserted interoperability layer and an unadopted standards instrument is the finding: what public systems must do to connect, and who decides, is set by nothing published.	STALLED
Legislation and regulation	**AI legislation / regulations**	There is no artificial-intelligence statute; the binding rule that reaches algorithmic use is the 2021 amendment of the general data-protection regime, and the regulator's own position is that legislation is needed. The amendment defines profiling, prohibits discriminatory profiles, limits decisions taken solely by automated processing where they produce legal effects or significantly affect the data subject, requires transparency about the decision logic, and requires impact assessments for high-risk technologies. It is a data-protection instrument that happens to reach algorithms, not a rule written for them. 2025-10 - the data-protection commission set out at an African governance workshop the provisions that bear on artificial intelligence and stated the regulator's position that the country needs legislation to regulate it. 2025-12-12 - a national readiness assessment was launched with the United Nations offices, the telecommunications and digital economy directorate framing it as producing a diagnosis across three pillars — artificial intelligence in the country, artificial intelligence in government, and regulation and ethics — and as the first step toward the regulatory framework the country does not have. No diagnosis has been published since.	NO CHANGE a standing position the repository holds for the first time

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**E-commerce legislation**	Legal frameworks for digital services, e-commerce and digital banking are named among the 5G strategy's declared reach; no bill is held. The frameworks were declared as a component of the 5G strategy presented in September 2025 and are named among the declared reach of the strategy approved on 20 February 2026, alongside a regulatory and business framework to support investment. No bill, draft or diploma is held: it is a stated legislative programme covering three fields, not a named instrument. Against that, a dedicated startup law with tax benefits, a special technology economic zone, modern data-protection and digital-transactions laws, simplified business registration and a digital-nomad visa are all stated to be in place, with no instrument number, adoption date, text or take-up figure for the startup law or the visa. That position rests entirely on a minister's summary in trade press.	MOVEMENT
Legislation and regulation	**Statistics legislation**	The national statistical system rests on Lei 48/IX/2019, gazetted on 19 February 2019. Lei 48/IX/2019 was gazetted in Boletim Oficial n.o 18 on 19 February 2019 as the governing statute of the national statistical system. The repository carries the statute and the statistical development strategy for 2022-2026. The only test of either against practice is an independent evaluation of the institute ordered by the Prime Minister in August 2026, whose terms, evaluator and reporting date are unpublished.	NO CHANGE a standing statute the repository holds for the first time
Legislation and regulation	**Access to information legislation**	Cabo Verde has a dedicated access-to-information statute: Lei 10/X/2022 regulates access to and re-use of administrative documents. Lei 10/X/2022, gazetted in Boletim Oficial n.o 47 on 16 May 2022, regulates access to and re-use of administrative documents and administrative information held by the bodies and entities listed in its article 2. The repository holds the gazette's own summary of the law and not its text: the full-issue capture stops before the law begins, and no per-act text was reachable. Nothing on the file states how the right is exercised in practice, what the response times are, or whether any refusal has been appealed.	NO CHANGE a standing statute the repository holds for the first time
Data protection	**Data protection authority**	The commission's powers are unchanged and its appropriation stands at CVE 36,313,115 for FY2025, with FY2026 unestablished. The commission has been an independent supervisory authority since 2015-16, with fining powers and referral of possible criminal matters to the public prosecution, and is a member of the Global Privacy Assembly. Its president stated it was entering a phase more attentive to digital innovation and named retention of technical staff as a standing constraint, every technician who started in 2016 having left. It was appropriated CVE 36,313,115 for FY2025 inside the National Assembly's own private budget rather than through any ministerial vote, a 3.0% uplift on CVE 35,255,451 for FY2024, with zero own-source revenue in both years; against the fining powers the statute confers, that is roughly a dozen maximum penalties. The FY2026 volume contains no occurrence of the commission in 266 pages, so its FY2026 appropriation is unestablished. On its own site it has published no genuine activity report since 2016.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data protection	**National data protection readiness**	The judicial police still have no effective access to the national video-surveillance system, two years after a formal request. A formal request was made to the Interior Minister in mid-2024 and the force had no effective access. 2026-05-13 - the claim was restated by the national director at the force's 33rd anniversary with still no access granted, the Justice Minister calling it justified and saying steps were under way with the Interior Ministry, which manages the system, alongside expansion projects in several cities and islands. No legal basis, safeguard or data-protection opinion on inter-institutional image sharing is held. A surveillance estate now being extended under a third financed phase, with no published rule on who may see it, is the readiness position. 2026-09-08 - oversight of the state's own intelligence capability moved by administrative act rather than statute. The prime minister's delegation of powers over the Republic's information service to the minister of internal administration was formalised by despacho no 15/2026 in the official gazette, the opposition calling it unconstitutional, the government invoking the delegation regime in the Organic Law of the Government, and the President declining to address it publicly. The despacho text is not held, so whether the delegated powers touch communications interception or data access is not established.	NO CHANGE
Regional collaboration	**Regional policy collaboration**	A digital corridor with Nigeria launched in September 2025, and an island-economies programme launched in July 2026. 2025-09 - a support agreement was signed in Abuja launching a corridor with cooperation priorities of artificial intelligence, youth empowerment and bilateral development, its declared deliverables training of over 500 secondary students on three islands, science and technology tools in Portuguese with teacher training, and a business and innovation mission in Praia, the mission having been announced at an artificial-intelligence summit. The repository holds no record that either deliverable was delivered, and it is promoted by a private organisation rather than by a treaty instrument. 2026-07-24 - a programme for African developing island economies launched with a 2026-2031 roadmap covering this and six other island states, on six pillars including connectivity; no country-specific commitment, allocation or project is named.	MOVEMENT
Regional collaboration	**Regional legal harmonisation**	The National Assembly approved accession to the AU Malabo Convention by Resolucao 153/IX/2020. Resolucao 153/IX/2020, gazetted on 17 March 2020, approves accession to the African Union Convention on Cyber Security and Personal Data Protection and publishes the Convention's full Portuguese text — the national act by which Cabo Verde harmonises to the regional instrument. What the repository does not hold: any act of ratification or transposition of an ECOWAS supplementary act on data protection or electronic transactions, and nothing on accession to Council of Europe Convention 108, which the ledger carries as an open row.	NO CHANGE a standing position the repository holds for the first time
Regional collaboration	**Shared regional infrastructure**		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Cross-border data transfers**	Transfer abroad runs on an adequacy test the data-protection commission decides, and the commission signed its first bilateral supervisory memorandum, with Macau, on 1 June 2026. The statute's article 19 makes transfer of personal data abroad conditional on the destination assuring an adequate level of protection and vests in the commission the decision whether a foreign State does so; article 20 sets the derogations under which it may permit transfer to a country without adequacy — unambiguous consent, contractual necessity, important public interest, judicial proceedings, vital interests, public register — and allows authorisation where the controller offers sufficient guarantees, expressly including adequate contractual clauses. No adequacy decision by the commission is held, so the derogations are what the repository can see working. 2026-06-01 - the commission signed in Macau a five-year renewable memorandum of cooperation with its counterpart, committing both authorities to joint training and seminars, support for investigations involving both territories, joint studies and exchange of legal interpretations and publications. It is a supervisory channel over data moving between the two jurisdictions and creates no authorisation or technical transfer mechanism.	MOVEMENT
Standards	**National interoperability standards**	No technical interoperability standards document exists; Decreto-Lei 47/2022 stands in its place, requiring alignment with the State's transversal solutions and prior opinion for public ICT purchases. The decree regulates the duty to inform, makes prior opinion mandatory for acquisition of information and communications technology goods and services across the central public administration, and approves the coordination procedure for digital transformation initiatives, requiring alignment with the State's transversal solutions including the authentication platform and the data-exchange platform, with the state modernisation directorate reviewing significant investments in articulation with the state technology operator. That is a procurement and coordination duty, not a standards catalogue: it says systems must align, and does not say to what. The diploma that would set the standards is unadopted and the framework it would sit in is mandated and unpublished.	NO CHANGE a standing position the repository holds for the first time
Standards	**National quality standards**	The national standards catalogue runs to 25 standards, all agricultural, fisheries, food or tourism, and carries no information technology, data or information-management standard. The standards body's own catalogue, updated March 2024, lists the whole corpus as NCV 001:2015 to NCV 025:2023 — twenty-one agricultural, fisheries and food product standards issued 2015-2016 and four tourism standards issued 2020-2023. Nothing in it touches digital. Where quality certification appears in the digital record it is an international standard adopted by an individual body rather than a national one: the state port operator states it is pursuing information-security certification for 2026 after achieving quality certification during 2025, and the state technology operator's own certification of its public-key infrastructure remains unrecorded in either its accounts or its plan.	NO CHANGE a standing position the repository holds for the first time

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	**Adoption of international standards**	ISO 27001 certification of the state operator's public-key infrastructure, committed in its 2024 plan, is unconfirmed. Certification was committed in the operator's plan for 2024 and funded from its own trading account, and neither the FY2024 accounts nor the FY2026 plan record it as obtained. The country-code domain management system, launched by the regulator in May 2024 with a designated body handling all registrations, is likewise unchanged, with no registration volume, fee schedule or operational report held. The two are the only international-standard or internet-governance commitments the repository records for this country, and neither has produced a published result.	NO CHANGE
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	A digital week was instituted as an annual national platform by resolution, and the advisory council met in November 2025. 2026-02 - the digital week was instituted by resolution as an annual national platform with five stated objectives covering digital literacy, public-sector modernisation, digitalisation of the economy, startup support and monitoring of the digital strategy, having been held as an event with no standing instrument before; the 2026 edition ran 9 to 15 March in hybrid format, opening on Brava. It is financed from the state budget and partnerships, and no budget line for it is identified in any budget document held. 2025-11-25 - the digital economy advisory council, chaired by the responsible minister, held its third ordinary meeting, at which the state set its programme on three pillars - digital public services, e-commerce and digital payments - supported by four declared work areas; no meeting after that date is recorded.	MOVEMENT
Public debate and participation in policymaking	**Open discussion of government policy**	An Open Government Partnership Forum met for the seventh time in February 2026 to prepare a third national action plan. The Forum met in Praia on 26 February 2026 to reformulate its membership and prepare the third National Action Plan for Open Government, the second having been completed in 2025. The Minister for State Modernisation argued at it that citizens can only criticise, support or propose alternatives to government policy if they have access to the underlying information. eParticipa is separately in service as a web and mobile channel between the citizen and the public administration. The repository holds no public-consultation register and no count of consultations run or responses received.	MOVEMENT

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The digital ministry's vote fell to CVE 174,200,533 for FY2026, an 87.5% fall across two budgets, while a first cybersecurity line of CVE 20,000,000 was inscribed. The ministry went from CVE 1,390,965,632 in FY2024 to CVE 369,781,930 for FY2025 and CVE 174,200,533 for FY2026, an 87.5% fall across two budgets while total state expenditure rose 11.3%, leaving the digital vote at 0.18% of state spending against 1.62% in FY2024, capital printed at zero for a second year, and a reprogrammed budget of CVE 1,614,624,282 at 31 March 2026, 9.3 times the voted figure. Every digital programme was cut: the innovation platform programme to CVE 513,994,724 with no external borrowing, the state-modernisation programme by 82% to CVE 976,042,125, the statistical-system programme to CVE 290,706,686. Against that, CVE 20,000,000 was inscribed as a new cybersecurity budget unit, the first such line in the budget, at 0.02% of state expenditure, and a rectificative budget was approved on 31 July 2026 at CVE 103,888 million, naming connectivity among the priorities and giving no digital figure. The civil-identification earmark is rolled forward at CVE 306,516,802 for FY2026, identical to the escudo, while the state operator forecasts service revenue of CVE 1,094,297,000 for 2026, 6.3 times the ministry's whole vote, its state-protocol line frozen for a third year.	MIXED the first cybersecurity budget line was inscribed for FY2026 while the digital ministry's vote fell 87.5% across two budgets and every digital programme was cut
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE
MoUs and other agreements	**Strategic relationships**	The state operator signed a memorandum with Angola's public finance technology body in March 2026, and a tech-diplomacy protocol was signed. 2026-03-03 - a memorandum was signed in Praia by the operator's executive administrator and the Angolan body's director-general in the presence of Angola's ambassador, covering cybersecurity, data-centre management, audit and internal control, and customer service, the two bodies having been in contact since 2023 with no instrument on the record; it is reported again in an account of Angola's own reform. No value, duration or workplan is stated. 2026-03 - a protocol on membership was signed in Praia and a technology ambassador designated, described by the institute as the second such appointment in Africa; no fee, obligation or term is stated and the signature date is not given. The standing multilateral instrument is the UN cooperation framework for 2023-2027, with a 2028-2032 successor opened for discussion in September 2026.	MOVEMENT
New investments	**Mobilisation of non-state finance**	A sovereign guarantee of up to EUR 37 million was approved for the incumbent, drawing a public objection from its competitor. 2026-04-20 - a resolution approved a guarantee of up to EUR 37 million for modernisation of telecommunications infrastructure, named as renewal of the inter-island submarine cable and reinforcement of international connectivity, each drawn tranche maturing within fifteen years and the project framed under a European gateway programme. No drawdown against it is held. The competitor objected publicly, demanding neutrality, transparency and separation of strategic infrastructure management from commercial service provision, and no regulatory response to the objection is on file. A one-stop shop for startups was announced, staffed by newly hired specialists to route founders to finance instruments that already exist, with no legal instrument, location, staff complement, budget or opening date.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	**Development-partner project financing**	A second-phase e-governance programme was signed on 31 December 2025, while a EUR 37m connectivity loan records zero disbursement. The innovation fund was confirmed from the recipient side as a EUR 24 million fund to back startups and attract digital nomads inside a EUR 156 million programme, with US$6,915,466 disbursed, and on 15 January 2026 memoranda brought three of its instruments into operation - a bank for young people and women executed by one state agency, and two funds executed by another, against a package of close to EUR 12 million (memoranda). The EUR 37,000,000 framework loan signed in September 2024 within a EUR 80 million total cost, financing a submarine-cable branch, transmission modernisation and an incumbent systems upgrade, records zero disbursement and no drawdown, works-start or completion. At the World Bank's September 2026 review the flagship project's original financing was about 80 per cent executed and its additional 2025-2028 financing about 40 per cent, with school connectivity the priority. A US$15m budget-support credit carries as its first prior action the creation of an autonomous Revenue Authority by decree-law (third operation). A US$25m policy operation of December 2024 carried uptake of digital services as its second objective and disbursed in full the same month.	MIXED a second-phase e-governance programme was signed and an innovation fund began disbursing while a EUR 37m connectivity loan stands at zero disbursement

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	The regulator counted 588,603 active SIMs at 113.9% penetration at the end of March 2026, down 0.8% on the quarter. ARME's Q1 2026 market indicators, published on 5 August 2026, count 588,603 active SIM cards at a penetration rate of 113.9%, a fall of 0.8% against the fourth quarter of 2025 and a rise of 0.2% against the same quarter a year earlier, with CVTelecom holding 68% of active SIMs and Unitel T+ 32%. The quarterly series had stopped at Q2 2025 in the repository and now resumes. Nothing in it is broken down by island or municipality, which the ledger carries as an open row.	NO CHANGE
Connectivity	**Internet usage**	The regulator counted 511,702 internet subscriptions at the end of March 2026, up 1% on the quarter and down 4% on the year. ARME's Q1 2026 indicators count 511,702 internet access subscriptions, 86% of them delivered over mobile broadband on a small screen, a rise of 1% against the fourth quarter of 2025 and a fall of 4% against the same quarter of 2025 — mobile broadband subscriptions fell 16.4% year on year while fixed broadband rose 12.9%. Market shares by subscription are CVTelecom 72%, Unitel T+ 27.3% and Starlink 0.64%, with Starlink up 0.20 percentage points on the quarter. The shift from mobile to fixed broadband is the movement in the quarter; the repository holds no household or individual-use survey against which to read it.	MIXED subscriptions up on the quarter and down on the year
Connectivity	**Mobile affordability**		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**National fibre backbone**	The inter-island backbone sits under a concession requiring an autonomous wholesale division to manage it, and the State guaranteed a EUR 37 million loan to renew the inter-island cable in April 2026. The concession contract held by the incumbent operator requires an autonomous wholesale division to manage the inter-island fibre-optic backbone network and the international hub, with provision for later separation into wholesale and retail companies, the regulator and the operator both heard before adoption. No later instrument effecting that separation is held. 2026-04-20 - the State guaranteed up to EUR 37 million of an investment-bank loan to the operator in which it holds 82 per cent, to underwrite modernisation of critical telecommunications infrastructure, stating the purpose as renewal of the inter-island submarine cable and reinforcement of international connectivity, and that the guarantee is not direct public financing and carries no charge on the budget. No length, route or capacity figure for the backbone is published at any date, so the network being renewed cannot be sized.	MOVEMENT
Connectivity	**International internet bandwidth**	EllaLink came ashore at Praia on 18 February 2021 with a stated 30 TB capacity. The EllaLink submarine cable came ashore at Portinho beach, Achada Grande Tras, in Praia on 18 February 2021; the Secretary of State for Innovation called it a historic moment for the country's telecommunications, and the government's record gives the low-latency fibre system a capacity of 30 TB, more than all existing cables combined. A second ECOWAS regional submarine cable reached feasibility-study validation at a Monrovia workshop in October 2025. No inventory naming every system serving Cabo Verde, its landing station and its in-service date is held, and no lit or used capacity figure is on file for any of them.	NO CHANGE a standing position the repository holds for the first time
Connectivity	**Internet Exchange Points**	One exchange exists, registered in Praia since 29 November 2022, and the government states it is operational and reduces cost and latency. The international exchange directory's registry entry records the exchange in Praia, organisation type association, status active, media type Ethernet, established 29 November 2022, with IPv4 and IPv6 subnets assigned; its switch, facility and participant tables are empty. The government's own status booklet states twice that the exchange is introduced and operational and that it reduces cost and latency, without a date beyond the booklet's own. No traffic, member or peering figure is published on either side, so what the repository holds is that the exchange exists and not that it carries anything. 2026-09-29 - the national operator signed a non-binding letter of intent with a European exchange operator for a Lisbon-Sao Paulo corridor, trading transport capacity for access to its exchanges.	NO CHANGE a standing position the repository holds for the first time

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Satellite broadband licensing and availability**	The satellite entrant held 0.64% of internet subscriptions at the end of March 2026, and the regulator opened a consultation on satellite rules. The entrant began activity in January 2025 under a general authorisation granted in 2024 and holds 0.2% of internet subscriptions at 30 June 2025, up 0.12 percentage points on the quarter in a market of 484,929 subscriptions; the Prime Minister had reported entry as an accomplished fact in November 2024 while the regulator dates commercial start to January 2025. 2026-08-05 - the regulator's first-quarter 2026 report puts the entrant at 0.64% of internet subscriptions, up 0.20 percentage points on the quarter, against 72% for the incumbent and 27.3% for its competitor. 2026-08-05 - the regulator opened a public consultation on licensing, radio-spectrum use, frequency coordination, user protection, network security and emergency communications for satellite operators, submissions to 31 August 2026, framed as addressing the legal and oversight challenges that followed the December 2024 launch; no draft text or adoption date is published.	MOVEMENT
Data Storage	**Local data centre capacity (all providers)**	The state data centre at Achada Grande was designated critical infrastructure in September 2015; no rack, floor area, power or server figure is published for it or for any other provider. The designating act records that the centre had recently been inaugurated as a purpose-built high-standard facility housing processing and storage equipment, principally the State's, with the potential to serve banks, companies and other national and international entities, and that the state technology operator requested the classification. It establishes that the facility exists and is state-held, and publishes no capacity figure of any kind. A third data centre is to be installed in Praia, with the technology park in prospect of handing it to private management (interview). No capacity figure has been published since: the operator has published no accounts after the 2024 volume, so no later certification, capacity or utilisation statement is held, and no Cabo Verdean source publishes a national data-centre capacity inventory.	NO CHANGE a standing position the repository holds for the first time
Data Storage	**Local data centre capacity (national providers)**	The state operator forecasts hosting and cloud revenue of CVE 127,494,000 for 2026, up 5.1%, inside a total forecast down 26%. The Praia data centre is in operation and Tier III certified, having billed connectivity of CVE 305,779,000 and protocolled state services of CVE 455,964,000 in the year to 31 December 2024. No accounts have been published since that volume, so no later certification, capacity or utilisation statement is held, and no floor area, rack count or installed electrical load is stated for any facility in the country. Hosting and cloud lines move up while the whole forecast moves down: housing CVE 26,994,000, infrastructure services 72,025,000, platform services 9,359,000 and software services 19,116,000 for 2026, CVE 127,494,000 combined and up 5.1% against CVE 121,274,000 forecast for 2025. Both are board forecasts, not outturn, and untested.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Off-site backup capacity**	A disaster-recovery data centre on São Vicente, built as the mirror of the Praia facility, opened with the Mindelo campus in May 2025. The impact study for the technology park's second phase describes the São Vicente data centre as a disaster-recovery site that also houses a small incubation centre (impact study). Its IT equipment went to tender under African Development Bank financing, with bids closing on 23 October 2024 (tender). In May 2025 the park's chair described it as the mirror of the Praia data centre, sited on another island to meet the recommendation that a backup site sit at least 75 km from the primary (interview). No replication schedule, recovery objective or list of the systems backed up there is published.	NO CHANGE a standing position the repository holds for the first time
Energy	**Sufficient energy and water for data centres**	A photovoltaic self-consumption project for the Praia data centre was board-approved for 2025 and nothing establishes it was implemented. The project was approved by the operator's board with implementation scheduled within the 2025 exercise, aimed at cutting fossil-sourced electricity to at least 35% of the data centre's cost structure. The operator's 2025 accounts are not published, so neither implementation nor any generation figure is established. The stated target is ambiguous between a share and a reduction and the accounts do not resolve it. It is the only energy statement of any kind attached to digital infrastructure in this country's record.	NO CHANGE
Energy	**Grid reliability**	Losses ran at 22.71 per cent in 2025, high but declining, on production of about 482.6 GWh and a peak of 77.9 MW, and the first phase of remote grid control on a fourth island was completed in January 2026. The financier's project paper is the most recent statement: 97 per cent electricity access, 80 per cent dependence on imported fossil fuel for generation, total production of about 482.6 GWh in 2023 growing at about 3.1 per cent a year, non-synchronous peak consumption of 77.9 MW, and total technical and non-technical losses of 22.71 per cent in 2025, and electricity prices among the highest in sub-Saharan Africa. It also records the unbundling of the vertically integrated utility into three companies, so post-2024 performance cannot be read as the old utility's. No national interruption index is published. 2026-01-09 - the energy minister recorded that adaptation of a fourth island's transformer and sectioning posts is finished, creating the conditions for remote monitoring and control from the national dispatch centre, that three islands are already integrated and the fourth joins on completion of a second phase, and that the integration plan is national in scope, financed by Luxembourg cooperation at about EUR 4 million. The head of government told parliament that the Praia outages came from repeated generator failures rather than a capacity deficit, and that technical, criminal and cyber investigations are under way. No outcome of any of the three is held.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	**Rural electrification**	Access reached 98 per cent in 2024 against 86 per cent in 2015, and USD 13.30 million was approved on 8 January 2026 for 1,800 further household connections and last-mile electrification. No rural series is published. The statistics institute's own series rises from 79.7 per cent of the population in 2010 to 94.3 per cent in 2023, with no observation for 2011 or 2020, and carries no urban and rural split — so the national office publishes no rural electrification figure, and the rural number has to be read out of household survey reports instead. 2025-10-29 - the head of government told parliament the target is 100 per cent household access by 2026, that the rate was 86 per cent in 2015 and 98 per cent in 2024, and quantified the programme: 400 thousand contos already invested in rural electrification reaching localities that never had power, 300 thousand contos in execution on network extensions, mini-grids and solar kits for isolated and dispersed households, and a social tariff benefiting over 17,000 families. 2026-01-08 - the World Bank approved USD 13.30 million of concessional finance with USD 2.01 million of co-financing, stating a 98 per cent coverage rate and funding 1,800 further household connections and last-mile electrification alongside 68 MW of new solar and wind on smaller islands.	MOVEMENT
Technical Capacity	**Robustness of government hardware and software**	The election results portal became unreachable during results publication on 17 May 2026 and is under forensic audit. The state operator's stated performance was publication of election results within two hours. The portal became unreachable from about 19:00 on 17 May 2026 during legislative-election results publication and was restored by about 21:00; its president initially said a cyber-attack was more likely than a technical fault, and nine days later the board's preliminary report pointed to technical causes and found no evidence of external malicious action, with internal conduct still being examined and an external independent technical and forensic audit under way. The systems that failed sit on the open-source microservices framework on which the state's e-government applications are built and managed across their lifecycle, which no later source revises.	REGRESSED
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	New in-country capability to run and defend state systems went live on 29 October 2025, built with an external implementation partner; a second-phase e-governance programme was approved domestically in March 2026. 2025-10-29 - the state technology operator publicly launched a cybersecurity operations centre and a digital security incident response team for the state's private technological network, implemented with World Bank financing and a Portuguese firm as implementation partner, and described them as standing structures whose resources will help public administration bodies and the private sector reach cybersecurity maturity. It is new operational capacity delivered with an external partner rather than by the operator alone. 2026-03-17 - the council of ministers approved domestically the financing agreement signed on 31 December 2025 for the second phase of the e-governance and public financial management reform programme, at a maximum of EUR 17.71 million, with the finance ministry as executing agency. What is not held is any measure of the capacity itself. No national technical workforce or public-sector technical capability figure is published, and the regulator's own budget, staffing and activity are unheld, so the capability can be described and not sized.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Cybersecurity	**National cybersecurity readiness**	A national security operations centre and incident response team were launched in October 2025, five years after the decree providing for them. The 2021 decree established the cybersecurity legal regime and created the national response team, with no budget line at any grain of the FY2024 or FY2025 volumes and the money sitting inside the state operator's trading account; the instrument itself is not held and is known only through the budget and operator records that recite it. 2025-10-30 - both bodies were launched inside the state's private technological network, built by the operator with World Bank involvement, the operations centre for real-time detection and the response team as a national alert-and-response point. No incident count, staffing figure or service catalogue has been published since. A technical mission to South Korea covering data governance, service digitisation and cybersecurity produced no formal agreement. 2026-09-08 - the first named phishing campaign in the repository, and the warning came from the target rather than from a response body. The national postal operator warned customers about fraudulent messages sent by people impersonating its staff, asking recipients to click a link that is not its own. No message volume, victim count, loss figure or law-enforcement referral is published.	MOVEMENT

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	PDEX is in service as the state data-exchange platform, with four integrations named live. PDEX lets data owners publish their holdings as APIs under conditions they set, with subscription and consumption enforced against those conditions; it names four live integrations — the consular portal, whose civil-identification integration runs entirely through it, the NhaCard platform's traffic with the national health system, the Treasury's DUC collection system, and citizen and company validation APIs already consumed by public and private entities. The platform states that its full API catalogue is still to be published, so the four named integrations are a floor and not a count. The page carries no date. 2026-09-21 — expressions of interest were invited for a 12-month build of a digital-nomad statistics module inside SGIT, interoperable with institutional platforms, under the African Development Bank-financed innovation project.	MOVEMENT
Data Exchange	**Use of digital id in other systems**	The authentication platform reports more than 95,000 users a day and integration by OpenID Connect open to any authorised application. The platform's own account is the first usage figure the repository holds for it: more than 95,000 users a day, offering basic email authentication, identity-card authentication by middleware, card reader and PIN, mobile-key authentication by mobile number, PIN and one-time code, and qualified digital signature; any duly authorised application offering useful services to citizens may use it, a citizen may authenticate with the card at any public administration portal that has joined, and integration is by OpenID Connect with onboarding requested from the state technology operator. Consumption by other systems runs through the state data-exchange platform, which publishes data holdings as APIs under conditions the owner sets and already carries the consular portal's civil-identification integration, health traffic, treasury collection and citizen and company verification. No list of joined applications and no per-service authentication count is published on either side.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of health systems**	Health information system maturity is scored at 55 per cent with interoperability achieved between the national and regional observatories; a national laboratory system specified to HL7 and FHIR went to procurement in April 2026. The World Health Organization's biennial report is the standing statement: it scores the maturity of the health information system at 55 per cent, records publication of the national digital health strategy for 2024-2034, and reports interoperability achieved between the national and regional health observatories — specific components interoperating while national maturity is partial. 2026-04-28 - the health ministry opened procurement for a national consultancy to design, build and install an interoperable laboratory information system across 20 laboratories, requiring HL7 and FHIR conformance and integration with the aggregated-data platform and the health information system, with the state technology operator named as standing technical partner regardless of the vendor selected. It is a contracting and design step, not a completed rollout. 2026-07 - a cooperation protocol was signed with the health ministry and 30 desktops, 30 monitors and a laptop handed to health delegations and central services for death registration, certification and cause-of-death analysis, the process revised with the health, civil registry and statistics sectors together inside aggregated-data platform modernisation and disease classification implementation, the minister stating a target of over 95 per cent coverage in priority units.	MOVEMENT
Data Exchange	**Interoperability of education systems**		NO EVIDENCE
Data Exchange	**Interoperability of social protection systems**		NO EVIDENCE
Digital Identity and CRVS	**Robustness of system**	The electronic identity and authentication platform operates behind the justice portal, supporting three authentication modes. The platform is operating as the state's e-identity layer behind the justice portal, supporting three authentication modes and serving as the interoperability layer between civil registration and identity through which every child is issued a unique identification number at birth. Its stated next phase is consolidating existing databases, expanding identity-enabled services and finding long-term financing models, carrying no date, instrument or budget line. That an identity platform doing this much work has no identified long-term financing model, and no appropriation traceable to it in a digital vote that fell by seven eighths across two budgets, is the position as the repository holds it.	NO CHANGE
Digital Identity and CRVS	**Registration of entire population**	The national identification card keeps its 2014 legal basis and 2018 launch design, now produced domestically and renewable online. The card is a polycarbonate electronic card created by decree in 2014, with fee regime, biometric capture rules and validity period set by later instruments, its chip carrying identification, authentication and digital-signature applications, officially launched in January 2018. Same design and legal basis, now renewable online through the justice portal and produced domestically. No issuance total, coverage rate or holder count is held from any date, so how much of the population carries it is unestablished - which the birth-registration figure recorded elsewhere in this report should not be read as answering.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**National maintenance of id and credentials systems**	The state printer began domestic production of identity documents on 11 June 2026. The Imprensa Nacional de Cabo Verde announced on 11 June 2026 that its personalisation centre, inaugurated in December 2024, is fully operational and authorised to issue the Cartao Nacional de Identificacao, the Titulo de Residencia para Estrangeiros and the electronic passport, at a stated daily capacity of 1,200 identity cards and residence titles and 2,400 passports, and an estimated 79,600 cards, 5,000 residence titles and 60,000 passports a year. The credential issued off the national civil identification base is now produced in country. No issued-volume figure against that capacity is held, and nothing states what the external supplier arrangement cost before it.	MOVEMENT
Digital Identity and CRVS	**Authentication**	SNIAC released card middleware at version 1.9.9, letting holders use the card's digital functions with institutions. The civil identification and authentication system publishes middleware, at version 1.9.9, that lets a citizen use the digital functions of the identity card in dealings with public and private institutions. The residence title for foreign nationals, created by Decreto-Lei 20/2014, was launched under the same system on 29 July 2021. SNIAC is the umbrella system, run from the justice ministry's portal. No activation count for the digital credential is held, which the ledger carries as an open row.	MOVEMENT
Digital Identity and CRVS	**Digital id from birth**	Birth registration reached 99%, with a unique identification number issued to every child at birth, from about 91% before the linkage reforms. Coverage stood at about 91% before the linkage reforms, with fragmented systems and weak institutional coordination. 2026-05 - the justice-modernisation institute reported 99% birth registration and 100% registration of deaths occurring in health facilities, reached within five years, with a unique identification number issued to every child at birth. The figures are the institute's own and are registration coverage, not identity-card coverage. It is the strongest measured position on this ledger, and the only one on it where a stated outcome rather than an instrument has moved.	MOVEMENT
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	The card's data is drawn from the birth registration act and its civil identification number generated through the national identification system; 290 birth certificates were issued remotely in the justice portal's first usage figures. The link is statutory. The card is optional from birth and compulsory from age four, its civil identification number is generated through the national civil identification and authentication system, and the data printed and encoded on it, filiation included, is drawn from the birth registration act. Coverage on the registration side is high: 99 per cent birth registration and 100 per cent registration of deaths occurring in health facilities, with a unique identification number issued to every child at birth. 2025-12-16 - the justice ministry published the first usage figures for its portal: 905 acts performed without any physical attendance at a conservatoria, of which 290 birth certificates and 150 identity card renewals — the two ends of the chain served through one channel. What is not held is the throughput of the link itself: no count of identity numbers issued at registration, and no identity-card enrolment or mobile-credential activation count at any date.	MOVEMENT
Digital Identity and CRVS	**Use by other systems**		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Governance role of central bank**	The central bank announced SPEED, a national instant-transfer system, for launch in the first quarter of 2026. The governor of the Banco de Cabo Verde announced SPEED on 5 December 2025, a national immediate-transfer system to launch in the first quarter of 2026, following a pilot completed with four commercial banks and specified to work without internet access. The bank is acting as architect and coordinator of the infrastructure rather than as its overseer, with costs shared between it, the commercial banks, the regulator and the government. SICIL, the integrated interbank clearing and settlement system, is separately described in service by the bank. No launch confirmation for SPEED is held, and the repository carries nothing on the digital currency the bank said it was separately studying.	MOVEMENT
Digital Payments and Fintech	**G2P functionality**	Salaries and pensions are processed through the state financial management system and credited to beneficiaries' bank accounts on stated value dates. No volume or value is published. The budget execution decree is the standing instrument for the year: public salaries and pensions are processed through the state financial management system and the human-resources databases and credited to beneficiaries' bank accounts on stated value dates, the public accounting directorate processes pensions, and direct transfers to families abroad run through the social pensions centre and the diplomatic representations. Nothing states how many beneficiaries that reaches, what it pays out, or what share of government-to-person payment is still made in cash. The single social registry that identifies beneficiaries is operating and querying held data directly instead of taking paper declarations, which is the enrolment side of the same question.	NO CHANGE a standing position the repository holds for the first time
Digital Payments and Fintech	**Revenue collection**	State revenue is collected on a single paperless collection document carrying a payment reference for automatic reconciliation, payable by point of sale, cash machine, mobile telephone and home banking. The founding act approves the single instrument through which sums entering the State Treasury are collected: normally issued without paper, carrying a payment reference allowing automatic processing and reconciliation of the collection, and payable through the state network including the card rails and home banking. The 2026 execution decree restates the obligation on the collecting side: every state receiving office must hold systems adapted to the collection document and integrated with the treasury control system, with electronic reporting of payments, and revenue at collaborating entities may be paid by point of sale, cash machine, mobile telephone and home banking. No collection volume, value or digital share is published at any date, so a rail that has existed since 2012 cannot be measured.	NO CHANGE a standing position the repository holds for the first time

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**B2B and B2G functionality**	Payment for central-administration goods and services is conditioned on electronically issued invoices, and the 2026 budget allows a 130 per cent deduction for adopting electronic invoicing and the standard audit file. 2026-01-09 - the execution decree makes central-administration procurement run on the electronic public contracting platform and conditions payment for goods and services on electronically issued invoices — a government-to-business rail with a compliance condition attached to it. The business-to-business leg is an incentive rather than a mandate. The 2026 budget law allows companies to deduct 130 per cent of spending on accounting and invoicing equipment and software in the course of adopting electronic invoicing and installing the standard audit file for tax purposes, extends the uplift to software migration, training, system parameterisation and the digital certificate, and directs the government to create a business programme easing adoption by small taxpayers. No adoption count and no mandatory commencement date is published. The procurement platform itself was re-let at CVE 70,000,000 over four years on terms of perpetual licensing, unlimited users, deployment on national infrastructure and full control of source code.	MOVEMENT
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	Rede vinti4 is the national retail switch, and cards were the most-used payment instrument in 2024. The Banco de Cabo Verde's payment-systems report for 2024, reported on 24 September 2025, makes the card the most-used payment instrument in the country, at a daily average of 132,405 card operations worth CVE 553.8m. Over the 2025 Christmas period Cabo Verdeans moved more than CVE 9bn through the vinti4 network. The repository holds transaction volumes and no breakdown by instrument type, merchant category or island, and no acceptance-point count. 2026-09-14 — the central bank's August figures record 4,992,880 operations worth CVE 21,159.9m on the vinti4 network, 3,768,595 of them card purchases, against 0.3 per cent more operations in July.	NO CHANGE a standing system the repository holds for the first time
Digital Payments and Fintech	**Population uptake**	380,545 cards and 13,249 terminals against 232 cash machines, on the central bank's own 2024 report. The payments report for 2024 is the repository's first consolidated coverage figure for Cabo Verde: 380,545 cards, 13,249 point-of-sale terminals and 232 cash machines, with 132,405 daily operations worth CVE 553.8m. It also records an instant transfer pilot under way, which is the next rail rather than a measure of use. No earlier comparable figure is held, so the direction of travel cannot be stated.	NO CHANGE a first published coverage count
Digital Payments and Fintech	**Cross-border functionality**	Transfers to and from abroad are generally free to contract and settle under the 2018 exchange diploma, subject to authorised intermediation and central-bank supervision. The diploma is the standing legal instrument for economic and financial operations with the exterior and for exchange operations in national territory. It consolidates into one text the exchange legislation previously split across several, defines transfers to and from abroad and exchange operations, makes their contracting and settlement generally free, permits foreign-currency accounts, and subjects operations to authorised intermediation and central-bank supervision. It is the country's own instrument, not a regional one. No cross-border transaction volume, remittance digitalisation rate or corridor cost is published, and no regional interoperability arrangement is held, so what the repository carries is the legality of the flow and nothing about its size.	NO CHANGE a standing position the repository holds for the first time

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Consumer protection**	Fraud complaints rose 150 per cent in 2025, from 10 to 25, and the central bank brought payment and electronic money institutions inside a binding advertising regime in February 2026. The standing regime is the 2018 payment services diploma, which governs the legal relationship between payment service providers, electronic money issuers and users, including information and transparency duties, reimbursement, and liability for unauthorised operations. 2026-02-05 - the central bank issued a binding notice that regulates the advertising of financial services and products and applies expressly to payment institutions and electronic money institutions across every medium including internet and social media: a written advertising policy with internal controls, principles of identifiability, veracity, transparency and balance, a closed list of restricted expressions such as sem juros and aceitacao garantida, minimum character sizes by medium, campaigns reported ten working days before launch, and power to order modification, suspension or rectification at the institution's cost. 2026-08-17 - the bank's behavioural supervision report for 2025 counts 278 complaints, 245 banking and 33 insurance, about 23 a month; bank accounts led with 61 and fraud came second with 25 against 10 in 2024, a rise of 150 per cent the bank attributes to the growing digitalisation of financial services and the security of digital channels. Twenty-five supervision measures were adopted, fifteen recommendations and ten specific determinations, and CVE 3,154,582 was restituted to consumers.	MOVEMENT
Registries	**Population register**	There is no population register distinct from civil identification: the national identification and authentication system is the umbrella, and the issuance chain runs off it under two 2026 contracts. The umbrella system operates as the civil identification and authentication system, carrying the identity card, the residence title for foreign nationals and a middleware release that lets a holder use the card; there is no separate population register and no published resident count derived from one. 2026 - the national press signed two contracts underpinning national personalisation and distribution of sovereign documents: with a Portuguese mint for raw material, technical support and maintenance of the document personalisation centre, and with the postal operator for collection, dispatch and distribution of the personalised documents. That is the contractual base for the issuance chain that runs off the civil identification database. Production is domestic: the press states a daily capacity of 1,200 identity cards and residence titles and 2,400 passports. No enrolment or holder count against the resident population is published.	NO CHANGE a standing position the repository holds for the first time

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Civil register**	The register runs under the 2014 Civil Registration Code, which requires a national electronic civil registry database, and the registries directorate began publishing its own activity figures in August 2026. The code makes birth, marriage and death registrable facts, defines the registry structure, requires a national electronic civil registry database managed by the registries, notary and identification directorate, and repeals the 1967 regime. 2025-10-01 - the statistics institute released its fifth vital statistics report, for 2023, built entirely on the registries directorate's administrative records: 6,760 births, 2,925 deaths and 2,435 marriages, the 2016-2023 series, and register-quality detail including 5.9 per cent of birth records made without paternal identification, highest in one island at 14.4 per cent. The register is the statistical source, which is the strongest evidence the repository holds that it is complete enough to be one. 2026-08-04 - the directorate opened a statistical bulletin of its own, reporting 2,944 births registered nationally in the first half of 2026 across 23 conservatorias, an average of 16 a day, and stating that the bulletin exists to publish performance indicators and the volume of acts practised by the services — the register publishing about itself rather than only through the statistics office.	MOVEMENT
Registries	**Address register**	There is no national address register; the nearest artefact is a national toponymy dataset published in June 2023, and two municipalities are building address infrastructure of their own. The territory institute's dataset is a completed national vector dataset published on 10 June 2023 covering islands, ilheus, lugares, bairros, vilas, cidades, ruas and door numbers, distributed as map services and shapefile download under an open licence, maintained as needed, and grounded in the 2012 decree regulating national and municipal toponymy. Street names and door numbers are a geospatial dataset plus municipal numbering programmes, not a register with a per-address identifier. 2026-04-04 - the capital's council reported that its municipal toponymy platform is live in the municipal online shop, letting residents look up official street names and building numbers with regular updates as door numbering and street naming continue across the neighbourhoods; the platform was launched in October 2025. It is the first operating municipal address lookup in the country and covers one municipality. 2026-05-22 - a second council announced the start of its toponymy project, beginning with photographic field survey of the island and door numbering in its main town, stating that the plan will produce a database supporting postal delivery, medical emergency response, census enumeration and home deliveries. Address coverage is accumulating municipality by municipality, which is why no national figure exists.	MOVEMENT
Registries	**Business register**	A company-lifecycle platform entered beta with a pilot user group in March 2026. 2026-03-20 - a beta platform for online company-lifecycle procedures was presented at a socialisation ceremony in Mindelo, developed by a private supplier with the registry and notary directorate and resting on interoperability between public systems. No user count, cost or full-launch date is published, and the developer rather than the state describes the interoperability design - which matters because the standards instrument that would govern it was announced for 2024 and never adopted.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Social protection register**	The single social registry now queries held data directly instead of taking paper declarations. The Cadastro Social Unico stopped requiring paper declarations in December 2025 and queries the data directly. Portaria Conjunta 16/2026 of 13 February 2026 extends it to the allocation of state housing, and in June 2026 the government called households in climate-vulnerable zones to register in it. It was created by Decreto Regulamentar 7/2018 and is run by the family and social inclusion ministry. 2026-02-05 - a World Bank restructuring paper recorded 16,036 additional households registered and the registry holding data on over 91,164 households, 64 per cent of the population, the coverage figure the UN country team repeated in September 2026.	MOVEMENT
Registries	**Electoral register**	419,755 electors on the roll at 28 April 2026, published by constituency in the gazette. The global electorate map puts the roll at 419,755 electors at its reference date of 28 April 2026, broken down by constituency. It reaches the repository as a republication: the original gazette text of 28 April was found inexact and the full corrected table was reissued two days later, which is the register's own correction mechanism working in public.	NO CHANGE
Registries	**Tax register**	The tax and customs authority's first governing board was appointed with effect from 1 August 2026. The resolution approved in council on 29 July 2026 appoints the members of the authority's governing board with effect from 1 August, which is the body constituted rather than the register moved. No taxpayer count or registration series is published against it.	MOVEMENT
Registries	**Land register**	LMITS is functioning and used for most land transactions on four islands. An independent evaluation published on 1 November 2022 found the Land Management, Information and Technology System functioning, integrated into the transaction process and used to process most land transactions; it was built under the US$17.5m Land Management for Investment project inside MCC's US$65.6m Cabo Verde II Compact, covering Sal, Boa Vista, Sao Vicente and Maio, and the national land management institute has continued the cadastre work since the compact closed. The territory institute runs the property cadastre as a service of its own. No national cadastral coverage figure is held, and nothing states the position on the six islands the compact did not cover.	NO CHANGE a standing position the repository holds for the first time

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Health**	A pharmaceutical market monitoring system was launched, and health-system digitalisation was announced with 24 telemedicine units. 2026-07 - the independent health regulator launched real-time national tracking of the medicines circuit, forecasting stock-outs and triggering replenishment or redistribution, integrated with the customs system to detect illegal imports; no cost, vendor, coverage figure or baseline stock-out rate is published, and it is held from a wire report with no first-party regulator document on file. Health-system digitalisation was announced at the handover of 24 telemedicine units: a unique patient identification code granting access to medical history, digital medical records centralised across facilities, and electronic prescriptions, with no build timetable, cost, vendor or coverage figure. A unique patient identifier is a second identity number alongside the one issued at birth, and nothing on file states how the two relate. 2026-09-04 - procurement opened behind the announced digitalisation: expressions of interest close on 18 September 2026 for a consultancy to train and support use of the health information system, its portal and the open-source district health platform, under a US$29m concessional health-security project. It is a training and support contract rather than a build, which is what the announced system will need if it is to be used.	MOVEMENT
Sectoral management information systems	**Education**	SIGE was made compulsory for the 2025/26 school year and a US$1m grant funds its expansion. The Global Partnership for Education approved a US$1m grant, 95,625,000 escudos, on 8 April 2026 for the PRISE 2026-2028 programme, whose named technical areas include the expansion and modernisation of the Sistema Integrado de Gestao Escolar. Despacho 120/GME/2025 made the system compulsory in the instruments regulating the 2025/26 school year. The education ministry's own account dates the pilot to two secondary schools in 2009, dissemination to 2014, completion across every secondary school in the country to July 2018, and completion across all 395 basic education schools to February 2019. No enrolment or record count is held for the system as it now runs.	MOVEMENT
Sectoral management information systems	**Social protection**	There is no single integrated platform; delivery runs on institutional systems, and the social security institute presented its mobile application in April 2026 after it took two national digital awards. The clearest dated evidence of the administering systems is the public presentation in July 2020 of the unemployment benefit award platform, which supports management of the benefit from application through to award by the social security institute and management of active employment measures by the employment institute, joining the two institutions' processes; the demonstration ran from registration through to confirmation of award and payment. It covers the contributory regime only, and the beneficiary system for the social inclusion income was still described as forthcoming in November 2025. 2026-04-23 - the institute presented its mobile application at the sixth national internet governance forum, following its recognition at the national digital awards with the public innovation and best mobile application prizes. The household register that identifies who is eligible sits separately and is operating as the single social registry, extended to state housing allocation and to households in climate-vulnerable zones, and querying held data directly instead of taking paper declarations. The registry holds data on over 91,164 households; no claim-processing time or digital-channel share is published for either.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Justice**	The criminal-process component of the justice information system operates in every comarca, with 46,000 case files handled digitally in the 2025/2026 judicial year. The system was in use by lawyers to reach and track cases without travelling to the comarcas, with design work running with the superior judicial councils since 2021. 2026-03-17 - the criminal-process system was completed and in operation in every comarca in the country, with maintenance passed from the state operator to the justice-modernisation institute and the civil-process component to begin implementation in April 2026. 2026-09-17 — a second evaluation, covering the 2025/2026 judicial year after about eighteen months of operation, records 46,000 criminal case files handled digitally across all 17 comarcas and an estimated 2.3 million sheets of paper saved, with 95.5 per cent of respondents using the system daily or several times a week, 401 justice professionals holding qualified digital signatures and 110 judges, prosecutors and court officers trained in artificial intelligence. The civil-process component is to extend through three pilots awaiting authorisation. No cost, contract or vendor figure is stated.	MOVEMENT
Sectoral management information systems	**Tax**	The 2026 budget put a 130 per cent deduction behind electronic invoicing and the standard audit file, and a US$15 million credit was approved in November 2025 whose first prior action creates an autonomous revenue authority. 2025-12-31 - the budget law allows companies to deduct 130 per cent of spending on accounting and invoicing equipment and software in the course of adopting electronic invoicing and installing the standard audit file for tax purposes, extends the uplift to software migration, training, system parameterisation and the digital certificate, and directs the government to create a business programme easing adoption by small taxpayers. Adoption is incentivised, not mandated, and no adoption count is published. 2025-11-12 - a US$15 million development policy credit, third in a programmatic series, carries a prior action strengthening value-added tax revenue performance through the tax code and a second promoting digitalisation and climate resilience of public services. The institution is being rebuilt around it: a resolution approved in council on 29 July 2026 appoints the members of the tax and customs authority's first governing board with effect from 1 August. No collection figure, filing rate or digital-channel share is published against any of it.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Customs**	The customs system has run nationally since 14 September 2015 and migrated to version 4.4.0 under a project closing in July 2026. The constitutive statement is the government's own: the system entered operation across the whole national territory on 14 September 2015, a web-based system that removes paper from customs procedures, taking the paper out of the detailed declaration, national transit and collection guides, with invoices and transport documents scanned and attached to the file, online tracking of dossiers by operators, and planned integration with the port single window, the external trade title, the road-transport authority, the statistics institute and the Treasury. 2026-07-09 - a technical review recorded migration to version 4.4.0, modernisation of the technological infrastructure, strengthened customs value controls, new customs modules, integration services and strengthened national team capability, under a project funded by the digital project and running November 2023 to July 2026, with the single window for foreign trade, institutional interoperability and risk management named as next-phase priorities. 2026-02-03 - the legal frame went out to tender behind the system: an expression-of-interest notice for a consultant to revise and update the customs code and its implementing regulation, explicitly to align it with the requirements of the digital economy and of electronic customs management systems, over six months. No declaration volume or clearance time is published.	MOVEMENT
Sectoral management information systems	**Land**		NO EVIDENCE
Other GovTech and e-Gov	**e-government services**	A single services portal went live on 24 February 2026, against an unmeasured target of 60% of vital services online by 2026. 2026-02-24 - a single web and app gateway went live covering finance, civil registration, identity, tax, higher education, transport and social services, with departmental portals to migrate into it; no count of migrated services is published, and the Prime Minister's own account is that departmental platforms did not communicate with each other before that date. It follows the justice portal launched in December 2024 behind the identity platform, serving land, commercial, vehicle and criminal-record certificates, civil-status certificates, identity-card renewal and appointment booking. The target of at least 60% of vital public services online by 2026 and 80% by 2030 was restated at a World Bank mission and remains unmeasured. The procurement platform was re-let at CVE 70,000,000 over four years on perpetual licensing, unlimited users, national deployment and full source-code control, its requirements redefined to extend it to local administration, and its use is compulsory for state purchasing in 2026.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	A municipal council will open a services platform with 17 services by end-2026, funded by a UN joint office. 2026-08-25 - a council presented a services platform for public presentation in October 2026 and operation by the end of that year, opening with 17 services on which residents can submit applications, track cases in real time, make payments and receive official documents in digital form with legal validity. It is funded by a UN joint office, whose resident coordinator called 17 services a good starting point and asked the council to consider integrating further procedures in a second phase, while a minister argued for keeping and improving traditional counter services for those still facing difficulties with digital access, and for replicating the model in other municipalities if it succeeds. It is the only local-government digital instrument the repository holds.	MOVEMENT
Digitalisation of sub-national government	**Digitalisation of local government records**	A municipal information system has run nationally since 2012 with uneven functionality, and its successor was presented to municipalities on 11 November 2025. The state technology operator's own strategic plan records the history: the municipal information system was deployed in three municipalities in 2001-2003, extended to a fourth in 2007, and its second version implemented nationally between 2008 and 2012 and functioning in all municipalities with uneven functionality, with an integrated paperless successor platform set out as the next step. 2025-11-11 - the successor was presented at a workshop to municipal supervisors and directors, the responsible minister describing it as an update of the existing system, with municipal staff training programmed alongside it, and accountability, transparency, efficiency and citizen participation as its stated purposes. No deployment date, municipality list or budget is published. Municipalities are also building outward-facing services of their own: one council presented a services platform it plans to put into public presentation in October 2026 and into operation by the end of that year, opening with 17 services.	MOVEMENT
Rural digital data capture	**Digitalisation of rural health clinics**	Digital capture is uneven by design of cost: the single patient record runs only in the capital's structures, the registration module on one island, and aggregated reporting everywhere. Twenty-four telemedicine units were handed over in December 2025. The health ministry's own terms of reference state the position: the financial component of the health information system is used in all service structures, the registration module is in use on one island only, the aggregated-data platform is in production across all structures, and the single patient medical record application is used only in the health structures of the capital because of licence cost and network limitations. The network it has to reach is three regional hospitals, thirty-two health centres across ten islands and 22 municipalities, and two health stations. 2025-12-18 - the ministry received 24 telemedicine units, 24 videoconference systems and two digital microscopes worth CVE 240,000,000, funded by Japan, stating that installation is under way, that all 22 municipalities will have at least one health facility fully equipped with telemedicine, and that the programme is to be integrated into the health information system. 2025-12-30 - the health charter was adopted as a binding planning instrument, naming interoperable information systems, telemedicine and artificial intelligence in imaging, and providing for raising base health units to health posts and those to health centres — the territorial reach the question turns on.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural primary schools**	A digital learning project reached fourteen schools across five islands by the close of the 2025/26 school year. 2026-07-14 - supervisors and school-group directors met to review the project, and the United Nations agency's education lead stated that the schools met their targets for children reached, that the gains are pedagogical differentiation tools and greater stimulus in learning, and that digital resources strengthened inclusion of children with special educational needs. Priorities set for the following year are resource management and a stronger supervisory role in the practical organisation of lessons. The project has run since 2022 as a partnership of the education ministry with the agency and a foundation, reaching five islands. Fourteen schools is the only quantity published: no enrolment figure, school list, per-island split or equipment count is held, so the reach cannot be set against the size of the rural primary network.	MOVEMENT
Rural digital data capture	**Digitalisation of rural registry offices**	Registration acts have been electronic since 2007, with a certidao obtainable at any conservatoria or through the one-stop shop; the first remote-service figures, 905 acts, were published in December 2025. The enabling act regulates the practice of registration acts, their archiving and the issue of the corresponding means of proof in electronic form, and the transmission of documents electronically, allowing a certidao to be requested at any conservatoria or through the one-stop shop rather than only where the entry is held; the same supplement carries the decree on electronic certidoes and access to public administration databases. That is the mechanism by which registry services reach outside the two largest towns. 2025-12-16 - the justice ministry published the first usage figures: 905 acts performed without any physical attendance at a conservatoria, broken down as 290 birth certificates, 150 identity card renewals, 148 property certificates, 95 commercial certificates, 71 marriage, 59 vehicle registrations, 58 criminal record certificates, 22 death and 12 acknowledgements of paternity. The figure is cumulative from the portal's launch in late 2024 and is not split by island or municipality, so remote use can be counted and not located.	MOVEMENT
Rural digital data capture	**Digitalisation of rural police stations**	The electronic criminal process is obligatory in the National Police and installation was completed on the last and most remote island on 28 November 2025, integrating all 17 comarcas. The enacting act declares the phased entry into operation of the justice information system and its criminal process subsystem and makes use of the electronic criminal process obligatory in the National Police. Its operative text is not held. 2025-11-28 - installation of the system was completed on Brava, the smallest and most remote inhabited island, integrating all 17 comarcas of the country and giving each access — full geographic coverage four months before the criminal-process component's formal custody handover from the state technology operator to the justice ministry. 2026-09-16 - the justice institute's second evaluation counts 46,000 criminal case files handled digitally through the system's integration with National Police and Judicial Police stations. Surveillance is expanding by agreement rather than by statute: a memorandum for a third phase of the city surveillance project was signed on 13 April 2026, wholly financed by China, and its implementation agreement, about EUR 9.3m covering command centres and base stations at Assomada, Tarrafal de Santiago and Porto Novo, in August.	MOVEMENT

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	The justice sector is where it is happening: 226 professionals enrolled in a first national training from 22 September 2025 and an integrated assistant was demonstrated a month later. 2025-09-22 - the justice modernisation institute and the justice policy directorate started the first national training on artificial intelligence for justice professionals, 226 enrolled over thirty hours covering fundamentals, intelligent management of judicial proceedings, ethics and data protection, and practical applications in law, with United Nations sponsorship. 2025-10-23 - the institute's president presented the justice portal and demonstrated an integrated artificial intelligence initiative, a platform centralising judicial services and information incorporating a chat built to help citizens reach information and digital services. The ministry describes a demonstration rather than a confirmed production deployment, and nothing since states that it went live; the institute reported in September 2026 that 110 judges, prosecutors and court officers had been trained in artificial intelligence. The frame around it is still absent. The digital economy strategy carries implementation of an artificial intelligence strategy as a measure yet to be taken, the national strategy is in drafting, and the one procurement of scale, a US$9 million contract for artificial-intelligence-assisted scanning equipment at the national ports, is stated to be under way with no award record.	MOVEMENT
AI	**Use of AI in sectoral management information systems**	A US$9m contract for artificial-intelligence-assisted port scanning is stated to be under way. 2026-01-09 - the Finance Minister stated at the Praia customs house that a US$9m contract for artificial-intelligence-assisted scanning equipment at the national ports is under way, inside a stated programme for a fully digitised national revenue directorate built on artificial intelligence and data management. Its signature date and counterparty are not established, and the figure is stated in dollars by the announcing minister with no escudo equivalent and no conversion date. It is the only artificial-intelligence deployment of any kind the repository records for this country, and it is a procurement statement rather than a system in service.	MOVEMENT
AI	**Development of national / regional AI systems**	The Health Minister proposed the country as a lusophone laboratory for artificial intelligence in health at a global conference. 2026-07-16 - the minister proposed the country as a lusophone laboratory for artificial intelligence in health, hosting pilot projects integrating it with telemedicine, and called for cooperation on skills, digital infrastructure, interoperability and an ethical and regulatory framework. No pilot, partner, budget or instrument is held. It is a ministerial proposal at an international conference rather than a domestic programme, and it was made while the national artificial-intelligence strategy that would frame it was still at kick-off stage with no draft text.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Control of AI abuse**	The regulator subscribed on 27 February 2026 to a joint declaration of 61 authorities on AI-generated images, while stating that the country needs legislation to regulate artificial intelligence. The binding rule is a data-protection one: the 2021 amendment defines profiling, prohibits discriminatory profiles, limits decisions taken solely by automated processing where they produce legal effects or significantly affect the data subject, requires transparency about the decision logic, and requires impact assessments for high-risk technologies. No artificial-intelligence statute exists. 2025-10 - at an African governance workshop the commission's member set out the data protection provisions that bear on artificial intelligence and stated the regulator's position that the country needs legislation to regulate it. 2026-02-27 - the commission published that it had subscribed to the joint declaration on AI-generated images issued four days earlier by 61 data protection authorities, which sets requirements on developers and users of generative systems covering security measures against non-consensual intimate imagery, transparency about system capabilities and permitted uses, accessible takedown mechanisms for harmful content involving personal data, and reinforced safeguards where children are depicted. It is regulator guidance and not national legislation, and no enforcement action under it is held.	MOVEMENT
ICT Industry	**National capacity in DT-related production**	Both technology park campuses are in operation with 23 companies and 311 professionals, and phase two went to tender. The campuses were inaugurated in May 2025, with a data centre and a disaster-recovery site across Praia and Mindelo, on a EUR 51.85m project of which EUR 45.5m is bank financing, with 23 companies from seven countries, 311 professionals, full occupancy of 52 office spaces against capacity for up to 1,500, and training programmes up from 6 in 2023 to 50 in the first quarter of 2025 with 2,769 people upskilled. No later figure is held. The park is a special economic zone carrying VAT exemption, reduced import duties and a corporate tax rate of 2.5%, with no uptake figure or list of admitted firms held; a Portuguese information-security firm present since 2007 is the first international company in both campuses. Phase two went to open international bidding on 29 July 2026 with the contract value unpublished. The incumbent operator is state-controlled: the state bought back PT Ventures' 40% of Cabo Verde Telecom in May 2019, leaving the social security institute with 57.9%.	MOVEMENT
Innovation ecosystem	**Technology hubs**	The state innovation body launched a diaspora initiative in March 2026 alongside its standing scholarship and startup programmes. The body is stated to support 200 young people a year on scholarships, fund about 100 startups with six minimum salaries for two co-founders, and finance attendance at international events, and is the implementing body named for the diaspora initiative, the public-sector hackathon and the digital-skills rollout. All programme figures are government-reported and unchanged in stated design; the awards it runs are its most visible output. 2026-03 - it launched an initiative to connect diaspora entrepreneurs, talent and investment to domestic opportunities, the launch event convened to shape the platform, its structure and operating model presented rather than opened. No budget, legal basis, target or timetable is held. 2026-09 - a company hub for technology firms was announced at a Brazil-Cabo Verde-Portugal business forum in Praia on 4 September and created with a tax number by 17 September, to draw firms in education, technology, IoT hardware and smart cities to the technology park; no investment figure, site or capacity is stated.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Innovation ecosystem	**Tech startup ecosystem**	A 2026 hackathon edition ran for public-sector challenges, while the foundation allocated for in FY2024 is uncreated. The hackathon is a running programme in which startups solve challenges set by public and private institutions; its two-day 2026 edition ran for public-sector challenges with national and diaspora participants, supported by the World Bank Group, the digital economy ministry, the telecommunications directorate, the state innovation body and the national university, with four teams recognised. The exact dates are not published. The science, innovation and technology foundation provided for by an allocation in the FY2024 budget has not been created, with no evidence of it at 2026-08-06. A university and economy ministry partnership on innovation, entrepreneurship and employment is projected rather than signed, with no scope, funding or programme published.	MIXED a public-sector hackathon ran a fresh edition while the science and innovation foundation provided for in the FY2024 budget has not been created

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	The standing policy sits in the digital governance strategy's annex as a capacity-building programme for the public administration; two dated sessions in the window reached 226 justice professionals and 126 revenue staff. The strategy's annex carries the intervention area for digital literacy of human resources, with a capacity-building programme in digital technologies for the public administration and an e-learning content development team. No national figure for civil servants trained in digital skills has been published under it at any date. 2025-09-22 - the first national training on artificial intelligence for justice professionals began with 226 enrolled over thirty hours. 2026-02-12 - the national revenue directorate ran a session on personal data processing with the data-protection commission, delivered by the commission's president and attended by 126 staff, covering data protection principles, data subject rights and the obligations of processing entities, as part of a February and March cycle also covering biometrics, use of electronic means in the workplace and information protection practice. Two sessions in one institution each are what the repository can see. Against a civil service of unstated size they establish that training happens and not how much of it.	MOVEMENT
Literacy	**Digital literacy (general population)**	The national digital-skills strategy is still not adopted a year after its draft workshop. 2026-10-09 — the economy and digital transition minister said his ministry will implement a national digital literacy programme, which already has a World Bank-financed manual and is to advance through protocols with the public university. No start date, budget or target is stated. The strategy was under preparation inside the World Bank-financed project, informed by a digital-readiness study covering more than a thousand people across several islands, and not adopted when a workshop on the draft was held in Praia. It is still not adopted: no adoption instrument, publication or target date is held a year later. The readiness study behind it is the only measurement of digital skills across the population the repository holds, and its results are not published either. The Secretary of State's claim that stronger digital skills could double national output is an official statement, not a modelled estimate.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**DT-related training in secondary education**	Information technology is a compulsory ninth-year subject of 70 hours a year whose official teacher guide was published on 30 April 2026, with programming an option in the tenth and eleventh years. The curriculum is in place on paper. The tenth and eleventh-year introduction to programming runs three hours a week across 38 weeks in the science and technology specific-formation option, written by the national education directorate with the university; the copy served is marked experimental, so it establishes the subject's formal existence and not universal delivery in every school. 2026-04-30 - the education ministry published the official teacher guide for the compulsory ninth-year information and communication technologies subject, 70 hours a year, covering digital literacy, security and digital citizenship, internet research, communication and collaboration, and multimedia production and creation. It is the most direct evidence in the window that the curriculum is being implemented rather than only published. 2026-04-23 - outreach sits alongside it: the state technology operator ran a girls in ICT day for 14 girls aged 14 to 18, with a tour of its innovation lab, practical workshops in its departments and a women in innovation session — orientation rather than a certified course. No enrolment, pass rate or teacher-qualification figure is published for either subject.	MOVEMENT
Training and skills	**DT-related university facilities and qualifications**	The regulator's register of accredited study cycles, updated 24 February 2026, gained a computing degree at a second university in April; a master's in computing engineering opened its second edition with 18 students. The register is the authoritative answer to which computing qualifications exist and are currently accredited: a consolidated list across eleven higher education institutions, last updated 24 February 2026, marking discontinued provision separately so a historical catalogue cannot produce a false positive. 2026-03-24 - the second edition of the national university's master's in computing engineering opened at its capital campus with eighteen students, run in partnership with a Portuguese university, most modules now taught by Cabo Verdean staff rather than the partner, reversing the first edition's model. The inaugural lecture presented a research project using neural networks to identify a maize pest from images farmers capture themselves. 2026-04-17 - the gazette carried the regulator's decision accrediting and registering a bachelor's in computing engineering at a second university's capital campus. No graduate count, enrolment total or staffing figure across the accredited cycles is published, so capacity can be listed and not sized.	MOVEMENT
Training and skills	**Graduates entering DT ecosystem**	A digital-skills programme opened 1,050 first-phase places against a 3,000-opportunity target, with no enrolment figure held. 2026-01 - the programme was formally launched with 1,050 places in a first phase against a stated 3,000-opportunity target, applications closing 25 February 2026, funded by the World Bank through the flagship project at a reported EUR 400,000, open to residents and the diaspora against youth unemployment reported at 27.8%. No enrolment, completion or placement figure is held, including after the first cohort sessions. A separate programme launched in July 2025 to back 150 young digital entrepreneurs carries no participant, completion, funding or outcome figure after launch, and the state operator's academy is reported at about 3,000 applications and more than 600 internships since 2016, both cumulative with no annual breakdown.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Research institutions	**Think tanks and academic departments contributing to DT policy**	Two centres were constituted inside six weeks: a university research centre in business and governance on 31 October 2025 and an independent fact-checking centre on 10 December. 2025-10-31 - the university's business and governance school launched a research centre in business and governance, its tenth active centre, with 25 members and 81 publications and research lines including governance, public policy and development. Its director states the centre exists to produce endogenous knowledge supporting government decision-making, and one of its named projects is an observatory turning official statistics and central bank data into indicators such as cost of living and municipal development indices as input to public policy. 2025-12-10 - the university, the media regulator and the journalists' union signed the institutional protocol creating and regulating an independent non-profit fact-checking centre on a hybrid model of regulation, academic research and journalistic practice: the university hosts the scientific and academic nucleus responsible for studies, reports and knowledge production on information integrity, the regulator holds editorial and operational coordination, and a United Nations joint office supports implementation of a monitoring platform. The rector frames generative artificial intelligence and circulating false videos and audio attributed to public figures as the threat the centre answers. Neither is funded from a national research line: no national research funding line for digital or artificial-intelligence research is held.	MOVEMENT

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	The earmark rose to CVE 74,050,000 for FY2026 across two sub-lines only, the citizen-space and one-stop-shop lines having disappeared. The one-stop shop operated on an earmarked own-service-fee receipt of CVE 74,817,675 at the FY2024 proposed stage and was CVE 59,437,242 for FY2025 across four sub-lines including a citizen-space community line and a one-stop-shop implementation line. For FY2026 it is CVE 74,050,000 across two sub-lines only, service quality and new technological infrastructure: the total rose while the two lines naming physical and one-stop-shop access disappeared. It is still named as a component of the state-modernisation programme, and no service-volume figure is held from any date.	MIXED the one-stop-shop earmark rose for FY2026 while the two sub-lines naming physical and one-stop-shop access were dropped
Access to services	**Citizen participation in policy**		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Gender equity**	The country's own figures are that women are 37 per cent of ICT workers, 20 per cent of engineering and technology researchers and 8 per cent of tertiary STEM graduates. No later measurement is held. The appraisal document is the only measurement the repository carries: women are 37 per cent of information and communications technology workers, 20 per cent of engineering and technology researchers and 8 per cent of tertiary science and technology graduates, and the project set sex-disaggregated indicators for mobile broadband users, youth certified in digital skills and women-led digital firms, with a target of at least 50 per cent female completion of the state operator's web labs against 36 per cent actual in 2019. It is six years old and nothing has updated it. 2026-01-15 - memoranda were signed bringing a bank for young people and women into operation alongside two other financing instruments, inside a package of almost EUR 12 million. 2026-03 - the digital week's training container was installed and inaugurated at a secondary school on Brava with about fifteen high-performance computers and two permanent monitors, mounted by a Cabo Verdean startup and aimed by the digital economy minister's own statement at training programmes for the island's young people and women. Both are measures without a measured gap behind them: no participation, completion or employment figure disaggregated by sex has been published since 2020.	MOVEMENT
Access to services	**Inclusion of persons with disabilities**	A disability inclusion strategy for 2024-2030 was approved on 11 November 2024, its accessibility axis costed at 6 per cent of the plan's budget. The resolution approves the strategy as the operative national instrument, over a population the 2021 census records as 47,021 people with a disability, 10.9 per cent of the total. Its fifth axis covers physical, communication and technological accessibility and sets out digital public-service accessibility, auditing of websites and applications and assistive-technology measures, costed at 206,500 thousand escudos, 6 per cent of the plan's budget. Two years on, no audit, no compliance figure and no implementation report against that axis is held, so the strategy is what the repository has and delivery under it is not testable.	NO CHANGE a standing position the repository holds for the first time
Access to services	**Inclusion of refugees and IDPs**	A fee schedule in force from 1 February 2026 exempts refugees and stateless persons and issues their travel documents free, and provides for electronic proof of payment where the service is requested online. 2025-11-27 - the instrument replaces the 1999 and 2012 fee schedules and sets the whole regime of fees and surcharges charged by the foreigners and borders directorate for visas, residence authorisations and the residence title for foreign nationals, in force from 1 February 2026. Three provisions bear on digital access: where the act or service is requested electronically the proof of payment is to be furnished by the same channel; the individual tourism visa requested on the online traveller pre-registration platform is priced at CVE 2,500; and refugees and stateless persons and their families, victims of human trafficking and of gender-based violence are exempt from fees, with travel documents for refugees and stateless persons issued free, while nationals of the lusophone community are exempt from residence-permit fees other than document production costs. Cabo Verde is a country of residence for migrants rather than of internal displacement, and the indicator is read here as access to documentation and digital public services by resident foreign nationals. No count of refugees or stateless persons documented, and no take-up figure for the online channel, is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital divides	**Bridging of digital divides**	The universal service fund is appropriated at CVE 122,073,633 for FY2026, identical to the escudo across three budgets. The fund is financed from operator contributions and the radio-spectrum fee, carried in the earmarked-revenue table and in no organic, functional or economic classification, and is appropriated at CVE 122,073,633 for FY2026, identical to the escudo across FY2024, FY2025 and FY2026 - a fee-financed ceiling rolled forward rather than re-estimated. The repository holds the appropriation only: no expenditure, project, governing instrument or annual report for the fund from any date. So the one instrument the country has for connecting what the market will not connect cannot be shown to have spent anything. 2026-10 - a two-month pilot is to take about 250 traders, mostly women, on four islands through training and mentoring in digital business tools, starting on Maio; no budget or outcome measure is published.	NO CHANGE

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The fourth national statistics strategy runs 2022-2026, and the budget support group called in November 2025 for a dedicated fund to give it predictable financing. The strategy is authored by the statistics institute on four strategic objectives — widening and coordinating the national statistical system, strengthening human, material, technological and financial capacity, improving coverage and quality of statistical production, and strengthening communication, dissemination and use of official statistics — with an evaluation of its predecessor, a diagnosis, a logical framework, an action plan and a budget and financing plan. 2025-11-28 - the budget support group's mission communique records progress on implementation, presses the importance of timely reliable statistics for policy, calls for creation of a dedicated fund for statistical production to give the strategy predictable and sustainable financing, notes the announced implementation of new methodologies for the household income and expenditure survey, and asks that gender indicators be consolidated in the national statistical system. 2026-07-07 - a consultancy to evaluate and modernise the fisheries statistical system went to expressions of interest under a World Bank credit. The strategy's term ends in 2026 and no successor is held, while the institute itself is under an independent evaluation ordered by the head of government into alleged interference and manipulation of data.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**Censuses and surveys**	The household income and expenditure survey fielded in December 2022 is still unpublished more than three years on. Fieldwork began in December 2022 and definitive results were unpublished at the window's opening. They are still unpublished at 25 July 2026, so the World Bank microsimulated its July 2026 poverty estimate from the 2015 survey; the statistics institute states an under-reporting of food expenditure was identified and corrected, and that a new fully digital survey was planned for July 2026. No source records the replacement survey starting. A poverty figure microsimulated from a survey eleven years old is the practical consequence, and the institute has separately rejected accusations bearing on its technical independence. The two headline series are not comparable: the institute's extreme-poverty rate of 2.28% for 2023 sits against World Bank estimates of 53.8% for 2024 and a projected 49.2% for 2026, the difference being which threshold was applied rather than any change in living conditions.	STALLED
National statistics	**Statistics from administrative data**	An independent evaluation of the statistics institute was ordered over alleged data manipulation, and no audited state account exists after 2023. The integrity dispute stood as anonymous technicians' allegations of August 2025 against the institute's rejection of September 2025. 2026-08-03 - the Prime Minister ordered an evaluation to establish alleged interference and manipulation of data, which the institute's board said it would host, offering all technical documentation; nothing is established about its terms of reference, who conducts it, when it reports, or whether findings will be published. Separately, the audit court's published opinion series ends at the FY2023 account, so the 2024 general account published in September 2025 remains unaudited and the finest published record of digital spending is the executive's own quarterly provisional account.	REGRESSED
Open data	**Use of open data**	A transparency portal completed public consultation in July 2025, and a statistics access protocol was signed with a university. The transparency portal was built and out to public consultation from 27 June to 17 July 2025, discharging the statutory duty to create a publicly accessible electronic platform, its declared scope covering central government, local government and state enterprises in one portal with downloads in six formats and data exchange by interface. It was launched on 21 January 2026. It was designed and implemented by the finance ministry's own directorates with donor technical support, naming no vendor. 2026-03 - a cooperation protocol was formalised providing mechanisms for scientific access to statistical data including metadata and anonymised microdata subject to data-protection rules and statistical secrecy, covering research projects, theses, publications and exchange of expertise; no access portal, request procedure or first dataset is named. 2026-09-10 — the fisheries ministry presented a public Fisheries Information System publishing licences, catches, revenues and subsidies, under a transparency standard joined in 2023; no launch date or licence is given.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	**Agricultural use of satellite data**	A geospatial laboratory opened with the agrarian research institute and was inaugurated on 15 March 2022, building a water and food security monitoring system on near-real-time satellite observations. The facility is the position: a geospatial lab opened with the national agrarian research and development institute on Santiago and inaugurated on 15 March 2022 by the head of government and the agriculture minister, under a cooperation that builds national capacity to map the rural space from medium to high-resolution satellite data and that is building the institute a water and food security monitoring system on near-real-time satellite observations. No equivalent record was located on a Cabo Verdean government or institute site, so the only account of a national facility is the partner institution's. Nothing published since states what the monitoring system produces, who uses it, or whether it is in operation four years on.	NO CHANGE a standing position the repository holds for the first time
Use of satellite data	**Meteorological use of satellite data**	The meteorology institute's organic structure vests in it the national meteorological watch, forecasting and warnings, and the country launched the early warnings for all roll-out on 16 December 2025. The enacting act for the institution that does the work vests in the meteorology and geophysics institute the national meteorological and climate watch, forecasting and the issue of meteorological warnings and alerts, aeronautical meteorology for the oceanic flight information region, marine and agrometeorological information, and coordination of the national observation networks and of data collection, processing and meteorological models. The captured text stops immediately before the clause naming meteorological satellites as an input, so the satellite wording itself is not held. 2025-12-16 - the country formally launched the national roll-out of the United Nations early warnings for all initiative, whose four pillars include the detection and forecasting pillar the institute carries, setting a coordination framework and unified national roadmap over an observations financing facility already being implemented and a climate fund proposal in preparation for a multi-hazard early warning system. It is an institutional and financing step around the observation capability rather than a new receiving station or satellite product, and the source does not claim otherwise.	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	The third compact, whose initial agreement was signed in April 2024, was terminated in December 2025, and the country is eligible again for FY2027. The country was selected for a third compact, stated as directed at connectivity in transport, services and digital links with the African continent. 2026-09-12 - the national press reported that the initial compact agreement signed in April 2024 was officially terminated in December 2025 after the corporation's global aid was cut, the government keeping the technical studies made since 2024; the country is on the FY2027 eligible list published on 31 August 2026, and the ministry responsible gave no answer on whether it will apply. No compact document, size or programme detail was ever held. It was the only United States government instrument the repository names for this country, and none now stands.	REGRESSED the third compact was terminated in December 2025

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
China activities	**Chinese MoUs, engagements and commitments**	A third phase of the surveillance programme was financed by China at about EUR 9.3m, its implementation agreement signed in August 2026. 2026-08 - phase three was financed at about EUR 9.3m in non-reimbursable assistance, the implementation agreement signed by the interior minister and the Chinese ambassador at the National Police Command Centre in Praia, covering command centres, data centres and wireless base stations at three towns, reinforcement of existing capacity in Praia and Mindelo and a wider video-surveillance network, recorded on the financier's side. No camera count, retention rule, data-protection authorisation or oversight arrangement is published for any phase. Phase two was an RMB 92.5 million grant committed in 2019 extending the network to three islands plus a further 100 poles in Praia and installing a 4G police network, with no statement of operating status since. 2026-07-29 - a vendor delegation was received by the Prime Minister and Finance Minister, the existing partnership reviewed and a new representative introduced, with no agreement, project, sum or timetable named.	MOVEMENT
EU activities	**EU MoUs, engagements and commitments**	A EUR 300 million gateway package stated in the FY2025 budget speech has no signed instrument, allocation or disbursement. The 14th special partnership ministerial in Brussels on 9 October 2026 reported a Global Gateway digital pipeline in preparation, covering submarine cables and inter-island connectivity, and progress in European support for the national data and AI strategies. A digital-transformation pillar and a cybersecurity strand were stated as intentions in the FY2024 budget speech, and a EUR 300 million gateway package in the FY2025 speech. Neither has a signed instrument, allocation or disbursement held, and these are intentions stated in budget speeches rather than appropriations. What did happen is smaller and specific: European Union representatives took part in the data and artificial-intelligence strategy kick-off reported in May 2026, and the telecom guarantee resolution of 20 April 2026 invokes the gateway framing.	MOVEMENT a pipeline in preparation with no instrument signed
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	A declared wish and no instrument: at Web Summit Qatar on 3 February 2026 the Secretary of State for the Digital Economy stated the country's wish to strengthen cooperation with Qatar at governmental and private-sector level. 2026-02-03 - at a press conference during the summit the Secretary of State stated the wish to build partnerships at both governmental and private-sector level, described the summit as a bridge for Doha to reach Africa, and set out what the country has built: a governance and innovation lab as a government technology lab, internet penetration of about 98 subscriptions per 100 people, and a technology park with investment above US$70 million. It is a declared engagement, not a signed memorandum, a financing commitment or an implementation step, and it is the only Gulf engagement of any kind the repository holds for Cabo Verde. No memorandum, allocation or project with Qatar, the United Arab Emirates, Saudi Arabia or any other Gulf state is on file.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
India activities	**India MoUs, engagements and commitments**	India's one engagement of record is the Pan-African e-Network, inaugurated in Praia on 29 July 2010. The Pan-African e-Network was inaugurated in Praia on 29 July 2010, implemented by the Indian company TCIL with NOSi and financed by the Government of India, connecting Cabo Verdean institutions over fibre and satellite to a TCIL data centre and studio in New Delhi, to twelve Indian hospitals and seven Indian universities, and to five regional African universities and five hospitals, for tele-education, telemedicine, videoconferencing, internet access and e-government. The repository carries nothing on the network after that date — no operating report, no closure notice, and no later Indian line of credit, technical-cooperation record or forum commitment naming Cabo Verde.	NO CHANGE nothing on the record after 2010
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
National technical capacity and public-sector technical capability	The repository holds zero sources tagged infra.capacity for Cabo Verde; a national compute, HPC or public-sector technical-capability statement from the telecommunications directorate or NOSi would open the subject	not yet probed
The regulator's own budget, staffing and activity	An ARME budget or activity report for any year; the 2026-08-04 acquisition pass recorded the regulator's website timing out on TCP 443 and holds none	not yet probed
5G spectrum assignment or licence award	An ARME spectrum-assignment decision or a national radio frequency plan; the strategy is approved but no band, auction, price or licensee is on file	not yet probed
National fibre network length	An ARME or incumbent network statement; the only figure in the repository is a Secretary of State's trade-press interview	not yet probed
Universal service fund expenditure, projects and beneficiaries	A fund account or activity report, or a Conta Geral do Estado that breaks out the earmarked-revenue counterpart; only the unchanged appropriation figure is held	not yet probed
Installed data-centre capacity	A technical specification from NOSi or TechPark CV giving rack count, floor area or delivered electrical load in MW for the Praia and Mindelo facilities	not yet probed
Government cloud, hosting or data-localisation rule	The interoperability-standards diploma and the public-administration data-governance diploma named as 2024 deliverables; the repository holds no evidence either was adopted	not yet probed
Electricity supply and cost to Cabo Verde's data centres	NOSi's accounts for 2025, which would carry the photovoltaic project's implementation and the data centre's energy cost structure	not yet probed
Any national policy linking digital infrastructure to energy	A named instrument; the section's only energy-tagged source carries an undated ministerial statement that electricity capacity will be stabilised, with no figures and no programme	not yet probed
National Cybersecurity Strategy	The strategy document itself; the repository holds only a secondary report that the Secretary of State cited an update of it in a May 2025 interview	not yet probed
CSIRT incident statistics	A CSIRT or SOC annual report giving incidents handled, sectors affected and response times since the 2025-10-30 launch	not yet probed
Cybercrime caseload and prosecutions	A judicial police annual report; the repository holds three dated warnings from the cybercrime brigade and no case, charge or conviction count	not yet probed
Final forensic audit of the 2026-05-17 election-night incident	The completed external audit report NOSi commissioned; only preliminary findings dated 2026-05-26 are held	not yet probed
State use of Earth observation or satellite data	A Cabo Verdean instrument or agreement naming an EO data source or programme; the repository holds zero sources on this subject for Cabo Verde at any date	not yet probed
Rural and inter-island last-mile digital service delivery	A programme document or budget sub-line naming rural or outer-island service points, or a deployment schedule with locations; the repository holds zero sources on this subject for Cabo Verde	not yet probed

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Count or percentage of public services actually online	The Digital Cabo Verde results framework or an implementation status report with the services-online indicator reported against the 60%-by-2026 target, or a portal service inventory	not yet probed
Award date and jury report for the e-procurement platform contract	The jury report or adjudication notice for the electronic public procurement tender, or the contract's publication in the Boletim Oficial	not yet probed
Identity-card enrolment count and mobile-credential activation count	A justice-modernisation institute or civil-identification activity report, or a registry issuance series; the reference pages carry no volume figure of any kind	not yet probed
Data-protection commission activity report and any enforcement measure	A genuine annual activity report for any year after 2016; no complaint count, inspection count, breach notification count, sanction or fine can be stated for Cabo Verde from any date	not yet probed
Cybercrime statute and national cybersecurity framework instrument	The Boletim Oficial texts; the repository carries an operational SOC and CSIRT and repeated police cybercrime warnings, but no statute and no prosecution or conviction figure	not yet probed
Artificial-intelligence statute	A bill or diploma in the Boletim Oficial; a named analyst argued for one in April 2025 and the data-protection commission president argued that AI cannot be regulated by operators alone, and the repository holds no bill	not yet probed
Membership status in the African Telecommunications Union	The union's membership register or the readout of the 2026 ITU Council bilateral; the April 2026 account states that membership-related matters were addressed without saying whether Cabo Verde is a member, an applicant or in arrears	not yet probed
ICT sector share of GDP and ICT sector employment	A statistics institute national-accounts or business-survey release breaking out the information and communication sector; the 7%-to-25% figures in circulation are ministerial targets, not measurements	not yet probed
Technology park disbursement statements and Phase I appraisal	African Development Bank disbursement statements for the two technology-park operations and the Phase I appraisal report; both are on the wiki's acquisition list	not yet probed
National research funding line for digital or artificial-intelligence research	A budget-table entry naming research or the national university's technology and engineering research centre, in any of the FY2024-FY2026 budget documents held	not yet probed
Free public internet points	A digital economy ministry or universal service fund list of installed sites with dates, or a budget line naming the programme	not yet probed
Island-level and urban-rural access disaggregation	The regulator's quarterly indicators broken down by island or municipality, or the census or household survey ICT module at sub-national grain	not yet probed
Data-protection commission appropriation for FY2026	The National Assembly resolution approving the private budget for 2026; no such resolution is indexed in the Boletim Oficial, breaking a series that ran CVE 35,255,451 for FY2024 and CVE 36,313,115 for FY2025	not yet probed
Accession to Council of Europe Convention 108	The Council of Europe treaty office status page, or a national accession resolution in the Boletim Oficial; the repository establishes accession to the AU Malabo Convention and nothing on Convention 108	not yet probed
Data and exit terms of the Technology Park data-centre concession and the Safe City agreements	the DC2 concession or operating contract, or the Safe City implementation agreements with China, stating data jurisdiction, access, portability and exit clauses	2026-09-25
