PROGRESS REPORT

Mali: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	A Conseil national du Numerique was recommended at the national digital week in August 2026 and has not been constituted. The recommendation came out of the Semaine du Numerique on 1 August 2026, which produced a set of proposals framed around digital sovereignty (recommendations). No council, founding text or membership is on record. The repository holds no whole-of-government digital strategy for the country either, so the coordinating body and the plan it would coordinate are both absent. A national digital economy policy and its 2025-2029 action plan were validated on 24 October 2024, the predecessor having been executed at 27.30%; the draft sets four axes and a digital development fund. No adopting decree is held.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**ICT strategy**	The national digital economy strategy ran to 2020 and nothing has replaced it on the record; the policy documents behind it were approved by decree in 2016. The strategy was drafted in November 2014 by the digital economy ministry and the document held is a draft (strategy); decree n. 2016-0066/P-RM approved the national policy documents (decree). Six years past its horizon the repository holds no successor, no implementation report and no evaluation. What has moved instead is institutional: an agency board setting strategic orientations and a national Digital Week whose recommendations went to the Council of Ministers (week).	STALLED
Strategies, plans and policies	**Broadband strategy**	Universal connectivity is targeted for 2030 on a roadmap drafted with two neighbours, and an updated access strategy with a white-zone map was recommended. The target was set at the national digital week's opening panel on 30 July 2026, with a roadmap drafted alongside Burkina Faso and Niger (target). The same week recommended an updated universal-access strategy carrying a white-zone map, which the repository records as not existing (recommendation, panel). Without that map, neither the target's distance nor its cost can be stated.	MOVEMENT
Strategies, plans and policies	**Data storage / cloud strategy**	A tier-three data centre was inaugurated on 31 January 2026 to host government platforms, with public data held abroad to be repatriated progressively. The facility arrived before the policy. The centre was inaugurated in Bamako on 31 January 2026 during the third national digital week, intended to host electronic government platforms and the state's strategic databases, with a stated availability standard of 99.982 per cent and an announced progressive repatriation of Malian public data currently hosted abroad. No adopted cloud or data-hosting policy document was located to govern it. The instrument that would is still a recommendation: the national digital week called for a data-management law and a national digital council. Until one exists, hosting policy here is the repatriation intention announced at a ribbon-cutting.	MOVEMENT
Strategies, plans and policies	**Data interoperability framework / roadmap**	The digital week recommended a data-management law and a national digital council; the government intranet and a public key infrastructure are the pieces in hand. There is no published interoperability roadmap. The nearest thing is a set of recommendations: the national digital week of August 2026 called for a data-management law, a national digital council and a single national transport operator, framed as digital sovereignty. The technical pieces exist separately. A government intranet is being built alongside administration of the country-code domain; a public key infrastructure framework was drawn up with the telecommunications union and remains planned; and the one working cross-border exchange is narrow, a customs interconnection piloted with a neighbour in August 2026.	MOVEMENT
Strategies, plans and policies	**AI strategy**	A national artificial-intelligence strategy was recommended at the national digital week in August 2026, with no draft published. The recommendation is the whole of the record: no draft, no lead ministry and no timetable is published (recommendation). The country has meanwhile adopted regional artificial-intelligence governance guidelines with five other francophone states and recommended a confederation protocol on the subject, so the governance work is running ahead of any national strategy to govern.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data localisation policies**	No localisation rule, but the state announced progressive repatriation of Malian public data held abroad when the data centre opened. Mali has no statute or decree requiring data to be held in the country. What it has is an intention stated at an opening: on inaugurating the tier-three centre the minister announced a progressive repatriation of Malian public data currently hosted abroad, framed as digital sovereignty. The rule that would give it effect is still a recommendation from the same digital week. Personal data remains governed by the 2013 protection law, administered by an authority whose 2026 second session opened with 1,000 files. Nothing states where public data must sit.	MOVEMENT
Strategies, plans and policies	**Data governance policy**	A data-management law was recommended at the national digital week in August 2026, and nothing has been tabled. The recommendation came out of the same sovereignty-framed set of proposals as the digital council and the startups law (recommendation). No draft, sponsoring ministry or parliamentary stage is on record. Data governance in the country currently rests on the 2013 personal-data statute and the authority administering it, and not on any instrument covering government data as an asset.	MOVEMENT
Strategies, plans and policies	**Open data policy**	The statistics institute publishes an open data licence agreement and worked through migration to a second-generation portal platform in June 2026. Both are the institute's own, covering its data rather than government data generally (licence, migration). No dataset count, portal address or open-data policy instrument is held, so what has moved is one institution's terms of use and not a government position. The institute also publishes a microdata catalogue (catalogue).	MOVEMENT
Legislation and regulation	**Data protection legislation**	The personal data protection law of 2013 has been in force since May 2013 as amended, and is the stated basis for the authority's sanctions. The statute is in force and the data-protection authority cites it as the basis on which it fines and issues formal notices (law). No amendment, implementing decree or consolidated text has entered the repository since, so what can be established here is that the law is used rather than what it now says. 2023-07-22 — personal data has constitutional standing: article 12 of the constitution makes personal data and the secrecy of communications inviolable except as the law provides.	NO CHANGE
Legislation and regulation	**Cybersecurity legislation**	The cybercrime repression law of 2019 is in force, and a national cybersecurity strategy was approved by a decree gazetted in March 2026 with a 2026-2030 action plan. Law n. 2019-056 of 5 December 2019 on the repression of cybercrime is in force, and its text is held from the official journal (law). A decree of 25 February 2026, gazetted on 6 March, approves the strategy and its action plan; the strategy text itself is not held, so what is established is that it exists and its period. The Council of Ministers approved the creation of a national information systems security agency in June 2026 (agency). No prosecution count under the law is published. 2024-12-13 — the criminal procedure code provides for seizing computer data, blocking illicit online content through access providers and intercepting electronic messages on written authorisation.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Legislation covering digital id**	The national identification number was instituted by law 06-040 of 2006, with decree 06-442 fixing how it applies. Both founding texts are now held (law, decree). They are twenty years old and the repository holds no amendment and no enrolment, coverage or issuance figure against them, so the identifier's legal footing is settled and its reach is not. The agency for securing civil status documents was created by ordinance in February 2025 (agency). 2022-11-03 — decree 2022-0639 instituted a secure biometric identity card, compulsory from age 15 and replacing the NINA card. No issuance figure is held.	NO CHANGE
Legislation and regulation	**Digital payments legislation**	The 2016 electronic transactions law is the governing statute; payment rules come from the regional central bank rather than from Bamako. The domestic statute is the 2016 law on electronic transactions, exchanges and services, and nothing in the window amends it. Payments themselves are regulated regionally. The regional central bank runs the instant payment platform Mali's banks connect to and extended the participation deadline in June 2026, having published the participant list in April. Consumer protection sits in the 2015 consumer protection law rather than in a payments instrument. No national payment systems act appears on the repository. 2024-07-19 — decree 2024-0429 made the digitalisation of payment in public services law, progressively, and a first compulsory wave covered taxes, police fines and identity card services.	NO CHANGE
Legislation and regulation	**Legislation enabling data interoperability**	A 2025 ordinance created the identification agency and the national population register; a general data-management law is still recommended, not drafted. The one enacted step is register-specific. A 2025 ordinance created the national agency for the security of identity documents and civil status together with the national population register, which is the instrument under which registers could be joined. The general duty does not exist. The 2016 electronic transactions law gives electronic exchange legal effect without requiring public bodies to share, and the national digital week's call for a data-management law is a recommendation rather than a bill. Where exchange happens it happens by project, as with the customs interconnection pilot.	MOVEMENT
Legislation and regulation	**AI legislation / regulations**	Francophone West African artificial-intelligence governance guidelines were adopted with five other states in July 2026, led by an advocacy organisation. The guidelines were adopted on 9 July 2026 and announced at a global dialogue on artificial-intelligence governance (guidelines). They are the country's only artificial-intelligence governance instrument in force, they are regional rather than national, and they were led by an advocacy organisation rather than by a state. No domestic statute, decree or regulator on the subject is held.	MOVEMENT
Legislation and regulation	**E-commerce legislation**	Law 2016-012 on electronic transactions, exchanges and services is the instrument, alongside a consumer protection law of 2015. The transactions law of 6 May 2016 is held from the official journal and is the footing an electronic signature service would rest on; no such service is in operation on the record (law). The consumer protection law of 16 July 2015 sits behind the regulator's decisions on telephone credit validity and internet bundle practices, and neither instrument cites the other on the record (consumer law, decision).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Statistics legislation**	Law 2016-005 of 24 February 2016 governs public statistics; the national statistics council and the master plan run under it. The text is held from the official journal (law). The national statistics council held an ordinary session in February 2026 (council), and the statistical master plan for 2020-2024 reached the seventeenth technical session of its annual review in August 2026 (review) — a plan whose own period expired in 2024, with a fourth plan for 2026-2030 still to be adopted.	NO CHANGE
Legislation and regulation	**Access to information legislation**	The access-to-information law's implementation was evaluated in April 2026, against a 2003 decree governing relations between the administration and users. Two instruments bear on access. The older is the 2003 decree on relations between the administration and users, which sets the duty to answer. The access-to-information law itself was the subject of an evaluation of its implementation in April 2026 — an assessment of how the statute works in practice rather than an amendment to it. The publishing side moved in the same period: the statistics institute agreed an open data licence in August 2026 and ran a workshop on migrating its portal. Access to information and publication of data are advancing on separate tracks.	MOVEMENT
Data protection	**Data protection authority**	The data-protection authority opened its second 2026 session with more than 1,000 files, and now runs regional offices in four towns. The session opened on 3 August 2026 with more than 1,000 files before it over ten days, against about 2,000 declaratory files under review a year earlier and one fine of five million francs with more than 100 formal notices issued in 2025 (session, caseload). A regional antenna opened at Segou in December 2025 (antenna), and by September 2026 the authority had offices at Kayes, Sikasso, Segou and Mopti (offices). No figures are published for sanctions issued or files cleared, so the workload is visible and the output is not. Cooperation with the Beninese authority was agreed in April 2025 (cooperation); its first recorded joint action was a working visit by Benin's First Rapporteur on 4 September 2026 (visit). 2026-09-23 - the authority signed a cooperation agreement with Togo's data-protection authority covering information exchange, complaints handling, compliance checks and staff training. A 2024 decree set the authority's filing fees at FCFA 100,000 a declaration and FCFA 200,000 an authorisation for firms. In 2025 it fined a retailer and a Bamako clinic FCFA 5m each for obstructing its inspections.	MOVEMENT
Data protection	**National data protection readiness**	The authority authorised the demobilisation commissions to process ex-combatant data, and has a mandatory lease-declaration decree in draft. The national health insurance body completed a digital security training dedicated to data protection (report). The two national demobilisation and integration commissions were authorised to collect and process ex-combatant and beneficiary data, and ran a three-day training on personal-data protection in domestic law covering it in August 2026; the authorisation's scope, retention period and the number of records held are not published (authorisation). A draft decree making lease declaration mandatory was before the authority in October 2025 and no adoption is on record (decree). Prior authorisation of a named sensitive processing is the strongest readiness signal the repository holds for the country.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Regional policy collaboration**	Mali was re-elected to the African Telecommunications Union board for 2027-2031, its data-protection authority signed a confederation coordination roadmap, and it remains a Smart Africa member. Re-election to the union board for the 2027-2031 term was recorded at the Abuja plenipotentiary in July 2026 (re-election). The Ouagadougou declaration on the digital economy was adopted at a regional salon in July 2026; Mali spoke for the three confederation states (declaration). Membership of the continental smart-cities and connectivity body continues (membership). 2025-11-18 — the three confederation data-protection authorities signed an operational roadmap for their coordination framework; no budget, secretariat or first joint action is published. 2026-09-23 — the three confederation telecommunications regulators, Mali's among them, announced a cooperation convention creating a Council of Sahel Regulators, to be signed on 25 September, covering roaming, cybersecurity, frequencies and equipment approval. 2026-09-26 - the three regulators signed the convention creating the Council of Sahel Regulators, naming free roaming, border frequency coordination, mutual recognition of type-approved equipment and coordinated 5G among its files; its statutes, rules of procedure and first work programme are still to be adopted.	MOVEMENT
Regional collaboration	**Regional legal harmonisation**	A confederation protocol on artificial-intelligence governance was recommended in August 2026 with no text, while ECOWAS membership ended in January 2025. The recommendation was one of the national digital week's sovereignty proposals (recommendation). No text, negotiating mandate or signature is on record. The country's harmonisation work that has actually happened runs through travel and identity document specifications agreed with the same two states, which the repository records separately. 2025-01-29 - ECOWAS's own statement records that withdrawal became effective that day, setting out only narrow transitional arrangements - passports, trade treatment under the liberalisation scheme, free movement and cooperation with ECOWAS officials - and leaving the post-withdrawal applicability of ECOWAS legal-harmonisation instruments, digital and data-governance acts among them, unresolved.	MOVEMENT
Regional collaboration	**Shared regional infrastructure**	The three confederation states signed a frequency coordination agreement in November 2025; the regional fibre programme's own page says nothing of the country after its withdrawal. The agreement was presented as a decisive step for regional digital integration, and the three states' digital ministers carried a common position to the union's digital forum in July 2026 (agreement, forum). No band plan, cross-border interference arrangement or implementation date is published. The body the country withdrew from in January 2025 still runs a regional fibre programme, and neither its page nor anything else states what the withdrawal leaves of the country's participation (programme) — the question the withdrawal raises for connectivity, unanswered on the record. 2026-10-06 - the Senegalese and Malian state fibre operators inaugurated the interconnection of their national backbones at the Kidira-Diboli border crossing.	MIXED a frequency agreement signed while the country's place in the regional fibre programme went unstated

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Cross-border data transfers**	Transfers are governed by the 2013 protection law; the regional track is a roadmap between Sahel authorities and a bilateral with Benin. The domestic basis is the 2013 personal data protection law, administered by an authority whose 2025 annual report and 2026 caseload show it working through volume rather than publishing transfer rules. Regionally, three arrangements exist and none is a transfer mechanism. The Sahel confederation's data-protection authorities agreed a coordination roadmap in November 2025, Mali and Benin agreed data-protection cooperation in April 2025, and Mali's and Togo's authorities signed a cooperation agreement on 23 September 2026 after talks that covered cross-border transfers. No adequacy list, standard clause or authorised-transfer route is published, and Mali has left the West African bloc whose instruments would otherwise apply.	NO CHANGE
Standards	**National interoperability standards**	The standards body publishes no interoperability standard. The public key infrastructure that would underpin one remains planned. The institution exists: the national standardisation and quality agency, created by ordinance in 2012, an international standards body member which considered a draft 2026 budget in January. Nothing it publishes addresses how government systems exchange data. The technical precondition is also unmet. The public key infrastructure framework drawn up with the telecommunications union is still planned, and the national digital week carried it among its recommendations. The one live exchange is bilateral and sectoral: customs interconnection piloted with a neighbour.	NO CHANGE
Standards	**National quality standards**	The standards agency's draft 2026 budget is about a quarter lower, at CFA 243.3m, and it is the international standards organisation's member body for the country. The agency was created by ordinance n. 2012-016/P-RM of 19 March 2012 (ordinance); its fourteenth ordinary board session, in January 2026, was submitted a draft 2026 budget balanced at CFA 243,306,303 against CFA 318,369,036 in 2025 (budget). No standard adopted, certification issued or staffing figure is published, so what is measurable about the agency is the money, and it is falling.	REGRESSED
Standards	**Adoption of international standards**	Passport production restarted on 27 October 2025 to civil aviation standards, on a polycarbonate document with more than 50 security features. The clearest adoption of an international standard in the window is a travel document. The security ministry records the relaunch of production and issuance of the secure regional biometric passport on 27 October 2025 at the border police directorate, with a new domestic contractor; the document is polycarbonate, carries more than 50 security features invisible to the naked eye, and meets the requirements of the international civil aviation organisation, with start-up capacity of 450 to 500 passports per day per printer. It implements the harmonised regional specifications for travel and identity documents agreed in November 2024. Institutionally, the standards agency is an international standards body member.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	A civil-society organisation launched a citizen application for reporting and checking online content in August 2026, closing a campaign it says reached 68,885 people. The application is aimed at young people and civil-society organisations, and was launched alongside the closing report of a digital campaign against viral falsehood that the organisation says reached 68,885 people (launch). The work is funded through a foreign-ministry facility with support from the ministry responsible for the digital economy, so it is civil-society delivery inside a state relationship rather than independent of it. No user or report-volume figure is published.	MOVEMENT
Public debate and participation in policymaking	**Open discussion of government policy**	A newspaper editor was sentenced before the cybercrime pole, and a ministerial instruction directs prosecutors at social-media content. The editor was arrested in June by the national cybercrime unit and sentenced to twelve months with six suspended for undermining the credibility of the state; a press-freedom body describes authorities using cybercrime provisions to prosecute journalists (sentence, case). Neither the judgment nor the charging instrument is held, and the characterisation of a pattern is that body's. The justice ministry instructed prosecutors on 29 July 2026 to act on platform content, building on existing penal and cybercrime provisions with no new statute (instruction, account). A survey of 2,220 adults in April 2026 puts a short-video platform third among main news sources at 19.7 per cent, behind radio at 27.3 and television at 21.7 (survey, reporting). The cybercrime tribunal sentenced a second newspaper editor to two years in prison on 14 September 2026, over a television remark about Kidal charged as spreading false information through an information system; he had been detained since June.	REGRESSED cybercrime provisions used to prosecute a journalist while a ministerial instruction directs prosecutors at platform content

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The universal access fund's 2026 budget was cut 32 per cent in July, days after it signed conventions to connect every secondary school by end-2027. The fund's adopted 2026 budget of FCFA 41,151,471,000 was revised down to FCFA 27,886,688,000 on 23 July 2026, after 8 per cent of the annual budget was spent in the first half and receipts ran at 56 per cent of forecast (revision). The day before, it signed two four-year renewable conventions with the education and employment ministries committing it to connect every secondary, technical and vocational school by the end of 2027, with cumulative education spend put above FCFA 17bn (conventions, partnership). The fund sits under direct prime-ministerial tutelle and named a new director-general the same week; a named-analyst investigation dates its removal from the regulator to 2012 (governance, investigation). The state's own digital lines run through the finance law: the 2025 law is enacted (law), while 2026 is held only as the October 2025 bill and a July 2026 supplementary bill (bill).	MIXED the universal access fund's budget cut by a third in July while it signed four-year school connection commitments
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
MoUs and other agreements	**Strategic relationships**	Mali took its digital agenda to the regional alliance's ministers and to an international mobile congress in the window. The relationships that matter here are regional and they are being worked. Mali took part in the continental digital alliance's presence at the international mobile congress in March 2026 and in the Sahel confederation's digital ministers' meeting in July, alongside a standing frequency coordination agreement. The financing relationships are older and narrower: a Chinese export credit loan for the national digital programme ratified in 2018 and a Gulf operator's connectivity commitment. The European multiannual programme is discontinued.	MOVEMENT
New investments	**Mobilisation of non-state finance**	The only private commitment naming the country is a US$6bn connectivity pledge spread undivided across sixteen markets. A Gulf operator pledged US$6bn to an international connectivity coalition for 2024 to 2026 across sixteen markets including Mali, undivided between them (pledge). No Mali-specific allocation is published, so the repository can record that the country is named in a large commitment and not what share of it, if any, reaches the country.	MOVEMENT
New investments	**Development-partner project financing**	An EUR 80m development-bank loan funds 4G and fibre build, and FCFA 88,740,927 of ICT equipment went to eight teacher-training institutes. The loan was signed in November 2025, co-invested with a regional bank and a private-sector window, and covers 300 4G towers, half of them rural, and fibre to about 300,000 households (loan). Equipment worth FCFA 88,740,927 was handed to eight teacher-training institutes on 30 July 2026, funded by Japan and implemented by a United Nations agency, with no maintenance, connectivity or software provision stated (handover, account).	MOVEMENT

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	A development-bank loan of November 2025 puts 300 4G towers, half of them rural, and fibre to about 300,000 households into build. Two operators hold development-bank money for 4G. The November 2025 loan covers 300 towers with half in rural areas, alongside fibre to about 300,000 households (loan); in June 2025 two IFC loans totalling EUR 370m were announced for the 4G rollouts of Maroc Telecom's subsidiaries in Mali and Chad, with no split between the two countries stated. No subscriber count, penetration rate or coverage share is published for the country at all, so the addition is on record and the repository it adds to is not.	MOVEMENT
Connectivity	**Internet usage**	No national use figure. What is published is price — mobile data compared against a neighbour — and a 2030 universal coverage target. Nothing on this repository measures how many people in Mali use the internet. The two published series bear on the conditions for use rather than on use itself: an affordability comparison of mobile data against a neighbouring market, and the coverage position discussed at the universal coverage panel of the 2026 digital week, which set 2030 as the target. Coverage itself is being extended by the universal access fund, whose 2026 programme covers 162 localities, and the repository carries an explicit position on rural and white-zone coverage with no percentage against it.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile affordability**	About 1.5GB of mobile data in Bamako costs what buys 25GB in Dakar, and the market has one surviving independent provider. The comparison, published in August 2026, puts the ratio at roughly twenty-five to one and attributes it to weak market oversight, the duopoly of the two incumbent operators and years of talk of a new operator licence with no competitive shift (comparison). It is a press comparison rather than a tariff series, and neither the basket nor the date of the prices compared is stated. One independent internet service provider is reported surviving, buying wholesale transit at near-retail prices, which is the wholesale structure behind the retail figure (provider).	NO CHANGE a first published comparison with no earlier price series behind it
Connectivity	**National fibre backbone**	Retail fibre speeds doubled to 100 Mbps across six cities, ADSL is to be retired by end-2026, and a single national transport operator was recommended. An operator doubled fibre speeds at no extra cost in June 2026, reaching up to 100 Mbps across six cities (speeds). Retirement of copper and migration to fibre to the home was announced for the end of 2026, with no subscriber or coverage figure published (migration). The national digital week recommended making the state transport-infrastructure company the sole national operator of transport infrastructure, as a law; nothing has been tabled (recommendation). No route map or backbone length for the country is held.	MOVEMENT
Connectivity	**International internet bandwidth**	An independent subsea route with automated rerouting was added behind the inland backbone in July 2026, easing a landlocked country's exposure to three landing points. The inland backbone integrated capacity on a west-coast subsea system in July 2026, giving an independent route with automated rerouting behind it (integration). The country's inland routes had been exposed to the concentration of landings at Abidjan, Accra and Lagos. The account is the vendor's, and no capacity, price or utilisation figure is published.	MOVEMENT
Connectivity	**Internet Exchange Points**	A steering committee for an exchange point was created by decree in 2017 and nothing since says whether it reported or an exchange point exists. Decree n. 2017-0872/P-RM created the committee with its organisation and working arrangements (decree). Nine years on the record is silent: no committee report, no exchange point, no operator listing. A published peering record would settle it, and the row is carried as a dated absence rather than a finding either way.	NO CHANGE
Connectivity	**Satellite broadband licensing and availability**	An operator's satellite 3G and 4G service reaches about 360,000 remote residents, while the regulator is seizing unauthorised terminals nationwide. The satellite-backhauled service is in service reaching about 360,000 remote residents, with no later coverage figure published (service, loan). A six-month lifting of the import ban on low-orbit kits was reported in October 2024 (lifting), the prohibition on unauthorised equipment was restated in March 2026 with a warning of sanctions (prohibition), and control, seizure and dismantling operations were announced in June 2026 against unauthorised kits, shared Wi-Fi zones and walkie-talkies, with operators ordered to cease immediately (enforcement). Imports and use remain banned pending authorisation.	MIXED a licensed operator's satellite service reaching remote residents while unauthorised terminals are seized

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Local data centre capacity (all providers)**	One facility: a tier-three centre inaugurated on 31 January 2026 with a stated availability standard of 99.982 per cent. No commercial provider is named. The window converted an absence into a facility. The centre was inaugurated in Bamako on 31 January 2026, intended to host electronic government platforms and the state's strategic databases, with a stated availability standard of 99.982 per cent. What is not published is its size: no rack count, floor area, power draw or customer is stated, and no commercial or operator-run data centre appears anywhere on the repository for Mali. National capacity and this one building are, on the evidence held, the same thing.	MOVEMENT
Data Storage	**Local data centre capacity (national providers)**	A Tier III national data centre was inaugurated in Bamako in January 2026, hosting state data and framed to carry mutualised regional infrastructure. The centre entered service on 31 January 2026 with stated availability of 99.982 per cent (launch, opening). It hosts state data and is framed as able to carry mutualised infrastructure for the three confederation states (account). No capacity in racks or megawatts, no customer count and no commercial facility elsewhere in the country is recorded.	MOVEMENT
Data Storage	**Off-site backup capacity**	One facility and no second site. The tier-three centre states an availability standard and no replication arrangement. A single data centre cannot answer this indicator, and a single data centre is what the country has. The tier-three facility inaugurated on 31 January 2026 states an availability standard of 99.982 per cent — a statement about that building's own redundancy, not about copies held elsewhere. Nothing published names a second site, a replication arrangement, a recovery-time objective or a restore test, for that centre or for any government system that will move onto it. The announced repatriation of public data held abroad would concentrate rather than distribute what the state holds, which makes the absence of a second site the more consequential.	NO CHANGE
Energy	**Sufficient energy and water for data centres**	The utility's own 2023 figures put energy not supplied at 17.92 per cent of energy sold against a contractual 1.5 per cent, after rationing caused by a cash crisis. The utility's published account is the measure. For 2023 it reports 2,837.90 GWh produced and purchased, installed capacity of 903.62 MW, peak demand of 474.91 MW on the interconnected network, and energy not supplied of 401.75 GWh against 101.73 GWh in 2022 — a rise of 297.9 per cent, and 17.92 per cent of energy sold against a contractual value of 1.5 per cent, the result of a rationing programme caused by fuel supply difficulties at the thermal plants arising from the utility's cash crisis. Reinforcement is financed and unbuilt: a 225 kV loop north of the capital ratified in 2026. No supply arrangement, tariff or water requirement is published for the data centre.	NO CHANGE
Energy	**Grid reliability**	Diesel-to-solar conversion of network sites is inside the November 2025 operator loan, with no site count published. The conversion is in the loan's scope and is the repository's only record of power provision for digital infrastructure in the country (loan). No site count, generation figure, outage measure or grid-availability statistic is published, so what the network runs on can be described in kind and not in quantity. 2025-11-25 — households in parts of Bamako were receiving 4 to 6 hours of electricity a day, against 12 to 18 hours earlier, on a press account.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	**Rural electrification**	A national mini-grid project's first steering committee put delivery at CFA 1.25bn, and three contracts were signed for 1,373 km of transmission to Mauritania. The Council of Ministers took the mini-grids programme in December 2025 (council) and the rural electrification agency behind it was created by law in 2003 (agency); no site count, connection target or completion date accompanies the cost figure. Separately, loan and grant agreements of about US$68.26 million for a 225 kV loop strengthening Bamako's supply were ratified in July 2026 (ratification). Nothing states whether any of this serves a telecommunications site, which is what would connect it to the network's own power problem. 2021-06-18 — a US$200 million access and solar integration project was at concept stage with the World Bank; no approval or later status is held.	MOVEMENT
Technical Capacity	**Robustness of government hardware and software**	Government systems now have somewhere to sit — a tier-three centre from January 2026 — and a security agency created in June. Hosting: the tier-three centre inaugurated on 31 January 2026 to carry electronic government platforms and the state's strategic databases. Security: an information systems security agency created in Council of Ministers in June 2026, under a cybersecurity strategy gazetted in March. Connectivity between ministries is still being built: a government intranet alongside administration of the country-code domain. 2026-01-12 - the state technology agency's 2026 procurement plan provides FCFA 240m to renew the government messaging and collaboration licences and FCFA 250m to fit out equipment rooms with IT, network, power and cooling; a plan, not an award. No inventory, refresh cycle or availability figure for government equipment is published.	MOVEMENT
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	The state technology agency administers the country-code domain, which held 13,441 names across thirty registrars at the end of 2025. The registry held 13,441 domain names across thirty registrars in December 2025, administered by the state agency that also builds the government intranet and the justice e-services recorded elsewhere in this ledger (registry). That agency is the whole of the state's recorded in-house capability. No technical headcount, maintenance arrangement or statement of which systems the state can run without a vendor is held.	MOVEMENT
Cybersecurity	**National cybersecurity readiness**	A National Cybersecurity Strategy 2026-2030 was adopted in December 2025, an agency created to implement it, and a criminal chamber began hearing cases. The strategy was adopted by the Council of Ministers on 9 December 2025 (strategy). The information-systems security agency was created by Council of Ministers texts in June 2026 to implement it, with no budget or staffing published (agency). The criminal chamber of the national cybercrime pole began hearing cases on 21 May 2026, opening with four cases and eight accused (chamber). The same pole is the venue in which a journalist was prosecuted, so the institutional build and the speech concern recorded elsewhere in this ledger are the same machinery.	MOVEMENT

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	A government intranet had thirteen services integrated at the end of 2025, and a national public key infrastructure was recommended for deployment. The intranet had thirteen services integrated in December 2025, with a draft decree to make government messaging mandatory (intranet). Effective deployment of a national public key infrastructure and electronic signature services was recommended at the national digital week, with no first service named (recommendation). Between them these are an internal network and an intention, not an exchange: no transaction volume, service catalogue or connected-agency count is held.	MOVEMENT
Data Exchange	**Use of digital id in other systems**	The identity number now reaches two other systems: online criminal record and nationality certificates and a parcel identifier keyed to it. The credential is the national identification number established by law in 2006, with its application decree. Two systems consume it. Justice: criminal record and nationality certificates were put online in February 2026, with an electronic justice platform and user training in July. Land: the cadastral identifier established by decree in 2019 keys parcels to the national number, carried into the 2025 domains and cadastre decree. A third is being built inside the state: biometric control of state agents under the human resources system.	MOVEMENT
Data Exchange	**Interoperability of health systems**	The national health information system publishes its own description, and community health workers notify perinatal deaths and births electronically in four districts. The system runs under a health and social information strategic plan for 2020-2024, whose period has expired, and a national digital health plan for 2024-2028 (system, plan). A health organisation set out the case for an integrated and efficient health information layer in September 2025 (case), which is a statement that integration is not yet there. No completeness rate, reporting timeliness figure or facility count is published for the system.	MOVEMENT
Data Exchange	**Interoperability of education systems**	The education information system was worked against school health statistics in March 2026 — the first cross-sector use of it on the repository. The education management information system is in development and its one recorded exchange is with health. In March 2026 it was worked against school health statistics with the education and culture agency, which is the first instance on this repository of education data being joined to another sector's. Behind it, delivery is being supervised through a project status report of December 2025, against a system that has been peer-reviewed since 2017. No learner identifier is described, and no link to the national population register is reported.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of social protection systems**	The unified social register ran an enrolment campaign from November 2025, and health insurance is being delegated under management contracts. Three systems sit in this space and the window moved two of them. The unified social register ran an enrolment campaign from November 2025, on a design set out in a technical paper with a financier. Universal health insurance moved onto delegated management contracts in July 2026, and pension payment is being digitised at the social security fund. What no source describes is exchange between them, or between any of them and the national population register. Each enrols its own people.	MOVEMENT
Digital Identity and CRVS	**Robustness of system**	Five document categories are issued on the confederation biometric passport to international specification, under specifications validated by three security ministers. The three states' security ministers validated harmonised travel and identity document specifications at Bamako in November 2024 and referred them to the heads of state (specifications, validation). The common biometric passport launched in January 2025 (launch) and five categories are now issued to international civil aviation specification on a five-year, thirty-four-page book (categories, supplier). No issuance count, rejection rate or verification figure is published.	MOVEMENT
Digital Identity and CRVS	**Registration of entire population**	The confederation biometric identity card was piloted on Malian soil in June 2026 for another member state's residents, with no Malian enrolment figure published. The cross-border diaspora enrolment pilot ran in Bamako in June 2026, enrolling Burkinabe residents rather than Malian citizens (pilot). No Malian enrolment figure, coverage share or rollout date is published, so the country's first biometric identity card operation on record served somebody else's population.	MOVEMENT
Digital Identity and CRVS	**National maintenance of id and credentials systems**	A national agency for civil status document security was created in 2025, and passport supply moved from a French to a Chinese vendor in October 2025. The agency's board was named on 21 July 2026, including the digital-economy ministry and the civil-status director. The agency was created in 2025 with no output figure published (agency). The passport supplier changed from Idemia of France to Emptech of China in October 2025, a change officials cast as regained sovereignty and local data management (supplier). Neither move puts the credential's production in national hands: what the repository records is a domestic body responsible for security and a foreign body responsible for supply. 2024-02-13 — the civil-status census database came back under national control: after Idemia shut the service over unpaid invoices, the government launched Mali Kura biometrie and said the data had been recovered with no foreign maintainer. No independent account of the recovery is held.	MIXED a national agency created for document security while passport supply moved from one foreign vendor to another

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Authentication**	Authentication is being built into the state's own payroll: biometric control of state agents. The public key infrastructure remains planned. Mali has a credential and not yet a way to verify it electronically. The national identification number dates from 2006 and the regional biometric identity card is at pilot stage with the diaspora. The one working authentication in the window is internal: biometric control of state agents under the integrated human resources system, carried into a Council of Ministers communiqué in July. The general mechanism, a public key infrastructure framed with the telecommunications union, is still planned and was restated among the digital week's recommendations.	MOVEMENT
Digital Identity and CRVS	**Digital id from birth**	A community birth registration arrangement for remote areas was presented in July 2026, and the country set out a modern and resilient civil status system in August. Community health workers notify perinatal deaths and births through an electronic platform in four health districts on a peer-reviewed account (study). No registration rate, notification volume or coverage of the arrangement is published, and the repository separately holds fewer than half of births registered on an older measure — so what has moved is the method and not yet the number.	MOVEMENT
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	A 2025 ordinance created the identification agency and the national population register together, and community birth registration reaches remote areas. The institutional link was made by ordinance. The 2025 instrument created the national agency for the security of identity documents and civil status together with the national population register, putting registration and identity under one body — the structural precondition this indicator asks about. Capture is being pushed outward at the same time: community birth registration in remote areas, marked at the ninth African civil status day in August 2026, and perinatal death and birth notification by community health workers. What no source states is whether a registration produces the national identification number automatically.	MOVEMENT
Digital Identity and CRVS	**Use by other systems**	The NINA national identity number is in use as the national identity key and authenticates applications to the justice e-services. The number is the identity key on which the online criminal record and nationality certificate applications are made (number). No count of systems keyed on it, no authentication volume and no coverage share of the population holding one is published, so its reach into other systems is recorded by example and not by measure.	NO CHANGE
Digital Payments and Fintech	**Governance role of central bank**	The regional central bank publishes the list of participants authorised to open instant payment services and extended the connection deadline in June 2026. The participant list is held as a document and the Malian entries on it are not extracted here (list); the bank's statutes are held beside it (statutes). An extended deadline is the clearest statement on file that connection to the platform is behind schedule (extension), and no transaction volume or value is published. The monetary authority here is regional rather than national, which is the position this indicator records for a member of the union.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**G2P functionality**	A bank-channel pilot for pension payment completed in July 2026 and is reported ready for phased extension to other partner banks. Mobile pension payment was already live; the bank-channel pilot with one partner bank completed on 27 July 2026 and is reported ready for phased extension (pilot). No pensioner count, payment volume or extension date is published. It is the only government-to-person payment stream recorded for the country.	MOVEMENT
Digital Payments and Fintech	**Revenue collection**	TresorPay takes identity fees and fines, and about FCFA 200m was collected digitally for local authorities between July 2024 and May 2026. The treasury payment service launched in March 2025 for identity fees and fines, with no transaction figure published (service). About FCFA 200m was collected through digital payment for local authorities between July 2024 and May 2026, and local authorities have been ordered to report on it at each civil registry centre within thirty days (collections). That reporting order is the repository's only sign that the state is measuring what its own digital channels take. 2025-11-26 — the tax director-general put electronic tax receipts at 300 billion FCFA in 2024. The figure is the directorate's own.	MOVEMENT
Digital Payments and Fintech	**B2B and B2G functionality**	Business-to-government payment works through a treasury single window and three online tax filing options from April 2026. Government collection is the half that has moved. The tax administration opened three options for filing the annual return online in April 2026, building on a published register of active taxpayers, and the treasury's payment single window serves the land registry. Communes are digitising civil registry payments. Business-to-business runs on regional rails rather than national ones: the regional central bank's instant payment platform, whose participation deadline was extended in June 2026. No business-to-business volume is published for Mali.	MOVEMENT
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	Both mobile money operators now issue prepaid cards: one launched in June 2025 with transaction caps, the second in April 2026. The first telco-led prepaid card launched with a bank partner in June 2025, capped at two million francs a transaction and ten million a month (first card). The second launched at a regional technology exhibition in April 2026 (second card). No issuance, activation or spend figure is published for either, so what the repository records is that the wallet has acquired a card rail and not how much travels on it.	MOVEMENT
Digital Payments and Fintech	**Population uptake**	The country's share of union electronic-money value fell to 11.7 per cent in 2024, and its distributor network fell 46.34 per cent. Share of union transaction value fell from 12.1 per cent in 2023 to 11.7 per cent in 2024, and share of volume stood at 10.7 per cent, on volume growth of 18.58 per cent and 7.29 per cent of accounts opened (shares). Distributor numbers fell 46.34 per cent in 2024 (network). Volume rising while the agent network halves is the shape worth watching here: it is consistent with use concentrating on fewer, larger points rather than spreading.	MIXED transaction volume growing while the country's share of the union fell and the distributor network contracted sharply
Digital Payments and Fintech	**Cross-border functionality**	A remittance integration into mobile wallets was announced in May 2025 and no volume has been published since. The integration between a cross-border payments network and a wallet operator was announced in May 2025, vendor-reported (integration). No corridor, volume, price or count of participating institutions is published, and no regional switch connection for the country is separately recorded.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Consumer protection**	The regulator framed the validity of telephone credit and the commercial practices attaching to internet bundles by decision of 6 May 2026. Decision n. 26-00074/AMRTP-P is held from the official journal (decision); the general consumer protection law of 2015 sits behind it and neither instrument cites the other on the record (law). No compliance deadline, operator response or enforcement action is published, so the rule is dated and its effect is not.	MOVEMENT
Registries	**Population register**	A national digital directory of diaspora skills was launched in Washington in August 2026, with no data-protection basis stated. The directory registers professional profiles across economic, administrative, academic, private-sector and emerging fields so that ministries can identify expertise against specific needs; it is run by the embassy to the United States and was launched on 22 August 2026 (launch). The minister described it as an accreting database whose usefulness depends on take-up and on profiles being kept current. Questions at the ceremony went to registration terms and to how the recorded data would be used, and no data-protection basis is stated.	MOVEMENT
Registries	**Civil register**	Birth registration stands at 89.5 per cent across 747 functional centres while death registration is about 20 per cent, and the village register remains hand-kept. Birth registration was recorded at 89.5 per cent across 747 functional primary centres in mid-2025, with no later figure published (births). Death registration stood at about 20 per cent on the same account (deaths). A civil register that captures nine births in ten and one death in five cannot support the population arithmetic that other systems would draw on. The village census ledger from which family record books are issued was formalised in a draft ordinance adopted in July 2026, replacing a 2006 statute, and remains a hand-kept ledger (ordinance).	MIXED birth registration near ninety per cent against death registration near twenty, on a village ledger still kept by hand
Registries	**Address register**	Addressing is being built through the land system: a unique national cadastral identifier for every parcel, under the 2025 domains and cadastre decree. There is no standalone national address register, and the function is arriving through land administration. The decree of 2019 gives each parcel a unique national cadastral identification number, the tax administration was presented with the NINACAD-Adresse addressing application in January 2026, and systematic registration of parcels began in 2025 under the domains and cadastre decree gazetted in January 2026. A regional instrument would harmonise it: the union directive on property registration, still planned. No coverage figure for parcels or addresses is published. 2025-03-10 — a national addressing system was presented: NINACAD-Adresse gives each address a six-digit code across about 1,500,000 places in Bamako, Kati and Segou.	MOVEMENT
Registries	**Business register**	A single window for business creation has existed by decree since 2008; the investment agency's quarterly newsletter is the newest account of its work. Decree n. 08-276/P-RM of 13 May 2008 fixes the administrative formalities for creating a business through a single window (decree). No registration volume, processing time or online channel is published, so the single window exists in law and its performance is unmeasured (newsletter).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Social protection register**	An enrolment campaign for the unified social register was running in November 2025, against a safety-net programme reviewed for its operation amid conflict. No household count, coverage figure, targeting method or grievance route is published for the register, and the campaign's own reach is not stated (campaign). The technical paper reflects on the safety-net programme's operation amid fragility, conflict and violence (paper). Against it, humanitarian caseload reporting is current: the refugee agency publishes quarterly operational updates and the food programme a monthly brief (update).	MOVEMENT
Registries	**Electoral register**	The annual revision of the electoral lists ran from 1 October to 31 December 2025, and the electoral authority trained agents on a mobile register application in February 2026. The electoral law of 24 June 2022 is the instrument behind both and its text is held from the official journal (law). No registered-voter count, revision outturn or relationship to the national identification number is published, so the process is dated and the register's size and quality are not.	MOVEMENT
Registries	**Tax register**	The revenue directorate has published its list of active taxpayers online since 2019 and opened three filing options in April 2026. No filing share, taxpayer count or processing time is published for the three options, and the newest annual report held is for 2022 (report, options). A digital addressing application was presented to the same directorate in January 2026 and is forthcoming rather than in service (address).	MOVEMENT
Registries	**Land register**	A land information system and one-stop land office launched in March 2025 and no transaction figure has been published. The system and the one-stop office launched together on 18 March 2025 (launch). No parcel count, transaction figure, coverage area or link to the payment service launched the same day is published, so the repository records that the office exists and not what passes through it.	NO CHANGE
Sectoral management information systems	**Health**	A national digital health portal launched in July 2026, a health information system is in build, and a unique patient identifier runs in one hospital. The portal went live on 8 July 2026 under the health digital plan, with facility geolocation; power, the urban-rural divide and interoperability were flagged as obstacles at launch (portal). The health information system is in build and is stated to link to the national identity number and to mandatory health insurance (system, platforms). A unique patient identifier runs an end-to-end digitised circuit in one Bamako hospital across registration, laboratory, consultation and pharmacy (identifier). One hospital is the extent of the working evidence.	MOVEMENT
Sectoral management information systems	**Education**	The education management information system was peer-reviewed in 2017, and a UN body supported school health statistics in March 2026. The education quality project's implementation status report of December 2025 carries the system among what it finances (report). The peer review is nine years old and the repository holds no enrolment dataset, completeness rate or publication cycle for the system, so support to it is dated and its output is not. 2026-07-29 — the education ministry validated the specification and mock-up of a portal to manage teacher postings and attendance, under an EU-funded project. No launch date is stated.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Social protection**	The health insurance fund and its delegated bodies signed management contracts towards universal coverage in July 2026, after digitising prior authorisation in May. Workshops on enrolling non-salaried workers ran in September 2025 (workshops). No enrolled-member count, claims volume, processing time or link to the national identification number is published, so the administrative steps are dated and the scheme's reach is not.	MOVEMENT
Sectoral management information systems	**Justice**	Online criminal records and nationality certificates went live in February 2026, keyed on the national identity number with an authenticity check. The services launched during a justice week in February 2026, with applications keyed on the national identity number and an authenticity check on the issued document (services). They were built by the state technology agency. No application volume, issuance count or processing time is published, and no case-management system for the courts themselves is recorded.	MOVEMENT
Sectoral management information systems	**Tax**	Three options for filing declarations and depositing financial statements opened in April 2026, on a base where the active taxpayer list has been online since 2019. The directorate's annual report for 2022 is the newest held, four years old (report). No filing share, taxpayer count or processing time is published for the options, so what is established is that the channels exist and not how much revenue moves through them. The monetary fund's second programme review of July 2026 is the newest independent account of the public finances they sit in (review).	MOVEMENT
Sectoral management information systems	**Customs**	A pilot exchanging transit-goods data with Ivorian customs is running, presented at a Bamako roundtable in August 2026. The customs administration frames the pilot as cutting fraud and transit delays, and gives no completion date for the full interconnection (pilot, roundtable). No counterpart administration, timetable, cost or system name is stated in the record held. For a landlocked economy whose imports move through a neighbour's ports, this is the single most consequential exchange in the ledger and the least documented.	MOVEMENT
Sectoral management information systems	**Land**	A decree of December 2025 reorganised the regional land and cadastre services, after the urbanism directorate opened a broad parcel registration campaign. Decree n. 2019-0112 of 22 February 2019 provides for identifying land parcels across the national territory (2019 decree), and a digital addressing application presented to the tax directorate in January 2026 is forthcoming (address). No parcel count, coverage figure or completion date is published for the campaign, so what is established is the institutional frame and not what it has registered.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Other GovTech and e-Gov	**e-government services**	A diaspora services platform, a driving licence and vehicle registration service, a territorial administration system and an HR management system are the recorded stack. The diaspora services platform launched in February 2025 with no usage figure published (platform). The driving licence and vehicle registration service is live and linked to the treasury payment service and the customs system (service, presentation), while the territorial administration data management system is in build with no deployment figure (territorial system). An integrated human resources management system was reported in build in July 2026, with no scope or completion figure published (human resources). Not one of the four carries a usage number. 2025-06-20 — the employment agency launched its BAARA-ANPE platform; no user figure is held.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	The territorial collectivities directorate validated a computerised monitoring and evaluation tool with a local development module, and reviewed its implementation in December 2025. A FCFA 9.407bn contract for a secure state network reaching local authorities was reported in June 2022, for 12 months. The Prime Minister launched it on 18 December 2023. In April 2025 the universal access agency was seeking to revive the September 2022 convention. The December meeting also covered a study visit on digitalisation (meeting). No commune count, data captured or publication of the outputs is on the record, so a validated tool is what the repository holds and a running system is not.	MOVEMENT
Digitalisation of sub-national government	**Digitalisation of local government records**	One commune is running a fiscal census and financial-management digitisation to widen its own-source revenue, funded by a foreign embassy. The local-authorities directorate trained seven staff on the software and its central server in September 2023. It was reported tested in 680 communes in July 2024. The directorate's 2025 action plan adds a financial-control module. The programme surveys taxable commercial equipment and public-space use and equips the town hall with digital financial-management tools (programme). It is funded by an embassy and run with a non-governmental organisation, with no budget, timetable or revenue target stated. It is the only local-government digitisation on record for the country, in one commune.	MOVEMENT
Rural digital data capture	**Digitalisation of rural health clinics**	Community health workers now notify perinatal deaths and births electronically, and a clinical system is being deployed alongside them. Capture is reaching the community level. Community health workers notify perinatal deaths and births through a national institute platform, an innovation project works with families in Kalake, and a partner describes an integrated health information practice. Above them the national layer is being assembled: the national health information portal under a digital health strategic plan for 2024 to 2028, and a unique patient identifier at pilot stage. No count of clinics capturing electronically is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural primary schools**	The universal access fund's 2026 programme covers school computer rooms across 162 localities, on a budget cut by 32 per cent. The financing exists and it was reduced. The universal access fund's board adopted a revised 2026 budget of 27,886,688,000 FCFA, down 32 per cent from the initial 41,151,471,000 FCFA and spread over 2026 and 2027 for security and procurement reasons; the retained programme covers network coverage extension in 162 localities, 80 universal access centres, 100 wifi points and digital centres, school computer rooms and training for 1,000 young people. The fund had signed conventions with the education and employment ministries days earlier. Equipment also reached teacher training: the education and culture agency handed over computing equipment in August 2026. No count of schools equipped or connected is published.	MOVEMENT
Rural digital data capture	**Digitalisation of rural registry offices**	Community birth registration reaches remote areas, and communes are digitising civil registry payments. Registration is being extended to where the offices are not. The civil status directorate runs community registration of births in remote areas, marked at the ninth African civil status day in August 2026, with community health workers notifying births and perinatal deaths. The offices themselves are being changed at the payment counter rather than the register: communes are digitising civil registry payments, and one commune digitised its fiscal census. The 2025 ordinance creating the identification agency and population register is the national layer they would report into.	MOVEMENT
Rural digital data capture	**Digitalisation of rural police stations**	The regional police information system is the only relevant system, described in 2021. No station-level deployment is reported. The one system on this repository that would reach a police station is the West African police information system, described in a 2021 information letter. Nothing since reports how many Malian posts it reaches, whether rural posts are among them, or what is captured at them. Nothing else fills the gap. The criminal chamber of the national court became operational in 2026 and the electronic justice platform trained users in July, but both sit at the national level. In a country where large areas are outside routine administration, the absence of any station-level record is the position rather than an oversight.	NO CHANGE

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	The artificial intelligence and robotics centre was created by ordinance in August 2023 and inaugurated in September 2026 on FCFA 3.3bn of national budget; no staffing or output is held. The founding text is now held (ordinance), and the campus was inaugurated on 21 September 2026, financed from the national budget at FCFA 3.3 billion; it is a research and training site, not a system in government use. An annual national forum on artificial intelligence was launched in April 2026 and the head of state's position was carried to the inaugural global dialogue on artificial-intelligence governance in July (forum, dialogue). No forum output, declaration or commitment is recorded, and no artificial-intelligence system in government administration is on the record at all.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in sectoral management information systems**	No sectoral system uses a model. The research centre and an operator assistant are the repository's only deployments. Artificial intelligence in Mali is institutional and commercial rather than administrative. The research centre was created by ordinance in 2023 and featured at the 2026 digital week; an operator launched a customer assistant; and Mali took part in a francophone West African governance initiative. Nothing records a model used inside a health, education, tax or social protection system. The national strategy is still planned, and the sectoral systems that would host one — education and health — are themselves still being built.	NO CHANGE
AI	**Development of national / regional AI systems**	A state artificial-intelligence and robotics centre was inaugurated in September 2026 on FCFA 3.3bn of national budget, and an operator launched an assistant in June 2026. The centre is operating and has one demonstration on record, of a locally built intrusion-detection technology shown on 1 August 2026 (centre). 2026-09-21 - the centre's 50-hectare campus at Kati Sirakoro Niare, with a fabrication and assembly workshop for intelligent systems and financed entirely from the national budget at FCFA 3.3 billion, was inaugurated. An operator launched an artificial-intelligence assistant in June 2026, operator-reported (assistant). Neither carries a model description, dataset or evaluation, and no national language model for the country's languages is recorded.	MOVEMENT
AI	**Control of AI abuse**	The media regulator took part in a continental conference of regulators on artificial intelligence in June 2026. More than fifteen presidents of African regulatory bodies attended, the national regulator's president among them (conference). No regulatory instrument, guideline or enforcement power on artificial-intelligence content follows from it on the record; a freedom of expression organisation separately published a briefing on civic space in December 2025 (briefing). 2026-09 - a model provider disclosed that its model was used to build a surveillance platform for the state security agency monitoring about 25 million SIM cards, with a warrant step removed. No Malian response is on record.	REGRESSED
ICT Industry	**National capacity in DT-related production**	The state raised its holding in the incumbent operator from 49 to 56 per cent for FCFA 160bn in June 2026, cutting the foreign partner to a minority. The purchase took the state to 56 per cent, put the foreign partner into a minority and came with a licence renewal (purchase); it is about US$277m and comes seventeen years after the 2009 privatisation (purchase). It is the largest single act on the country's digital industry in the repository, and it is a change of ownership rather than of capability: no manufacturing, software export or domestic supplier capacity is separately recorded.	MOVEMENT
Innovation ecosystem	**Technology hubs**	An innovation fund's fourth cohort finished with five winners in July 2026, the fund having been officially launched in November 2025. The fund's first-phase tranche was implemented through a consortium in 2025 (tranche). No fund size, ticket size, portfolio or survival figure is published, and the cohort count is the only measure of reach on the record. Two assessments of the wider base are held and both are three or four years old: a digital innovation profile and a digital economy diagnostic (profile, diagnostic).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Innovation ecosystem	**Tech startup ecosystem**	A startups law was recommended at the national digital week in August 2026, and nothing has been tabled. The recommendation sits alongside the digital council and the data-management law in the same set of sovereignty proposals (recommendation). No draft, definition of a startup, register or count of firms is held for the country, so the repository records an intention to create a legal status and no measure of the population it would apply to.	MOVEMENT

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	The state's own systems are training their users: biometric payroll control and electronic justice platform training in July 2026. No civil service digital skills programme or measurement exists on this repository. What the window shows instead is training delivered system by system as each is deployed: user training on the electronic justice platform in July 2026, and biometric control of state agents brought into the human resources system, which obliges every agent to use it. Public bodies also train their own staff on data protection, including a course delivered by a private firm and closed at the health insurance fund in August 2026. None of this is measured, and the government intranet they would all work over is still being built.	MOVEMENT
Literacy	**Digital literacy (general population)**	Training is counted by programme, not by population: 350 graduates from one centre and 1,000 young people in the access fund's 2026 programme. No measure of digital skill in the Malian population exists. What the repository counts is programme throughput. An operator's digital centre reported 350 graduates; a skills programme aimed at 15,000 people featured at the digital week's close; a girls' coding programme entered its third phase in October 2025; and the universal access fund's 2026 programme includes training for 1,000 young people alongside 80 access centres and 100 wifi points. An operator loan also carries a women's digital training target. Each counts its own participants; none counts the country. 2026-08-20 - a public awareness campaign against disinformation was launched with a target of 60,000 people; no reach figure, funder or closing date is on file.	MOVEMENT
Training and skills	**DT-related training in secondary education**	Computer equipment worth FCFA 88,740,927 was handed to eight teacher-training institutes in July 2026, with no maintenance or connectivity provision stated. The handover to eight institutes took place on 30 July 2026, funded by Japan and implemented by a United Nations agency (handover, account). No maintenance, connectivity or software provision is stated, and no curriculum, teacher count or pupil-facing programme is recorded, so the country's school-level digital capacity is on record as hardware delivered to trainers.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**DT-related university facilities and qualifications**	A digital university strategic framework was validated in May 2024 for 132,186 students across sixteen institutions, at an 81 to 1 student-teacher ratio. The framework and action plan were validated on 7 May 2024, against 132,186 students across sixteen higher-education institutions and a student-teacher ratio of 81 to 1, well outside the international norm of 25 to 1 (framework). No creation decree or launch date for the digital university has been published since that validation, so the instrument built to relieve the ratio has not itself been created.	MOVEMENT
Training and skills	**Graduates entering DT ecosystem**	A digital-skills programme for 15,000 young people opened first-cohort recruitment in August 2026, and an operator centre placed 350 graduates. Recruitment for the first cohort opened on 1 August 2026 under a convention with a local association, targeting 15,000 young people (programme). An operator's digital centre reported 350 young people placed on the labour market by July 2026, operator-reported (placements). One target and one company's figure are the whole of the labour-market evidence for the country. 2026-08 - a first cohort of 1,000 began bursaried training under a convention to train 15,000.	MOVEMENT
Research institutions	**Think tanks and academic departments contributing to DT policy**	The repository holds no long-term national research strategic plan, and the higher-education digital framework validated in 2024 is the nearest thing to one. The national higher-education and scientific research policy document of 2009 is the repository's oldest source for the country, and it records no long-term research strategic plan and a teacher-student ratio of one to a hundred at the main university (policy). No think tank, research centre or university department is recorded contributing to national digital policy, and the sovereignty proposals adopted in 2026 were produced by a government week rather than by any research body.	MOVEMENT

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	A citizen participation project launched in August 2026, alongside a citizen application for reporting content. Both instances in this window are about speech rather than service delivery. The government launched a citizen participation project in August 2026, described a few days later as digital participation, and a women-led team built an application for citizens to report and check content against disinformation. No portal takes complaints about a public service, and no volume of feedback made or resolved is published. The context is a civic space assessment of December 2025 and prosecutions of speech before the cybercrime chamber, which is the other half of what a feedback channel means here.	MOVEMENT
Access to services	**Citizen participation in policy**	A project on digital tools and citizen participation reached the stage of capitalising on what it has achieved (report). A project on digital tools and citizen participation reached the stage of capitalising on what it has achieved (report). No participation figure is stated. No participant count, submission volume or policy outcome is published for it.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Gender equity**	A women's digital-training target of 70 per cent by 2032 was set inside the November 2025 operator loan, with no interim figure published. The target was set as a condition of the development-bank loan rather than by the state (target). No interim figure, baseline or sex-disaggregated measure of access, ownership or use is published for the country, so the only gender commitment in the repository sits in a private financing agreement and has no measurement behind it.	MOVEMENT
Access to services	**Inclusion of persons with disabilities**	Law 2018-027 on the rights of persons living with a disability is the frame, and the statistics institute has a 2026-2029 plan to build disability information into national surveys. The law's text is held from the official journal (law). The institute's action plan would integrate information needs on people living with disability into large-scale national studies (plan). Nothing on the record addresses digital accessibility of public services, which is the question this indicator asks; what is on file is a right in law and a plan to measure the population it covers.	NO CHANGE
Access to services	**Inclusion of refugees and IDPs**	The refugee agency publishes quarterly operational updates and the food programme a monthly country brief, which is the dated reporting the repository holds. The caseload figures in both are not extracted here; what this records is that the reporting exists and is current (update, brief). Against it, the unified social register that assistance would target from publishes no coverage figure at all, so displaced populations are counted by the agencies serving them and not by the state's own register. 2025-05-22 — a statelessness law protects people without documents from penalties and opens a path to nationality; its text is held from the official journal.	MOVEMENT
Digital divides	**Bridging of digital divides**	The access fund's retained 2026 programme covers 162 localities, 80 access centres and 100 wifi points, on a budget cut by 32 per cent. The instrument is the universal access fund and the window shows both its reach and its constraint. Its board adopted a revised 2026 budget of 27,886,688,000 FCFA, down 32 per cent from the initial 41,151,471,000 FCFA and spread over 2026 and 2027 for security and procurement reasons, with the retained programme covering network coverage extension in 162 localities, 80 universal access centres, 100 wifi points and digital centres, school computer rooms and training for 1,000 young people. The target above it is universal coverage by 2030, with rural and white-zone coverage the named gap. An operator loan carries a women's training target. Nothing measures the divide itself.	MOVEMENT

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The statistics master plan covered 2020-2024 and its annual review reached a seventeenth technical session in August 2026 ahead of the adoption of a fourth plan for 2026-2030. 2026-10-09 — the Council of Ministers took note of the fourth statistics master plan and its action plan for 2026 to 2030, set on four axes. No budget is stated and the text is not held. The public statistics law of 2016 is the instrument behind the plan and the national statistics council that oversees it (law, council). The institute publishes a quarterly bulletin of statistical activity and a manual harmonising collection methodologies and indicator definitions across the system (bulletin, manual). A review still running against a plan whose period expired two years ago is the clearest thing the record says about the planning cycle.	MOVEMENT
National statistics	**Censuses and surveys**	The statistics institute's microdata archive holds 107 studies, and the fifth population census was externally funded across three records. The institute's own archive held 107 studies at capture in August 2026, led by the 2022 census and near-annual agricultural surveys running back to the late 1990s (archive). External support to the fifth population and housing census runs across an original contribution and an agreement amendment from 2018 and a special review committed in April 2024 (review, contribution, amendment). Those are commitment records rather than a census report: no enumeration date, publication or result is on file.	MOVEMENT
National statistics	**Statistics from administrative data**	The statistics institute reviewed its statistical master plan in August 2026 and published a manual harmonising collection methods across the system. The statutory basis is the 2016 public statistics law, and the institute under it is working on exactly the question this indicator asks. It published a manual harmonising data collection methodologies across the national statistical system in December 2025 and held the seventeenth annual review of the statistical master plan in August 2026, alongside a microdata catalogue. The administrative systems that would feed it are the sectoral ones: education statistics worked against school health data, and the national health information portal. No statistic is yet published as derived from a register.	MOVEMENT
Open data	**Use of open data**	There is no open-data portal and no single access-to-information law, while a government monitoring system publishes completion rates. A 2026 evaluation found no single access-to-information law: the right is split across three statutes, and no open-data portal or policy is held (evaluation). The government action monitoring and evaluation system published its first evaluation, covering the second half of 2025, and is operating and publishing completion rates (system). That first evaluation puts 43.43 per cent of planned activities completed, 109 of 251, with 83 in progress and 59 not started (execution). A state that publishes its own shortfall but has no open-data instrument is doing transparency by exception.	MIXED no open-data portal or single access-to-information law against a government monitoring system publishing its own completion rates

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	**Agricultural use of satellite data**	A satellite rice-monitoring tool is being institutionalised for agricultural investment planning and climate risk management. Institutionalisation is stated as a direction rather than completed (tool). A food security watch and alert agency was established with its own remit (agency), and a national action plan for integrated management of geospatial information is held with no adoption instrument on file (plan). No area monitored, forecast accuracy or user of the outputs is published.	MOVEMENT
Use of satellite data	**Meteorological use of satellite data**	A flood forecasting and warning platform was launched in December 2025 with equipment handed over, and real-time flood risk mapping set out in January 2026. A climate resilience project covering the hydrometeorological services closed with an implementation completion report in December 2025 (completion); the meteorological agency behind the work was created by ordinance in February 2012 (agency). No coverage, lead time, warning recipient or accuracy figure is published for the platform, so the launch is dated and what it delivers is not.	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	The United States integrated country strategy of March 2024 is the record the repository holds of the channel, and it predates the current political arrangement. Nothing in the strategy is extracted here as a digital commitment, and no instrument, value or project is carried (strategy). No engagement with a United States technology company is on the record at all, which is the substance this indicator asks about.	NO CHANGE
China activities	**Chinese MoUs, engagements and commitments**	A Chinese supplier replaced a French one on the national biometric passport in October 2025, a change officials cast as regained sovereignty. The passport supplier changed from Idemia of France to Emptech of China, with officials framing it as regained sovereignty and local data management (supplier). No contract value, term or data-hosting arrangement is published. It is the only Chinese engagement on record for the country, and it sits at the most sensitive point in the identity stack.	MOVEMENT
EU activities	**EU MoUs, engagements and commitments**	There is no dedicated 2025-2027 country programme; the country is funded instead from a regional complex-settings allocation, with no digital activity named. The Commission's country page states the country is funded from the central-Sahel complex-settings allocation for 2025 to 2027 rather than a dedicated country programme, against EUR 151m committed for 2021 to 2024 for growth and green economy and for human development and youth (country page). No digital or data-governance activity is named in either tranche, and no separate termination instrument was found, so what the repository establishes is the disappearance of the country programme and not a decision to end digital cooperation.	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	A Gulf operator's US$6bn connectivity pledge for 2024 to 2026 names the country among sixteen markets, undivided between them. The pledge was made to an international connectivity coalition in March 2024 across sixteen markets including Mali and Niger (pledge). It is not broken down by country, so no Mali-specific allocation, project or delivery can be established from it. No other Gulf instrument, investment or agreement is recorded for the country.	MOVEMENT
India activities	**India MoUs, engagements and commitments**	The Indian foreign ministry's bilateral relations brief is the record the repository holds of the channel, and it carries no digital instrument. The brief is one side's own account (brief). Nothing in it is extracted here as a digital commitment, and no instrument, value or project is carried — which is itself the finding for a channel that elsewhere on the continent produces named lines of credit and technology centres.	NO CHANGE
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Open-data portal or policy	A Malian government open-data portal, open-data policy or right-to-information instrument, or an official statement that none exists.	2026-08-10
United States bilateral digital cooperation	A US government programme document, agreement or funding decision on digital or data cooperation with Mali after the 2023 Digital Ecosystem Country Assessment.	2026-08-10
India bilateral digital cooperation	A bilateral memorandum, DPI cooperation programme or ministerial readout naming a Mali-India digital instrument.	2026-08-10
National internet exchange point	a published operator listing, peering record or regulator statement would settle it; probed 2026-09-06, decree 2017-0872 created a steering committee for putting an exchange point in place and nothing since says whether it reported or an exchange point was established	2026-09-06
Outturn against the digital appropriations	A loi de règlement or year-end budget execution report for 2024 or 2025 giving payment against the digital lines, read into the budget extract.	2026-09-25
FY2026 enacted budget, digital lines	The enacted loi de finances 2026 or its credit-distribution decree, read into the budget extract; FY2026 holds bill-stage rows only.	2026-09-25
Rule on where state data is hosted	A data-management law, hosting decree or government cloud policy requiring state data to be held in the national data centre; repatriation is stated as policy only.	2026-09-25
Source code, operating skills and exit for the e-passport system	The SECU-PASS Mali contract or a security-ministry statement on source-code ownership, administrative control and exit terms.	2026-09-25
Data jurisdiction, portability and exit terms of the Mali Digital 2020 contract	Publication of the 2018 China Eximbank-financed contract with China International Telecommunications Construction Corporation, with its data, portability and exit clauses.	2026-09-25
