PROGRESS REPORT

Equatorial Guinea: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	The digital agenda launched in 2019 on 33 lines of action ran to 2025 and has produced no implementation report, budget figure or successor. It was aligned with three international frameworks and is the agenda a World Bank diagnostic assesses against, with the diagnostic's recommendations outstanding (diagnostic, priority actions). The national development strategy to 2035 commits to gradual privatisation of state telecom ownership, a universal broadband backbone across all regions, an updated telecoms legal framework and a science and innovation fund that may be financed by a special tax on oil and gas exports; the diagnostic's own digital recommendations, a one-stop shop, online business registration and a digitised commercial registry, remain undelivered (strategy text, economic memorandum). A consolidated action plan for the second half of 2026 was adopted in July with 35 strategic objectives under three national priorities, one of them restoring sovereignty over the national digital space; it is not yet financed and goes to the Council of Ministers, which decides what is recorded and funded (action plan).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**ICT strategy**	An international tender to draft a replacement telecommunications law opened in June 2025 and has produced no award, draft or revised timetable. The tender was scoped to cover artificial intelligence, cybersecurity, critical infrastructure, satellite connectivity and data protection (tender). Fourteen months on, the 2005 statute still governs a sector that has since acquired a second state operator, an offshore satellite authorisation and a directorate for artificial intelligence, none of which it contemplates.	NO CHANGE
Strategies, plans and policies	**Broadband strategy**	The transport ministry set the country's first published target: 85 per cent coverage through 34 new towers by end-2026. Equatorial Guinea has had a fibre backbone since the last decade — four rings and an international gateway, over US$30m invested — and no coverage target against it. The half-year plan of July 2026 supplies one: 85 per cent second and fourth generation coverage through 34 new towers by the end of the year. Twenty of those towers were already live on the mainland trunk road by September 2025.	MOVEMENT
Strategies, plans and policies	**Data storage / cloud strategy**	A negotiating commission is to be created to recover the country-code domain from a foreign operator the release does not name. The commission was named in the July to December 2026 plan (plan). Nothing is established about the current administration arrangement, so the repository holds an intention to recover a domain and no statement of who holds it or on what terms. No cloud or storage policy exists beside it.	MOVEMENT
Strategies, plans and policies	**Data interoperability framework / roadmap**	The World Bank diagnostic found no interoperability framework, and none has been published since. The diagnostic records the absence plainly: no interoperability framework and no digital skills data held. Where the problem surfaces operationally it is named as such: the third steering-committee meeting of the civil service management project in June 2026 reviewed 22 procedures and identified interoperability as the challenge. A national digital economy strategy was still being finalised with World Bank support in September 2026.	NO CHANGE
Strategies, plans and policies	**AI strategy**	Artificial intelligence acquired a director-general and a state secretariat before it acquired a policy; the strategy is still in drafting. The institutional layer arrived first, and the ledger carries both offices. What the repository does not hold is an adopted strategy. The forum around it is academic: a second national artificial intelligence forum in May 2026 drew ministry, university and international research participation on artificial intelligence policy, and a sovereign artificial intelligence and data infrastructure collaboration was pitched to the Vice-President at Davos in January.	MOVEMENT
Strategies, plans and policies	**Data localisation policies**	The 2015-2017 electronic laws cover data protection and retention and set no localisation requirement. The five laws published together in the official bulletin run to data protection, data retention, electronic signature, electronic access and internet communications. None requires data to be held in the country. Hosting is instead a procurement question: the national data centre stood up under the administration computerisation programme and a backup site is at works stage, with no rule saying what must go into either.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data governance policy**	Data governance rests on the 2015-2017 electronic laws; no policy instrument sits above them. The law package is the whole of the framework: protection, retention, signature, access and communications, enacted between 2015 and 2017 and unamended. What would sit above it has not been adopted. The national digital economy strategy was still being finalised in September 2026, and the ratification of the regional data protection convention was approved by the Chamber of Deputies in March — an external commitment rather than a domestic policy.	NO CHANGE
Strategies, plans and policies	**Open data policy**	The first transparency and access-to-information law passed the Senate unanimously in May 2026; no portal follows from it. The Prime Minister opened the parliamentary debate on transparency, access-to-information and public finance bills in February 2026, and the Senate passed the transparency bill unanimously in May. An access right is not an open data policy. Nothing in the repository records a publication scheme, a dataset inventory or a portal following from the law, and the statistics strategy that might have carried one is a production plan rather than a release policy.	MOVEMENT
Legislation and regulation	**Data protection legislation**	Ley 1/2016 has been in force since August 2016, giving rights of access, rectification, cancellation and opposition and a sanctions regime to CFA 15,000,000. It was gazetted on 22 July 2016 and took effect twenty days later (the law). Ten years on, no implementing decree, guidance or enforcement action under it is held, and the country signed the continental convention on the same subject only in July 2026.	NO CHANGE
Legislation and regulation	**Cybersecurity legislation**	Ley 7/2024 on social media and computer crime has been in force since December 2024, its full text unheld and its provisions known from reporting. Its provisions were reported in rollout from July 2026 (the law). The same statute creates the national cybersecurity and critical infrastructure agency under the Presidency, and that body has no premises, staffing, budget or activity on record, so the law's institutional half exists only on paper. 2026-09-16 — the law's first publicly explained prosecutions: lawyers for the vice-president lodged four criminal complaints at a Malabo court against a digital newspaper's journalist and three others under articles 2, 50 and 60, using article 2 to reach conduct abroad. They came while Facebook and TikTok had been unreachable without a VPN since 2 September, with no official explanation.	MOVEMENT a law in force since 2024 used for the first time against a journalist
Legislation and regulation	**Legislation covering digital id**	Identity rests on a 1957 registry law and a regional passport regulation, with reform under review. The justice ministry announced in April 2025 the activation of civil registry offices in every district beyond Bata and Malabo. A multisector commission under the first deputy prime minister began redrafting the 1957 Civil Registry Law in January 2026. The statistical questionnaire records the position exactly: civil registration still runs on a registry law inherited from 1957. The biometric credential above it is regional, governed by the regulation applying the CEMAC biometric passport decree. Reform is under consideration rather than enacted: an interministerial council reviewed reform of the 1957 law in November 2025, and a draft decree would recode the tax identification number for individuals as well as companies.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Digital payments legislation**	A presidential order banned cash collection of taxes and fees, routing public revenue to bank accounts and electronic platforms. The order of September 2025 is the operative instrument: cash collection of taxes, fees and other administrative revenue is prohibited and payment must go to bank accounts or electronic platforms. It bites on benefits too — social benefits are now paid bank-only, and a 2025 census purged 2,282 untraceable pensioners. The regional layer moved separately: the deposit insurance ceiling rose to 8m CFA for individuals and 15m for firms from 10 December 2025.	MOVEMENT
Legislation and regulation	**Legislation enabling data interoperability**	A bill creating an electronic public procurement information system went to single-reading study in November 2025. No statute enables data exchange across Equatoguinean agencies. The electronic laws of 2015-2017 address protection, retention and signature, not exchange. The nearest thing to an enabling instrument is sectoral: the public sector contracts bill creating an electronic procurement information system, opened for single-reading study in November 2025. The business single window remains the only decree that folds several registers into one process.	MOVEMENT
Legislation and regulation	**AI legislation / regulations**	A draft artificial intelligence law is being written, setting six guiding principles and proposing an autonomous national authority for the technology and for data. A drafting session in August 2025 addressed splitting the proposed authority's functions, and two national institutions are named as prospective training and certification centres under the draft; no enactment, text or adoption date is published (draft law). The proposed authority would supervise both artificial intelligence and data, in a country whose existing data-protection statute has had no supervisory body for a decade.	MOVEMENT
Legislation and regulation	**E-commerce legislation**	The 2015-2017 laws supply electronic signature and access rules; the state is instead building platforms. The legal base for electronic dealing is the signature and electronic access laws inside the 2015-2017 package. No electronic commerce act has followed. Activity has run ahead of the statute: national marketplace and e-commerce platforms sit on the ledger, and in April 2026 a foreign platform pitched an e-commerce hub while the Vice-President formed a task force on paying digital creators. Neither has a consumer-protection rule behind it. 2026-09-08 - the state opened the question of what foreign platforms owe it. The vice-president instructed a commission in Malabo to open talks with one large platform, which he said has built its business in the country without paying the state, and with comparable platforms as alternatives, the intention being a mechanism letting the state capture part of the revenue large digital platforms generate in its market. No draft law, rate, tax base or revenue estimate is published, and no platform has responded on the record.	MOVEMENT
Legislation and regulation	**Statistics legislation**	The census legal basis was set by Decree 25/2025 and Resolution 006/2025; no general statistics act is held. The repository holds no general statistics statute for Equatorial Guinea. What it holds is instrument-by-instrument authority: the fifth population census and first agricultural census rest on a 2025 decree and resolution, with a scientific committee starting work. The institute's own governance moved in July 2026, when its board adopted a revised staff statute and approved action plan spending above five million.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Access to information legislation**	The Senate passed the country's first transparency and access-to-information bill unanimously in May 2026. The Prime Minister opened the debate before the Chamber of Deputies in February 2026 on transparency, access to information and public finance. The Senate passed the transparency and finance-access bill unanimously in May. Nothing yet records its promulgation, an implementing regulation, or a request procedure a citizen could use. 2026-10 — a Senate committee approved by consensus its final report on the press freedom bill, which sets a right of access to public information with deadlines, exceptions and appeals, and sent it to the plenary.	MOVEMENT
Data protection	**Data protection authority**	The supervisory body the statute provides for was never created: article 15 leaves it to a decree the government has not issued. The article leaves both the supervisory organ and the registry it would run to that decree, and a continental country register records no supervisory authority publicly identified (the law). So a statute with a sanctions regime running to CFA 15,000,000 (the law) has had no body able to apply it for ten years, which is the clearest instance on this ledger of a law without an institution.	NO CHANGE
Data protection	**National data protection readiness**	The Chamber of Deputies approved ratifying the regional data protection convention in March 2026; no supervisory authority operates. The domestic law dates from 2016 and its supervisory authority has never been recorded operating. The 2015-2017 package carries the protection and retention rules it would enforce. The external commitment moved first: an interministerial council reviewed a proposal to authorise the convention in November 2025 and the Chamber approved ratification in March 2026, four months before the signing ceremony. Ratifying a convention does not constitute a regulator.	MOVEMENT
Regional collaboration	**Regional policy collaboration**	The country took part in a regional data governance workshop in June 2026 applying an international toolkit, with no national framework resulting. It was the second such workshop in the Lusophone Africa process (workshop). No commitment, framework or follow-up is recorded from it, and it is the only regional policy process the repository holds outside the continental convention and a bilateral accord with one neighbour. The central bank adopted a regional financial inclusion strategy for 2025-2029 covering the six member states, validated by the monetary union's ministerial committee on 21 December 2023 and published in February 2025 (strategy); the repository holds no member-state implementation plan, target or outturn under it. 2024-07 — the Lusophone community's charter of rights and principles in digital environments commits members to meaningful connectivity and data protection, and is expressly non-binding.	NO CHANGE
Regional collaboration	**Regional legal harmonisation**	The country signed the continental cyber and data convention on 28 July 2026 and is not a party to it. No instrument of ratification is on file or on the continental register (signature). The Chamber of Deputies' unanimous vote of 25 March 2026 was a domestic authorisation to ratify, taken four months before the country became a signatory, so the two acts ran in the wrong order and the second has not followed (authorisation).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Shared regional infrastructure**	Three accords with Gabon were signed in November 2025 covering fibre interconnection, free roaming and frequency coordination. No traffic or tariff figure is published (accords). The July 2026 connectivity plan separately names a zero-roaming arrangement with four neighbours, so the roaming half of the accords has a stated regional extension and no measurement at either end.	MOVEMENT
Regional collaboration	**Cross-border data transfers**	A border-screening connection runs at ten sites including three airports, with no traffic figure and no successor project. It was extended under a regional border-management project running to 2024 (connection). It is the only cross-border data exchange the repository holds, and no data-protection arrangement, retention rule or oversight applies to it on the record, in a country whose own supervisory body was never constituted.	NO CHANGE
Standards	**National interoperability standards**	No interoperability standard exists; the diagnostic found none and the standards agency is pre-launch. The World Bank diagnostic records no interoperability framework, and the body that would issue one set out a seven-stage plan in March 2025 and remains pre-launch. The commitment that exists is declaratory: the Malabo declaration of May 2026 commits to interoperable standards for green digital infrastructure, agreed at a symposium the country hosted.	NO CHANGE
Standards	**National quality standards**	A service-quality regulation of 2018 is confirmed in force through the regulator's own index, with only its title and date held. The index also lists an inspection and sanctions regulation of 2020 and a broadband-market update of February 2026, neither captured separately (regulatory index). So the country has published quality-of-service rules and the repository cannot read them; no measurement, inspection outcome or sanction under any of the three is held.	MOVEMENT
Standards	**Adoption of international standards**	The backup data centre works are tendered to an international facility standard, and the passport follows the regional chip specification. Two adoptions are documented. The biometric passport regulation sets chip, machine-readable zone and issuance-control rules to the regional specification, and the technical oversight tender for the backup data centre names an international facility standard. The statistical system is adopting one too: the technical committee began rolling out the 2008 national accounts standard and updating the base year in March 2026.	MOVEMENT
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	The consultation body created by decree in 2021 had its composition deferred and nothing records it meeting. The decree adopting the national sustainable development strategy creates an observatory as the consultation channel and defers its composition. Five years on, nothing in the repository records it constituted or meeting. Where non-state voices do reach policy it is through single events: a second national artificial intelligence forum in May 2026 brought ministry, university and international researchers together on artificial intelligence policy.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	**Open discussion of government policy**	The Chamber unanimously approved a press bill bringing digital journalism under law on 11 September 2026, while Facebook and TikTok had been blocked since 2 September. It was referred to a parliamentary committee alongside a separate copyright and related rights bill implementing the country's convention obligations; neither bill text is held and no adoption date is published (presentation, scope). A commission adopted 11 articles of the draft on 18 August 2026, leaving four outstanding, on the principles of the profession, the qualification required to practise, student interns, and professional secrecy; no plenary vote, text or commencement date is published (commission stage). 2026-09-04 - two enforcement bodies agreed to exchange information rather than to publish any: the attorney general's office and the anti-corruption commission agreed a permanent coordination mechanism of institutional liaison points, an information-exchange protocol and periodic reviews. No protocol text, data categories, safeguards or first review date is published, and neither body publishes a caseload. 2026-09-11 - the Chamber of Deputies unanimously approved the press bill that brings digital journalism under law for the first time. 2026-09-02 — Facebook and TikTok were blocked and bandwidth throttled after a viral corruption allegation against the vice-president; no order is published. 2026-09-16 — lawyers for the Vice-President lodged four criminal complaints under the 2024 social-media law against a digital newspaper's journalist and three others.	MIXED a press bill passed while two platforms were blocked and a journalist faced criminal complaints

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The telecommunications ministry's vote fell 23 per cent to CFA 5,802,246 thousand for 2026, 0.4 per cent of the total budget. The prior year's figure was CFA 7,556,246 thousand, and the 2026 vote includes CFA 140,000 thousand for the telecommunications school at the new capital, against a total budget of CFA 1,294,282m (budget law). It is the only domestic appropriation for the sector the repository holds at any date, and it fell in the year the ministry adopted a 35-objective plan it states is not yet financed.	REGRESSED
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE
MoUs and other agreements	**Strategic relationships**	A Huawei electronic government memorandum of December 2025, followed by contract annexes and a network contract. The relationship that carries most of the estate is one vendor's. A memorandum to accelerate electronic government was signed in December 2025 with no financial terms disclosed; annexes to the surveillance contract closed in March 2026 adding plate recognition and 80 technicians to train in China; and the state operator signed a six-month network optimisation contract in July, value undisclosed. Others are proposals rather than agreements: a Nigerian company's submarine cable and data centre deal with no figures disclosed, and a sovereign artificial intelligence pitch at Davos.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	**Mobilisation of non-state finance**	A private group offered US$50m for the second state operator with a 49 per cent state stake in January 2026. State telecom assets were listed for privatisation as a lending benchmark in 2022, which is the frame the offers arrive into. Two arrived in the window: US$50m to launch the second state operator, replacing the incumbent state telco, with a 49 per cent state stake, and a Nigerian company's agreement for a submarine cable and a commercial data centre with no figures disclosed. Neither is recorded as closed.	MOVEMENT
New investments	**Development-partner project financing**	Two Chinese policy-bank facilities, US$402m for a submarine cable and US$70.3m for video surveillance, carry no repayment or delivery record. The cable credit is drawn and the cable is in service, with no repayment or restructuring on record (cable credit). The surveillance loan is committed, with no delivery, siting or oversight arrangement for the system on record (surveillance loan). Together they are the only external project financing the repository holds for the sector, and neither has a disbursement or completion statement against it.	NO CHANGE

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	A semestral plan targets 85 per cent second- and fourth-generation coverage through 34 new towers in the islands and the interior. The plan was presented to the Prime Minister in July 2026 and also names a zero-roaming arrangement with four neighbours and a national digital postcode system; the plan document itself is not held (connectivity plan). No current coverage figure, subscription series or penetration rate is published at any date, so the 85 per cent target (plan) has no starting point on the record. A continental governance index scores mobile communications at 28.3 out of 100 for 2023, 53rd of 54, after a 24.0-point gain over the decade. It is a composite score and supplies no coverage baseline for the target.	MOVEMENT
Connectivity	**Internet usage**	No national internet-use series exists; the statistical yearbook publishes administrative counts and no penetration figure. The eighth national yearbook carries 19,586 civil servants, 10,468 online visas approved and public debt at 33.3 per cent of output — administrative counts, not connectivity. The population it would be measured against is itself estimated: the 2025 compendium still projects population off the 2015 census. The fifth population census now has its legal basis and has not been taken. The same index scores internet and computers at 32.6 out of 100 for 2023, 28th of 54 and up 23.7 points since 2014; it is a composite access score, not a count of users.	NO CHANGE
Connectivity	**Mobile affordability**	The state operator raised prepaid data volumes 50 per cent at held prices in August 2026, its top tier reaching 24GB for 15,000 CFA. Price last moved by agreement rather than regulation: the government and operators halved internet tariffs from 1 September 2022. In the window the movement was volume: a summer promotion raising data 50 per cent across all prepaid packages at held prices, the top tier at 24GB for 15,000 CFA. Upstream, the regulator updated the primary and secondary broadband capacity market regime by ministerial order in February 2026. No affordability ratio against income is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**National fibre backbone**	The four-ring backbone may be joined by the electricity utility's 2,000km grid fibre network. The minister's own account puts the backbone at four rings and an international gateway with over US$30m invested. A second national network exists and is unused for telecommunications: the electricity utility is studying whether to lease its 2,000km grid fibre network to operators, on a vendor study. International capacity may also grow — a study backs a Medusa cable landfall at Bome near Bata at EUR 20-60m, with service targeted for 2029-2030.	MOVEMENT
Connectivity	**International internet bandwidth**	The country lands three submarine systems, has two more under study or agreement, and since November 2025 exchanges traffic overland with Gabon. One regional system was inaugurated in 2018 on a 400 km route between the two main cities and a neighbour, alongside an earlier landing; no later capacity or utilisation figure is held (regional cables). The state infrastructure operator is landing party for the continental system and hosted its maintenance committee in May 2026, with capacity unchanged on the record (landing party). A Mediterranean-anchored system is under study at a landing in one of two towns, put at EUR 20-60m and 2029 to 2030 with an alternative route also named, the existing cable reported to degrade quality which is the stated reason for diversifying (study, routes). A subsea fibre agreement with Nigeria was signed in February 2026 bundling a data centre, with no route, capacity or delivery date published (agreement, signature). 2025-11-10 - the two countries' national backbones were interconnected and inaugurated at Ebibeyin, exchanging traffic on the Bitam-Ebibeyin and Libreville-Bata routes, the first terrestrial international route on this ledger; no traffic or capacity figure is published.	MOVEMENT
Connectivity	**Internet Exchange Points**	The exchange point reached construction stage in 2017 and no launch has been recorded since. The continental infrastructure registry's entry is the only record the repository holds: construction stage in 2017, no launch, no operator, no traffic figure. Nine years on nothing records it operating, so domestic traffic between Equatoguinean networks has no published local exchange path.	NO CHANGE
Connectivity	**Satellite broadband licensing and availability**	The satellite service is now available in the country, after a July 2026 authorisation that covered only foreign companies' offshore operations. On 29 August 2026 the operator confirmed the service is available in the country, following the government's opening of negotiations on national digital transformation in March 2026 (availability). So a service that was lawful for foreign companies at sea and unlawful for citizens on land is now stated to be generally available, and the licence, tariff and subscriber figures that would show on what terms are not held. 2026-09-09 - the service was launched and put under state distribution in the same week. It was officially launched on 9 September, announced by the vice-president, and legal authority to sell it rests with the state operator under the Secretariat of State for Artificial Intelligence, with a dedicated bank account for the revenue, cancellation of contracts signed privately outside official channels, training of national technicians, and the supplier to deactivate connections established beforehand. No tariff, subscriber target, licence instrument or deactivation date is published. 2026-09-15 — the regulator was made the seller: all satellite broadband sales are to run through it, with contracts obtained outside official channels cancelled. No instrument text is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Local data centre capacity (all providers)**	A digital economic zone at the new capital is under evaluation around artificial intelligence, big data and high-performance data centres. No instrument, site or investment figure is published (zone). No commercial data centre exists anywhere in the repository, so the whole of the private-capacity record is a zone under evaluation and a data centre bundled into a subsea cable agreement with Nigeria.	MOVEMENT
Data Storage	**Local data centre capacity (national providers)**	A tender was published for a primary data centre in one city and a solar-powered backup in the other, for public financial data. It follows data-economy actions including data centres validated with the World Bank in December 2025 (validation), and covers storage, processing and backup (tender). What exists today is two technical facilities described in the state operator's own factsheet, one in each city, each with two generators and ten nodes with distribution and transmission equipment; no floor-area, power or storage figure is given, and the document's content narrates 2016 and 2017 work despite a 2025 upload path (factsheet).	MOVEMENT
Data Storage	**Off-site backup capacity**	Backup data centre works are tendered but unlet: the server room tender was extended a third time to 16 September 2026. A development bank-financed project tendered technical oversight of new data centre works, including a backup site to an international facility standard, in June 2026. The procurement has not closed: the finance ministry's server room tender was extended for a third time to 16 September and remains unawarded. The primary facility it would back up was stood up under the administration computerisation programme.	STALLED
Energy	**Sufficient energy and water for data centres**	An audit found the island's gas turbines inefficient in May 2026, with an eighteen-month overhaul under study. The repository holds no power or water provision figure for any Equatoguinean data centre. What it holds is the supply behind them: an audit by a foreign contractor found the island's gas turbines inefficient in May 2026, with an eighteen-month overhaul under study. That matters because the government's own facilities sit on that island. A backup data centre is at works stage with no published power provision of its own.	REGRESSED
Energy	**Grid reliability**	A proposal to replace copper with fibre in electrical substations was presented in May 2026, for fault prediction and reduced fire risk. The state electricity company and a foreign vendor would lease spare capacity to telecom operators to extend national broadband coverage; it is under review, the Vice-President citing a need for exhaustive analysis before viability is determined (proposal). It remains a proposal rather than a contract. The nearest held position on power for network sites and data centres is an audit that found the island's gas turbines inefficient in May 2026, against two data centres under tender. The 2024 Enterprise Survey found 33.3% of 173 firms experiencing electrical outages, averaging 0.9 a month, against 69.7% and 6.9 a month across Sub-Saharan Africa. It covers formal private firms only and is a first count.	MOVEMENT
Energy	**Rural electrification**	Rural electrification near 2 per cent against 90 per cent urban; a foundation solar-powered a school and clinic in April 2026. The World Bank's country update is the measure: rural electrification near 2 per cent against 90 per cent urban. Provision against it is small and specific. A Chinese-backed foundation solar-powered a school and a clinic in April 2026, in a district where grid access stands at 2.4 per cent, and the Vice-President ordered a four-day study in March to extend the grid to a neighbouring town, with a transformer due in April.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	**Robustness of government hardware and software**	A study puts ministry interoperability at about 15 per cent, big data at 21 and data analysis at 10. The measurement is the state infrastructure operator's own, published in July 2026 (study). It is the only assessment of government systems anywhere in the repository, no earlier reading exists to measure direction against, and the three figures are consistent with the development agency's own account of ministries that do not share data.	NO CHANGE a first measurement with no earlier figure behind it
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	The state operator's 2026-2030 plan orders maintenance shifted in-house; 80 technicians are to train in China. The training base is a decade old: 2,315 civil servants trained under the first phase of public administration computerisation, which also stood up the national data centre. The window's moves are two. The state operator's four-axis 2026-2030 plan orders it to cut tariffs, shift maintenance in-house and launch its own payment service; and 80 technicians are to train in China under the surveillance contract annexes. A security firm was hired in December 2025 to audit the networks after the Prime Minister pressed operators on fraud and coverage.	MOVEMENT
Cybersecurity	**National cybersecurity readiness**	The cybersecurity agency created by statute has no premises, staffing, budget or activity on record. 2026-10-09 — the Vice-President alleged that a registry official extracted several years of the Presidency's administrative files on the pretext of an archive digitisation project. The account is the government's own and no judicial finding is on file. It was created by the December 2024 law under the Presidency (creation). No incident response team, sector designation, audit programme or national strategy exists anywhere in the repository, so an agency named in a statute is the whole of the country's cybersecurity institutional record.	NO CHANGE

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	No interoperability framework exists, and the development agency names limited data-sharing by line ministries as its main obstacle to monitoring delivery. The absence was named by the World Bank diagnostic and no framework, standard or governing body has been published since (diagnostic, priority actions). At the agency's directorship handover on 7 August 2026, its outgoing Inspector General stated the consequence directly: limited sharing by line ministries is what stops it monitoring delivery against the national development strategy (handover).	NO CHANGE
Data Exchange	**Use of digital id in other systems**	A mobile wallet onboards customers on a SIM and a copy of the national identity document, the only recorded downstream use. The identity document is used for enrolment rather than verification: a fuel retailer and a wallet provider onboard customers with just a SIM and a copy of the national identity document. No query service against the register exists, and the interoperability framework that would carry one is still planned. The state operator's approved programme adds biometric know-your-customer checks on its own account rather than against a national register.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of health systems**	The health platform's two-district pilot completed in November 2025, against no unique patient identifier. The baseline is the World Health Organization's assessment: no unique patient identifier and no interoperable health data exchange. The platform arrived in stages — launched at Baney in March 2025 with a ministry data centre and more than 100 digital agents trained, pilot completed in two health districts in November opening a 2026 national rollout. A universal health insurance committee drafted a digitalisation plan tied to the national health information system in May 2026.	MOVEMENT
Data Exchange	**Interoperability of education systems**	SICOLO, the first digital education portal, launched in July 2026 with enrolment, results and a graduate directory. The education system's data has been a yearbook rather than a service: the ministry's statistical yearbooks name the management information system and describe no learner identifier, exam or payroll linkage. The portal launched in July 2026 is the first citizen-facing layer over it, carrying enrolment, results and a graduate directory. Whether it draws on the same records as the yearbooks, or on a register of its own, is not stated.	MOVEMENT
Data Exchange	**Interoperability of social protection systems**	The social protection law specifies no registry or management system; the insurance institute's system is obsolete and unreplicated. The institute's own delegate told parliament in April 2025 that its information system is obsolete, unreplicated and dependent on a single internet provider — a single point of failure stated by the operator. The law that might have required better passed at second reading in March 2026 specifying no registry and no management information system. What has changed is payment channel rather than data: benefits are now paid bank-only and a 2025 census purged 2,282 untraceable pensioners.	NO CHANGE
Digital Identity and CRVS	**Robustness of system**	The passport portal was restored on a new host in July 2026 after a maintenance outage. The credential itself is regional and well specified: chip, machine-readable zone and issuance-control rules under the CEMAC passport regulation, with 7,706 issued through missions abroad between 2022 and 2026. The service around it is less so. The application portal went down for maintenance and was restored on a new host in July 2026, and only six overseas posts capture data with more pending.	MOVEMENT
Digital Identity and CRVS	**Registration of entire population**	The biometric identity document is issued from a central agency, with a 2025 national tour reporting 7,670 dossiers obtained and 7,275 processed. Issuance takes about 30 days for the identity document and 14 to 17 days for a passport, and the tour figures remain the most recent held (tour, agency). The executive has invited parents to register children and adults over 18 to obtain the document (invitation). There is no digital identity: the World Bank diagnostic records a 2018 digital civil-registry pilot only and recommends building one, and nothing has been built since (diagnostic).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**National maintenance of id and credentials systems**	Document issuance runs through a state agency, extended to two further towns in June 2026, on a regional credential specification. The credential is not the country's own: it is the regional biometric passport, whose chip and issuance-control rules are set by CEMAC regulation, with a national agency as document custodian under ministerial procedures for missions abroad. The agency's own reach is growing — identity and passport services extended to two further mainland towns in June 2026 — while the underlying registry law dates from 1957 and reform is only under review.	NO CHANGE
Digital Identity and CRVS	**Authentication**	No verification service exists; identity is presented as a document copy, as in the wallet onboarding flow. Nothing in the repository records a query service against the civil register or the identity document. The one documented downstream use is manual: a wallet onboarding customers on a SIM and a copy of the national identity document. Biometric verification is being built inside a single operator rather than as a shared service: the state telecom's approved modernisation programme carries biometric know-your-customer checks.	NO CHANGE
Digital Identity and CRVS	**Digital id from birth**	Birth registration coverage passed 90 per cent from administrative records for 2024, from 46 per cent unregistered in 2019. The starting point was poor: 192,000 birth records digitised to 2019 with 46 per cent of children unregistered. The second vital events report of September 2025 puts birth and death coverage above 90 per cent from administrative records for 2024, drawn from hospital and community data. Registration is not an identifier, though: no number is assigned at birth and the registry law dates from 1957.	MOVEMENT
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	Registration feeds statistics rather than credentials: vital events reports draw on hospital and community data with no link to the identity document. The first vital events report describes hospital and community data feeding a statistical pipeline. That is the route the birth record takes, and it ends at the statistics institute. No link from the register to the identity document or the passport is described anywhere in the repository, and the registry law reform that might create one was still under interministerial review in November 2025.	NO CHANGE
Digital Identity and CRVS	**Use by other systems**	One documented use: a wallet accepting a SIM and an identity document copy at fuel stations. The identity document appears once in the repository as an input to another system, at onboarding for a mobile wallet at fuel stations. Everything else that would consume it runs on its own enrolment: the business single window on a company file, the tax identification number under a draft recoding decree, and social benefits on the insurance institute's own roll.	NO CHANGE
Digital Payments and Fintech	**Governance role of central bank**	No mobile-money licensing decision is on record, and bank and telecom applications have launched without one being reported. The absence of a licensed operator was named by the World Bank diagnostic and nothing has changed it (diagnostic). Two wallets nonetheless entered service during 2026 (market account), so services are running ahead of the authorisation that would govern them, which is the same pattern as the data-protection statute without its supervisory body.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**G2P functionality**	Benefits are paid bank-only and a 2025 census purged 2,282 untraceable pensioners. The insurance institute's delegate told the Chamber of Deputies in September 2025 that social benefits are now paid only into bank accounts, and that a 2025 census purged 2,282 untraceable pensioners. That is government-to-person payment through the banking system rather than a payment rail of the state's own. The order banning cash collection covers the flow in the other direction. Payroll credibility is uneven: a bank was ordered to repay 182m CFA to 12,000 civil servants over an unauthorised fee scheme.	MOVEMENT
Digital Payments and Fintech	**Revenue collection**	A treasury single account has a five-phase roadmap adopted and production targeted for the first quarter of 2027, with the annual tax licence already filed online. A census of all state bank accounts is complete and the account is to be built on the regional central bank's own systems, with no cost, agency or supplier stated (roadmap). The single tax licence moved online in January 2026, with no transaction or take-up figure published (tax licence). The Treasury moved card payment of taxes and fees to a pilot at its Malabo windows in November 2025, after a first phase at Baney and under the order banning cash collection, with a state-wide launch set for 1 January 2026 and cash still taken from payers without a card. No confirmation of that launch and no transaction count is held. 2026-09-28 - a Presidency order of 2025 prohibits cash collection of any tax or fee in the administration, requiring bank accounts or authorised electronic platforms; its text and compliance are not held.	MOVEMENT
Digital Payments and Fintech	**B2B and B2G functionality**	Cash collection of taxes and fees is prohibited, and chamber registration is required before any state contract or payment. The presidential order of September 2025 routes all public revenue to bank accounts or electronic platforms, which makes business-to-government payment electronic by default. On the identification side, registration with the chambers of commerce became a precondition of any state contract or payment from 1 January 2026. The procurement system that would carry the transaction is still a bill.	MOVEMENT
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	Five commercial banks and the regional central bank were pressed to expand cash machines, terminals and card issuance in February 2026. The expansion is sought for value-added tax control and tourism, and no deployment count has been published (pressure). A national plan for cash machines and terminals was launched in May 2025, with connectivity named by the banks and the state infrastructure operator as the limiting factor (plan). So the country has a plan, a ministerial push and no count of machines or terminals at either date.	MOVEMENT with no delivery figure
Digital Payments and Fintech	**Population uptake**	Two wallets launched in 2026, on a base holding 0.41 per cent of regional payment volume, the smallest share of six member states. The share is measured at end-2024 by the regional central bank (regional report). A bank wallet launched in February 2026 with a payment service and a prepaid card, with no user or transaction figure published (bank wallet). The state operator named a wallet of its own as part of its modernisation, again with no user or transaction figure (operator wallet).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Cross-border functionality**	Cross-border capability is regional and prudential: the deposit insurance ceiling rose to 8m CFA from December 2025. The repository holds no Equatoguinean cross-border payment instrument. What moved is the regional safety net: the deposit insurance ceiling rose to 8m CFA for individuals and 15m for firms from 10 December 2025. The country's share of regional electronic payment volume sits on the ledger as its own measure. No participation in a continental settlement system is recorded. The regional switch was live across the six member states with 91 participants by 2021, settling on a deferred net basis at the regional central bank (case study). No per-country participation figure is given.	NO CHANGE
Digital Payments and Fintech	**Consumer protection**	A bank was ordered to repay 182m CFA to 12,000 customers after the Vice-President found an unauthorised fee scheme. The intervention of April 2026 is the repository's only recorded consumer remedy in the payment system: a bank ordered to return 182m CFA to 12,000 civil servants over fees it had no authority to charge. It came from the Vice-President rather than a regulator or an ombudsman, and no standing complaints process is recorded. The regional layer supplies the other protection: a deposit insurance ceiling raised in December 2025.	MOVEMENT
Registries	**Population register**	Birth and death coverage above 90 per cent from administrative records, against a population still projected off the 2015 census. Registration has improved sharply — from 46 per cent of children unregistered in 2019 to coverage above 90 per cent for 2024. The denominator has not: the 2025 compendium still projects population off the 2015 census. The fifth population census has its legal basis in a 2025 decree and resolution and a scientific committee at work.	MOVEMENT
Registries	**Civil register**	The civil registry remains paper-based, with a 2018 digital pilot and fraudulent birth certificates identified as a control problem. The country hosted the continental civil-registration meeting in June 2025 and no digitisation milestone or registration coverage figure has followed (meeting). The government has stated it wants a rigorous control mechanism for issuing birth certificates, which is the same document the identity document depends on (control mechanism). A continental governance index scores civil registration at 37.5 out of 100 for 2023, 47th of 54 and up 37.5 points over the decade, the second most improved of its indicators for the country. The composite score does not measure whether records are digital.	NO CHANGE
Registries	**Address register**	No street coding exists: the responsible minister told parliament in March 2026 that its absence undermines the cadastre. The postal union's filed address format for the country carries no postcode field in any delivery mode, which is the formal position. The minister responsible put the practical one on the record: colonial-era plans and the absence of street coding undermine both the cadastre and the address system. No addressing programme has been announced against that statement.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Business register**	The single window reached two provincial capitals during 2025, and chamber registration is now a condition of state payment. The founding decree folds the notary step, the tax identification number and the treasury into one digitised deed, which remains the country's clearest working data exchange. It is spreading and hardening: extended to the provincial capitals of two mainland provinces during 2025, and from 1 January 2026 registration with the chambers of commerce is required before any state contract or payment. A single annual trade licence system opened training in February with a 40 per cent tax cut pitched at informal traders.	MOVEMENT
Registries	**Social protection register**	A 2025 census purged 2,282 untraceable pensioners from a roll of 137,445 affiliates. The institute's roll stood at 137,445 affiliates in the 2025 compendium, and a 2025 census removed 2,282 pensioners who could not be traced, with benefits moved to bank-only payment. The register runs on a system its own delegate calls obsolete, unreplicated and dependent on a single internet provider, and the social protection law passed in March 2026 specifies no successor.	MOVEMENT
Registries	**Electoral register**	The 2022 decree orders a periodic electoral census with no biometrics and no digital register. The decree is the operative instrument and is explicit in what it does not provide: no biometric capture, no digital register, a periodic census taken as an exercise rather than a maintained roll. Nothing since records a change of method, and no register size is published.	NO CHANGE
Registries	**Tax register**	The revenue system's registration, filing and audit modules were detailed in May 2026 as the route to a reliable taxpayer roll. The system was launched with development bank finance in October 2023, contracted to a supplier and due in the first quarter of 2026. In May 2026, after that date, the finance ministry was still setting out its tax registration, filing and audit modules. A single annual trade licence system opened training in February with a 40 per cent tax cut pitched to draw informal traders onto the register, and a draft decree would recode the tax identification number itself.	MOVEMENT
Registries	**Land register**	The first house-to-house cadastral census began at Bata in June 2026 under the 2025 cadastre law. Title has rested on the 2009 land law's concession basis, with registration of customary tenure optional, and on an 1906 survey statute that the cadastre bill approved by deputies in May 2025 replaces. Field work started in June 2026 at Bata, house to house. The consequences are already reaching households: residents along one highway were given a year to regularise title as the register forces case-by-case checks.	MOVEMENT
Sectoral management information systems	**Health**	National health accounts for 2021-2023 were presented by the health insurance technical committee (presentation). The universal health insurance technical committee presented the national health accounts for 2021 to 2023 (presentation). It was deployed under a malaria elimination programme (deployment). It is the only health information system in the repository, it covers one commodity class on one island, and no national health management information system, facility count or coverage figure exists.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Education**	Yearbooks for 2021 to 2023 were handed to four international agencies in May 2026, and the 2025/26 census began at Bata. The system's output is a yearbook series, running from the 2014/15 edition that names it through the 2020/21 edition. In May 2026 the ministry and its programme partner handed the 2021 to 2023 yearbooks to four international agencies, and in June the 2025/26 national school census began at Bata feeding the same series. No learner identifier is described in any edition.	MOVEMENT
Sectoral management information systems	**Social protection**	The insurance institute's system is obsolete, unreplicated and dependent on a single provider, by its own delegate's account. The delegate's statement to parliament in April 2025 is the most direct assessment of any Equatoguinean system in the repository: obsolete, unreplicated, single-provider dependent. A year later the law regulating the social protection system passed at second reading without specifying a registry or a management information system. The one operational change is the payment channel and the purge of 2,282 untraceable pensioners.	NO CHANGE
Sectoral management information systems	**Justice**	A justice ministry plan adds digitised judicial databases with no cost, supplier or timeline; a US$1.4m pledge is recorded. The action plan of October 2025 commits to digitised judicial and religious-sector databases and attaches no cost, supplier or timeline to either. Money is recorded against it from the other side: the development programme's 2024 annual report notes a US$1.4m government pledge funding judicial system digitisation. No system is recorded in operation.	MOVEMENT
Sectoral management information systems	**Tax**	The revenue system was contracted in 2023 and due in the first quarter of 2026; in May 2026 its modules were still being set out. The launch of works in October 2023 was development bank-financed, contracted to a named supplier and dated to the first quarter of 2026. The finance ministry's directive council was still detailing the registration, filing and audit modules in May 2026, which is a description of design rather than of a system in service. No go-live is recorded.	STALLED
Sectoral management information systems	**Customs**	A ministerial workshop agreed a single import-valuation database and an automated valuation module (workshop). A ministerial workshop agreed to build a single import-valuation database and to bring an automated customs valuation module into service (workshop). It is an agreement, not a system: no supplier, cost or date is stated. An undated page of the public finance reform programme lists a second phase of the SYDONIA customs software for Bata, Mongomo, Ebebiyin, Corisco, Aconibe, Cogo and Rio Campo, with computer equipment and network links to carry it outside Malabo. No date, cost or installation is on record.	MOVEMENT
Sectoral management information systems	**Land**	The cadastre moved from statute to field: the first census phase began at Bata in June 2026. The cadastre bill approved in May 2025 replaces an 1906 colonial survey law, which is the repository's measure of how far behind the record was. The first house-to-house phase began at Bata in June 2026, and the cabinet's first sitting of 2026 advanced rustic-land expropriations and a state-property bill. No parcel count or coverage figure has been published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Other GovTech and e-Gov	**e-government services**	The document agency opened two provincial offices with online appointment booking, and a civil-service management system is in implementation. The offices opened in June 2026 at two interior cities, with booking through the agency's own site, where citizens had previously travelled to central offices (offices, tariffs). An administrative-procedure tracker launched in 2021 lets citizens follow a procedure's status through the public service ministry's site, with no processing-time or usage figure published in five years (tracker). A civil-service management system with biometric attendance and automated payroll is in implementation on an estimated eighteen-month timeline, with a steering committee convened in March 2026 and a monitoring strategy (steering committee, timeline). 2026-10-06 - the government announced a digital edition of the official gazette with free online access and search.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	The cabinet's own record cites poor regional ICT equipment; provision since has been ad hoc. The cabinet record of July 2023 states the problem in the government's own words: poor ICT equipment at the regional delegations. What has arrived since is single deliveries rather than a programme — thirty desktops, printers and cameras to a community centre in a mainland province in March 2026. Services have travelled instead of equipment: document issuance extended to two further towns and a documentation drive to the island of Annobón.	NO CHANGE
Digitalisation of sub-national government	**Digitalisation of local government records**	Central applications reached one regional city: electronic government, human resources and civil registry apps are live, with Bata the only rollout. The computerisation agency's briefing to a consular post in March 2025 records three applications live — electronic government, human resources and civil registry — and Bata as the only regional deployment. What has spread since is service delivery rather than records: document services to two further towns and the business single window to two provincial capitals. The cadastre is the first record system being built outward from the field, beginning at Bata.	MOVEMENT
Rural digital data capture	**Digitalisation of rural health clinics**	The health platform's pilot completed in two districts in November 2025, opening a 2026 national rollout. The platform was launched at Baney in March 2025 with a ministry data centre and more than 100 digital agents trained, and its pilot in two health districts completed in November. Reach beyond the mainland is being considered rather than delivered: the health ministry weighed a telemedicine and drone logistics pilot with satellite links for the rural islands in July 2026.	MOVEMENT
Rural digital data capture	**Digitalisation of rural primary schools**	A community centre in a mainland province received thirty desktops, printers and cameras for a new computer room in March 2026. The largest counted reach into rural schools is a foundation programme: 16,041 pupils across 52 to 62 Catholic primary schools. State provision is smaller and more recent: thirty desktops, printers and closed-circuit cameras to a Kie-Ntem community centre's new computer room in March 2026, and the education minister's citation of workshop rehabilitation at a coastal polytechnic in January.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural registry offices**	A third mass documentation drive reached Annobón in July 2026; the island still has no permanent office. Registry capacity outside the two main cities is delivered by visit rather than by office: the third documentation drive to Annobón in July 2026 brought identity and passport issuance to the island and left no permanent presence behind. Two mainland towns did get standing services in June 2026, ending trips to Bata or Malabo.	MOVEMENT
Rural digital data capture	**Digitalisation of rural police stations**	No station-level system is recorded; the security ministry's 2026 draft budget floats digitalisation and an AFIS revival. The repository holds nothing on Equatoguinean police stations outside the capital. The one relevant document is a budget submission: the security ministry's 2026 draft floats ministry digitalisation and the revival of a fingerprint identification database. That is a funding request, not a system. The state's most visible security technology is the video surveillance programme financed by a Chinese development bank loan, whose annexes added plate recognition in March 2026.	NO CHANGE

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	The cabinet approved the state operator's programme carrying artificial intelligence service bots and biometric checks in May 2026. The administration's own computerisation plan carried nothing of the kind: the 2024 action plan names a data centre, a fibre ring and e-mail, with no artificial intelligence component. The first approved deployment is in a state-owned operator rather than a ministry: the cabinet-approved modernisation programme of May 2026 carries artificial intelligence service bots, biometric know-your-customer checks, fifth-generation service and a zero-paper target.	MOVEMENT
AI	**Use of AI in sectoral management information systems**	The statistics institute pressed for artificial intelligence in health statistics at the United Nations in March 2026; no system operates. The institute's head spoke for the African Group at the United Nations statistical commission in March 2026, pressing for artificial intelligence in health statistics under rights-respecting governance. It is a position taken abroad rather than a system at home: nothing in the repository records artificial intelligence inside an Equatoguinean sectoral information system. The national artificial intelligence forum of May 2026 is likewise discussion rather than deployment.	MOVEMENT
AI	**Development of national / regional AI systems**	The country holds a state secretariat and a director-general for artificial intelligence, neither with a published mandate, budget or workplan. The secretariat was first named at secretary-of-state level in August 2024 and changed hands in July 2026 under a decree of 23 June (first appointment, current decree, handover). A director-general for the technology sits within the transport and telecommunications ministry, again with no published mandate, budget or workplan for the directorate (directorate, public-sector programme). Two named offices, a draft law and a proposed authority, and no deployed system, dataset, compute facility or use-case register anywhere in the repository.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Control of AI abuse**	The 2024 social media and cybercrime law names no artificial intelligence and no synthetic media. The law of 23 December 2024 criminalises computer fraud, identity theft and false news online, which is the frame any synthetic-media case would have to be brought under. The government reasserted the law's full force in July 2026 amid rising complaints, naming neither artificial intelligence nor deepfakes. No AI-specific rule or prosecution is on the record.	NO CHANGE
ICT Industry	**National capacity in DT-related production**	Parastatal directorships were filled by competitive interview, and the second state operator's merger is halted pending an audit. Article 16 of the public enterprises law was invoked to remove supervising officeholders from parastatal boards, and director-general posts at four state companies were filled by competitive interview against stated criteria (appointments, incompatibility regime). The state infrastructure operator is now led by a new director-general and deputy after that process, replacing one of thirteen years' standing; the new leadership's first recorded act was a meeting with its Chinese equipment supplier on collaboration strategies, with no contract, scope or value attached (new leadership, handover). The second state operator, announced at about US$50m with 260 towers and 90 per cent coverage, has had its merger with a foreign group halted until an audit establishes the assets, liabilities and debts of the company being merged (halt).	MIXED board appointments were opened to competition while a second state operator's merger was halted for an audit
Innovation ecosystem	**Technology hubs**	A digital transformation forum convened in July 2026 naming artificial intelligence, electronic payments and public-administration reform as its three priority axes. It was backed by the national development agency (forum). It is the only convening of the technology sector the repository holds, and no hub, incubator, accelerator or workspace appears anywhere in the record.	MOVEMENT
Innovation ecosystem	**Tech startup ecosystem**	A digital marketplace launched in August 2026 as a structured replacement for the messaging groups that carry much of the country's informal commerce. It was launched before ministers by its founder; it is a private platform and no user count, payment integration or regulatory status is published (marketplace). A separate platform is named by the ministry as the national electronic commerce platform, on which small firms, traders and farmers are to be trained to open free online stores, and is organising the country's first electronic commerce and digital payments workshop for September and October 2026; no ownership, transaction volume, merchant count or launch date for the platform itself is stated (national platform).	MOVEMENT

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	A digital transformation and cybersecurity programme for multisectoral officials was delivered once in August 2025 and not repeated. No later cohort, participant count or evaluation is on record (programme). It is the only civil-service training the repository holds, against a civil-service management system now in implementation and a ministry maturity study that puts data-analysis capability in the low single figures.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (general population)**	A development scheme selected 50 trainers from 466 applicants in July 2026 to cascade skills to 2,000 young people. The standing facility is a virtual training centre opened to the public in 2021, the first of its kind in the country. The window's programme is larger and time-bound: 50 trainers selected from 466 applicants in Malabo in July 2026, to cascade skills to 2,000 young people by September. A solar-powered offline digital library holding two million items was pitched to two ministries in April with no deal agreed.	MOVEMENT
Training and skills	**DT-related training in secondary education**	A UNESCO-backed programme is to reach 1,000 young people and 400 trainers in artificial intelligence and robotics by 2028. Technical and vocational education is where the ministry places computing: the education minister named information technology among the priority technical trades and cited workshop rehabilitation at a coastal polytechnic in January 2026. The programme with the largest stated reach launched in July 2026: a train-the-trainers scheme to reach 1,000 young people and 400 trainers in artificial intelligence and robotics by 2028. Neither source states how many secondary schools teach computing.	MOVEMENT
Training and skills	**DT-related university facilities and qualifications**	A technology institute trains more than 200 students with Chinese universities under a cooperation roadmap. No later enrolment or graduation figure is on record (training). It is the only training institution the repository names, and the draft artificial intelligence law would make it and the national university prospective certification centres, so a single institute carries both the current provision and the planned one. 2026-08-22 — an investigation opened into where more than 425 million CFA francs allocated to equip the university computer room at Bata went; no finding is published.	NO CHANGE
Training and skills	**Graduates entering DT ecosystem**	Ten young people were selected for a vendor's technology programme in China (report). Ten young people are travelling to China under a vendor's seeds for the future programme (report). It is a vendor programme, and the repository holds no domestic training pipeline behind it.	MOVEMENT
Research institutions	**Think tanks and academic departments contributing to DT policy**	Doctoral findings on big data, interoperability and digital identity were presented at the July 2026 forum, the only national research on record. No research programme, funding line or publication is held (presentation). The national development strategy proposes a science, technology and innovation fund that may be financed by a special tax on oil and gas exports, and that fund does not exist, so one doctoral presentation is the whole of the research record.	MOVEMENT

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	No complaints channel exists; redress came by Vice-Presidential intervention in the one recorded case. The state's citizen-facing digital layer is an administrative procedure tracker and the document services around it. Nothing in the repository offers a route to complain. The one recorded remedy came from the top: the Vice-President found an unauthorised fee scheme and ordered a bank to repay 182m CFA to 12,000 customers in April 2026.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen participation in policy**	The consultation body created by decree in 2021 had its composition deferred and has not been recorded meeting. The decree adopting the national development strategy creates an observatory and defers deciding who sits on it. Nothing since records it constituted. The participation that has happened is by invitation to single events: a national artificial intelligence forum drawing ministry, university and international research participants in May 2026, and an interministerial task force on paying digital creators formed in April.	NO CHANGE
Access to services	**Gender equity**	No sex-disaggregated digital figure is published; the national yearbook carries none. The eighth national statistical yearbook publishes civil service headcount, online visas and debt, and no connectivity or digital-skills figure by sex. Nor do the programmes count it: the artificial intelligence and robotics scheme targets 1,000 young people and 400 trainers and the trainer cohort selected 50 from 466 applicants, neither with a sex breakdown. The absence is the finding.	NO CHANGE
Access to services	**Inclusion of persons with disabilities**	The state's own review names no disability statute, only a 2022 national agenda. The national report to the human rights council's periodic review is the state's own account, and it names no disability statute — a 2022 national agenda is the whole of the framework it cites. With no statute there is no accessibility duty to attach to public digital services, and nothing in the repository records disability-disaggregated access data or an accessibility standard for any Equatoguinean platform.	NO CHANGE
Access to services	**Inclusion of refugees and IDPs**	The refugee agency records no domestic refugee status law despite treaty accession. The agency's rights mapping sets out the position: Equatorial Guinea has acceded to the refugee treaties and has enacted no domestic status determination law. Without a status procedure there is no registration or documentation system to assess, and no refugee population figure appears in the repository for the country.	NO CHANGE
Digital divides	**Bridging of digital divides**	Twenty of 34 planned towers were live on the mainland trunk road by September 2025. Coverage is being extended along the mainland interior corridor: twenty of 34 planned towers live on the Bata-Mongomo road by September 2025, with the remainder inside the 85 per cent coverage target for end-2026. The divide that is not closing is electrical: rural electrification near 2 per cent against 90 per cent urban, and a mainland district at 2.4 per cent grid access.	MOVEMENT

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	A successor strategy for 2027-2031 was opened in April 2026 and the first national indicator catalogue launched in June. The 2022-2026 strategy carries a diagnosis, an action plan and costed activities, and its term is ending. The institute's committee reviewed 2025 progress and opened work on a 2027-2031 successor in April 2026, and the first national indicator catalogue was launched with regional statistical support in June to standardise definitions across producers. 2026-08-25 — the government adopted a national quality-assurance framework for official statistics, a standard protocol for collecting, processing and disseminating socio-economic data.	MOVEMENT
National statistics	**Censuses and surveys**	The fifth population census and a first agricultural census had their strategic documents validated in August 2026, with no enumeration date published. The census programme drew on a south-south exchange studying Burundi's digital census experience (exchange), and the statistics council reviewed progress on the country's main statistical operations (council). Both run together under a decree of March 2025, with scientific committees created by a resolution of April 2025, and the last population census was in 2015 (validation). The validated project document is stated to set objectives, methodology, timetable and the agricultural sample size, none of which is published; preparation has now been validated twice in four weeks without an enumeration date being fixed (earlier validation).	MOVEMENT
National statistics	**Statistics from administrative data**	The eighth national yearbook publishes 19,586 civil servants and 10,468 online visas approved, from administrative sources. The yearbook series is administrative statistics in practice: the eighth edition carries 19,586 civil servants, 10,468 online visas approved and public debt at 33.3 per cent of output. Vital events are the other stream, compiled from hospital and community records into a first report in 2024 and a second the following year. What administrative data cannot supply is the denominator: the population is still projected off the 2015 census. 2026-09-03 - the institute went out to the ministries: a ministry-by-ministry supervision tour of statistical services began on 2 September at the interior and education ministries and runs to 9 September, ordered by the national statistics council's eighth session of 27 August, to assess each service's state and consolidate the national statistical system. No findings, service inventory or report from the tour is published, and the account is the institute's own. 2026-09-25 - the ninth yearbook, covering the last five years, was presented in Malabo, the institute naming weak administrative registers, undigitised processes and poor information-system interoperability among its outstanding challenges.	MOVEMENT
Open data	**Use of open data**	Data collection for an extractive-industries transparency report opened in July 2026, the last outstanding measure before an international programme validation. No report has been published (data collection). No national open data portal, policy or dataset inventory exists anywhere in the repository, so a single sector report driven by an external validation deadline is the entire open-data record.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	**Agricultural use of satellite data**	Imagery use is forestry rather than agriculture: a regional deforestation-driver methodology covering six states including this one. The national instrument is a climate submission: the forest reference level submitted to the climate convention rests on satellite-based deforestation monitoring, with gaps flagged in it. What was added in the window is method rather than data: a global methodology for assessing deforestation and degradation drivers, published in October 2025 and covering six Central African states including Equatorial Guinea. No agricultural monitoring platform is recorded, and the first agricultural census is only now getting its legal basis.	NO CHANGE
Use of satellite data	**Meteorological use of satellite data**	The only operational feed is aviation: the main airport's information publication confirms a regional agency satellite weather feed. The aeronautical information publication effective August 2025 confirms the satellite weather data feed serving the main international airport, supplied through the regional air navigation agency. Nothing in the repository records a national meteorological service receiving station, a forecasting product built on satellite data, or an early-warning system using it.	NO CHANGE

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	No bilateral investment treaty, no active development finance project and no hyperscaler memorandum. The United States' own investment climate statement is unambiguous: no bilateral investment treaty, no active development finance project, no hyperscaler memorandum. A meeting in the window changed nothing on the record: a deputy secretary of state and the President discussed United States investment in April 2026 with no deal or memorandum named. The health ministry separately weighed a telemedicine pilot with a United States supplier, which is a commercial consideration rather than a state commitment.	NO CHANGE
China activities	**Chinese MoUs, engagements and commitments**	A technology cooperation roadmap aims to make the country a regional technology hub, and the state operator signed a network contract with a Chinese vendor in July 2026. The Vice-President instructed the finance ministry on 7 October 2026 to investigate and expedite the financing file for the operator's network agreement with the vendor, slowed by Treasury payment arrears to the operator. The roadmap names institute training and a cybersecurity and artificial intelligence forum at the new capital, with no delivery, disbursement or completion figure on record (roadmap). The operator's modernisation programme covers fifth-generation networks, embedded subscriber modules, public wireless access and fibre reactivation on that contract, signed on 9 July 2026 (contract, programme); the independent press reports opaque procurement and overlapping state operators around it. The same vendor is behind the substation fibre proposal and was met by the infrastructure operator's new leadership within a fortnight of its appointment, so one supplier stands behind the network, the grid proposal and the training pipeline.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
EU activities	**EU MoUs, engagements and commitments**	The Commission's own page records no delegation and no country programme for Equatorial Guinea. The country page is the clearest statement of absence in this unit's file: no European Union delegation, no country programme under the external financing instrument, ties handled from a neighbouring capital. European engagement is bilateral and unresolved: the President pressed Spain in October 2025 to return funds after a ten-year delay on a stalled digital terrestrial television project.	NO CHANGE
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	No Gulf digital instrument is on the record for Equatorial Guinea. Nothing in the repository names a Gulf state, sovereign fund or operator in connection with Equatoguinean digital infrastructure, financing or skills. The partnerships that do carry the estate are Chinese and, at proposal stage, Nigerian: the vendor memorandum for electronic government and the submarine cable and data centre agreement of February 2026.	NO CHANGE
India activities	**India MoUs, engagements and commitments**	India's brief records trade at US$463m in 2024-25 and a digital technology course held in November 2025. India's own country brief is the only source in the repository on the relationship: bilateral trade at US$463m for 2024-25, and a digital technology course delivered under its technical cooperation programme in November 2025. No digital public infrastructure agreement, line of credit or system deployment is named, so the engagement is training and trade rather than infrastructure.	MOVEMENT
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
National open data portal	A government open-data portal or published open-data policy, or an official statement that none exists. The EITI reporting process is the only open-data commitment on the record.	not yet probed
National addressing	A national addressing decree, a street-naming and numbering programme, or a postcode scheme filed with the postal union.	2026-09-04
Refugee legal framework	A domestic refugee status determination law, an asylum procedure decree, or a registration and documentation instrument for refugees and asylum seekers.	2026-09-04
Disability rights framework	A disability rights statute, an accessibility regulation, or a digital accessibility standard for public services.	2026-09-04
United States digital engagement	A bilateral investment treaty, a development finance project, or a memorandum with a United States cloud or platform company.	2026-09-04
European Union digital cooperation	A Global Gateway commitment, a country programme allocation, or a financing agreement naming Equatorial Guinea.	2026-09-04
FY2025 enacted budget, digital investment lines	The Ley de Presupuestos Generales del Estado 2025 volume with its Programa de Inversiones Públicas, read into the budget extract; FY2025 is held only from the comparator columns of the 2026 law.	2026-09-25
Rule on where state data is hosted	A decree, government cloud policy or implementing regulation of Ley 1/2016 fixing where state data is held and under whose law.	2026-09-25
Hosting and supplier of the national identity database	A CNEDOGE, interior ministry or supplier statement naming where the identity and passport database is hosted and who built and maintains it.	2026-09-25
Data jurisdiction, portability and exit terms of the Huawei and BCN agreements	Publication of the December 2025 Huawei e-government memorandum or the February 2026 Backbone Connectivity Network agreement text.	2026-09-25
