PROGRESS REPORT

Mauritius: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	The Digital Transformation Blueprint 2025-2029 has an inter-ministerial committee behind it and no delivery report, milestone or revision published against it. The blueprint was launched in May 2025 with new digital regulations announced alongside it, and an inter-ministerial coordinating committee was established in August 2025 (blueprint, committee). Fifteen months on, nothing has been published against it (launch, regulations). Its interoperability commitments in particular have produced no instrument, and the framework they would replace dates from 2002. 2026-09-11 - Cabinet approved Vision 2050, a US$50bn economy target with digital among seven strategic sectors.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**ICT strategy**	The 2025-2029 digital transformation blueprint sits under a 2030 strategic plan, with a national data strategy added in 2026. The long-horizon instrument is the 2030 strategic plan of December 2018 (plan); the blueprint of May 2025 is the current term's programme under it (blueprint). A national data strategy for 2025 to 2029 was published in January 2026, the first instrument to revisit the 2017 open data policy (strategy). The repository holds three live strategy instruments and no published measurement against any of them. The one progress account on file is the digital government transformation strategy's own update of April 2025 (update).	MOVEMENT
Strategies, plans and policies	**Broadband strategy**	The broadband policy ran to 2020 and has no successor; what moves instead is spectrum, by regulator decision. The national broadband policy covers 2012 to 2020 and is the only broadband policy on file (policy). Six years past its horizon, the instruments actually moving broadband are the regulator's: the 700 MHz band opened for IMT and 5G in December 2025 (decision) and the 2300-2400 MHz band in June 2026 (decision). No replacement policy, coverage target or universal service obligation is held. The policy layer has fallen behind the licensing layer rather than directing it.	NO CHANGE
Strategies, plans and policies	**Data storage / cloud strategy**	No cloud or storage policy is held; a sovereign cloud market sounding reached its second clarification in September 2025. A request for information for a sovereign cloud for government reached a second clarification in September 2025 (clarification). A scale-out storage solution for the government online centre was tendered in October 2025 (tender) and awarded in March 2026 (award). The procurement is running ahead of the policy: no instrument states where government data must be held, what may be hosted abroad, or on what terms cloud services are bought.	MOVEMENT
Strategies, plans and policies	**Data interoperability framework / roadmap**	The national data strategy of January 2026 is the first roadmap over a sharing platform that has run since 2016. The sharing layer is the older half: a platform in service since 2016 through which government agencies exchange data (platform). A national data strategy for 2025 to 2029 was published in January 2026 and names that platform as what it builds on (strategy). Data measures were carried into the 2026-2027 budget in June (budget). What the repository does not hold is a technical interoperability standard, a service catalogue, or a count of agencies connected to the platform.	MOVEMENT
Strategies, plans and policies	**AI strategy**	A National AI Strategy and its FAIR guidelines run on six pillars to 2029, with an artificial-intelligence unit from December 2025 and a first innovation lab in August 2026. The guidelines are vendor-neutral and border-agnostic, governing by impact rather than geography (guidelines, launch). The strategy runs 2025-2029 with an artificial-intelligence unit established in December 2025, and a first innovation lab was inaugurated at the cybercity in August 2026 with a memorandum signed at the event; the lab's capacity, funding and access terms are not published (lab).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data localisation policies**	No localisation rule is held; the 2017 Data Protection Act governs transfers, and sovereign cloud is a procurement rather than a policy. The Act of December 2017 is the governing instrument and regulates transfer abroad rather than requiring local storage (Act). A sovereign cloud for government is being market-sounded (clarification), and the 2026-2030 fintech strategy sets out where financial data is expected to sit (strategy). Neither is an instrument requiring state or personal data to be held in country, and none is held. Sovereignty here is being bought as infrastructure before it is written as rule.	NO CHANGE
Strategies, plans and policies	**Data governance policy**	A National Data Strategy 2025-2029 was launched in January 2026 and a separate data governance strategy was committed to in July, with no text published. The data strategy was launched on data protection day around responsible data governance, cybercrime prevention and online protection of minors, with a memorandum signed between the police, the data-protection office and the national computer emergency team (strategy, preparation). A national data governance strategy was separately committed to at an operator summit in July 2026, alongside forthcoming amendments to the data protection statute aimed at cybersecurity, privacy and online safety for children; no text, timetable or introduction date is published (commitment).	MOVEMENT
Strategies, plans and policies	**Open data policy**	The national open data policy of May 2017 stands unamended; a statistics platform launched in 2025 is the practical movement. The policy was published in May 2017 and is still the governing instrument (policy). The statistics office launched a data platform with United Nations development agency support on World Statistics Day 2025 (launch). The 2026 national data strategy is the first instrument to revisit the policy's ground (strategy). No dataset count, licence statement or publication mandate under the 2017 policy is held.	NO CHANGE
Legislation and regulation	**Data protection legislation**	Data Protection Officer Regulations were promulgated in June 2026 for January 2027, while the Data Protection Act 2017 is not among the fifty-seven enactments the omnibus amends. The regulations formalise designation, qualifications, independence and reporting duties for data protection officers across public and private sectors, with a six-month compliance window (regulations). Amendments to the Act itself were committed in July 2026 with no text, timetable or introduction date (commitment), and the Act is not among the fifty-seven enactments the omnibus bill amends, so the new data handling in that bill arrives with no matching amendment to the Act (bill).	MIXED officer regulations promulgated while the Act itself was left out of an omnibus amending fifty-seven enactments

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Cybersecurity legislation**	The Cybersecurity and Cybercrime Act 2021 is in force, and a National Crime Agency Bill covering cybercrime was published in September 2026. The enacted text as gazetted is held, carrying the offences of misuse of a fake profile, cyberbullying and failure to moderate undesirable content with their penalty scales (Act). It is the statute the ministry's own online-content warnings rest on, and no charge, prosecution or takedown count under any of those sections is published in this repository. 2026-09-12 — the National Assembly published the National Crime Agency Bill, which would create a lead agency for financial crime and cybercrime with interception and real-time collection powers under Judge in Chambers orders; the Assembly stands adjourned to 20 October 2026. 2026-09-14 — a crime agency bill went to cabinet among nine: the prosecutions director warns it risks remaining a dead letter without resources, and its independence, surveillance powers and accountability are questioned. The texts are not published. 2026-10-07 — the government said bills and amendments on cybersecurity, cybercrime and the ICT Act are in preparation, and the minister described a framework agreement being negotiated with a platform operator on takedowns and verified identities. No text or date is published.	MOVEMENT
Legislation and regulation	**Legislation covering digital id**	The 1985 identity card Act carries the digital card through 2024 regulations, and a Road Traffic (Amendment) Bill would give the digital driving licence legal recognition. The Act has been in force since April 1986 and is the statutory basis for the card (Act); the regulations of February 2024 set the terms on which the card and the mobile identity are issued and read (regulations). The Road Traffic (Amendment) Bill would make the digital driving licence an official electronic version equivalent to the traditional one and let holders settle fixed penalties online, across more than 800,000 licence holders; the Bill text is not held and no enactment date is stated. The Finance Act 2026, assented in August, carries the statutory changes behind the budget's identity and registry measures (Act). The Electronic Transactions (Amendment) Act 2026 was enacted in May (Act). A forty-year-old card statute is doing the work, extended by regulation rather than replaced. The 2023 SIM registration regulations, now held in full, require a real-time identity check against the regulator for every card sold and liveness detection for remote sale, with unregistered cards deactivated from 30 April 2024 (regulations, questions). 2026-10-02 - Cabinet agreed to promulgate the regulations for online payment of fixed penalties from 30 October 2026.	MOVEMENT
Legislation and regulation	**Digital payments legislation**	The 2018 payment systems Act is the governing statute; a payment aggregator guideline was issued under it in July 2026. The Act was assented in November 2018 and is now at its seventh consolidated version (Act, consolidation). The central bank issued a guideline for payment aggregators in July 2026, bringing them under a stated supervisory expectation for the first time (guideline). The financial-crime statute book was amended in April 2026 (Act). No enforcement action, licence refusal or sanction under the payments Act is held.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Legislation enabling data interoperability**	An omnibus bill amending fifty-seven enactments and repealing one carries the fintech committee, the artificial-intelligence city scheme, a threat-sharing platform and a digital travel authorisation. The bill is dated 24 July 2026, with commencement staggered from June 2025 to January 2027, several provisions deemed retrospective and some left to Proclamation (bill). A secondary account put the figure at some sixty laws; the enacting text gives fifty-seven amended and one repealed (account). It is the single largest legislative vehicle in the country's digital record, and it was introduced and not enacted.	MOVEMENT
Legislation and regulation	**AI legislation / regulations**	The higher education AI regulations of April 2026 are the country's only binding artificial-intelligence instrument. Government Notice 39 of 2026 makes regulations on the use of artificial intelligence in higher education (regulations). The national strategy and its fairness, accountability, inclusiveness and responsibility guidelines are non-binding (strategy, guidelines). The higher education regulator issued amended guidelines of its own in May 2026 (guidelines). What the repository does not hold is any general artificial-intelligence statute, bill or regulator: the one binding rule reaches universities only.	MOVEMENT
Legislation and regulation	**E-commerce legislation**	A virtual-asset solicitation rule in the omnibus bill would presume any publicly accessible communication targets Mauritius, and electronic transactions amendments were referred to in July 2026. Unlicensed solicitation of investors would be prohibited by any medium, defined to reach targeted or algorithmic advertising, platforms, applications, social media, influencers, affiliates, referral codes, seminars and webinars, with any publicly accessible communication presumed to target the country; the presumption shifts the burden onto an offshore promoter to show it was not soliciting locally (rule). Amendments modernising the digital-commerce framework and consumer protection were referred to by the minister at a postal-sector workshop, with no text, timetable or introduction date published (amendments). 2026-09-16 — a bank executed the first electronic bills of exchange under Mauritian law, five created in under 30 minutes and transferred in under an hour, under the Finance Act 2025 amendment adopting the UNCITRAL model law on electronic transferable records. The instrument is now in use, not only on the statute book. 2026-10-05 - a law firm's reading has the amendment Act recognise electronic transferable records and contracts formed by automated message systems.	MOVEMENT
Legislation and regulation	**Statistics legislation**	The Statistics Act 2000 is under revision, with the office's independence carried in the 2026-2027 budget annex. The Act has been in force since April 2001 and is held in its consolidated, amended form (Act). The 2026-2027 budget annex carries the independence of the statistics office (annex), and the Finance Act 2026 amends the statute book around it (Act). An observance of standards and codes data module assessed the statistical system in December 2025 (assessment). The independence provision is announced; no amending text is held.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Access to information legislation**	A Freedom of Information Bill was announced as in preparation in January 2026, and no draft, text or timetable has been published since. The bill was announced by the data-protection commissioner at the launch of the national data strategy (announcement). Six months on, nothing has followed. The country has a data-protection statute aligned to the European regulation and no statutory right of access to public information to sit beside it.	MOVEMENT
Data protection	**Data protection authority**	The office runs about 3,000 enforcement actions a year with 99 per cent resolved amicably, and is pursuing a European adequacy assessment. Enforcement volume was set out at an international identity meeting in May 2026: about 3,000 actions a year, 99 per cent resolved amicably, chief data officers mandated and administrative fines being added by amendment (enforcement, formula). Adequacy is being pursued with full alignment of the law to the European regulation, and no application date, assessment stage or decision is published (adequacy). The authority handled 179 complaints in 2024, 158 of them about closed-circuit television, and cleared 112 cross-border transfers while refusing 12 (annual report).	MOVEMENT
Data protection	**National data protection readiness**	Interception described in Parliament as running since 2017 without judicial oversight has no reform instrument, and an airport plate-recognition system was installed with no retention rule published. Large-scale interception was described in Parliament as running since 2017 without judicial oversight, wired into major operators and accessed by counter-terrorism and national security units; no reform instrument, inquiry outcome or judicial-authorisation requirement has been published, and leaked recordings continue to test the framework (interception, leaks). An airport parking system with more than twenty licence-plate-recognition cameras entered full operation in August 2026 at a cost of Rs 50 million, replacing a 2013 installation; no retention period, data controller or privacy assessment is published (system). 2026-09-12 — the National Crime Agency Bill would require Judge in Chambers orders for the new agency's interception of communications, the first reform instrument on record since the 2025 parliamentary revelations; it is not in force.	REGRESSED large-scale interception still running without judicial oversight while a new plate-recognition system was installed on public premises with no privacy assessment
Regional collaboration	**Regional policy collaboration**	The country ran two regional tracks in 2026: Indian Ocean governance in April and the southern African summit in August. The government programme for 2025 to 2029 sets regional cooperation as a standing commitment (programme). An Indian Ocean Commission meeting in April 2026 promoted regional cooperation and sustainable governance (meeting). Cabinet noted the southern African bloc's 46th summit in August 2026 (Cabinet). Neither account names a digital instrument, a data-sharing arrangement or a harmonisation commitment among what was agreed. 2026-09-10 — the country signed the international declaration on space-based scientific data, one of 49 states with the European Space Agency committing to open access to satellite observation data save justified exceptions, open licences and harmonised exchange standards; it names no implementing measure.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Regional legal harmonisation**	The regional justice ministers called for signature and ratification of the bloc's legal instruments in June 2026; nothing was ratified. The committee of ministers of justice and attorneys general called for enhanced cooperation and for signature, ratification, accession to and implementation of the bloc's legal instruments (call). Which instruments Mauritius has yet to ratify is not stated in the account, and no ratification is recorded against it. What the country has ratified on the data side is the Council of Europe protocol, in September 2020, which is a different track from the regional one (ratification).	NO CHANGE
Regional collaboration	**Shared regional infrastructure**	The continental internet registry named one person to all eight board seats while withholding the vote tallies its own guidelines promised, and the appeal court set aside its appeal for want of corporate authority. The appeal court had directed in October 2024 that the board be reconstituted within two months, describing it as a matter of utmost urgency, in substitution for the six months ordered in 2023 (judgment). The registry named a person to all eight seats in September 2025, some nine months past that deadline, while withholding every candidate vote tally its own election guidelines promised (election). The appeal court then set aside the registry's 2023 appeal for lack of corporate authority without ruling on the official receiver's permission or on statutory leave, leaving the authority chain from election through appointment to quorum unresolved and the receiver undischarged (appeal).	REGRESSED the continental internet registry seated here left with an unresolved authority chain and an undischarged receiver
Regional collaboration	**Cross-border data transfers**	Transfers run under the 2017 Act and the Convention 108+ protocol ratified in 2020; the European adequacy assessment is open. The Act of 2017 governs transfer abroad (Act), and the amending protocol to the Council of Europe data convention was ratified in September 2020, among the first ratifications outside Europe (ratification). The national data strategy of January 2026 sets cross-border flows as a workstream (strategy). Cabinet's February 2026 decisions record the social register being used for a connectivity measure rather than any transfer arrangement (Cabinet). No transfer authorisation, refusal or adequacy finding is held.	NO CHANGE
Standards	**National interoperability standards**	The e-Government Interoperability Framework dates from 2002 and no successor is held, twenty-four years on. Cabinet noted a Digital Service Framework on 28 August 2026 setting mandatory principles and standards for every government digital service, from procurement through maintenance (framework). It is noted, not yet issued, and no compliance date is stated. Version 1.0 was published in November 2002 and remains the standing interoperability instrument (framework, case study). The interoperability commitments of the 2025-2029 blueprint have produced no published instrument. A country running a mobile identity wallet, an instant payment switch and a Tier IV sovereign facility is doing so on an interoperability framework older than any of them.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	**National quality standards**	The standards bureau made two instruments inside two months in 2026 — a certification mark and appliance efficiency standards. The bureau's last published annual report covers 2021 to 2022 (report). Certification mark regulations were made in April 2026 (regulations), and minimum energy performance standards for refrigerating appliances in May (regulations). No standard for digital services, procurement or accessibility is held, and no annual report later than 2021-2022 is on file, so the bureau's current throughput cannot be read.	MOVEMENT
Standards	**Adoption of international standards**	The postal operator is being wired into a global postal information-sharing centre with an international security standard urged, and the state operator co-chairs model-as-a-service certification work. The national postal operator is being connected to the postal union's global information-sharing centre and the minister urged adoption of the international information-security management standard; no membership date or commitment is published (postal). Work to define controls and conformance criteria for a model-as-a-service certification framework began in July 2026, with the state operator a founding contributor and co-chair; the framework does not yet exist, and the standards body's own research finds 72 per cent of operator leaders say they trust their production artificial intelligence while 14 per cent can evidence it (certification). The standards bureau's national certification scheme held ten valid ISO/IEC 27001:2022 certificates at 31 December 2025, among them the national response team, the revenue authority's server room, the civil service's central IT division, the police IT unit and two operators' data centres.	MOVEMENT
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	A national internet governance forum convened in 2026 with the Vice President and the minister attending, and the clearest domestic objection to the AI-first framing was published in August. The forum is a national multi-stakeholder body founded by a civil-society movement; at its 2026 meeting a visiting alliance and an exchange met the Vice President and the minister to discuss artificial intelligence, cybersecurity and digital-trust frameworks for small island states. The record held is the visiting alliance's own release, and no programme, outcome document or attendance figure is held (forum). A named analyst argued in August 2026 that contract enforcement is a serious constraint on the economy, its reform less attractive than technology announcements but likely to matter more, prescribing digitalised case management alongside a small-claims process and a stronger commercial division rather than instead of them (argument). It is analysis rather than evidence, and it is the only domestic objection on file to the framing the budget adopts.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	**Open discussion of government policy**	A ministerial communique restated penalties of up to Rs 1m and twenty years for online content, and identity verification for social media was announced for consultation. The communique restated that the 2021 Act penalises false profiles, cyber-harassment and the diffusion of undesirable content, that administrators of accounts, pages and groups must moderate flagged content when a competent authority reports it, and that penalties reach a fine of Rs 1m and up to twenty years' penal servitude (communique). It creates no new obligation and is enforcement signalling on a law five years old. A parallel communique defined undesirable content to include material that is deceptive or inaccurate (warning). Consultations were announced in June 2026 toward a social-media identity verification mechanism, citing 2,300 online-harm cases in six months and frauds up to Rs 500,000 (consultation); the minister acknowledged the privacy and free-expression tension and the need to negotiate with platforms (consultation).	REGRESSED the state restating criminal exposure for online speech and consulting on identity verification for social media

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The 2026-2027 budget names artificial intelligence thirty-five times and funds a training platform, an investment tax credit and a forensic laboratory; the Finance Bill itself is not held. The budget carries a 50,000-trainee target, a Rs 25m national learning platform, an investment tax credit of 15 per cent a year over three years, a special economic zone of 83 arpents with preferential data-centre power and thirty-year renewable leases, electronic gates, an electronic visa, an electronic judiciary and a Rs 13m cyber forensic laboratory (budget). The accompanying 128-page Finance Bill is not held: three fetch paths into the assembly's bills library returned an HTML shell rather than the document, so the enacted tax and revenue measures cannot be read against the announcements (bill).	MOVEMENT
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE
MoUs and other agreements	**Strategic relationships**	The India relationship deepened with new agreements in April 2026 and a tax treaty ratification approved in July. New agreements were signed with India in April 2026 (agreements), and Cabinet approved ratification of the double taxation avoidance agreement in July (Cabinet). Domestically, the financial-sector agencies re-signed an amended memorandum of cooperation in March 2026 to strengthen coordination (memorandum). The digital content of the India agreements is not itemised in the account held; what is dated is the relationship, not a named digital activity under it.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	**Mobilisation of non-state finance**	The state operator's 2026-2029 strategy is a reported Rs 20bn programme across four corridors, and one payments gateway reports volume growth above 300 per cent. The four-corridor strategy covers connectivity, financial services, artificial intelligence and compute, and innovation, at a reported Rs 20bn; no delivery milestone has been published against it (strategy, launch, roadmap). One cross-border payments gateway reports its Mauritian entity grew transaction volume by over 300 per cent year on year and merchants by 42 per cent, serving over 150 companies, crediting exit from an international financial watchlist for the confidence (gateway); the figures are the company's own (gateway).	MOVEMENT
New investments	**Development-partner project financing**	A development agency annual report for 2025 is held in full, and its digital component is not separately costed. The report is a United Nations development agency's own account of its year in the country (report). The digital component is not separately costed in what is held, so the repository can record that a partner is present and not what it spends on digital work. It is the only development-partner financing record in this unit.	MOVEMENT

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	Mobile penetration is reported in the 2025 ICT statistics, a first observation on this ledger. The statistics office's 2025 ICT release is the source of record (release). Two regulator decisions bear on what those subscriptions run over: the 700 MHz band opened in December 2025 (decision), and 3G is being phased out (communique). This is a first figure with no earlier observation held, so the level is stated and the direction is withheld. The 3G sunset has no switch-off date or migration figure behind it.	NO CHANGE
Connectivity	**Internet usage**	Internet usage is reported annually alongside household penetration indicators, with no earlier figure held here. The 2025 ICT statistics carry usage and household penetration together (release), on the household indicator series the promotion agency publishes (indicators). Spectrum for mobile broadband was released in June 2026 (decision). A first observation with no earlier one on this ledger. What the repository does not hold is a rural-urban split, a gender split, or usage by income.	NO CHANGE
Connectivity	**Mobile affordability**	A free monthly mobile data package for young people was added in June 2026 to the regulator's promotional tariff framework. The regulator issued a promotional tariff framework in August 2025 (directive). A free monthly mobile data package for young people is administered through the revenue authority (package). Usage and penetration are reported annually (statistics). Both instruments are interventions rather than measures: no price index, basket cost or affordability figure is held, so whether tariffs have moved cannot be read from the repository. 2026-10 — the regulator opened a call for applications for a mobile number portability licence, framing switching costs as the case for it. No launch date is given.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**National fibre backbone**	The backbone is in service under the 2030 strategic plan's connectivity pillar, and the Rodrigues cable had 19.9 of 100 Gbps sold in June 2025. The 2030 strategic plan is the instrument the backbone sits under (plan). The incumbent used its December 2025 summit to position the island as the natural connector between Africa and Asia (summit). The one capacity figure held is for the domestic link to Rodrigues: the MARS cable, in service since February 2019, had 19.9 of its 100 Gbps sold at 30 June 2025, six of ten line-terminating ports unused, with no ICT strategic plan for the island. For the main island the repository holds no physical figure — kilometres laid, lit capacity, or the number of exchanges reached. The connector claim rests on landings and geography rather than on a published domestic network.	NO CHANGE the Rodrigues cable's first capacity count shows four-fifths of it unsold
Connectivity	**International internet bandwidth**	Two ageing cables carry most international traffic; a new cable participation rests on a non-disclosure agreement, and two further landings are named in an operator strategy. Landings exist on four systems, two of which carry most international traffic, and the stated driver for new capacity is infrastructure ageing, with one cable due to retire around 2027 (cables, estate). The prime-ministerial commitment to join a new transoceanic cable sits behind a signed non-disclosure agreement and unfinished technical, legal and financial negotiation; no consortium confirmation, landing point, capacity, cost or service date is published, and the operator's own chief executive stayed non-specific on subsea at the same event (commitment, summit, report). Two further landings are named as planned in the operator's strategy, one of them to replace the retiring cable, with no contract, cost or date published (landings, replacement).	MOVEMENT
Connectivity	**Internet Exchange Points**	The exchange launched in 2015 runs public route servers on both address families; its size is known only from a third-party tracker. It was launched in August 2015 with African Union support, to keep intra-country traffic in country (launch). Its route servers and looking glass are publicly reachable on both address families (looking glass). The only account of its size is an external tracker's snapshot (tracker). The exchange publishes its infrastructure and not its traffic: no peer count, throughput figure or domestic-traffic share comes from the exchange itself.	NO CHANGE
Connectivity	**Satellite broadband licensing and availability**	The satellite authorisation regime requires a locally licensed provider, a local point of presence and provider-retained terminals, and no service has been authorised under it. Raphael Island in the Saint Brandon archipelago was connected to the internet (report). The regulator's decision of May 2025 permits service only through a locally licensed provider, with a local point of presence carrying Mauritian-geolocated addresses, real-time terminal dashboards and provider-retained terminal ownership (decision). No satellite service has been authorised under it. Domestic experts are divided on its relevance given the country's existing fibre and mobile coverage (debate), which is the argument a small dense island makes against low-orbit service that larger neighbours cannot. The ICT authority awarded a two-year contract on 28 August 2026 to provide satellite-based internet and communications to Raphael Island in the St Brandon archipelago, a first for the archipelago, intended to strengthen maritime monitoring, meteorological capability and safety in a cyclone-prone area (contract). No service date, capacity or contract value is stated.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Local data centre capacity (all providers)**	Ten facilities operate across five locations, unchanged in count for a year, and a carrier-neutral green data centre was announced at a regional summit in August 2026. The estate is ten operating data centres across five towns, including a carrier-neutral facility designed to the highest resilience tier and the internet exchange point; no new facility has been reported since (estate). A carrier-neutral green data centre and a digital embassy village were announced at a regional summit in August 2026 as the digital leg of a bid to position the country as a regional hub, with no site, capacity, cost, operator or date stated (announcement). A commercial estimate puts installed capacity at 5 MW in 2025 and on course for 11 MW by 2030, with one cybercity holding about half the market (market report). It is a vendor figure, and no official measure of installed capacity is held. 2020-09-24 - an operator's Arsenal facility was certified Rated 3 as a constructed facility, a certificate the register shows expired on 23 September 2023.	MOVEMENT
Data Storage	**Local data centre capacity (national providers)**	The Rose-Belle facility was certified to the highest resilience tier in December 2025 and is to host the government portal, the identity wallet and government artificial-intelligence equipment. It is to host electronic health, the government portal, the mobile identity wallet, the penalty-points system and government artificial-intelligence equipment, working with the government online centre to supply the backup it lacked (facility). It extends the government online centre, and the repository holds no capacity, utilisation or tenant figure for it.	MOVEMENT
Data Storage	**Off-site backup capacity**	A central backup service runs for government, and a disaster recovery site is inside the current server and storage procurement. The central information systems division operates a central backup service for government (service). High-performance servers, a storage area network and a backup solution for the main site and the disaster recovery site reached bid evaluation (evaluation), and a scale-out storage solution was awarded in March 2026 (award). The service page publishes no capacity, retention period or restoration-test record, and nothing states whether the disaster recovery site is in service.	MOVEMENT
Energy	**Sufficient energy and water for data centres**	The 2026-2027 budget provides a special economic zone of 83 arpents with preferential data-centre power and thirty-year renewable leases. The zone is the country's only stated arrangement connecting energy supply to data-centre siting (budget). No generation commitment, tariff, water assessment or outage measure for any facility is published, so the incentive is on record and the supply behind it is not.	MOVEMENT
Energy	**Grid reliability**	A severe yellow alert followed a record 540 MW peak in March 2026, five months after a red alert. The ministry's annual report for 2023-2024 is the standing account of network performance (report). Business was urged to cut consumption under a red alert in October 2025 (alert). A severe yellow alert was triggered in March 2026 after electricity demand reached a record 540 MW peak (alert). The alert colours are the utility's own scale; no reserve margin, outage duration or loss figure is published against them.	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	**Rural electrification**	Electrification is universal on the main island; the live decisions are a household solar scheme and outer-island extensions. The ministry reports annually on network performance (report). The Rodrigues executive council took electricity extension decisions in February 2026 (decisions). A household solar photovoltaic scheme opened for 2026 (scheme). The indicator reads differently here than on the continent: connection is not the open question, and what the repository tracks instead is generation at the household and on the outer islands.	MOVEMENT
Technical Capacity	**Robustness of government hardware and software**	Government servers, storage and a disaster recovery site are in procurement, alongside a sovereign cloud market sounding. The 2025-2029 blueprint sets the modernisation of government platforms as a workstream (blueprint). High-performance servers, a storage area network and a backup solution for the main and disaster recovery sites reached bid evaluation (evaluation). A sovereign cloud for government is being market-sounded in parallel (clarification). No availability figure, incident record or capacity statement for the existing estate is held, so the case for replacement rests on procurement documents rather than on published performance. The police criminal database dates from 1999 and a commercial package has gone unreplaced since 2011; Rs 43m was allocated in the 2025-26 budget to replace the database (report, debate).	MOVEMENT
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	An information security management system is being advanced across the public service from March 2026. The digital government transformation strategy reported progress for the first time on file in April 2025 (update). A half-day workshop programme is advancing an information security management system across the public service (workshop). No certification, scope statement or completion date accompanies it, and no establishment figure, vacancy rate or retention account for specialist digital posts is held anywhere in the repository.	MOVEMENT
Cybersecurity	**National cybersecurity readiness**	A critical information infrastructure regime came into force in June 2026 across five sectors, a threat-sharing platform is provided for, and a forensic laboratory is funded. The designation regulations are in force across financial and banking, public service, information technology and broadcasting, energy and water, and transport, with a twelve-month compliance window and non-compliance carrying up to twenty-five years' imprisonment and fines up to Rs 2m (regime, framework). The omnibus bill would empower the central bank to establish a cyber threat intelligence sharing platform and to require financial institutions, and other institutions it specifies, to participate on terms it determines; participation is compulsory and the perimeter is set by the central bank rather than by the cyber authority (platform). A cyber forensic laboratory is funded at Rs 13m alongside an information-security management system across the administration, with no site, staffing or opening date published (laboratory), against more than 4,000 reported cyber incidents since January 2026 (incidents). 2026-10-07 — figures presented at a government workshop put reported security incidents at 6,073 in 2025 against 5,221 in 2024, with cyberbullying up from 491 to 702 cases.	MOVEMENT

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	The Finance Bill would empower the statistics office to share more data with the finance ministry, alongside new declaration duties on public bodies. The provision was before Parliament in July 2026 and its enacting text is not held (provision). The expanded inter-agency sharing will need solid personal-data safeguards (provision), and the interoperability framework it would run over dates from 2002. Those two facts together are the exchange position of this unit. The data-sharing platform carries 74 inter-agency connections and 253 electronic services, with agencies onboarded in 14 days (leaflet).	MOVEMENT
Data Exchange	**Use of digital id in other systems**	The government superapp soft-launched in January 2026 on verifiable credentials in a secure identity wallet. A request for information was issued in September 2025 for a superapp built on verifiable digital credentials in a secure identity wallet (request). It soft-launched as KOREK! in January 2026 (launch). The mobile identity wallet it draws on has been in service since February 2025. What the repository does not hold is a list of the services the credential now opens, or a transaction count through any of them. The identity card number is the taxpayer's login for income tax filing (filing season), keys social security returns to each employee (services), and opens the deeds registry through the national sign-on (registry).	MOVEMENT
Data Exchange	**Interoperability of health systems**	The e-Health programme targets full public-sector coverage by end-2027, thirteen years after it started. The ministry reported on its performance for 2024-2025 (report). An account of July 2026 puts full public-sector coverage at the end of 2027, thirteen years into the programme (account). A modernised public health bill was put to a stakeholder workshop in May 2026 (workshop). The 2027 target is the programme's own, and no coverage figure against it is published.	MOVEMENT
Data Exchange	**Interoperability of education systems**	A data infrastructure was tendered for the higher education regulator in February 2026, under a 2025-2035 sector strategy. The national strategy for higher education, science and research covers 2025 to 2035 (strategy). Consultancy services for a comprehensive and robust data infrastructure were put out to bid for the higher education regulator (notice). An education platform pilot was agreed with the incumbent operator in October 2025 (agreement). Nothing in the repository records an exchange between the education systems and the identity or civil registration layers.	MOVEMENT
Data Exchange	**Interoperability of social protection systems**	An e-Social Security system was tendered in October 2025 over a social register decided in Cabinet in 2009. The social register was decided in Cabinet in March 2009 (decision). An e-Social Security system was put out to tender in October 2025 for supply, installation, testing, commissioning and maintenance (tender). Cabinet used the register in February 2026 to target a free-internet measure (Cabinet) — the clearest evidence held that the register is joined to another system's delivery, and the only such use on file.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Robustness of system**	The national authentication framework was put to an independent security audit tendered in October 2025. The identity card regulations of February 2024 set the terms on which the card and the mobile identity are issued and read (regulations). A consultancy firm was sought in October 2025 for an independent information-technology security audit of the national authentication framework (notice). The servers the framework runs on are inside a separate procurement, alongside a sovereign cloud market sounding (clarification). The audit was commissioned; no finding, availability figure or incident record from it is held.	MOVEMENT
Digital Identity and CRVS	**Registration of entire population**	Registration runs under the 1981 Civil Status Act, with a further issuing centre tendered in December 2025. The Act has been in force since January 1982 and is held in its consolidated form (Act). Office space was put out to open national bidding in December 2025 for a further registration and issuance centre of the identity card unit (tender). The Finance Act 2026 amends the statute book around the registers (Act). No coverage rate, enrolment count or backlog figure for the population register is published in the sources held.	MOVEMENT
Digital Identity and CRVS	**National maintenance of id and credentials systems**	The omnibus bill would make permits issuable in digital, card or paper form and impose a digital travel authorisation on visa-exempt arrivals. The authorisation would be applied for electronically and paid before travel; the bill was introduced and not enacted (provision). It is the first credential in the repository whose form is set by statute rather than by the issuing agency, which is what makes the digital form enforceable rather than optional.	MOVEMENT
Digital Identity and CRVS	**Authentication**	The Mobile ID wallet has been in service since September 2024 and is hosted on the sovereign facility, with no user or issuance figure published. The wallet launched in September 2024 with a foreign vendor under the 2024 national identity card regulations (launch, regulations). It is now hosted on the Rose-Belle facility and still carries no published user or issuance figure. A domestic analysis welcomed its convenience and pressed for privacy and surveillance safeguards around the enabling regulations (analysis). Single sign-on has run since December 2020, its document wallet rising from 2,067 users in January 2022 to 12,172 by that September (account). Three 2024 regulations add a mobile identity, which civil-society analysis argues should be stored on the device alone (brief).	NO CHANGE
Digital Identity and CRVS	**Digital id from birth**	The 1985 identity card Act governs issue, and the repository holds no provision assigning an identifier at birth. The Act has been in force since April 1986 (Act). Statistical and registry measures were carried in the 2026-2027 budget annex (annex). What the repository does not hold is any provision assigning a unique identifier at birth, any linkage rule between the birth register and the card, or a figure for how many newborns are registered. The card is an adult instrument on the record as it stands.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	The verifiable-credential wallet is the route by which civil-status records could reach the identity layer; nothing yet flows. Birth registration runs under the Civil Status Act in its 2023-revised form (Act). A clarification of October 2025 set the shape of the secure identity wallet the superapp is built on (clarification). Registry and identity systems are carried together in the public sector investment programme for 2026-2027 to 2030-2031 (programme). No integration between birth registration and the identity system is recorded as operating.	MOVEMENT
Digital Identity and CRVS	**Use by other systems**	SIM registration by electronic identity check has been in use since the re-registration exercise, with no completion or coverage figure held. The electronic verification steps were published for the re-registration exercise and remain in use (steps). No completion or coverage figure is held, and no other system is recorded taking the national identity as its authentication, so the identity layer's reach into other sectors cannot be established from this repository. 2026-09-29 - the digital driving licence was soft-launched on the KOREK app, with legal effect from 1 January 2027; access needs a fully activated MauPass account. 2026-10-02 - the ICT minister said a driver without a smartphone may go on showing the physical licence, and put MauPass registrations at 500,000.	NO CHANGE
Digital Payments and Fintech	**Governance role of central bank**	A National Fintech Strategy 2026-2030 was presented in June 2026, a governance committee put on a statutory footing, and a digital onboarding system is under construction. The strategy runs six pillars carrying a governance committee, open banking, an artificial-intelligence push in finance and a business facilitation bill, with implementation coordinated among regulators, the central bank and the private sector (strategy). The committee is provided for in a new part of the financial services statute from September 2026, minister-chaired, seating the central bank governor, the financial regulator's chief executive, four ministries, the investment board and four private-sector members, empowered to approve sector-wide standards and expressly not a body corporate (committee, account). A know-your-customer system for digital onboarding is under construction alongside alignment to an international cross-border roadmap and exploratory work on fraud detection, with no delivery date published (onboarding).	MOVEMENT
Digital Payments and Fintech	**G2P functionality**	A social contribution income allowance is administered by the revenue authority, with eligibility and payment terms published. The revenue authority publishes the allowance's terms in a frequently-asked-questions document of January 2026 (document). The 2026-2030 fintech strategy sets out the payment rails such transfers run over (strategy). No payment volume, disbursement channel breakdown or coverage rate is published for the allowance, so the repository can say the mechanism exists and not how much of the population it reaches or by what route.	NO CHANGE a standing allowance with no earlier position held

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Revenue collection**	Value-added tax on digital services from foreign suppliers is being collected, with a supplier guide now at version 2.0. The central bank's annual report for the year to June 2024 is the standing account of the payment system revenue runs over (report). The revenue authority collects value-added tax on digital and electronic services supplied from abroad (regime), and its guide for foreign suppliers is at version 2.0 (guide). No collection figure under the regime is published, and no count of registered foreign suppliers is held. Simplified value-added tax registration runs online against a national identity, business registration or tax account number, with the 2025 Finance Act halving the threshold from Rs 6m to Rs 3m (registration).	MOVEMENT
Digital Payments and Fintech	**B2B and B2G functionality**	The central switch routes payments around the clock, and payment aggregators were brought under guideline in July 2026. The central automated switch is owned and operated by the central bank and routes payments among operators on a 24-hour basis (switch). A guideline for payment aggregators was issued in July 2026, bringing them under a stated supervisory expectation for the first time (guideline). Business-to-business measures were carried in the 2026-2027 budget (budget). No transaction volume through the switch is published in the sources held.	MOVEMENT
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	The instant payment switch is the national interoperable instant-payment rail, and the largest bank reports code payments up 67 per cent with cash down to 27 per cent of consumer spend. The switch was profiled as the national interoperable instant-payment rail in a 2024 instant-payments review (switch). The largest bank's 2025 figures put cash at 27 per cent of consumer spend against 30 per cent a year earlier, code payments up 67 per cent year on year, contactless above six in ten card transactions and about 18,000 merchants accepting (adoption); they are one bank's figures rather than a national series (adoption).	MOVEMENT
Digital Payments and Fintech	**Population uptake**	The state operator's wallet is being built into a cross-border payment product, and no user or transaction figure for it is published. The cross-border plan is part of the operator's 2026-2029 strategy (wallet, strategy). No user count is held, so neither the level nor the direction of uptake is recorded, in a country where mobile connections outnumber people (connections). A survey of 103 consumers (research) found 63 per cent naming cash as their primary payment method, half having sought to reverse a transaction and a quarter of those having it resolved.	NO CHANGE no published user count

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Cross-border functionality**	An India payment link has run since 2024, a Seychelles corridor was announced in July 2026, and the rupee is reported as considered for regional settlement. 2025-03 - named one of eight pilot countries for the regional digital retail payments platform under a EUR10m EU-financed programme; no Mauritian corridor or participant is on record. The bilateral cross-border payments link with India was the country's first, in force since February 2024, with no volume or corridor figure published (link). A corridor with Seychelles was announced as launched by the state operator at its summit, with no corroborating record from the partner, the central bank or the counterpart central bank on file (corridor). Onboarding the rupee to the regional settlement system is reported as under consideration, potentially by the end of 2027, on a spokesperson's account from another central bank; no domestic statement is held (settlement), and the pula and the metical are named as the next currencies (currencies).	MOVEMENT
Digital Payments and Fintech	**Consumer protection**	The 2018 payment systems Act is the statutory base, and stablecoin guidance was issued in August 2026. The Act is at its seventh consolidated version and is the statute under which payment providers are licensed and supervised (Act). The financial services regulator issued guidance notes on stablecoins with an annexure in August 2026, as part of its fintech series (guidance). Neither instrument is a consumer redress mechanism. No complaint volume, resolution rate or compensation arrangement for payment users is held anywhere in the repository.	MOVEMENT
Registries	**Population register**	The civil status register's system is being replaced, announced September 2025, with the 2026 Finance Act amending around it. The register operates under the Civil Status Act of 1981 (Act). The civil status division announced a revamping of its system in September 2025 (communique). The Finance Act 2026 carries the statutory changes behind the budget's registry measures (Act). No completeness figure, record count or migration timetable for the replacement is published.	MOVEMENT
Registries	**Civil register**	The civil registration base is recorded as complete and underpinning the identity system, on a performance report for 2023-2024. The civil status division's performance report for 2023-2024 is the most recent account held (report, presentation). No later performance report is held, and no registration rate, backlog or error measure has been published since. A complete base is the assumption on which the identity wallet and the social-security digitisation both rest.	NO CHANGE
Registries	**Address register**	No national address register exists; the national data strategy identifies addressing as a data gap. The strategy of January 2026 is the instrument that names the gap (strategy). The closest work on file is the verifiable-credential wallet's identity attributes, market-sounded in September 2025 (request). The island's postal addressing is not organised as a state register, and no addressing standard, register or mandate for one is held. The absence is dated and searched rather than unexamined.	NO CHANGE a searched absence the data strategy itself names

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Business register**	The register runs under the 2006 Act and feeds quarterly enterprise statistics. The Business Registration Act has been in force since October 2006 (Act). The register feeds quarterly enterprise-dynamics statistics, published for the second quarter of 2026 in July (statistics). The economic and financial measures bill debated in July 2026 touches its statutory base (debate). No registration volume, processing time or online-share figure for the register itself is held. Incorporation, annual returns, trade-fee payment, free search and structured financial-statement filing all run through the registry's own portal (portal).	NO CHANGE
Registries	**Social protection register**	The social register targeted the 2026-2027 budget's measures and a free-internet decision, with its platform being replaced. The register was decided in Cabinet in March 2009 (decision). Cabinet used it in February 2026 to target a free-internet measure (Cabinet), and the 2026-2027 budget's measures are targeted on it (budget). The social integration division reported on its performance for 2024-2025 (report). No enrolment figure for the register is published in any source held.	MOVEMENT
Registries	**Electoral register**	The register is compiled annually from a statutory house-to-house inquiry; no digital enrolment route is described. The Representation of the People Act requires a house-to-house inquiry for the compilation of the register, carried out again in 2026 (inquiry). The electoral commissioner issued a public communique on elector registration in May 2026 (communique). The inquiry is a door-to-door canvass. In a country whose identity card carries a mobile form and whose government runs a credential wallet, the electoral roll is still compiled by knocking on doors. Twelve breakdowns of the 2024 roll are published — by constituency, polling station, town, ward, village, sex, age group and citizenship (register).	NO CHANGE
Registries	**Tax register**	The register extended in two directions inside a year: a changed VAT threshold and a tax agent registration regime. The register is maintained under the Income Tax Act, in force since July 1996 (Act). The compulsory value-added tax registration threshold changed following the Finance Act, notified in September 2025 (communique). A registration regime opened for tax agents, with eligibility, procedure and obligations published in June 2026 (guide). No registered-taxpayer count is published in the sources held.	MOVEMENT
Registries	**Land register**	A disaster recovery solution was implemented for the electronic registry in March 2026, with deed e-submission in the budget annex. The registry operates under a statute of 1864 (Act), and the department reported on its performance for 2024-2025 (report). A disaster recovery solution was implemented for the electronic registry system in March 2026 (communique). Electronic submission of land deeds is carried in the 2026-2027 budget annex (annex). The registry is digital and resilient; the statute beneath it is 162 years old.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Health**	The eHealth strategy dates from 2015 and no successor or delivery report is held, though health workloads now run on the sovereign facility. The continuity-of-care strategy published in 2015 is the standing instrument (strategy). Electronic health workloads are hosted on the Rose-Belle facility, so the hosting has moved and the strategy governing what is hosted has not. No successor strategy, delivery report, record count or facility coverage figure is held. A roadmap published with the health ministry names a laboratory information system, a single-patient-record programme and a digital health agency as the three pillars of health digitisation (roadmap). The 2015 strategy remains the only instrument held. 2022-01-27 - the platform's country account reported DHIS2 in use at regional and national level, with extension to district and primary care level still planned.	NO CHANGE
Sectoral management information systems	**Education**	The education pilot on the sovereign artificial-intelligence platform was narrowed from a student tutor to a teacher assistant after teacher and parent resistance. The pilot was deliberately narrowed on pedagogical rather than technical grounds to homework correction and exam generation, targeting one per secondary teacher by 2027 (pilot, keynote). The operator's chief executive put the platform's exam-marking tools at 99 per cent accuracy across the tools introduced (interview). It is a rare documented narrowing of an African education deployment, and the reason it narrowed is recorded (keynote).	MOVEMENT
Sectoral management information systems	**Social protection**	10.5m social-benefit documents are being digitised into a future platform, after thirteen years of the welfare system running on paper. 2026-10-09 — Cabinet noted that online applications for the State Age Pension opened on 7 October 2026, with assisted applications at 38 Social Security Offices. Bulk scanning of beneficiary files began in May 2026 with full integration stated at about eighteen months; the system carries about 800,000 payments a month to at least 350,000 beneficiaries (digitisation). Social-protection spending was Rs 91.4bn, 12.8 per cent of gross domestic product, in 2024-25 (spending), which is the scale the paper system was carrying.	MOVEMENT
Sectoral management information systems	**Justice**	Court systems are carried in the 2026-2031 investment programme and in the e-judiciary component; nothing is recorded as operating. The force's 2021 policing plan put use of the system up from 30% to over 80% of divisions in 2020, with full use targeted for 2021. A 2023 press account dates the replacement of handwritten occurrence books by computer entries to 2015. The repository holds nothing later on its coverage. Justice systems appear in the public sector investment programme for 2026-2027 to 2030-2031 (programme). The government's own justice information page describes the aim rather than a system (page). The e-judiciary sits in the same package as e-Gates and e-Visa, all planned. No case-management system, filing volume or rollout figure is held, so the repository can record an intention and not a capability.	NO CHANGE an investment line with nothing recorded as operating

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Tax**	An e-invoicing system is being introduced nationally in a phased approach; no phase schedule or volume is published. The revenue authority is introducing an e-invoicing system at national level in a phase-wise approach (system). Value-added tax on digital services from foreign suppliers runs alongside it (regime). The page held carries no phase schedule, taxpayer count or invoice volume. Three years after the announcement, the repository cannot say how far the rollout has reached.	NO CHANGE a phased rollout with no phase reported
Sectoral management information systems	**Customs**	Customs hosted a World Customs Organization cloud study mission in January 2026, on regulations made in 1997. Computerised customs declaration has a statutory basis in regulations of April 1997 (regulations). A study mission on cloud computing was hosted by the customs administration in January 2026 (mission). The export procedure under China zero-tariff treatment was put onto the trade platform in May 2026 (notice). The country is teaching cloud practice to its peers on a legal basis written before the platform existed.	MOVEMENT
Sectoral management information systems	**Land**	The land administration system is being replaced, with consultant selection opened in March 2026 for a second-generation solution. The system's statutory basis is the Cadastral Survey Act 2011 (Act). A consultant selection was opened in March 2026 for a turnkey second-generation solution (notice). The deeds registry beside it took a disaster recovery solution in the same month (communique). No parcel count, coverage figure or transaction volume for the current system is held, so what the replacement improves on is not on the record.	MOVEMENT
Other GovTech and e-Gov	**e-government services**	An online motor vehicle licence and road tax service launched in August 2026, with electronic gates, visa and judiciary funded and a clinical-trial licensing system provided for in statute. The licence and road tax service is live for taxi operators, who renew and pay online instead of at post offices and counters, and the ministry states it will also build a database of operators; the transport authority's underlying system is stated as outdated with a tender launched to upgrade it (service). Electronic gates, an electronic visa and an electronic judiciary are funded in the budget alongside a healthcare innovation and artificial-intelligence unit, with no procurement, vendor or delivery date published (funding). The omnibus bill would put concurrent submission, review and processing of clinical-trial applications through a statutory electronic system, with the council and ethics committee empowered to meet virtually; the electronic channel and the procedure that runs on it are in the same statute, which makes the channel enforceable against the regulator (licensing). A metrology platform for bookings, payments and certificates is separately in build (metrology). 2025-12-17 - the World Bank's 2025 GovTech Maturity Index placed the country in Group A, extensive maturity, the group it held on the 2022 edition. 2026-09-21 - the environment ministry made online filing of Waste Carrier Licence applications through the Economic Development Board platform compulsory from October 2026.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	Local authorities were given more autonomous and digital management in February 2026; no platform is named. The ministry reports annually on local government performance (2023-2024, 2024-2025). A decisive step towards more autonomous and digital management of local authorities was taken in February 2026 (step). Government servers and storage are being procured centrally (evaluation). What the repository does not hold is any account of what local authorities themselves run: no equipment programme, connectivity figure or platform is named.	MOVEMENT
Digitalisation of sub-national government	**Digitalisation of local government records**	Local government records appear only in ministry annual reports; the February 2026 step is the first digital commitment held. Records are described in the ministry's annual performance reports for 2023-2024 and 2024-2025 (2023-2024, 2024-2025). The February 2026 decision on autonomous and digital management of local authorities is the first dated commitment on file (decision). No digitisation programme, record count or system is named for local authority records. The national registries are being replaced one by one; the municipal layer has no equivalent on the record.	MOVEMENT
Rural digital data capture	**Digitalisation of rural health clinics**	Electrical works were awarded in May 2026 for e-Health in the second region's area and community health centres. Electrical works for area and community health centres in the second e-Health region were awarded in May 2026 (award). Full public-sector coverage is targeted for the end of 2027, thirteen years into the programme (account). The ministry's own performance report for 2024-2025 is the standing account (report). No count of centres connected against the target is published.	MOVEMENT
Rural digital data capture	**Digitalisation of rural primary schools**	Two programmes run in primary schools: virtual reality and an education platform launched in January 2026. A virtual reality programme runs in primary schools (programme). An education platform was launched in January 2026 under a pilot agreed with the incumbent operator (launch). Household ICT penetration is reported annually (statistics). Neither programme publishes a school count or a pupil reach, and no school connectivity figure is held.	MOVEMENT
Rural digital data capture	**Digitalisation of rural registry offices**	The civil status division's system is being replaced and the deeds registry reports annually; there is no separate rural network. The deeds registry reported on its performance for 2024-2025 (report). The civil status division announced a system revamping in September 2025 (communique). The indicator reads differently on an island of this size: there is no rural registry network in the sense it asks about, and the offices are a small national estate reached by the same replacement programmes as everything else.	MOVEMENT
Rural digital data capture	**Digitalisation of rural police stations**	Digitisation is carried in the force's strategic plan for 2026 to 2028, published December 2025. The force reported on its performance for 2024-2025 (report). Its strategic plan for 2026 to 2028 was published in December 2025 and carries the digitisation commitment (plan). No station count, system name or rollout figure accompanies it, and no case-management or reporting platform is named. The commitment is dated; the delivery is not.	MOVEMENT

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	An AI-enabled water leakage reporting service launched on the government superapp in July 2026. The service launched on the government superapp in July 2026, the first artificial-intelligence service the repository holds inside a citizen-facing government channel (launch). The superapp itself soft-launched in January 2026 (launch). The 2026 pay research report carries a dedicated section on digitalisation and artificial-intelligence readiness across conditions of service (report). No usage figure for the service is published.	MOVEMENT
AI	**Use of AI in sectoral management information systems**	The 2026 pay research report assesses readiness across conditions of service; no sectoral system uses artificial intelligence on the record. Section 15 of the 2026 pay research report is dedicated to digitalisation and artificial-intelligence readiness (report). The national data strategy sets the data foundations such use would rest on (strategy). The report is a conditions-of-service review rather than a capability assessment, and quotes no readiness score. No health, education, tax, land or justice system in the repository is recorded as using artificial intelligence in production.	NO CHANGE a readiness review with no system in production
AI	**Development of national / regional AI systems**	A sovereign artificial-intelligence platform is in service, an AI registry went live in July 2026, and a Mauritian Creole voice model was presented in August. The registry is live as a discovery and trust directory of locally relevant models, agents and skills that does not host what it lists, each entry carrying provider identity, local-context relevance and any institutional validation; the stack is open-sourced and is being offered to other operators (registry). The operator's chief executive set out a cloud partnership with a hyperscaler, sovereign data centres and a plan to train 50,000 people (interview). A voice model for Mauritian Creole was described by the incumbent operator as the first built for the language; the account is the chief executive's in an interview and no user count, evaluation or release detail is held (model).	MOVEMENT
AI	**Control of AI abuse**	The FAIR guidelines carry mandatory bias audits in financial services and gaming and locally-based-representative duties on foreign providers, non-binding but on a stated legal trajectory. The guidelines govern by impact rather than geography, which is what lets them reach a foreign provider serving the country (guidelines). They are non-binding on a stated legal trajectory, so what the repository records is an obligation the state intends to make enforceable and has not yet. No audit, complaint or enforcement action under them is published (launch). 2026-10-02 - the ICT ministry and Meta are to discuss a framework agreement on online safety on 6 and 7 October 2026; nothing is signed. 2026-10-08 - the ICT ministry held its working session with Meta on faster content removal, Kreol moderation and proposed amendments to the Cybersecurity and Cybercrime Act, with no framework yet signed.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
ICT Industry	**National capacity in DT-related production**	The sector is put at about 5.4 per cent of gross domestic product against a stated ambition of 10 to 12, and an adoption and readiness survey was commissioned because no picture exists. The share was stated by the minister in July 2026 against an ambition of 10 to 12 per cent (share). An adoption, readiness and governance study was launched on 27 July 2026 by the chamber of commerce, the outsourcing association and a third partner, commissioned because no picture exists of adoption levels, affected sectors or available skills; its results are not held (study, launch). A country doubling its sector share is a policy ambition; a country that cannot say what its firms have adopted is a measurement problem, and both are on the record here. A pan-African investment fund took a minority stake in a Mauritian digital transformation consultancy. No consideration, stake size, use of proceeds or holding period was disclosed.	MIXED the sector at about half its stated ambition while no picture of enterprise adoption exists at all
Innovation ecosystem	**Technology hubs**	An AI City Scheme in the omnibus bill would establish a specialised hub whose certificate holders get fiscal incentives and expedited permits, with a founder category at US$1m invested. The scheme would establish a specialised technological and innovation hub and promote investment in artificial intelligence, digital sectors, advanced computing infrastructure and advanced manufacturing, its certificate holders entitled to fiscal incentives, duty exemptions, expedited permits and prescribed property acquisition, with a founder category at US$1m invested added to the permit criteria (scheme). It is an incentive and immigration scheme rather than a governance one, and it was introduced and not enacted. No existing hub, incubator or accelerator is separately recorded for the country.	MOVEMENT
Innovation ecosystem	**Tech startup ecosystem**	A start-up package was carried in the 2026-2027 budget and an AI start-ups initiative showcased in May 2026. The investment promotion agency's account of the innovation environment is the standing description (account). An artificial-intelligence start-ups initiative was showcased in May 2026 (showcase). A start-up package was carried in the 2026-2027 budget in June (budget). No funding total, company count or survival figure is held for any of it. Mauritian startups had raised USD 1.7m in venture funding, with investors calling the domestic market too small to scale into (feature). The country ranks 55th of 133 on the 2024 innovation index and first in the sub-region, with inputs 40th and outputs 79th (index).	MOVEMENT

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	A seminar on artificial intelligence was run for named civil servants in October 2025, the same month an innovation institute was established by Act. The 2025-2029 blueprint names public-service capability as a workstream (blueprint). A public service and innovation institute was established by Act in October 2025 (Act). A seminar on artificial intelligence was run for civil servants in the same month, with participants named across departments (seminar). No training throughput, curriculum or competency framework for the service is held.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (general population)**	A digital literacy rate is published with household ICT indicators, and an awareness booklet was launched in October 2025. The promotion agency publishes household ICT penetration indicators including a digital literacy rate (indicators). The 2025 ICT statistics are the statistics office's own annual release (release). An awareness booklet on artificial intelligence was launched at the presidency in October 2025 (launch). The rate is measured, which is more than most of this frame's places manage; no distribution or reach figure for the booklet is published.	NO CHANGE
Training and skills	**DT-related training in secondary education**	A schools cybersecurity and artificial-intelligence awareness programme opened in August 2026 with about 500 senior secondary students across all four education zones. The programme is run by the incumbent operator with the education ministry and opened on 13 August 2026, with free ten-hour cloud-provider training on offer (programme, account). It is an operator-run awareness programme rather than a curriculum change, and no full-year target, budget or evaluation is stated.	MOVEMENT
Training and skills	**DT-related university facilities and qualifications**	AI modules were taken to universities at the August 2026 youth convention, alongside an externally reviewed data science master's. Tertiary participation is reported for 2024 (report). A master's programme in data science and artificial intelligence is covered by an external quality review of its provider (review). Artificial-intelligence modules were taken to universities at the 2026 youth convention (convention). No enrolment figure in digital subjects is broken out of the participation report held.	MOVEMENT
Training and skills	**Graduates entering DT ecosystem**	A national training target of 50,000 people in one year covers professionals, ninth-grade pupils, teachers and civil servants on a Rs 25m platform. The target breaks down as 25,000 professionals, 12,000 ninth-grade pupils, 8,000 teachers and 5,000 civil servants (target). No completion or enrolment figure has been published. It is the largest single skills commitment in the repository for the country and the repository holds no baseline of current skills against which to read it.	MOVEMENT
Research institutions	**Think tanks and academic departments contributing to DT policy**	A national research and innovation institute was established by Act in June 2026, five years after a technologies council bill that went nowhere. An emerging technologies council was provided for in a bill of May 2021 (bill); the repository holds no evidence it was enacted or the council constituted. A national research and innovation institute was established by Act in June 2026 (Act). The higher education regulator issued amended guidelines on the use of artificial intelligence in May 2026 (guidelines). No research output, funding line or policy submission from any institution is held.	MOVEMENT

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	The government superapp gained a reporting service in July 2026, beside a citizen support portal debated in 2025. A citizen support portal was put to the National Assembly in July 2025 (debate). The government superapp soft-launched in January 2026 (launch). An artificial-intelligence-enabled water leakage reporting service was added to it in July 2026 (service). No case volume or resolution rate is published for either channel, so the repository holds the mechanisms and not their effect.	MOVEMENT
Access to services	**Citizen participation in policy**	Two consultations opened inside four months: national consultations on a 2050 vision and online pre-budget consultations. Periodic reporting to the regional human rights commission is the standing record of participation (report). National consultations on a 2050 vision were launched in December 2025 (launch). Pre-budget consultations for 2026-2027 were opened online in March 2026 (consultations). No account of a consultation changing a published position is held, and no submission count is published for either.	MOVEMENT
Access to services	**Gender equity**	No gender-disaggregated digital measure is held; the 2026-2027 budget annex carries the statistics office's independence and no such indicator. The budget annex of June 2026 carries the independence of the statistics office (annex). Household ICT penetration is published without a gender split (indicators), and the 2025 ICT release does not carry one either (release). No national gender policy text reached the repository. The absence is dated and searched: what would settle it is a gender-disaggregated access or usage figure, or the policy's own text.	NO CHANGE a searched absence with no disaggregated measure found
Access to services	**Inclusion of persons with disabilities**	A disability pension reform was agreed in Cabinet in November 2025 and carried into the 2026-2027 budget. The Protection and Promotion of the Rights of Persons with Disabilities Act 2024 is the governing instrument (Act). Cabinet agreed a disability pension reform in November 2025 (Cabinet), carried into the 2026-2027 budget in June (budget). The 2024 Act carries no accessibility duty for public digital services, and none is held elsewhere. The movement is on income support rather than on access to the systems the state now runs online.	MOVEMENT
Access to services	**Inclusion of refugees and IDPs**	A treaty body's concluding observations are the only account on file; no digital service for displaced people is recorded. The racial discrimination committee's concluding observations of May 2025 are the whole of what the repository holds on the question (observations). No refugee or statelessness framework, registration system, identity credential or service portal is recorded. The absence is dated and searched. What would settle it is a framework instrument, or any digital service the repository can show reaching displaced people.	NO CHANGE a searched absence with one treaty-body account behind it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital divides	**Bridging of digital divides**	Rodrigues was brought into the national digital strategy in May 2026 through a planned cybersecurity framework, a youth project and post office agents promoting the government super-app. A ministerial mission to the island in May 2026 announced a working framework, notably for cybersecurity, with a mainland-based team and an intended dedicated representative, alongside a youth awareness project and post office agents enlisted to promote the government super-app, building on the regional assembly's own roadmap (mission). It is the first national digital commitment to the outer island on record. No connectivity, usage or service-uptake figure for it is published.	MOVEMENT

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The 2020-2025 statistics strategy was externally assessed in December 2025; its own period has ended with no successor held. The strategy covers 2020 to 2025 (strategy). An observance of standards and codes data module assessed the statistical system in December 2025 (assessment). The 2026-2027 budget annex carries the statistics office's independence (annex). The strategy's horizon has passed; what replaces it is a governance change rather than a published successor strategy.	MOVEMENT
National statistics	**Censuses and surveys**	The release programme runs to schedule: annual labour force results in May 2026, quarterly results in June, ICT statistics in July. Annual labour force, employment and unemployment results for 2025 were published in May 2026 (release), and first-quarter 2026 results in June (release). The 2025 ICT statistics followed in July (release). The Statistics Act 2000 is the statutory basis (Act). No population census date is held, and the releases carry no response rate in the captures on file.	NO CHANGE
National statistics	**Statistics from administrative data**	A national fisheries information system was endorsed at a validation workshop in August 2026 for submission to a multilateral funding window. The proposal was endorsed at a workshop convened by the fisheries ministry, for submission under a fisheries fund's project-implementation grant window (proposal). It is a proposal for submission with no award, budget or build on record. It is the only sectoral data system in this unit that would produce statistics rather than administer a service.	MOVEMENT
Open data	**Use of open data**	A statistics data platform launched on World Statistics Day 2025, nine years after the open data policy. The national open data policy dates from May 2017 (policy). The statistics office launched a data platform with United Nations development agency support in October 2025 (launch). The national data strategy of January 2026 revisits the policy's ground (strategy). No dataset count, download figure or reuse account is held for the platform or under the policy. 2026-09-03 - the central bank put its statistics on a standards-based platform: it launched its statistical data platform on 3 September, built with monetary fund and development bank support on an open data platform with standardised statistical data and metadata dissemination, stated as the first African central bank on that platform's second version. No dataset count, series coverage, licence or machine-readable access statement accompanies the launch.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	**Agricultural use of satellite data**	Satellite monitoring was carried into the 2026 agriculture review after a crop-monitoring training programme in 2025. A national training workshop on satellite-based crop monitoring was held in September 2025 (workshop). A deep-learning analysis of satellite images for development-goal monitoring in one district was published in October 2025 (paper). Satellite monitoring was carried into the 2026 agriculture review in May (review). The applications are donor, academic and sector led; no national earth-observation programme or agency mandate is held.	MOVEMENT
Use of satellite data	**Meteorological use of satellite data**	The meteorological service's mandate is statutory; no account of its satellite reception or products is held. The Mauritius Meteorological Services Act 2019 sets the service's observation and forecasting functions (Act). That is the whole of what the repository holds on this indicator. No reception station, data-sharing arrangement, forecast product or partnership is recorded. The mandate exists in statute; nothing on the record says what is done under it.	NO CHANGE a statutory mandate with nothing recorded under it

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	A hyperscaler memorandum was signed with soft scope and no disclosed value, and another hyperscaler already operates a ground station on the island. The memorandum was executed at a summit opening ceremony in July 2026 covering skills, institutional enablement and a growth pathway for local innovators, with no disclosed value or binding deliverable; the training is to run initially in premises rented for the purpose, with permanent infrastructure only a possibility (memorandum, scope, summit). The other hyperscaler already operates a ground station serviced by the state operator, so a cable commitment would deepen a relationship rather than open one; what is contracted with either so far is skills and confidentiality, not capacity (presence). 2026-10-07 - the incumbent operator and the cloud company held an executive workshop on cloud, data and artificial intelligence for more than 125 delegates of state-owned enterprises.	MOVEMENT
China activities	**Chinese MoUs, engagements and commitments**	A preferential buyers credit of US$73.7m is the largest external digital-sector financing on the country's record, with no repayment or completion statement published. The credit is recorded in the finance ministry's own annual report (credit). Eight years on, no repayment, drawdown or completion statement has been published, and no other Chinese instrument, vendor contract or cooperation framework is recorded for the country.	NO CHANGE
EU activities	**EU MoUs, engagements and commitments**	The European relationship on file is a data-protection adequacy assessment being pursued in 2026, with no application date, stage or decision published. Adequacy is being pursued with full alignment of the law to the European regulation, confirmed by the data-protection commissioner in May 2026 (assessment). No application date, assessment stage or decision is published, and no European funding instrument, memorandum or project for the country's digital programme is held. The relationship is regulatory rather than financial, which is unusual in this repository.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	Cabinet approved a Saudi energy and cybersecurity memorandum for signature in August 2026, putting digital transformation and energy-sector cybersecurity alongside hydrocarbons. It is an approval to sign rather than a signature, with no signing date, term, value or committed system, standard or spend (memorandum). It is the only Gulf engagement on record for the country, and the digital element is bundled inside an energy instrument rather than standing on its own.	MOVEMENT
India activities	**India MoUs, engagements and commitments**	The first bilateral cross-border payments agreement was with India in February 2024, and a new transoceanic cable would run between the two countries. The payments link has been in force since February 2024 as the country's first such agreement, with no volume or corridor figure published since (link). The cable participation commitment is to a system connecting the United States and India, behind which sits a signed non-disclosure agreement and unfinished negotiation (cable). Between them these are the country's two named Indian engagements, one operating and unmeasured, one committed and unsigned.	MOVEMENT
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Budget 2026-2027 tax and revenue measures as enacted	The 128-page Finance Bill 2026. Three fetch paths into the National Assembly's bills library returned an HTML shell rather than the document; the library is script-rendered and exposes no static file path, so this needs a browser rather than an automated fetch.	not yet probed
National sovereign compute capacity	Vendor or independent confirmation of installed accelerators. The state operator's chief executive stated in July 2026 that its data centre already hosts NVIDIA H200 units with B300 due by end-2026; no corroboration is on file, and this is precisely the compute-timing bet a domestic critique disputes.	2026-08-09
Enterprise artificial-intelligence adoption	The results of the adoption, readiness and governance study launched on 27 July 2026 by the chamber of commerce, the outsourcing association and a third partner, commissioned because no picture exists of adoption levels, affected sectors or available skills.	not yet probed
Chinese digital cooperation with Mauritius	A bilateral agreement, financing or vendor arrangement in the digital sector. The only Chinese-linked item held is a 2018 buyer's credit.	not yet probed
National address register	A national addressing standard, a state address register, or a mandate for one.	2026-09-01
Gender in digital policy and statistics	A gender-disaggregated digital access or usage figure, or the national gender policy's own text.	2026-09-01
Position on refugees and stateless people	A refugee or statelessness framework, or any digital service reaching displaced people.	2026-09-01
Commercial terms of state hosting at Mauritius Telecom's Rose-Belle centre	The hosting agreement or a ministry statement giving the price, duration and obligations for state systems hosted at Rose-Belle, and the budget line that pays for them.	2026-09-25
Outturn against the 2025-26 digital appropriations	The Accountant-General's annual report and financial statements for the year ended 30 June 2026, read into the budget extract.	2026-09-25
Outcome and contract terms of the government sovereign-cloud procurement	The award, bidding document or contract that followed RFI MITCI/RFI/01/2025-26, with its key-custody, portability and exit terms.	2026-09-25
Source code and supplier exit for the national identity system	The Thales-led consortium's contract, the independent security audit the National Identity Card Act requires, or a ministry statement on source-code ownership and change of supplier.	2026-09-25

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Data jurisdiction, portability and exit terms of the Mauritius Telecom–AWS memorandum	Publication of the July 2026 memorandum or any follow-on agreement touching state data.	2026-09-25
