PROGRESS REPORT

Libya: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	The prime minister approved a National Strategy for Government Digital Transformation in April 2025, with no text or costing held; the civil service ministry began preparing a plan of its own in August 2026. The Ministry of Civil Service held a preparation meeting on 4 August 2026 for a national digital transformation plan, with no timetable, budget, lead agency or published document behind it (preparation meeting). The prime minister approved the National Strategy for Government Digital Transformation on 21 April 2025, set on four tracks: integrated digital government, a competitive digital economy, an inclusive digital society and a safe digital environment. The information authority's chairman, who led the committee that prepared it, named a national digital accessibility policy among its outputs. It is named elsewhere in this repository as the parent of the country's digital identity work, but no text, period, targets or costing for it is held.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**ICT strategy**	The National Telecommunications and Informatics Strategy 2023-2027 remains in force, with root servers delivered under it in October 2025. The strategy period runs to 2027 and nothing on file records a mid-term review, a successor or a costing. Its one recorded delivery is the pair of root-server instances that entered service in Tripoli and Benghazi in October 2025, presented by the authority as a step in national control of internet infrastructure (root servers).	NO CHANGE
Strategies, plans and policies	**Broadband strategy**	The 2025-2030 digital agenda sets a broadband rollout to 2027 and records the laws behind it as unenacted. The agenda issued in October 2025 is the first standing digital development plan the repository holds for Libya, and it puts broadband rollout on a horizon to 2027 while stating that the data protection and electronic commerce laws it relies on remain unenacted. What is moving underneath it is wholesale access rather than a plan: the regulator and the fixed operator set fibre-pair lease prices and opened access networks to private investment in December 2025. 2026-09-28 - the telecoms authority and the ITU opened a review of the national emergency telecommunications plan and early-warning systems, conceived after the 2023 Derna flood cut communications; no draft is on record.	MOVEMENT
Strategies, plans and policies	**Data storage / cloud strategy**	A National Cloud Computing Policy went to national consultation with ESCWA in January 2026; the final text is not published. The consultation was held on 1 January 2026 and the policy is framed as the arrangement for hosting government data and services, pressed on the state's sovereignty over its own data (consultation). No draft text, timetable or hosting standard has been published since, so the repository holds the intention and not the instrument.	MOVEMENT
Strategies, plans and policies	**Data interoperability framework / roadmap**	A roadmap proposes an interoperability framework and none had been adopted as at December 2025. The regional commission's roadmap sets out best practice and proposes a Libyan government interoperability framework; nothing had been adopted when it was published. The governance layer that exists is a method rather than a standard: the information authority's national guide for government data sets a six-stage approach with no interface specification or schema behind it. The mandate to interconnect state bodies has sat with the authority since a 2018 decision.	NO CHANGE
Strategies, plans and policies	**AI strategy**	The prime minister adopted a 2026-2030 National Artificial Intelligence Strategy on 1 June 2026, replacing the 2025-2030 edition published eight months earlier. The first edition, prepared with ESCWA, was published in October 2025 (2025-2030 edition). The 2026-2030 edition was adopted at an official ceremony alongside an ethics charter (adoption). Its targets are stated rather than measured: 80 per cent of government entities using artificial intelligence, 70 per cent activation of the national digital identity, 10,000 staff trained, 100 startups, half of government transactions automated and 70 per cent of paper records digitised (adoption).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data localisation policies**	Circular 18 of 2025 bars all cross-border transfer of Libyan banking data and requires certified in-country hosting. The central bank's regulation is the strictest localisation rule the repository holds for Libya: banking data may not leave the country, hosting must be certified to international information-security and card-industry standards, and breaches carry a penalty of LYD 100,000 each. It is sectoral. No economy-wide localisation instrument exists, and the national digital agenda records the general data protection law as still unenacted.	MOVEMENT
Strategies, plans and policies	**Data governance policy**	The identity authority's Government Data Governance Policies moved from presentation in February 2026 to first application in April, with no adoption instrument stated. The policies were presented at a Tripoli cloud-computing workshop in February 2026 as a national vision for data ownership, integration and cybersecurity-by-design (presentation). They were applied in April 2026 as the reference framework for the Libyan Zakat Fund's digital platforms, the only application on file (application). The authority's own account is the sole source, and no adoption instrument or gazette date is stated, so the standing of the policies cannot be established from this repository.	MOVEMENT
Strategies, plans and policies	**Open data policy**	A draft national open-data policy was issued in November 2025 alongside the open government data platform; no adopted text has followed. The identity authority launched the platform on 27 November 2025 with a draft national open-data policy and a National Technical Guide covering standards and metadata for adoption by government entities (launch). Nine months on, the repository holds no adopted policy, no adopting decision and no list of the entities that have taken the guide up (workshop account).	MOVEMENT
Legislation and regulation	**Data protection legislation**	No data-protection statute is in force; the National Artificial Intelligence Strategy sets 2026 as the target for one, with nothing enacted by August. The strategy published in October 2025 names a data-protection law among its 2026 deliverables (strategy). Nothing had been enacted as at 10 August 2026, and the repository holds no draft text, no sponsoring ministry and no parliamentary stage for it. Personal-data systems have meanwhile continued to be built and launched without one.	NO CHANGE
Legislation and regulation	**Cybersecurity legislation**	A comprehensive cybersecurity law is in drafting on the eastern legislative track, discussed with the National Security Council in July 2026. The House of Representatives established a committee for the draft under the Speaker's decision 115 of 2025, and drafting was discussed with the National Security Council on 16 July 2026 (drafting). No text has been published, no reading has been recorded, and the repository holds nothing on how a law passed on that track would apply in the west of the country. Law No. 5 of 2022 on combating cybercrimes, 53 articles in force since 27 September 2022, lets the national information security authority monitor and block content and makes encryption subject to its licence.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Legislation covering digital id**	Law 8 of 2014 creates the twelve-digit national number, mandatory from birth for every state service. The law is the statutory basis for everything built since: a twelve-digit number assigned from birth and required to obtain any state service. The institution beneath it is older — the civil registry authority created by decree in 1998 — and the competences were redistributed by a 2018 presidential council decision that gave the information authority the national database. No amending statute has been passed.	NO CHANGE
Legislation and regulation	**Digital payments legislation**	A prime-ministerial decree of 6 March 2026 obliges treasuries and collecting agencies to accept electronic payment, the first such instrument on file. The decree was issued on 6 March 2026 and is reported alongside a cut in the foreign-exchange levy, making electronic acceptance a duty of state collecting bodies rather than an option (decree). The repository holds no implementing regulation, no compliance deadline and no penalty for a body that does not comply.	MOVEMENT
Legislation and regulation	**Legislation enabling data interoperability**	A 2018 decision hands the information authority the national database and the mandate to interconnect state bodies. The decision is the operative instrument: it redistributes the national number project's competences and gives the authority both the database and the linkage mandate. The service it produced is running — electronic linkage connecting national bodies to the central database, with no civil registry link named — while the framework that would standardise it is still only proposed.	NO CHANGE
Legislation and regulation	**AI legislation / regulations**	The adopted AI strategy names the legislative vacuum and sets a four-stage law roadmap to 2030. The strategy adopted in June 2026 is unusually direct about its own starting point: it names a legislative vacuum and sets a four-stage roadmap to legislation by 2030. No artificial intelligence statute is in force. The instrument that arrived first is soft: the regulator reopened the draft national artificial intelligence charter for public comment in April 2026, five weeks before adoption, and the information authority convened a meeting in April to move the strategy from drafting to implementation.	MOVEMENT
Legislation and regulation	**E-commerce legislation**	Law 6 of 2022 covers electronic signatures, contracts and fifteen disclosures to online buyers; no e-commerce act follows it. The law enacted in October 2022 is the operative instrument for electronic dealing: signature and contract rules, and fifteen matters a seller must disclose to an online buyer. It is not a full electronic commerce regime, and the national digital agenda of October 2025 records the electronic commerce law as still unenacted alongside the data protection law. 2026-09-15 — importing outside banking channels is prohibited from 30 September, tying imports to banking and customs procedures and to trade-system registration. Traders have questioned whether the date can be met.	NO CHANGE
Legislation and regulation	**Statistics legislation**	Law 16 of 1963 still governs statistics and censuses, its penalty scale unchanged since enactment. The statute creates the central statistics committee and remains the governing law, with penalties still expressed in the currency unit of 1963. Nothing has replaced it. The statistics development strategy that ran to 2023 carried no adoption decree the repository could locate and has not been renewed, so the sector runs on a sixty-three-year-old law and an expired plan.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Access to information legislation**	The cabinet's draft bill sets a request-and-appeal procedure and remains unenacted. The draft law on the national information system would give Libya a request-and-appeal route to public records. It has not been enacted. What publication happens is voluntary: the audit bureau published its 2024 annual report on 31 December 2025 after delay, with no right-to-information law compelling it. The constitutional declaration guarantees expression and privacy and creates no access right.	NO CHANGE
Data protection	**Data protection authority**	No supervisory authority exists and none is named in the strategy that targets a data-protection law, leaving new platforms to protect data on instruction alone. The National Artificial Intelligence Strategy sets a data-protection law for 2026 but does not name a regulator to administer it (strategy). The practical consequence shows in the Libya Experts Forum registration platform, reported ready for launch in July 2026: those preparing it were instructed to protect registrants' data, with no statute and no regulator to apply (platform).	NO CHANGE
Data protection	**National data protection readiness**	Two databases holding personal records were authorised in August 2026, one of expatriate workers and one of event participants, neither with a stated legal basis. The interior and labour ministries agreed a unified national database of expatriate workers on 3 August 2026, with a dedicated platform and no authorising instrument, retention limit or oversight body named (database). The economy and trade ministry launched an exhibitions and conferences platform on 9 August 2026 building an integrated record of organisers, participants and visitors, with no supplier, hosting arrangement or data-protection basis stated (platform).	REGRESSED two new population-scale databases authorised with no protective framework behind them
Regional collaboration	**Regional policy collaboration**	Libya took the chair of the Arab working group on artificial intelligence and digital infrastructure, declared for the ITU Council and signed an audit roadmap with Tunisia. The Arab ministers' executive bureau recorded Libya's allocation of the chair of the working group on artificial intelligence, data and digital infrastructure on 1 August 2026 (allocation). A delegation canvassed the country's ITU Council candidacy bilaterally at the African Telecommunications Union plenipotentiary in Abuja in July 2026 (candidacy). Libya's Audit Bureau and Tunisia's Court of Auditors signed a phased roadmap in Amman on 15 August 2026 covering exchange of expertise, capacity building, digital systems and cooperation on artificial intelligence and its governance; no phase dates, budget or workplan is published (roadmap).	MOVEMENT
Regional collaboration	**Regional legal harmonisation**	Libya signed the United Nations cybercrime convention in October 2025; neither it nor the 2010 Arab convention is ratified. The Arab League's own tally records Libya as having signed the 2010 convention on information technology offences and never ratified it. The pattern repeated: Libya signed the United Nations Convention against Cybercrime at Hanoi in October 2025 among sixty states, with the anti-corruption authority's head leading the delegation. Where harmonisation does bite it is technical rather than legislative: the standards bodies of Libya and Tunisia concluded the twentieth meeting of their mutual recognition working group in December 2025.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Shared regional infrastructure**	The Medusa submarine cable reaches Libya through Misrata as part of an eight-country Mediterranean system; no further landing has been recorded. Medusa was inaugurated at Misrata in May 2025 as an 8,700 km system serving Italy, Spain, Portugal, Morocco, Tunisia, Greece, Egypt and Cyprus, with Tripoli and Benghazi landings planned (inauguration). Nothing has been published since on either planned landing, so the country's share of a regional system remains a single station.	NO CHANGE
Regional collaboration	**Cross-border data transfers**	Circular 18 of 2025 bans all cross-border transfer of Libyan banking data outright. The central bank's regulation prohibits banking data leaving Libya and requires hosting inside the country certified to international security and card-industry standards, with a penalty of LYD 100,000 per breach. A flat prohibition is a harder rule than most transfer regimes: there is no adequacy route, no consent route and no derogation on the record. Outside banking, no general instrument governs transfers at all, the data protection law being still unenacted.	REGRESSED
Standards	**National interoperability standards**	No framework is adopted: a roadmap proposes one and the national data guide sets a method, not a standard. The national guide for government data of December 2022 sets a six-stage governance method and stops short of any interface specification or schema, which is what an interoperability standard would have to supply. The regional commission roadmap of December 2025 proposes a framework and records none as adopted. Meanwhile the exchange layer runs without one, through the authority's electronic linkage service and the national data exchange already on the ledger. 2026-09-06 - the committee behind the national information system fixed its own composition: at its sixth regular meeting in Tripoli on 1 September it reviewed financial indicators and tied permanent seats to the office of director of an information and documentation centre, with a written letter required for a proxy. Its mandate, published output and the indicators it reviewed are not held. Payments have a published specification the wider exchange lacks: the central bank's developer portal documents LYPay's participant APIs and NUMO, the national QR standard for customer- and merchant-presented payments, on a page last revised in 2025.	NO CHANGE
Standards	**National quality standards**	The standards body adopted its 2026 plan, new specifications and a quality mark rule in February 2026. The governing statute is Law 5 of 1990, which creates the standards centre and makes its standards binding nationwide, with a penalty ceiling frozen at LYD 1,000 since enactment. The centre's supreme committee reviewed the 2025 annual report and adopted a 2026 plan, new specifications and a quality mark licensing rule in February 2026. No count of information technology standards adopted is published.	MOVEMENT
Standards	**Adoption of international standards**	Operators were convened in April 2026 to begin the move from IPv4 to IPv6, with no timetable or target published. The communications authority convened operators on 22 April 2026 to start the transition (convening). No timetable, adoption target or measurement of current IPv6 traffic accompanies it, and the repository holds no other national programme to take up an international technical standard.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	A Libya Experts Forum registration platform was reported ready for launch in July 2026, the one channel on file for outside expertise. The application was reported ready for launch on 23 July 2026, intended to register experts willing to contribute to national work (platform). No launch, registration count or terms of reference have been published since, and the repository holds no other structured route for non-governmental contribution to policy.	MOVEMENT
Public debate and participation in policymaking	**Open discussion of government policy**	The constitutional declaration guarantees expression and sets no consultation duty; two consultations ran anyway in 2026. The consolidated declaration guarantees expression and privacy and imposes no obligation to consult before adopting policy, so every consultation in Libya is discretionary. Two ran in the window. The regulator reopened the draft national artificial intelligence charter for public comment five weeks before adoption in April 2026, and the information authority and the development programme opened community consultations for the seventh national human development report in February.	MOVEMENT

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The communications authority drew LYD 25.2m from January to August 2026, none of it development spend, after LYD 41.2m in all of 2025. The central bank's 2025 statement puts the communications authority's spend at LYD 41.2m against total state outlay of LYD 136.8bn, about 0.03 per cent. The statement for January and February 2026 showed no development spend on the authority, with salaries also short. The statement for January to August 2026 puts the authority and its affiliates at LYD 25.2m, all salaries and operating costs, against state outlay of LYD 68.8bn, with August salaries not yet included. The fiscal frame did change: the governor announced the first unified state budget in more than thirteen years in April 2026. What the repository does not hold is that budget's text, so no digital appropriation for 2026 can be read. 2026-10-08 - the central bank's statement for January to September 2026 puts the communications authority and its affiliates at LYD 31.7m of state outlay of LYD 88.6bn.	NO CHANGE on the central bank's execution figures
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE
MoUs and other agreements	**Strategic relationships**	Talks with the People's Bank of China point to a financing relationship, including yuan-denominated panda bonds for reconstruction; no agreement is held. A newspaper account of August 2026 reports that talks between the Central Bank of Libya and the People's Bank of China cover both accession to China's payment network and an intention to issue yuan-denominated panda bonds to help fund post-conflict reconstruction (account). No signed agreement, issue size or timetable is stated, and no central-bank statement is held, so the relationship rests on a single report.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	**Mobilisation of non-state finance**	A sixty-article partnership regulation was adopted in July 2025 and a state seed fund created in January. The partnership regulation is the framework private capital would enter public projects through: sixty articles, with the courts holding jurisdiction over disputes and no digital-sector figure attached. The seed fund created in January 2025 supports and guarantees financing for startup innovation companies and requires an artificial-intelligence-screened application platform, which is state money rather than private. Donor money is separate again: a EUR 11.2m technical assistance project for public financial governance and digital investment runs 2026-2029.	MOVEMENT
New investments	**Development-partner project financing**	Development partners carry the two named programmes on file, a UNDP data-systems memorandum and a UNDP-backed institute, with no value published for either. UNDP and the identity authority signed a memorandum on data systems and human development in July 2025 (memorandum), under which the Seventh National Human Development Report was in preparation as at February 2026 (progress). The Ministry of Planning launched a professional master's institute in artificial intelligence and cybersecurity with UNDP in November 2025 (institute). Neither engagement carries a published value, duration or disbursement schedule, so the repository can record partner activity but not partner financing.	MOVEMENT

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	Commercial 5G began in central Tripoli in January 2026 and the state operator is in talks with Nokia; no penetration figure is published. Almadar Aljadid began the country's first commercial 5G service in central Tripoli on 29 January 2026, with extension to the rest of the country stated to follow (launch). A regional review a year later placed Libya among the North African markets where 5G is live (review). LTT met Nokia on 15 July 2026 on 5G cooperation, with no agreement announced (meeting). No subscriber count, coverage share or penetration measure is published in this repository, so what is recorded here is network availability rather than take-up.	MOVEMENT
Connectivity	**Internet usage**	74 per cent of women use the internet and household internet stands at 92 per cent on the 2024-25 survey. The regulator's own dashboard puts 9.06m internet users and 15.4m mobile lines for 2024, a line count well above the population. The household survey is the better instrument and gives a different picture: 92 per cent of women using mobile phones, 74 per cent using the internet, household internet at 92 per cent. The international agency series carries 88 per cent internet use for 2022 and leaves every household and gender indicator unreported.	NO CHANGE
Connectivity	**Mobile affordability**	Operator tariffs run from 0.5 LYD for 50MB to 80 LYD for 80GB; no regulated price basket is published. The repository holds no regulated tariff order and no affordability basket for Libya. What it holds is the retail cards: an operator's live tariffs from 0.5 LYD for 50MB over a day to 80 LYD for 80GB over thirty days. A competing unlimited daily plan caps heavy use at 10 dinars through the operator's app. Neither is set against income, and no regulator series measures the basket as a share of earnings.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**National fibre backbone**	A flood severed the Ghat to Tahala fibre link on 27 May 2026; 11 of 12 sites were back within days, most on VSAT backup. The link was cut by flooding on 27 May 2026 and restored to 11 of the 12 sites it serves, 91.7 per cent, with most running on VSAT backup rather than on fibre (restoration). The repository holds no route map, no capacity figure and no statement of when full fibre service returned, so the condition of the backbone after the cut cannot be established beyond the count of sites.	REGRESSED restored to eleven of twelve sites after a flood cut, most of them on satellite backup
Connectivity	**International internet bandwidth**	The Medusa cable has been live at Misrata since May 2025 and no capacity or bandwidth figure has been published for it since. The cable was inaugurated at Misrata in May 2025 (inauguration). No capacity figure, utilisation share or price effect has been published in the fifteen months since, and the repository holds no measure of international bandwidth per user for the country at all.	NO CHANGE
Connectivity	**Internet Exchange Points**	Libya's only registered exchange point shows zero peers connected. The registry record for the Tripoli exchange lists no connected peers, so nothing measurable is exchanged there and domestic traffic between Libyan networks has no published local path. Nothing in the repository since records a peering agreement, a member count or a traffic figure for it.	NO CHANGE
Connectivity	**Satellite broadband licensing and availability**	The state operator signed a capacity partnership with Arabsat in August 2026 for the 30.5 degrees east position; no commercial terms are stated. LTT and Arabsat announced a partnership on 7 August 2026 for capacity on Arabsat-6A at 30.5 degrees east (partnership). No value, duration, service date or retail offer is published, and the repository holds nothing on licensing terms for any other satellite provider, including the low-orbit operators active elsewhere in the region. 2026-09-13 — the satellite operator's entry remains without agreement after two years of negotiation, with permitted services, licensing, frequencies and coverage all unsettled.	MOVEMENT
Data Storage	**Local data centre capacity (all providers)**	Almadar Aljadid's Tripoli and Benghazi facilities and a Tripoli cloud and colocation provider are the capacity on file; a 2019 Tripoli project has nothing since. Root-server instances entered service in October 2025 in Almadar Aljadid data centres in Tripoli and Benghazi, the first evidence on the repository that a national operator runs data-centre space (root servers). A Trans-Sahara and Tatweer data centre was announced for Tripoli in October 2019 for delivery in early 2020, and nothing on it has appeared since (announcement). No floor area, tier rating or customer figure is held for any facility in the country. A Tripoli provider sells OpenStack infrastructure-as-a-service from 1,780 dinars a month for 16 virtual CPUs, with colocation and object storage, and claims PCI DSS 4.0 Level 1 compliance. The state carrier has since 2021 sold private links to Microsoft's data centres abroad, which serves hosting outside the country rather than in it. A hosting company opened a Tripoli data centre in April 2024 behind a local OpenStack cloud, and a free zone launched a fourteen-rack hosting centre for its investors in February 2023.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Local data centre capacity (national providers)**	A tier III design certification is recorded for the national telecom company's KM-4 site, with no capacity disclosed. The certification record is the first independent assessment of a Libyan facility the repository holds. It certifies design rather than construction or operation, and discloses no capacity figures. The regulatory frame is behind it: the regulator floated a first data centre and cloud licensing framework in February 2026, at which point storage firms were operating unpermitted. A ministry opened its own data centre in April 2026.	MOVEMENT
Data Storage	**Off-site backup capacity**	No backup rule or disaster recovery site is held; the central bank said in July 2026 that banking systems were fully restored after a cyberattack. The one recorded test of resilience came out well: the central bank told the parliamentary finance committee in July 2026 that banking systems were fully restored after a cyberattack with no accounts hit. The repository holds no rule on where backup copies are kept and no named Libyan disaster recovery site.	NO CHANGE
Energy	**Sufficient energy and water for data centres**	The grid lost 1,350 MW in one failure in July 2026; no power or water standard for data centres is held. The grid data centres depend on lost 1,350 MW in July 2026, darkening most of the country after a tripped 400kV line. No power, fuel or water standard for data centres is held, and no Libyan facility publishes its own provision.	NO CHANGE
Energy	**Grid reliability**	8.2 GW of capacity in 2023, a 1,350 MW national failure in July 2026, a new plant firing in August. Capacity reached a record 8.2 GW in 2023 after years of blackouts. Reliability did not follow. A failure in July 2026 lost 1,350 MW and darkened most of the country, blamed by the ministry on a tripped 400kV line. In August the utility fired the first of four units at a new South Tripoli plant toward 1,320 MW of added capacity.	MIXED capacity added against a national failure inside the window
Energy	**Rural electrification**	400 off-grid solar systems at 310 kW peak for remote clusters and border posts. The renewable energy authority's programme is the only off-grid electrification the repository holds: 400 systems, 310 kW peak, for remote population clusters and border posts. On the grid side, work began in January 2026 for a Cyrenaica settlement cut off since 1999. Neither source gives a count of households reached.	MOVEMENT
Technical Capacity	**Robustness of government hardware and software**	The central bank's card system collapsed in May 2026 under two million transactions in a day, against a terminal estate of 170,149. The electronic payment system failed on 27 May 2026 when 2m transactions were attempted across 67,000 acceptance points in a single day (failure). The estate had grown from 150,205 terminals in 2024 to 170,149 by February 2026 (estate, 2025 volumes). Nothing has been published on the cause, on remediation or on capacity headroom since, and the repository holds no equivalent measure for any other government system.	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	A foreign vendor, Huawei, is scoping civil-service systems, while one ministry's own staff are finishing an archiving system upgrade. The telecommunications regulator suspended Huawei's activities nationwide on 17 August 2025 (suspension) and reinstated the company three days later on a compliance undertaking (reinstatement). By July 2026 the company was scoping digital transformation work on civil-service systems (scoping). 2026-09-23 - the technical and vocational education ministry said its own information systems section had rebuilt its electronic archiving system on user feedback, with operator training due from 28 September. Beyond that one account the repository holds nothing on in-house capability: no civil-service technical headcount, no maintenance arrangement, and no statement of which systems the state can run without a vendor.	NO CHANGE
Cybersecurity	**National cybersecurity readiness**	The central bank was breached in June 2026 with data later published on a dark-web site, while the interior ministry signed a cooperation agreement in August. The Central Bank of Libya isolated systems in June 2026 and a sample of bank data was later published on a dark-web site (incident, context). The interior ministry and the national telecommunications company signed a technical cooperation agreement reported on 12 August 2026 covering cybersecurity, shared platforms and equipment at ministry sites, with no value, duration or delivery date published (agreement). The last cybercrime caseload published is 135 cases and 188 devices seized in the first quarter of 2025 (caseload). No national readiness assessment, incident-response body or breach-notification duty is held. 2026-09-20 - the unity government began work on an integrated national cybersecurity plan with the heads of three cyber and information authorities, covering emergency plans, early warning, incident response and a joint monitoring mechanism. No text or deadline is published. 2026-10-01 - the Attorney General's Office ordered two National Oil Corporation officials into pre-trial detention over oil-sector data that passed to a foreign company; an investigation, not a finding.	MIXED a central bank breach and a caseload unpublished since early 2025 against a new interior ministry cooperation agreement

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	LY-NDEX was positioned in July 2026 as the state's data-exchange spine for inter-agency verification, with no connected-entity or transaction figure published. The general information authority and the commercial register office are examining the interconnection of their systems (report). It is an examination; no design, standard or date is stated. The identity authority presented LY-NDEX at an interior ministry workshop concluding on 8 July 2026 as pillar infrastructure for information exchange between agencies, including anti-money-laundering and counter-terrorist-financing compliance (workshop). No legal basis, connected-entity count, service catalogue or transaction volume has been published, so the repository can record the claim made for the exchange but not its operation. 2026-04-23 - the information authority and the Union of Chambers set out at a Tripoli meeting on 20 April 2026 that the union's planned electronic system should follow the national digital government framework and data governance policies and interoperate with the National Data Distributor. No connection date or technical specification is stated.	MOVEMENT
Data Exchange	**Use of digital id in other systems**	LY-DNID is presented together with the national data exchange as the verification layer for anti-money-laundering checks across agencies. At the July 2026 workshop the identity authority set the national digital identity beside LY-NDEX as the pair on which inter-agency verification and compliance checks are to run (workshop). The only sector named as a consumer of it is financial compliance. No ministry, service or agency is listed as connected, and no count of identity verifications performed for another system is published.	MOVEMENT
Data Exchange	**Interoperability of health systems**	The diabetes authority's system links insulin dispensing to the national number, the first named clinical link to the identity layer. The health information centre runs the national health data platform and hosts health data on a mobile operator's cloud, which is the standing arrangement. Two links were added in the window. The ministry activated an electronic system tracking medicines from pharmacy intake to hospital dispensing in October 2025, and the diabetes authority launched a unified system in May 2026 tying insulin dispensing to the national number.	MOVEMENT
Data Exchange	**Interoperability of education systems**	The education data system now carries private schools and links schools by network, with no link to the civil registry. The system launched for the 2023/24 year covering school-level staff and institutions, and logged 498,653 pupils across 4,981 schools for 2025/26 with entry still under way. In July 2026 the ministry finished loading private-school data and launched a parent verification platform. Its own account of the data centre describes school links by wide-area network and mapping, with no connection to the civil registry or the national number — so the system is complete internally and isolated externally.	MOVEMENT
Data Exchange	**Interoperability of social protection systems**	The Libyan Zakat Fund's digital platforms took integration through the national data exchange as their reference model in April 2026, the only such case on file. The identity authority's April 2026 guide records the Zakat Fund adopting integration via LY-NDEX, digital identity verification and the once-only principle for its platforms (guide). No other social-protection body is recorded as connected, no data-sharing agreement is published, and the fund's own integration is described as a reference case rather than as completed work.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Robustness of system**	Enforcement in 2026 revoked 225 national identification numbers and passports and suspended 61 family records, with a trade in forged numbers still reported. The attorney general's office suspended 61 family records and revoked 225 national identification numbers and passports in January 2026 (enforcement); ten further numbers were cancelled at Al-Marj the same month (cancellations). A trade in forged national numbers was still being reported in April 2026 (trade), and parliament had warned of breaches in the civil registry system in December 2025 (warning). No count of fraudulent numbers in circulation and no remediation programme is published. An independent analysis built on 66 official publications of the Attorney General's office to April 2026 found 278,969 nationality files exposed to forgery over a 43-year window, with 10,620 families and more than 4,000 individuals implicated, and named five mechanisms including direct manipulation of the registry database (analysis). 2026-09 - 3,090 national numbers issued on forged records at one registry office were halted. 2026-09-26 - the public prosecutor announced a further case of civil-status data falsified for 76,000 dinars, the forged-number count standing above 89,000 in the last official tally.	REGRESSED
Digital Identity and CRVS	**Registration of entire population**	Holders of administrative rather than national numbers remain outside services gated on the national number, with no published resolution. Protests were reported in June 2025 by holders of administrative numbers excluded from services that require a national identification number (protests). No resolution has been published since, and the repository holds no count of the population holding a national number and none of those in the administrative category. Vital events are close to fully recorded on the state's own figures: the health ministry's vital statistics report put birth registration at 100 per cent and death registration above 90 per cent for 2020, measured against estimated births and deaths. No independent check of either figure is held.	NO CHANGE
Digital Identity and CRVS	**National maintenance of id and credentials systems**	The civil registry match completed across 257 offices covering 97 per cent of households; the project is still unfinished. The registry authority created by decree in 1998 is the source layer for every Libyan credential, and the electronic-to-paper match completed across 257 offices covering 97 per cent of households. The government reviewed the unfinished project and its links to other agencies in July 2026 without giving a completion date. The passport authority separately set out an electronic passport project and printer renewal to a prime-ministerial committee in September 2025.	MOVEMENT
Digital Identity and CRVS	**Authentication**	The Level 3 biometric tier of the national digital identity entered technical trials with the central bank and several banks in April 2026. The identity authority and the Central Bank of Libya put the biometric tier into technical trials with several banks in April 2026, ahead of its use in banking know-your-customer checks (trials). The system is named the Digital Identity Management System for Citizens in that release and LY-DNID in the July one, and no enrolment count, authentication volume or assurance standard is published for either name (July release).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Digital id from birth**	Law 8 of 2014 makes the national number mandatory from birth; no birth-to-number workflow is described. The statute is unambiguous that the twelve-digit number attaches from birth and is required for every state service, so the entitlement exists in law. What the repository does not hold is any account of how a birth becomes a number in practice. The registry match across 257 offices was a reconciliation of existing records, and the project remained unfinished in July 2026.	NO CHANGE
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	The civil registry database is still under development and the linkage service names no civil registry connection. The information authority's electronic linkage service connects national bodies to the central database and names no civil registry link among them. The registry's own electronic database is still being built: the attorney general reviewed progress on it in March 2026 amid a forgery investigation, and the government reviewed the wider project again in July without a completion date.	NO CHANGE
Digital Identity and CRVS	**Use by other systems**	The National ID Number gates SIM registration, passports, bank accounts, marriage and voting, and that position has not moved since 2024. The number is in force and required across those services, which makes it the country's operative credential rather than one of several (gating). Nothing has been published since 2024 on how many transactions are gated on it, on which further systems have taken it up, or on what a resident without one can still obtain.	NO CHANGE
Digital Payments and Fintech	**Governance role of central bank**	The central bank launched a national financial inclusion strategy for 2025-2029, directed banks to activate QR acceptance and launched a stand-in processing service. The governor launched a national financial inclusion strategy for 2025-2029 at the first electronic payment forum in June 2025, alongside financial-inclusion accounts for excluded groups, a banking data protection system, full digitisation of government payments, localisation of the foreign-currency payments infrastructure, a framework for digital and crypto currencies and a digital banking identity. The strategy text is not published and none of the projects carries a budget, operator or delivery date. Banks were directed to activate QR-code acceptance by 8 March 2026 (directive). Circular 9 of 2026, issued on 11 March, permitted resident foreigners to hold e-wallets on passport and residency with daily transfer caps (circular). A national stand-in processing service was launched at the EPAIX conference on 17 June 2026 to keep card payments working through communications and banking disruption (service). The bank sets the rules, the deadlines and the shared infrastructure, and no other body is recorded acting on the payment market. The industry's own cashless drive stopped for want of a rule. The banking sector development forum announced it would stop pursuing the Zero Cash initiative, for want of an executive framework from the central bank.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**G2P functionality**	Ratibak Lahzi carried September 2026 salaries for about 1.75m of 2.2m public employees, 79 per cent, up from 72 per cent in March. The real-time salary system launched in August 2025 with about 2m records collected, the eastern government refusing to share employee banking data (launch). Enrolment reached 72 per cent in March 2026 (March), 75 per cent in June (June) and 76 per cent in July, when July salaries were executed through it (July, confirmation). About 500,000 public employees remain outside it, with no published breakdown of who they are (remainder). 2026-09-28 - September salaries went through the system with about 1.75 million of 2.2 million public employees registered, 79 per cent, and the central bank is automating complaint handling for undisbursed salaries with the finance ministry.	MOVEMENT
Digital Payments and Fintech	**Revenue collection**	State treasuries and collecting agencies must accept electronic payment from March 2026, the first duty of its kind placed on revenue bodies. The obligation reaches treasuries and collecting agencies and was issued together with a cut in the foreign-exchange levy (mandate). No collection figure, adoption rate or list of complying agencies has been published since, so the repository holds the requirement and no measure of what it has changed.	MOVEMENT
Digital Payments and Fintech	**B2B and B2G functionality**	The Prime Minister ordered treasuries to accept electronic payment of all state revenues in March 2026. The decision activates electronic collection of all public revenues and dues at Libyan treasuries, which is the mandate side. The delivery side is smaller and specific: the central bank exempted point-of-sale fees for tax, customs and port payments and deployed 130 terminals as a first phase, moving toward ending cash collection. The bank's own payment and settlement page sets out the rails behind it and gives no business or government transaction figures.	MOVEMENT
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	Instant transfers ran 18.3m times in 2025, and acceptance widened to petrol stations and to phones used as terminals. Between 1 August and 26 December 2024 LYPay signed 1.28m individual and 8,814 merchant subscribers, and OnePay processed LD 1.01bn across 411,169 transactions. LYPAY ONEPAY carried 18.3m transfers worth LD 108.7bn in 2025 (volumes). Jumhouria Bank brought card acceptance to petrol stations on 15 January 2026, the first such service (petrol stations). SoftPOS was launched at EPAIX on 17 June 2026, letting NFC phones act as card terminals (launch, conference). No count of active wallets, or of merchants accepting by either route, is published. 2026-09-14 — the central bank's Circular 9/2026 replaced the 2017 wallet rules, setting daily limits of LYD 100,000 person to person, 500,000 person to business and 2 million business to business for Libyans, lower for foreigners, and opening wallets to lawful residents on a passport or residence document. No figure for wallets in use is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Population uptake**	Banking apps reached 4.30m subscribers by February 2026 and electronic payment value reached LD 643bn in the first seven months of 2026. Electronic payment value ran at LD 136bn in 2024, LD 389bn in 2025 and LD 643bn between 1 January and 31 July 2026 (2026 to date, 2025). Banking-app subscribers stood at 4.30m in February 2026, and 200.7m transactions worth LD 313.6bn were recorded in 2025 (subscribers, 2025 total). Part of that movement is scarcity rather than choice: branch cash withdrawals were capped at LD 3,000 a customer, and LD 4,000 in the south, from 9 August 2026 (cash limits). 2026-10-05 - the central bank put electronic transactions at about LD 865 billion by the end of September 2026.	MOVEMENT
Digital Payments and Fintech	**Cross-border functionality**	Foreign-currency Visa acceptance went live on local terminals in June 2026, and banks are reported set to join China's CIPS network. Visa acceptance in foreign currency was launched on local points of sale at EPAIX on 17 June 2026, giving cards issued abroad a route into the domestic network (launch). A newspaper account of 16 August 2026 reports Libyan banks set to join China's Cross-Border Interbank Payment System after talks between the two central banks; no accession date, participant list or signed agreement is stated, and no central-bank statement is held (account). 2026-09-07 - the central bank governor announced a link to the Arab regional payments platform, a study track on a central bank digital currency and stablecoins, a cyber-skills programme, and a pilot for accession to China's cross-border interbank system targeted at early 2027. None carries an instrument, budget, participant list or delivery date. A private bank is to send payments to China through a Chinese payment platform from its own application, capped at US$5,000 a transaction and US$50,000 a year. Announced rather than in service: no launch date, licence or central bank authorisation is stated.	MOVEMENT
Digital Payments and Fintech	**Consumer protection**	Card-payment surcharges were prohibited and made enforceable by a Municipal Guard notice in August 2026, after spreads of up to 20 per cent. The Municipal Guard issued an enforcement notice on 2 August 2026 against merchants adding a surcharge to card payments, with spreads of up to 20 per cent reported before it (notice). No penalty schedule, complaint route or enforcement count has been published, and the repository holds no other consumer-protection measure covering electronic payment.	MOVEMENT
Registries	**Population register**	The interior and labour ministries agreed a unified national database of expatriate workers in August 2026, with a dedicated platform and no authorising instrument. The two ministries agreed the database on 3 August 2026 and named a dedicated platform for it (agreement). No build or timetable is published, and the repository holds no register of the citizen population against which to set it, so the only population-register movement on file covers non-citizens. 2026-08-23 - the anti-illegal-immigration agency began connecting a unified digital system across its branches; no branch count, data-protection basis or completion date is on file.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Civil register**	Project Intilaqa matched the civil registry's electronic and paper records across 257 offices to 97 per cent, and no later figure has been published. The project matched electronic data to paper records in 257 offices and printed 1.8m family records, reaching 97 per cent completion as at September 2024 (matching). It had been outstanding since the mid-1970s. Nothing has been published in the two years since on the remainder, on error rates found, or on how the matched register is now maintained.	NO CHANGE
Registries	**Address register**	National postal addressing is in phase one covering 42,000 buildings in one Tripoli district, and a digital address for every company was under discussion in June 2026. Phase one covers 42,000 buildings in Hay Al-Andalus, Tripoli, and was under way at the start of 2025 (phase one). No later count and no extension to other districts has been published, so the address layer that other systems would draw on does not yet exist beyond one district. 2026-06-15 - a second addressing project was put forward for businesses: the economy minister and the head of Libya Post discussed giving each company a unified digital postal address tied to its physical location and linked to the Commercial Registry and company registration systems. It was a discussion of launch mechanisms, with no timetable, coverage target or start date.	MOVEMENT a planned company address project only
Registries	**Business register**	A Unified Economic Number was authorised in July 2026, the chambers of commerce system went live in March, and the one-stop shop is again promised. Decision No. 348 of 2026 authorised implementation of a Unified Economic Number with a national council constituted for it, and no timetable, budget or legal basis for the data linkage is stated (decision). The Unified Digital System for Chambers of Commerce went live on 1 March 2026 with digital certificates of origin, chamber registration and a verification channel for customs (system). Reactivation of the One-Stop Shop for company registration under Law No. 23 of 2010 was agreed in February 2026, against a record of repeated past failures to reform registration and nothing yet delivered (reactivation). The health ministry's registration portal has registered 131 local and 53 foreign pharmaceutical companies and is being extended to the products themselves, confining attendance at the ministry to the final stage and licence collection (portal) - a sectoral register rather than the general one. 2026-09-15 — trade registration was made compulsory: importers, exporters and foreign suppliers must register on the unified digital trade system for a certificate and electronic identification number, biting from January 2027 for businesses trading US$1m a year or more.	MOVEMENT
Registries	**Social protection register**	A Unified Social Registry draft was approved by the prime minister in June 2025 and nothing on its build has been published since. The draft was approved on 23 June 2025 (approval). No build, budget, timetable, lead agency or data source has been published in the fourteen months since, and no count of households or beneficiaries held in any existing social-protection list is available in this repository.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Electoral register**	Biometric voter verification was piloted in four municipalities at the 2024 municipal elections and no extension has been published. The commission used biometric verification in four municipalities at the municipal council elections of August 2024 (pilot). No evaluation, no extension to national elections and no register size have been published since, so the register's coverage and its link to the national identification number cannot be established from this repository.	NO CHANGE
Registries	**Tax register**	The tax administration was entirely paper-based with no register system in August 2024; a unified tax system has since gone live. The fund's technical assistance report of August 2024 is blunt: Libya's tax administration ran entirely on paper with no register system behind it. The unified tax system carried on the ledger since December 2025 is the answer to that finding, and the electronic revenue collection mandate of March 2026 extends the same logic to collection. No taxpayer count has been published against either.	MOVEMENT
Registries	**Land register**	Land registry services at Benghazi resumed in part after more than fifteen years. The registration authority has issued certificates only, with substantive registration suspended since 2011, and cadastral mapping covers two-thirds of the country on a fragmented spatial data infrastructure. In April 2026 the Benghazi office resumed limited administrative transactions including mortgage and ownership transfer despite the suspension. Municipalities are building their own holdings alongside: a mayor reviewed registry records for a state-property inventory that month. The authority issued its first electronic real estate certificate in April 2025, covering only registrations already on record. The registration authority announced the partial resumption on 25 April 2026, on instructions from its presidency and a legal-department opinion, after a stoppage dating from decision 102 of 2011. The Benghazi and Green Mountain branches were directed to resume discharge of a mortgage, mortgage of a property and transfer of ownership to heirs - the administrative work the stoppage does not bar. No transaction count, timetable for full resumption or statement on the registry's digitisation is given, so what is held is that a paper service restarted, not that a register was built.	MOVEMENT
Sectoral management information systems	**Health**	A Sustainable Medical Supply Platform entered pilot in August 2026 to manage pharmaceutical procurement, inventory and distribution for the state importer. The pilot phase began on 17 August 2026, built with and run by NSR International for Information Technology, a subsidiary of the Libyan Foreign Investment Company, for the state importer of the country's medicines, and aimed at a unified national medical-supply database (pilot). No cost, pilot scope, timetable or facility count is stated. A World Bank-commissioned review of primary care published in June 2024 found medical records still kept on paper, health management systems out of routine use nationally and locally, and a DHIS-2 system under design that informants said was not built for clinicians. In November 2025 the health ministry and WHO assessed the ministry's DHIS2 reporting and whether to extend it to pharmacy management, supply forecasting and service monitoring in public facilities. No decision or timetable is reported. 2024-01-01 - the health reform centre launched a health number system presented as the route to the electronic health file.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Education**	498,653 pupils across 4,981 schools logged for 2025/26, with private schools loaded in July 2026. The system launched for 2023/24 and now carries 498,653 pupils across 4,981 schools for 2025/26, with entry still under way. Coverage widened in July 2026 when the ministry finished loading private-school institutions and launched a parent verification platform. A separate smart geographic map of 102 technical education institutions was launched in February 2026 as the sector's first system-wide digital record.	MOVEMENT
Sectoral management information systems	**Social protection**	The social insurance system moved from modelling to procedural build-out in March 2026. The diagnostic baseline is a 2022 assessment finding social assistance delivery paper-based, with no unified registry and no identity check. The fund moved its integrated insurance system from modelling into procedural build-out in March 2026. The only published throughput figure is a transfer count: 1.22m families and 1.21m spouse cards for the second quarter of 2026, paid through commercial banks.	MOVEMENT
Sectoral management information systems	**Justice**	The prosecution's digital case-file system tallied 108,939 convictions in absentia over four years. Digitisation started with the record layer: the prosecution service digitised 400,000 evidence-gathering records across six appeal courts in 2023. By November 2025 the office was reporting from it, telling the United Nations human rights body that its digital case-file system tallies 108,939 in-absentia convictions over four years. No court-side case management system is named in the repository.	MOVEMENT
Sectoral management information systems	**Tax**	A Unified Tax System launched in December 2025, with a Tax Police role activated alongside it for oversight and compliance. The system was launched on 12 December 2025 with further platforms stated for 2026, and the Tax Police role was activated with the interior ministry two days earlier (launch). No registered-taxpayer count, filing volume, revenue effect or list of the further platforms has been published since, so the repository records the launch and nothing about its operation.	MOVEMENT
Sectoral management information systems	**Customs**	A port trade service began taking vessel arrivals and cargo manifests electronically at two ports in August 2026, with chambers cooperation under discussion. The Port Trade Service was activated at Tripoli and Al-Khoms on 5 August 2026, receiving vessel arrival notifications and cargo manifests electronically and presented as a control on undervalued or banned imports and on currency smuggling through fake trade (activation). The customs authority and the general union of chambers of commerce discussed strengthening digital cooperation on 20 August 2026, with no memorandum or data-exchange arrangement on record (discussions). No instrument establishing the service is held, no other port is covered, and no transaction figure is published. 2026-09-15 — customs met contractors to revive stalled automated inspection and coastal monitoring contracts; no value or date is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Land**	Cadastral mapping covers two-thirds of the country on a fragmented spatial data infrastructure. The housing agency's analysis puts cadastral coverage at two-thirds of Libya and finds the spatial data infrastructure fragmented, which is the repository's only national assessment. Nothing has consolidated it. The registration authority issues certificates with substantive registration suspended since 2011, and the movement in the window is municipal: a council building an integrated state-property database after a twenty-year planning freeze.	NO CHANGE
Other GovTech and e-Gov	**e-government services**	Four state platforms moved in 2026: e-visas, an export window, a government reporting tool and an exhibitions register, with usage published for two. The electronic visa service took 2,325 applications from 103 nationalities between 1 July and 17 August 2026, of which 67.1 per cent were approved (usage). The Electronic Unified Export Window processed LD 79.5m of exports from April to July 2026, with 354 companies registered and 190 products exported, two thirds of orders going to Tunisia (export window). LY-GOVREP was activated on 9 April 2026 as the unified performance-monitoring tool for public entities (activation), after preliminary operation with 60 cabinet entities (preliminary). An exhibitions and conferences platform was launched on 9 August 2026 as the first specialised system for that sector (launch). 2026-09-05 - the citizen service centre and the passports authority agreed a joint mechanism for visa enquiries and complaints. 2026-06-30 - a cabinet follow-up meeting confirmed the Wafed and E-Visa systems in operation with about 6,000 electronic visas issued, every earlier electronic visa type discontinued and the two made the only official channels for entry visas. 2026-08 and 2026-09 - a platform to track government project execution was designed and a database of international grants proposed; neither has a go-live date.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	BaladiyaBOT, a municipal digital assistant, went into development in April 2026 and is piloting in one Tripoli municipality. Development began on 19 April 2026 and the assistant is piloting in Tripoli Centre municipality (development). It is the only municipal digital service on file. No count of municipalities with connectivity, systems or equipment is published, and no national programme for local-government infrastructure is held in this repository.	MOVEMENT
Digitalisation of sub-national government	**Digitalisation of local government records**	A municipal council leaders database and a council state-property database were begun in 2026. The ministry's own digitalisation began with correspondence: internal mail moved to electronic form with paper phased out in 2023. Record-building followed. The ministry started a comprehensive database of municipal council leaders in March 2026, still missing deputy data; a mayor reviewed registry records for a state-property inventory in April; and a council moved to an integrated state-property database in June after a twenty-year planning freeze. 2026-09-11 — a Tripoli municipality began electronic archiving of staff data and records in its human resources department.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural health clinics**	Influenza sentinel surveillance expanded to 15 sites in September 2025. Health data systems were rebuilt around the national platform after the Derna floods, which is the repository's account of where the current architecture came from. The reach beyond the cities is measured in surveillance posts rather than clinics: 15 sentinel sites with new posts at Misrata and Zliten from September 2025. No count of clinics running an electronic record is published.	MOVEMENT
Rural digital data capture	**Digitalisation of rural primary schools**	The ministry's data centre links schools by wide-area network; no rural school detail is published. The ministry's own project account describes schools linked by wide-area network and mapped geographically, without saying how many schools are connected or where they are. The data centre opened in April 2026 alongside the ministry's platforms, again with no rural breakdown. The system carries 498,653 pupils across 4,981 schools, which counts records rather than connections.	NO CHANGE
Rural digital data capture	**Digitalisation of rural registry offices**	The electronic match completed across 257 civil registry offices covering 97 per cent of households. The match is the widest geographic digital exercise the repository records for Libya: 257 offices, 97 per cent of households reconciled between paper and electronic records. It is a reconciliation rather than a live system, and the project remained unfinished when the government reviewed it in July 2026, with no completion date given.	MOVEMENT
Rural digital data capture	**Digitalisation of rural police stations**	A digital records system for police stations launched at the end of December 2025, in the capital. The Tripoli security directorate launched the system on 31 December 2025, which is the first station-level digital record the repository holds for Libya. It is the capital's directorate. No deployment to stations elsewhere is recorded, and no station count is published.	MOVEMENT

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	The one working case is a municipal assistant in pilot; the strategy's targets for administrative use are stated rather than measured. BaladiyaBOT, in pilot in one Tripoli municipality since April 2026, is the only artificial-intelligence tool on file in day-to-day administrative use (assistant). The National Artificial Intelligence Strategy adopted in June 2026 sets 80 per cent of government entities using artificial intelligence and half of government transactions automated as targets (strategy). Neither is measured, and no baseline for either is published.	MOVEMENT
AI	**Use of AI in sectoral management information systems**	The medical supply platform in pilot is described as artificial-intelligence-enabled, with no statement of what the component does. The platform entered pilot on 17 August 2026 as an artificial-intelligence-enabled national system for pharmaceutical procurement, inventory and distribution (pilot). What the artificial-intelligence component does is not described, no model or supplier component is named, and no other sectoral information system in the country is recorded using one.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Development of national / regional AI systems**	LIBIGPT launched in October 2025 as the country's first domestic generative artificial-intelligence system. The system was launched on 28 October 2025 and is presented as the first generative artificial-intelligence system built in the country (launch). No user count, model description, training data statement or funding source has been published since, and no second domestic system has appeared in the repository.	MOVEMENT
AI	**Control of AI abuse**	The prime minister adopted an AI Ethics Charter on 1 June 2026 committing the state to human decision-making over automated systems in sensitive sectors. The charter was adopted at an official ceremony alongside the artificial intelligence strategy and commits the state to justice, transparency and accountability, safeguards individuals' digital rights and centres human decision-making over automated systems in sensitive sectors (charter). It is a reference for government, private and academic bodies rather than a binding instrument. No enforcement body, complaint route or sanction is named, and no statute on artificial intelligence is in force.	MOVEMENT
ICT Industry	**National capacity in DT-related production**	A Libyan firm supplies Niger's biometric passport system, while banks build their digital services with foreign vendors and a national satellite sits at design stage. Al Itissan Al-Jadeed won Niger's biometric passport and national identity contract in June 2025, a rare identity-technology export, and no delivery milestone has been published since (contract). Tadamon Bank was reported building with JMR Infotech, and Seraj Islamic Bank with Network International, in April 2026, on vendor accounts (build-outs). The scientific research authority discussed a national earth-observation satellite at design stage in August 2026, with no budget, timetable or launch partner stated (satellite).	MIXED an identity-technology export against bank systems bought from foreign vendors
Innovation ecosystem	**Technology hubs**	A national incubator in Tripoli and a university incubator running a first competition. The small-enterprise programme runs a technology incubator with Tripoli premises, training and a seed-grant admission route. Universities are the other host. One crowned five ventures from more than 600 entries in its first technology competition in July 2026, and another added licensed design and certification training for students and startups through two agreements in February.	MOVEMENT
Innovation ecosystem	**Tech startup ecosystem**	A state seed fund was created in January 2025, requiring an AI-screened application platform. The decision creates a fund to support and guarantee financing for startup innovation companies, and requires applications to run through an artificial-intelligence-screened platform. Demand is visible where it has been counted: more than 600 entries to a single university technology competition in 2026. No count of Libyan startups, investment total or survival rate is published.	MOVEMENT

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	The only civil-service training on file is an Islamic Development Bank executive programme for central bank officials, run once in July 2026. The programme ran in Jeddah from 27 to 30 July 2026 for Central Bank of Libya officials on cybersecurity and artificial-intelligence risk management (programme, account). Participant numbers, curriculum and any standard it works to are unstated, and no ministry-wide or government-wide digital skills programme is recorded in this repository.	MOVEMENT
Literacy	**Digital literacy (general population)**	A skills assessment platform neared launch in April 2026 to measure digital skills against the labour market. The platform, modelled on a French instrument, is the first attempt the repository records to measure Libyan digital skills rather than assert them. Delivery around it is programme-shaped: a vendor innovation campus opened at the largest university in July 2026 with a 150-seat national artificial intelligence cohort, and a technology foundation opened a sixth two-month bootcamp in cloud tooling, software development and cybersecurity. No population-level literacy measure exists yet.	MOVEMENT
Training and skills	**DT-related training in secondary education**	About 4,500 pupils competed in a national informatics olympiad and a licensing code puts 20 of 100 accreditation points on digital transformation. The olympiad concluded in January 2026 with about 4,500 pupils competing nationwide and 24 finalists, which is the widest counted school-level participation the repository holds. The structural moves are two: a municipality reached a first agreement in April to bring coding and artificial intelligence teaching into its model schools, and the private-school licensing code adopted in June puts 20 of its 100 accreditation points on digital transformation. A district office trained secondary staff in classroom artificial intelligence tools in August.	MOVEMENT
Training and skills	**DT-related university facilities and qualifications**	A professional master's institute in artificial intelligence and cybersecurity opened in November 2025, and a higher-education research cloud was approved in August 2026. The Ministry of Planning launched the institute with UNDP on 1 November 2025, the only postgraduate qualification in these subjects on file (institute). The scientific research authority's scientific committee approved a higher-education and research cloud platform on 4 August 2026, described by the authority as built on Microsoft 365. No enrolment, graduation or faculty figure is published for either, and no other university facility is recorded. 2026-09-09 - the first digital library provision in the repository, and it replaces something the war destroyed: a memorandum with the University of Benghazi gives more than 70,000 students access to a foreign cultural body's digital library of over 80,000 resources - scholarly journals, newspapers, literature and film - after the university lost much of its physical collection during the war. No sum is stated so no deal record was built, and no term, access mechanism or usage measure is published. 2026-08-31 - the prime minister told the supreme council of universities to accelerate the digital transformation of higher education and complete stalled infrastructure projects; no programme, budget or target followed.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**Graduates entering DT ecosystem**	The largest university's technology faculty reports 1,208 cumulative graduates, none in cybersecurity or data science and AI. The faculty's own facts page gives 1,208 graduates cumulatively and records that none has yet come out of the cybersecurity or the data science and artificial intelligence tracks. It is a supply figure with no destination attached: nothing in the repository counts Libyan technology graduates entering employment. The training that is being added sits outside the degree pipeline, in bootcamps and a 150-seat vendor cohort.	NO CHANGE a first count with no earlier figure behind it
Research institutions	**Think tanks and academic departments contributing to DT policy**	The one analytical contribution on file is the Seventh National Human Development Report, in preparation under a UNDP memorandum with the identity authority. UNDP and the identity authority signed a memorandum on data systems and human development in July 2025 (memorandum), and the report was in preparation as at February 2026 (progress). No domestic think tank, university department or research centre is recorded contributing to digital policy, and the report itself has not been published.	NO CHANGE

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	The Raqib platform takes complaints and violation reports against about 750 state bodies. The oversight authority launched the platform at a Tripoli anti-corruption event in December 2025. It is live and its scope is stated: complaints and violation reports against about 750 reportable state bodies. No count of reports received or resolved is published, so its use cannot be measured from the record.	MOVEMENT
Access to services	**Citizen participation in policy**	A consultative forum of about 120 members, 35 per cent women, with no binding power. The United Nations mission's own account is candid about the limit: about 120 members, 35 per cent of them women, and no binding power over any decision. Other participation is issue-specific and did move: stakeholders neared consensus on a missing-persons draft law at a March 2026 meeting, and the information authority opened community consultations for the seventh national human development report, including a session dedicated to women.	MOVEMENT
Access to services	**Gender equity**	An eleven-point gender gap in account ownership against 74 per cent of women using the internet. The central bank's financial inclusion strategy puts the gender gap in account ownership at eleven points and access to mobile or internet banking at 14 per cent overall. Connectivity is not what stands in the way: the household survey puts 92 per cent of women use mobile phones and 74 per cent use the internet. The international agency series leaves every Libyan gender indicator unreported, so the survey is the only sex-disaggregated evidence the repository holds.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Inclusion of persons with disabilities**	The digital accessibility policy moved from plan to mandatory compliance in February 2026. 2026-10-10 — the social affairs ministry and the minister of state for digital economy launched an initiative whose second track is the digital empowerment of persons with disabilities; no budget, numbers or timetable are stated. The statutory frame is old and analogue: the 1987 disability law imposes shelter, access and financial-aid duties and carries no digital-accessibility mandate. The information authority launched the implementation path of the national digital accessibility policy with regional commission support in February 2026, moving it from plan to compulsory compliance. Market provision is thin and specific: an operator halved data pricing on a line restricted to certified deaf and hard-of-hearing users.	MOVEMENT
Access to services	**Inclusion of refugees and IDPs**	Registered foreign residents were opened to electronic wallets in March 2026, on lower transfer limits. Registration itself is the agency's rather than the state's: 44,223 refugees registered on the agency's own system with biometric enrolment deployed from August 2020. Financial access moved in the window. The central bank opened electronic wallets to Libya's registered foreign residents with lower daily transfer categories in March 2026, and a commercial bank launched the first such wallet, requiring no bank account. Both reach the repository through press reporting rather than a published circular.	MOVEMENT
Digital divides	**Bridging of digital divides**	Household internet at 92 per cent, with off-grid solar and university networks extending reach. The household survey puts household internet at 92 per cent and internet use among women at 74 per cent, which is high for the region and leaves the divide sitting elsewhere than access to a connection. Where the state is closing gaps it is doing so through power and campus networks: 400 off-grid solar systems for remote clusters and border posts, grid work for a settlement cut off since 1999, and a university completing the second phase of its unified fibre network.	MOVEMENT

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The 2018-2023 strategy expired unrenewed, with no adoption decree ever located. The strategy was Libya's first, produced with international support, and the repository could locate no decree adopting it. Its term ended in 2023 and no successor has been published, leaving the statistical system running on a 1963 statute and no current plan. The Ibrahim Index scored the capacity of Libya's statistical system at 15.2 out of 100 for 2023, last of 54 African states and 20.2 points lower than in 2014, the year the strategy's term ended.	NO CHANGE
National statistics	**Censuses and surveys**	A 2024-25 household survey was published, and the authority declared census readiness in July 2026. The multiple indicator cluster survey for 2024-25 is the most recent national household evidence the repository holds, and supplies most of what is known about Libyan connectivity by sex and household. The census is a different matter: the information authority confirmed its technical readiness for the general population census and accompanying censuses in July 2026, and the census itself remains unscheduled.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**Statistics from administrative data**	More than 8,000 procurement tenders were analysed from platform data for 2025. The information authority completed an analysis of key indicators from the government procurement and tenders platform covering more than 8,000 tenders for 2025. Sector capacity is being built to the same end: the agriculture ministry and the food agency closed a two-week programme training 32 staff for the national agricultural statistics plan in July 2026. 2026-09-10 - a second ministry published from its own register. The industry ministry's green industry centre issued an engineering report of industrial and environmental indicators compiled from its database of industrial facilities, recording 305 registered industrial establishments of which 301 are private, and 26,034 workers. The source gives no reference year for any figure; none can be read as a series. The health ministry's information centre and the Civil Registration Authority compiled births and deaths for 2020, with a summary back to 2013, from the authority's single automated database across 12 branches, 133 issuing offices and 400 service offices. No later edition is held. 2026-09-14 — the information authority met ministries' information centres in Tripoli to agree how they supply indicators to a Unified Directory for National Indicators, and set the order for completing it. The directory is not yet published.	MOVEMENT
Open data	**Use of open data**	The government open data platform carries indicators over 91 datasets, joined in 2026 by an information-for-all committee and a trial mineral map. The platform was launched on 27 November 2025 and by February 2026 carried indicators covering 91 datasets (platform, indicators). A National Committee for the Information for All Programme was established under Decision No. 50 of 2026 and met first on 20 July (committee). A trial national digital mineral map was launched on 12 August 2026 on a database of roughly 1,200 ore and mineral indicators with geological maps at 1:250,000 scale, and no access terms, licence or publication date is stated (mineral map).	MOVEMENT
Use of satellite data	**Agricultural use of satellite data**	Officials were trained on the geospatial platform and its AI tools in May 2026, with a second phase in coordination. The platform launched in March 2024 by the agriculture and water ministries with international agency backing is the standing instrument. Stakeholders opened coordination on a second-phase irrigation decision-support platform in February 2026, and officials were trained in May on the platform and artificial intelligence tools for water and oasis data. Libya's first drought strategy embeds vegetation-index and gravimetric satellite data in national planning.	MOVEMENT
Use of satellite data	**Meteorological use of satellite data**	Libya was named a pilot for early-warning upgrades under a trilateral memorandum in April 2026. The meteorological service credited satellite imagery for its August 2024 flood warnings, which is the repository's evidence that imagery reaches operational forecasting. In April 2026 the world meteorological body named Libya a pilot for early-warning upgrades under a trilateral memorandum with Chinese development and meteorological agencies. The national earth-observation satellite the ledger carries remains a plan.	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	United States engagement runs to a research cloud on Microsoft 365 and an infrastructure memorandum between the state holding company and KBR. LPTIC signed a memorandum with KBR on 25 January 2026 covering infrastructure and 5G, with no value or timetable published (memorandum). The scientific research authority approved a higher-education platform on 4 August 2026 that it describes as built on Microsoft 365, the only named dependence on a United States cloud provider in this repository (platform). No hyperscaler has a data centre, region or commitment recorded in the country. 2026-10-03 - a state holding-company subsidiary reviewed its project for 7,000 telecommunications towers; no count built or completion date is published. 2026-10-08 - the communications authority and the United States State Department signed a strategic cooperation framework covering digital infrastructure, artificial intelligence, data centres, cybersecurity and satellite communications.	MOVEMENT
China activities	**Chinese MoUs, engagements and commitments**	Chinese engagement covers a ZTE modernisation framework, Huawei's return after a three-day suspension, and reported accession to China's payment network. LTT signed a memorandum with ZTE at Mobile World Congress on 9 March 2026 covering 4G and 5G, e-wallet, e-commerce, content delivery and terminals, with no value or timetable (memorandum). Huawei was suspended nationwide by the regulator on 17 August 2025 and reinstated three days later on a compliance undertaking (reinstatement). Libyan banks are reported set to join China's Cross-Border Interbank Payment System, with yuan-denominated panda bonds also raised, on a single newspaper account (account).	MOVEMENT
EU activities	**EU MoUs, engagements and commitments**	European engagement on file is one programme: GIZ's municipal support, funded by the European Union and Germany, behind a municipal assistant in pilot. BaladiyaBOT is being developed under the GIZ Support to Municipalities in Libya III programme, funded by the European Union and the German development ministry, and development began on 19 April 2026 (programme). No value, duration or wider European digital engagement is recorded, and no European Union instrument covering the country's digital transformation is held in this repository.	MOVEMENT
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	Gulf engagement runs through two institutions: Arabsat for satellite capacity and the Islamic Development Bank for central bank training. LTT and Arabsat announced a capacity partnership on 7 August 2026, with no commercial terms published (partnership). The Islamic Development Bank ran an executive programme in Jeddah in late July 2026 for central bank officials on cybersecurity and artificial-intelligence risk (programme). No Gulf sovereign fund, hyperscaler or bilateral digital agreement is recorded, so the relationship is institutional rather than financial.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
India activities	**India MoUs, engagements and commitments**	Libya and India agreed cooperation on artificial intelligence and quantum skills in February 2026, with no programme document published. The cooperation was agreed on 1 February 2026 and covers upskilling in artificial intelligence and quantum technologies (cooperation). No programme document, participant numbers, funding or delivery date has been published since, and no other Indian engagement is recorded in the repository.	MOVEMENT
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Trans-Sahara and Tatweer Tripoli data centre	Any statement, contract, opening report or capacity figure after 2019 establishing whether the Huawei FusionModule1000A facility announced for Tripoli in early 2020 was ever deployed.	2026-08-10
Access-to-information statute	A gazetted Libyan access-to-information law or decree, or an official statement that none is in force.	2026-08-10
Unified 2026 state budget, digital lines	The unified 2026 budget law or its expenditure tables by body, agreed on 11 April 2026, read into the budget extract.	2026-09-25
Outturn against the digital appropriations by body	The Central Bank's annual revenue and expenditure statements read into the budget extract for the Civil Status Authority, the communications ministry and NISSA; only the communications authority's spending is read.	2026-09-25
Rule on where state data is hosted	Adoption of the National Cloud Computing Policy proposed in January 2026, or the communications authority's data-centre and cloud legislation.	2026-09-25
Hosting and operator of the national identity database	A Civil Status Authority or General Information Authority statement naming where the civil registry and LY-DNID databases are hosted and who operates them.	2026-09-25
Data jurisdiction, portability and exit terms of the LPTIC-KBR memorandum	Publication of the January 2026 LPTIC-KBR memorandum or any contract under it covering data centres.	2026-09-25
National backup policy	The information security authority's backup policy text, or any dated statement of a rule on where backup copies are kept; the one record of it was retired from the repository on 2026-10-11.	not yet probed
Physical security policy for data centres	The information security authority's physical security policy for data centres, or any dated power, fuel or water standard for them; the one record of it was retired from the repository on 2026-10-11.	not yet probed
