PROGRESS REPORT

Egypt: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	The minister put the platform at about 245 live services on 9 September 2026, with more than 400 targeted by 2030, after a July statement of over 270 by end-2026 and about 450 by 2030. The repository's last count before the window is more than 170 e-government services, with no target series on record. 2026-07-21 - the minister set out 242 services, a target of over 270 by end-2026 and about 450 by 2030, under a legislation and governance pillar alongside digital transformation, technology localisation, digital infrastructure and capacity building, the nearer target having been stated in June. The apex body behind the strategy is on record for the first time: the Supreme Council of Digital Society was formed under Presidential Decree 501 of 2022 as amended by Decree 511 of 2022, chaired by the prime minister, with the central bank governor, the commander-in-chief and six ministers among its members. It approves the national strategy for a fully digital state, sets digital government service policy and assesses the adequacy of financing for digital transformation. No minutes or decision after its first session is on record. 2026-10-03 - the communications minister put the platform at about 250 services in September 2026, with 270 targeted by the end of the year.	MOVEMENT
Strategies, plans and policies	**ICT strategy**	105 government entities are connected and 242 services live on the national platform, under the ICT 2030 strategy. The strategy runs on three pillars of digital transformation, digital skills and jobs, and technological innovation. 2026-01-02 - the ministry's annual statement puts the national platform at 210 services and 10.7 million users, and a 47-place improvement in an international ranking. 2026-07-19 - a cabinet follow-up meeting recorded 105 government entities connected electronically and 242 services available on the platform - 32 more services in six months, on the government's own count.	MOVEMENT
Strategies, plans and policies	**Broadband strategy**	A 2026-2030 spectrum strategy accompanied a US$3.5bn award of 410 MHz to the four operators, doubling their holdings. Neither existed at the window's opening. 410 MHz of additional spectrum was awarded to the four operators for US$3.5bn, doubling operator holdings in a single transaction, the minister stating the award matches all spectrum allocated in the country over the previous thirty years, across 1.8 GHz, 2.6 GHz and 3.5 GHz. The strategy document is not held. The country refarmed 2.6 GHz for fifth-generation service rather than licensing dedicated mid-band, and set no coverage or speed obligations comparable to its neighbours' - so the largest spectrum transaction on this ledger carries no published obligation on what the operators must deliver with it. Investment since 2019 is stated at more than US$6bn, with about 3,000 new towers planned in-year and a stated target of 40,000 by 2028, in dollars by the ministry and with no split between state and operator spending given.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data storage / cloud strategy**	A Cloud First Policy has been in force since 22 August 2024, and the national data-centre strategy is promised by the end of 2026. The standing instrument predates the window: the Supreme Council of Digital Society adopted the Cloud First Policy on 13 March 2024 and it entered into force on 22 August 2024. It directs government bodies to prefer public cloud systems hosted in Egypt, makes data classification the starting point for choosing between models, and requires licensed and compliant providers. No implementation report, migration target or compliance deadline under it is on record. The strategy did not exist at the window's opening. It is under preparation, framed around data localisation, a regional storage and processing hub, digital sovereignty and digital-services exports; on 8 September the minister set out its scope for the first time - storage and compute requirements, investment attraction, the regulatory environment, international standards, sustainability, skills and sovereignty. 2026-09-20 - the minister told a cabinet meeting the ministry is drawing it up with other ministries as an integrated national strategy. 2026-09-22 - opening a data-centre summit, the minister said the strategy would be launched by the end of 2026. No draft, capacity target or cost is published.	MOVEMENT
Strategies, plans and policies	**Data interoperability framework / roadmap**	The ministry names linking government digital systems as the strategic objective; no framework or roadmap is published. The ministry's programme page for digital government names data as a main transformation platform and the linking of government digital systems as the strategic objective. No published national interoperability framework accompanies it. What exists instead is a count of connections: 105 government entities connected electronically and 242 services on the national platform as at July 2026. A connection count is not a framework. Nothing states the standard those 105 entities connected against, or what a 106th would have to meet.	NO CHANGE a first stated position with no earlier account behind it
Strategies, plans and policies	**AI strategy**	The second-edition strategy for 2025-2030 stands unchanged, with delivery bodies added around it. The second edition has been in force from early 2025 on six pillars covering governance, technology, data, infrastructure, the sector and skills, following a first strategy of 2021 and a responsible-artificial-intelligence charter of 2023, and is restated by the minister without revision. The text is not held, and the country is counted among those regulating artificial intelligence by strategy rather than statute. What was added around it: the council created in 2019 had its remit widened to artificial intelligence, quantum computing and emerging technologies and is preparing a national quantum strategy, with no decree, membership list or rename date held, and a university capacity programme is placed under the strategy. 2026-09-25 - the council adopted the strategy's achievements report for the first half of 2026 and reviewed the outlines of a National Quantum Computing Strategy 2027-2030; no quantum strategy text or adoption date is held.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data localisation policies**	Data classified top secret or secret must be hosted exclusively within Egypt, in force since August 2024. The Cloud First Policy's localisation requirement entered into force on 22 August 2024, mandating that data classified top secret or secret be hosted exclusively within Egypt, after adoption on 13 March 2024. A policy tracker records it as an executive order of central government at national level, applying to cloud computing, storage and database infrastructure providers. The policy itself puts the requirement more broadly, committing the state to localising data related to national security and to relying on licensed and compliant providers, with data classification the step that decides what may leave. Nothing has moved on it since. No enforcement mechanism, certification scheme for compliant domestic hosts, or count of workloads repatriated under it is published, and no sectoral localisation rule outside the classified-data case is held - which sits against a national data-centre strategy framed around localisation and digital sovereignty that has not been published.	NO CHANGE a first stated position with no earlier account behind it
Strategies, plans and policies	**Data governance policy**		NO EVIDENCE
Strategies, plans and policies	**Open data policy**	The open data policy entered into force in August 2025 as a transitional framework pending a data governance law. At the window's opening the repository held a single passing ministerial reference to the policy, with no date of adoption, text, issuing instrument, dataset inventory or portal established. The artificial-intelligence council, chaired by the communications minister, adopted the policy drafted by the communications ministry, and it entered into force in August 2025 as a transitional framework pending a data governance law and its executive regulations. It requires an open data officer in every government body and a joint data access committee under the council to approve datasets for publication, with those duties passing to an Egyptian Data Governance Authority on its establishment under the coming law. The principles are open-by-default treatment with timeliness, accessibility, free-of-charge and non-discrimination, and the ministry has begun building institutional capacity and a unified national portal. The instrument text is still not held, the portal does not yet exist, and the authority that is to run the regime awaits a law that has not been passed.	MOVEMENT
Legislation and regulation	**Data protection legislation**	The 2020 data-protection law was operationalised by Executive Regulations issued on 1 November 2025, enforceable from 1 November 2026. The Regulations were issued by ministerial decree on 1 November 2025 and circulated in December, establishing the approvals model, a separate licence for each cross-border transfer specifying destination, purpose, data categories and safeguards, extra approvals for electronic marketing and certain public-space surveillance, registered data-protection officers, and breach notification within seventy-two hours to the regulator and three business days to affected individuals. The obligations become enforceable from 1 November 2026 at the end of a one-year grace period. The Regulations' own text is not held. 2026-09-05 - the regulations went to the market before they bite: the ministry's investment conference of 7 September 2026 carried a session on them alongside ICT investment, artificial intelligence and startup finance, seven weeks before the grace period closes. No guidance, decision or licence issued under them is on the record.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Cybersecurity legislation**	A regulatory framework for cybersecurity services rests on the 2018 crimes law, which two bills would now amend. The regulator's operative framework for providing cybersecurity services rests on the 2018 information technology crimes law and the 2003 telecommunications regulation law. 2026-04-22 - two separately sponsored private members' bills would amend the 2018 law: one to strengthen protection of children against newly emerging electronic crimes, the other to address artificial-intelligence-generated deepfakes and tie fines to the benefit obtained. Neither is recorded as passed. The regulator also signed a cross-border cyber security cooperation agreement with a Gulf council in October 2025. 2026-10-05 - the chair of the House communications committee said the new session would open with the digital safety bill, which gives priority to protecting children on social media.	MOVEMENT
Legislation and regulation	**Legislation covering digital id**	Biometric identification is mandated by decree in non-bank finance; the identity layer itself still has no statute. One sectoral instrument is now on record. The financial regulator issued Decrees 139, 140 and 141 of 2023 on 11 July 2023 to enforce Law 5 of 2022 on financial technology in non-bank finance, Decree 140 requiring biometric verification including facial recognition and fingerprint matching in fintech dealings with non-bank financial entities. No decree text or supervisory action under them is held. Nothing of the kind was on record at the window's opening. A member's proposal for a national identity card for children carrying a photograph from age five, requiring amendment of the Child Law, was discussed at two workshops, with recommendations including a unified national child-data platform, a full biometric identification system for children, and linkage between health, education and other government databases. Participants also recommended a strict legal framework for protecting the resulting data. No bill has been tabled, and biometric identity processing is mandated by decree in one sector while unregulated as a national system: the digital identity app, the financial identity platform, the interior ministry's biometric verification platform and facial verification at mobile-line enrolment all operate with no statute of their own.	MOVEMENT
Legislation and regulation	**Digital payments legislation**	The central bank approved regulations for a digital financial identity platform and the financial regulator admitted two projects to its sandbox. 2025-09 - the central bank issued regulations on governance, internal control and fit-and-proper criteria for key officials of payment system operators and payment service providers - the conduct rules beneath the payments market. 2026-08-23 - its board approved the regulations governing the digital financial identity platform for identifying bank customers and verifying their identities electronically, which is the rule that lets an account be opened without a counter. 2026-09-01 - the financial regulator granted preliminary approval for two further technology projects to enter its regulatory sandbox. No licence issued under the payment-institution rules, and no count of customers identified through the platform, appears on this ledger. 2026-09-14 — identity verification was made binding in one market: consumer and MSME financiers must complete one-time-password verification within two months under a gazetted decision. No supervision or penalty is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Legislation enabling data interoperability**	The data centre and cloud licensing framework is the operative rule; no interoperability statute is held. The regulator's licensing and registration framework for establishing and operating data centres and providing hosting and cloud computing services is the operative rule beneath the estate, issued under the telecommunications law. A 2025 United States market guide describes it as 15-year licences for public data-centre providers allowing direct submarine-cable connection, a parallel 15-year cloud registration and a nine-month window for existing operators to regularise. The one law that obliges an exchange is sectoral: the 2025 real estate identifier law establishes a unified non-repeating national identifier database built on a unified base map, which is a shared key by statute. No general statute requiring public bodies to exchange data, and no once-only rule, appears anywhere on this ledger.	NO CHANGE a first stated position with no earlier account behind it
Legislation and regulation	**AI legislation / regulations**	The minister told Cabinet a regulator unit already detects and acts on artificial-intelligence-manipulated content, and legislative amendment is needed. 2026-07-29 - the minister told Cabinet that a unit had been formed inside the telecommunications regulator which already detects and acts on manipulated video and imagery, but that legislative amendment is needed to address the practices at root. The unit's formation date, legal basis, staffing, method, appeal route and contest procedure are not stated. At the same meeting the Cabinet agreed a review of the governing social-media statutes, heavier financial penalties and public awareness campaigns, with a comparative study of other states' approaches being prepared and no bill, text or timetable stated; the Prime Minister credited a press and media campaign with prompting the response.	MOVEMENT
Legislation and regulation	**E-commerce legislation**	A 54-article party draft on the digital space would oblige platforms to appoint a legal representative and register influencers; it is not tabled. Nothing of the kind was on record at the window's opening. The draft was described by its sponsor on 10 August 2026 as fifty-four articles across seven chapters, requiring digital platforms to appoint a legal representative in the country and register influencers on a national platform, and regulating artificial intelligence, deepfakes, online extortion, gambling and child protection online. It is not tabled and no text is published; the article count and the preparation time are the sponsoring member's own account, and it is separate from the cabinet's own social-media legislative review. So the most comprehensive platform instrument on this ledger exists only as a member's description of it. The enabling statute behind electronic transactions is older and is held only at second hand: Law 15 of 2004 regulates electronic signatures and established the Information Technology Industry Development Agency, making electronic signature data, media and information submitted to a licensed certification authority confidential and requiring applicants for e-signature services to operate systems securing the secrecy and privacy of customer information to legal standards. The repository knows it through practitioner guides rather than the instrument, and holds no licensing or enforcement record under it.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Statistics legislation**	The governing statute is the 1960 statistics and census law; no replacement is on the record. The statistics agency publishes the 1960 statute under its own heading of the laws regulating statistical work; its article 1 vests censuses and statistics in a technical body constituted by presidential decree. It is sixty-six years old and the repository holds no amendment or replacement. 2026-02-02 - the machinery under it moved: the prime minister chaired the high committee for the 2027 population, housing and establishments census, with the agency and six ministers. A national statistics strategy had been in preparation for nearly two years with 18 ministries and research bodies plus international partners and is not published.	NO CHANGE a first stated position with no earlier account behind it
Legislation and regulation	**Access to information legislation**	Two freedom of information bills were submitted to parliament in August 2026; nothing is enacted. 2026-07-05 - the minister of state for information told the prime minister that coordination was under way with ministries and authorities to issue the freedom of information law quickly. 2026-08-09 - a member's bill was submitted to the House with its text carried in the reporting. 2026-08-10 - a syndicate-backed bill was submitted after securing 60 lawmakers' signatures; it would create an authority for the protection of freedom of information. Two bills and a ministerial statement of intent, with no statute in force, is the position after a decade of the same commitment.	MOVEMENT
Data protection	**Data protection authority**	The supervisory centre was confirmed by the Executive Regulations and published ten compliance guidelines; no regulator decision is held. The repository carries no dated statement of the Centre's standing, staffing or activity at the window's opening. It is confirmed as the body implementing, monitoring and enforcing the law, running the approvals and cross-border-transfer licensing regime, officer registration and breach receipt, its acting chief executive having framed data sovereignty as a strategic necessity at a November 2025 workshop. 2026-01 to 02 - ten guidelines were published covering consent, lawful bases, electronic direct marketing, the data protection officer, officer categories, data users, principles, records of processing, licences and permits, and privacy notices, with breach-notification and records templates. Enforcement is one court award: EGP 10 million ordered against an operator in February 2025 on tort and custodian's liability, not on the data-protection law. No regulator decision, fine, registration figure or transfer licence is on record at any date. 2026-10-07 - a law firm reported that the data-protection centre opened its portal for accreditation, licence and permit applications in early October 2026, weeks before the grace period ends.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data protection	**National data protection readiness**	Regulators set the first age-based rule for children's social-media accounts, while rights organisations called for withdrawal of the directives making biometric verification a condition of holding a mobile line. 2026-09-17 - the first age-based processing rule: platforms may not hold independent accounts for children under 13, must enable an undisableable safe mode for those aged 13 to under 15, and must verify age while minimising the data collected. The regulator's spokesman then said platforms missing the three-month deadline could be blocked, existing accounts included, and that a digital-safety law is being prepared with parliament's ICT committee. The regulator also says tens of thousands subscribed in two months to operator child-protection services that filter content or block social media. 2026-09-29 - two rights organisations asked for the decision's full text, number and legal basis to be published, and for limits on who collects age-verification data and for how long. 2026-10-04 - the digital-safety bill heads the House ICT committee's agenda for the new session; no text is published. 2025-05 — a digital-rights group read an Alexandria court's EGP 10m award against a mobile operator over a SIM-swap as the first judicial application of the 2020 law. The judgment itself is not held.	MIXED a first age-based rule for children's accounts was issued while biometric verification became a condition of holding a mobile line over rights groups' objections
Regional collaboration	**Regional policy collaboration**	The country chairs the Arab artificial-intelligence governance and quantum computing working groups, elected to two of six. The Arab permanent committee for artificial intelligence and emerging technologies was created by ministerial resolution at a session this country hosted in January 2026 and held its first founding meeting in May. 2026-07-31 - it was elected chair of the artificial-intelligence governance working group, whose remit is a guidance framework, technical tools and mechanisms for activating the Arab charter for artificial-intelligence ethics, and of the quantum computing working group, whose remit is an Arab quantum strategy and quantum-cybersecurity deployment. The committee is mandated to propose regional and international agreements and coordinate a unified Arab position in international forums. 2026-09-07 to 10 - the communications ministry took part in the second Arab AI summit at Hammamet, on AI governance, digital sovereignty and data protection; no declaration text is held. On the continental side the central bank hosts a digital portal for the African financial stability committee, carrying its objectives, mandate and structure, its member central banks, its meeting calendar and working groups, and acting as the publication channel for the African Financial Stability Report and technical papers, its content maintained by the committee secretariat. 2026-10-04 - eleven African missions in Cairo agreed to draft a joint document on digital integration.	MOVEMENT
Regional collaboration	**Regional legal harmonisation**	The 29th session of the Arab ICT ministers council approved an AI committee and adopted an ethics charter in Cairo. 2026-01-22 - the 29th session, hosted by the communications ministry in Cairo, approved the establishment of a regional committee for artificial intelligence and emerging technologies and adopted a regional charter on artificial-intelligence ethics, described as a guiding and advisory document rather than a binding instrument. A guiding charter is harmonisation by persuasion. Nothing records the charter being domesticated here or anywhere, and the country's own national governance framework is separately made and does not cite it.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Shared regional infrastructure**	2Africa lands at two Egyptian coasts joined by trans-Egypt routes, and a point of presence opened at a Jordanian hub. The transit position is stated in figures: click-to-order cross-connectivity between the 14 subsea systems landing at ten cable stations, linked over ten terrestrial routes. 2025-11-19 - 2Africa lands at Ras Ghareb on the Red Sea and Port Said on the Mediterranean, the two joined by two trans-Egypt routes adjacent to the canal. 2025-09-22 - a new point of presence at a Jordanian digital hub, paired with a subsea cable and a 15-kilometre link from a Sinai landing point opened a second-country interconnection, and a binding offer valued the regional data hub at US$230m rising to US$260m.	MOVEMENT
Regional collaboration	**Cross-border data transfers**	Executive regulations set the conditions, procedures and fees for a cross-border transfer licence, five years after the law provided for them. Cross-border transfer is governed by the 2020 personal data protection law, issued at the presidency on 13 July 2020 with entry into force three months later. 2025-11 - the executive regulations set the conditions and procedures for a licence or permit to transfer personal data across borders, for legal and for natural persons, and the fees for it. Five years passed between the law and the regulations that make its transfer regime operable, and no licence, permit or refusal issued under them appears on this ledger.	MOVEMENT
Standards	**National interoperability standards**	The one sectoral exchange standard held is the smart-metering adoption of 2025; no whole-of-government standard is on the repository. The repository holds one exchange standard and it is sectoral: a 2025 national standard adopting the international smart-metering data-exchange standard. Another is a specification rather than a standard: a national electronic receipt technical specification setting the document element, data structure and mandatory fields for education-service return receipts exchanged with the tax authority. No whole-of-government interoperability framework, message standard or conformity test appears anywhere, and the ministry's own programme page names linking government digital systems as the strategic objective without one.	NO CHANGE a first stated position with no earlier account behind it
Standards	**National quality standards**	A 2025 national standard adopts the international smart-metering data-exchange standard, on a default to international standards. The body is the sole official one for preparing and issuing national standards, founded by presidential decree in 1957. A ministerial decision of 2022 provides that where no national standard exists, an international or foreign standard applies, from a named list - a default that makes the national catalogue a supplement rather than a gate. 2025-10 - the register carries a national standard adopting the international smart-metering data-exchange standard, giving electricity metering a common exchange basis.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	**Adoption of international standards**	The central bank formed an inter-ministerial working group on a sustainable finance taxonomy on 7 August 2026. Nothing of the kind was held at the window's opening. 2026-08-07 - a taxonomy is under development by an inter-ministerial working group formed by the central bank with the finance, investment, environment and financial-regulatory authorities, ahead of official issuance. No draft text, reporting obligation, data requirement or issuance date is stated. It is the only standards instrument of any kind on this ledger, in a country whose transfer-pricing guidance has not been revised since 2018 and whose accessibility work exists as a toolbar on one ministry's own website.	MOVEMENT
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	A syndicate-backed freedom of information bill secured 60 signatures; the regulator has a consultation framework. 2026-08-10 - a syndicate-backed freedom of information bill was submitted after securing 60 lawmakers' signatures, proposing an authority for the protection of freedom of information - the clearest instance on this ledger of a non-governmental body carrying a legislative proposal into parliament. The formal channel exists on paper: the telecom regulator's bilingual framework for public consultations. No consultation held under it, and no response document, is recorded. An independent analysis of 28,311 job postings is research rather than policy input, and nothing records it being taken up.	MOVEMENT
Public debate and participation in policymaking	**Open discussion of government policy**	The complaints system received 195,000 items in one month, while an assessment scores 5 of 40 on violations of user rights. 2025-10-08 - the unified government complaints system received 195,000 complaints, appeals, requests and enquiries in September 2025, of which 153,000 were routed to competent bodies. It is a grievance channel operating on that volume, and nothing states what came back. Against that, an international assessment scores the country 14 of 25 on obstacles to access, 9 of 35 on limits on content and 5 of 40 on violations of user rights, on a coverage period that ends before this window. The participation measure sits between them: an electronic participation index of 0.5890, ranked 74 of 193.	MIXED a large complaints channel against low scores on user rights

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	EGP 13bn of public investment was allocated to the sector in the 2025/26 plan, and up to US$860m a year is intended for data centres and state artificial intelligence. No domestic appropriation was held at the window's opening. The 2025/26 plan presented to the House allocates EGP 13bn of public investment to the communications and information technology sector, against plan targets of US$8.5bn in annual digital exports of which US$6bn from outsourcing, reported separately. It is a plan allocation, not an outturn, and no execution figure against it is held. 2026-08-21 - a ministry document relayed at second hand states an intended allocation of up to US$860 million a year from the general budget, from FY2026/27 to the end of 2030, for data centres, computing infrastructure, data security and privacy, and artificial-intelligence use inside state-owned companies, on a stated target of 0.10 to 0.15 per cent of national output. It is an intention with no appropriation line.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE
MoUs and other agreements	**Strategic relationships**	The central bank signed a memorandum on a pan-African gold bank, and an outsourcing delivery centre memorandum was signed. 2025-12-30 - a memorandum with a continental lender put a pan-African gold bank at feasibility-study stage, to assess technical, commercial and regulatory requirements for siting it in a designated free zone with an internationally accredited refinery, secure vaulting and associated financial and trading services. 2026-07-06 - a memorandum with the information technology agency framed a regional outsourcing delivery centre serving Middle East and North Africa clients in consulting, risk management, cybersecurity, digital engineering, data analytics, artificial intelligence and business platforms, stated as creating more than 1,000 jobs over three years, with no investment sum, site or opening date. The central bank also presented its continental payment-system accession experience, currency-circulation system and institute training to Eswatini, with no instrument signed, and talks with the United Kingdom covered digital skills, artificial intelligence, cloud, data centres and financial technology with no agreement stated. A payments company signed an integration connecting its acceptance terminals with a point-of-sale software provider's system, targeting hospitality, retail chains and hypermarkets, with no sums, merchant counts or transaction volumes disclosed.	MOVEMENT
New investments	**Mobilisation of non-state finance**	A lender raised US$37.1m of equity and local-currency debt, and the startup charter began issuing label certificates. 2026-06 - a consumer lender raised US$12.5m of Series A equity led by a domestic venture fund with three development and regional investors, plus US$24.6m in local-currency debt from three Egyptian banks, against a point-of-sale lending network of more than 3,000 merchants. The startup charter was a framework in preparation in December 2025, with a stated unified financing initiative of EGP 50bn to support 5,000 startups against targets of US$5bn of investment over five years, and no launch or governing instrument on file. Certification is now issuing, one company named among the first awarded the label; no cumulative count or disbursement figure accompanies it. The largest listed payments company reports 2025 revenue of EGP 8.65bn and a market capitalisation of EGP 67.72bn on about six million transactions a day. 2026-09-10 - an Egyptian company raised US$10 million for card-terminal tools that identify customers at checkout; no investor, valuation or round stage is named. 2026-09-14 — a digital bank backed by the largest private bank received preliminary central-bank approval, with up to US$300m planned for its platform ahead of a pilot.	MOVEMENT
New investments	**Development-partner project financing**	A development bank lent up to EGP 250m to a payments company's small-business arm under a youth credit line in April 2026. 2026-04-27 - a development bank lent up to EGP 250m, about EUR 4.4m, to a payments company's small-business finance arm under a youth credit line, with European cash incentives of up to 10 per cent of the loan amount. The standing instruments are larger and older: a US$200m partial guarantee for sustainable transport and digital infrastructure, whose monitoring report records formal consent in October 2025 to use bond proceeds for revised eligible subprojects, and a health insurance loan of 2020.	MOVEMENT

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	Fifth-generation service has run since June 2025 on refarmed 2.6 GHz, while combined median download speed fell to 34.77 Mbps. Service has been in place since June 2025, initially focused on Cairo and Alexandria, on shared refarmed blocks of 20 to 30 MHz; no coverage obligation, subscriber count or population-coverage figure is held, and the country is the only one of four North African launch markets with no published coverage or quality obligation. Crowdsourced measurement puts fifth-generation median download at about 89 Mbps at month six against 110.5 Mbps at launch, and the combined median at 34.77 Mbps against a 37.68 Mbps pre-launch baseline - cited as a measurement, not absorbed. About 3,000 new towers are planned in 2026 and more than 9,000 over three years, against a target of 40,000 by 2028. 2026-08-19 - a first upper 6 GHz mobile trial ran at a reported 1.7 Gbps per user, with no allocation or commercial date. 2026-09-21 - an operator began commercial rollout of AI-capable radio-access processors built for 5G-Advanced, one of the first markets after Japan, with no site count or timetable. The presidency has directed fifth-generation rollout against a USD 8bn digital-exports target for 2028.	MIXED fifth-generation service is in place across four operators and towers are expanding while measured combined download speeds fell below the pre-launch baseline
Connectivity	**Internet usage**	98.2 million people were online in October 2025, 82.7% of the population, with fixed broadband at 12.60 million subscriptions. The repository held no internet-penetration figure at all before this. A commercial digital-adoption compilation puts 98.2 million internet users in October 2025, 82.7% of a population of 119 million, alongside 121 million mobile connections at 102% of population and 51.6 million social media users at 43.4%. It is a first measurement with no earlier figure behind it, and no regulator or ministry penetration figure is on record. The repository held 11.51 million fixed broadband subscriptions for 2024. By November 2025 there were 12.60 million, up from 12.50 million in October, growing 8.98% annually, with mobile carrying 75.44% of internet access against 72.97% a year earlier. The same monthly bulletin records rising consumer complaints over data caps, upgrade fees and post-cap speed reduction. So subscriptions grow while the terms attached to them draw complaint, and no later monthly figure than November 2025 is held. 2026-06 — the ministry's bulletin put fixed broadband at 12.68 million subscriptions, down 2.09 per cent on the quarter.	MOVEMENT
Connectivity	**Mobile affordability**	A new mobile package at EGP 5 replaces one at about EGP 13 while other packages rise 9 to 15%. 2026-05-06 - a new mobile package at EGP 5 replaces a lowest package of about EGP 13, and a fixed package at EGP 150 replaces one at EGP 210, while other packages rise 9 to 15 per cent including taxes. The cheapest entry point falls and the rest of the ladder goes up, which is a distributional change rather than a price cut, and the regulator frames it as digital inclusion. No data-basket price, no price index and no affordability measure against income appears anywhere on this ledger, so what the adjustment means for a typical subscriber cannot be stated. The regulator's consultation framework is the process behind decisions of this kind.	MIXED the cheapest entry package fell while the rest of the ladder rose

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**National fibre backbone**	The incumbent launched in-home fibre-to-the-room commercially with a vendor, stated as a first for the country. The service did not exist at the window's opening. 2026-05-24 - the incumbent's consumer brand launched in-home fibre-to-the-room commercially with a vendor, presented as a first for the country. No coverage, subscriber, tariff or contract-value figure is stated. It is the only fixed-network product launch on this ledger, against a rural fibre programme that has reached about five million lines and a fixed base of about 12.6 million subscriptions - so what share of the network it touches is not established.	MOVEMENT
Connectivity	**International internet bandwidth**	About fifteen active international submarine systems land in the country, the largest concentration in Africa, and a 200 km, 5 Pbps link to Taba is under agreement. The repository held thirteen systems landing on the eastern coast with a stated plan to expand to eighteen, and now about fifteen active systems, the largest concentration in Africa. Both figures are operator or ministry-reported and no independent register is held. The largest system carries Mediterranean capacity on the Port Said to Genoa and Marseille route, announced with a vendor in January 2025, with the country a transit hub rather than a peripheral landing on a system reaching more than thirty-three countries at up to 180 Tbps. No later source updates the vendor partnership behind that activation. An agreement was signed on 3 September 2026 to construct a multiple-petabit Sharm El Sheikh to Taba subsea cable, framed by the incumbent as extending the country's eastern digital corridor. It is a domestic route rather than an international landing, and no cost or in-service date is held. The Sharm El Sheikh to Taba link has a contractor: Power Sub Link, building the 200 km cable extending the Red Sea festoon into a continuous Suez-to-Taba path at about 5 petabits per second (contractor).	MOVEMENT
Connectivity	**Internet Exchange Points**	The main exchange peaked at 722.19Gb/s on 7 September 2026 across 18 members, five of them Egyptian, and 15% of popular web content is served from inside the country. A byte-weighted measurement puts 15% of popular web content served locally, the majority from European servers, against 13% for Algeria, 66% for South Africa and 83% for the United States. No prior reading is held. 2026-09-07 - EG-IX, owned by the state-controlled incumbent, showed a daily peak of 722.19Gb/s across 18 member networks, only five of them Egyptian, holding about 3Tbps of ports over 31 connections. No earlier traffic figure is held. The finding sits against the cable-hub and data-centre framing: the country carries other people's transit and hosts little of its own users' content. The one edge presence on file is a content-delivery edge location in Cairo in operation since May 2024, with a vendor-stated latency reduction of up to about 30%, and no capacity expansion or additional presence recorded - an edge cache, not a cloud region.	NO CHANGE a first count with no earlier figure behind it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Satellite broadband licensing and availability**	Satellite talks moved to a licensed local operator with no licence, entity or service date, a possible 2025 launch having passed. Advanced ministry negotiations were reported in June 2025 with a possible launch during that year. That expectation passed without delivery. Talks moved to a licensed local operator, with no licence, no local entity, no service date, and the operator's own map listing the country as service date unknown in May 2026; nothing is held on a June 2026 meeting or after. The standing instrument is a framework in force since 9 July 2024 for any foreign satellite operator serving earth-station terminals in the country, granting categorical licences to operators supplying space capacity to licensed providers, adopted in October 2023 with a grace period. No foreign low-earth-orbit operator has been licensed under it, and the telecommunications law criminalises unlicensed wireless equipment with a minimum of one year's imprisonment.	STALLED
Data Storage	**Local data centre capacity (all providers)**	Ten data-centre licences were issued over two years, and the government's AI data-centre build is contested between a Chinese vendor's bid and a United States consortium with no award on file. Standing commercial sites predate the window: a 5 MW carrier-neutral facility in New Cairo opened in 2015, with an EGP 2.7bn expansion adding 12 MW announced in 2023; the new capital's data centre, built on over US$135m, was providing colocation by 2024; and a Cairo operator took US$25m for a third Tier III site, selling a 42.9% stake. Two 2023 Gulf ventures, a 25 MW hyperscale site at Maadi and a 192 MW three-campus memorandum, have no construction on file. Also held: the incumbent's six commercial data centres beside its regional hub campus, an operator business cloud opened with an Alexandria data centre in 2020 and extended to Huawei Cloud in 2024, and two banks' own Tier III centres, one certified as built in 2024 and one opened in 2022. One campus is reported at 25 MW operating with plans for 45 MW. 2026-09-23 - an 80 MW Sokhna site had USD 270 million allocated to phase one of USD 1.2 billion, undated. 2026-10-07 - an investment company's chief executive put installed data-centre IT load at about 15 to 20 MW, against 400 to 500 MW announced, of which about 20 MW is committed.	MOVEMENT
Data Storage	**Local data centre capacity (national providers)**	The second regional hub is now put one to two months from operating after its end-2025 date passed unconfirmed, and a majority-stake sale was cancelled. The second hub was design-certified to Tier III with an estimated IT load of 4.6 MW against the first hub's 2.5 MW and completion expected end-2025. No held source states it entered service, and the stated date has passed; the first hub is stated as reaching full utilisation within a year of opening. 2026-07-17 - the board withdrew from an agreement announced in September 2025 to sell 75 to 80% of the regional data-centre hub, citing unmet conditions, and the hub is instead to be carved out as a wholly-owned subsidiary with its own technical and commercial team. Consideration and the specific unmet conditions are not disclosed, and the stated reason is transactional rather than sovereigntist. 2026-08-28 - the chief executive told the half-year results call that phase two is expected to begin operating within one to two months, on economics improved against phase one, with further projects screened on return, payback and business model; the carve-out continues and the finance chief said retaining the business is worth more than the cancelled sale. No entry into service is stated: a second schedule against a first that passed.	MIXED the incumbent's second regional hub passed its stated completion date unconfirmed while the sale of a majority stake in its data-centre unit was cancelled and the unit brought back in-house

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Off-site backup capacity**	The government cloud centre is described as an active alternative to the new capital data centre; no replication is stated. The government data and cloud computing centre was inaugurated in April 2024 and described as an active alternative to the new capital data centre and as a unified national platform. A trade account names it the centralised national data and disaster-recovery centre, on the Ain Sokhna road with 10,000 of 23,500 sqm in use. Two sites described as alternatives to each other is the closest thing to off-site capacity the repository holds. What is not stated anywhere is what is replicated between them, on what schedule, to what recovery objective, or whether a restore has been tested. 2026-03-26 - the electricity and communications ministers agreed a joint task force to draw up a national data-centre strategy covering investment incentives, licensing, land and energy.	NO CHANGE a first stated position with no earlier account behind it
Energy	**Sufficient energy and water for data centres**	A hyperscale data centre approaching US$1bn is proposed for Sinai on seawater cooling and green hydrogen power. Neither the project nor its power arrangement existed at the window's opening. 2026-03-17 - a proposal put to the investment minister targets investment approaching US$1bn, starting at 10,000 square metres with an expansion vision to 500,000, seawater cooling, and power wholly from the consortium's green hydrogen and solar project, the minister requiring a full feasibility, financing structure and shareholder file, and coordination with three ministries and security bodies. It is talks, not a project. The power source is about 127 square kilometres with 4 km of Red Sea frontage, EUR 5m of technical studies completed over two years, two phases targeting 160,000 then 400,000 tonnes a year of liquid green hydrogen wholly for export to Europe - the only data-centre power arrangement of any kind in the repository, and it is a proposal whose output is contracted elsewhere. 2026-10-07 - a government official said the electricity ministry had approved an EGP 3bn expansion of the El Alamein and Dabaa transformer zones, with two 500 kV substations, to serve data centres.	MOVEMENT
Energy	**Grid reliability**	The electricity holding company's annual report carries capacity, peak load and the state load-reduction plan. The holding company's own annual report for the year to 30 June 2024 carries installed capacity, peak load and generation figures and the state load-reduction plan that shaped the year. It is the only systematic account of grid performance the repository holds, and it is two years old. A load-reduction plan is the reliability position stated in the government's own terms. No interruption duration or frequency index is published, and no figure since 2024 appears anywhere - which matters because the data-centre strategy the ministers agreed in March 2026 covers energy.	NO CHANGE a first stated position with no earlier account behind it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	**Rural electrification**	The electricity regulator adopted the country's first smart mini-grids regulatory package; no rural electrification rate is held. 2025-09-29 - the electricity regulator's board adopted the country's first regulatory package for smart mini-grids, issued as a Periodic Book setting rules, licensing, ownership models, tariff setting, contractual relations and safety standards, and opening private-to-private investment in renewable mini-grids for commercial, industrial and tourism clusters and for remote, border and coastal areas. A donor programme supported the drafting and ran a consultation attended by about 150 ministry, regulator, distribution company, private sector and financing participants before finalisation. No licence issued under it, and no installed mini-grid capacity, is on record. The dated review of the rural development programme's first phase records EGP 306bn allocated, 93% of total first-phase investments, with development works completed in 620 villages, against an earlier account of EGP 350bn allocated and EGP 200bn disbursed across 23,000 projects. Neither states an electrification rate, a connection count or a rural-urban access split, so what the programme has done to electricity access cannot be stated. Its digital component is the technology equipment supplied to the government service complexes in those villages.	MOVEMENT
Technical Capacity	**Robustness of government hardware and software**	An institutional memory system is being taken to individual state bodies, and a unified manufacturers platform launched. Neither existed at the window's opening. A cabinet information centre system for institutional memory is being taken to individual state bodies: the nuclear power plants authority received a delegation on it as part of its digital transformation, and the social solidarity ministry held an expanded meeting on its objectives and components ahead of applying it. No adoption count, technical description or completion date is published. 2026-08-19 - an industry ministry platform launched covering the industrial investment cycle, carrying a complaints-management system with defined response deadlines and real-time indicators on resolution rates and recurring issues, a database and marketplace for locally produced production inputs, and a separate marketplace for finished industrial products; no registration count or service-level standard is published.	MOVEMENT
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	A career-launch initiative covers cybersecurity, development operations and telecom networks, on a four-pillar civil-service programme. The standing programme for civil-service digital capability runs on four pillars: digital culture, digital skills, the skills of information-centre employees and leadership. 2025-09-11 - a career-launch initiative covers cybersecurity, development operations and telecom networks - the three skill areas bearing most directly on maintaining and operating government systems, and a summer programme was designed for 10,000 students across eight tracks. 2026-02-09 - the sixth batch of an artificial-intelligence ambassadors programme graduated 2,641 trainees. No in-house-versus-contractor split for government systems is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Cybersecurity	**National cybersecurity readiness**	The 2023-2027 second-edition strategy is being implemented with a third in preparation, and the country holds a full score on the global index. The second edition covers 2023 to 2027 and sets out programmes for awareness, specialised training, research and industry support, a cybersecurity industry development fund and a legislative build-out, with performance indicators. It is being implemented through projects to protect digital infrastructure and build cyber defences, a third is being prepared, and the national emergency readiness centre is being developed to use artificial intelligence against cyber threats. No third-edition text, timetable or adopting decision is held. The readiness centre operates under the telecommunications regulator and is a delivery partner in the national cyber-skills academy, with no incident statistics, mandate document, budget or reporting obligation held. The global index standing of 100% and a first-tier place among twelve states was restated in June 2026, but both readings refer to the same 2024 edition, so it is a static reading rather than movement.	MOVEMENT

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	The government digital switch connects 105 bodies and links 100 national databases, and a digital treasury of reusable documents began. The repository carries no connection count, architecture statement or lawful basis for the exchange at the window's opening. The switch now has 105 government bodies connected and 100 national databases linked for secure inter-agency exchange, named alongside unified digital identity, the services platform, the digital treasury, digital trust services and the digital post box as the enablers of the transformation. It is ministry-reported through a cabinet readout: no published register of connected bodies, no lawful basis, no audit arrangement and no role for a data-protection regulator is held. The digital treasury's operating model is set and applied to a number of services, its first document an employment registration certificate, with the shop-licensing service the first to reuse verified documents from it, implementing the once-only principle; no list of documents, count of reuses or governing instrument is held. 2026-08-20 - a protocol will integrate the commercial registry and stock exchange databases, giving the exchange direct access to registry data for listed companies, with a joint executive committee overseeing implementation and data confidentiality.	MOVEMENT
Data Exchange	**Use of digital id in other systems**	Two services launched in the same week gate access on the national digital identity — family-case enquiry and foster-family services. The public prosecution opened an electronic enquiry service for family-case data and judgments on 1 September 2026, with entry restricted to users verified through the national digital identity so the data reaches only the party concerned (service). The social solidarity ministry launched the first phase of a digital services system for foster families and care institutions two days earlier, wired to other state bodies through the government digital exchange and to the national digital identity for sign-in (launch). Both are single services rather than a general integration, and neither publishes a transaction figure. What they establish is that the identity is now a precondition of reaching one's own record in two ministries. 2026-09-10 - a third service: the prosecution issues five personal-status documents online behind the national digital identity.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of health systems**	The health insurance information system's beneficiary, provider and claims modules are not yet in service. The health data layer under universal health insurance carries 4.5 million electronic health records, a unified electronic medical record and an electronic prescription, and the health cooperation strategy records interoperability with the national identification systems. 2026-01-20 - a supervision report states the procurement module developed and in service, with the beneficiary, provider and claims modules not yet in service - the three an exchange would run over. 2025-12 - a memorandum would automate the healthcare accreditation authority's core operations. 2026-09-14 — a national platform was proposed to connect facilities and integrate patient histories, with AI and telemedicine services, discussed with two named suppliers. Nothing is procured, costed or dated.	MOVEMENT
Data Exchange	**Interoperability of education systems**	A unified pre-university education dataset complies with the statistics agency's requirements; no other exchange is held. 2025-12-15 - the first unified national infrastructure for pre-university education data was launched, complying with the statistics agency's requirements. That compliance is the one education-system exchange the repository holds, and it runs to the statistical system rather than between education systems. 2026-04-01 - the communications and higher education ministries set out a digital transformation agenda including issuing digital graduation certificates through the national platform - an exchange in prospect, with no certificate volume or start date.	NO CHANGE a first stated position with no earlier account behind it
Data Exchange	**Interoperability of social protection systems**		NO EVIDENCE
Digital Identity and CRVS	**Robustness of system**	The regulator referred all four mobile operators to prosecution over lines registered without their holders' knowledge and expanded facial verification. The repository carries no position on mobile line registration at the window's opening. 2026-08-10 - the regulator referred all four operators to the Public Prosecution over lines registered without customers' knowledge, ordered them to halt new activations on corporate registration systems, contact every existing corporate-line holder to re-register in person by a deadline with unclaimed lines cancelled, and accelerate biometric verification, warning that non-compliance would cost them sale and activation rights. It followed reports of a nineteen-year-old sentenced in absentia to twenty-five years in a case turning on a line registered in his name. The regulator logged over 3,000 line-fraud complaints and 100,000 call-centre inquiries in two days, and public use of its line-checking service reached five million registrations in a week, roughly doubling its user base. Members asked what framework governs collection, storage and access to the facial-recognition data taken at registration, and researchers argue irreversible biometrics carry their own risk while the protection framework is still being built. 2014 - a contract with Morpho for a chip-embedded biometric identity card had yielded no card by May 2025; the 1996 barcode card still in use cannot hold biometrics.	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Registration of entire population**	Electronic registration of births and deaths is stated as taken nationwide, and civil-registry kiosks stand at sixteen locations. The repository carries no statement on electronic civil registration coverage at the window's opening. The health ministry and associated bodies are stated to have taken electronic registration of births and deaths nationwide, credited with faster and more accurate demographic monitoring. Nationwide is the plan's own word: no coverage rate, completeness figure or target date is reported, the plan document is not held, and the claim is uncorroborated. The sixteen mall-based kiosks across six governorates and the airport, issuing birth, death, marriage and divorce certificates and identity application forms on fingerprint or facial verification and paid in cash, are unchanged, with no expansion, transaction count or withdrawal recorded.	MOVEMENT
Digital Identity and CRVS	**National maintenance of id and credentials systems**	The interior ministry created a unified national biometric verification platform, it states for the first time. 2026-02-14 - the interior ministry states it has created, for the first time in the country, a unified national platform for biometric verification and instant authentication using face-recognition algorithms. No lawful basis, retention rule, accuracy figure or oversight arrangement is stated with it. 2026-08-23 - the central bank board approved regulations governing the digital financial identity platform for identifying bank customers and verifying identities electronically. 2025-09-10 - a citizens' data update form was launched in one governorate as the initial phase of a nationwide expansion - the maintenance side of the register. The machinery underneath is described once, undated beyond its year: state budget funding established the Civil Status Information Center and the birth, death, marriage, divorce and family registration databases, and a state technology company maintains the national number databases including photographs and fingerprints, and operates the integration of the national identity database with the recruitment, public security, labour permits, supply, traffic, social insurance, justice, social solidarity and central bank systems. It carries no enrolment or card figure. 2021 - a presidential decision created a Defence ministry complex to preserve civil records and biometric data, setting no retention period.	MOVEMENT
Digital Identity and CRVS	**Authentication**	A remote biometric verification and e-signature platform was opened to licensed mobile operators on 18 September 2026, after an August pilot. A digital identity card enabling remote verification was under development. The app is now released and in its second version, integrated with electronic signature and seal services, with civil-registry-linked verification stated as approaching. No registration count, first-release date or governing decree is held. Signature and seal services are live using the security token and integrated with digital identity, with remote signature stated as expanding across government services and the digital post box being finalised. 2026-02 - an interior ministry Android pilot has users scan the identity card and complete facial recognition to authenticate for selected government services; it was described at launch as the country's first unified biometric authentication platform. 2026-08-26 - the telecoms regulator piloted a remote biometric verification system for telecom services, linked to the civil registry. 2026-09-18 — the communications and interior ministries launched a platform for remote biometric identity verification and electronic signature, first through licensed operators' own phone applications, built with the telecom regulator, the IT industry agency and a local developer. No user count is stated.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Digital id from birth**	An electronic birth and death registration system was recorded as under way from 2017; no identifier at birth is stated. An electronic birth and death registration system was recorded as under way from 2017, and the country's own submission puts birth registration completeness at 96.6%. Registration is close to complete and nothing states that an identifier is issued at the birth event, or that the civil status system and the identity system exchange at that point. The country's own presentation contrasting 2017 with 2026 is the fullest account held and it does not close that question.	NO CHANGE a first stated position with no earlier account behind it
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	The health cooperation strategy records interoperability with the national identification systems; no birth-registration link is stated. The one interoperability with the identification systems the repository holds is on the health side: the health cooperation strategy records it. On the civil registration side, the electronic birth and death registration system recorded as under way from 2017 and the country's own 2017-to-2026 presentation describe the registration system without stating a link to the identity system. The new biometric platform is a verification service rather than a registration one: unified national biometric verification and instant authentication.	NO CHANGE a first stated position with no earlier account behind it
Digital Identity and CRVS	**Use by other systems**	The central bank approved rules for a digital financial identity, and the Prosecution opened criminal-record self-enquiry through digital identity. 2026-08-23 - the central bank's board approved rules for the digital financial identity system: customers may open accounts and take banking products through digital channels without visiting a branch, with electronic acceptance of terms and electronic authentication in place of a handwritten signature, the rules setting out governance, participants' roles, technical and operational requirements and data-protection and cybersecurity controls, the system having been launched in November 2025. No enrolment or verification volume is held. On the non-bank side, lending, investment and insurance companies may create digital identities, run biometric and non-biometric checks against national-identity and mobile-registry databases and execute binding electronic contracts, the licensee reporting over 25m verifications a year. 2026-07-27 - a citizen may now query criminal judgments registered against their own national number through the digital identity system, the Prosecution stating the result is not a substitute for official certificates. The incumbent operator launched electronic identity verification with e-signature for buying and activating mobile lines without paper documents, without naming the identity database it checks against.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Governance role of central bank**	The central bank owns, operates and settles the instant payment network under rules it issued in October 2021, and has approved two digital banks that are not operating. The first had preliminary clearance from May 2024 with due diligence on infrastructure, banking systems and cybersecurity under way; initial approval was granted with products stated as preparing for 2026 and no launch on record, so nothing held establishes an operating digital bank in the country. 2026-08-21 - a commercial bank received preliminary approval to establish a digitally native bank under the 2023 digital-banks framework, now entering technology validation, cybersecurity testing and operational-resilience readiness under a newly appointed chief executive, launch remaining subject to final approval, with no launch date or capitalisation stated. Two approvals and no operating institution is the position after two years of the framework. 2026-09-15 — the central bank is laying ground for a digital pound, wholesale before retail. No pilot, design decision or date is published. 2026-09-24 — the non-bank regulator's Decision 2684 came into force, requiring consumer-finance companies to link their databases to the regulator's, including real-time purchase data, under controls due within six months.	MOVEMENT
Digital Payments and Fintech	**G2P functionality**	A completion report closes a US$900m safety-net loan; no current payment channel figure is held. The arrangements are described in a country note on government-to-person payments, which sets out the flagship cash transfer programme launched in 2015. 2024-06-05 - a completion report closes a US$900m-equivalent loan strengthening the safety net. Neither states a current beneficiary count, a payment channel split or a digital-payment share, so what proportion of transfers now reach people electronically is not on the repository - against a financial inclusion rate of 77.6% at the end of 2025.	NO CHANGE a first stated position with no earlier account behind it
Digital Payments and Fintech	**Revenue collection**	A second facilitation package added a premium centre and a real-estate transactions app, against named defects still on the record. The tax system has run since January 2021 across returns, electronic invoices and receipts, registration, payments, automated audit, refunds, exemptions, appeals and enforced collection. 2026-08-19 - a second facilitation package added a premium services centre and a real-estate transactions app on which citizens register transaction details, upload documents, pay taxes and obtain electronic clearance certificates online, with telephone guidance for less confident users; no uptake figure is published. The defects are named by practitioners: historic credit balances never migrated so companies holding credits are shown as debtors; audit offices asking again for documents already on the authority's databases and for paper copies of files already uploaded; files moved to appeal committees on timer expiry; some payments unevidenceable, creating phantom debts; and government bodies not always issuing electronic invoices while the private sector is compelled to. The 2018 transfer-pricing guide is unrevised, with appeal committees relying on the statutory requirement for a minister-approved guide and some penalties cancelled as a result, and a proposed cut of the VAT credit-refund period awaits its legislative steps.	MIXED a second facilitation package added a services centre and a real-estate app while named defects in the tax system remain on the record and the 2018 transfer-pricing guide is unrevised

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**B2B and B2G functionality**	A digital factoring portal lets companies verify prior funding of an invoice electronically, enforcing a ban on double-funding a receivable. There was no electronic check on whether an invoice had already been funded. Factoring companies now verify prior funding electronically through a direct link with the finance ministry and the tax authority, the platform vetting invoices before financing and freezing them to the financing company to enforce a board resolution's ban on double-funding a receivable; companies were trained on it on 6 August 2026. Factored paper value rose 77.8% in 2025 to EGP 132.2bn. 2026-08-13 - the state digital financial infrastructure operator agreed the full acquisition of a non-bank lender to small and medium firms, and on 2026-09-20 its shareholders approved buying 99.32% for EGP 956.37m in cash and shares, the regulator having approved in August. The record states no separation between its role building and running government payment infrastructure and the lending book it is buying. 2026-09-21 — the regulator reviewed a creditor survey of the Movable Collateral Registry with its operator, E-Finance.	MOVEMENT
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	The central bank launched acceptance on merchants' own phones, and a first carrier-billing licence covers government payments. Phone-based acceptance was a pilot capped at EGP 600 per transaction and is now live: merchants may use a smartphone or tablet as an electronic point of sale, accepting contactless card payments with the customer entering a PIN on the device. No merchant count, transaction volume or cap for the live service is held. 2025-12-11 - a first regulator licence for direct carrier billing was signed, letting citizens pay utility bills, traffic fines and civil-registry charges from mobile balance or the monthly bill. No transaction volume, participating operator list or live-service date is held after signature.	MOVEMENT
Digital Payments and Fintech	**Population uptake**	The instant payment network reached 16m users and EGP 4.2tn transacted to June 2025, alongside over 55.5m wallet accounts. The network had 12.5m users and about 1.5bn transactions worth up to EGP 2.9tn in calendar 2024, domestic transfers only. It now has 16m users and EGP 4.2tn transacted from July 2024 to June 2025, with inbound remittances credited instantly at all banks operating in the country. No figure fresher than end-June 2025 is held. Cards and acceptance stand at 29.1m debit cards at about 40% of the market, 34.3m prepaid and about 7m credit, with national scheme cards still stated at 43.5m from end-2024. About 16.7 million adults had no formal access to credit at June 2025. The first switch-level series the repository holds runs to 2024: 1.561 billion transactions worth US$92.0bn in 2024, against 39 million worth US$3.4bn in 2022, with over 12.72 million unique users at end-2024, about 16% of the adult population. It is an industry body's case study; the central bank publishes no payment systems report the repository can reach. The telecom regulator counted 57.01m operator wallets in the first half of 2026, up 23% in a year, at 45% penetration. 2026-10-01 - the central bank governor put the network at about 22m registered customers and 1.47bn transactions by the second quarter of 2026.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Cross-border functionality**	The central bank has built a framework letting Egyptian banks settle with African counterparties directly, without clearing agents or the US dollar, and the national card scheme is being joined to the continental one. The system has operated from Cairo since January 2022, connecting the real-time gross settlement systems of participating African central banks, with no Egyptian participation, volume or value figure published in anything held. 2026-09-09 - the operator's chief executive said it plans to connect to Instapay, the state-backed instant payment application, to widen cross-border payments between Egypt and the rest of Africa. It carried no date, technical arrangement or central bank confirmation. 2026-09-19 - the central bank stated its own position to the 14th Governing Council in Nairobi: a framework letting Egyptian banks execute and fund transactions with African counterparties directly, without intermediary clearing agents or the US dollar. It joined in November 2024, is assessing integration with the card scheme and is exploring the Marketplace platform. 2026-09-20 - the continental card scheme is being joined to the national Meeza network so cards issued on either side work across more African markets: a first phase connecting the two infrastructures and establishing a settlement layer, with no availability date. 2026-09-23 - six unnamed banks applied to the central bank to integrate the instant payment rail with the continental system; no launch date is set.	MOVEMENT
Digital Payments and Fintech	**Consumer protection**	Instant-transfer fees stand where they were set in April 2025, at 0.1% of value with a EGP 20 cap. Pricing has been 0.1% with a minimum of EGP 0.50 and a maximum of EGP 20 since 1 April 2025, plus EGP 0.50 for balance enquiry beyond ten free monthly requests, and no central-bank decision altering the schedule is held. The prior free-use position rested on a board exemption effective 1 January 2025 for three renewable months rather than on an instrument, and lapsed rather than being repealed - so the country's flagship retail rail moved from free to priced without a published decision to price it. 2026-09-12 - the financial regulator required consumer and small-business lenders to report to the credit bureau in real time, within three months. 2026-09-15 — the credit file gained a second duty: consumer-finance companies must verify applicants digitally and consult the bureau's behavioural score, built on alternative data, when granting or refusing credit, from 1 April 2027. A day later the media council and the financial regulator put applications and platforms in the non-bank financial markets under joint prior oversight, the council having to take the regulator's technical opinion within fifteen days before licensing one, so that users are not led to believe an application is licensed.	MOVEMENT
Registries	**Population register**	Registration completeness is high on the country's own figures, and a citizens' data update form was piloted in one governorate. The register rests on the 1994 civil status law and the civil status organisation at the interior ministry, with completeness put at 96.6% for live births and 95.3% for deaths. 2025-09-10 - the communications and supply ministries launched a citizens' data update form in one governorate as the initial phase of a gradual nationwide expansion, described as an organising instrument for keeping citizen records current. No completion, record count or further governorate is recorded. The 2027 census is in preparation under a high committee the prime minister chairs.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Civil register**	Registration completeness is put at 96.6% for live births and 95.3% for deaths on the country's own submission. The statutory basis is the 1994 civil status law, whose article 1 places implementation with the civil status organisation at the interior ministry and empowers the minister to establish civil-status information systems. An electronic birth and death registration system was recorded as under way from 2017, and the country's own submission puts estimated completeness at 96.6% for live births and 95.3% for deaths. 2026-07-17 - the country's own presentation to the annual registrar generals' meeting contrasts the position in 2017 with 2026.	MOVEMENT
Registries	**Address register**	Nearly 30 million property identification numbers have been issued under the unified real estate identifier database. 2025-06-17 - a law establishes a unified non-repeating national identifier database for all real estate - land, buildings and installations - built on a unified base map. It is the closest thing to a national address register the repository holds. 2025-12-18 - the platform's first phase carries more than 3,000 units in one new city, all issued unique real estate identification numbers. 2026-07-05 - nearly 30 million National Property Identification Numbers have been issued under the nationwide digital property inventory, each a permanent digital identifier linkable to utilities, municipalities and the tax authority. The lender that reports the count stresses that assigning one is not legal registration or proof of ownership, which continues to rest exclusively on the Real Estate Registry. 2025-09-06 - the statistics agency chaired a meeting on the law, reviewed the explanatory memorandum and the draft executive regulations it had itself prepared, and formed a subcommittee.	MOVEMENT
Registries	**Business register**	A single investment window offers 460 licences from 41 issuing bodies, and a state-companies platform is being built. The repository carries no position on either at the window's opening. The investment platform is a single electronic window offering 460 licences, approvals and permits from 41 government issuing bodies, with electronic fee payment, real-time tracking and licences issued within 20 working days where documents are complete; no count of licences actually issued through it, and no measurement of the 20-day undertaking, is held. A platform to enumerate and classify every company the state owns or holds a stake in is under protocol for hosting, secure storage and compute for its artificial-intelligence applications, which analyse and monitor the financial and operating performance of the state's corporate portfolio; no value, term, data-governance instrument, company count or launch date is disclosed, and the host is a listed company in which the state is the dominant shareholder. An economic entities platform is announced as a single gateway for establishing companies and obtaining approvals electronically, with no build stage, launch date, budget or governing instrument stated. 2026-09-22 - the investment ministry described a capital-increase platform linking eight government bodies, from the investment authority to the commercial registry, with digital-identity log-in and remote signing; no transaction count is given.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Social protection register**	The unified social registry covers about 12m households and reaches 4.7m active households; no fresher figure is held. The registry covers about 12m households, reaching 4.7m active households and about 17m individuals, roughly a fifth of families, with payments by national scheme card, national-identity-based monitoring across more than 3,000 offices and targeting by proxy means testing plus home verification. No fresher registry, caseload or payment figure is held. It is a candidate base for automatic enrolment into universal health insurance per a February 2025 policy note, and nothing establishes that this has been done. 2026-09-12 — the register's suspensions were documented at household level: a Cairo family's subsidy card was suspended, leaving the household counting out what bread it could afford. No count of cards suspended, reinstated or appealed is published.	NO CHANGE
Registries	**Electoral register**	69,891,913 electors were registered at the 2025 House elections, of whom about 22 million voted. The register is governed by the 2014 law on the exercise of political rights. 2025-10-17 - the electoral authority launched an updated voter database through its own site and application, letting a voter query their polling committee and its location. 2026-01-10 - final statistics put 69,891,913 electors registered in the database at the 2025 House elections, with about 22 million votes cast. No deduplication, biometric or roll-maintenance measure for the register is published.	MOVEMENT
Registries	**Tax register**	A new tax work automation system began operating from October 2025, on a unified registration number. The statutory basis is the 2020 unified tax procedures law, whose article 26 assigns every taxpayer a single unified tax registration number across all taxes. 2025-10-01 - a new tax work automation system began operating at the first Cairo office. 2025-11-12 - a finance ministry decree opened application to a simplified regime for businesses under EGP 20m of annual turnover, and a national electronic receipt specification for education-service returns was issued in August 2026. No register size or filing-compliance figure is published.	MOVEMENT
Registries	**Land register**	Less than 10% of real estate is formally registered, and the property identifier law has no implementing decree. The legal barrier was cut before the window: Law 9 of 2022 amended the Real Estate Registration Law 114 of 1946, removing the chain-of-title requirement that had effectively prevented millions of owners from registering. The state-land platform records more than 302,000 applications received against about 1,700 contracts drawn up and 350 plots recovered, while on the older statutory track the committee reports more than 124,000 regularisation contracts delivered. The property identifier law was approved by the House on 27 April 2025, making a unique digital identifier a prerequisite for registry or notary registration and for utility connections; no decree naming the overseeing authority and no commencement date are on record fifteen months later, though on 9 September 2026 the ministry said national numbers have been produced for every building in the country. One survey section's title register was deferred by a year to 1 July 2027, the country moving section by section under a 1964 statute.	MIXED nearly 30 million properties now carry a digital identifier while under 10% are legally registered, the state-land platform cleared under 1% of its intake and the property identifier law still has no implementing decree

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Health**	A national digital health strategy launched in November 2025, and an open-source health information platform went live. The pandemic fund project steering committee named the development of surveillance data exchange a project priority on 1 September 2026. The strategy launched in November 2025 on secure, interoperable systems, and is carried forward in the FY2026/27 development plan, which targets predictive models built on electronic health records and specialised health datasets carrying diagnostic terminology. The strategy text is not held. The open-source platform is live under the national digital health priorities for 2025-2029, its first-year use covering over 180,000 consultations for emergency evacuees across 189 sites and tuberculosis follow-up for 7,500 cases. Every first-year figure is from a vertical or emergency programme, not routine reporting. The procurement authority is building a national medical-stock database, with stocktaking moved onto a mobile scanning application across 11,000 facilities and 2,000 suppliers, on its own figures.	MOVEMENT
Sectoral management information systems	**Education**	The ministry names an education management information system carrying daily attendance monitoring, behind a verified national dataset. The sector plan makes digital transformation and innovation a dedicated component built around the education management information system. 2025-12-15 - the ministry launched the first unified national infrastructure for pre-university education data through a named dataset, complying with the statistics agency's requirements - the join between the education system and the national statistical system. 2025-12-22 - the ministry's own reporting focal point puts coverage at 25.8 million students, 52,375 public and 9,681 private schools and 1.26 million teachers, disaggregated for the first time by gender, geography, school type and disability status, after review and authorisation by the statistics agency, and the dataset was then transmitted to the UNESCO Institute for Statistics, the World Bank education statistics platform and the ITU. The same account is the repository's only description of the system underneath: daily attendance monitoring linked to the management information system, weekly attendance dashboards, monthly teacher allocation reviews and annual ICT and infrastructure verification cycles, with attendance rising above 80% nationwide by the end of the 2024/25 year. It also records that regional capacity to run the system varies between governorates and affects data quality. No system name, vendor or architecture is published.	MOVEMENT
Sectoral management information systems	**Social protection**	The system cleared 92% of the accumulated arrears backlog, while the 40-service first tranche is still forthcoming. The authority states the system went into live operation on 24 February 2026 after testing and phased pilot operation. It is running monthly pension disbursement plus an integrated electronic collection function, with electronic signatures, time-stamping and electronic links to other bodies; 167,500 arrears cases have been paid since go-live and 92% of the accumulated backlog cleared, the remainder attributed to missing citizen data chased by text message, and 8,621,000 people were served in about four months since launch, averaging 2.1m a month. Served is not defined and may count transactions rather than distinct people; all figures are the authority's own and unaudited. Against that, 95 electronic services were undertaken within six months from 8 February 2026, opening with a first phase of 40; the first tranche is restated as forthcoming at the point the window falls due, and of roughly 170 insurance services in all, only three concern pension entitlement and payment.	MIXED the social insurance system cleared 92% of its arrears backlog and served 8.6m people in four months while its 95-service catalogue's first tranche slipped past the six-month undertaking

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Justice**	A unified digital justice strategy was signed by the justice minister and every judicial body head on 11 August 2026. 2026-08-11 - the strategy was signed by the justice ministry and the heads of every judicial body, launching a shared judicial-data platform built with a foreign vendor and setting out three phases covering remote litigation, cybersecurity and artificial-intelligence-enabled services; no text, budget or contract value is published. The administrative-justice branch states an integrated digital transformation plan is under way, with no named system, date, figure or deliverable. 2026-08-23 - a three-year protocol with the Cairo Court of Appeal covers a unified digital repository of finally adjudicated cases, a citizen portal and application, a judges' library, and artificial intelligence as a judicial assistant for search, summarisation and drafting. 2026-08-31 - the E-Court platform went live for criminal courts, charging lawyers EGP 500 a year and EGP 500 per remote felony hearing. Lawyers sued to annul the fees as not set by statute; the ministry says use is optional. 2026-10-01 - a former chair of the communications ministry's legislation committee reports a parliamentary committee proposal to defer the new Criminal Procedure Law by a further year.	MOVEMENT
Sectoral management information systems	**Tax**	Identity on the tax authority's real estate transactions application is verified using artificial-intelligence techniques (statement). Identity on the tax authority's real estate transactions application is verified using artificial-intelligence techniques (statement). No accuracy or fallback route for a failed verification is stated. 2026-09-27 - the property-tax authority's head acknowledged failures in its new registration app and asked for the filing deadline to be extended; he put registrations at about 1.2m against about 10m expected, and the extension is under study.	MOVEMENT
Sectoral management information systems	**Customs**	The customs authority launched its electronic developed export system at one port in April 2026. The statutory basis for electronic customs procedures is the 2020 customs law as carried in the official gazette. 2026-04-07 - the authority officially launched the electronic developed export system at one Red Sea port, with plans to extend it. No declaration volume, clearance time, further port or interoperability with the tax systems is recorded, so what is established is that the system exists at one place and not what it processes. 2026-09-14 — the finance ministry began surveying road-freight companies at land ports to link them to Nafeza, bringing truck cargo into the single window used for sea and air freight, on unnamed officials' account and with no timetable. 2026-09-28 - a digital truck yard at one Red Sea port went live with a link to Nafeza that admits trucks only for cargo the single window shows as cleared, the yard itself for up to 1,100 trucks a day being under contract, on the operator's account.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Land**	Fifty mobile technology centres were handed to the justice ministry, taking the sector's total to 93. The systematic account is a development bank assessment covering the survey authority's cadastral role and the real estate publicity department's registration role. 2026-07-01 - fifty fully equipped mobile technology centres were handed to the justice ministry to expand real estate registration and notarisation, bringing the sector's total to 93. On the agricultural side, the survey authority compares and audits agricultural holding data against digital maps at 1:2,500 scale down to basin level for about six million holdings. No registered parcel count or turnaround time is published. 2026-09-23 - the agriculture ministry said its digital register of agricultural holdings ties each holding to the crop actually grown across about 4.4 million farmer cards, to target subsidised fertiliser and record encroachment on farmland. No launch date or coverage of all holdings is stated.	MOVEMENT
Other GovTech and e-Gov	**e-government services**	The services platform reported more than 240 services and 12.9m registered citizens in September 2026, and the country rose 47 places on the govtech index. The platform had about 170 services, 8.1m registered users and 7.8m transactions in 2024 and now has 242 services and about 20m transactions since the start of 2026, with 73 services exclusive to it and other digital channels. Usage reached 10.7m users, up 32.1%, and more than 25m transactions and enquiries in 2025, and 12.9m registered citizens with 109 government entities integrated by September 2026. 2026-09-05 - the unified card's terms reached the repository: it is issued free as a prepaid fingerprint-authenticated card through the postal service, carrying bread and ration subsidy alongside health insurance, and usable at point-of-sale terminals and cash machines. No issuance count or coverage figure is published. 2026-09-01 - environmental impact assessment applications, review and approval moved online. 2026-10-04 - a ministry source said the unified platform was switched off and replaced with an untested system, and the minister ordered the fault fixed.	MIXED the services platform grew while the electricity billing platform faulted

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	Public shop licensing moved onto one national platform with a three-month maximum approval time and deemed approval on silence. The service did not exist digitally at the window's opening. 2026-07-29 - it moved to a single national platform for the whole licensing process, with standardised procedures, real-time tracking, a maximum three-month approval time, immediate temporary operating permits, electronic licence issuance and deemed approval where an authority fails to respond, fees unified across participating agencies with the interior ministry cutting its own by half. The Arabic record carries the enforcement half absent from the English accounts: penalties applied to unlicensed shops, agencies canvassing premises, and the stated object of building a complete database of every commercial premises in the country. It is the first consuming service of the digital treasury, and it is also a registration drive.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**Digitalisation of local government records**	393 technology centres serving citizens were completed by the end of 2025, up from 380. 2025-08 - 380 technology centres had been developed across localities, villages and new communities. 2026-01-05 - 393 technology centres serving citizens in districts, villages and governorate offices were completed by the end of 2025. Under the rural development programme, the communications ministry agreed to supply the technology equipment needed to operate every government service complex in its villages. The counts are of centres built, not of records held or services delivered through them, and no local record system is named anywhere.	MOVEMENT
Rural digital data capture	**Digitalisation of rural health clinics**		NO EVIDENCE
Rural digital data capture	**Digitalisation of rural primary schools**		NO EVIDENCE
Rural digital data capture	**Digitalisation of rural registry offices**		NO EVIDENCE
Rural digital data capture	**Digitalisation of rural police stations**	A protocol delivers ten mobile technology centres for electronic criminal records; no station is named. 2026-01-18 - a protocol between the planning ministry and the interior ministry's criminal evidence directorate delivers and operates ten mobile technology centres for electronic criminal records. Mobile centres are the answer to reach rather than to station capability: nothing records a police station capturing records digitally, and no location, coverage or record volume is published for the ten. The prosecution side is separately moving - a protocol covers ten projects across criminal justice, family, traffic and civil status applications - and neither is stated to connect to the other.	NO CHANGE a first stated position with no earlier account behind it

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	A centre for responsible artificial intelligence was established inside the ICT ministry at the end of 2025. The centre did not exist at the window's opening. It was established inside the ministry to support safe use of artificial intelligence within government bodies and to develop regulatory models; no mandate document, budget, staffing or output is held, and the date is padded because the source says end of 2025 without a day. It is the only body on this ledger whose remit is how the state itself uses these systems, and nothing published states what it has reviewed, approved or refused - while a regulator unit already acts on manipulated content and a national model is being offered as a base layer for government services. 2026-09-25 - government procurement guidelines for AI systems and generative-AI guidelines for government were reviewed by the national council, with no adoption date stated.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in sectoral management information systems**	A national Arabic large language model was announced as public digital infrastructure, with a teaching application named. 2026-02-11 - a national Arabic large language model was announced as public digital infrastructure, with named applications built on it including one for secondary Arabic and history teaching. No parameter count, training corpus, licence or evaluation is published. The governance around it is further along than the deployments: the council adopted the strategy's implementation plan with 56 sub-indicators and required quarterly achievement reports from government entities, and a readiness assessment identifies scaling computing as a constraint. No ministry system on this ledger is stated to run a model in production.	MOVEMENT
AI	**Development of national / regional AI systems**	An Arabic large language model tops international evaluation platforms in its parameter classes and runs inside domestic data centres. The repository carries no statement on the model before June 2026. 2026-08-24 - the minister stated it now tops international evaluation platforms among Arabic models in the thirty-billion and forty-billion parameter classes; it is built by retraining the latest global open-source models on curated Egyptian and Arab published data rather than from scratch, run inside Egyptian data centres as a stated matter of digital sovereignty, handles both Modern Standard Arabic and Egyptian colloquial, and is intended as a base layer for education, legal guidance, government services, translation and language learning. A conversational assistant built on it launched in pilot, stated to answer from verified, audited sources, with no user numbers, availability or evaluation result published for the assistant itself. The compute behind it is a continental programme Egypt is one of five stated sites in, about US$720m with a first phase of some 3,000 processors in South Africa. On 8 September 2026 the communications minister attended a Cairo signing at which that company, Vodafone Business and Elsewedy Electric undertook to establish the country's first sovereign artificial-intelligence data centre (signing). No site, date or capacity for it is stated.	MOVEMENT
AI	**Control of AI abuse**	A national governance framework reached edition 2.0, and a bill would address deepfakes. 2026-03-15 - a national artificial-intelligence governance framework was approved for publication at edition 2.0, its version history running from an August 2025 drafting committee through public consultation, and the council adopted the strategy's implementation plan with 56 sub-indicators and required quarterly achievement reports from government entities. 2026-04-22 - a private member's bill would amend the 2018 crimes law to address artificial-intelligence-generated deepfakes and tie fines to the benefit obtained. A framework and an unpassed bill is the whole of the control the repository holds; no enforcement or prohibited use is recorded. 2026-09-25 - the council reviewed Safe Use Guidelines for AI Applications for Children, covering harmful content, exploitation, bias and privacy and grounded in the Child Law and the data protection law; they are not stated as adopted or published. 2026-10-06 - a newspaper reported that Egypt led the Human Rights Council to adopt by consensus a resolution on artificial intelligence and human rights.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
ICT Industry	**National capacity in DT-related production**	Handset output reached 10 million by end-2025 from 3 million in 2024, and the sector is stated at about 6% of national output. Handset production went from 3 million in 2024 to 10 million by end-2025, with ministerial targets of more than 15 million during 2026, a 30 million capacity by 2028 and local content of about 45%. Sector growth was 15.2% in FY2022/23 contributing 5.1% of output and is now 24.3% in the fourth quarter of FY2025/26, described as the sector's highest on record. Outsourcing exports went from about US$2.4bn in 2022 to a 2025 outturn put at US$4.8bn and US$5.2bn and then at US$5.1bn, against a target of US$8bn by 2028 - three unreconciled ministerial figures for the same year. The ministry and its IT industry agency count 252 offshoring companies employing more than 195,000 specialists. 2026-09-10 - an Egyptian enterprise AI company expanded into Bahrain with a local operator; a Jordanian education platform acquired an Egyptian maker of tutoring-centre software, price not stated; and on 17 September a US outsourcing firm opened an AI-powered delivery hub in Cairo, planning to grow from about 135 staff to 1,365 over three years. A Sokhna optical-fibre cable factory was 92% complete in October 2022, with no production start on record.	MOVEMENT
Innovation ecosystem	**Technology hubs**	A regional headquarters and first global generative-artificial-intelligence centre of excellence opened in New Cairo, backed by a stated US$100m. A memorandum between the state and the company was signed in January 2025 with no facility. 2026-07 - a regional headquarters for the Middle East and Africa plus the group's first global generative-artificial-intelligence centre of excellence was inaugurated, backed by a company-stated US$100m, with about 800 staff and company targets of 1,000 by end-2026 and about 3,000 by end-2028, the group's agentic platform developed, tested and localised by Egyptian teams, reported in the national press. A second delivery centre opened with about 250 engineers and more than 380 further jobs stated, the group saying the Egyptian centre is planned to become its second largest worldwide and that about 85% of its business is export-directed. Six technology parks are recorded as under development at Minya, Menoufiya, Mansoura, Sohag, Qena and Aswan with no completion date, cost or occupancy stated, and no source since updates any of them; university technology parks were separately named as a next step with no instrument or date. Cairo entered the top 100 science and technology clusters worldwide in the 2024 ranking (ranking).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Innovation ecosystem	**Tech startup ecosystem**	The country led the continent with US$327m raised in the first half of 2026, while funded ventures fell 15.7% in 2025. 51 startups were funded in 2024, the highest count in Africa. In 2025 one tracker counts US$378.95m across 43 funded startups, second to Nigeria for a second year, the number of funded ventures falling 15.7% while the average raise rose to US$8.81m; the country then led the continent in the first half of 2026 with US$327m raised. Two companies left independent operation: a semiconductor startup was acquired by a United States chip manufacturer, and an infrastructure company's team joined a United States platform company as a talent acquisition, with no consideration or asset transfer disclosed. A financial regulator sandbox cleared two of seven preliminarily approved projects to three-month live testing, from 49 applications. A foreign-trade sandbox is due in October 2026. On the composite measure the country ranked 86th of 133 economies in the 2024 innovation index, 95th on innovation inputs and 80th on outputs - the funding lead sits on inputs in the bottom third; no later edition is held. An AI startup census of May 2026 counts 13 firms in Egypt, sixth of 22 countries; earlier editions are not held. 2026-09-27 - an operator group allocated EUR 25m to AI and advanced-technology startups; no fund vehicle is named.	MIXED the country led the continent for funds raised in the first half of 2026 while the number of funded ventures fell and two companies left independent operation

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	The civil-service capability programme runs on four pillars including digital culture and digital skills; no headcount is published. The standing programme for civil-service digital capability is structured on four pillars: developing digital culture, developing digital skills, developing the skills of employees at information centres, and leadership. What is counted is elsewhere: 2,641 trainees in the sixth batch of an artificial-intelligence ambassadors programme, open beyond the civil service. No civil-service digital skills assessment, no headcount trained and no competence framework appears anywhere on this ledger, so the programme's pillars are known and its reach is not. 2026-10-08 - the communications and labour ministries signed a memorandum to digitise the labour ministry's work and run digital-skills programmes for its staff, graduates and job seekers.	MOVEMENT
Literacy	**Digital literacy (general population)**	Among people aware of mobile money but holding no account, not knowing how to use it affects 21% of women and 15% of men. No Egyptian digital-literacy measure is on file at the window's opening. An industry association's report finds that among people aware of mobile money but holding no account, not knowing how to use the service affects 21% of women and 15% of men. Sample and survey design are not given, and it is cited rather than absorbed. Awareness of artificial intelligence is the one series with two points on it. The cabinet information centre puts those who had heard of AI applications at 65 per cent in 2026 against 22 per cent in 2023, work the leading use at 51.7 per cent ahead of personal use and study, with about 94 per cent of users rating the accuracy of the answers they get (survey). Sample size, method and margin are not stated. 2026-09-16 — the ministry and Intel signed to train one million citizens a year in AI for three years.	NO CHANGE a first measurement with nothing earlier behind it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**DT-related training in secondary education**	A fully funded scholarship runs from the first preparatory to the second secondary year across five training levels. The repository's only entry on technology training inside school education is a fully funded scholarship for students from the first preparatory year to the second secondary year, run as basic, summer and self-learning programmes across five training levels. It is a scholarship programme run by the communications ministry rather than a curriculum change, and no enrolment, completion or school-coverage figure is published. The education sector plan does make digital transformation a dedicated component, and nothing on this ledger records what it put into a classroom. 2026-09-12 — devices were announced rather than delivered: free tablets for about 700,000 secondary students a year, above 1.2 million announced in total, set by commentary against connection costs and teacher readiness.	NO CHANGE a first stated position with no earlier account behind it
Training and skills	**DT-related university facilities and qualifications**	A fourth round of the university artificial-intelligence programme trained 1,090 students producing 445 projects, 2,710 students cumulatively since 2022. The programme has run since 2022 under a ministry agreement with a technology vendor, with three rounds completed and no cumulative figure published at the window's opening. 2026-08-04 - the fourth round closed having trained 1,090 students from ten public, national and private universities producing 445 projects, plus a renewable-energy hackathon of 105 students in 21 teams, with a cumulative 2,710 students and 763 projects since 2022. Cost, the funding split, placement outcomes and the fate of the 763 projects are not stated, and no data-governance arrangement is stated for the patient-derived healthcare datasets added under a tripartite agreement. 2026-09 - a memorandum with a network vendor is to certify 3,000 technology instructors, 1,000 university faculty and independent lecturers a year for three years; no signing date is given. 2026-09-27 - the same operator group committed training grants for about 200,000 trainees in AI and cybersecurity and technology laboratories for universities; no timetable or institution list is given.	MOVEMENT
Training and skills	**Graduates entering DT ecosystem**	A third cyber-skills academy edition targets more than 6,000 trainees across 17 governorates; the national training total is unchanged. Artificial-intelligence and cybersecurity capability building is being expanded inside the judicial institutions (report). No participant count is stated. The national figure is 400,000 information and communication technology trainees in 2023/24, and no fresher national total is on file at either end of the window. 2026-07-06 - a third academy edition opened for registration targeting more than 6,000 trainees across 17 governorates in three age-banded stages from age eight upward. No completion figures are published for the two earlier editions. 2026-08-17 - a first phase concluded training close to 200 senior state-administration officials over ten days and sixty training hours, aimed at 500 leaders across ministries, governorates and public bodies. September 2026 - the ministry's capacity-building institute signed protocols to train jointly in enterprise resource management and IT systems in digital transformation and automation, and one with a state authority on digital transformation and AI capacity building. None publishes a cohort size, duration, cost or placement target. 2026-09-20 — the presidential Digilians initiative admitted 1,674 of about 40,000 applicants to its first cohort, with the state paying EGP 500,000 to EGP 1m per trainee, on ministry figures.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Research institutions	**Think tanks and academic departments contributing to DT policy**	An applied innovation centre works at the intersection of policy, research and execution, and a working paper analysed 28,311 job postings. The centre was established in 2019 to turn emerging digital technologies into practical solutions for national challenges, working at the intersection of policy, research and execution. It sits inside the ministry rather than outside it. 2026-04-07 - an independent working paper analysed 28,311 online job postings during 2025 to construct an automatability index, finding clerical work most exposed - the clearest non-governmental research contribution on the country's own digital labour market the repository holds. Nothing records either being cited in a government instrument.	MOVEMENT

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	The complaints system handled about 229,000 cases in July 2026, while 2,600 appeals followed about 850,000 ration-card deletions. 2026-07 - the system handled about 229,000 complaints, requests and inquiries, 84% referred to the responsible authority, 14% closed and the rest under review, with governorates taking 17% of referrals and nine of them handling 74% of that share. Referral is not resolution: no outcome, resolution time or satisfaction measure sits behind the referred share. Against that, about 850,000 ration cards were deleted under criteria strictly enforced from June 2026, with 2,600 appeals filed, about 0.3%, the ministry attributing the low rate to document hurdles - applicants must obtain proof from other agencies before an appeal can be assessed, and name collisions and stale entries require correction at the agency holding the original record. 2026-07 - data-update forms began to be accepted at 500 post offices on Friday afternoons and Saturday mornings alongside the online route, with a daily adjudication committee and results notified by text. 2026-H1 - the telecoms regulator logged 141,224 consumer complaints and a 97% operator response rate on escalated complaints, at an average 0.70 days; response is the operators' measure, not resolution.	MIXED the unified complaints system handled about 229,000 cases in a single month while ration-card appeals ran at 0.3% of deletions and had to be reopened at post offices
Access to services	**Citizen participation in policy**	An electronic participation index of 0.5890 ranks 74 of 193; the one published mechanism is a regulator consultation framework. The measured position is an electronic participation index of 0.5890, ranked 74 of 193 in the 2024 survey, against an electronic government development index of 0.6699 and rank 95 - participation scoring better than delivery, which is unusual. The only published mechanism behind it is the telecom regulator's framework for public consultations, with no consultation recorded under it. What operates on any volume is grievance rather than participation: 195,000 complaints, appeals, requests and enquiries in September 2025.	NO CHANGE a first stated position with no earlier account behind it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Gender equity**	Women's financial inclusion reached 72.5% against 19.1% in 2016, and a second accelerator cohort of twelve women-led startups opened. Financial inclusion overall went from 76.3% of adults at June 2025 to 79% at end-June 2026, 56.4 million people holding active accounts of a 71.4 million eligible population counting bank accounts, postal accounts, mobile wallets and prepaid cards, with women at 72.5% against 19.1% in 2016 and ages 15 to 35 at 58% against 36.3% in 2020; a second national financial inclusion strategy for 2026-2030 is in development. 2026-08-24 - a second accelerator cohort opened with twelve women-led startups and USD 35,000 in equity-free grants split between three at the end; the first edition's outcome is not on file. Against the inclusion gains, the only literacy measure held shows the knowledge barrier to mobile money falling harder on women than on men. Of the 57.01m operator wallets counted in the first half of 2026, about 67% are registered to men and 33% to women, on the telecom regulator's report.	MOVEMENT
Access to services	**Inclusion of persons with disabilities**	Two binding accessibility regimes cover banking and mobile e-wallets; government web accessibility reaches two ministries' sites. Financial services are the one area with mandatory rules, both issued before the window. The central bank obliges banks to run digital corners with sign-language video access, screen-reader compatibility, Braille forms and Braille keypads on cash machines, and reports more than 9,300 bank employees trained in sign language and disability customer care. No usage figure is published. The telecom regulator, with the central bank, instructed mobile operators to make e-wallet services usable by people with disabilities, requiring sign language interpreters at outlets, contracts in Braille, and voice dictation and screen reader support in their applications. No compliance audit is on record. Government web accessibility is spreading site by site: an accessibility toolbar was published on the ICT ministry's pages by its academy for persons with disabilities, whose mandate is to propagate the standards, and 2026-09-17 - the transport ministry added text-to-speech, a sign-language interpreter, dyslexia fonts and keyboard navigation to its site with the same academy, saying its authorities and companies will follow. No deadline, list of bound entities or audit route is stated: binding rules where a financial regulator writes them, voluntary adoption elsewhere. 2026-09-26 - an ICT-sector disability-inclusion playbook was launched with 14 companies.	MOVEMENT
Access to services	**Inclusion of refugees and IDPs**	The executive regulations of the asylum law were issued by decree, taking effect three months after publication. 2026-05-21 - the executive regulations of the foreigners asylum law were issued by decree, published in the official gazette and taking effect three months after publication. The held text states no registration procedure, documentation standard or service-access provision bearing on digital systems, so what the regulations mean for a refugee's access to identity or services cannot be stated from them. No refugee or displaced population figure, no registration count and no service-access measure appears anywhere else on this ledger either. 2026-09-07 - the only outcome measure the repository holds for refugee assistance is the delivering agency's own: its year-end monitoring of 2024 multi-purpose cash assistance interviewed 393 of 434 sampled households and found 99% able to buy items they could not previously afford. A self-evaluation on a sample rather than the caseload, reporting purchasing ability rather than any outcome.	NO CHANGE a first stated position with no earlier account behind it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital divides	**Bridging of digital divides**	The rural fibre programme reached more than 1,250 of 1,450 first-phase villages and about 5 million fibre lines. The programme stood at 856 of 1,450 first-phase villages connected at end-2024, up from 267 at end-2023. 2026-06-30 - it reached more than 1,250 of 1,450 first-phase villages across 52 markazes in 20 governorates, about 5 million fibre lines and 75% of village service complexes connected, the programme being carried into a deepened lender partnership. No completion date for the remaining 200 villages is stated in any held source, and a 2024 account gives a much larger village frame which the repository does not reconcile with the first-phase denominator - so the share of rural Egypt reached depends on which denominator is used, and nothing on file settles it. The one divide the repository can now measure inside a public system is in schools: primary schools average 95 students per device, against close to one device per student in secondary and in technical and vocational education, which the ministry names as an early digital-equity warning. On the same dataset 36,878 of 42,931 schools meet national smart school criteria and more than 54,000 schools have reliable internet connectivity; the two school counts are not reconciled in the source. It is a first measurement with no earlier figure behind it.	MOVEMENT

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The sixth economic census results were announced with a new agency website; the strategy behind them is not published. 2025-10-27 - on World Statistics Day the agency announced the results of the sixth economic census, adding three new fields - electronic commerce, outsourcing services and the green economy - and launched a new website. 2025-11-30 - it published the annual marriage and divorce bulletin for 2024: 936,739 marriage contracts against 961,220 the year before, and 273,892 divorce cases against 265,606. The strategy itself has been in preparation for nearly two years and no text, indicator or timetable from it is held, so the outputs are visible and the plan is not.	MOVEMENT
National statistics	**Censuses and surveys**	The 2027 census is designed to match a full electronic field count against state digital records keyed on the unified national property number; the authorising decree is still pending. The repository carries no position at the window's opening. The census is designed to build central statistical registers of buildings, households, individuals and establishments by matching electronic field enumeration against digital registers and state databases, keyed on the unified national property number, with the property-wealth map and secure electronic data exchange to be finalised before a presidential decree authorises the count. The exchange is a precondition of the census rather than a by-product of it, and no data-protection regulator role is named in the design. The property number it keys on comes from a law whose implementing decree has not been made, so the census depends on an identifier the state has not yet commenced.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**Statistics from administrative data**	A Senate proposal for a national labour-market data platform was examined by a joint committee, alongside a ministry platform of its own. The repository carries no position at the window's opening. A proposal for a national platform integrating databases and forecasting future skills demand was welcomed by the minister, who pointed to the ministry's own forthcoming digital labour platform. No launch date, budget, governing instrument or lead body is established for either, and the two are not stated to be the same thing. It is the only proposal on this ledger to build a statistical product out of administrative data, and it arrives as two parallel intentions rather than one.	MOVEMENT
Open data	**Use of open data**	A governorate sustainable-development dashboard covering all 27 governorates went live; no dataset catalogue or licence is held. 2025-07-30 - the planning ministry launched an interactive platform displaying sustainable development indicators for all 27 governorates, built on official data drawn principally from the statistics agency and updated periodically. It scores each governorate on the gap to its own 2030 target, the annual rate of change required to close it and its rank among the 27, on an OECD framework. The governing policy sets open-by-default treatment with timeliness, accessibility, free-of-charge and non-discrimination principles, and entered into force in August 2025. The dashboard is a viewing surface, not a catalogue: no dataset download, API, open licence or indicator count is stated for it, and no national open-data portal exists. The other public output of the window was the sixth economic census results and a new agency website. A policy with a dashboard and no catalogue behind it is the position.	MOVEMENT
Use of satellite data	**Agricultural use of satellite data**	A crop type map was classified from 10-metre imagery with field data, and desert cropland change was imaged. 2026-06-24 - a crop type map of one governorate area was classified from 10-metre satellite imagery plus field data collected between May 2023 and October 2024, under an international water productivity programme. 2026-06-26 - a false-colour comparison of 2015 and 2025 imagery over the western desert shows land reclamation and centre-pivot irrigated cropland. Both are produced outside government. The domestic equivalent is not satellite-based: the survey authority compares agricultural holding data against digital maps at 1:2,500 scale down to basin level for about six million holdings.	MOVEMENT
Use of satellite data	**Meteorological use of satellite data**	A trilateral memorandum with Japan covers satellite rainfall data for Nile basin monitoring and flood-risk modelling. The repository carries no position at the window's opening. A memorandum with two Japanese ministries covers technical missions, joint research and the application of artificial intelligence and digital models to monitoring water structures and reducing flood risk, with the intention of using a Japanese satellite rainfall product to monitor rainfall across Nile basin states and improve hydrological forecasting. No money, implementation date or named system is stated, and the instrumentation targets are old physical structures, the barrages first. It is the only use of satellite data of any kind on this ledger.	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	A vendor named the country among the first eight for free student subscriptions to its artificial-intelligence tier. The offer did not exist at the window's opening. 2025-09-22 - a company-announced free one-year subscription for college students was to begin in the coming weeks in this and seven other African countries; no confirmation of launch, uptake figure or end date is held. It is a company announcement, and the offer is demand generation for a paid tier. Beyond it the repository holds one edge cache in Cairo, one vendor partnership on Mediterranean cable capacity and a 2019 agreement for the incumbent to carry a second vendor's network point of presence, never confirmed in service - so the United States relationship here runs through commercial infrastructure rather than through any government instrument.	MOVEMENT
China activities	**Chinese MoUs, engagements and commitments**	A digital cooperation memorandum covering cloud, data centres, semiconductors and cybersecurity was signed during the Chinese president's visit, with no text or project held. September 2026 - the communications minister signed a memorandum on technological and digital cooperation covering cloud computing, data centres, the data economy, semiconductors and cybersecurity during the Chinese president's visit. Its text, projects and value are not held, and the account is a newspaper feature. A United States firm's safe-city package was recorded as adopted in the country in 2023, with Chinese supply not separately established. The country is now one of eleven where Chinese firms were found to supply smart-city surveillance equipment, with the New Administrative Capital listed against multiple named vendors, and named again in continental reporting. No Egyptian contract, value or camera count is held. Commercially a public cloud region has operated since 2024 with data held in country, the company stating regulator certification and adherence to financial-regulator residency requirements. It is entirely company-reported. 2026-10-07 - the state digital-finance operator signed a memorandum with a Chinese cloud provider to explore offering its services to Egyptian businesses from locally hosted infrastructure.	MOVEMENT
EU activities	**EU MoUs, engagements and commitments**	The minister discussed cloud sovereignty with a European vendor's regional president; no instrument is signed. The repository carries no statement of the country's position on sovereignty over data hosted on European vendor platforms at the window's opening. 2026-03-31 - talks covered expanding outsourcing operations and investment, cooperation on cloud computing to support the push for greater sovereignty over data and applications hosted on those platforms, artificial-intelligence rollout, and a joint study of labour-market demand; no agreement, value or timetable is stated. It is the only source that touches the country's digital relationship with a European counterparty at instrument level, and it establishes talks only - in a year when the country ran the largest spectrum award on this ledger, hosted a continental settlement system and chaired two Arab working groups.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	Abu Dhabi's sovereign investor co-led a US$35m round in an Egyptian-founded payments company; an Emirati 25 MW hyperscale venture shows no construction. 2026-09-21 - Abu Dhabi's sovereign investor co-led a US$35m pre-Series C round in a payments company licensed by the Central Bank of Egypt, the proceeds directed at its expansion across the region. Two data-centre ventures predate the window: an Emirati operator and an Egyptian group signed a shareholders agreement in November 2023 for a 25 MW hyperscale site at Maadi Technology Park on more than US$250m, and a Gulf operator signed a memorandum in February 2023 for three campuses of 192 MW on a stated US$2.1bn. No groundbreaking or delivered capacity is held for either, and no Saudi or Qatari commitment is on file.	MOVEMENT
India activities	**India MoUs, engagements and commitments**	The two industry ministers agreed a joint study of priority sectors and discussed linking their payment systems. The repository held no source at all on this relationship at the window's opening. 2026-08-07 - on the margins of a ministerial meeting the two ministers agreed a joint study of priority sectors for industrial and investment integration, covering market needs, value chains, joint manufacturing, incentives and tariff and non-tariff barriers, with financial technology among the named priority sectors; they discussed linking the two countries' payment systems and settling bilateral trade in local currencies, and one side proposed an industrial integration platform matching companies on joint production, component exchange and supplier development. The payment-system linkage is stated as under discussion only: no central bank, operator or payment rail is named on either side, and no instrument, value or date is given.	MOVEMENT
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
National emergency readiness centre incident and advisory record	An annual report or regulator incident statistics giving reported incidents, sectors affected and response times for 2025 or 2026	not yet probed
Critical information infrastructure protection regulation	A regulator or cabinet instrument designating critical information infrastructure and setting security obligations on its operators, including the data centres now being licensed	not yet probed
Submarine cable protection regime for Egyptian waters	An Egyptian instrument on cable protection zones, anchoring restrictions or repair-vessel access; the analysis the wiki holds is Africa-wide and names none for Egypt	not yet probed
2Africa Egyptian landing stations and ready-for-service dates	The consortium's landing-station list or the incumbent's segment announcements naming the Egyptian Mediterranean and Red Sea landings	not yet probed
National broadband plan and any universal service obligation or fund	The published national broadband plan or the regulator instrument establishing a universal service fund, with coverage targets and a financing line	not yet probed
5G coverage and subscriber base	A regulator quarterly bulletin giving 5G population coverage, base-station count and subscribers; the equivalent is held for Morocco and Tunisia in the same source and absent for Egypt	not yet probed
Regional Data Hub 2 entry into service	An operator press release or annual report confirming commissioning, Tier III constructed-facility certification, and delivered IT load	not yet probed
Power supply arrangements for Egypt's operating data centres	A grid connection agreement, tariff schedule or power purchase agreement for any licensed Egyptian data centre; the repository holds nothing beyond the Sinai green-power proposal	not yet probed
Data-centre energy and water consumption reporting	A licence condition or operator sustainability report giving power usage effectiveness, annual energy draw or cooling-water use for an Egyptian facility	not yet probed

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
National high-performance computing or public GPU capacity	A ministry or applied innovation centre statement giving the compute on which the Arabic large language model was trained and is served, with location and ownership	not yet probed
National digital identity enrolment count	A ministry or interior ministry registration figure for the digital identity app, the interior biometric platform or the central bank identity app; three biometric identity channels launched inside the window and the repository holds no enrolment number for any	not yet probed
Governing instrument for digital identity and biometric processing	A decree or law establishing the national digital identity system and its biometric processing basis; the data-protection law and its regulations are held, but no identity-specific instrument is	not yet probed
Register of bodies connected to the government digital switch, and its lawful basis	A ministry or cabinet decree establishing the switch, or a published register of the 105 connected bodies and 100 linked databases; only a cabinet readout of ministry-reported counts is held	not yet probed
Relationship between the ministry's digital post box and the postal service's product	A ministry statement naming the digital post box product, or the postal service protocol text; the ministry reported its own digital post box as being finalised on 2026-07-19 and a national-ID-linked postbox appeared as operating on 2026-08-05, and nothing states whether these are the same system	not yet probed
Commercial register size and digitisation state	A supply ministry or investment authority figure for registered establishments; the repository records nine commercial-registry services made exclusive to the platform from 2026-01-01 but no register size or digitisation coverage	not yet probed
National card scheme current issuance	A central bank figure for national scheme cards issued after end-2024; 43.5m at end-2024 is the newest count held, repeated in two November 2025 accounts of the same address	not yet probed
Governorate-level service platforms and local-government information systems	A local development ministry statement on governorate digital service centres or a local-government information system; the repository holds the shop-licensing platform and nothing on governorate-level systems as such	not yet probed
Statistics agency release programme and publication calendar	The agency's published release calendar or its statistical yearbook for 2025 or 2026; the repository holds no agency output at all beyond the census-planning readout	not yet probed
Egypt's own earth-observation and satellite programme	An Egyptian Space Agency statement or satellite mission record; the section's only satellite content is Egypt's intended use of a Japanese rainfall product	not yet probed
Rural digital service uptake, as distinct from rural connectivity	A figure for platform transactions or service-centre usage originating in Decent Life villages; the repository holds fibre-line and village counts but nothing on whether rural households use the digital services those lines carry	not yet probed
Data-protection regulator enforcement and licensing record	An annual report or published decisions register giving decisions issued, fines imposed, officers registered and cross-border-transfer licences granted since 2025-11-01	not yet probed
Executive Regulations 816 of 2025, the instrument itself	The Official Gazette text of the decree; the repository holds only two law-firm summaries of it	not yet probed
Cybercrime Law 175 of 2018 and its enforcement record	The Official Gazette text with any amendments, plus prosecution or conviction statistics; the repository names the law repeatedly but holds no text and no enforcement record	not yet probed
Telecommunication Regulation Law 10 of 2003	The Official Gazette text as amended; the repository knows it only through the recital in the regulator's satellite framework and a second-hand reference to one article	not yet probed
Egypt's position on the AU Malabo Convention	The AU depositary's ratification list, or an Egyptian instrument of ratification or accession; nothing states whether Egypt has signed, ratified or acceded	not yet probed
EU-Egypt digital cooperation instrument	The text of any EU-Egypt digital chapter, Global Gateway package allocation or European Commission adequacy assessment naming Egypt; the repository holds nothing on Egypt's digital relationship with the EU as an institution	not yet probed
Egyptian national open-data portal	The portal's own landing page with a dataset count and a licence statement, or the text of the open data policy the ICT minister referred to on 2025-12-21	not yet probed
Public consultation on the data-protection Executive Regulations	A regulator or ministry consultation record - a draft published for comment, submissions received, or a response document; the repository holds no evidence the Regulations were consulted on before issue	not yet probed
National Artificial Intelligence Strategy, second edition, the document	The published strategy text giving the six pillars' content, targets, budget and delivery milestones now known only from ministerial summaries	not yet probed

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Egypt's AI-specific statute or regulation	A published bill or Official Gazette instrument; nothing establishes any AI-specific law, only the data-protection law and a cabinet-agreed legislative review of 2026-07-29	not yet probed
Egyptian Charter for Responsible AI (2023)	The charter text itself; the repository carries only the minister's one-line reference to its 2023 issuance	not yet probed
Applied Innovation Centre	A founding instrument, budget line or annual report; the centre is named in three sources as the developer of the Arabic model but has no establishment date, mandate or funding on file	not yet probed
Artificial intelligence contribution to Egyptian GDP	The study behind the widely quoted figure of about US$42.7bn or 7.7% of GDP by 2030; no source on file establishes it, and the entity page expressly declines to carry it	not yet probed
State appropriation for digital transformation and for the ICT ministry	The communications ministry's vote in the finance ministry's approved FY2026/2027 administrative-apparatus budget volume, now catalogued (2026-09-14) but held as a citation page only, its figures set in a legacy Arabic glyph encoding and not yet extracted to the budget table; or the ICT chapter of the Economic and Social Development Plan, which is not held	not yet probed
Economic and Social Development Plan FY2026/2027	The plan document from the planning ministry or as laid before Parliament; the wiki records at 2026-08-04 that it is not held and that the ministry site serves no plan document	not yet probed
Startup Charter EGP 50bn financing initiative, appropriation and disbursement	The cabinet decision or finance law establishing the fund, and the managing body's first disbursement report	not yet probed
Applied Innovation Centre research programme and model documentation	The centre's own published research output, budget or model card; nothing at all is held on research capacity for Egypt	not yet probed
National research and development spending on artificial intelligence and digital technologies	A statistics agency or higher education ministry expenditure series, or the National AI Strategy's own budget annex	not yet probed
Compute access for Egyptian researchers	A dated statement from the AI-factory operator or the Egyptian state on the Egyptian site's siting, capacity and access terms; the repository records only that Egypt is one of five planned sites	not yet probed
Enrolment and graduate numbers for the named national training programmes	Ministry or IT industry agency annual reports giving per-programme intake and completion figures; the repository names the vehicles at 2026-07-21 but carries no numbers	not yet probed
Universal service fund or universal service obligation	The regulator's annual report or the universal-service provisions of the telecommunications law and any levy accounts; no source names such a fund	not yet probed
Postal service digital services and post-office digitisation	A national postal authority progress report; the repository holds only 2024 figures of 27 digital services and about 3,000 post offices digitised, with no update	not yet probed
Gender gap in internet and mobile-internet use	An industry association gender-gap country table or a statistics agency ICT household survey for Egypt; only the mobile-money literacy split is held	not yet probed
Affordability of connectivity relative to income	An affordability alliance or ITU affordability series for Egypt; the repository records rising consumer complaints about internet prices at December 2025 but no price or income measure	not yet probed
Outturn against the digital appropriations	The final account (al-hisab al-khitami) for 2024/25 or 2025/26 giving executed spending for the communications ministry headquarters, CAPMAS and the Civil Status System Development Fund.	2026-09-25
Revenue base of the Civil Status System Development Fund	The instrument creating the fund and fixing the fees or charges that make up its own revenues.	2026-09-25
Data terms of the cloud and data-centre agreements	The published text or a statement of the clauses on data jurisdiction, portability and exit for the Huawei Cloud region, the September 2026 Egypt-China digital memorandum or the Vodafone-Cassava sovereign AI data centre.	2026-09-25
Rule on where unclassified government data is hosted	A decree, circular or the national data-centre strategy text fixing where unclassified public-sector data may be hosted.	2026-09-25

ABOUT THIS DOCUMENT

EDITION	**2026-10-12**
