PROGRESS REPORT

Mozambique: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	The national digital transformation strategy is still unpublished, while an agency and a technical commission were created in March 2026. Drafting was formally launched in February 2026, with more than 700 stakeholders engaged across six regional consultations and validation workshops, and no text published by August (launch, engagement). A donor project recorded in January 2026 that its own strategy work had been deprioritised against the ministry's stated preference for implementation over new policy documents (deprioritisation). A Digital Transformation and Innovation Agency was created with a remit covering interoperability of state platforms, data-centre integration and procurement (agency), and a Multisectoral Technical Commission by decree of 10 March 2026 (commission). The integration roadmap the commission was to draft by mid-2026 is not on record. 2026-09-15 — an operational plan was begun: the agency set priorities for 2026-2029 around a common architecture, a sovereign cloud and data centre and a national interoperability platform. Nothing is costed or dated. 2026-09-21 - the plan went before the technical commission, which expects to harmonise and cost it within two to three months, and the state administration minister said data produced by the administration must belong to the state.	NO CHANGE in drafting at both ends while two coordinating bodies were created above it
Strategies, plans and policies	**ICT strategy**	The ICT institute launched the process of drafting a National Digital Transformation Strategy on 12 February 2026, successor to the 2019-2028 information-society plan. 2026-02-12 — the national ICT institute opened the process of drafting a National Digital Transformation Strategy for sustainable and inclusive development, the announced successor to the Strategic Plan for the Information Society 2019-2028. What moved is a drafting process, not an instrument: no text, adoption date or budget is published, and the 2019-2028 plan remains the operative strategy until one is. The repository holds no delivery report against that plan either, so the succession is being begun without a published account of what it achieved. 2026-09-22 - a civil-society review cites the plan as Resolution 52/2019, under the 2018 Information Society Policy, and finds its execution hampered by limited consolidated public reporting and dependence on donor cycles. The information society policy was approved on 20 March 2018 on seven axes, revoking the 2000 informatics policy.	MOVEMENT a successor strategy entered drafting with the 2019-2028 plan still the operative instrument

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Broadband strategy**	Internet Para Todos targets 80 per cent mobile penetration and 95 per cent territory coverage by 2030, and the President pledged 5G in all districts by then. The programme launched in March 2025 with the regulator stating targets of 80 per cent mobile penetration, 95 per cent territory coverage and 99 per cent network availability by 2030 (programme); two held accounts state those targets differently (programme, account). The President pledged 5G in provincial capitals, special economic zones and main tourist destinations by 2027 and in all districts and administrative posts by 2030 (pledge, coverage). No costing, financing plan or interim milestone is published for either. 2026-10-07 - a proposed Internet for All strategy with targets to 2030 was presented in Maputo, where only 15% of the population was said to afford mobile data. 2026-10-08 - the regulator put a proposed national Internet para Todos strategy to validation, with 2030 targets for internet use, digital skills and public access points. 2026-10-09 - the regulator validated the national Internet para Todos strategy, which targets 95% broadband coverage and at least 60% of schools connected by 2030.	MOVEMENT
Strategies, plans and policies	**Data storage / cloud strategy**	A five-year domestic data-centre plan was announced for bank and institutional hosting, and licence categories are to be extended to data centres and cloud platforms. The communications minister announced in December 2025 a five-year plan to build domestic data centres hosting cloud services for banks and institutions, with an updated regulatory framework replacing current restrictions; no site, cost, operator or milestone is stated and no implementation document has followed (plan). Extension of the digital-operator licence categories to data centres and cloud platforms was announced at the first licensing ceremony, with no date, draft or instrument (extension). One provider states it will open two availability zones and that it is the first licensed in the advanced category, on its own account alone (provider).	MOVEMENT
Strategies, plans and policies	**Data interoperability framework / roadmap**	The e-government interoperability regulation reached the final consultation on its revision in June 2026, and a national data governance policy and strategy was validated in December 2025. 2026-06-11 — a two-day national workshop held the final consultation on the revised government interoperability regulation before its approval. It is the single cross-cutting governance movement in the window, bearing on education, social protection, identity and local government alike. 2025-12-05 — a validation workshop was held on the draft national data governance policy and strategy and its action plan, the broader framework the interoperability regulation sits under. The operative instrument is still the original: the 2017 decree establishing the e-government interoperability framework, its principles, the ICT institute's regulatory role and the state information agency's platform role. Neither the revision nor the data governance policy is approved, so the roadmap has moved and the framework has not.	MOVEMENT the 2017 framework reached final consultation on its revision

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**AI strategy**	The National Artificial Intelligence Strategy is in final drafting on five principles and eight sectoral pillars, and was presented to the national association in August 2026. Draft 1 is held: five founding principles including data sovereignty, and eight sectoral pillars structured into short, medium and long-term objectives (draft). Public consultations and provincial workshops are under way and the artificial-intelligence commission is to review before submission to the Council of Ministers; the institute consulted the largest mobile operator at its Maputo premises on 12 August 2026 (consultation, operator). The draft was presented to the national artificial intelligence association later in August, described as still under development through open multi-sector consultation; no adoption date, budget or governance instrument is stated (presentation).	MOVEMENT not adopted
Strategies, plans and policies	**Data localisation policies**	Data centre and cloud regulations were approved by decree at the end of 2025, above a 2003 central-bank notice already requiring data centres to sit in the country. The regulations were approved by Decrees 71/2025 and 72/2025, both of 31 December 2025, subject to a ninety-day vacatio legis, and carry provisions on data centres located abroad and on storage of information classified as state secret (decrees). Operators running on the date of entry into force have one year to comply, and a data-centre operator licence waives the requirement for a separate cloud-computing licence (decrees). The decree texts themselves are not held. The consultation drafts required registration of any data-centre operator whether or not the facility is in Mozambique, a resident legal representative for foreign providers, four resilience categories, financial-sector data confined to the two highest and classified information confined to private clouds on national territory (drafts); whether those provisions survived into the decrees is not established. 2026-08-31 - the central bank gazetted a notice requiring banks' primary data centres and principal systems in national territory, replacing the 2003 rule, in force 60 days on.	MOVEMENT
Strategies, plans and policies	**Data governance policy**	A National Data Governance Policy, Strategy and Action Plan was validated in December 2025 as a draft resolution and had not been adopted by July 2026. Zero Draft 2 is written as a Council of Ministers resolution with its number and approval date left blank (draft). It proposes an independent National Data Governance Council of eleven to seventeen members with expert seats appointed by presidential decree subject to a two-thirds confirmation vote of the assembly, sitting alongside a data protection authority the law has not yet created, with four data classification tiers and a jurisdiction claim over data affecting Mozambican citizens and entities wherever located (workshop, diagnostic). Before it, government entities followed their own data policies with oversight implied across four institutions and coordination gaps between them (inception).	MOVEMENT not adopted

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Open data policy**	No open data portal. A national data governance policy, strategy and action plan were validated in December 2025 and are not yet adopted. The repository carries an explicit finding that no national open data portal exists, and nothing in the window supplies one. What moved is the policy above it: a validation workshop on 5 December 2025 settled the draft national data governance policy and strategy with its action plan, work a financier also recorded as prioritising data governance and digital sovereignty. Publication happens where a sector decides to publish. The public infrastructure data portal launched in August 2026 is the one working instance, and the right of access rests on the 2014 right to information law rather than on any release duty.	MOVEMENT
Legislation and regulation	**Data protection legislation**	The personal data protection bill was being prepared for submission to parliament in August 2026, with no text, timetable or tabling date published. Civil society argued at a round table on the draft data protection law that the country needs greater national capacity to store and process strategic, sensitive and personal data in infrastructure under its own jurisdiction (round table). The agency's president stated in August 2026 that the draft is being prepared for submission; the Cabinet submission planned for June 2026 is not on record (statement). An independent review of the proposed law was published in September 2025 (review), and the government was recorded as preparing it in July 2026 (preparation). Until it passes, the country's data rules are scattered across a constitutional article, the electronic transactions law, banking and labour statutes and a 2003 central-bank notice, with a ratified regional convention and no domestic statute giving effect to it. 2026-10-01 - parliament's standing commission placed the personal data protection draft law on the agenda of the session opening 28 October 2026.	MOVEMENT
Legislation and regulation	**Cybersecurity legislation**	A Cyber Security Law and a Cybercrime Law were published on 1 July 2026 and come into force on 29 September, with regulations due within 180 days. The Cyber Security Law was approved by the assembly in April 2026, promulgated in June and published on 1 July, creating a national incident response team seated in the ICT institute and, at articles 67 to 71, a Cyber Security Fund financed by a flat 1 per cent of licensed providers' prior-year gross revenue (law, approval). The Cybercrime Law was published alongside it, providing for preservation and collection of digital evidence and for international cooperation, and repealing six penal-code articles in favour of its own offences (cybercrime law). Neither set of implementing regulations had been made by August 2026, and the Cyber Security Fund's own operating rules are among what they are left to settle (regulations).	MOVEMENT
Legislation and regulation	**Legislation covering digital id**	The digital certification framework is unamended; the ICT institute signed a memorandum with Brazil on digital certification on 13 February 2026 covering the root certification authority behind it. 2026-02-13 — the national ICT institute signed a memorandum with Brazil's information technology institute to cooperate on digital certification, digital-identity technologies and the root certification authority underpinning the national digital certification system. The law behind it did not move: that system rests on a 2019 decree under a 2017 statute, and neither was amended in the window. A memorandum is a cooperation instrument, not a legal one, and no term, budget or deliverable is published for it.	NO CHANGE the 2017 and 2019 instruments stand and the movement was cooperation rather than law

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Digital payments legislation**	The central bank made connection to the single national payments network mandatory with 60-minute incident reporting and set an annual ceiling on card payments abroad. 2026-06-02 — a central-bank notice made connection to the single national network mandatory for electronic payment services and imposed 60-minute incident-reporting, continuity and disaster-recovery duties on financial institutions. The gazette text was not locatable, and the repository holds the fullest available account instead. 2026-07-28 — a further notice set an annual limit of 3,000,000 meticais on external payments made with bank cards, revoking the December 2025 notice it replaces, this one the primary gazette text. Two instruments moved in two months, in opposite directions: one compels participation in a domestic rail, the other caps what can leave through a foreign one.	MOVEMENT
Legislation and regulation	**Legislation enabling data interoperability**	The interoperability regulation's revision reached final consultation on 11 June 2026, nine years after the 2017 decree that enacted it. Mozambique legislated interoperability early and is now rewriting it. Decree 67/2017 established the electronic government interoperability framework, its principles, the information technology institute's regulatory role and the state administration agency's platform-implementation role, under the 2017 electronic transactions law. The revision is nearly done: a two-day national workshop on 11 June 2026 held the final consultation on the revised regulation before approval, and acknowledged persisting fragmentation, data duplication and absent common integration standards — the regulator's own account of why a nine-year-old framework needed rewriting. Above it, the data governance policy was validated in December 2025.	MOVEMENT
Legislation and regulation	**AI legislation / regulations**	There is no dedicated artificial-intelligence legislation; an online copyright act is in drafting and an intellectual property strategy mandates a patentability study. The ICT institute's board chairman stated in August 2026 that the country still lacks dedicated artificial-intelligence legislation (absence). An Online Copyright Protection Act is in drafting for introduction next year, its chairman naming authorship of artificial-intelligence output and liability for artificial-intelligence training as open questions the country has no law on; no draft text or introduction date is held (drafting). An intellectual property policy and strategy to 2035, approved by resolution in June 2026, mandates a study of the patentability of inventions made by artificial intelligence and of the inventive-step and disclosure standards that should apply (strategy, account). 2026-09-17 — the education ministry says its law regulating the use of artificial intelligence in education is almost ready and will go to the Council of Ministers before the end of 2026, covering every institution from primary schooling to higher education. No draft text or commencement date is published.	MOVEMENT
Legislation and regulation	**E-commerce legislation**	The electronic transactions licensing regime issued its first 19 licences in June 2026, against about 170 companies under evaluation. Nineteen licences were issued to digital operators in June 2026 of about 170 registered companies under evaluation (licences). The fee is one national minimum wage plus 1 per cent of revenue annually from the next fiscal year (regime, diagnostic). The regime had been in force with no licences issued a year earlier, so the movement here is the door opening rather than the rule changing. 2026-09-15 — the Council of Ministers approved a postal security regulation covering fraud and cyber threats to e-commerce parcels.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Statistics legislation**	Law 7/96 remains the operative statute creating the National Statistical System, unamended, while a personal-data bill bearing on statistical collection went to Parliament in March 2026. The founding instrument has not moved: Law 7/96 of 5 July creates the National Statistical System and the statistics institute's mandate and is still operative thirty years on. 2026-03-03 — the Council of Ministers approved a Personal Data Protection Bill for submission to Parliament, bearing on statistical collection, consent and cross-border transfer. It is an approved proposal, not an enacted law. 2025-08-18 — a ministerial diploma placed the production and publication of public-finance statistics inside the finance ministry's own internal regulation, an institutional mandate rather than a change to the statistical law.	NO CHANGE the founding statute stands while two adjacent instruments moved around it
Legislation and regulation	**Access to information legislation**	Law 34/2014 remains the operative access-to-information statute, and the Constitutional Council struck down 18 provisions letting the regulator monitor traffic and suspend services. 2026-07-29 - the Constitutional Council declared unconstitutional 18 provisions of Decree 48/2025, which had let the telecommunications regulator monitor traffic, collect user data and suspend services without parliamentary authorisation. It removes the main legal basis for communications restrictions. 2026-05-27 - the President promulgated three laws, on social communication, broadcasting and a higher council for social communication, replacing the 1991 press framework and extending to internet-based publications. The statute itself is unmoved: Law 34/2014 on the right to information, implemented under Decree 35/2015, is still operative. No count of requests, refusals or appeals is published, so what the right delivers in practice cannot be stated. 2026-09-10 - the July ruling is now being read beyond the country. An advocacy organisation sets it out as establishing that a government must show not only that the power to restrict connectivity was lawfully created but that it was exercised by a legally authorised authority, and places it against a wider continental pattern of shutdowns used to silence dissent. The judgment text is still not held, and what the government has done in response is not established.	MIXED the founding statute is untouched while a court struck down surveillance powers and a new media package replaced the 1991 framework
Data protection	**Data protection authority**	The data protection authority exists only in the draft law, and donor funding for standing it up was cut from US$18m to US$11m in January 2026. No authority has been established: it is provided for in the draft only, with a two-tier commission and agency in the September 2025 version (review, preparation). A December 2025 diagnostic recommended creating one (diagnostic). In January 2026 the funder cut the project subcomponent covering cybersecurity and data protection from US$18m to US$11m, stating that operationalising the Data Protection Office had been envisaged over six years and the remaining project period no longer allows it (restructuring). Four institutions exercise implied oversight between them, with coordination gaps (inception).	STALLED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data protection	**National data protection readiness**	A personal-data breach reporting platform has taken reports since January 2026, operating with no data-protection statute behind it. The platform launched in January 2026, was reported as a pilot in February and takes reports of personal-data breaches, illicit content and cyber incidents (launch, platform, update). No reporting volumes and no exit-from-pilot date are on record. A breach-reporting channel without a statute defining a breach, a controller's duty or a sanction is a useful thing built in the wrong order. 2026-03-01 - Decree 73/2025 came into force, giving consumers of postal and telecoms services rights of access, objection, rectification and erasure over the personal data operators hold. It reaches one sector's operators only; no general personal-data statute is in force.	MOVEMENT
Regional collaboration	**Regional policy collaboration**	Two memoranda with Angola and one on digital identity with Ethiopia were signed in 2026, and the United Nations cybercrime convention was signed but not ratified. The ICT institute joined TriDigital, reported 9 October 2026: a common framework and bilingual platform for assessing the digital maturity of public institutions in Angola, Guinea-Bissau, Mozambique and São Tomé and Príncipe, running to January 2028 and including a demonstration diagnostic of the country's own maturity. The two Angolan memoranda cover space-sector cooperation and communications, information technology, information and meteorology (memoranda). The Ethiopian memorandum, signed in Addis Ababa on an initial three-year term, covers digital-identity platforms and authentication, pilot projects, government-system interoperability, technical training and joint cybersecurity policy; its text is not held (memorandum, account). The cybercrime convention was signed at Hanoi in October 2025 and the ratification request was still to be submitted to parliament in December 2025, with no update since (signature). 2026-01-29 — Lusophone states took up data-governance cooperation under the CPLP charter of digital rights and principles, a declaratory and non-binding text covering connectivity, data protection and cybersecurity cooperation.	MOVEMENT
Regional collaboration	**Regional legal harmonisation**	The regional convention on cyber security and personal data protection was ratified in 2019 and no domestic statute gives effect to it. The ratification is recorded in a single line of a consultancy inception report; no month, instrument of ratification or deposit date is held (ratification). Seven years on, the domestic data-protection statute the convention obliges has not been enacted, so what the country has harmonised is its international commitment and not its law.	NO CHANGE
Regional collaboration	**Shared regional infrastructure**	A cross-border fibre interconnector to Zambia was commissioned in February 2026, and a Nacala to Lobito submarine cable is in design. 2026-10-10 — a US$174,000 contract was awarded to build a transport and trade observatory for the Beira Corridor, integrating port, road, rail and customs data and hosted in Mozambican data centres; it is to be piloted on the Beira-Machipanda route. The interconnector links Zambia's national backbone to Mozambique's submarine cable network and was commissioned in February 2026; no capacity, cost or traffic figure is stated by either government (interconnector). The President stated that a Nacala to Lobito submarine cable is in the design phase; the only held statement on the project is one sentence in that speech, with no route length, cost, financier or in-service date (cable).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Cross-border data transfers**	Mozambique joined a five-country roadmap for customs-to-customs data exchange (roadmap). Mozambique joined Malawi, South Africa, Zambia and Zimbabwe in adopting a joint roadmap and action plan for customs-to-customs data exchange at a meeting in Pretoria on 24-26 August 2026 (roadmap). The agreement was signed at Washington in December 2025 and published as a treaty record (agreement). Specimens, sequencing data and digital sequence information are to be shared within eight working days of a request, subject to approval by the national ethics, biosafety and security authority which shall not be unreasonably withheld, with advance consent to onward sharing with United States entities on after-the-fact notice and no cap on recipients (assessment, agreement). The terms are looser than a comparable country's on transfer time and tighter on consent. It runs in a jurisdiction whose data protection bill had not been approved by Cabinet or sent to parliament by October 2025 (project report).	MOVEMENT
Standards	**National interoperability standards**	An electronic government systems interoperability regulation was reviewed in December 2025, stated to set standards for integrating public information systems. The review rests on a single account of institute remarks and the regulation text is not held (review). No standards register, conformance requirement or list of systems bound by it is published, so the repository records that an interoperability rule exists and cannot say what it requires.	MOVEMENT
Standards	**National quality standards**	Mandatory conformity certificates were extended to an enlarged import list from 1 June 2026, and communications complaints reached 391,723 in 2025, up 44 per cent. 2026-05-07 - the economy ministry and the standards institute extended the mandatory certificate of conformity to rice, fortified foods, used vehicles, tyres and construction steel from 1 June 2026, widening enforcement scope rather than making a new instrument. The frame is unchanged: Decree 8/2022 sets the institute's mandate and the process for Mozambican technical standards. No count of standards issued, certificates granted or conformity failures is published. 2026-09-09 - in communications the position is now measured. The regulator's 2025 consumer protection report, held first-hand, records 391,723 complaints in 2025, up 44 per cent on 2024, with 372,846 of the telecommunications complaints resolved, a 95.2 per cent resolution rate, against an average satisfaction index of 82 per cent. The regulator attributes much of the rise to better recording rather than worse service, naming one operator's technology migration and another's incident-tracking deployment, which took that operator's logged complaints from 213 to 24,036 - which makes the two years not comparable. Two instruments sit behind it, Decree 73/2025 on consumer protection and Decree 74/2025 on dispute resolution, in force from 1 March 2026 - so the 2025 figures ran under the earlier framework.	MIXED the conformity regime widened its mandatory scope and communications consumer rules were made, while recorded complaints rose 44 per cent
Standards	**Adoption of international standards**	A free public device-identity lookup against the global device registry went live in August 2026, with no enforcement attached. The regulator opened public lookup against the industry association's global device registry on 4 August 2026 (notice, platform). It is verification only: no type approval, import control, blocking regime or penalty is attached, so a buyer can check a handset and the state cannot act on what the check shows.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	Organised civil society submitted twice to the national dialogue: a 50-organisation youth coalition report in March 2026 and a nationwide consultation package in August. 2026-08-06 — a citizens' network submitted the proposals of a nationwide civil-society consultation to the national dialogue's technical commission, covering constitutional and electoral reform, natural-resource governance transparency and the digitalisation of public administration. 2026-03-13 — a coalition of more than fifty youth organisations submitted a consolidated consultation report to the same commission, following consultations that had run since 7 November 2025. Both are inputs, dated and documented. Neither the commission's response nor any adoption of a proposal is on file, so the channel is evidenced and its effect is not.	MOVEMENT
Public debate and participation in policymaking	**Open discussion of government policy**	The telecommunications traffic control regulations were declared unconstitutional in July 2026, and the government said days later it would pursue the same powers another way. The decree, approved in October 2025 and in force from December, gave powers to suspend or block services, compel call and internet-protocol detail records, issue binding technical norms and intervene in operator networks without consent (decree). Judgment 6/CC/2026 of 29 July 2026 voided those provisions (ruling). The ground was organic unconstitutionality, so the powers remain available to the assembly by statute. The government stated on 4 August 2026 that it respects the ruling and will seek the same end by another route, naming no bill, instrument or timetable (response, statement). 2026-09-04 — a journalism school announced a Media Barometer to track audience trust in the media, disinformation and deepfakes.	MIXED blocking and interception powers struck down by the constitutional court while the government states it will seek the same end by another route

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The 2026 appropriations give three digital agencies no capital line, and the new Cyber Security Fund has no budget line either. The universal access fund regulation of May 2025 caps spending at 55 per cent infrastructure expansion, 14 per cent digital inclusion, 14 per cent broadcasting, 14 per cent operating costs and 3 per cent innovation, with the levy stated by the regulator at 1 per cent of each licensed entity's gross revenue (regulation, annual report). The 2026 final maps give the ICT institute MZN 73,636,370, the identification directorate MZN 230,819,650 and the statistics institute MZN 211,296,440 centrally, none of the three with a capital allocation, and salaries are between 77.5 and 93.2 per cent of each (maps). The Cyber Security Fund is provided for in statute from July 2026 with state appropriations among its revenue lines, and no line for it appears in the 2026 budget (fund).	MIXED a reformed universal access levy against three digital agencies with no capital allocation at all
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
MoUs and other agreements	**Strategic relationships**	A new five-year World Bank partnership framework was endorsed in January 2026 and five financing memoranda worth about US$455m were signed under it in June. 2026-01-22 — the World Bank Group's board endorsed a Country Partnership Framework for FY26-31 with an indicative US$2.5bn of mobilisation, superseding the FY23-27 framework. It is the formal five-year engagement and financing frame the rest sits inside. 2026-06-09 — the finance minister and a World Bank delegation signed five memoranda worth about US$455m covering agriculture, education, social protection, minerals and water and sanitation, the first package under that framework. 2026-03-17 — a memorandum with Brazil's development bank was signed to support structuring a new Mozambique Development Bank, alongside related bilateral cooperation agreements. None of the three names a digital allocation, so what reaches this sector cannot be read off the totals. 2026-09-14 — the finance ministry and Brazil's public services management ministry signed a memorandum on exchanging experience and training staff in procurement, payroll management and digital transformation; no value, deliverable or date is published.	MOVEMENT
New investments	**Mobilisation of non-state finance**	A US$132m network modernisation facility was 57 per cent complete in 2023 with no completion report, and a second US$200m facility reported secured in 2025 has no confirmed signing date. The first facility was committed in 2020 and stood at 57 per cent complete in September 2023 with completion expected in May 2024 (facility); no completion or delivery report is held and no signed loan agreement is public (facility). A second expansion financing of about US$200m was reported secured in April 2025 with terms undisclosed, and no signing, drawdown or works have been reported (second facility); the record rests on a single low-tier press source and an estimated amount (second facility).	NO CHANGE
New investments	**Development-partner project financing**	The digital acceleration project had disbursed US$83.88m of US$200m by June 2026, beside a governance and economy project and a rural energy and broadband project. The digital acceleration project reached US$83,880,000 disbursed of US$200m in June 2026 and its overall implementation progress was upgraded to moderately satisfactory, while its data-protection-regulations indicator remains at zero of a target of two (supervision, restructuring). The governance and economy project stood at US$65.59m disbursed of a net US$137.85m in February 2025, with progress and implementation both rated moderately unsatisfactory (project). A rural energy and broadband project had disbursed US$190,819,278 of US$343m by June 2026 (rural project), and a separate digital programme committed EUR 22.5m in 2022 with nothing disbursed on the published record (programme). European money is committed to the government network itself: a EUR 7.1m action in the 2026 annual action plan, EUR 5m of it from the European Union budget and the balance from member states, to reach at least twenty further districts alongside community multimedia centres (action). 2017-07 - the World Bank committed US$53.7m to the statistics institute under a project completed in 2022.	MOVEMENT

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	5G spectrum was assigned to three operators in June 2026 with a provincial-capital deadline of June 2027, against 209 of 1,222 localities uncovered. Licences were awarded to the three operators in June 2026 by administrative consignment rather than auction, covering 5G and 4G expansion; one group reports 210 MHz assigned to its Mozambican operator for US$56m with payment and licence terms still being finalised (award, revenue). The licences carry a deadline of June 2027 for 5G in every provincial capital, with 4G obligations reaching border and rural areas in a later phase; two operators put on record that many target localities have no grid electricity, roads or backhaul (terms). The regulator's 2024 report has 6 of 453 administrative posts and 209 of 1,222 localities uncovered, at 82.9 per cent locality coverage, with no later figure published (coverage). 2026-09-17 — the state operator's own documentation puts it at 1.79 million active mobile customers at the end of 2025, up 62.1 per cent on the year, on 1,303 sites carrying 1,193 2G, 1,303 3G and 724 4G stations, of which 447 are in the south against 157 in the centre and 120 in the north. It is one operator's book, not a market total.	MIXED 5G licensed with 2027 coverage deadlines while six administrative posts and 209 localities still have no service at all
Connectivity	**Internet usage**	A public broadband coverage portal went live in July 2026 letting anyone query operator coverage and speeds by location, with a public gap-reporting channel. The geospatial platform was built with commercial mapping software and publishes operator coverage and speeds queryable by location, with a channel for the public to report gaps (portal). No usage or gap-report figures have been published. The portal maps what is available rather than what is used, and no national internet penetration figure is published alongside it.	MOVEMENT
Connectivity	**Mobile affordability**	A standard data package fell from 9.4 per cent of monthly income per head in 2022 to 2.67 per cent in March 2026, on the funder's own figures. The figures were released with the national coverage map and are the World Bank project's own; the basket behind the standard package is not defined in the record held (figures). A fall of that size in four years is the largest single improvement recorded for the country in this repository, and it is the one measure here that a household would feel directly. 2026-09-17 — after complaints that bundles run out too fast, the regulator said it is building a tariff management system, due to operate in November 2026, to compare operators' packages, identify the effective price including validity, and stop data running out before a bundle's stated expiry. No rule, sanction or published comparison is yet on file. 2026-08-21 — a commercial bank made its mobile banking application reachable without consuming customers' data balances; no user count or regulatory clearance for the zero-rating is on file.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**National fibre backbone**	The incumbent's modernisation facility covers 7,600 km of fibre and capacity from 10 to 400 Gbit/s, last reported 57 per cent complete in 2023. The scope is 1,350 antennas, 7,600 km of fibre and capacity raised from 10 to 400 Gbit/s, at 57 per cent complete in September 2023 with completion expected in May 2024 (facility). No completion or delivery report has entered the repository since. It is the only national backbone build on record, and its last measured position is three years old. 2026-09-17 — the state operator's documentation gives about 6,500 km of backbone and 4,500 km of access fibre, with 1,298 antennas modernised or activated and an optical transport upgrade. The same documentation puts fixed lines down 20 per cent to 15,537.	NO CHANGE
Connectivity	**International internet bandwidth**	The 2Africa cable lands at Maputo and Nacala alongside the older EASSy and SEACOM systems, and a subsea cable southern extension plans a further landing from 2028. Three systems already land in the country: EASSy and SEACOM at Maputo, and 2Africa at Maputo and at Nacala, the first submarine cable to land in the north, with Vodacom Mozambique its landing partner. 2Africa went live at Nacala in August 2023. 2025-07-23 - the state operator signed a framework agreement with a 2Africa consortium member for capacity over the cable and terrestrial routes into South Africa. The extension plans landings in Tanzania, Mozambique, Madagascar and South Africa, interconnecting at Mombasa, with the Mombasa to Durban route estimated at 3,200 to 3,500 km (extension); no construction start was confirmed by August 2026 (extension). No capacity, price or utilisation figure for the country's international bandwidth is held.	MOVEMENT
Connectivity	**Internet Exchange Points**	The national internet exchange carries 143 Gbps of cumulative member port capacity across eighteen peers, and opened a second point of presence in a carrier-neutral Maputo facility in May 2025. The exchange is operated by the national university's computer centre in Maputo, founded in May 2002, with eighteen peers on its own site and 143 Gbps of cumulative member port capacity (exchange). A second point of presence opened at a carrier-neutral Maputo data centre hosting more than fifteen network operators in May 2025, when the exchange reported peak traffic above 150 Gbps across nineteen peering members and about 35 per cent of the country's internet traffic routed through domestic exchanges (point of presence). Member port capacity is an upper bound on what could be exchanged at one time and not measured traffic; no autonomous systems joined or left over the tracked period and the exchange's own peering database record has been stale since 2016 (tracker). The peer count falls between the 2025 and 2026 accounts and neither explains it.	MOVEMENT
Connectivity	**Satellite broadband licensing and availability**	Low-orbit service is live with an operator backhaul partnership, donated terminals went to flood centres, and trials of an Angolan satellite began in August 2026. The low-orbit service is live, with an operator backhaul and equipment-resale partnership; no licence date, subscriber count or terminal count is held (service, deployment). Donated terminals were deployed by the regulator with open access at flood accommodation and coordination centres in February 2026, plus four operator connectivity kits at four named locations; the terminal count is not stated (terminals). The state operator began proof-of-concept testing of the Angolan satellite in August 2026 as a step towards a commercial agreement, implementing a bilateral memorandum of June 2026; no commercial terms are published (trials).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Local data centre capacity (all providers)**	The national count stands at seventeen or eighteen on one 2025 speech, above a 400-rack Tier III facility and a US$25m operator centre. The only national count is a figure given by the Prime Minister in March 2025, which two accounts of the same sentence report as seventeen and as eighteen; nothing later has been published and the university facility and two announced availability zones appear in no national count (count, account). The independent carrier-neutral facility at Beluluane is Tier III certified with 400 racks, 2,000 square metres of white space and 3 MW of information technology power, indirect adiabatic cooling at a stated power usage effectiveness of 1.3, and eight connectivity providers terminating fibre into two meet-me rooms (facility). An operator's Tier III centre at Matola opened in March 2025 at US$25m with direct access to a subsea cable (centre), and a network operator announced co-location into the independent facility in July 2026 (co-location). 2023-02-07 - a carrier-neutral operator opened a facility in central Maputo with about 80 racks in its first phase, the local landing point for 2Africa cable equipment, on a 400 kW utility feed with about 156 square metres of data-hall floor.	MOVEMENT
Data Storage	**Local data centre capacity (national providers)**	A university data centre opened in August 2026, while the state data centre is described as technically capable but underused. The university facility entered service on 3 August 2026 with about fourteen times the storage of the server room it replaces, precision cooling, redundant systems and reinforced physical security, designated to help underpin the country-code domain and the internet exchange and intended to carry research, cloud and artificial-intelligence services; it is donor-financed with no amount stated (inauguration, account). The state facility is in operation and, on an account published by the regulator, technically capable but underused, with state institutions not digitising and structuring their data into it in the absence of a national digitisation and systems-integration strategy; capacity, tenants and hosting arrangements are not stated, and nothing on record establishes where government systems are hosted (assessment, bandwidth). 2025-08-13 - the government signed a memorandum for a pan-African infrastructure fund to finance a new data centre in Maputo and the rehabilitation of the state facility at Maluana; no amount, site or timetable is stated, and nothing later is held. Two government data centres in the north, at Mocuba and Nacala, were listed as upcoming projects in a 2021 US trade note; no construction record is held.	MIXED a new university facility in service while the state's own data centre is described as capable and underused
Data Storage	**Off-site backup capacity**	Two in-country availability zones about 20km apart were launched, under 2025 decrees setting redundancy, continuity and data-location requirements. 2026-07-24 — a commercial provider launched two geographically separate in-country availability zones about 20km apart, allowing disaster-recovery and high-availability architectures with data kept resident in the country. No capacity figure is disclosed. 2026-07-24 — a public tender was issued for an uninterruptible power supply battery facility at the state financial system agency's secondary data centre, a dated public investment in a named government secondary facility's resilience. The rules were made first: two decrees approved on 31 December 2025 establish redundancy, continuity, licensing and data-location requirements for data centres and cloud computing. No national figure for backup capacity, and no count of systems with off-site recovery, is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	**Sufficient energy and water for data centres**	The data-centre regulation sets resilience and continuity obligations but names no power requirement, and the university facility is the only one in the repository whose power design is described. The data-centre regulation approved by Decree 71/2025 sets security obligations and requirements for resilience, continuity of service and physical and cyber security, and requires civil liability insurance against force majeure; no power, grid-resilience or energy-efficiency requirement is named (regulation). The university facility's power design is grid supply with integrated photovoltaic generation and a generator as redundancy, named by the minister as the reason interruption risk falls; capacity, generation and consumption figures are not stated (design). It is the only facility in the repository with its power design described. The utility's published industrial schedule gives medium voltage at 4.78 metical a kilowatt-hour plus fixed and capacity charges and high voltage at 4.70, negotiable; no data-centre-specific supply arrangement is published (tariffs).	MOVEMENT
Energy	**Grid reliability**	The state utility lost supply and revenue through 2025 to unrest, cyclones and hydrological deficit, and states it will spend US$82 million in 2026 on grid expansion. The utility's 2025 annual report attributes the year's performance to civil unrest and infrastructure destruction, cyclone damage, hydrological deficits limiting domestic generation and export, and the unavailability of the Maputo thermal plant; it records customer cancellations and reductions in contracted capacity and emergency repair spending (report). Against that it states an investment of US$82 million in 2026 for grid expansion, targeting 420,000 new residential connections (report). No outage series, availability figure or reserve-margin measure is published, so the utility's own account is the whole of the record.	MIXED a year of destruction and hydrological shortfall against a stated investment for the next one
Energy	**Rural electrification**	Solar systems were specified for all 60 of the rural mobile stations awarded in October 2025, with no installed capacity or commissioning date stated. Solar energy systems are specified to power all sixty sites, which was not in the tender notice; no installed capacity, supplier or commissioning date is stated (specification). It is the only held statement of the power design for the rural build, and the only rural electrification evidence in the country's digital record: the repository holds no national electrification rate against which to set it.	MOVEMENT
Technical Capacity	**Robustness of government hardware and software**	173,770 attacks and 1,061 criminal cases were recorded in 2024, and the national response team detected 5,654 ransomware attempts in the first seven months of 2026. 2026-10-12 — the communications minister put cyber incidents recorded in 2025 at about 39,600, a count whose relation to the earlier attack figures is not stated. The communications minister gave parliament 173,770 attacks and 1,061 criminal cases for 2024 against 912 cases in 2023, and 36,330 attacks for the first half of 2025 (figures, account). These are government detection counts with no published methodology, so the series is not safely comparable. The national response team detected 5,654 ransomware infection attempts between January and July 2026, disclosed at the launch of a prevention campaign (attempts); these are attempts detected rather than incidents suffered, and no comparable earlier period is published (attempts). The government email service was restored after an outage on 14 September 2026, with some peripheral services still restricted pending stabilisation of the underlying infrastructure; the digital transformation agency gave neither the start date nor the cause.	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	The country-code domain is managed by the regulator with no operator named and no registration volumes published, and CloudGov has had no account since 2020. A 2020 decree vests management and operation of the domain and its official subdomains in the regulator and permits delegation of the technical aspects by public tender or direct award; no operator is named in the text, the government subdomain is compulsory for every body in the structure of government, and no registration count is published anywhere in the repository (decree). A government-wide storage, sync and share platform was announced in 2020 as a pandemic response and described as in rollout across public-administration institutions; no later account, institution count or usage figure is held (platform).	NO CHANGE
Cybersecurity	**National cybersecurity readiness**	A successor cyber strategy is in preparation and a national risk assessment rates nineteen of twenty-nine critical systems very high risk, against a regional index placing the country first among its language group. The minister said on 7 October 2026 that a national network of response teams now has teams in government, the cyber defence unit, the research network, the regulator, the telecoms sector and four provinces, with more being set up. The 2021-2025 policy ran six pillars and twenty-five projects; its successor is under revision, adding safeguards against artificial-intelligence risks, with no adoption date (revision, predecessor). Its period ended before its successor was drafted. The incident response team was created in statute and seated in the ICT institute, which named consolidating it the immediate priority; fourteen national specialists hold an international maturity certification (team). The first national cyber risk assessment, published in May 2025 on a foreign methodology, rates 19 of 29 systems across 18 institutions very high risk, 6 high and 4 moderate; it names no operator and no system, so it publishes a risk distribution without a register of what is at risk (assessment). A Cyber Security Fund is provided for at articles 67 to 71 of the new statute, financed by a levy on licensed providers and state appropriations; its operating rules are left to a regulation not yet made (fund).	MIXED the legal framework advanced while an assessment found public services outrunning it

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	An X-Road interoperability platform is described as under implementation, and a single unified government database is named as an agency responsibility. The platform is named as currently being implemented in a May 2026 tender document, with no operator, go-live date or list of connected agencies on record (platform, tender). A single unified government database is named as a responsibility of the digital transformation agency, with no design, scope, host or timetable published (database). Both are known only through documents about something else, which is the state of the exchange layer here: named in other people's paperwork and never described in its own. 2026-09-28 - the digital agency expects the interoperability platform in the fourth quarter of 2026, and has submitted a shortlist for the mobile digital ID consultancy to the World Bank. 2026-10-09 - the digital transformation agency trained 25 technicians from nine public bodies on the X-Road data-exchange layer, led by Estonian experts.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Use of digital id in other systems**	Biometric identity and access management is being deployed into the national payments switch, having previously run in a single bank. A multi-year deployment agreement was announced in February 2026 taking biometric identity and access management from a single national bank deployment into the national payments network (deployment). The account is the vendor's, with no completion date or participating-bank count. It is the only case in the repository of the country's identity layer reaching into another sector's infrastructure.	MOVEMENT
Data Exchange	**Interoperability of health systems**	Birth notifications pass from hospitals into the civil register in real time, and laboratory results now reach clinicians without printing or re-keying. Electronic birth notifications pass in real time from the hospital birth module into the electronic civil registration system over an interoperability layer, launched on 22 July 2024 after an April-May 2024 pilot in Inhambane province, where the facilities using the birth module grew from five to nineteen and over 11,589 newborns were registered digitally (integration, launch). Viral load results generated in the laboratory information system now reach clinicians through the electronic patient tracking system without printing or one-by-one re-keying, which was the previous route (results). Both are reported by implementing partners. Nationwide expansion of birth notification is stated as a plan with no date, no figure later than 2024 is held for it, and no coverage, turnaround-time or error-rate figure is published for the laboratory link.	MOVEMENT
Data Exchange	**Interoperability of education systems**	No education-specific exchange exists. The 2017 interoperability decree is the only enacted instrument that reaches it. Education data is collected and not exchanged. The management information system is operating and being scaled to school level, with work on making it responsive, and nothing describes it passing data to another system or receiving an identifier from one. The instrument that would require it is general rather than sectoral: decree 67/2017, whose revision reached final consultation on 11 June 2026 while acknowledging persisting fragmentation, data duplication and absent common integration standards. The exchange platform itself is still in development. 2026-10-09 - the digital transformation agency trained 25 technicians from nine public bodies on the X-Road data-exchange layer, led by Estonian experts.	NO CHANGE
Data Exchange	**Interoperability of social protection systems**	The disaster institute is piloting a digital beneficiary register designed to interoperate with the social action database to check who has already received assistance, with national rollout planned for October 2026. 2026-08-10 — the disaster management institute began piloting a digital beneficiary-registration system in Beira, designed to interoperate with the social action institute's beneficiary database to cross-check who has already received assistance and avoid duplication, with national rollout planned for October 2026. It is the most concrete social-protection interoperability movement in the window and it is pre-launch. The governance frame moved in the same window: the revised government interoperability regulation reached its final consultation in June 2026, bearing on social protection among other sectors. Duplication is the problem this exists to solve, and no measure of it — before or after — is published, so the pilot's own case cannot be checked against the record.	MOVEMENT a cross-checking link is designed and piloting rather than running

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Robustness of system**	Updated civil identification regulations were approved in 2026 governing collection, processing and retention, and the biometric passport takes applications by electronic pre-booking. The regulations under the 2022 identification law were updated and approved by the Council of Ministers, governing collection, processing, management and retention of civil identification data and standardising issuance; the instrument is not held and its provisions rest on a spokesperson's description (regulations, framework). The biometric passport is in issue with applications submitted by electronic pre-booking, named as the principal documentary-security measure at the migration service's anniversary; no dates, volumes or coverage figures are given (passport).	MOVEMENT
Digital Identity and CRVS	**Registration of entire population**	856,101 identity cards were produced in the first half of 2026, up from 730,527, of which 297,470 were issued free. Production ran at 856,101 cards on 813,307 applications in the first half of 2026, against 730,527 on 677,305 applications a year earlier (production); the figures are the directorate spokesperson's with no published series behind them (production). Free first issuance of the identity card, birth certificate and personal certificate was extended to 2027 and widened to children and adults alike, with 297,470 free cards issued in the first half of 2026 (extension, cards); neither the 2027 end month nor the deadline replaced is stated (extension).	MOVEMENT
Digital Identity and CRVS	**National maintenance of id and credentials systems**	8,790,034 identity cards had been issued, about 31.4 per cent of the population, from 208 service posts, and a national mobile digital identity and electronic signature layer went out to expressions of interest. 2026-05-29 — the digital transformation agency issued a request for expressions of interest to design and implement a national mobile digital identity and electronic signature layer, integrated with the interoperability platform, the national population registry and the national public-key infrastructure. It is the clearest step in the window toward a maintained identity and credentials layer, and it is at procurement, not deployment. The system it would sit on is thin. The civil identification directorate's own account puts issuance at 8,790,034 identity cards to date, about 31.4 per cent of the population, across 208 service posts and 14 diplomatic missions, with a production centre rated at 15,000 cards a day, and names operationalising the link between the identification and civil-registration systems among its own outstanding challenges. A press rated at 15,000 cards a day against coverage of 31.4 per cent is not a capacity problem, which points the question at demand, distribution and cost rather than at production.	MOVEMENT a mobile identity layer entered procurement over a card system covering under a third of the population
Digital Identity and CRVS	**Authentication**	A national mobile digital identity and electronic signature infrastructure went to tender in May 2026, with partner discussions opened in August. The digital transformation agency floated a tender in May 2026 for a national mobile digital identity and electronic signature infrastructure (tender, partner search). The ICT institute opened discussions with a local partner in August 2026 on a platform extending digital identity, advanced digital signatures and public key infrastructure into a national digital trust layer; it follows a February 2026 memorandum with a foreign institute covering credentialing, auditing, training and technical assistance for operating a root certification authority (discussions). 2026-09-05 - the prime minister directed the state digital certification system extended across all sectors.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Digital id from birth**	A mass campaign launched in March 2026 targets up to 7 million citizens by December through 500 mobile brigades issuing a birth certificate and, first time round, the identity card on the spot, free of charge. 2026-03-20 — the justice ministry launched a mass civil-registration campaign of about US$9m targeting up to 7 million citizens by December 2026, through up to 500 mobile brigades that jointly issue a birth certificate and, for first-time applicants, the national identity card on the spot and free of charge. Issuing both in one encounter is what makes this an identity-from-birth movement rather than a registration drive. The system behind it registers births and deaths by USSD, SMS and web, coordinated across justice, health, interior and the statistics institute, with the stated objective of a single lifecycle citizen identification number linking civil registration to civil identification. 2026-04-27 — a package of memoranda with Ethiopia covered digital transformation with a stated emphasis on digital identity and public infrastructure, bringing another country's identity-system experience into the build. No registration figure against the 7 million target is yet published.	MOVEMENT
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	Hospital births notify the civil register electronically in nineteen facilities of one province, against a civil registration system the Code integrates with the identity system. Real-time digital birth registration launched on 22 July 2024, connecting the hospital birth module to the electronic civil registration system; the pilot expanded from five to nineteen health facilities in Inhambane province and registered over 11,589 newborns, with health workers entering birth data directly and receiving instant confirmation (integration). The civil registration system is itself established by the revised Civil Registration Code as integrated with the national identity and health systems (code). Coverage is one province of eleven, nationwide expansion carries no date, and no figure later than 2024 is held.	MOVEMENT
Digital Identity and CRVS	**Use by other systems**	Biometric SIM registration became compulsory in 2024 with blocking from 2025, and nothing has entered the repository on the regime since. Registration was optional from a pilot in January 2024, compulsory in the second half of that year and subject to blocking from 2025, as described at the time (regime). No later account is held and no registration, blocking or enforcement figures exist in the repository at all. Nothing has entered it on this regime for over two years, which for a compulsory nationwide identity-linked measure is the notable fact.	NO CHANGE
Digital Payments and Fintech	**Governance role of central bank**	A National Payments System Law replaced the 2008 regime in July 2026, and a notice makes switch connection mandatory with sixty-minute outage reporting. The law was enacted in July 2026, extending central bank inspection and supervision over electronic-money institutions and new payment service providers; the official text is not held and its provisions rest on secondary accounts (law, passage). The notice makes connection to the single payments network mandatory to offer electronic payment products, with three months to migrate existing terminals, any unavailability lasting more than ten minutes reported within sixty minutes, annual recovery testing due 31 March and an annual incident-framework review (notice, reporting). 2026-10-08 - the central bank licensed a payments aggregator as a payment service provider, among the first such licences, allowing merchants to be onboarded directly across the three mobile money operators.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**G2P functionality**	More than US$14.4m has been paid to nearly 246,000 health workers by mobile money since 2024, replacing cash for vaccination and emergency campaigns. The cumulative figure to August 2026 is more than US$14.4m paid to nearly 246,000 health workers and volunteers, replacing cash and giving funders a full digital transaction record (payments). The figures are the agency's own, the payments run through commercial mobile-money operators the account does not name, and no per-campaign breakdown or failure rate is published. It is the country's only recorded government-to-person digital payment stream, and it is run by an international agency rather than by the state. 2026-09-04 - the payroll became a credit rail: a memorandum between the dominant mobile money operator, a microbank and the state financial information centre puts a salary-advance product on the operator's short code for more than 380,000 civil servants. A memorandum rather than a live product: no launch date, interest rate, advance ceiling, repayment mechanism or default treatment is published, and the payroll data path is not described.	MOVEMENT
Digital Payments and Fintech	**Revenue collection**	An online tax clearance certificate went live in August 2026 with a ten working-day ceiling, and a tax amendment on wallet-agent commissions is in preparation. The certificate is requested through the taxpayer portal and issued within a maximum of ten working days, with a published electronic complaints address; the authority's own communique is not held (certificate). An amendment on the taxation of mobile-money agent commissions is still in preparation, with taxation already proceeding under the existing framework and 787 wallet agents registered for tax numbers in the first half of 2025; no adoption, tabling or gazetting is held (amendment).	MOVEMENT
Digital Payments and Fintech	**B2B and B2G functionality**	The instant payment system launched on 16 March 2026 with 24/7 availability, web, app and USSD access and free interbank transfers for individuals, above a treasury service linking the state system to banks and e-money institutions. 2026-03-16 — the central bank governor launched the instant payment system, already legally created by an earlier notice, moving the rail from regulation into live operation: available 24 hours a day all year, funds available near-instantly, reachable by web, application and USSD, with interbank transfers free for individuals. The government-to-business side rests on an older service: the finance minister's address on the 2024 state accounts describes the automated state payments service interlinking the treasury system with commercial banks and electronic money institutions to collect taxes, fees and other state charges electronically. 2025-09-03 — the ICT institute met the state power utility on registering its planned online energy-payment application under the electronic services decree, a sectoral application moving toward regulatory compliance. USSD access matters more here than the launch: it is what decides whether a rail reaches people without smartphones.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	An instant payment system entered production in March 2026 with free interbank person-to-person transfers, and daily transfers tripled to more than 11,000. The system runs around the clock over bank applications, websites and short codes, operated by the interbank company with wallet-operator participation mandatory and free interbank person-to-person transfers for individuals; the governing notice sets daily limits of 200,000 metical for individuals and 500,000 for legal persons and a twenty-five second fund-availability ceiling (notice, launch). Daily transfers passed 11,000 by July 2026, a tripling since production entry in March (volumes). Against a base of more than twenty-five million wallet accounts, that is a system working and barely used. The switch behind it is not new: the interbank company was established in 2011 to give all payment service providers a single clearance platform, launched a bank-to-bank instant payment system in 2012 and a cross-domain system in 2022, before which processors and switches were not interconnected, pricing was opaque and interoperability between bank accounts and mobile money was limited (case study).	MOVEMENT
Digital Payments and Fintech	**Population uptake**	Mobile money reached 130.9 accounts per 100 adults and access points 532,761 by end-June 2026, while the inclusion index held at 36.4 in 2025. Mobile money holdings rose from 1,093 to 1,313 accounts per thousand adults and bank accounts from 330 to 337 between 2024 and 2025, with women's mobile money holding rising from 924 to 1,144 (accounts). Non-bank agents rose from 315,005 to 446,604 while cash machines fell from 1,391 to 1,383 and card terminals from 35,486 to 32,236, giving 482,359 access points in total, up 36 per cent (access points); the central bank attributes the terminal fall to decommissioning of inactive devices (access points). The national inclusion index held at 36.4 points across the same year (index), against a strategy targeting 60 per cent of adults with a bank account by 2031 (strategy). 2026-08-31 — the central bank counted 532,761 access points at end-June 2026, 494,955 of them e-money agents, with 1,291 cash machines and 31,316 card terminals; agents grew 5.8 per cent in the quarter while branches, cash machines and card terminals each fell slightly. 2026-09-15 — electronic money is now the account most adults have: 130.9 accounts per 100 adults at Q2 2026 against 33.8 for bank accounts, and skewed male at 144.7 per 100 men against 118.5 per 100 women.	MIXED wallet accounts and agents growing sharply while card terminals fell and the inclusion index did not move

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Cross-border functionality**	Six domestic banks settled 215 transactions worth ZAR 261.79m through the regional real-time system in June 2026, and the Angolan kwanza became its second settlement currency in July. 2026-07-27 — the Angolan kwanza was added as the second settlement currency in the regional real-time gross settlement system, after the rand, which had been the only one since 2013, with further currencies to follow. The country participates as one of fifteen members. The connection is demonstrably live rather than merely established: published settlement statistics record six Mozambican participating banks settling 215 transactions worth ZAR 261.79m in June 2026. 2026-08-11 — the central bank published a notice revising the limits on bank-card payments made abroad, replacing the December 2025 notice. Regional capacity widened and outbound card capacity was recapped in the same quarter, which is the tension worth reading here. 2026-10-01 - the central bank governor said the country will join the regional settlement system with the metical in the first quarter of 2027. 2026-10-07 - the central bank governor was reported saying the metical could be used for regional payments through the settlement system from January 2027.	MOVEMENT a second settlement currency was added to the regional system and outbound card limits were revised
Digital Payments and Fintech	**Consumer protection**	Law 15/2026 repeals the 2008 payments law and strengthens the central bank's licensing and supervisory powers over payment operators and fintechs, and licensing became mandatory for digital platforms from 29 December 2025. 2026-07-02 — a new National Payment System Law repealed the 2008 statute and strengthened the central bank's licensing, oversight and supervisory powers over payment operators and financial technology firms. It is the top-level instrument governing payment-system conduct and consumer safeguards. 2025-12-29 — mandatory registration and licensing began for all providers of electronic services and digital platforms serving the market, digital payments expressly among the covered services, with consumer data protection and service reliability stated as objectives of the regime. Two licensing regimes now bear on the same providers, one from the central bank and one from the ICT institute, and no statement of how they relate is published. The statute's implementing regulations are not held either, so what a consumer can actually invoke is still unsettled.	MOVEMENT a new statute replaced the 2008 payments law and platform licensing became mandatory
Registries	**Population register**	The 2018 revision of the civil registration code is the founding act of the civil registration and vital statistics system; the repository holds no separate continuously updated population register. The statutory foundation is the 2018 revision of the civil registration code, which establishes the electronic civil registration and vital statistics system and governs the digitisation and notification duties of registry offices. What the repository does not hold is a population register distinct from civil registration: no separate continuously updated register, no coverage figure and no statement of how the civil register would serve that function. The distinction matters because a civil register records events and a population register records a current resident population, and the record here answers only the first.	NO CHANGE and the repository holds no register distinct from civil registration

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Civil register**	The electronic civil registration system established by the revised Civil Registration Code runs behind a free birth registration campaign targeting about seven million people to the end of 2026. The national civil registration system is administered by the justice ministry through the national directorate of registries and notary services, established by the Civil Registration Code as revised in 2018 and integrated with the national identity and health systems; the Code mandates registration of all vital events, compulsory free birth registration within 120 days, and electronic transmission of data to the statistics institute (code, portal). The campaign launched in March 2026 and runs to 31 December, targeting about seven million people at 25,000 registrations a day through up to 500 mobile brigades, with costs met by a donor-funded governance project (campaign); no mid-campaign total is on record (campaign, launch). A tender for services to strengthen civil registration and identification closed in February 2026, requiring bidders to show a US$7m or two US$4m track record and a US$90,000 bid security (tender); no award, contractor or contract value is established (tender). Two earlier vital-statistics programmes closed fully disbursed at the end of 2023, at CAD 19.5m and CAD 6.5m (first phase, second phase). 2026-09-24 - the justice sector is installing 100 more registration posts in maternity units, beside about 250 already in health units; no completion date is given.	MOVEMENT
Registries	**Address register**	A national postal address code was piloted at one district in 2020 against a five-year, US$33 million rollout, and nothing on it since is held. The regulator inaugurated a pilot covering 1,500 homes and other premises and more than 1,200 streets at Manhica in July 2020, with Chimoio in preparation and Matola, Beira, Quelimane, Nampula and Nacala to follow over five years (pilot). The regulator's feasibility study puts the cost of implementing the code at at least US$33 million, from state funds and cooperation partners (study). The repository holds nothing on the code after July 2020, so the five-year rollout would have run its course unobserved.	NO CHANGE
Registries	**Business register**	74 per cent of legal-entity registrations were submitted electronically by June 2026, on the justice minister's figure. The share was stated by the minister at an international legal forum, with no published series behind it (share). No absolute registration count, processing time or rejection rate is held. A three-quarters electronic share with no denominator is the shape of most of this unit's administrative evidence.	MOVEMENT
Registries	**Social protection register**	A biometric register of humanitarian-aid recipients completed validation for national launch in October 2026, built to interoperate with the national social-support database. Validation of the beneficiary and humanitarian assistance management system is complete, with national launch stated for October 2026 after a pilot at Beira, at a costed investment of about 20 million metical (validation, register). It is built to interoperate with the national social-support database so responders can see who has and has not received aid and duplicate or fictitious registrations are curbed. No data-protection basis, retention rule or enrolment target is published, and the country has no data-protection statute.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Electoral register**	A new voter register is produced for each election rather than maintained continuously, and the observation mission records a notable lack of confidence in its reliability. The European Union observation mission on the 9 October 2024 general elections records that a new voter register is produced for each election, which it names as part of what makes elections expensive, and a notable lack of confidence in the register's reliability given discrepancies between it and the statistics institute's population projections (mission). The election administration published no report on the voter registration process, and the mission recommends updating the register from other reliable existing data sources, naming the civil registry (mission). No register size, update cycle or duplicate rate is published by the election administration.	NO CHANGE
Registries	**Tax register**	A nine-digit single taxpayer identification number assigned by the revenue authority is required of natural and legal persons for all income including customs. The number is assigned by the revenue authority to natural and legal persons regardless of income level and is required for all income including customs, obtained at a tax office against an identity document, passport, birth certificate, voter registration card or driving licence (guidance). The held record is the revenue authority's own guidance page, retrieved from a web archive after the live site failed to answer. No register size, issuance figure or linkage to the national identity system is published.	NO CHANGE
Registries	**Land register**	The land information system had recorded 563,765 land-use right requests, 77 per cent processed and 68 per cent delivered to beneficiaries. The system digitises land-use right application processing, with 563,765 requests recorded, 77 per cent processed and 68 per cent delivered (system). The figures come from a 2019 review report and nothing later is held, so the country's only quantified registry position is seven years old and the gap between processed and delivered is the part worth watching.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Health**	A national electronic medical record has a minimum viable version targeted for September 2026, under a ten-year digital health strategy and a data-quality plan. The government is owner and operator of the core integrated electronic medical record, its minimum viable version targeted for September 2026 with modules for registration, consultation, maternal and child health and two disease programmes; a foreign-built patient tracking system was to pass to Mozambican management by June 2026 and be retired once migrated, with laboratory, surveillance and logistics systems behind a health data exchange expected functional by the end of 2026 (architecture). That architecture is named in a United States instrument the government signed, and no Mozambican document naming these systems is held (record). The country's first dedicated digital health strategy runs on a ten-year horizon and is known only through a dated reference directory (strategy); a five-year data-quality plan followed an assessment finding 9 per cent exact-match between records and facility registers (plan). One hospital is running an inpatient system: Mavalane General Hospital in Maputo became the country's first digital hospital in December 2024, with a hospital health information system digitising admissions and inpatient care, which the implementing partner puts at about US$7.8 million a year in paper costs saved (case study). The saving is the partner's own estimate with no method stated, and no second hospital is named.	MOVEMENT
Sectoral management information systems	**Education**	An education management information system is being pushed from district to school level in one district of more than 300 schools, with no national statement held. Milange district in Zambezia, with more than 300 schools, has scaled use of the education management information system down from the district to the individual school so that schools analyse their own data, under a Global Partnership for Education project (district). Regional policy work on responsive education-data policies runs alongside it (policy). The national system's coverage, data quality and publication arrangements are not held: the repository carries one district's initiative and a regional policy discussion, not a national statement.	NO CHANGE
Sectoral management information systems	**Social protection**	US$154.4m was approved to establish a National Social Registry, clean a 1.2m-household database and modernise the social action information system for interoperability with civil registration, health and education. 2026-05-19 — additional financing of US$154.4m was appraised to legally and technically establish a National Social Registry, consolidate and clean the existing 1.2 million-household beneficiary database, and modernise the core social action information system for interoperability with civil registration, health and education systems. It is the clearest architecture-level movement in the window. 2026-08-08 — the disaster management institute began piloting a biometric digital register of humanitarian-aid beneficiaries in Beira, designed for national rollout in October 2026 and for interoperability with the social action database to check who has already received assistance. The system being modernised is the social action institute's integrated management information system for registration, socioeconomic evaluation, case management and beneficiary payment. Financing approved is not a registry built: no registry go-live, record count or completed interoperability link is yet on file.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Justice**	A 2024 law on electronic processing is named as the cornerstone of judicial modernisation, and two operating systems now sit under it — a gender-violence case platform and camera-based traffic enforcement. The President laid the first stone in August 2024 for a building in Maputo to house the interior ministry's public security management information system, financed with US$11m from Korea's export credit bank and due in December 2025. The repository holds no completion. The statute has been in force since 7 June 2024 and was named by the justice minister in June 2026 as the cornerstone of judicial modernisation; its text is not held (law). No case-management system, filing volume, disposal rate or court coverage figure is held. The interior ministry runs InfoViolencia through police departments, the country's first digital platform for gender-based violence case data, used at Integrated Services Centres and police stations, where a single registration form replaces printed forms and generates referral reports across health, justice and social services (platform). No case volume, coverage or data-protection arrangement is published for a system holding case files on named survivors, and nothing on it after April 2023. Camera-based traffic enforcement went live across Greater Maputo on 10 December 2025, detecting violations, processing offences and sending fines by text message, under an approximately US$7 million Korean-funded programme.	MOVEMENT
Sectoral management information systems	**Tax**	Tax clearance certificate applications moved to an exclusively electronic workflow from 3 August 2026, with a ten-working-day issuance target. 2026-07-31 — a tax authority announcement moved tax clearance certificate applications to an exclusively electronic workflow through the taxpayer portal, available from 3 August 2026, with a ten working-day issuance target. An exclusive channel is a stronger position than an additional one: it removes the paper route rather than supplementing it. What the repository does not hold is any measure of whether the target is met — no issuance volume, median time or rejection rate is published.	MOVEMENT
Sectoral management information systems	**Customs**	Construction began in August 2026 on a one-stop border post at the South African frontier, with the two countries to exchange data and share systems. Ground was broken on 17 August 2026 under an investment plan of about 980 million metical, one tranche for modernising the post's technological infrastructure and a second for a road freight terminal and express lanes (works, account). The design has the two countries' authorities exchanging data and sharing systems so that an exit registration on one side reaches the other. No completion date, system specification or data-sharing instrument is published, which for a cross-border personal-data exchange is the material omission.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Land**	An integrated agricultural platform in preparation would carry producer registration and production plot mapping alongside the existing land-use right system. The agriculture, environment and fisheries ministry is preparing a single portal to consolidate services across the agricultural value chain, to carry digital producer registration, production plot mapping, national production certification and seed and input quality control, and to establish export traceability from input to final consumer, with digital land mapping and registration stated to be under way alongside it (platform). It was announced by a national director at a private-sector forum, and no budget, supplier, timetable or data-protection arrangement is stated for a system that would register producers and map their plots. The existing land-use right system digitises application processing, with 563,765 requests recorded, 77 per cent processed and 68 per cent delivered to beneficiaries (system); that figure is from 2019 and nothing later is held.	MOVEMENT
Other GovTech and e-Gov	**e-government services**	A citizen portal enters experimental phase with about 140 services inventoried, an environmental licensing platform launched, and a two-hour notification certificate was decreed. An end-to-end environmental licensing system launched in August 2026 carrying a permit from application through issuance into monitoring, audit and inspection (platform, upgrade). 2026-09-01 — the road transport regulator launched a digital licensing system, moving applications for special transit licences for oversize and overweight vehicles and for emergency warning-device certificates to an end-to-end online process (launch). It is the second sectoral licensing platform in a month, and neither is stated to connect to the citizen portal now entering its experimental phase. 2026-09-03 - the agency's own account of the citizen portal names what it rests on: the government network, the government cloud storage platform, state electronic payments and digital identity. Which of them is actually in service behind the portal is not stated, and 21 of the planned services are stated live, with no user figure published. 2026-09-21 - the agency put the portal at about 26 services, among them driving licences, the taxpayer number and the one-stop desk, used by more than 3,000 citizens before any official launch. 2026-10-06 - the digital transformation agency held the country's first digital service delivery design lab, with the World Bank and a policy institute.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	A European initiative of EUR 7.1m is to extend the government network to at least 20 districts and connect local administrations, paired with community multimedia centres. 2026-06-17 — a European Team Europe initiative of EUR 7.1m, of which EUR 5m is the Union's contribution, is to expand the government network into at least 20 districts and connect local administrations and other public services, paired with community multimedia centres. It is a funded commitment and nothing more yet: no district list, connection date or bandwidth is published, and the repository holds no count of local administrations connected before it. The starting position is therefore not measurable from the record, only the intended addition.	MOVEMENT on a funded commitment with no connection yet recorded

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**Digitalisation of local government records**	A 22-module municipal management suite was specified in August 2026, under a memorandum across all 65 municipalities with no delivery report. The suite spans twenty-two interoperable modules covering finance and revenue, urban and land, licensing, waste, cemeteries, fleet, parking and policing; no deployment date or municipality count is published (specification). A municipal digital services programme was launched by memorandum across all sixty-five municipalities in February 2025, covering virtual secretariats, digital tax clearance, transparency tools and a national document management system, with no budget, delivery or progress report held (programme). Existing municipal systems are older and narrower: a property-tax system built in 2009 for the capital and three further revenue systems, with no national rollout or count of municipalities using them established (systems).	MOVEMENT
Rural digital data capture	**Digitalisation of rural health clinics**	About US$40m is committed to digitising 63 health units within a wider plan covering about 863 of some 1,900, and a five-year health memorandum commits to electronic medical records from health-unit level. 2026-04-15 — about US$40m is assured for digitising 63 health units, inside a wider plan covering roughly 863 of some 1,900 units nationally, with a pilot running at one Maputo hospital and extension planned to Quelimane and Beira. It is the largest funded expansion in the window, and the announcement does not break out how many of the target facilities are rural. 2025-12-15 — a five-year bilateral health memorandum worth about US$1.7bn commits to implementing an electronic medical record from the level of the health unit as part of strengthening health information systems. Both are commitments. No count of rural units actually digitised, and no record-completeness or uptime figure for those that are, is published — so the repository can state what is funded and not what is running.	MOVEMENT on funding commitments rather than on delivered facilities
Rural digital data capture	**Digitalisation of rural primary schools**	149 localities and 418 schools were connected under the ministry's programme, against a stated target of up to 4,000 schools. The connected counts and the targets are the communications ministry's own, given without a completion date: at least 300 localities, up to 4,000 schools and around 10,000 new access points (programme). At 418 schools the programme is about a tenth of the way to its own ceiling. No completion date, per-school service level or count of schools still unconnected is published.	MOVEMENT
Rural digital data capture	**Digitalisation of rural registry offices**	Staff of every registry office in Nampula province are being trained to enter documents into electronic platforms, with technical teams deployed to the districts. 2026-06-11 — the state administration minister confirmed training under way for the staff of every registry office in Nampula province to enter documents into electronic platforms, with technical teams deployed to the districts. It is a last-mile event distinct from the national electronic civil registration framework, and the first the repository holds at province scale. The duties behind it are statutory: the 2018 revision of the civil registration code governs the digitisation and notification obligations of registry offices, rural posts included. One province is not a national position. No count of offices reached, documents entered or districts completed is published, and no other province has a comparable record.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural police stations**	The only identified instrument is a gender-based-violence case-registration platform used at police stations, piloted in the capital and not extended to rural posts on the record. The closest thing to police-station digitisation the repository holds is a digital gender-based-violence case-registration platform developed by the interior ministry with UN support. Its pre-pilot covered stations in the capital and its twin city; no extension to rural posts is recorded. Nothing else qualifies. No statute or decree establishing police record digitisation was located, and no event in the window was a distinct rural police-digitisation development. What the repository holds is one urban pilot from 2019 and an absence since — which is a finding about the record, not a claim that nothing exists.	NO CHANGE one urban pilot from 2019 and nothing since

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	A national artificial-intelligence commission was created by decree in April 2026, and the draft national strategy went to public consultation the following month. 2026-04-17 — a decree created a national artificial-intelligence commission subordinate to the Council of Ministers, with the ICT institute as its executive secretariat and a mandate spanning public-sector AI policy, ethics, sectoral application and the national strategy. It is the binding founding act, not an announcement. 2026-05-04 — the ICT institute opened a month-long public consultation on the first draft of a national artificial-intelligence strategy, moving the subject from preparatory agenda to formal policy process. 2026-07-13 — the institute and the national health institute agreed a digital health laboratory complex and a public-health AI regulatory sandbox to test and validate solutions before deployment in the national health system. Governance is moving faster than use. No AI system in operational government administration is named anywhere in the record.	MOVEMENT
AI	**Use of AI in sectoral management information systems**	A public-health AI regulatory sandbox was agreed in July 2026 with international technical support confirmed for the cross-sector mechanism. 2026-07-13 — the ICT institute and the national health institute agreed to create a digital health laboratory complex and a public-health artificial-intelligence regulatory sandbox, to test and validate solutions before they are deployed in the national health system. 2026-05-15 — the international telecommunications body confirmed technical support for establishing the regulatory sandbox as a cross-sector testing and governance mechanism, ahead of the national artificial-intelligence and digital transformation strategies. The commission's mandate expressly covers sectoral application in health, agriculture, education and finance. What the repository does not hold is any sectoral management information system actually using artificial intelligence: the sandbox exists to test what does not yet run.	MOVEMENT a sectoral testing mechanism was agreed with no system yet through it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Development of national / regional AI systems**	Mozambique is a founding member of a world artificial-intelligence cooperation body and is named as implementing a regulatory sandbox. The establishment agreement was signed at Shanghai in July 2026, with the country one of twenty-nine signatory states and one of ten African ones; no ratification step, entry-into-force date or contribution is stated (membership). The country is named among African states already implementing an international artificial-intelligence sandbox initiative, with no start date, scope, participant or output held (sandbox). No domestic model, dataset, compute facility or research output is recorded, so the country's artificial-intelligence position is entirely institutional. The artificial-intelligence association's launch and the swearing-in of its leadership executive were one ceremony in Maputo on 26 August 2026, on the venue host's own account, not an inauguration on the 27th as the trade report had it. No constitution, membership, funding or work programme is published.	MOVEMENT
AI	**Control of AI abuse**	A National Commission for Artificial Intelligence began advising government in 2026, an observatory is proposed, and the Prime Minister warned on deepfakes in elections. The commission was created by decree of 10 March 2026 and is an advisory body under the Council of Ministers chaired by the communications minister with the defence and education ministers as vice-presidents, issuing opinions on policy, legal instruments, funding, research and workforce questions; the decree number is not stated in any held source (commission, framework). A National Artificial Intelligence Observatory was named in August 2026 as expected to support transparency, build trust and measure impact; no establishing instrument, host, membership, funding or method is on record (observatory). The Prime Minister welcomed artificial intelligence while warning of the dangers of deepfakes in elections; no detection capability, electoral rule or platform obligation follows it (statement).	MOVEMENT
ICT Industry	**National capacity in DT-related production**	A technical team was formed to sell part of the state stake in the loss-making incumbent, and a private group notified a purchase taking it to exclusive control of a fixed operator. The government formed a technical team in August 2026 to negotiate the sale of part of its stake in the incumbent, which carried a US$400m debt in 2023; no buyer, share, valuation, timetable or treatment of the debt is stated. A private group notified the competition authority in July 2026 of the purchase of the incumbent's residual 30 per cent in a fixed operator and its network-engineering arm, taking it to exclusive control, with no amount disclosed (merger). Between them these move a fixed operator and its engineering capability out of state part-ownership and put the incumbent's ownership in play; no domestic manufacturing, software or supplier capacity is recorded anywhere in the repository. 2026-09-12 — the government invited expressions of interest within 15 days in a strategic partnership, including a possible partial sale of its shares; no stake size or valuation is stated. 2026-09-17 — documentation prepared for the partner gives the fullest account of the operator's position on the record: 1.79 million active mobile customers at the end of 2025, up 62.1 per cent, on 1,303 sites and about 6,500 km of backbone. The figures are the seller's, not a regulator's.	REGRESSED the state moving out of both the incumbent operator and a major fixed operator in the same year

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Innovation ecosystem	**Technology hubs**	The state company owning the science and technology parks was extinguished and its 2012 founding decree revoked, while a regulator incubator network planned expansion from the capital to two more cities. 2026-06-16 — a decree extinguished the state company that owned and managed the science and technology parks, revoking its 2012 founding decree, in connection with the new digital transformation and innovation agency. It is the most significant institutional change to the hub-managing body in the window, and no successor arrangement for the parks themselves is stated. 2026-05-29 — the communications regulator set out a first-phase plan to expand its digital incubator network from the capital to Beira and Nampula, with an eventual every-province ambition. The assessment behind both is unflattering: an international review of the country's science, technology and innovation parks and hubs found the field nascent, with weaknesses in funding, coordination and university-industry linkage. Dissolving the owner and planning an expansion in the same quarter is not obviously one strategy.	MIXED the hub-owning state company was dissolved while an incubator network planned expansion
Innovation ecosystem	**Tech startup ecosystem**	The country ranked 128th of 133 economies in the Global Innovation Index 2024, and 22nd of the 27 ranked in Sub-Saharan Africa. The Global Innovation Index 2024 places the country 128th of 133 economies and 22nd of the 27 ranked in Sub-Saharan Africa (index). The held capture is a machine extraction of the index's country profile in which some running text is scrambled, so the ranks above are the legible figures and no pillar scores are read from it. The repository holds no start-up statute, no national innovation or research funding programme and no register of technology firms, all of which stand as not held.	NO CHANGE a first placing with no earlier reading held on this repository

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	2,032 professionals were trained across public bodies, private firms and the media under the donor project, with fourteen national maturity certifications. The cumulative figures are fourteen training actions for thirty institute technicians, 2,032 professionals trained across public bodies, private firms and the media, and fourteen national certifications on an international maturity model (training). They are the institute's own cumulative figures and the period they cover is not stated, so the repository holds a total with no rate behind it and no measure of the civil service population it reached.	MOVEMENT
Literacy	**Digital literacy (general population)**	There is no national digital literacy programme, and in September 2026 the ICT institute signed a memorandum with a private firm for rural digital-literacy campaigns. The absence is dated rather than settled by the source: an organisation used a dialogue-series launch in Maputo on 20 August 2026 to demand a national digital-literacy programme for young people, arguing digital skills are now a precondition for meaningful democratic participation (demand). A civil-society demand is evidence that no programme exists rather than a programme. No literacy measurement, curriculum or target for the general population is held. 2026-09-21 — the ICT institute signed a memorandum with a rural mobile-multimedia firm for awareness campaigns, workshops and community forums on digital culture, cybersecurity and data protection, with content in Portuguese and where possible local languages. No budget, reach target or start date is stated.	MOVEMENT a rural awareness memorandum while no national programme exists

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**DT-related training in secondary education**	A digital skills programme trained fifty young people and five teachers in a pilot, and EUR 50m was signed for education and skills. The programme's reported outputs are a national digital skills assessment informed by more than thirty interviews and a survey of about 400 young people, a pilot that trained fifty young people and five teachers, fifteen women trained under a governance challenge and more than a hundred participants in artificial-intelligence training for young women; no curriculum document, enrolment series or completion rate is published (outputs). The project behind them runs to 2027 on CHF 2,244,820 with US$8,305,800 of co-financing (project, page). A further EUR 50m was signed in June 2026 to prepare students for a digital and sustainable future, with no recipient organisation, work plan or disbursement named (agreement).	MOVEMENT
Training and skills	**DT-related university facilities and qualifications**	The research and education network went from 5 to 60 Gbps of international bandwidth, and a university data centre opened in August 2026. International bandwidth rose from 5 Gbps on a single route to 60 Gbps over a South Atlantic link with two continental routes in October 2025, restated by the minister as funded for fifteen years; the national backbone that would distribute it to universities was still being expanded at that date (bandwidth, restatement). The network is operated from the communications ministry's premises, and the minister stated he wants it managed by the universities instead, with no transfer date, instrument or governance model named (network). The university data centre opened in August 2026 to carry research, cloud and artificial-intelligence services (data centre).	MOVEMENT
Training and skills	**Graduates entering DT ecosystem**	A EUR 20m credit was ratified for a programme placing final-year students and graduates into technology employment, and a national programme targets about 40,000 young people. 2026-04-02 — the Council of Ministers ratified a EUR 20m credit agreement funding a national programme for final-year students and graduates entering technology employment, start-up incubation and entrepreneurship, run through the education ministry with the science-park company and two enterprise agencies. 2026-06-17 — the youth ministry signed a memorandum with two companies for a national digital-skills programme targeting about 40,000 young people — 36,000 in digital literacy and 3,660 in advanced-technology bootcamps — piloting in five provinces. The policy base is older than either: the 2019-2028 information society strategy sets education and human development as its first strategic axis. Seven years in, no graduate count, placement rate or completion figure against that axis is published, so two new programmes are being started over an unmeasured baseline.	MOVEMENT two funded programmes were agreed against a strategy axis with no delivery record behind it
Research institutions	**Think tanks and academic departments contributing to DT policy**	The minister proposed transferring the research and education network from his ministry to the universities, with no date or instrument named. The proposal was made at the university data-centre inauguration in August 2026, with no date, instrument or governance model named (proposal). It is the only recorded move to put a national digital asset under academic governance. No research programme, publication or think tank is otherwise recorded contributing to the country's digital policy.	MOVEMENT

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	A national procurement whistleblowing line was agreed in November 2025 and a personal-data breach reporting platform launched in January 2026; the standing municipal grievance portal is offline. 2026-01-28 — the ICT institute launched a platform for citizens to report personal-data breaches and misuse, with a published complaint-handling workflow. 2025-11-12 — the finance ministry and the prosecutor-general signed a memorandum establishing a national confidential reporting line for citizens, suppliers and public servants to report corruption in public procurement. The standing channel is not working. The municipal development programme's grievance mechanism — an online form with tracking, a phone line and dedicated addresses — states on its own page that it is offline and read-only. Two new channels opened in the window and no complaint volume, response time or resolution rate is published for any of the three, so what reaches a decision cannot be stated.	MOVEMENT two national reporting channels opened while the standing municipal portal is offline
Access to services	**Citizen participation in policy**	The five-year government programme commits to citizen and non-state participation in policy, and a national dialogue opened public consultation in September 2025 with ten working groups drawing partly on a public call. 2025-09-10 — the Presidency launched the national and diaspora public-consultation phase of an Inclusive National Dialogue, with a technical commission including civil-society members and ten working groups, drawing partly on a public call, covering district, provincial, central and diaspora levels — the widest-reach participation channel opened in the window. 2026-03-04 — the social security institute opened a nationwide consultation across all provinces, to 27 March, on revising the compulsory social security regulation, consulting workers, employers, unions, pensioners, academia and civil society against a recorded base of more than 2.8 million worker-beneficiaries and about 42,000 pensioners. The commitment behind both is Programme 4.1.3 of the government's five-year programme, on democracy and participation. What the repository does not hold is any account of what a consultation changed: no submission count, response or published outcome for either exercise.	MOVEMENT
Access to services	**Gender equity**	EUR 28m was signed with a stated focus on women in the digital economy, while the credit gap widened from 31-59 to 34-66 per cent. The agreement was signed in June 2026 within a four-agreement package of EUR 178m, with the recipient organisation unspecified and no disbursement recorded (agreement). Access to credit ran at 31 per cent of women against 59 per cent of men in 2024 and 34 against 66 in 2025, so the gap widened over the same year in which women's mobile money holding rose 24 per cent (gap). The account gap narrowed and the credit gap did not, which is the distinction a headline inclusion figure would lose.	MIXED EUR 28m signed for women's participation while the gender gap in credit widened

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Inclusion of persons with disabilities**	Law 10/2024 sets disability rights including accessible information and disaggregated statistics, and a 2026 regulation created a free identification card as proof of status. 2026-04-14 — the Council of Ministers approved the regulation implementing the 2024 statute, creating a free personal disability-identification card issued by the health ministry as official proof of status for access to services and benefits. It converts a statute into an administrative-access mechanism, which is the movement that matters here. 2025-11-05 — the health ministry and partners published a standard operating manual for making sexual and reproductive health and gender-based violence services accessible to persons with disabilities, with accessibility checklists, referral pathways, provider training and monitoring. The frame is the 2024 statute, covering priority public-service treatment, accessible information, health, education, employment, transport, building accessibility and disaggregation of statistics. No card issuance figure, accessibility audit or disaggregated statistical series is yet published.	MOVEMENT the 2024 statute gained the administrative mechanism that makes it usable
Access to services	**Inclusion of refugees and IDPs**	About 392,000 people were newly displaced by floods in early 2026 on top of conflict displacement, and a US$6.9m partnership is restoring civil documentation in Cabo Delgado. 2026-01-30 — the refugee agency recorded about 392,000 people newly displaced by floods, on top of more than 300,000 displaced by conflict in the second half of 2025, with about 100,000 sheltering in around 100 overcrowded temporary centres lacking privacy, lighting and basic services, and elderly people and persons with disabilities struggling to access assistance, and states a 2026 country requirement of US$38.2m. 2026-03-03 — a US$6.9m partnership with Japan was signed for 2026-2028 to rehabilitate 27 government service points, train 300 officials and deliver mobile civil-documentation and legal aid to about 100,000 displaced and returnee people in Cabo Delgado, restoring the legal identity that gates health, education, justice and social assistance. The policy frame is the internal displacement management policy approved in 2021, covering prevention, protection, response and reintegration under the disaster management institute. Documentation is the digital dimension of this indicator, and it is being restored by a donor project rather than by the register itself.	REGRESSED displacement rose sharply against a standing policy framework and a documentation gap the response is still closing
Digital divides	**Bridging of digital divides**	Sixty rural mobile stations were awarded and 700,000 subsidised smartphones provided for, against 80 per cent urban penetration and 20 per cent rural. Sixty mobile stations across nine provinces were awarded in October 2025, each with second and fourth-generation service, a public multimedia centre, solar power, a prepaid public telephone and a hundred handsets; the scope had doubled from thirty sites and no completion date is on record (award, tender). A programme provides for 700,000 subsidised smartphones starting at US$5m and able to grow to US$25m, financed through microcredit and pay-as-you-go models (smartphones); no start date, distribution channel or eligibility rule is published (smartphones). The regulator puts penetration at about 80 per cent urban against about 20 per cent rural (gap), and planned and running inclusion work slowed or stopped after a funder's 2025 wind-down with no replacement named (withdrawal). 2026-08-21 — Decree 36/2026 lets the regulator convert operators' fines into universal-service obligations; no first conversion is on file.	MIXED sixty new rural stations and a subsidy programme against an 80 to 20 urban-rural gap and a major funder's withdrawal

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	An updated national statistical strategy is named as in preparation, with no draft, timetable or publication held. It is named as one of several strategies in preparation in a December 2025 diagnostic (diagnostic). Nothing else about it is on record: no lead institution beyond the statistics office, no period, no costing and no consultation. It sits alongside a data governance policy, a digital transformation strategy and an artificial-intelligence strategy all in drafting at the same time.	MOVEMENT
National statistics	**Censuses and surveys**	The fifth census is scheduled for August 2027 as the first run entirely in digital format, on a pilot costing US$430,000 and a US$68m funding shortfall. The pilot launched in Magude district in August 2026 at a cost of US$430,000, covering 177 enumeration areas across five administrative posts with 177 enumerators and 38 controllers selected from 260 trained, testing digital cartography, the collection application, the electronic questionnaire, data validation and synchronisation (pilot, training). The 2027 operation is costed at EUR 96.2m and the institute reported in March 2026 a shortfall of US$68m against the US$110m required, with a funder committing US$12.7m of initial financing (costing). Which operation pays for the census is unestablished, and no supplier, device count or data-hosting arrangement is reported.	MOVEMENT
National statistics	**Statistics from administrative data**	A microdata catalogue holds 79 statistical operations from four ministries and the statistics office, all under licensed access rather than open download. The catalogue held 79 operations at capture in August 2026, depositing from the statistics office, the education ministry, the science ministry and the public works ministry (catalogue). Access is licensed, not open, which is the distinction between a microdata archive and an open-data holding. It is the country's only cross-ministry data catalogue.	MOVEMENT
Open data	**Use of open data**	A public infrastructure data portal publishes road, bridge and project data under an open licence and an international contracting standard. The portal is run by the roads fund with foreign development support and was validated as a publisher against the infrastructure contracting standard in 2026 (portal). It is the only government open-data publication in the repository carrying an explicit reuse licence, and it covers one sector. No national open data portal, policy or publication mandate is held. Where electoral data is concerned, access rests on a bilateral undertaking rather than publication: the elections commission and a civil-society consortium signed a memorandum in April 2023 giving the consortium a right of access to electoral-process information for the 2023 municipal and 2024 general elections in return for a duty to support the electoral bodies (memorandum). What was released under it is not held, and the European Union observation mission separately records that most of the commission's 2024 decisions were not accessible from its own website (mission).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	**Agricultural use of satellite data**	A satellite-based irrigation performance tool was handed to the national irrigation institute, and earth-observation crop mapping produced statistics for three provinces for the 2024/25 season. 2026-05-06 — an irrigation performance assessment and diagnostic tool was formally handed over to the national irrigation institute, using satellite-derived water productivity, evapotranspiration and biomass data for the Chokwe scheme. The movement is institutional: a monitoring capability passes from project to national tool. 2026-06-10 — a peer-reviewed account documented an earth-observation architecture combining a satellite-based sampling frame, a smartphone field-data application and automated crop-type mapping, generating high-resolution crop maps and statistics for Gaza, Manica and Zambezia for the 2024/25 season. The mandate under which both sit is the 2022 founding statute of the national mapping and remote-sensing institute, which is to acquire, process, archive and distribute aerospace imagery and geo-referenced data across all sectors. Neither application is that institute's own, which is the gap worth noting.	MOVEMENT a satellite monitoring tool passed from project to national institution
Use of satellite data	**Meteorological use of satellite data**	A national flood-mapping capability of nine sensor-equipped drone systems and thirty certified specialists was left by a donor programme in July 2026. The capability comprises nine sensor-equipped drone systems, simulators, unmanned surface vessels and data platforms, with thirty specialists from the meteorology institute, the disaster management institute, the remote-sensing centre, the roads administration and the water directorate certified in July 2026 (programme). The half-trained cohort was deployed months early into floods in January 2026, which the affected district recorded with no loss of life. The account is the financing bank's own, and no running cost, custodian institution or data-sharing arrangement for the output is stated.	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	A bilateral health memorandum plans US$1.83bn of support to 2030 including US$83m for health data systems, and partnership talks were held with a satellite operator. The memorandum was signed at Washington in December 2025 for activities running to 2030: planned United States support of US$1,829,380,000 against Mozambique's US$70,573,106, including US$83,072,079 for health data systems (memorandum, record). The text carries no personal-data, data-ownership, hosting or residency clause, makes failure to fulfil the specimen and data sharing agreements grounds for changing or discontinuing assistance, and lets the United States revisit funding if a mutually acceptable technology roadmap is not finalised (assessment). A separate government-level meeting with a satellite operator discussed connectivity, digital infrastructure and small-business participation, with no agreement, amount or timetable announced (talks).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
China activities	**Chinese MoUs, engagements and commitments**	Chinese engagement runs to a US$132m network facility, local cloud services billed in local currency, and city surveillance cameras reported concentrated in opposition areas. The network modernisation facility was committed in 2020 with no signed loan agreement public (facility). Local cloud services launched in Maputo billed in local currency in 2024, and nothing on the deployment has entered the repository since (cloud). A research report of March 2026 records cameras from three Chinese suppliers concentrated in political-opposition areas in the absence of adequate legal regulation or oversight; it is researcher-reported, and no contract, financier, deployment date, supplier split or camera count for the country is held (surveillance).	MOVEMENT
EU activities	**EU MoUs, engagements and commitments**	Four agreements worth EUR 178m were signed in June 2026, of which EUR 28m is digital transformation and EUR 50m education and skills. The package was signed at a business forum on 9 June 2026, with EUR 28m for digital transformation focused on women's participation in the digital economy and the recipient organisation unspecified (package). A further EUR 50m covers preparing students for a digital and sustainable future, with no recipient organisation, work plan or disbursement named (education). No disbursement against either is recorded, and an earlier European digital programme committed in 2022 has nothing disbursed on the published record.	MOVEMENT
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	A Gulf environment memorandum moved past signature into a mixed technical team, and a Qatari conglomerate signed a US$20bn strategic agreement covering six sectors. 2026-02-03 — the agriculture ministry confirmed that a memorandum with the United Arab Emirates on environment and biodiversity has moved past signature, with a mixed technical team agreed to implement its action plan. It is the only Gulf instrument the repository can show reaching an implementation mechanism. 2025-08-26 — a Qatari conglomerate and the government signed a strategic agreement valued at US$20bn across agriculture, energy, infrastructure, health, education and tourism, the largest Gulf figure in the window. It is a private company's pledge, not a state financing instrument, and no drawdown, project or timetable is published against it. 2026-01-14 — a bilateral business roundtable reviewed cooperation across trade, gas, solar energy, port expansion, agriculture and artificial intelligence, the Emirati side citing bilateral trade of about US$1.7bn in the first nine months of 2025, up 57.8 per cent. No digital-specific commitment is named in any of the three.	MOVEMENT one memorandum reached an implementation mechanism and a much larger private pledge was signed
India activities	**India MoUs, engagements and commitments**	An information technology park was delivered under an Indian concessional line of credit, with no location, value or completion date stated. The park is named in an Indian bilateral brief of April 2025 as delivered under a concessional line of credit; the brief states no location, value or completion date (brief). It is the only Indian digital engagement on record for the country, and nothing in the repository establishes whether the park is operating.	MOVEMENT
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Gulf-state digital or data-centre investment agreement	Any agreement with a Gulf state fund or operator; the held data-centre financiers are development finance institutions, private funds and an operator, with no Gulf party named	2026-08-06
National innovation and research funding programme	A science ministry or Council of Ministers instrument establishing a research or innovation fund, with an appropriation line; the repository carries the artificial-intelligence commission's mandate to opine on funding but names no fund, programme or amount	2026-08-06
Start-up act	A start-up or innovation statute, or a ministerial statement that none is planned; the repository carries no source at all on this subject and no held source names a start-up law, register or qualification regime	2026-08-06
National space policy or programme	A Mozambican space-sector policy, or the text of the June 2026 space memorandum; the repository holds two signed memoranda with Angola and the earth-station integration, with no domestic instrument behind them; named legal analysts (Abreu Advogados, Jan 2025) confirm no national space strategy or Space Law exists, pegged to the April 2025 African Space Agency inauguration -- corroborates the absence, does not settle it	2026-08-06
Government data catalogue and designated data steward	A government decision designating the catalogue host and the data-steward role; the World Bank diagnostic of December 2025 recommends both be designated, which establishes that neither existed, and nothing since	2026-08-06
Government-systems integration roadmap	The roadmap itself or a progress statement by the technical commission; the repository records the February 2026 commitment to deliver it by mid-2026 and carries nothing on whether it was delivered	2026-08-06
Implementing regulations for Law 15/2026	A central bank notice or Council of Ministers decree issued under the new payments law; the repository holds the enactment through secondary accounts and nothing on subordinate instruments	2026-08-06
National open data portal	A government-hosted open-data portal or data catalogue with an address and a dataset count, or a dated statement that none exists; the three sources held on this subject name no portal, catalogue or access-to-information instrument	2026-08-06
Data Classification Policy	The policy text or a Council of Ministers resolution approving one; the repository carries the World Bank's December 2025 recommendation to design one and the minister's April 2026 statement that states must classify their data, but no instrument, draft, timetable or responsible body	2026-08-06
Financial education programme under the financial inclusion strategy	The strategy text or its financial-education work plan; the repository carries only the launch report's summary that financial literacy will be promoted, especially in rural areas, with no programme name, budget, delivery agency or target	2026-08-06
National digital literacy programme or strategy	A published national digital-literacy or digital-skills programme document, or a ministry statement of its status; the repository carries no source at all on this subject, and training counts under the acceleration project are professional rather than population-level	2026-08-06
Universal Access Service Fund accounts	Fund accounts or the regulator's levy receipts; the fund is named as the funder of the rural connectivity build with no income, balance or disbursement figure anywhere in the repository	2026-08-06
World Bank financing for the university data centre	The operation name, project number and amount; three held accounts of the 2026-08-03 inauguration name the World Bank as financier and state none of the three	2026-08-06
Installed national data-centre capacity	A register of licensed data centres carrying capacity in megawatts; the repository carries a disputed count of facilities and now one operator's own specification for one facility (400 racks, 2,000 sqm, 3 MW), and no capacity figure for any other Mozambican facility and no national total	2026-08-06
National compute capacity plan for artificial-intelligence workloads	A ministry or agency plan responding to the minister's own statement of 2026-07-28 that current infrastructure cannot support more advanced models; no plan, budget or procurement is held	2026-08-06
Published national internet penetration figure	A national statistical or regulator series; the repository carries only third-party estimates — close to 80% offline (GSMA, 2026-07), 21.2% (ITU, cited 2026-07) and 23.2% (DataReportal, 2024) — and no Mozambican official figure	2026-08-06
Critical information infrastructure register	The designation instrument made under the Cyber Security Law; compliance with the cloud and radio-centre regulations is stated to be mandatory for operators of critical infrastructure, and which operators those are is nowhere established	2026-08-06

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Dedicated artificial-intelligence legislation	a bill, decree or regulation addressing artificial intelligence directly, or a government statement naming an instrument in preparation with a date	2026-08-17
Mozambique Land Administration Project (Terra Segura)	A World Bank board approval, implementation status report or completion report for P164551, or a Mozambican statement of the project's outcome; the repository holds only the August 2018 concept-stage document, which sets an October 2018 appraisal and a December 2018 board date and states US$100 million of IDA grant financing	not yet probed
Costing of the 2026–2029 Operational Plan for Digital Transformation	The costed operational plan, or the technical commission's published cost estimate and financing plan; as at 2026-09-21 the commission expected to cost it within two to three months.	2026-09-25
Enacted text of the data-centre and cloud regulations (Decrees 71/2025 and 72/2025)	Boletim da República I Série n.º 250 of 31 December 2025, carrying the articles on data centres abroad, state-secret information and public-sector hosting; only legal commentary and INTIC's announcement are held.	2026-09-25
Source code and exit terms of the identity and travel-document system	The Muhlbauer concession contract, an audit, or a DNIC or ministry statement on source-code ownership, renewal and exit as the eight-year concession from 2018 runs out.	2026-09-25
Data jurisdiction, portability and exit terms of agreements touching state data	Publication of the Muhlbauer concession terms and of the December 2025 data-sharing agreement with the United States.	2026-09-25
