PROGRESS REPORT

Mauritania: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	The National Digital Transformation Agenda 2022-2025 has run out its period, and no successor agenda is held. The agenda set four axes and its period has since ended, with no successor, evaluation or extension on record (agenda). The pattern repeats across this unit: the cybersecurity strategy and the university research accreditation both expired in the same way, so what the repository records is a set of instruments that ran their term and were not replaced.	NO CHANGE
Strategies, plans and policies	**ICT strategy**	The national digital transformation agenda for 2022-2025 has run out, and preparation of a 2030 successor began in December 2025. The 2022 agenda is now held as the ministry's own document, carrying a vision, objectives, strategic orientations, implementation levers and project sheets (agenda). The ministry announced on 4 December 2025 that work on a National Digital Transformation Agenda 2030 had begun (successor). No implementation report, budget outturn or project-by-project status against the 2022 agenda's sheets is published, so a four-year strategy closed without the repository holding what it delivered.	MOVEMENT the strategy period expired with a successor only in preparation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Broadband strategy**	A broadband promotion and universal access strategy was completed in February 2019 with an action plan beside it, and no successor or implementation report is held. The strategy volume sets quantified coverage and capacity objectives, market segments and an indicative budget, and calls for a National Broadband Plan to be put in place; it proposes regulatory action on the wholesale market, a wholesale catalogue and a tariff structure (strategy, action plan). Seven years on, the repository holds no adoption instrument, no implementation report and no successor, and nothing establishes whether the National Broadband Plan it calls for was ever made.	STALLED
Strategies, plans and policies	**Data storage / cloud strategy**	The national cloud launched in June 2026 over the tier-three data centre, and the regulator took up hosting and certification. Mauritania now has the estate and is writing the rules over it. The national cloud platform was launched in June 2026 and presented to the national assembly the following month, running on the tier-three data centre of 1,372 square metres and 100 racks inaugurated in May 2025. No consolidated storage or cloud strategy document is held. What governs hosting is the data-protection authority's practice: its June 2026 monthly meeting took up data hosting and the certification of the data centre, after deliberations of 2025 on foreign cloud services. The rule is arriving through the regulator rather than through a strategy.	MOVEMENT
Strategies, plans and policies	**Data interoperability framework / roadmap**	The administrative procedures portal launched in February 2026 with a stated three-phase roadmap ending in integration into the government services platform. The clearest cross-government roadmap of the window came with a portal launch. At the 16 February 2026 launch of the national portal of administrative procedures, the minister set out three phases: centralise and publish every procedure on one national platform, keep them updated and reliable in coordination with each sector, then fully digitise the most-used procedures and integrate them into the government services platform. The portal centralises the procedures it publishes on one address. Two other tracks bear on it: a national framework for public digital services standards, and a national data management system being worked through blockchain workshops in the public administration.	MOVEMENT
Strategies, plans and policies	**AI strategy**	A draft National AI Strategy for 2024-2029 sets five strategic priorities, twelve objectives and thirty measures, and no adoption instrument is held. The ministry's April 2024 draft sets five strategic priorities, twelve objectives and thirty measures, covering skills, research, international collaboration, data governance and ethical use, with sector projects in health, education, agriculture, fisheries, transport, energy and defence (draft). A reference guide records a National AI Strategy 2025-2029 as existing (guide); no adoption instrument, budget or implementing body is held, so the country's position rests on a draft.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data localisation policies**	Using cloud services hosted abroad for personal data requires prior authorisation from the data protection authority under the amended deliberation of April 2026. The amended text of deliberation 005/2025, published 30 April 2026, requires public and private bodies using cloud services abroad to obtain prior authorisation for the processing, a separate transfer authorisation where the host country is not on the approved list, and contractual guarantees covering compliance with the 2017 law, a data-transfer clause, return of the data on contract expiry and its permanent deletion by the provider (deliberation). The authority has also taken up homologation of the national data centre at its monthly meeting (hosting). No general localisation requirement, sector rule or list of authorisations granted is held, and the approved-country list the regime turns on is not published.	MOVEMENT
Strategies, plans and policies	**Data governance policy**	Governance runs through the regulator's deliberations rather than a policy: transfers abroad and foreign cloud in 2025, hosting and certification in 2026. There is no single national data governance policy. What performs the function is a sequence of deliberations by the data-protection authority under the 2017 personal data protection law: a 2025 deliberation on transfers abroad with a list of adequate countries, another on foreign cloud services as later amended, and monthly meetings taking up data hosting and data-centre certification and interconnection between the population register and other registers. The authority works to its own strategic plan for 2023 to 2026. Alongside it sits a 2023 national strategy for open and interoperable data.	MOVEMENT
Strategies, plans and policies	**Open data policy**	A 2023 open and interoperable data strategy with a thin portal, an electronic gazette portal since November 2025, and systematic extractives disclosure. The policy exists and the publishing behind it is thin. A national strategy for open and interoperable data was adopted in 2023, and the portal it provides for carries little. Two narrower channels do publish. The electronic gazette portal launched in November 2025 puts the official journal online. And extractive-industry data is released under a 2019 decree requiring systematic disclosure, which the transparency initiative's board scored as moderate against its standard in 2024. A national data portal is among the procurement commitments of the digital programme.	MOVEMENT
Legislation and regulation	**Data protection legislation**	The data protection law has been in force since July 2017, requiring approved codes of conduct and free, unambiguous consent, with no enforcement decision published. The statute covers both manual and electronic processing and requires codes of conduct approved by the authority and free, unambiguous consent (law). The authority runs monthly ordinary meetings and sensitisation days for ministries, telecom operators and financial institutions, and no enforcement decision, register entry, sanction or annual report is published (authority). The held extraction of the law cuts off mid-article, so the chapters covering the authority's powers and sanctions are not captured.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Cybersecurity legislation**	The cybercrime law of 2016 is the instrument in force, its text now held; no amendment is on the record. Law n. 2016-007 defines computer data, subscriber data and traffic data and sets the offences and procedure for cybercrime (law). Against it, a national emergency response team and security operations centre were put out to international tender in September 2025 and no award is on the record. The repository holds no prosecution count, case record or amendment, so the statute is dated and its use is not.	NO CHANGE
Legislation and regulation	**Legislation covering digital id**	The civil status code of 2011 created the national population register, and law 2025-011 replaced certain of its provisions in February 2025. The 2011 law repealed and replaced the 1996 code and is the instrument behind the national population register (code); law n. 2025-011 of 24 February 2025 repeals and replaces certain of its provisions (amendment). Both texts are held in Arabic and the repository does not hold a consolidated version, so which provisions the 2025 law changed is not established from the record.	MOVEMENT
Legislation and regulation	**Digital payments legislation**	Law 2021-014 on electronic payment services and means has been in force since July 2021 and is the statute the central bank's payment instructions are issued under. The Official Gazette text of 30 July 2021 covers definitions, electronic payment services and means, payment cards and the contestation of a card payment (law, text). The held capture is an excerpt cut off partway through Titre III, so the later articles the central bank's own instruction cites are not on file, and no implementing decree, licensing decision or amendment to the statute is held.	NO CHANGE a statute in force since 2021 that the repository has only now acquired
Legislation and regulation	**Legislation enabling data interoperability**	Decree 2022-009 governs electronic exchanges between users and administrations and between administrations, under the electronic transactions law of 2018. The decree was made on the digital ministry's report under law n. 2018-022 of 12 June 2018 on electronic transactions, and is the legal footing the service portals rest on (decree). No implementing arrangement, register of compliant administrations or evaluation is held,; the national data management system it would serve is still in development, and the repository holds no register of administrations exchanging under it.	NO CHANGE
Legislation and regulation	**AI legislation / regulations**	No statute or regulation addressed to artificial intelligence. What exists is a strategy and a sector framework for schools. Mauritania governs artificial intelligence by policy rather than by law. The national strategy for 2024 to 2029 is the governing document, and the one sectoral instrument beneath it is the national framework for artificial intelligence in the republican school, adopted in January 2026. Nothing on the repository is a statute, a decree or a regulator's binding rule reaching artificial intelligence. Where synthetic content is addressed it is addressed by training: a programme with the audiovisual regulator on deepfakes and synthetic media for journalists in July 2026. The general data-protection statute is the only law that would reach automated processing.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**E-commerce legislation**	The transport regulator gave ride-hailing applications fifteen days to bring their authorisations into line in August 2026, warning of suspension. The communique warned that failure within the deadline could bring legal proceedings including suspension of the activity, with no further notice or warning required, and set the warning against growing use of digital platforms for transport services (communique). No operator is named and no count of non-compliant authorisations is given. It is the repository's only record of platform activity being regulated in the country, and it reaches the platforms through transport law rather than through any digital statute.	MOVEMENT
Legislation and regulation	**Statistics legislation**	No statistics statute is held. The system runs on the decadal statistics strategy for 2021 to 2030 and the continental charter. No statistics law, ordinance or decree constituting the statistical system appears on this repository. What governs it is a strategy and a treaty commitment: the decadal national strategy for statistical development covering 2021 to 2030, and the country's position on the continental charter on statistics. The institution beneath them is being reorganised by decree rather than by statute: the Council of Ministers appointed the statistics agency's orientation council in March 2026 in the same sitting as the archives bill. The agency publishes to that mandate, including the preliminary poverty results of the 2025 household survey.	NO CHANGE
Legislation and regulation	**Access to information legislation**	A bill on access to and use of public information is on the record from June 2026, presented as making good a presidential commitment. A press-freedom organisation welcomed the bill and asked for strengthened guarantees (bill). Nothing from the government or parliament on it is on file: no text, tabling date or parliamentary step. An advocacy organisation's welcome is the whole of what the repository holds, which is the position this row records.	MOVEMENT
Data protection	**Data protection authority**	The data protection authority is established and operating under a 2023-2026 plan, with no decision, register or annual report held. Its existence and plan are recorded by a reference guide (guide). Nine years after the statute, the repository holds no decision, no register of declared processing, no enforcement action and no annual report from it, so what can be established is that the institution exists and not that it acts.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data protection	**National data protection readiness**	The 2017 data protection law is being issued under: deliberations of 2025 set rules for transfers abroad and for foreign cloud services. Deliberation 004/2025 sets the conditions and procedural rules for transferring personal data abroad with a list of countries treated as adequate (transfers), and the amended text of deliberation 005/2025, published 30 April 2026, requires prior authorisation for processing personal data through cloud services abroad and contractual guarantees covering return of the data on expiry and its permanent deletion by the provider (cloud). The authority meets monthly with minutes issued, working on the inspection framework and its sworn agents (inspections) and on hosting the state digital agency's data and accrediting the national data centre (hosting), against a published strategic plan for 2023-2026. No budget, staffing, caseload or sanction figure is published, so activity is dated and capacity is not. The amended text does not state which articles changed from the original. 2026-09-16 — the Council of Ministers took a statement proposing to limit minors' social-media access at 16, switch off recommendation algorithms for them and ban advertising targeted at them, and the youth-empowerment minister said the same day that an interministerial committee is to propose the framework law. No draft text or date is published.	MOVEMENT
Regional collaboration	**Regional policy collaboration**	A digital cooperation memorandum with Senegal was signed in January 2025, with no deliverable, workstream or funding under it on record. The memorandum was signed in January 2025 and nothing has followed it into the repository (memorandum). It is the only bilateral instrument with a neighbour on file. The country's other recorded international digital engagements run to the Gulf and to European financiers rather than along its own borders. 2026-01-16 - the data-protection authority signed a cooperation convention with its Moroccan counterpart at Marrakech.	NO CHANGE
Regional collaboration	**Regional legal harmonisation**	The 1989 Maghreb Union treaty is in force with a binding judicial organ and no summit since 1994. The treaty concluded at Marrakesh in February 1989 has been in force since 1 July 1989 and establishes a presidential council, a council of foreign ministers, a general secretariat, a consultative council and a judicial organ whose rulings bind. No summit has been held since 1994, so the instrument supplies a legal frame for harmonisation and no working machinery. Harmonisation between Maghreb states therefore proceeds bilaterally where it proceeds at all.	NO CHANGE
Regional collaboration	**Shared regional infrastructure**	A vendor with two European donors was named for Sahel digital connectivity support in June 2026, with no site, capacity or delivery figure for the country published. The announcement names an equipment vendor working with two European government funders on Sahel connectivity (announcement). No Mauritanian site, capacity or delivery figure is published, so the country appears in a regional programme whose national share cannot be established.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Cross-border data transfers**	The data protection authority set the conditions and procedural rules for transferring personal data abroad, with a list of countries treated as adequate. Deliberation 004/2025 is the instrument (transfers); a companion deliberation sets minimum conditions for using cloud services hosted abroad (cloud), and both were taken up again at the authority's monthly meeting of April 2026 (meeting). The adequate-country list itself is not published, and no authorisation, refusal or transfer volume under the regime is on the record.	MOVEMENT
Standards	**National interoperability standards**	A public digital service standards framework is under development with German support, and the 2023 data strategy proposes making the state digital agency the national interoperability operator. A three-day standards and interoperability workshop was run by the ministry in March 2026 with German support; no framework or standard has been published (workshop). The agency intended to operate national interoperability was proposed in July 2021 as a public establishment under the digital ministry with about fifty staff, EUR 220,000 to set up and EUR 1.4m a year to run, with a draft creation decree (proposal). A June 2023 open-data strategy proposed revising the decree that created the state digital agency so as to name it national interoperability operator (strategy), and the agency took part in the data protection authority's June 2026 coordination on hosting its data (hosting). 2026-09-28 - the digital ministry began training 120 new staff to apply unified state digital-infrastructure standards to every new service; the standards are not published.	MOVEMENT
Standards	**National quality standards**	Decree 2023-113 created a national standardisation council and an accreditation committee and set the terms for accrediting conformity assessment bodies. The decree of 7 September 2023 creates the National Standardisation and Quality Promotion Council and the Mauritanian Accreditation Committee (decree). No membership, meeting record, accredited body or published standard is held for either institution, so the instrument exists and nothing on the record shows it working.	MOVEMENT
Standards	**Adoption of international standards**	All licensed operators have activated IPv6, with one past 15 per cent of subscribers migrated against the strategy target of 25 per cent by the end of 2026. A sixty-eight page national transition strategy set a target of 25 per cent adoption by 2026 with a national transition committee (strategy); it carries no printed adoption date and its economic-impact figures are lifted from a consultancy report rather than measured (strategy). By July 2026 all licensed operators had activated IPv6 across networks and services, with one unnamed operator past 15 per cent of subscribers migrated (activation). The target is the clearest measurable commitment the country has made on a technical standard, and it is on course to be missed.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	Civil society contributed to the fourth-cycle universal periodic review, and a validation workshop settled the electronic commerce strategy. Contribution here happens where the state convenes it or where an international process requires it. The fourth-cycle universal periodic review drew observations from the national human rights commission on the implementing decrees of the disability law, alongside the state's own national report and a contribution from the education and culture agency. Domestically the route is the validation workshop: the national electronic commerce strategy was put through one in October 2025, and the continuing training policy through another in May 2026. Both are ministry-convened, and neither publishes who contributed or what changed.	MOVEMENT
Public debate and participation in policymaking	**Open discussion of government policy**	The independent score fell to 38 of 100, with free expression down to 1 of 4; deputies questioned the government on media plurality in June. The scored assessment went down. The 2026 country report puts the country at 38 of 100 and partly free, down from 39, with the sub-question on expressing personal views on sensitive topics without fear of surveillance or retribution scored 1 of 4, down from 2, the decline attributed to intensified use of the 2021 law on the protection of national symbols against online dissent. Free and independent media stands at 2 of 4 and government openness at 1 of 4. Against that, contestation did happen and was reported. At a public sitting on 18 June 2026 two deputies put oral questions with debate to the government spokesman on whether public media reflect political plurality, and on irregularities in the regularisation of media staff; the minister answered that 1,860 collaborators had been made permanent.	MIXED an independent score fell while policy was contested openly in parliament

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The digital ministry's budget reached US$24.2m for 2026, up 104.6 per cent, while the universal access fund decree was repealed for unclear object and resource allocation. The ministry's 2026 budget is US$24.2m, up 104.6 per cent on the previous year (budget). The Council of Ministers approved a decree in July 2026 repealing the fund's 2020 governing decree, on grounds that the fund's object, its resource mobilisation and allocation, and its integration into the state budgetary system were all unclear; the new terms are not published and neither decree is held (repeal). So the domestic money for digital transformation grew sharply in the same year the instrument for spending it on universal access was found not to work.	MIXED the ministry's budget more than doubling while the universal access fund's governing decree was repealed as unclear
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
MoUs and other agreements	**Strategic relationships**	Five memoranda were signed with Oman in July 2026, after a US$50 million digital financing commitment in April. The window added two relationships and reactivated a third. A business forum with Oman in July 2026 produced five memoranda on digitisation, preceded by a ministerial meeting with the Omani delegation. The Islamic development bank committed US$50 million to digital financing in April 2026. The standing bilateral relationships are regional: a digital cooperation memorandum with Senegal signed in January 2025, and an agreement with Morocco on digital transformation of justice in October 2025. The electoral commission's memorandum with the European Union is the fourth.	MOVEMENT
New investments	**Mobilisation of non-state finance**	The digital programme was extended to artificial intelligence and data in June 2026, alongside a US$50 million commitment and a new investment code. Almost all the money on this repository is public and external. The regional digital programme is the largest channel and it grew in June 2026 with an extension covering artificial intelligence and data; a development bank committed US$50 million to digital financing in April; and European lending financed both the data centre and the second submarine cable connection. What would mobilise private money is newer and untested: the 2025 investment code with its single-window implementing decree, and the startup act. No private or blended investment in a digital undertaking is named on the repository.	MOVEMENT
New investments	**Development-partner project financing**	A regional digital programme financed the national cloud, a US$30m reform grant was disbursed, and US$50m more was agreed in principle in April 2026. The regional digital programme financed the national cloud launched in June 2026, and its national public key infrastructure procurement remains unawarded (programme, appraisal). A US$30m grant was disbursed in 2021 as the second of three planned private sector, digital and human capital reform operations, and no third operation is on record (grant, operation). An agreement in principle for US$50m covering digital infrastructure, cybersecurity, interoperability and skills was reached in April 2026 (agreement); no signed instrument, disbursement or schedule is held (agreement, record). The data centre behind the cloud was financed separately: a EUR 15m European Investment Bank loan, the facility inaugurated on 8 May 2025 within the World Bank co-financed regional connectivity programme (loan).	MOVEMENT

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	Four fifteen-year 5G licences were awarded in 2026 and the first commercial network launched at Nouakchott in August, with no coverage or subscriber figure published. Licences went to the three incumbents and a new entrant at bids of MRU 252.6m to 305m plus 5 per cent of revenue, breaking the three-operator structure (licences). One operator launched the country's first commercial 5G network at Nouakchott on 10 August 2026 under the digital transformation minister; no coverage footprint, tariff or subscriber figure is published (launch, account). The same operator had completed a full network modernisation at Nouakchott with a foreign vendor in November 2025, again with no coverage, capacity or subscriber figure published (modernisation).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Internet usage**	Use is measured through the financial inclusion and connectivity survey and the regulator's market observatory, not by a national survey of individuals. Two published series bear on how many people use the internet. The 2025 financial inclusion survey carries connectivity alongside account ownership, and the telecommunications union's development dashboard carries the infrastructure and access series. The regulator publishes subscriptions through its market observatory and annual report. None of them is a national survey of individuals using the internet, and nothing in the window updates the position. What did move is supply: coverage extended to southern and south-eastern border zones in December 2025 and three satellite service providers selected in July 2026.	NO CHANGE
Connectivity	**Mobile affordability**	No price series is published. The regulator's market observatory is where one would appear; the statistics agency publishes a communication price index. No tariff basket, income-share measure or affordability index for Mauritania is held on this repository. The two places a figure would come from are published and do not carry one: the regulator's market observatory and annual report, and the statistics agency's monthly bulletin, which carries a communication price index rather than a retail tariff. What the window did add is a cost imposed rather than a price charged: the 2026 finance law introduced a tax on electronic transactions. Affordability of connectivity and affordability of using it are moving in different directions, and only one of them is measured.	NO CHANGE
Connectivity	**National fibre backbone**	The national infrastructure company operates more than 1,760 km of fibre on three axes, and a regional programme's backbone loan closed in 2022. The kilometre figure is the company's own, given at the inauguration of its headquarters in December 2025, with no route map, capacity, utilisation or wholesale tariff beside it (network). The regional communications infrastructure programme's second loan closed with an implementation completion report covering the national backbone it financed (completion). The relationship between the two - what the programme built and what the company now runs - is not established by anything on file.	MOVEMENT
Connectivity	**International internet bandwidth**	The one international cable since 2011 is to be joined by a second commissioning in early 2027, with a third financed and unlanded. A single submarine cable has been the country's only international connection since 2011 (cable, baseline). The second cable was launched at Nouadhibou in July 2025 at 669 km and 200 Gb/s rising to 12 Tbit/s, European-financed; phase-one coastal landing is complete, offshore laying was scheduled for August 2026 and commissioning is expected in the first quarter of 2027 (landing, launch). A third system's sub-Saharan component is financed with no landing, route or commissioning date on record (financing). A country dependent on one cable for fifteen years is the position the other two are meant to end.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Internet Exchange Points**	A national internet exchange point was launched in May 2025, eleven years after a feasibility study; no peering or traffic figure is published. The final study was completed under the regional connectivity project in June 2014, setting out the state of the internet sector and its market data (study). Twelve years on, nothing on the record says whether an exchange point exists. A published operator listing or peering record would settle it, and the row is carried as a dated absence rather than as a finding either way. 2025-05-28 — the digital transformation ministry launched the national exchange point at International Mauritanian Telecommunications, presented as keeping traffic in the country and lowering access costs. No member, peering or traffic figure is published.	MOVEMENT
Connectivity	**Satellite broadband licensing and availability**	Three firms were provisionally selected for satellite internet licences across two lots in July 2026, with no award or operating framework published. The tender opened in January 2026 and nine bids were received, from which three firms were provisionally retained, two of them required to match the leading offer (selection, tender). Thirteen firms took the dossier, and the leading bid was US$800,000 for the mobile lot and US$3m for capacity against US$50,000 and MRU 6.5m from the other two (bids). The regulator's own communique is not held and the figures reach the repository through a trade account of it. No award, launch date or operating framework has been published. 2026-09-15 — satellite broadband is still unlicensed: the operator lists the country among sixteen African markets targeted for 2026 after two years of seeking a licence, with security guarantees and data control the stated conditions.	MOVEMENT
Data Storage	**Local data centre capacity (all providers)**	The Nouakchott data centre runs to 1,372 m2 and 100 server racks, and the national cloud was inaugurated on it in June 2026. The facility was inaugurated by the President on 8 May 2025 as the first national installation of its kind, presented as certified to international standards and stated as extensible (inauguration). The national cloud was inaugurated at it on 29 June 2026, the minister telling parliament three days later that its launch removes the need to host state services internationally (cloud, statement). The financier states Tier III certification by the Uptime Institute and operation by International Mauritania Telecom (financier); no certificate is published, and utilisation, customers and load are unpublished. A backup data centre was specified under the earlier connectivity programme and nothing says whether it was built (specification).	MOVEMENT
Data Storage	**Local data centre capacity (national providers)**	A EUR 15m Tier III national data centre has been in service since May 2025, and a national cloud launched on it in June 2026. The data centre was inaugurated on 8 May 2025, European-financed at EUR 15m and certified, operated by the international telecoms company (data centre); no capacity, utilisation or migration figure has been published since (data centre, construction). The national cloud launched in June 2026 to host government data and services domestically and centralise public information technology, with no migration timeline, capacity or cost disclosed; as at August 2026 it was in data-security testing and migration preparation ahead of go-live (launch, testing).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Off-site backup capacity**	One data centre and a backup station specified back in 2021. No second operating site is reported. The estate is one facility: the tier-three data centre of 1,372 square metres and 100 racks, inaugurated in May 2025, now carrying the national cloud. A backup site was specified long before it. The regional connectivity programme's tender documents of February 2021 carry station specifications for a backup data centre, and nothing since reports one built or operating. What the window does record is oversight of the primary site: the data-protection authority's June 2026 meeting took up hosting and the data centre's certification. No recovery objective or restore test is published.	NO CHANGE
Energy	**Sufficient energy and water for data centres**	The government's own annual infrastructure note covers electricity access, generation and the capital's water programmes, and publishes no reliability indicator. The single official document covering energy, water and digital infrastructure together is the annual sectoral implementation note for the growth-infrastructure pillar, dated May 2025 with 2024 outturn: electricity access rates, generation and network reinforcement, and the water production programmes serving the capital. It carries two cautions of its own — it is marked draft, and it publishes no standardised reliability indicator such as outage duration or frequency. Nothing connects that supply to the data centre. No facility-level supply arrangement, tariff, generator provision or water requirement is published. The national energy compact and rural mini-grid financing are directed elsewhere.	NO CHANGE
Energy	**Grid reliability**	The electricity utility's 2024 procurement plan itemises a data-centre fit-out, an enterprise system and smart-metering and dispatch studies, none reported complete. The plan itemises a donor-financed data-centre fit-out launched in July 2023 and due October 2024, an enterprise resource planning and customer relationship system in procurement due June 2025, a second planning study due December 2025, a geo-referenced database for the national electrification strategy due October 2025, and advanced-metering and national-dispatch studies due late 2025; two telecoms engineers were recruited under a development bank's financing (plan). No item is reported complete. The utility's own data centre is distinct from the government's national facility, so the state runs two data-centre programmes and has published an outturn for neither.	MOVEMENT
Energy	**Rural electrification**	Two framework agreements of June 2026 fund 85 rural mini-grids, and the National Assembly passed the financing bills in July. The agreements were signed on 19 June 2026 and the bills authorising the financing passed on 31 July 2026 (financing and ratification). A national energy compact issued under the continental access initiative sets the country's commitments on electricity access (compact). No amount, site list, connection target or delivery date is held for the mini-grids, and nothing states whether any of them serve telecommunications sites - which is what would connect this to the network's own power problem.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	**Robustness of government hardware and software**	The sector diagnostic records more than 150 unconnected public platforms. No inventory of ministry servers, workstations or licences exists. The most recent whole-of-sector assessment is also the frankest. Prefaced by the digital transformation minister, it carries a chapter on public digital platforms covering government back-office systems, the fragmentation of more than 150 unconnected public platforms, the state of hosting infrastructure and the first tier-three data centre, dependence on a single submarine cable, and the skills and interoperability gaps. It is a diagnostic rather than an audit: no inventory of ministry servers, workstations or licences was located, and no availability or incident figure is published for any government system. The network those platforms would run over is itself unfinished — the broadband administrative intranet is in development — and a national response team is still only tendered.	NO CHANGE
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	A 390-post civil service competition was run digitally from application to examination in August 2026, inside a 3,000-post recruitment programme. Applications were filed through the state services platform and examinations sat on digital tablets at Nouakchott, for a 390-post competition inside a wider programme for 3,000 state employees and contract workers (competition, examination). It is the first competition the repository holds that is digital end to end rather than at the application stage only. No candidate count, marking method, accessibility provision or fallback for a candidate unable to use a tablet is published, and nothing states how the results are audited.	MOVEMENT
Cybersecurity	**National cybersecurity readiness**	The cybersecurity strategy ran out in 2025 with no successor and the response team it provided for was never built, while a central-bank platform detected more than 10,000 threats. The project unit issued a national tender on 9 October 2026 to set up the national response team and a security operations centre for the administration's intranet, with bids due 17 November 2026. The 2022-2025 strategy's period has ended and no successor, evaluation or response team is on record; the strategy text itself is not held (strategy). The national computer emergency response team is planned, with no establishing instrument, staffing or premises on record (team). A central bank digital reputation protection platform detected more than 10,000 electronic threats in the first half of 2026, of which 470 were confirmed and removed, with 20 digital identities protected (platform). The country's only operating detection capability sits inside one institution and covers that institution's own exposure. 2026-09-16 — the Internet Society puts resilience at 43 per cent, with 3 per cent of the most-visited websites served locally.	MIXED the national strategy expired with its planned response team never built while a central-bank platform detected threats at scale

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	A national data management system is being scoped for inter-administration integration, with blockchain proposed as its trust layer. A two-day workshop on data governance and blockchain in public administration opened on 27 July 2026 (workshop). The system is being scoped on a national blockchain policy in consultation since November 2025, naming land administration, trade, public procurement and natural-resource management as its first domains; no draft text, adoption date or budget is published (scoping). The state digital agency was proposed as national interoperability operator in 2023 (strategy). 2026-09-16 — one sector shows what the exchange is used for: qualification and classification of construction firms now runs exclusively through a government platform linked electronically to the tax administration, the transport administration, the procurement commission, the social security fund and the registry administration. The minister puts the purpose as cutting human intervention and fraud; no file volume or turnaround figure is published.	MOVEMENT
Data Exchange	**Use of digital id in other systems**	National diplomas were integrated into the identity application in March 2026, and consular and civil-status services followed. The digital identity application is being used as the front door to other systems, which is what this indicator asks. National diplomas were integrated into it in March 2026, after the education certificate service was put on it in July 2025, and consular and civil-status services for the diaspora were digitised onto it. Two other systems consume the identity credential without going through the application. Telecommunications operators are under pressure to complete biometric subscriber identification, and the tax administration keys to its own identification number. An outage in August 2026 showed what depends on it.	MOVEMENT
Data Exchange	**Interoperability of health systems**	An electronic consultation register reached two eastern regions in July 2026, with a health data platform under construction. Health information here is being rebuilt from the consultation upward. An electronic consultation register was extended to the two eastern regions in July 2026, the national digital health programme selected its pilot sites in April, and a digital health data platform is being built with a financier. The system it replaces is the regional health information system constituted by a 2021 order for data collection, which the health minister described to the assembly in January 2026. No exchange between health and any register outside health is described.	MOVEMENT
Data Exchange	**Interoperability of education systems**	The 2022 framework law requires an education management information system and sets no exchange protocol or learner identifier. The legal duty exists and is silent on exchange. The education framework law gazetted in October 2022 requires an education management information system run on results-based management at article 78, and prescribes a policy of digitalising teaching at article 72. It sets no interoperability standard, no exchange protocol and no unique learner identifier. What runs under it is a platform still being deployed — computers delivered to Trarza for the education platform in June 2026, against a joint action plan agreed in March — and one working outward link, the education certificate service on the national identity application. 2026-09-28 - a news site reported registration and transfer of pupils for the 2026-2027 school year opening on the Siraj platform on 28 September 2026.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of social protection systems**	The social register platform verified 2,057,006 citizens by June 2026 and pays through the interbank switch. Social protection is the most connected part of the Mauritanian state on this repository. The social register's platform had verified 2,057,006 citizens by June 2026 and was opened to the capital's three wilayas in April; digital transfers run through the interbank payment operator. A second register was created beside it: the 2025 decree establishing the database of households affected by disasters, explicitly alongside the social register. What no source describes is the exchange between them, or between either and the population register.	MOVEMENT
Digital Identity and CRVS	**Robustness of system**	The national identity application serves about 1.5 million citizens and 554,027 remote services, and a full day of maintenance on 8 August 2026 took all of it down together. The application launched in 2024 on a vendor identity platform carrying document extracts and passport requests (launch, pilot). It is in use by about 1.5 million citizens for 554,027 remote services and is the identity-verification backbone for the state services portal's fifteen-plus services and for private financial applications (usage, account). A full day of scheduled maintenance on 8 August 2026 took all of it down at once; no operator statement on the outage or on redundancy is held (outage). A single point of failure carrying that many dependent services is the finding here, and the repository holds no continuity arrangement for it.	MIXED about 1.5 million users and half a million remote services against a full day of scheduled maintenance taking every dependent service down at once
Digital Identity and CRVS	**Registration of entire population**	The population register reached 5.1m entries against 3.4m in 2019, with enrolment now a permanent public service, and a contested residual without papers. Figures given to deputies in June 2026 put 5.1m on the register against 3.4m in 2019, with more than 1.7m new enrolments, over 613,000 people captured by a difficulties survey and 238 local commissions installed (register); enrolment is now a permanent public service under the 2025 reform (register). More than 94 per cent of the population had been reported enrolled since 2020 (coverage). A contested residual of citizens without papers falls disproportionately on two population groups and sits in tension with the aggregate coverage claim, which is why the difficulties survey exists.	MOVEMENT
Digital Identity and CRVS	**National maintenance of id and credentials systems**	The transport minister stated in August 2026 that driving licences and registration plates would be issued in biometric form before the end of 2026. The statement came alongside continued reform of the land transport directorate (statement). It is a stated target with no procurement, supplier or system specification published, and it is the only credential besides the national identity card and the passport that the country has committed to issuing biometrically.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Authentication**	A national public key infrastructure and certificate management system went to tender in two lots under donor credit and was twice extended, with no award held. A second addendum of 10 June 2026 moved the proposal deadline and the public opening to 21 July 2026 and proposal validity to 22 November 2026, on IDA credit 7445-MR (addendum); the earlier notice had put evaluation at 40 per cent technical and 60 per cent cost (tender). The notice title promises a national digital identity system but the operative text describes only electronic certification integrating with the existing register, so what is being procured is narrower than what it is called. No award is held. 2024-08-15 — a UNDP-funded pilot supplied by TECH5 replaces passwords on the e-government portal with face verification, on the supplier's account.	MOVEMENT
Digital Identity and CRVS	**Digital id from birth**	The 2025 amendment to the civil status code provides for digital acts, over a population register at 5.1 million. The legal chain from birth to credential is being closed. The civil status code, itself resting on the 2011 law that created the national population register, was amended in February 2025 to provide for digital civil-status acts. The interior directorate's first-half 2026 report describes biometric interconnection with civil status. The register reached 5.1 million enrolled on the account given to parliament in June 2026, where the same sitting heard that exclusion from civil status remains. Registration at birth as such is not separately measured.	MOVEMENT
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	The interior directorate reports biometric interconnection with civil status, and the regulator has taken up register interconnection. This is the one link the repository can show being built rather than promised. The interior directorate's first-half 2026 report describes biometric interconnection with the civil-status system, on a population register that stood at 5.1 million in June 2026 and runs through 153 reception centres. The legal enabling step was the February 2025 amendment providing for digital civil-status acts. The data-protection authority has taken interconnection between the population register and other registers into its monthly meetings, which is oversight arriving with the connection rather than after it.	MOVEMENT
Digital Identity and CRVS	**Use by other systems**	Formal notices went to all three operators in January 2026 over biometric SIM identification, with a two-month deadline before sanctions of up to 3 per cent of turnover. Deactivation of non-biometric cards had been ordered in October 2023 with compliance not established; formal notices with a two-month deadline followed in January 2026 (notices). No compliance outcome is on record. Three years between an order and a sanction threat, with no published measure of how many cards were affected either time, is the shape of enforcement here.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Governance role of central bank**	The central bank regulates payment institutions and their agents under 2022 instructions and carries a digital payment strategy for 2023-2028. Instruction 03/GR/2022 regulates payment institutions and instruction 05/GR/2022 regulates the agents of payment service providers and the protection of their customers, both issued on 31 March 2022 (institutions, agents). The bank's digital payment strategy for 2023-2028 sets five objectives, among them easing the regulation of payment and electronic money institutions to attract fintech investment and building an instant-payment system (strategy); it is presented as an extension of the financial inclusion strategy. The payment, clearing and securities settlement systems council met in May and July 2026, welcoming progress in modernising the financial system (council, progress). No register of licensed institutions, agent count or supervisory action is published, and no implementation report against the strategy is on file. 2026-08 - the bank ran a week of sandbox tests for a central bank digital currency proof of concept; no design, participant or pilot date is published.	MOVEMENT
Digital Payments and Fintech	**G2P functionality**	A verification platform opened for a social transfer covering more than 2 million registered citizens, its cash component run through the interbank payment operator. The AOUN transfer covers more than 2,057,006 citizens recorded in the social register, and its cash-transfer component is run by the solidarity delegation with the national deposit and development fund and the interbank payment operator (platform, transfers). An electronic payment platform was delivered under the first safety-net project (completion). The figure is the number registered rather than the number paid, and no payment completion rate, exclusion-error estimate or grievance route is published.	MOVEMENT
Digital Payments and Fintech	**Revenue collection**	A tax on electronic transactions took effect in 2026, the electronic tax platform has 66 public bodies enrolled, and electronic invoicing was announced. The 2026 finance law levies 0.1 per cent on electronic transactions above MRU 5,000 and 10 per cent on agent commissions, collected at source (tax). The electronic tax services platform has 66 public bodies enrolled, 53 filing electronically and 3 paying through it, against 642 legally constituted public bodies of which 339 are active with the tax administration; more than 500 taxpayers overall are on the platform, producing 36.45 per cent of directorate revenue in 2026 (platform). Electronic invoicing for public institutions was announced in July 2026 to handle value-added tax and withholding at source by transferring data automatically to the tax directorate, with no instrument, supplier or date published (invoicing). The 2026 supplementary finance law caps the electronic transactions tax at MRU 200 per transaction and levies value-added tax on digital services from non-resident suppliers, with monthly reporting by payment institutions and powers to block non-compliant platforms; its posted text carries no law number or signature date.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**B2B and B2G functionality**	Electronic invoicing and remote payment reached public entities in July 2026, on a switch certified to the card security standard. Business-to-government payment is the half that moved. The tax directorate extended electronic invoicing and remote payment to public entities in July 2026, after a seminar on non-tax revenue and electronic payment in May and an evaluation of the public finance reform master plan; a compliance guide workshop for public bodies accompanied it. The rails underneath are the interbank operator, certified to the card industry security standard and on the international scheme's provider register, and the 2022 instruction regulating payment institutions. No business-to-business volume is published.	MOVEMENT
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	Social transfers now run digitally through the interbank operator, and online tax filing reached 39 per cent of large enterprises. All three directions have working instances. Person-to-government: online tax filing reached 39 per cent of large enterprises by March 2026 on the tax platform set out in the directorate's 2025-2029 plan. Government-to-person: digital social transfers through the interbank operator, on a payment platform built under the safety-net project. The governing statute is the 2021 law on electronic payment services and means. Against all of it, the 2026 finance law taxes electronic transactions, which is a charge on the behaviour the rest of the policy encourages. 2025-06-03 — a call for an instant payment system to make financial services interoperable closed under the regional digital integration programme; no award is held.	MOVEMENT
Digital Payments and Fintech	**Population uptake**	Financial inclusion is put at 55 per cent in 2026 against 21 per cent in 2019-20 on the financier's own account, with one bank's transfers rising from 5,000 a year to 94,000 in a half-year. Telecompensation, real-time settlement and automated refinancing were reported delivered under a US$4.78m modernisation project, with inclusion at 55 per cent in 2026 against 21 per cent in 2019-20 and one bank's transfers rising from 5,000 in the whole of 2023 to 94,000 in the second half of 2025 (project). The figures are the development bank's account of its own project rather than a central-bank series, and a second phase targets financial technology firms. No account count, wallet figure or agent network measure is independently held. 2026-09-08 - a retrospective puts the market's origin in one product. A state-owned bank's mobile service, announced in late 2019 as the country's first fully mobile bank and launched in 2020, is credited with making the domestic digital payments market rather than entering a mature one: opening an account from a phone, transferring and paying merchants were new to a wide part of the population, and transferring money by phone has since become a daily behaviour. It is an opinion account, not an operator disclosure: no user count, transaction volume, value or agent network is published.	MOVEMENT
Digital Payments and Fintech	**Cross-border functionality**	The central bank's foreign exchange platform handled 86 per cent of interbank volume between November 2024 and April 2025. The account of how value crosses the border is the financier's fourth review. It records that the central bank's foreign exchange trading platform, launched on 14 December 2023, handled 86 per cent of total interbank foreign exchange volume between November 2024 and April 2025, and covers repatriation of mining foreign currency through commercial banks alongside reforms aimed at exchange-market transparency and flexibility. The licensing regime and the cross-border transfer ceilings sit elsewhere, in the 2022 instruction on payment institutions and its companion on agents and consumer protection. No retail cross-border transfer volume or corridor is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Consumer protection**	A 2022 instruction covers payment agents and consumer protection; complaints route through the citizen platform, 97 per cent handled. Payment consumers are covered by the central bank's 2022 instruction on agents and payment service providers, which addresses consumer protection directly, beside the instruction regulating payment institutions. Nothing in the window amends either. Redress runs through a general channel rather than a financial one: the citizen complaints platform reported 97 per cent of complaints handled over its first twelve months, having launched in October 2024. No complaint count for payments specifically is published. The central bank separately runs a digital reputation and cyber-threat protection service.	NO CHANGE
Registries	**Population register**	A unified digital consular registry went live for three countries in 2026, registering residence, distribution and permitted activities of citizens abroad. The registry is live for the Riyadh mission's zone of competence, covering Saudi Arabia, Bahrain and the Maldives, and builds a digital register of national skills abroad (registry, services). The consular registration desk remains the competent authority, so the platform layers onto the registry rather than replacing it. No enrolment count for the diaspora it covers is published.	MOVEMENT
Registries	**Civil register**	The national register holds more than 5.1 million people and enrolment is described as a permanent public service; the civil status code was amended in 2025. The interior minister gave the figure to parliament on 18 June 2026 and separately described enrolment as having become a permanent public service guaranteeing every citizen's right to be registered (figure, enrolment). The system for running the register and secure documents was renewed in August 2021 across 153 reception centres (system), and the ministry's own half-year report for 2026 records the biometric interconnection of the register with civil status (interconnection). No denominator, coverage rate or age breakdown accompanies the 5.1 million, and no independent audit of the register is held.	MOVEMENT
Registries	**Address register**	Terms of reference were issued in March 2025 for a geolocated addressing system to be implemented through the postal company, and nothing has followed on the record. The terms of reference were issued under the regional digital integration programme, presenting the system as favouring the development of commerce and electronic commerce in particular (terms). Eighteen months on, no award, supplier, coverage, address standard or delivery date is on the record, so what exists is a specification and not a register. 2026-09-29 - the national digital addressing system was presented for consultation under the World Bank-financed regional programme; no launch date is published. 2026-09-29 - the digital ministry presented the national addressing system, with a pilot version expected by the end of 2026.	NO CHANGE
Registries	**Business register**	Law 2021-005 amends the Commercial Code and carries the trade register and the movable securities regime; nothing states whether either runs electronically. The law of 10 February 2021 amends, completes and repeals provisions of the Commercial Code of 2000 (law). An investment code of February 2025 and its application decree of August 2025 carry a single-window arrangement for investors (code, decree), and no operating single window, service list, processing time or investor count is on the record. Nothing says how many entries either register holds.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Social protection register**	The social register carries more than 2 million citizens, and a separate database for disaster-affected households was created by decree in October 2025. The delegation ran a coordination round to update the register across the Nouakchott wilayas in April 2026 (update), and the safety-net programme behind it was re-established by decree in May 2024 (decree). Decree n. 2025-162 creates a special database for poor and vulnerable households affected by disasters (disaster database); no operator, household count or relationship to the social register is stated for it.	MOVEMENT
Registries	**Electoral register**	1,939,343 registered voters on the Constitutional Council's proclamation of the 2024 presidential result. The figure is the roll as it stood at the 2024 presidential election, taken from the Council's own deliberation proclaiming the definitive results (proclamation). No later revision, audit or statement of the register's relationship to the national population register is on the record, so the repository holds one dated count and no series.	NO CHANGE a single count with no earlier figure behind it
Registries	**Tax register**	The tax procedures book carries the tax identification number and the obligations attaching to it. The common provisions of the procedures book are what the repository holds on the identifier (provisions). No registered-taxpayer count, coverage figure or link to the business or population registers is published, so the identifier exists in law and its reach is unmeasured.	NO CHANGE
Registries	**Land register**	A decree of 27 August 2026 creates a national digital cadastral reference with a unique identifier for every parcel, where no integrated cadastral system existed. The government's cadastre digitisation was publicly criticised as a route to silent dispossession in a country where land is at the heart of social conflict (critique). The critique is one outlet's; what the repository does not hold is any safeguard, appeal route or consultation record attached to the digitisation. The Council of Ministers adopted a decree on 27 August 2026 establishing a national digital reference for land and cadastral data as the state's authoritative source, with a permanent, unique, non-duplicable identifier for every parcel independent of administrative divisions, the land minister stating that no integrated cadastral survey system meeting these requirements has existed (decree). The decree states expressly that neither the reference nor the cadastral certificate creates or extinguishes any real property right. 2010-03-31 — the statutory base for land titles is decree 2010-080 applying the 1983 land reorganisation ordinance, later amended in 2014.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Health**	An electronic consultation register is producing usable epidemic-response data in two wilayas, and a national digital health project selected its pilot sites in April 2026. The health organisation's account puts the register as giving reliable data for epidemic response in Hodh El Chargui and Hodh El Gharbi (register). The health minister said in January 2026 that work was under way to generalise the model reference hospitals' information systems (hospitals), the ministry discussed digitising the system with the lender in March (lender), and an order of December 2021 fixes the regional health system's data collection (order). No facility count, completeness rate, reporting timeliness figure or national rollout date is published. 2024-10-29 — an e-health strategy for 2024-2030 went to validation; in December 2025 the health minister named a national vaccination database as the next step, and the insurance fund's E-CNAM platform began digitising prior authorisation. 2022-01-01 - the state news agency reported the Sebkha health centre presented as a pilot that had digitised its patients' records.	MOVEMENT
Sectoral management information systems	**Education**	An education certificate service runs on the national identity application for certificates issued after 2013 or linked to the identity number, with no usage figure held. The service extracts and confirms national education certificates through the identity application (service). It covers certificates issued after 2013 or otherwise linked to the national identity number, which puts a date before which the record is not reachable digitally. No usage figure, coverage share or education management information system for the country is held. 2025-04-30 — regional education staff were trained on the SIRAGE information system, which carries education administration data towards the regions; no coverage figure is held.	NO CHANGE
Sectoral management information systems	**Social protection**	The social register platform verified 2,057,006 citizens by June 2026, and a disaster household database was created by decree. The delivery system is the most measured on this repository. The social register's platform had verified 2,057,006 citizens by June 2026, was opened to the capital's wilayas in April, and rests on the 2024 decree creating the cash transfer programme and the register with a financier's status report behind it. A second system was added in October 2025: the decree creating the database of households affected by disasters, expressly alongside the social register. Payment runs through the interbank operator. 2026-10-09 - the national solidarity agency launched a unified digital platform for social assistance, opening with transport costs for 11,656 pupils and students from households in the social registry, verified by facial recognition.	MOVEMENT
Sectoral management information systems	**Justice**	The second phase of the justice modernisation programme was signed in December 2025, with digitisation of judicial procedure among its objects. The vehicle exists and the system does not. On 12 December 2025 the justice minister and the development programme's resident representative signed the second phase of the justice modernisation and access programme, running four years, with objects including modernising the criminal justice system, digitising judicial procedure, and building the capacity of judges, clerks, court staff and lawyers. Its wording is the evidence: digitisation of judicial procedure is a programme still to be implemented. Two adjacent pieces are further along. The criminal record information system was adopted in Council of Ministers in August 2026, after digitisation work with online access from March 2025. An agreement with Morocco covers digital transformation of justice.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Tax**	39 per cent of large enterprises file tax online on the financier's project indicator, against a revenue strategy carrying remote declaration. The figure is a project indicator reported by the lender in March 2026, with no denominator, target or comparison for other taxpayer segments beside it (indicator). The revenue directorate's strategic plan for 2025-2029 carries remote declaration among its objectives (plan), and a workshop in July 2026 took up electronic invoicing for public entities and remote payment (workshop). 2026-10-01 - the tax directorate said public establishments must use an electronic platform for invoicing, declarations and tax payment from 1 November 2026.	MOVEMENT
Sectoral management information systems	**Customs**	The customs system is reached over the internet under a published user guide, and its reforms are carried in the monetary fund's fifth review. The finance ministry published the user guide for connecting to the system over the internet in February 2023 (guide). The fund's fifth programme review of February 2026 carries the customs and tax administration reforms running on it alongside the free-zone arrangements (review). No declaration volume, clearance time or coverage figure is published, and a programme review is not an evaluation of the system. 2025-02-24 — electronic payment of border duties, due by the end of 2024 under the trade facilitation agreement, was pushed back to the end of 2027 for want of a support partner.	MOVEMENT
Sectoral management information systems	**Land**	A cadastral referential and unique parcel identifier went before the Council of Ministers in August 2026, after a digital census of built parcels in Nouakchott. The property ministry launched the digitisation of the land sector in January 2026 (launch) and opened the parcel census carrying a unique identifier in May (census); a workshop on a land data warehouse ran under a land project the same month (warehouse). A Council decree of September 2025 provides for electronic land transactions and their interoperability (decree). No parcel count, coverage figure, completion date or link to the population register is published.	MOVEMENT
Other GovTech and e-Gov	**e-government services**	An administrative procedures portal consolidates more than 800 procedures, consular services went online in July 2026, and water utility transactions joined the services portal in August. The procedures portal launched in February 2026 as a directory of more than 800 procedures with documents, processing times, agencies and tracking; no usage figure is published (portal). A consular platform launched on 9 July 2026 with nine online services covering registration, the consular card, travel authorisation, legalisation, powers of attorney, appointments and burial and repatriation permits, built by diaspora engineers with the ministry after consultations in twenty-two countries (platform, services). The water utility's transactions became available remotely from 4 August 2026 (utility), and a remote transactions platform named in a roadmap is now the subject of integration work with the territorial-administration system, reported as under way rather than delivered (integration). 2026-06-26 — the Mourchid platform put the youth ministry's employment, training and entrepreneurship programmes in one place.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	An annual bulletin on communal finances is produced from the local financial management system, and digital counters are opening in remote towns. The Treasury's local finance directorate publishes the bulletin from the local financial management system (bulletin), and a ministry report sets out what the communes can and cannot run institutionally (capacity). A digital counter opened at Bassikounou to bring public services closer to citizens (counter) and a digital space at Ouadane (space). No commune runs a digital service of its own on the record: the counters are the central ministry's and the finance system is the Treasury's.	MOVEMENT
Digitalisation of sub-national government	**Digitalisation of local government records**	Local finances now run on a named system in the treasury's 2025 note, and digital counters opened in remote communes. Two different things are happening at the commune level. Financial records are being systematised: the treasury's 2025 note on local finances reports on the local finance management system, against a 2022 assessment of communes' institutional capacity. Service points are being placed: a digital counter at Bassikounou framed against the digital divide in February 2026, and a digital space at Ouadane in Adrar in December 2025. Utility records went the same way, with water company services put on the government services portal in August 2026. No count of communes with digitised records is published.	MOVEMENT
Rural digital data capture	**Digitalisation of rural health clinics**	An electronic consultation register reached the two eastern regions in July 2026, and the digital health programme selected pilot sites in April. This is capture moving outward from the capital. An electronic consultation register was extended to Hodh Ech Chargui and Hodh El Gharbi in July 2026 — two of the country's most remote regions — and the national digital health programme selected its pilot sites in April 2026. Behind them a digital health data platform is being built with a financier, replacing collection under a 2021 order on the regional health information system. No count of clinics capturing electronically is published, and the primary health care assessment predates all of it.	MOVEMENT
Rural digital data capture	**Digitalisation of rural primary schools**	The ministry's own compact records the system stabilised at central level with deconcentration to schools still to be achieved. The government's own words settle this one. Its partnership compact with the global education partnership names the current management information system, records that it has stabilised at central level while its deconcentration towards the regional and departmental directorates and the schools is still to be achieved, and that deconcentrated administrations have been equipped to collect, enter and transmit data electronically while the tool remains under-used for regional and school-level steering. Digital data capture had not reached the rural primary school itself. What has moved since is equipment at the regional level — 40 computers delivered to Trarza for the education platform in June 2026 — and the duty in the 2022 framework law that the system exist at all. 2026-09-28 - a news site reported registration and transfer of pupils for the 2026-2027 school year opening on the Siraj platform on 28 September 2026.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural registry offices**	The population register runs through 153 reception centres and reached 5.1 million enrolled, with permanent public service reported in 2026. Registry capture is national by design. The population register operates an integrated system across 153 reception centres, had 5.1 million people enrolled on the account given to parliament in June 2026, and is described as a permanent public service. The 2025 amendment to the civil status code provides for digital acts. Land registration went the same way, with a rural land concession registration platform reported in September 2026. What is not published is how many of the 153 centres are rural, or what proportion of registrations are captured electronically at the point of registration. The same parliamentary sitting recorded continuing exclusion from civil status.	MOVEMENT
Rural digital data capture	**Digitalisation of rural police stations**	The police information system reached 62 police, gendarmerie and customs posts in December 2025. The regional police information system is the clearest instance on this repository of a national system reaching beyond the capital. In December 2025 the national security directorate reported it operating across 62 police, gendarmerie and customs posts, alongside the launch of a digital platform for complaints and criminal records. It builds on the national criminal data collection centre inaugurated in 2021. What no source gives is the split between urban and rural posts, or the total number of posts the 62 are drawn from. The criminal record information system adopted in August 2026 is the national layer above it.	MOVEMENT

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	The competition for 3,000 state officials was run end to end through the services portal, with artificial intelligence used in preparing and marking it. The digital minister said in February 2026 that the whole recruitment process would be digitised (direction), and candidates interviewed after sitting it praised the transparency of the process (competition). How artificial intelligence was used in marking is not set out, no error, appeal or audit arrangement is published, and the candidate reaction is reported rather than surveyed - so what is established is that the tool was used and not how well.	MOVEMENT
AI	**Use of AI in sectoral management information systems**	An artificial-intelligence agrometeorological early warning system was worked through at Rosso in January 2026 with a UN development agency. The workshop was run by the meteorological office with the development agency (workshop); a separate hydrometeorological early warning system for the Senegal River valley is described by its developer as artificial-intelligence powered (system). Neither account states what the models do, what data they use, who receives the warnings or whether either system is in operation.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Development of national / regional AI systems**	Two open repositories carry language data for the country's languages, and the draft national strategy runs on five priorities and thirty measures. A Hassaniya dialect dataset collection was published on a model-hosting platform in January 2026 (datasets) and an open natural-language hub for Pulaar, Soninke and Hassaniya on a code-hosting platform in May (hub); both are community repositories rather than state assets and neither is named in the strategy. The draft strategy covers skills, research, international collaboration, data governance and ethical use, with sector projects in health, education, agriculture, fisheries, transport, energy and defence (strategy). The repository holds a draft and no adoption instrument.	MOVEMENT
AI	**Control of AI abuse**	A European-supported programme ran a session with the audiovisual regulator on deepfakes and synthetic media in July 2026. The session was held in Nouakchott with the audiovisual regulator (programme). No regulatory instrument, guideline or enforcement power on synthetic media follows from it on the record, and the account is the implementing organisation's own. Awareness work is what the repository holds and a rule is not.	MOVEMENT
ICT Industry	**National capacity in DT-related production**	The mobile market went from three operators to four at the 5G award in April 2026, the first change in the market structure on record. A new entrant was licensed alongside the three incumbents at the provisional 5G award (award). No domestic manufacturing, software production or supplier capability is recorded anywhere in the repository, so the country's industrial position in this sector is the number of licensed operators and nothing else.	MOVEMENT
Innovation ecosystem	**Technology hubs**	A technology incubator at Nouakchott supports startups and small firms, and a one-day artificial-intelligence build was held in May 2026. The incubator presents itself as building an entrepreneurial base with economic, social and sustainable impact, accompanying startups and small and medium enterprises to growth (incubator). The build was held on 17 May 2026 to launch working projects in the country (build). Both records are the organisers' own sites: no cohort count, funding, survival rate, project outcome or public support is established from either.	MOVEMENT
Innovation ecosystem	**Tech startup ecosystem**	A Startup Act was promulgated in January 2024 with a merit-based label, a state-backed fund and procurement preference, and its enacted text is not held. The draft that went to consultation targeted 300 labelled start-ups and 3,000 jobs over five years, and set out a merit-based label with a preferential public-procurement margin, a state-backed start-up fund and guarantee fund with investor tax incentives, payroll-cost relief, a technology-innovation hub, and intellectual property and customs relief (draft). The law was promulgated on 2 January 2024 (promulgation). The promulgated text itself is not held, so whether those provisions survived into law cannot be established, and no count of labelled firms, fund disbursements or jobs has been published since. The central bank runs its own fintech programme with German development cooperation, with two hackathons set for October 2026 on digital credit, split payment and crowdfunding; no participant or funding figure is published.	MOVEMENT

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	A national platform for training public servants in essential digital skills was presented in June 2024, and 300 officials entered a cybersecurity programme in December 2025. The platform was presented at a ministry workshop (platform), and nothing on the record since says whether it is in use: no enrolment, completion or curriculum figure is published. The cybersecurity programme was launched for 300 state officials (programme) with no curriculum, duration, provider or completion figure beside it. A study for a national continuing training policy reached a restitution workshop in May 2026 (policy). 2026-09-08 - the education ministry opened a ten-day course for 20 secondary education inspectors in documentation, archiving, librarianship and electronic document management, its secretary-general arguing for a modern documentation centre inside the inspectorate. Twenty inspectors on one course; no curriculum, certification, system to be used or decision on the centre is published.	MOVEMENT
Literacy	**Digital literacy (general population)**	No measurement programme exists. The sector diagnostic names the skills gap; the civil service skills platform reaches officials. Nothing measures digital skill in the Mauritanian population. The repository carries a row for a national measurement programme and holds no source for it, and the whole-of-sector diagnostic names the skills gap without quantifying it at population level. What exists reaches defined groups. The national digital skills platform serves the civil service; a cybersecurity and artificial intelligence training programme runs in the public sector; and a youth digital employability project works on the other end. Each counts its own participants and none counts the country.	NO CHANGE
Training and skills	**DT-related training in secondary education**	The 2026 baccalauréat ran on a digital system across 195 centres for 64,532 candidates, and the digital school programme trained 160 teachers. Two distinct things moved. The standing programme is the digital school, launched for the 2024-2025 school year with technical support from a Gulf partner, training and certifying more than 160 digital teachers from the teacher-training colleges through an accredited pathway and fitting 20 public schools across the three capital wilayas with fibre broadband. The examinations themselves were digitised in the window. Ministers agreed a roadmap on 1 April 2026 for digitising the organisation and marking of national examinations, and by 29 June a digital system was assigning invigilators and centre heads at random across 195 centres for 64,532 candidates, with the minister stating that better solutions are under study so exam security need not rely on wide-area internet shutdowns.	MOVEMENT
Training and skills	**DT-related university facilities and qualifications**	The national university opened a first summer school on language models for low-resource African languages in August 2026. The University of Nouakchott opened the first edition of a summer school on language models for low-resource African languages at Nouadhibou on 25 August 2026, taking participants from corpus construction and semantic annotation through model adaptation and evaluation to prototypes in translation and conversational assistants (summer school). No participant count, budget or repeat commitment is stated.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**Graduates entering DT ecosystem**	A youth digital employability programme launched in July 2026 for 2,150 beneficiaries across six cities, about 2,000 of them young people. The programme is financed by a French fund and delivered by an external implementer, succeeding a predecessor that closed in 2025; the implementer puts its three-year record at about 5,000 people given basic digital skills (programme). No completion, certification or placement figure is published for the current programme, and no national count of digital graduates or of employment in the sector is held.	MOVEMENT
Research institutions	**Think tanks and academic departments contributing to DT policy**	The university's computing and data sciences research unit lost its accreditation period in May 2024 with no renewal published, having held sixteen doctoral candidates. The unit at the science and technology faculty was accredited for May 2021 to May 2024 and held sixteen doctoral candidates concentrated in artificial intelligence and data science, covering network optimisation, distributed-ledger and internet-of-things process mining, health-data management and cloud-resource elasticity, with three theses defended in 2022 (unit). The accreditation period ended in May 2024 with no renewal published. It is the only research capability on the country's digital questions in the repository, and its formal standing lapsed two years ago.	STALLED

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	The complaints platform handled 97 per cent of what it received in its first twelve months, on the minister's own account. The platform was launched by the Prime Minister on 22 October 2024 to receive and handle citizens' complaints (launch), and the digital minister gave the twelve-month figure at the government spokesman's briefing (result). Handled is the minister's own word, and no volume, category breakdown, resolution time or outcome is published beside the 97 per cent, so what it counts is not established.	MOVEMENT
Access to services	**Citizen participation in policy**	Technical assistance for a citizen participation platform was provisionally awarded in May 2026, against an e-participation policy still held as a 2023 draft. The draft policy was proposed by a UN regional commission in December 2023, benchmarked against Tunisia, Morocco and Denmark and carrying a vision, strategic objectives and an assessment of the country's e-participation (policy). The assistance was provisionally awarded under the regional digital integration programme (award). A provisional award is not a contract: no supplier, value, scope or delivery date is published, and the policy carries no adoption instrument.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Gender equity**	Two ministers awarded the prizes of a women-led artificial-intelligence start-up challenge in April 2026, framed as the move from training to entrepreneurship. The window's event is a completed step rather than an announcement. On 23 April 2026 the digital transformation minister and the social action, childhood and family minister jointly marked the international girls in technology day under the theme of artificial intelligence and development, and awarded the prizes of a national challenge for women-led artificial-intelligence and digital-innovation start-ups, run by the ministry's innovation directorate with the telecommunications union and German cooperation. The minister framed it as the move from training to entrepreneurship. No count of winners or beneficiaries is given. What it is not measured against is any sex-disaggregated figure. The 2025 financial inclusion and connectivity survey is the nearest source, and no gender gap in phone ownership, internet use or account holding is published for the country.	MOVEMENT
Access to services	**Inclusion of persons with disabilities**	The 2006 ordinance on the promotion and protection of persons with disabilities is the frame, and its implementing decrees are outstanding. The national human rights commission's observations on the periodic review in July 2026 record that implementing decrees for the disability law have not been made (observations). Transfers were made to 6,000 children with special needs around the international day in December 2025 (transfers). Nothing on the record addresses digital accessibility of public services for disabled users, which is the question this indicator asks.	NO CHANGE
Access to services	**Inclusion of refugees and IDPs**	Decree 2022-063 replaced the 2005 refugee decree, and refugee registration in the eastern region is reported alongside inscription in the national register. The decree of 5 May 2022 fixes how the international refugee conventions apply in Mauritania (decree), and the refugee agency's 2025 overview for Hodh Chargui reports registration there (factsheet). No registered-refugee count, card issuance figure or statement of what the national register records for refugees is carried in either, so inclusion is provided for in law and unmeasured in practice.	MOVEMENT
Digital divides	**Bridging of digital divides**	Border-zone coverage launched in December 2025, three satellite providers were selected in July 2026, and the universal access fund got a new decree. Three instruments moved on the divide in this window. Coverage was launched across southern and south-eastern border zones from Kiffa in December 2025. Three companies were selected to provide satellite telecommunications services in July 2026, after a licence tender in January. And the universal access fund was given a new management decree placing it with the public treasury. External support runs alongside: a Sahel digital connectivity programme with European partners. What is missing is measurement — no urban-rural gap in use is published for the country.	MOVEMENT

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The decadal statistics strategy runs to 2030 but its first action plan covered 2021-2025 and no successor plan or implementation report is held. The strategy carries an action plan for 2021-2025 whose period has run out (strategy). The statistics agency's orientation council was named in Council of Ministers in March 2026 (council), and the agency publishes monthly statistical bulletins carrying a communications price index (bulletin). The country's position on the continental statistics charter is recorded on the union's own list (charter).	STALLED
National statistics	**Censuses and surveys**	The fifth population and housing census was conducted entirely electronically for the first time, with final regional results presented from August 2026. Mapping, collection, processing and analysis were all digital, and final results were presented at regional workshops from 3 August 2026 (census). The all-electronic claim is the statistics agency's own and no methodology document is held, so what the repository establishes is that the agency says the operation was digital end to end and not how it was done.	MOVEMENT
National statistics	**Statistics from administrative data**	A National Youth Empowerment Index was published in preliminary form at 60.5 out of 100 for 2026, built from 43 secondary indicators across five domains. The reference document was presented at a Nouakchott workshop on 29 July 2026, with education and training strongest at 69.5 per cent and health and sport weakest at 46.1 per cent (index). It is built from secondary indicators rather than new collection, which makes it a use of administrative and survey data the state already holds. No methodology note, weighting scheme or update cycle is published.	MOVEMENT
Open data	**Use of open data**	The national open data portal carries 24 downloadable datasets from four public providers, last of four benchmarked countries on every published measure. The portal is run by the statistics agency and carries 24 datasets from four providers, with no membership of the international open-government partnership (strategy). A June 2023 national open-data strategy proposed a new governance framework, a portal redesign and revising the decree that created the state digital agency to make it operator; none of that is reported delivered three years later, and the portal is where it was.	NO CHANGE
Use of satellite data	**Agricultural use of satellite data**	The 2025 biomass assessment covers every moughataa from satellite imagery and converts it into pastoral forecasts for 2026. The most concrete instance is produced outside government. The 2025 national biomass assessment, published in October, is computed from three satellite imagery series supplied through the European earth-observation programme and run at one-kilometre resolution over a 1999 to 2025 series, giving biomass anomalies and a vulnerability index for every moughataa and converting them into pastoral lean-season and transhumance forecasts for 2026. Inside government, two capabilities are being built. An agrometeorological early warning system using artificial intelligence was set up with the meteorological office at Rosso in January 2026, and satellite reception capacity was inspected under the continental climate services programme in September 2025.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	**Meteorological use of satellite data**	The continental body installed new climate services and satellite reception infrastructure for the national meteorological services, inspected in September 2025. The meteorological office runs to a strategic plan for 2024-2030 (plan), and a continental earth-observation programme held its fourth national workshop on using earth observation for natural resource management in July 2025 (workshop). No station count, data product, availability figure or user of the outputs is published, and the strategic plan's implementation is not reported. 2026-09-08 - the meteorological authority ran a two-day workshop in Nouakchott for regional administrators and its own staff on an AI-based agricultural, hydrological and meteorological early warning system, to strengthen national capacity to forecast climate risks and to equip regional staff to use AI techniques in processing meteorological data. It is training on a platform rather than a record of the system in service: no coverage, forecast product, accuracy measure, funder or operational start date is published.	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	The one instrument on file is a clean energy cooperation memorandum between the two energy ministries, signed in December 2023. The memorandum text is held (memorandum). No value, work programme, duration or activity under it is on the record since, and the repository holds no engagement with a United States technology company at all - which is the substance this indicator asks about.	NO CHANGE
China activities	**Chinese MoUs, engagements and commitments**	A Chinese government grant of MUR 629.4m funded an urban security system, with no delivery, siting or oversight arrangement on record. The grant was recorded in 2021 through a bilateral cooperation agreement (grant). Five years on, no delivery, siting or oversight arrangement for the system is on record. A surveillance deployment funded by a foreign state with no published oversight is the kind of thing a data-protection authority would be expected to have ruled on, and no decision of the authority is held on anything.	NO CHANGE
EU activities	**EU MoUs, engagements and commitments**	European financiers put more than EUR 43.5m into the second submarine cable, funded resilience work in 2020, and run a EUR 4m German cooperation project. More than EUR 43.5m was committed by the European investment bank and the union for the second cable connection, with construction under way and the cable not yet commissioned (financing, launch). A resilience submarine cable financing was committed in 2020 with no completion or outcome report held (resilience). A German cooperation project has run since January 2025 at EUR 4m, supporting the public digital service standards framework, with no output or completion report published (project, framework). European money is the largest single source in the country's digital record, and none of the three carries a published result.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	A cooperation agreement with Oman was signed in July 2026 across five instruments, and the Islamic Development Bank agreed US$50m in principle in April. The Omani agreement and accompanying memoranda cover digital capacity-building, electronic training, cybersecurity, artificial intelligence and data analytics, platform development and civil-service programmes, signed at the close of a Nouakchott forum with no value disclosed by either side (agreement, forum). The development bank's agreement in principle covers digital infrastructure, cybersecurity, interoperability and skills, with no signed instrument, disbursement or schedule held (agreement in principle). Between them these are the largest recent commitments to the country's digital programme, and neither has a signed value on record (delegation, business forum).	MOVEMENT
India activities	**India MoUs, engagements and commitments**		NO EVIDENCE
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Power supply to network sites and the data centre	An operator, utility or regulator statement quantifying outage exposure or backup provision for telecommunications sites and the Nouakchott Tier III data centre now hosting the national cloud.	2026-08-10
Municipal or regional digital services	A named wilaya or commune digital service, one-stop desk or local e-government platform, with a location and a start date. Ijraati and Mes Services are national portals.	2026-08-10
IBTIKAR technology park	Any dated statement of whether the IBTIKAR technology park, named in the 2023 digital agenda, was built, is operating, or holds tenants.	2026-08-10
National digital literacy measurement	A national survey or ministry statement measuring digital skills or literacy in Mauritania, as distinct from the vocational-training place counts.	2026-08-10
Outturn against the digital appropriations	The digital lines of the Loi portant règlement définitif du budget 2024 (held, published 2026-02-25) read into the budget extract, and the 2025 settlement law when published.	2026-09-25
Running cost and budget line of the national cloud and data centre	A budget line, operating agreement or ministry statement giving the national cloud's cost and who pays to run it after WARDIP.	2026-09-25
Data jurisdiction, portability and exit terms of the national data centre operation	Publication of the national data centre contract and the operating arrangement with International Mauritania Telecom, as an MP requested on 2026-09-13.	2026-09-25
Source code and vendor dependence of the SIGPTS population register	An ANRPTS, ministry or audit statement naming the register's supplier and whether the state holds its source code and can change it without the vendor.	2026-09-25
