PROGRESS REPORT

Sudan: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	A Digital Transformation Authority was established by prime-ministerial decree alongside data, artificial-intelligence and cybersecurity authorities, and no account connects the decree to the platform claims that follow it. Three authorities were created at once by decree: digital transformation, data and artificial intelligence, and cybersecurity (decree, roundup). No account held connects the institutional decree to the platform launches recorded through 2026 — the national platform, the identity credential, the payment switch — so which authority owns which system, and under what powers, is not established anywhere in this repository. That gap runs through the whole unit: institutions are announced by decree, systems are announced by ministry, and nothing published links the two. The ministry launched phase two of its 3x3 transformation plan, naming consular, visa, university, business-registry and identity services and an interoperability gateway as its pathways (phase two). No text of the plan is held. A development partner's country programme records no digital public infrastructure policy framework in place at 2025 and targets one by 2028 (programme).	MOVEMENT
Strategies, plans and policies	**ICT strategy**	The last information and communication technology strategy the repository holds ran to 2011, and the e-government plan that followed it expired in 2020. The Knowledge Society strategy approved in 2007 under the twenty-five-year national strategy ran to 2011, with the National Center for Strategic Planning named as the responsible body (profile). The e-government and smart transition plan that followed covered 2016 to 2020 and has expired; its text could not be captured (plan). The repository holds no successor. What the minister described to the ITU in November 2025 is a programme of work — digitising services, updating regulatory frameworks, developing digital identity and cybersecurity — not a published strategy (statement).	NO CHANGE
Strategies, plans and policies	**Broadband strategy**	No domestic broadband strategy is held. What moved is an ITU resolution creating a basis for international help to rebuild war-damaged networks. Sudan's draft resolution was adopted by consensus at the World Telecommunication Development Conference in Baku on 26 November 2025, seeking international support to rebuild war-damaged telecommunications infrastructure (adoption). The ministerial statement that preceded it names satellite connectivity for war-affected and remote areas as something to explore rather than a planned rollout (statement). Neither is a broadband strategy: they set a route to external assistance, not a domestic target for coverage, speed or price.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data storage / cloud strategy**	A sectoral data-centre and cloud regulation stands in for a strategy, and the central bank has committed to a hybrid cloud transformation. The regulator names Regulations for the Organization of Data Center and Cloud Computing Services, 2025 as the current sector instrument; the text itself is not held and an acquisition line is open for it (catalogue). The central bank's five-year plan dated 31 December 2025 commits under its digital-transformation axis to a national disaster-recovery centre for the banking sector, an expanded data-centre network and a hybrid public-private cloud transformation project (plan). No standalone national cloud or data-storage strategy was located. Both instruments are sectoral, and neither sets a whole-of-government hosting position. The regulation's own text is now held, closing the acquisition line that stood against it (regulation), as is the 2018 statute the regulator is constituted under (Act). The sectoral instrument can now be read rather than cited; it remains sectoral.	MOVEMENT
Strategies, plans and policies	**Data interoperability framework / roadmap**	The nearest thing to a roadmap expired in 2020; interoperability now appears as a platform design principle rather than a framework. The e-government and smart transition plan for 2016 to 2020 is identified as the closest Sudanese instrument to an interoperability roadmap, and it has expired (plan). The ministry's own product page for the government-institution platform names interoperability among its design principles and lists 23 integrated government institutions (product page). A platform that integrates institutions is not a framework other systems can be built against. The repository holds no published architecture, no data standards and no sequencing plan.	NO CHANGE
Strategies, plans and policies	**AI strategy**	A Data and Artificial Intelligence Authority was established by decree ahead of any primary data-protection law, and no strategy, sandbox or guidance note is held. The authority was created by the same decree as the other two, and it was created before the country had a data-protection statute (authority). No artificial-intelligence strategy document, regulatory sandbox or guidance note is held for the country, unlike several other African states the same roundup records (roundup). A regulator standing up before the law it would enforce is a sequencing choice, and the draft that would supply the law is recorded separately as still in redrafting.	MOVEMENT
Strategies, plans and policies	**Data localisation policies**	There is no economy-wide localisation law. Licensing requires disclosure of hosting location, and the digital identity's terms commit to primary storage in Sudan. Applicants for an internet-applications licence must state whether their hosting server sits inside or outside Sudan and name the hosting company, and data-centre licence categories separate operators owning facilities inside Sudan from cloud resellers (licensing). The national digital identity's terms commit to data minimisation and primary storage inside Sudan (terms), and the cybersecurity authority asserted full sovereignty over the platform and its encryption keys (statement). What the repository does not hold is any general requirement covering data outside the telecommunications licence and the identity platform.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data governance policy**	A data and artificial intelligence authority now carries the mandate to regulate national data management; no policy document sits behind it. The prime minister's decree of 5 November 2025 established three authorities under the communications ministry, among them a data and artificial intelligence authority evolved from the National Information Center and mandated to regulate national data management (decree). A draft data and artificial intelligence law was reported in redrafting in August 2026 and is not in force. The mandate exists; the policy does not. Nothing the repository holds states what the authority's rules over public-sector data actually are.	MOVEMENT
Strategies, plans and policies	**Open data policy**	No open-data policy is held. The access-to-information law of 2015 is the closest instrument, and its commission was never made operational. The law ratified on 27 January 2015 establishes a citizen right to obtain information from public institutions and a commission with powers to compel publication (law). Available reporting indicates that commission was never effectively established. A land-sector assessment found no open data available online since the 2023 escalation and recorded Sudan's last Open Data Inventory score as 24, ranking 159th worldwide (assessment). No open-data policy, portal or publication schedule was located.	NO CHANGE
Legislation and regulation	**Data protection legislation**	A draft Data and Artificial Intelligence Law is in redrafting with the digital transformation ministry, legislating data protection and artificial intelligence in one instrument. The draft went to the Council of Ministers with two others and was reported back in redrafting in August 2026 (draft, redrafting). Legislating data protection and artificial intelligence in a single instrument is a design few African states have attempted. Neither text is published, so what it would provide on lawful basis, consent, transfer or supervision cannot be stated. The authority that would enforce it already exists, created by decree ahead of the statute.	MOVEMENT
Legislation and regulation	**Cybersecurity legislation**	A draft Cybersecurity Law is in redrafting, and its relationship to the cybercrime provisions the country described to a regional experts' meeting is not established. The draft is the second of the three-instrument package and was reported in redrafting in August 2026 (draft, redrafting). Its relationship to the cybercrime provisions the country separately described to an Arab experts' meeting in July 2026 is not established (meeting). That matters because the cybercrime statute in force is being used against speech, and whether the new draft replaces, amends or sits alongside it is exactly what no source says.	MOVEMENT
Legislation and regulation	**Legislation covering digital id**	The Electronic Transactions Act 2007 and the Civil Registry Act 2011 carry the digital identity; two later instruments it cites are not held. The 2007 Act covers digital signatures, electronic authentication and certification, and establishes an electronic licensing committee (Act). The 2011 Act founds the civil registry and its unique national number, and requires the registry to supply data to competent state organs (Act). The national digital identity's terms, published 21 May 2026, cite both, plus a digital identity regulation of 2025 and a cybersecurity act of 2025 (terms). Neither 2025 instrument could be located as an independently accessible text, so the legal basis a reader can check stops at 2011.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Digital payments legislation**	Four central bank instruments cover digital payments: mobile payment licensing, banking agency, USSD controls and anti-money-laundering controls. The 2020 regulation sets licensing conditions, capital and insurance requirements, e-money and trust-account rules and agent rules for mobile payment institutions (regulation). Three instruments were made inside the window. The banking agency regulation of 1 March 2026 lets banks deliver services through licensed agents outside branches (regulation). Circular 7/2026 sets binding consumer-protection requirements for USSD services (circular). Circular 8/2026 extends anti-money-laundering supervision to mobile and phone payment channels (circular). All four are central bank instruments made under the Banking Business Organisation Act 2004. No primary payments statute is held.	MOVEMENT
Legislation and regulation	**Legislation enabling data interoperability**	A draft Digital Transformation Law of 2026 is in redrafting with the ministry, the third of a three-instrument package. It went to the Council of Ministers alongside the cybersecurity and data drafts and was reported in redrafting in August 2026 (draft, ministry). None of the three texts is published. The platforms the law would presumably govern — the national services platform, the identity credential, the civil-service records system — are already live, so the statute follows the systems rather than authorising them.	MOVEMENT
Legislation and regulation	**AI legislation / regulations**	No artificial-intelligence statute is in force. The cybercrime amendment of 2020 is the instrument reached for, and it is not AI-specific. The Cyber Crime Prevention (Amendment) Act, 2020 was signed on 22 April 2020 and gazetted on 13 July, sharply increasing penalties across articles 5 to 39 of the 2018 Cyber Crime Law (gazette). It carries no deepfake or generative-AI provision, and no dedicated instrument was found. A draft data and artificial intelligence law was reported in redrafting in August 2026. When a manipulated image of the prime minister circulated in June 2026, the information ministry reserved the right to act without naming a provision (statement).	NO CHANGE
Legislation and regulation	**E-commerce legislation**	A ministerial meeting resolved to review state-level border-trade protocols and replace them with a single national legal framework, with revenue protection the stated driver. The meeting was chaired by the finance minister and resolved to refer the state-to-neighbouring-country protocols to the Council of Ministers, to build one national framework in their place (meeting). It was paired with the adoption of the national platform as the sole channel for foreign-trade transactions, and the stated driver is revenue protection rather than service delivery. No draft, timetable or list of the protocols under review is published.	MOVEMENT
Legislation and regulation	**Statistics legislation**	The Statistics Act 2003 remains in force and was assessed in 2021 as not providing for recent advances in statistical production. A joint assessment of the national statistical system, with fieldwork between March and July 2021, states plainly that the Act is outdated, does not adequately provide for recent advances in statistical production and contains no gender-statistics provisions (assessment). That is the most current authoritative statement of the Act's standing the repository holds. No full primary text of the Act itself was locatable, and no amendment or successor bill has been found.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Access to information legislation**	The Right to Access Information Law of 2015 is in force, and the commission it requires was never effectively established. The law was ratified by the National Assembly on 27 January 2015 and signed on 22 February. It establishes a citizen right to obtain information from public institutions, and a commission with powers to compel publication (law). Available reporting indicates the commission was never made operational, so the law's practical reach is unverified. Nothing later amends or replaces it, and no implementing regulation was located.	NO CHANGE
Data protection	**Data protection authority**	A cybersecurity authority was launched in January 2026, and its published mandate is cybersecurity rather than personal-data protection. The authority created by the November 2025 decree was formally stood up in January 2026, mandated to lead national cybersecurity policy, regulatory frameworks and protection of digital infrastructure (launch). In May 2026 it asserted full Sudanese sovereignty over the national digital-identity platform, and named data governance, encryption-key management and periodic security review as national priorities (statement). No body with a personal-data protection remit is held, and the draft data law that would create one is not in force. A research series published in July 2026 reads the same gap from the other side (series).	MOVEMENT
Data protection	**National data protection readiness**	A central bank directive suspends bank accounts whose customer data is not updated, its deadline extended to end-2026, with no exception for displaced customers without documents. The directive requires customer data to be updated on pain of account suspension, and the deadline was extended to the end of 2026 (directive, extension). The directive text is not held. No count of accounts affected, no exception for displaced customers without documents and no appeal route is stated anywhere (flexibility). In a country where displacement is mass, a rule that conditions keeping a bank account on producing identity documents is an exclusion instrument whether or not it is meant as one, and nothing published measures who it excludes. The country has no data-protection statute in force under which a customer could contest the processing. The national identity application publishes a privacy policy: passport chip photograph and a selfie retained, no biometric template stored, selfies deleted at twelve months and storage stated to be inside Sudan (policy). It is the only published data-handling commitment the repository holds for a Sudanese system, and there is no law behind it.	REGRESSED
Regional collaboration	**Regional policy collaboration**	Sudan carried a resolution at the ITU development conference and opened cooperation with the regional internet registry on exchange points and address resources. The resolution adopted by consensus in Baku on 26 November 2025 creates a formal basis for international technical and financial assistance to rebuild war-damaged telecommunications infrastructure (adoption). At the WSIS Forum in Geneva in July 2026 the minister discussed strengthening internet exchange points, IPv6 expansion and internet-resource development with the regional registry and the Internet Society (meeting). Both are engagements rather than instruments. Nothing yet commits either side to a dated deliverable.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Regional legal harmonisation**	A regional cybersecurity harmonisation consultancy was awarded at USD 336,700, moving the work from terms of reference to an appointed consultant. The regional body's 2025 procurement disclosure records the award of a USD 336,700 consultancy for the harmonisation of cybersecurity legal frameworks across member states, Sudan among them (disclosure). That is a step, not an outcome: the award commits a consultant, not a member state. No harmonised instrument, model law or timetable has been published. Sudan's own cybersecurity draft law is separately in redrafting, and nothing on the repository connects the two processes.	MOVEMENT
Regional collaboration	**Shared regional infrastructure**	The Horizon Fiber tripartite agreement became binding in February 2026; a longer Port Sudan to Douala corridor remains at pre-feasibility. Three operators signed a binding tripartite agreement on 4 February 2026 for a multi-terabit terrestrial fibre corridor running from Djibouti's submarine landing stations through Ethiopia to Sudan, converting a December 2024 memorandum into a commitment (agreement). The continental programme's record for the Sudan section of a Port Sudan to Douala corridor positions Sudan as a transit route with open-access gateways for landlocked neighbours, at planning stage (record). One has a signature behind it and the other does not.	MOVEMENT
Regional collaboration	**Cross-border data transfers**	A regional consultancy on data hosting and cloud-market guidelines was put out to tender in March 2026; no agreement governs transfers today. Expressions of interest were invited on 30 March 2026 for a consultancy to develop harmonised regional guidelines on infrastructure sharing, co-location, data hosting and the cloud market across member states including Sudan (notice). This is procurement, not policy. What the repository does not hold is any instrument — regional or bilateral — that presently governs the transfer of personal or public-sector data across Sudan's borders. Sudan's own sectoral rules reach only as far as hosting-location disclosure in telecommunications licensing (licensing).	MOVEMENT
Standards	**National interoperability standards**	A request for proposals for the instant payment system sets real interoperability requirements; the government platform names the principle without publishing a standard. Version 5.0 of the central bank's request for proposals, dated 7 April 2026, requires interoperability with the existing interbank settlement system and real-time programming-interface integration, alongside enterprise security and compliance standards (document). The ministry's government-institution platform product page names process engineering, smart governance and interoperability as design principles and lists 23 integrated institutions (page). A procurement specification binds one supplier and a product page binds nobody. No published national interoperability standard exists for other systems to build to.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	**National quality standards**	A telecommunications service quality regulation was gazetted in March 2026, and the standards body publishes an adopted catalogue against international equivalents. The regulation gazetted on 15 March 2026 was made under the Telecommunications and Post Regulation Act 2018 with the minister's approval and repeals the 2021 quality-of-service regulation (gazette). Its substantive quality provisions from page seven onwards are not held. The national standards body publishes a catalogue of adopted Sudanese Standards with their international equivalents, under the Standards Act of 2008 (catalogue). It is cross-sector rather than an ICT list. In July 2026 the body began taking certification fees through the government payment platform (integration).	MOVEMENT
Standards	**Adoption of international standards**	A banking cybersecurity framework made ISO and PCI alignment mandatory, and Sudan deposited its passport signing certificate in the ICAO directory. The central bank's framework, issued in January 2026 over the governor's signature, requires banks and financial institutions to align with ISO 27001, ISO 27002, NIST, ISF, Basel and PCI DSS (framework). It is a mandatory instrument, not an aspiration. On 15 February 2026 Sudan deposited its country signing certificate in the International Civil Aviation Organization's public key directory in Montreal, enabling worldwide verification of its machine-readable passports (deposit). The USSD circular separately requires encryption to TLS 1.2 and ISO/IEC 27001 (circular).	MOVEMENT
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	A private-sector forum called for a national strategy and a supreme council, and a private-sector engagement strategy was built on 71 interviews. The seventh edition of an operator-hosted forum on 31 May 2026 brought together university academics and external advisers who called for a national artificial-intelligence and digital-transformation strategy, a supreme council for digital transformation, and stronger public-private partnership (forum). A private sector engagement strategy published on 29 April 2026 rests on 71 key-informant interviews conducted in November 2025 with small firms, banks, associations, displaced firms and diaspora businesses (strategy). The older precedent is the statistics strategy, whose design process recorded consultation with private-sector actors, civil society and academia (strategy).	MOVEMENT
Public debate and participation in policymaking	**Open discussion of government policy**	A six-year sentence over a private phone conversation was reported in August 2026, one of a series of cybercrime prosecutions for speech. A pharmacist was jailed for six years over a private phone conversation (sentence), inside a pattern of anti-war prosecutions under the cybercrime statute (prosecutions), and a journalist was detained under the same Act (detention). The two accounts date the statute differently, to 2007 and to 2008, and neither the judgment nor the charging instrument is held. So the law being used is one whose year the sources disagree on and whose text this repository does not hold. The draft cybersecurity law now in redrafting does not state whether it touches these provisions.	REGRESSED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	A Treasury Single Account commitment was reaffirmed at a summit in August 2026, and an electronic oversight system for public bodies was announced with no scope or timetable. The state minister of finance reaffirmed the commitment to implementing the treasury single account at a summit in Abuja, with no timetable, coverage or implementation stage stated (commitment). An electronic oversight system for public bodies and government companies was announced as forthcoming, with no scope, custodian, timetable or stated relationship to the treasury single account or the procurement platform (oversight). Three public financial management systems are therefore in flight — an account, an oversight system and a procurement platform — and no source relates any of them to the others.	MOVEMENT
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE
MoUs and other agreements	**Strategic relationships**	The clearest priced relationship the repository holds is a USD 15 million satellite-broadband partnership signed in January 2023 with a Sudanese operator. The six-year agreement was signed on 23 January 2023 and announced a week later, providing satellite broadband capacity explicitly linked to digital-transformation goals, e-government programmes and banking-sector revitalisation (announcement). The counterparty is a Sudanese telecommunications operator, not the government, so it is a commercial relationship rather than a state one. Nothing inside the window supersedes it. The card-processing agreement signed in January 2026 is the nearest recent equivalent and is narrower in scope (agreement).	NO CHANGE
New investments	**Mobilisation of non-state finance**	Online trading launched on the stock exchange in 2016 under a donor-financed programme and has not been refreshed since, and a digital agricultural platform is described as imminent. The exchange's online trading system launched in March 2016, financed at a reported US$34.8m under a public financial management project (trading). A decade later the 2026 finance-ministry directives restate the same payroll, electronic invoicing and electronic procurement list without referencing it (trading). That is worth stating plainly: the reform list being announced in 2026 is substantially the one that was already financed in 2016, and nothing on file records what happened to the first attempt. The agricultural bank's digital financing platform is described as imminent, and no launch date, function, farmer register or data-protection basis is stated (platform).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	**Development-partner project financing**	An energy and digital access operation became effective in October 2025 and launched two tenders, while a USD 41.9 million education grant runs to end-2026. The energy and digital access operation was effective from 25 October 2025. By April 2026 over 30 private-sector expressions of interest had been received and requests for proposals launched for solar irrigation and telecom-sector energy solutions; its targets of 150,000 people with new internet access and 50 telecom sites with improved energy stood at nil (report). The education grant of USD 41.9 million, approved 19 November 2024, covers offline learning servers, tablets, solar power, digital learning hubs and dashboard monitoring in reopened primary schools (appraisal). A large earlier safety-net operation closed with USD 181,402,800 disbursed against USD 760 million committed (completion report). An education system transformation grant budgets USD 3.95m for education data systems, against a 2021 review that found no costed national policy for the education management information system (programme document).	MOVEMENT

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	The ministry reports 60 fourth-generation towers built with 200 more planned during 2026, and no later source confirms progress against the target. The tower count and the 2026 target come from the digital ministry's own account, and no later source confirms progress against it (towers). The digital-transformation minister separately praised the two operators for keeping services running through the war; that is ministerial praise rather than an independent operational assessment, and no coverage, outage or availability figure accompanies it (operators). Every connectivity figure in this unit is the government's or an operator's own, and none is measured by a regulator.	MOVEMENT
Connectivity	**Internet usage**	14.9 million users at 28.7 per cent penetration in October 2025, up 407,000 year on year; the official series has no observation since 2017. The commercial estimate for October 2025 puts users at 14.9 million, up 407,000 or 2.8 per cent year on year, with penetration unchanged at 28.7 per cent (estimate). The official indicator series for Sudan was last updated on 13 July 2026 but its most recent non-null observation is 18.6 per cent for 2017, with every year since null (series). Usage is also being displaced rather than simply grown: during the April 2026 exam shutdowns one satellite provider reached 27 per cent of the internet-service market (report). Separately from the exam-period shutdowns, both private operators were cut nationwide for three weeks in early 2024 while the state operator restored service in 21 centres from a new Port Sudan data centre (blackout).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile affordability**	One operator raised bundle and call prices in September 2025 and the other reset its schedule in January 2026; prices have moved again since. The first increase took effect on 6 September 2025, covering daily, weekly and monthly internet bundles and local call minutes, on grounds of higher operating costs (announcement). The second operator's schedule as at 8 January 2026 ran from SDG 1,100 for 100MB a day to SDG 110,000 for 500GB a month (schedule). Its own current price list differs again, so the schedule moved after that report (price list). No affordability measure against income is held, so the direction is clear and the burden is not.	REGRESSED
Connectivity	**National fibre backbone**	The incumbent added 1,586 km of backbone and 94 sites in 2025, taking group-wide terrestrial fibre past 25,000 km. The operator's own results announcement for the year to 31 December 2025 reports over 25,000 km of terrestrial fibre group-wide, 1,586 km of new backbone added and 94 new sites built, alongside stakes in three submarine systems (results). These are group figures across the operator's footprint, not a Sudan-only count, and they are the company's own. The audited statements for the same year carry a qualified opinion, because war-related restrictions on access to Khartoum, Darfur and Kordofan sites prevented verification of property, plant and equipment (statements).	MOVEMENT
Connectivity	**International internet bandwidth**	A tripartite binding agreement was signed in February 2026 converting a 2024 memorandum into a three-country fibre corridor, and no source states a build or completion date. The agreement was signed in Djibouti between the three states' operators, converting the December 2024 memorandum into a binding instrument (agreement, deal, corridor). No physical build or completion date is stated in any source held (review, operators). For a country whose international capacity runs through neighbours, the corridor is the single most consequential infrastructure commitment in this ledger, and it is dated only by its signature.	MOVEMENT
Connectivity	**Internet Exchange Points**	The sole exchange point's registry entry was refreshed in August 2026 after six years: four members at 1 Gbps each, and no network joined or left in twelve months. The registry entry for Sudan's sole listed exchange point, operated by the National Information Center, records four peers and a 4G aggregate capacity, last updated on 22 January 2020 (entry). It is self-reported and shows no membership change since. At the WSIS Forum in July 2026 the minister discussed strengthening exchange points, IPv6 expansion and internet-resource development with the regional registry and the Internet Society (meeting). That is the only movement found, and it is a conversation rather than a peering. The tracker's August 2026 reading gives four members at 1 Gbps each, three of them valid under route-origin authorisation, and records no network joining or leaving in the preceding twelve months (tracker). The six-year gap in the record closes; the position it reveals is the same one.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Satellite broadband licensing and availability**	Satellite service was never officially licensed and has run informally through smuggled terminals, and an armed group ordered services cut at a locality from 26 August 2026. The service has never been officially licensed on any source held, reaching the country through smuggled dishes described as a lifeline (terminals, lifeline). An armed group ordered services cut at a West Kordofan locality from 26 August 2026 (cut), having banned the service at the same place in December 2025 (ban). Connectivity in the conflict areas is therefore governed by whoever holds the ground rather than by the regulator, and the same terminals are described in the record as both a lifeline and a war facilitator (conflict).	REGRESSED
Data Storage	**Local data centre capacity (all providers)**	A 1,300 square metre state data centre was restored and made operational after war damage, and an alternate national data centre is announced with no construction start date. The restored facility is equipped for cloud computing, data security and artificial-intelligence application hosting, and is distinct from an operator's separately reported facility in the same city, a claim not corroborated in this pass (restoration). An alternate national data centre at the wartime seat of government is announced as one of the ministry's future projects with no construction start date (alternate). No capacity, load, tenancy or ownership figure is published for either. A mobile operator built a disaster-recovery centre in Port Sudan in March 2024 after its network shut down completely, and its group reported a new data centre established there in the first half of 2025. No capacity figure is published.	MOVEMENT
Data Storage	**Local data centre capacity (national providers)**	Two facilities came back into service: the 1,300 square metre state data centre in Khartoum and the incumbent's core data centre in Port Sudan. The minister announced in October 2025 that the 1,300 square metre state data centre had been rehabilitated and returned to service with cloud computing, data security and artificial-intelligence support, qualifying it to host government systems (announcement, report). The incumbent operator, having lost its Tier-4 data centre, three data transformers and a satellite station at a cost it puts above USD 70 million, restored its core data centre in Port Sudan and reports it fully operational for government and private users (account). The central bank separately commits to an expanded data-centre network and a disaster-recovery centre (plan).	MOVEMENT
Data Storage	**Off-site backup capacity**	The vehicle register survived the war on backup data centres built inside the states and abroad, restored at 2,124,750 vehicles and 3,161,599 driving licences. The traffic police register was restored with 2,124,750 registered vehicles and 3,161,599 driving licences, and the offsite and in-state backups are credited with its survival (register). It is the only evidence in this unit that any government system was designed to survive the loss of its primary site, and it is the only registry the repository can say came through intact. No comparable arrangement is recorded for the identity credential, the civil-service records system or the national platform.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	**Sufficient energy and water for data centres**	The grid is conflict-split and manually operated, and facility power is shifting to distributed solar rather than grid supply. The sector update with data to August 2024 reports pre-war installed capacity of 3,700 MW against a conflict-split, manually operated grid, isolated Darfur diesel grids without power for want of fuel, and increasingly widespread solar adoption for public facilities and water supply in the west and north (update). A 2026 study documents up to USD 3 billion in war damage to the grid and surging solar adoption, with diesel generators costing up to ten times more to run (study). No assessment addresses power or water sufficiency for data centres specifically; the position has to be read off the general grid.	REGRESSED
Energy	**Grid reliability**	No reliability indicator later than the 2019 diagnostic is held, and that diagnostic's own reliability section was not captured. The diagnostic review of 30 June 2019 records 3,500 MW installed capacity, a 32 per cent electricity access rate and the lowest tariff in sub-Saharan Africa at under one US cent per kilowatt-hour (review). Its interruption-duration and frequency indicators sit in a section the capture did not reach. The 2024 sector update describes a grid split by the conflict and operated manually, which is a description of reliability rather than a measure of it (update). No comparable national reliability diagnostic has been published since, so the standing baseline is necessarily pre-war.	NO CHANGE
Energy	**Rural electrification**	Rural grid connection fell to 5 per cent of households from 52 per cent before the conflict, and the response is off-grid solar rather than grid extension. The appraisal document prepared on 1 May 2025 states that only 5 per cent of rural households were connected to the grid, down from 52 per cent before the conflict, and designs results-based off-grid solar grants for households, farms, public facilities and telecom infrastructure (appraisal). Three de-risking workshops for rural solar minigrids were held in Port Sudan in January 2026 with the energy ministry and the electricity holding company (workshops). By March 2026 the operation's delivery actuals were still nil (report).	REGRESSED
Technical Capacity	**Robustness of government hardware and software**	A national civil-service human-resources platform was launched holding every public employee's record, with no data-protection arrangement disclosed. The platform was launched as an integrated national database of every public employee's record, held by the civil service authority and replacing paper files (platform, minister). No data-protection arrangement is disclosed for a national personnel database stood up during an active war, and the country has no data-protection statute in force. Nothing states where it is hosted or whether it carries the offsite backup arrangement that saved the vehicle register.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	Two training cohorts ran inside the window — prosecutors and police and 17 engineers abroad — against a diagnostic finding siloed systems and staffing constraints. The national computer emergency response team concluded its second cybersecurity training workshop of 2025 for cybercrime prosecutors and police in December (workshop), having run an earlier one in October (ceremony). Seventeen engineers completed an eight-week external programme in cybersecurity, cloud-systems management and data analytics between June and August 2026 (programme). The standing assessment against which these read identifies inadequate ICT infrastructure, human-resource constraints, siloed systems and weak interoperability across the major public platforms (diagnostic). It is pre-war.	MOVEMENT
Cybersecurity	**National cybersecurity readiness**	A Cybersecurity Authority was established by decree, cited alongside a fourth-tier international cybersecurity score of 48.17 out of 100. The authority was created by the same prime-ministerial decree as the digital transformation and data authorities, and the tier-four score was cited alongside its creation (authority). The country sent experts to a regional cybercrime meeting in July 2026 (meeting). No incident-response team, caseload, budget or enforcement power is published for the authority, and the statute that would give it powers is still in redrafting.	MOVEMENT

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	An electronic single window will operate only once all investment-related entities are linked electronically, with no list, sequence or date given, and a central bank electronic application system was directed to completion. The investment authority states the window will operate electronically only once every investment-related entity is linked, and gives no list, sequence or date (window). The national economic management committee directed completion of a central bank electronic application system in August 2026, and no description of the system, its scope, its data or its completion date is given beyond the direction to finish it (system). There is no national data exchange, and both instruments that would need one state the dependency without naming what would satisfy it. 2026-09-03 - the first service the repository holds that names agency-to-agency links went live: a needs-disclosure service on the national platform lets an investor complete the step digitally and wires the industry, transport, agriculture and customs bodies to each other electronically. The links are asserted in the launch announcement; no data-sharing instrument, service volume or processing time is published. An interface gateway is named as a phase-two pathway of the transformation plan (phase two) — the first named candidate for a national exchange layer, with no standards, build or status stated.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Use of digital id in other systems**	The national number is checked against the registry when banks open accounts, and the digital identity launched in May 2026 is intended for four sectors. A central bank circular of 2 December 2024 requires banks to record the national number alongside account-opening documents and to check it against the civil registry's own system (circular). That is a live cross-system verification, not a paper credential. The national digital identity was launched on 21 May 2026 by the communications ministry, the cybersecurity authority and the authentication authority in coordination with the civil registry, intended for use across banking, telecommunications, education and healthcare (launch). Banking is the only sector for which the repository holds an actual integration. 2026-09-26 - the first bank went live on the identity link, letting customers update their data through its digital channels without a branch visit; the other banks are to follow one at a time.	MOVEMENT
Data Exchange	**Interoperability of health systems**	Health reporting coverage rose from 13 to over 56 per cent by end-2025, while interoperability specifications remain undefined. The health ministry declared 2026 the year of full digital transformation, reporting coverage up from 13 per cent at the onset of the crisis to over 56 per cent by the end of 2025, and calling for full expansion of the routine reporting platform to link all facilities and coordinate with the civil registry and the statistics bureau (declaration). The standing assessment records the platform deployed since 2016 under a health management information system established in 2013, and finds technical interoperability specifications between one health information system and the next undefined (assessment). Three new tools launched in September 2025 for rollout to over 400 facilities (launch).	MOVEMENT
Data Exchange	**Interoperability of education systems**	Certification is fragmenting rather than converging, and the education information system's last evaluation found weak federal-state integration. A regional director warned on 10 June 2026 that fragmented certification systems risk creating barriers that outlast the conflict, and called for the same nationally recognised examinations to be administered consistently across Sudan and in refugee-hosting countries (statement). The only evaluation of the education data architecture the repository holds documents weak federal-state integration and incompatible software and inputs across the federal ministry, 15 state ministries and locality offices (evaluation). It predates the war by over a decade. The transitional education plan sets out building the foundation for a full system rather than repairing an existing one (plan).	REGRESSED
Data Exchange	**Interoperability of social protection systems**	A closed project's registry-linked platform is the achieved case; a new shared platform is specified against open standards. The completion report of 28 February 2025 documents that the safety-net project's management system held a data-sharing platform linked to the national civil registry over an interface, and was linked to payment providers for delivery (report). The project has closed; its registries and rails are reported still usable (retrospective). Technical specifications dated 15 December 2025 for a shared humanitarian cash platform are aligned to open government-to-person standards so it can interoperate with national social-protection systems over time (specifications). That alignment is a design intention, not a connection that exists.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Robustness of system**	The national digital identity has begun banking-sector linkage, and no enrolment count is held while bank accounts are conditioned on it. The credential launched in May 2025 and banking-sector linkage began in August 2026, its scope publicly bounded at the same time (launch, linkage, bank data). Tying bank-account continuity to a credential whose coverage is unmeasured is the exclusion risk the repository recorded before launch (trust, recovery). The electronic know-your-customer route announced by the ministry and the central bank in August 2026 is that risk being realised rather than answered: it makes the credential the condition of keeping an account current, in a country where displacement is mass and the coverage figure is still unpublished (eKYC). It has also been integrated with the trade registry (registry). No enrolment count is held at any date.	MIXED a national credential launched and tied to bank-account continuity while its coverage is unpublished in a country of mass displacement
Digital Identity and CRVS	**Registration of entire population**	Coverage was 88.8 per cent in 2021; the war closed Darfur's offices and thousands of children have no national number. Sudanese authorities reported 35.5 million of 40 million inhabitants registered by 2021, up from an official 82 per cent in 2016, with coverage materially lower in peripheral, conflict-affected and displaced populations (report). No national figure has been published since the war began. A lawyer states that Darfur's civil registry offices shut down amid the conflict, leaving thousands of children without birth certificates or a national number (account). Issuance has resumed in two states: Port Sudan in December 2025 (resumption) and Kassala in February 2026 (resumption).	REGRESSED
Digital Identity and CRVS	**National maintenance of id and credentials systems**	Card issuance resumed in Port Sudan in December 2025 with data recovered to April 2023, and a ministerial relaunch followed. The civil registry resumed national identity card issuance in Port Sudan on 27 December 2025 after a suspension of more than two years, with registry data reported fully recovered to 13 April 2023 and a new security-enhanced card in production (resumption). The interior minister relaunched personal and foreign-origin identity card issuance at the registry headquarters, with Khartoum and the remaining states to follow within about a month (relaunch). Kassala resumed in February after restoring vital records and fingerprint data (resumption). Darfur has not.	MOVEMENT
Digital Identity and CRVS	**Authentication**	A national root key for the public key infrastructure was launched in March 2026, two months before the identity platform it underpins. The cybersecurity authority launched the national root key on 12 March 2026 as the trust anchor for electronic signatures and for verifying digital documents and certificates (launch). The identity platform's own description specifies multi-factor authentication using biometrics, a personal number and a QR code, with near-field registration integrated into government and service systems (description). The legal validity of the signatures rests on article 8 of the 2007 Act, as the platform's terms state (terms). Nothing states how many credentials have been issued. The national certification authority states that its root is in no browser trust store, so government domains are certified through a commercial partner while the root serves the passport trust chain (products).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Digital id from birth**	A joint health and civil-registry committee was formed in March 2026 to record a citizen from birth to death; nothing yet operates. The health ministry's undersecretary and the civil registry's director agreed on 16 March 2026 to form a joint higher committee and technical subcommittees, and to prepare a new memorandum, to restore and develop electronic linkage between the two systems, with the stated goal of recording a citizen's health status in the national registry from birth to death (agreement). The hospital management system launched in May 2026 integrates civil registration and vital statistics at two hospitals (launch). At locality level the first electronic birth certificate after the war's suspension was issued in South Gezira (certificate).	MOVEMENT
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	The same joint committee is the only mechanism on the repository, and it is a governance step rather than a working link. The March 2026 agreement is explicitly to restore and develop electronic linkage between the health and civil-registry systems, with technical subcommittees and a memorandum to follow; the health side disclosed twelve digital-transformation projects under way (agreement). The hospital management system's first phase integrates civil registration and vital statistics alongside patient records and disease surveillance at two hospitals (launch). No source states that a birth registered in a health facility creates or updates a civil-registry record automatically. The committee exists to build that, which is the evidence it does not yet exist.	MOVEMENT
Digital Identity and CRVS	**Use by other systems**	Banking is the one working case: the national number is verified against the registry at account opening under a December 2024 circular. The circular of 2 December 2024 adopts the national number alongside account-opening documents and requires banks to check it against the civil registry's own system to confirm validity (circular). The digital identity launched in May 2026 is intended for banking, telecommunications, education and healthcare (launch), and the earlier safety-net project entered registry data over an interface into its own management system (report). Outside banking and that closed project, the repository holds intentions rather than integrations.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Governance role of central bank**	The national payment switch launched with one bank connected, and a rival payment-switch licence was revoked days after that platform's launch with no breach disclosed. The central bank launched an electronic capital-flows system on 26 August 2026, replacing manual processing (launch). The switch went live connecting one bank as its first and only participant, with the first cash-machine withdrawal completed over it; the central bank's own framing is restoration rather than a greenfield rail (switch, tender). A separate payment-switch licence was revoked days after the platform launched, with no specific breach disclosed; a Gulf linkage was reported by domestic outlets and not confirmed by the central bank (revocation). A regulator that licenses and then revokes without stating a reason, and simultaneously operates the competing rail, is a market-structure fact the record states without explaining. 2025-12-31 - the central bank published a five-year plan for 2026 to 2030 whose digital axis commits to a banking disaster-recovery centre, a wider data-centre network and a hybrid cloud project; a banker's September 2026 review finds no implementation programmes, budgets or indicators attached and would put payment continuity ahead of larger digital projects. 2026-09-28 - the governor revoked Sudan Pay Digital's mobile-payment and switching licence by Administrative Decision No. 65 of 2026, citing the 2026 banking act and the 2020 and 2013 payment regulations and stating no reason.	MOVEMENT
Digital Payments and Fintech	**G2P functionality**	A closed project's rails reached 8.7 million people; a successor safety net made a first payment to 172,388 in August 2025. The retrospective on the earlier programme records a unified registration platform and payment infrastructure reaching 8.7 million people, built in collaboration with the national civil registry and suspended after the 2021 coup, with its registries and rails reported still usable by successor programmes (retrospective). The successor's implementation report of September 2025 records targeting, identification and registration completed in five localities and a first cash payment reaching 172,388 people, over a quarter of a 602,000 caseload target, with biometric registration tracked as a management indicator (report). 2026-09-14 — the last mile is where the value goes: households in East Darfur lose up to 45 per cent of humanitarian payments converting transfers into cash, one recipient collecting 468,000 of 780,000 pounds, with traders refusing electronic payment. 2026-09-16 — in Khartoum, converting banking-application balances into banknotes costs 5 per cent at most shops and up to 10 per cent at some, amid a cash shortage and restricted applications.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Revenue collection**	An electronic government-collection system is named among the reforms behind a stated rise in first-half 2026 revenue, and the ministry states no figure, baseline or attribution method behind the claim. The finance ministry signed a contract with Sudani on 8 October 2026 for text-message services supporting the system, the third such agreement with a mobile operator. The system is contracted through a national bank (contract) and has been transferred between states (transfer), with one state's collection rate praised by the minister (praise). That state's figure of more than 90 per cent is the state's own and unverified, and the ministry states no revenue figure, baseline or attribution method behind the claimed rise (reforms, directives). A collection system spreading state by state is the most concrete delivery in this unit; the revenue claim attached to it is not testable from anything published. 2026-09 - the finance ministry signed a framework with 11 companies to supply portable collection devices, with no value stated. 2026-09-27 - the finance ministry signed a text-message services agreement with MTN Sudan so that the operator's subscribers can use the collection system and follow their transactions; no start date or fee is stated. 2026-10-04 - the finance ministry signed a text-message services agreement with a second operator, Zain.	MOVEMENT
Digital Payments and Fintech	**B2B and B2G functionality**	The central bank linked import and export transactions to the government platform in December 2025, and the first fully electronic export contract ran through it. On 28 December 2025 the central bank inaugurated electronic integration of its import and export system with the government platform, linking foreign-trade transactions to national payment systems; the first fully electronic export contract was executed through it (inauguration). In July 2026 the standards body began taking certification fees through the same platform in coordination with the finance ministry (integration). A wallet's new recurring-debit interface explicitly covers business collections and regulatory fees (interface). None of the three carries a volume figure. 2026-10-01 - company registration and two services for the legal profession were added to the platform. 2026-10-04 - the finance ministry signed a text-message services agreement with a second operator, Zain.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	The national payment switch went live in August 2026 with one bank connected, and a wallet added recurring debits two weeks later. The bank launched a USSD transfer service on one mobile operator's SIMs, reported 10 October 2026, so customers can transact without a smartphone or internet. The central bank's payments arm launched live switch services on 10 August 2026, connecting the first of the country's banks and completing a first cash withdrawal through it, with the remainder to be phased in (launch). On 24 August a mobile wallet launched an interface for pre-authorised recurring deductions, offered as an alternative to cheques for subscriptions, instalments, rent, government fees and business collections (interface). One bank connected is a switch that is live rather than a switch that is national; the dominant mobile-money service remains dominant by default. 2026-09-14 — the RSF commander ordered traders in areas his forces hold to charge one price whether paid in cash or through banking applications, ending the premium on app payments. It is a non-state directive with no enforcement record. 2026-10-06 - a bank launched a USSD banking service with a mobile operator, needing neither internet nor a smartphone and aimed at humanitarian payments.	MOVEMENT
Digital Payments and Fintech	**Population uptake**	One bank's mobile money application is the dominant retail rail, driven by cash scarcity rather than technology uptake, and short-code banking was launched to reach users without internet. Disruptions in the days before 9 October 2026 again left the application's customers unable to reach or transfer their money, amid cash and fuel shortages; the bank apologised. The dominant application carries retail settlement in the capital's markets because cash is scarce and the currency has collapsed, not because of technology uptake; a war-economy analysis finds its volumes now a monetary mass outside central-bank supervision (dominance, infrastructure, cash). Short-code banking was launched jointly by the ministry, the central bank and the telecommunications regulator and works without internet access; operational details for participating banks and operators were to be announced separately and none is held (short code). An operator wallet launched in the wartime seat of government covering transfers, airtime, bills, merchant purchases and agent cash handling as phase one of three, and no later report confirms progression (wallet).	REGRESSED
Digital Payments and Fintech	**Cross-border functionality**	Two enabling steps — a card-processing agreement and a SWIFT service bureau accreditation — against an assessment finding no connectivity outside Sudan. The standing assessment of April 2023 found the domestic payment infrastructure had no connectivity outside Sudan, that Sudan did not participate in the regional settlement system despite membership of the trading bloc, and that 92.5 per cent of remitting migrants used informal channels (assessment). On 19 January 2026 a bank signed a processing agreement covering end-to-end digital payments, card-scheme sponsorship and prepaid issuing (agreement). On 11 June 2026 the central bank's payments arm was accredited as a SWIFT service bureau (accreditation). Neither is a live corridor. Both are readiness.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Consumer protection**	Two central bank circulars made in 2026 — on USSD services and on anti-money-laundering controls — set binding duties for the first time. Circular 7/2026 of 31 March sets minimum requirements for USSD financial services: fee disclosure, no debit on failed transactions, mandatory transaction notifications, a round-the-clock complaint centre, 48-hour resolution, masking of sensitive account data, two-factor authentication for high-value transactions and encryption to TLS 1.2 and ISO/IEC 27001 (circular). Circular 8/2026 of 30 April extends monitoring, exception reporting, funding and value limits and service suspension to mobile and phone payment channels (circular). Enforcement followed: a public alert against an unlicensed application in South Darfur (alert) and a licence revoked in July (revocation).	MOVEMENT
Registries	**Population register**	The Civil Registry Act 2011 founds the register and its national number; coverage was 88.8 per cent in 2021 and has not been measured since. The Act repealed the 2001 statute and establishes the national civil registry and its unique national number, requiring the registry to supply data to competent state organs and coordinate with them (Act). Sudanese authorities reported 35.5 million of 40 million inhabitants registered by 2021, up from 82 per cent in 2016 (report). Issuance resumed in Port Sudan and Kassala over the window, and registry data was reported recovered to 13 April 2023 (resumption). No post-war coverage figure exists.	MOVEMENT
Registries	**Civil register**	Issuance resumed in two eastern states over the window, while Darfur's offices remain shut and children go unregistered. Port Sudan resumed national identity card issuance on 27 December 2025 after more than two years, with a digital identity project launched alongside it (resumption). Kassala followed on 15 February 2026, having restored vital records and fingerprint data, with extended hours and dedicated counters planned (resumption). In Gezira the state governor launched service in Umm al-Qura locality and the registry director pledged six locality centres for rural residents (launch). A lawyer reports Darfur's offices shut, leaving thousands of children without birth certificates or a national number (account).	MIXED resuming in the east and closed in Darfur
Registries	**Address register**	An address register exists only as a statutory mandate on the regulator; no deployed national register was located. The regulator's own statement of its duties under the Telecommunications and Post (Organization) Act 2018 includes establishing a postal addressing system and managing and regulating it (mandate). That is the most authoritative reachable statement, and it establishes an obligation rather than a system. The Act's own text would not fetch, so the institutional page stands in for it. No addressing standard, coverage figure, or deployment record was found for any part of the country.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Business register**	The register runs on a database built from 2003, and all administrative work in Port Sudan including trademarks was suspended in December 2025. Company registration was added to the national e-government platform in October 2026. The justice ministry's description of the commercial registrations department records its divisions, a computerised company database built from 2003, and 13 state branch offices; it still cites the 1925 Companies Act rather than the 2015 Act (description). The registrar suspended all administrative work in Port Sudan, including the trademark office, from 14 December 2025 as part of moving institutions back to Khartoum, with no resumption date given (suspension). In April 2026 the justice and communications ministries agreed to activate a digital-transformation partnership with the registrar present (partnership). 2026-10-01 - company commercial registration was added to the national e-government platform.	MOVEMENT online registration added after the December 2025 suspension
Registries	**Social protection register**	Ministers reviewed progress on a Unified Social Registry, a foundational social-protection targeting database, in April 2026. A survivors' fund opened a tender for a secure, offline-capable digital victims' registry, built with a national organisation in an 18-month project from 1 November 2026, with about 500 survivors to be documented first and hosting outside the country. The review took place at a ministerial meeting on digital transformation and civil-service reform (review). No coverage, household count, targeting rule, data source or completion date is published. In a country where humanitarian cash transfers are a principal channel of assistance, a targeting database with no published design is the instrument that most needs one.	MOVEMENT
Registries	**Electoral register**	The National Elections Act 2008 still founds the general electoral register, and no operational post-2023 register was found. The Act establishes the general electoral register and the commission that prepares, revises, approves and keeps it, repealing the 1998 statute (Act). No authoritative evidence of an operational register after 2023 was located. The war and the absence of elections leave this an operative but dormant framework. That matters for more than voting: an electoral register is one of the few population-wide datasets a state maintains independently of the civil registry, and Sudan's has not been refreshed.	NO CHANGE
Registries	**Tax register**	The register runs on a single tax identification number with monthly commercial-register feeds, and an expansion initiative opened in July 2026. The chamber's own procedural statement sets mandatory registration within 30 days, a single tax identification number covering all tax types including customs, a per-taxpayer account kept for ten years, and monthly data sharing from the commercial register (procedures). An initiative launched in July 2026, backed by an April ministerial decision forming a cross-agency committee, aims to close the war-widened gap between economic activity and registered taxpayers, citing an estimate that over 60 per cent of activity sits outside the net (initiative). The electronic invoice system went live from the start of May, linking invoice data to taxpayer accounts (launch).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Land register**	Offices are reopening and the electronic system is being restored, while a six-month freeze blocks dealings in reconstituted parcels. The registrar general states the electronic system across state and locality offices was disrupted by the war, offices reverted to paper, and restoration is under way with field preparation for renewed network linkage (statement). In March 2026 he ordered a six-month freeze on sales and ownership transfers for parcels whose registers had just been reconstituted, after Khartoum offices were burned and forgers were found selling absent owners' land (order). The Jabal Awliya office reopened in April under a 2025 settlement law and a chief justice regulation covering record reconstruction (reopening). Registration has sat with the judiciary since 1909, across 106 branches (administration).	MIXED offices reopening under a freeze on transfers
Sectoral management information systems	**Health**	A health-sector platform was referenced at a ministerial meeting with an international agency urging acceleration, and it is not confirmed live. The ministry, the health ministry and the agency met to set a comprehensive health digital strategy; the platform was referenced rather than reported as operating, and the agency urged acceleration (meeting). It is distinct from the 130 health services later reported live through the national platform, and the relationship between the two is not established. So the repository holds a named health platform that may or may not be the thing already delivering services, and no source resolves it. A public-private platform deploying electronic medical records and hospital information systems runs in partnership with the Khartoum State health ministry (platform). It describes itself as national; the evidence reaches one state, and no ministry document naming it is held.	MOVEMENT
Sectoral management information systems	**Education**	A pilot began in Red Sea State in May 2026 and a nationwide school census was launched, against a system whose foundation is still being built. Tablets, computers, a smart display, routers and conferencing equipment were handed to the Red Sea State education ministry on 12 May 2026 to support the information system pilot and a monitoring dashboard (handover). A nationwide school census covering schools, students, teachers, services and learning materials was launched in April 2026, starting in three states and expanding in phases, explicitly to build an integrated national database (survey). The transitional education plan sets out establishing the foundation for a future full system, in the context of war-disrupted governance (plan). A monitoring system for the Transitional Education Plan collects 71 indicators digitally against a single dashboard, adopted by the sector's coordinating bodies on 23 July 2025 (progress report). Nothing states how it exchanges data with the education management information system.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Social protection**	A successor safety net paid 172,388 people in August 2025, and the Red Crescent replaced spreadsheets with a live platform. The safety-net project's implementation report records targeting, identification and registration completed in five localities and a first payment reaching 172,388 people against a 602,000 caseload target (report). The national society moved from spreadsheet-based tracking to a centralised platform with offline registration, automated deduplication and role-based access, piloted with 516 households in Red Sea State and 200 displaced people in White Nile at a full payment success rate (account). Both sit alongside a unified social registry still in development, and the closed project whose registries they inherit (retrospective).	MOVEMENT
Sectoral management information systems	**Justice**	The judicial authority signed a contract for a judiciary digital-transformation project, financed by the finance ministry and vetted by the justice ministry's contracts department. The contract was signed with a national technical company, financed by the finance ministry and vetted by the justice ministry's contracts department (contract). No value, scope, timetable or deliverable is published. It is one of the few procurements in this ledger where the vetting route is stated, which is itself worth recording.	MOVEMENT
Sectoral management information systems	**Tax**	The core system integrates with 18 external bodies, over 80 per cent implemented, and the electronic invoice system restarted in May 2026. The chamber describes a core system covering digitised registration, declarations, assessments and payments, an external portal, integration with 18 external bodies over 80 per cent implemented, internal and external networks and its own data centre (description). On 4 May 2026 the authority announced resumption of the electronic invoice system, publishing the executable, registration form, technical requirements and user guide (announcement); the system went live from the start of that month, with 2,000 taxpayers targeted for onboarding by year end (launch). The wider financial management system it should feed remains an aspiration (briefing).	MOVEMENT
Sectoral management information systems	**Customs**	The customs system is now linked to the civil registry through the national platform, though its reach beyond one reactivated yard is still unstated. The reactivation was at one customs yard ahead of resuming formal customs operations there (reactivation). It rests on a single source predating the reporting window, and no later report confirms further rollout. The national platform has meanwhile been adopted as the sole channel for foreign-trade transactions, and nothing states how the two relate. On 4 October 2025 the customs authority announced completed integration between the customs management system and the civil registry database through the national platform, so a declaration carrying a forged national identity number is rejected (integration). That answers how the two systems relate, and still leaves the reach of the customs system itself unstated.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Land**	35,000 of 40,000 scheme maps were recovered after wartime destruction, while land information itself remains closed to the public. The agriculture ministry recovered 35,000 of 40,000 archived maps of a century-old irrigation scheme, aided by electronic archiving of some maps begun outside the irrigation facilities in 2008 (recovery). Khartoum State's 2026 to 2036 plan includes electronic archiving of agricultural land records and networking between the state's land departments (plan). The standing assessment finds land governance data are not open, none has been available online since the 2023 escalation, and the last inventory assessment scored Sudan 24, ranking 159th worldwide (assessment).	MOVEMENT
Other GovTech and e-Gov	**e-government services**	The national platform became the sole channel for all foreign-trade transactions with permits issuable from any location, and no coverage or uptake figure is published for any service tranche. No coverage or uptake figure is published for any of the announced tranches. A public procurement platform launched in August 2026 (procurement), and a finance-ministry platform for public-sector companies launched the same month, with no supplier, cost or scope published (finance platform, launch). 2026-09-15 — electronic collection of standards fees reached the White Nile branch, and a government platform was put before the national economic committee without a stated function or start date. 2026-09-16 — the finance ministry began practical steps to launch Itzan, a national budget system said to have reached its final stages, planned for the 2027 budget and full operation in 2028. No cost or supplier is published. The traffic police launched a platform renewing driving licences online, including from abroad, with the national number as the login (service). No use figure is published. 2026-09-29 - the education ministry put Sudan School Certificate applications and fees online; no uptake figure is published. 2026-10-01 - company registration and two services for the legal profession were added to the platform. 2026-09-07 - the animal resources ministry launched an official website for producers, breeders and investors.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	The state data centre in Khartoum was restored, and a state coordination directorate carries the remit for ICT projects at wilaya level. The 1,300 square metre state data centre was rehabilitated and returned to service with cloud computing, data security and artificial-intelligence support, qualifying it to host government systems centrally (announcement). The National Information Center, established under a 1999 decree, carries a state coordination directorate whose remit names coordinating and following up ICT projects and training at wilaya level and supervising state information forums, alongside an infrastructure directorate (structure). No budget, staffing or equipment figure for local government ICT is held anywhere. A content analysis of 18 Sudanese local-government websites found all of them informational only, with no transactional service and no integration between them (analysis). It is the only measurement of local-government digital provision the repository holds. 2026-10-06 - Khartoum State put its standard systems back into operation, connected a government fibre network to 36 state units and signed six partnership memoranda.	MOVEMENT
Digitalisation of sub-national government	**Digitalisation of local government records**	Khartoum's urban planning ministry began digitising services on the government platform in June 2026, starting with the electronic commercial licence. The state urban planning ministry launched its platform team under the governor's patronage, beginning with the electronic commercial licence, and covering the linking of ministry departments and archiving into the platform (launch). The state agriculture ministry's 2026 to 2036 plan includes electronic archiving of agricultural land records and networking between land departments, alongside rehabilitation of destroyed office equipment (plan). The land registrar is separately restoring the electronic system across state and locality offices that reverted to paper (statement). 2026-10-01 - company registration and two services for the legal profession were added to the platform.	MOVEMENT
Rural digital data capture	**Digitalisation of rural health clinics**	Monitoring expanded to 4,809 service delivery units nationwide, and three digital tools launched for rollout to over 400 facilities. The health resources monitoring system, deployed since June 2023, expanded its footprint from 4,363 to 4,809 service delivery units nationwide, including rural clinics and mobile and emergency structures, on data to 31 January 2026 (report). Three tools — a care coordination app, a telehealth and electronic records app, and a training app — were launched in September 2025 after a pilot in five primary care facilities and one referral hospital, for rollout across all 18 states to over 400 facilities and 3,000 health workers, explicitly targeting marginalised and remote communities (launch).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural primary schools**	Education technology packages were distributed to remedial-education schools in Gezira in July 2026, under a grant covering offline servers, tablets and solar power. The state education ministry launched distribution of tablets and related technology to remedial-education schools serving primary pupils, described by state officials as the largest ICT project in the state and aimed at restoring foundational literacy and numeracy (distribution). The grant behind it, USD 41.9 million approved in November 2024, covers offline learning servers, tablets, solar power, digital learning hubs, remote-learning systems and dashboard monitoring in reopened public primary schools nationwide (appraisal). No count of schools reached is published.	MOVEMENT
Rural digital data capture	**Digitalisation of rural registry offices**	Gezira reopened a locality registry with six more pledged for rural residents, and South Gezira issued a first electronic birth certificate. The state governor launched civil registry service — national number and birth certificate issuance — in Umm al-Qura locality, and the registry director announced all state-level centres complete and pledged six locality centres to serve rural residents (launch). The South Gezira locality centre issued the first electronic birth certificate after a war and displacement-driven suspension, for a child born in August 2023, restoring documentation access for the locality and surrounding villages (certificate). Against this, Darfur's offices remain shut (account).	MOVEMENT
Rural digital data capture	**Digitalisation of rural police stations**	The only figure the repository holds is 31,667 electronic reports filed in under five months of 2023, with no locality breakdown. A stolen-vehicle lookup was added to the platform in September 2024. The police counted 80,902 citizen reports since June 2023, 59,115 of them for missing vehicles, at January 2025. A police spokesman stated that 31,667 reports were filed on the electronic reporting platform between 1 June and 21 October 2023, feeding the criminal action committee, the national traffic system and international bulletins (statement). No locality-by-locality coverage figure is given, so whether rural stations file into it cannot be established from the repository. The traffic police's own unified smart platform, in final preparation in June 2026, would issue licences and register vehicles across states but is traffic-specific rather than general station-level digitisation (preparations).	MOVEMENT

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	A data and artificial intelligence authority was created by decree in November 2025, mandated to let the state use AI in decision-making and services. The prime minister's decree established the authority under the communications ministry, evolved from the National Information Center, explicitly mandated to regulate national data management and to enable the state to employ artificial intelligence to support decision-making and develop public services (decree). In March 2026 the prime minister directed that strategic projects be brought onto a national projects-management platform, alongside directives on AI in higher education and hospital digitisation (directives). No deployed administrative AI system is documented. The mandate and the directive are the whole of the record.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in sectoral management information systems**	A school-detection model reached 95 per cent accuracy from satellite imagery, and an education AI roadmap is 70 per cent complete. A deep-learning model detecting school locations and boundaries from satellite imagery was built at 95 per cent accuracy across Sudan by 52 engineers over six weeks, designed for integration into a school-connectivity mapping system (case study). A project running from January 2024 to December 2025 to build official capacity and develop a roadmap for integrating artificial intelligence and information technology into literacy and out-of-school education programmes stood at 70 per cent progress in the fourth quarter of 2025, on a USD 20,000 budget (project). Both sit in education. No other sector's management system carries an AI component on the repository.	MOVEMENT
AI	**Development of national / regional AI systems**	Sudan became a founding member of a world AI cooperation organisation in July 2026 and directed work to begin on a national AI degree programme. The ambassador in Beijing signed the founding agreement of an organisation established on 17 July 2026, making Sudan one of 35 founding member states, for international cooperation, capacity building, research and technology transfer (signature). The prime minister directed the communications ministry to begin technical infrastructure preparation for a national artificial-intelligence bachelor's programme and curriculum integration (directives). A joint university protocol signed in August names artificial intelligence among priority fields (protocol). No national model, dataset or compute facility is held.	MOVEMENT
AI	**Control of AI abuse**	The information ministry reserved legal action over a manipulated image of the prime minister, under a statute that is not AI-specific. The ministry stated it reserves the right to act against those producing, publishing or promoting a fabricated, AI-manipulated image of the prime minister (statement). No provision is named. The instrument reached for is the 2020 cybercrime amendment, which increases penalties across the 2018 law's computer-misuse and false-news offences and carries no AI-specific provision (gazette). A partner project launched in November 2025 pairs an AI detection tool for manipulated narratives and bot amplification with local narrative analysis and Arabic-language resources (project).	MOVEMENT
ICT Industry	**National capacity in DT-related production**	Domestic production is a licensable category — technical support for basic infrastructure manufacturing — with no licensee, output or employment figure held. The regulator's licensing framework includes a technical support licence category explicitly for basic infrastructure manufacturing, alongside licences for value-added digital services, internet applications, automated tracking and payment services (framework). That establishes production as a regulated, licensable activity. It does not establish that anyone is doing it: no register of holders of that category, and no production figure, was located. The nearest thing to industrial evidence in the window is the launch of the national payment switch as domestic financial infrastructure (launch).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Innovation ecosystem	**Technology hubs**	A regional project activated a university incubator in August 2026, alongside a standing technology transfer authority mandated to expand incubators. The finance ministry, the African Development Bank and the regional body launched the national component of an entrepreneurship and innovation project — regionally about USD 3.255 million, also covering South Sudan and Djibouti — delivered through the University of Khartoum's entrepreneurship incubator (launch). The research council's technology transfer authority, established in 2019, states a mandate to expand technological incubators and model production units and to move research outputs into production (mandate). A private organisation that builds out the startup sector runs its own hub (about). No count of active hubs is held.	MOVEMENT
Innovation ecosystem	**Tech startup ecosystem**	Eight startups secured over SDG 500 million at a December demo day, and 35 entrepreneurs from six states were selected in July 2026. The sixth demo day concluded with eight startups in renewable energy, agriculture and healthcare collectively securing over SDG 500 million in growth investment through an innovation fund, subject to due diligence (demo day). Batch 9 selected 35 entrepreneurs from Khartoum, Kassala, Al Jazirah, Red Sea, Gedaref and White Nile across nine sectors, with many ventures using digital tools (announcement). A youth entrepreneurship programme for 500 people launched in Kassala in November 2025 under a memorandum with the state ministry (launch). Recruitment is nationwide despite the war; no sector-wide financing total is published.	MOVEMENT

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	A unified digital personnel platform launched in August 2026; the only training programme the repository holds trained 8,000 employees by 2009. The pre-war programme run by the National Information Center offered a free 45-day curriculum in office software and the internet, training over 8,000 employees by 2009 including ministers, with state centres in four states and a target of covering all government employees by 2011 under a 2001 resolution (profile). A unified digital platform for civil-service personnel records launched in Khartoum on 5 August 2026, described as the first step towards a national digital file covering recruitment, training, career development and evaluation (launch). A cybercrime investigation workshop for prosecutors and law-enforcement ran in October 2025 (ceremony).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (general population)**	The national programme's last figure is 130,855 graduates by 2007; the only current measurement finds about 10 per cent of women phone owners use them for business. The technological-illiteracy eradication project launched in March 2002 had reached 117 centres and 130,855 graduates by the end of 2007, on the last account the repository holds (profile). No later figure exists. A 2026 study combining a labour-market panel survey with fieldwork in Kassala State finds only around 10 per cent of women who own phones use them for business, and identifies practical digital skills, affordability, electricity and connectivity reliability, trust and safety, and institutional intermediaries as what actually stops use, beyond device access (brief). No nationally representative digital-literacy measurement is held.	NO CHANGE
Training and skills	**DT-related training in secondary education**	Teacher-training packages are being standardised and accredited with a digital delivery component, against a curriculum baseline last measured in 2007. The baseline records a national ICT-in-education policy launched in 2002, ICT introduced into secondary curricula in 2004, computers in around half of secondary schools at about ten per school, and an ICT curriculum from grade four (survey). It is pre-war and pre-secession. A workshop with 30 training experts from Sudan's states launched standardisation and accreditation of teacher-training packages for education in emergencies, explicitly connecting state training centres to the national centre through digital technology (workshop). The ministry declared 2026 the year of technical and vocational education, with equipment handed over and e-learning capacity building cited (declaration).	MOVEMENT
Training and skills	**DT-related university facilities and qualifications**	A university created a deanship of digital transformation in February 2026, and a joint international university was agreed by protocol in August. A university decision of 3 February 2026 elevated an information and communication technology centre to a deanship of digital transformation, described as the first such deanship in a Sudanese university, following wartime e-learning, electronic certificate issuance and online registration (decision). A protocol signed in Ankara on 3 August 2026 provides for a joint public university in Khartoum, with information technologies and artificial intelligence named among its priority fields, alongside an initiative hosting three Sudanese universities (protocol). The standing facilities baseline records computer labs in all 27 public and all 47 private higher institutions for the 2004-05 year (survey). 2026-09-12 — the higher education council approved an e-learning and blended learning regulation by decision 138, in force from signature; its text is not held.	MOVEMENT
Training and skills	**Graduates entering DT ecosystem**	An operator digital-skills programme ran workshops for content creators in 2025, and it is the only training data point held for the country. The programme launched workshops in digital media and online marketing for content creators (programme). No participant numbers, duration or outcome measures are given, and it has not been refreshed since. It is the only capacity or training record in this ledger, against a government standing up an identity credential, a payment switch, a civil-service records system and a national services platform at once.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Research institutions	**Think tanks and academic departments contributing to DT policy**	Three research outputs were published in the window: a digital-payments policy brief, a privacy-gap series and a working paper on digitalised food assistance. A Sudan-based research institute founded in 2021 published a brief on 22 March 2026 analysing digital payments in Sudan through a digital public infrastructure frame; only its abstract is reachable (brief). A five-part series opened on 19 July 2026 on the absent data-privacy legal framework, reading wartime adoption of digital finance and AI platforms against the regional convention and the November 2025 decree (series). A working paper by researchers at the University of Khartoum and a London institution, based on 83 interviews across four states in 2025, treats wartime digitalisation of humanitarian cash as a question of political economy and data extraction (paper).	MOVEMENT

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	The cabinet opened a complaints and suggestions page on the government portal, and a humanitarian mechanism handled over 230,000 cases in 2025. The ministry of cabinet affairs opened a dedicated complaints and suggestions page on the government portal as a direct channel for citizens, for immediate follow-up (announcement). No caseload or response figure is published for it. The inter-agency mechanism — digital channels plus over 150 community champions, almost 20 of them with disabilities — received more than 230,000 feedback cases in 2025 with almost 90 per cent closed, and over 570 community reports covering the needs of more than 3 million people (chapter). The same chapter records 57 per cent of consultation respondents not knowing how to submit feedback at all (chapter).	MOVEMENT
Access to services	**Citizen participation in policy**	A messaging-app consultation platform with over 9,000 subscribers ran a ceasefire round, and a response plan drew on 3,429 community members. The platform, built on a messaging chatbot and a deliberation tool, ran a consultation round in October 2025 gathering citizen input on ceasefire negotiations among communities inside the country and in the diaspora; the operator states it is voluntary and not statistically representative, and complements rather than replaces in-person dialogue (report). A consultation process between August and October 2025 engaged 3,429 community members and 145 community-based organisations, including women-led organisations and organisations of persons with disabilities, across all 18 states, to inform a response plan (chapter). Both are humanitarian. The closest governmental instrument is an engagement outcome in a country team report (report).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Gender equity**	A study found about 10 per cent of women phone owners use them for business, and a programme enrolled 221 women and displaced people in July 2026. The Kassala study identifies practical digital skills, affordability, electricity and connectivity reliability, trust and safety, and institutional intermediaries as what actually stops use, beyond device access, finding only around 10 per cent of women who own phones use them for business (brief). A programme launched on 8 July 2026 enrolled 221 conflict-affected women and internally displaced people in a free three-phase entrepreneurship and digital-entrepreneurship course, delivered in two languages through a mobile-first platform with offline access, running to February 2027 (programme). The regulator runs an annual girls-in-ICT programme (statement). No national gender-digital-access dataset exists.	MOVEMENT
Access to services	**Inclusion of persons with disabilities**	A national strategy for 2026 to 2030 was issued in December 2025, calling for accessible communication including digital channels. The strategy, issued by the human resources ministry and the national disability council, identifies the 2017 disability act and the national council as the existing legal and institutional basis, situates itself against the 2021 to 2030 national disability strategy, and calls for disability-inclusive service delivery and accessible communication including digital and social media (strategy). Organisations of persons with disabilities took part in the community consultation informing the 2026 response plan (chapter), and almost 20 of the mechanism's 150-plus community champions have disabilities (chapter). No accessibility standard for public digital services is held.	MOVEMENT
Access to services	**Inclusion of refugees and IDPs**	7.9 million beneficiaries in 2024 including 3.4 million displaced people, and a refugee-facing site in Egypt that became the most visited country site worldwide. The 2024 country report records 7,911,328 beneficiaries including 3,432,876 internally displaced people and 879,777 refugees, with more than 1.7 million reached through cash-based transfers worth USD 53.8 million, and a business-to-business distribution model piloted for over 135,000 people in access-constrained locations (report). Sudanese refugees are now over three-quarters of the roughly 1.1 million registered in Egypt, a fourteen-fold rise since 2023, served through digital channels: 12.8 million views on one platform and 3.4 million on the help website in 2025 (fact sheet). A digital learning centre in eastern Chad offers training to up to 400 learners (release). The refugees commission announced smart cards carrying a Foreign Number from June 2026, against a register of more than 950,000 refugees (announcement). Its stated purpose is regulating presence and verifying identity; nothing states which services the number gives access to.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital divides	**Bridging of digital divides**	Connectivity assessments began in two Darfur hotspots in February 2026, with satellite services sought and equipment moved. The emergency telecommunications cluster began connectivity assessments from 1 February 2026 in Tawila in North Darfur and Geneina in West Darfur, two of the most critical humanitarian locations (report). The same report records authorisation sought from the foreign ministry to extend satellite-phone services through 2026 and to pilot satellite internet devices and push-to-talk units, and three tonnes of telecommunications equipment moved. The divide these address is not measured: the only national usage figure is a commercial estimate of 28.7 per cent penetration (estimate), with no subnational breakdown on the repository. The central bank governor records that most Sudanese adults remain unbanked and that the upgraded directorate responsible has yet to formulate a national financial inclusion strategy (opinion).	MOVEMENT

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The 2012 to 2016 strategy has expired, and a technical support programme with Egypt's statistics agency opened in March 2026 to lay the ground for a new one. Sudan's first strategy for the development of statistics, coordinated by the statistics bureau with development support, covered 2012 to 2016; a later 2017 to 2021 iteration is recorded as due for end evaluation and update (strategy). Egypt's statistics agency received Sudan's bureau director on 30 March 2026 to launch a technical-support programme covering training, census and economic-statistics methods, and an institutional assessment explicitly framed as laying the foundation for a national statistical-system development strategy (programme). The legal frame beneath both is a 2003 Act assessed as outdated (assessment).	MOVEMENT
National statistics	**Censuses and surveys**	There has been no census since 2008, while a fourth welfare monitoring round was fielded across all 18 states in 2025. The country programme document states no national census since 2008, statistical and health information systems collapsed after the 2023 conflict, and a 2024 common operational population dataset used in lieu of a census (document). Against that, a fourth mobile-phone welfare monitoring round was fielded between May and July 2025 across all 18 states with a dedicated refugee sample, covering food insecurity, displacement, employment, education and health (catalogue entry). The first national multidimensional poverty survey was published in 2026 for a 2023 reference year; its full report was not fetchable and is raised as an acquisition (launch page).	MIXED no census and an active survey programme

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**Statistics from administrative data**	A hospital management system launched integrating vital statistics with clinical records, and health reporting coverage reached over 56 per cent. Phase one of the hospital digitisation programme launched at two hospitals, integrating civil registration and vital statistics, electronic patient records, laboratory and pharmacy systems, the health management information system, disease surveillance and human-resources information — a direct administrative-data-to-statistics pipeline (launch). The health ministry reports routine reporting coverage up from 13 per cent at the onset of the crisis to over 56 per cent by the end of 2025, and calls for coordination with the civil registry and the statistics bureau (declaration). In education, an information system pilot and monitoring dashboard began in Red Sea State (handover).	MOVEMENT
Open data	**Use of open data**	Land governance data are not open and none has been online since 2023; the last inventory assessment scored Sudan 24, ranking 159th worldwide. The assessment finds land governance data and information are not open, no open data has been available online since the 2023 conflict escalation, and Sudan's last Open Data Inventory assessment, in 2018, scored 24 and ranked 159th worldwide (assessment). No open-government-data portal or policy was located. The access-to-information law of 2015 is the closest instrument, and the commission it requires was never effectively established (law). What data does reach the public reaches it through partners: survey microdata catalogues and humanitarian data platforms rather than a national portal.	NO CHANGE
Use of satellite data	**Agricultural use of satellite data**	Satellite data now substitutes for destroyed ground stations: 2025 cereal production at 5.2 million tonnes, and nearly 40,000 square kilometres of farmland degraded. The 2025 crop and food supply assessment covered all 18 states using satellite-derived rainfall and vegetation health data to compensate for destroyed ground weather stations, estimating national cereal production at 5.2 million tonnes, 22 per cent below the prior year (report). A satellite land-health comparison between early 2023 and 2025 finds nearly 40,000 square kilometres of farmland degraded since the conflict began, including severe damage to a major irrigation scheme (analysis). An earlier technical report analyses cropland extent and cultivated-area trends from 2018 to 2024 (report). All three are partner-produced.	MOVEMENT
Use of satellite data	**Meteorological use of satellite data**	The national meteorological authority forecasts from satellite rainfall estimates, and a dekadal subnational rainfall series runs to July 2026. The authority's own seasonal forecast report states its rainfall forecasts use estimated rainfall data obtained from satellites, enhanced with surface rain-gauge data (report). That is primary evidence of operational sovereign use, not a partner product. A dataset of dekadal subnational rainfall indicators computed from satellite imagery combined with station data and short-term forecasts was modified on 14 July 2026 with coverage extended to 10 July (dataset). Sudan joined four other basin countries at an April 2026 workshop advancing an interoperable flood early-warning platform, with a roadmap to operational testing (workshop).	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	The standing instrument is a 2021 memorandum for up to USD 1 billion covering sectors including 5G, with no agreement recorded in force since. The export credit agency and the government signed a memorandum to explore up to USD 1 billion in export financing across infrastructure, energy, agriculture, health care, mining, 5G and water (announcement). The State Department's own later investment climate statement recorded no active development finance or investment guaranty agreement in force after the 2021 military takeover, so the memorandum stands without an instrument behind it. The one US commitment inside the window is humanitarian rather than digital: USD 200 million to a humanitarian fund at a February 2026 event that raised USD 1.5 billion in pledges (event).	NO CHANGE
China activities	**Chinese MoUs, engagements and commitments**	The digital transformation and communications minister attended the opening of a digital cooperation centre with China (report). The digital transformation and communications minister attended the opening of a digital cooperation centre with China (report). No instrument, value or scope is stated. China's foreign ministry separately records a strategic partnership dating from September 2015 and states that its cooperation projects in Sudan have been suspended since April 2023 (profile).	MOVEMENT
EU activities	**EU MoUs, engagements and commitments**	The EU's October 2025 Council conclusions set political and humanitarian asks and carry no digital programme, financing or memorandum. The Foreign Affairs Council approved conclusions on 20 October 2025 reaffirming commitment to Sudan's sovereignty, unity and territorial integrity, setting four political asks — a ceasefire, humanitarian access, inclusive civilian governance and accountability — and committing to intensify restrictive measures where warranted (conclusions). Nothing in the captured paragraphs names digital infrastructure, connectivity or digital public infrastructure. No EU or European Investment Bank digital financing, programme or memorandum covering Sudan was located anywhere in the repository.	NO CHANGE
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	A Gulf-based processor signed a strategic processing agreement with a domestic bank for card-sponsored digital-payment processing, formalised at a regional trade event. The agreement covers card-network-sponsored digital payment processing and was formalised at a regional technology exhibition (agreement). No value, term or volume is published. It is the only foreign commercial arrangement in the payments stack the repository holds, alongside a revoked switch licence whose reported Gulf linkage the central bank never confirmed.	MOVEMENT
India activities	**India MoUs, engagements and commitments**		NO EVIDENCE
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
National policy linking digital infrastructure to energy supply	A national policy or programme document connecting grid rehabilitation or generation capacity to digital-infrastructure planning.	2026-09-03

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Compute or high-performance computing capacity	A data-centre, cloud or high-performance computing specification, or a hosting contract for a public system beyond the two named data centres.	2026-09-03
Open government data portal	A public-sector open-data portal or policy document.	2026-09-03
European Union digital cooperation with Sudan	Any EU or European Investment Bank digital financing, programme or memorandum covering Sudan.	2026-09-03
Indian digital-sector engagement with Sudan	Any Indian government or vendor financing, contract or memorandum covering Sudanese digital infrastructure.	2026-09-03
Fiscal-year budget for the digital estate	Sudan's enacted budget for 2025 or 2026, read into budgets/SDN/ with the digital lines of the Ministry of Digital Transformation and Communications, the digital authorities, the civil registry and the central bank's payment systems.	2026-09-25
Where the offshore backup of the vehicle and driving-licence database is hosted	A traffic police or Ministry of Interior statement naming the country and provider hosting the offshore backup and the terms governing it.	2026-09-25
