PROGRESS REPORT

Togo: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	A national digital strategy for 2025-2030 reached consultant procurement with no adoption reported, under a government roadmap whose text is not held. Neither the 2020 strategy nor the 2025-2030 draft is held, and the repository does not settle whether the two names denote one instrument or two (strategy, toolbox). The roadmap for 2026-2031 is present only through the government's own account of a private-sector contribution workshop convened under it; the government said it would specify by the end of 2026 the reciprocal commitments it will offer the private sector (roadmap, financing). At a national review on 28 August 2026 the finance ministry reported an average reform implementation rate of 68.4 per cent at end-June 2026, the digital items named being expansion of biometric identification and a broadened mandate for the national cyberdefence company (reforms); the digital share of that average is not separated out.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**ICT strategy**	The electronic communications and posts regulator was created in October 2020 in an institutional reform replacing its predecessor. The creation date is held at month precision, and a claim that the country's framework is a model for other African markets is the publisher's and uncorroborated (regulator, broadband). The regulator is the most active institution in this ledger — it runs the frequency plan, the fee decrees, the consumer tour and the quality regime — and no annual report, budget or enforcement series for it is held. The digital-economy sector policy for 2018-2022, on four axes, was approved by decree in the Council of Ministers in October 2017. Its term has ended.	NO CHANGE
Strategies, plans and policies	**Broadband strategy**	A decree approving the national frequency allocation plan was adopted in March 2026 and published by the regulator in April. The decree was adopted in Council of Ministers on 11 March 2026 and published on 15 April; the superseded 2022 decree is not held and carries no exact date in the repository (plan, royalties). A frequency allocation plan adopted and published is the most concrete piece of connectivity policy this unit produced in the period, and no assignment, auction or award has followed it on the record.	MOVEMENT
Strategies, plans and policies	**Data storage / cloud strategy**	Commercial hosting capacity advanced twice in the period; no national cloud strategy is adopted. A colocation offering opened at Lome on 15 October 2025, letting Togolese organisations place their own servers in a third-tier facility with redundant power and biometric access control. A protocol signed at Lome on 26 May 2026 between the same operator and the wholly state-owned company running the national data centre commits to a private-cloud service catalogue hosted in Togo. Both are vendor announcements. The repository holds no adopted national cloud or data-storage strategy, no obligation on any public body to use in-country hosting, and no capacity or price for the private cloud.	MOVEMENT
Strategies, plans and policies	**Data interoperability framework / roadmap**	A common interoperability framework is published inside the state enterprise-architecture guide, and is still a draft on its own publisher's record. The enterprise-architecture guide defines a Cadre Commun d'Interoperabilite — a duty to define and maintain, across the state administration, the norms applicable to exchanges between administrations, over four levels of interoperability. The guide's own version page records version 1.0, prepared by the digital agency, status Brouillon, with the version date, reviewer and review date fields blank and an empty revision table. A published normative text is not an adopted one: no decree or order giving the framework force of law appears anywhere in the repository, and the guide names that step as still outstanding.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**AI strategy**	No adopting act for a national artificial-intelligence strategy has been located, and two official statements disagree about whether one exists. At a ministry event of 13-15 November 2024 the digital economy minister stated it was necessary for Togo to have a national artificial-intelligence strategy, so none had been adopted at that date. A justice ministry symposium of 25 November 2025 gathered more than fifty state and institutional actors on artificial intelligence in public governance and closed by recommending regulation of digital platforms on ethical grounds. A government report of July 2026 then refers to the national AI strategy of Togo as an existing framework without naming an adopting act. No such act is held. 2026-09-21 - the education ministry presented a drafted national policy on artificial intelligence in vocational training to a regional workshop, to be enriched by its close; it is a sectoral policy and does not settle whether a national strategy exists.	NO CHANGE
Strategies, plans and policies	**Data localisation policies**	A continental profile records no localisation requirement; the data-protection authority states an objective rather than an obligation. The profile states that Togo imposes no restrictions on data localisation, no requirement for local storage or processing, and that articles 28 to 31 of the 2019 data-protection statute frame transfers rather than restricting them — the framework does not address the place of storage at all. The authority's president said in January 2026 that the final objective is to require personal data of Togolese to be stored in Togo, and that authorisation requests for international transfers are already being handled. The intention has an infrastructure counterpart in the May 2026 private-cloud protocol, and no obligation on anyone to use it.	NO CHANGE
Strategies, plans and policies	**Data governance policy**	No standalone data-governance policy is held; the 2021 digital strategy is the only national instrument treating data as a cross-cutting programme. The ministry's own detailed presentation of the Strategie Togo Digital 2025, dated April 2021 and adopted publicly by the President on 27 April 2022, carries data governance, data valorisation, state reference registries and a national interoperability platform as programmes. Its period has expired and it is still cited as the operating framework — 181 classrooms connected under it in 2026. The institutional side moved: the Council of Ministers adopted a decree on 19 February 2026 converting the geographic information directorate into an autonomous institute, on the ground that the existing arrangement held back production of reliable geographic data.	NO CHANGE
Strategies, plans and policies	**Open data policy**	The portals exist and are being rebuilt; no open-data policy, charter or licence has been adopted behind them. The national open data portal and a geoportal were launched on 19 December 2024, which establishes the infrastructure and dates it. A national workshop of 7 to 11 April 2026 trained focal points on statistical data and metadata exchange modelling and began standing up a second-generation portal for the statistics institute and the sector ministries, financed by the World Bank. No adopted policy, charter or national licence was located; the geoportal's own terms invoke a presidential decree without giving its number or date, and Togo is not a member of the Open Government Partnership.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Data protection legislation**	A personal data protection law of ninety-seven articles was gazetted in October 2019, and what moved in the period is the repository's holding of it rather than the instrument. The law was gazetted on 29 October 2019 and the gazette's own signature block is dated a day after the title date (law, implementation). The instrument did not move in the window. It is the statute that created the protection authority by an article rather than by a separate constitutive act, and it is the basis for the corporate correspondents programme recorded separately. 2026-09-15 — the regulator turned to the state's own compliance, convening ministry chiefs of staff and secretaries-general on their obligations. No count of administrations registered or compliant is published.	NO CHANGE
Legislation and regulation	**Cybersecurity legislation**	The framework statute of 7 December 2018, as amended in June 2022, is in force and both texts are now held. The 2018 statute sets the national cybersecurity regime, defines the cybercrime offences and procedure, creates the national cybersecurity agency at article 6, provides for a digital sovereignty fund and refers implementing decrees to article 48. It was amended by loi n 2022-009 of 24 June 2022, held as a scan whose first page only is transcribed; the number and date are corroborated independently in the visas of a September 2022 decree. None of the implementing decrees article 48 provides for is held, and no enforcement or prosecution record under the statute appears in the repository.	NO CHANGE
Legislation and regulation	**Legislation covering digital id**	A review of the 2009 civil registration law opened in August 2026, with proposals due before the end of the year, and ran a technical workshop for its support cell in September. The scoping meeting was held in August 2026 (review), and a three-day technical workshop from 8 September 2026 equipped the support cell running the review (workshop). It is the statute under which the birth-registration catch-up campaigns and the online certificate pilot operate, and the review is the first movement on it the repository holds. No draft or proposal is on record. The 2020 biometric identification law, as amended in 2022, constitutes the national biometrics authority under the presidency and gives it custody of the central biometric database and the household social register (mandate). The text itself is not held.	MOVEMENT
Legislation and regulation	**Digital payments legislation**	An anti-money-laundering law was adopted in the December 2025 budget session, with no promulgation date, number or gazette reference held. The source gives only the budget session, so the vote date is not established (law). It is the only payments-adjacent statute in this ledger, and its text cannot be read. Against six institutions live on the regional instant payment platform and a treasury prepaid card announced, the governing law is present as a headline. 2026-09-07 - the Council of Ministers adopted a bill authorising ratification of the convention governing the Banking Commission of the West African Monetary Union, examining four bills and adopting three together with one decree. Neither the convention nor the bill is held, no parliamentary timetable is stated, and what ratification changes for supervision of digital finance here is not described.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Legislation enabling data interoperability**	A maritime single window created by decree in September 2025 is the period's regulatory movement on data exchange between administrations. The decree of 18 September 2025, gazetted 30 September, creates a national electronic platform centralising receipt, processing and transmission of port and maritime formalities, expressly tasked with facilitating information exchange between the competent authorities — port, customs, immigration, health, maritime safety and environment — on single submission and reuse of data. The standing instrument is the ministerial order of 10 September 2024 on access to social-registry data, which converts a decree principle into procedure: a convention with the identity agency in every case, data-protection clearance for personal data, and quarterly reporting of requests. The 2022 amendment to the identity statute is the enabling text, charging the agency with interconnecting the registry with administrations' databases.	MOVEMENT
Legislation and regulation	**AI legislation / regulations**	No general artificial-intelligence statute exists; a sectoral use policy for vocational training entered drafting in September 2025. The technical training ministry launched drafting on 23 September 2025 of a national policy on the use of artificial intelligence in vocational training, framed around ethical and responsible use and aligned with international and regional orientations. It is at situational-analysis stage and sectoral, not a general law. What stands in the meantime is technology-neutral: the 2019 data-protection statute bars decisions with legal effect taken solely on automated profiling, supervised by the authority whose organisation decree gives it control, inspection and reference-framework powers. No artificial-intelligence-specific Togolese instrument, in force or in draft, was located.	MOVEMENT
Legislation and regulation	**E-commerce legislation**	Rules on mobile commercial offers entered into force in April 2026, recorded in one line of an operator parent's half-year financial report. No instrument number, title or text is held, and the sole account is a single line in a foreign-listed operator's financial filing (rules). A rule that changes what operators may offer consumers, evidenced only in the accounts of the company it binds, is worth recording as exactly that. The consumer-rights tour recorded separately is running in the same period with no reference to it on file.	MOVEMENT
Legislation and regulation	**Statistics legislation**	The 2011 statistics statute is in force; its text could not be obtained and is held only through the institute's own account. The statistics institute's own institutional page states that loi n 2011-014, voted and promulgated on 3 June 2011, defines the principles and institutional framework of the national statistical system for the production, securing and dissemination of public statistics, and lists the institute's fifteen statutory missions. The statute text itself was not obtained: the institute offers it as a download with no addressable link, and the one direct path located for the companion 2015 decree returns not found. The regional statistical body's member-state register independently catalogues both instruments. A prior-authorisation mechanism under that framework, the statistical visa, had its operational tools validated in July 2026.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Access to information legislation**	The 2016 statute and its 2017 decree are in force, with oversight vested in the Mediateur de la Republique. The 53-article statute of 30 March 2016 sets a 30-day response period, 15 days for researchers and journalists, and vests oversight in the Mediateur de la Republique rather than the broadcasting authority. Its implementing instrument, decret n 2017-104/PR of 10 August 2017, runs to 26 articles across nine chapters and confirms that arrangement. Nothing later in the window amends or replaces either text.	NO CHANGE
Data protection	**Data protection authority**	The data-protection authority formally launched activities with a public campaign from April 2025, and signed a cooperation accord with the broadcasting authority. The authority was created by an article of the 2019 statute rather than by a separate constitutive act, launched activities at the capital, certified a first cohort of corporate correspondents and held a second edition of a personal-data forum in July 2026 (launch, correspondents, forum, edition). The accord with the broadcasting authority was signed in December 2025; the sole account is sourced to the data-protection authority itself and carries no critical framing of that access (accord). No enforcement action, penalty, complaint volume or registration count is published at any date. 2026-10-05 - the data-protection authority opened its first certification session for data protection officers, assessing 32 professionals.	MOVEMENT
Data protection	**National data protection readiness**	The authority moved from constitution to operation, opening an online declaration platform and training the first data-protection correspondents. Its organisation and powers were fixed by decret n 2020-111/PR of 9 December 2020 — status, missions, control and inspection powers, and competence to issue recommendations, guidelines and reference frameworks including prior risk assessment. On 27 March 2026 it put the statutory declaration of video-surveillance systems onto an online platform with an electronic receipt and a regulatory pictogram, its first compliance procedure operated in its own right. On 22 June 2026 it trained the first 35 data-protection correspondents from public and private bodies, dating the point at which the function became an operating layer rather than a statutory provision. The interview that dates its effective start of activity puts it at March 2025.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Regional policy collaboration**	An African centre for coordination and research in cybersecurity is named as the strategic culmination of a bilateral programme, and the country is a founding government of a pan-African language artificial-intelligence coalition. Chad drew on the Togolese experience of deploying agricultural digital solutions (visit). The cybersecurity centre is named in a regional working-group report which gives no host, no date, no budget and no constituting instrument (centre). The language coalition launched at a continental telecommunications conference with the digital ministry a founding government; no national deliverable, budget, dataset commitment or timetable is on file, and the repository holds no statement on how it relates to the country's own fifty-language project (coalition, declaration, initiative). 2026-09-23 - the data-protection authority signed a cooperation agreement with its Malian counterpart covering information exchange, complaints handling, compliance checks and staff capacity-building; the text is not published. 2026-10-04 - the data-protection authority hosted its Beninese counterpart at Lome on 2 and 3 October 2026 under their cooperation agreement.	MOVEMENT
Regional collaboration	**Regional legal harmonisation**	Transposition of the regional consumer-protection directive has reached consultation only, a stakeholder workshop in March 2025 with no adoption instrument. The source's headline says the framework was adopted and its body describes a workshop; the repository has already corrected that (workshop). Nothing since. The consumer-rights outreach tour recorded separately runs on the regulator's existing powers rather than on a transposed directive.	NO CHANGE
Regional collaboration	**Shared regional infrastructure**	A free-roaming arrangement with two neighbours took effect in April 2026, about four months late against the regional deadline. It was signed at the capital and took effect on 24 April 2026 under a regional regulation of December 2017 (roaming, borders, strategy). No traffic or price effect has been published. A regulation adopted in 2017 and applied in 2026 is the measure of how long regional harmonisation takes to reach a subscriber here.	MOVEMENT
Regional collaboration	**Cross-border data transfers**	A regional dialogue on border interoperability was held at a joint border post, with no data-protection arrangement stated for the shared border and transit data. The dialogue took place in August 2026 at a joint post on the coastal corridor (dialogue). No deployment figure, timetable or data-protection arrangement for the shared border and transit data is stated. The country has a data-protection statute and an operating authority, and neither is named in the arrangement.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	**National interoperability standards**	Health insurance is where interoperability standards actually bit: a federated architecture agreed in May 2026 and two systems deliberately converged. A technical workshop at Lome on 4 to 7 May 2026, run by the health ministry with German and World Bank support, settled on a federated architecture for the unified health-insurance management system, naming interoperability standards, medical-data security and governance as the work items and unique patient identification as a precondition. A design decision, not a deployment. On 21 April 2026 the public-sector insurer launched its own platform built to the same architectural and technological standards as the social security fund's and hosted in the fund's data centre, which the fund states is meant to lay the basis for real interoperability between the two managers. The general framework above both remains a draft.	MOVEMENT
Standards	**National quality standards**	A decree instituting a national conformity-assessment mechanism was adopted in July 2026 with no number, text or entry-into-force date held, at the same session as a fee and royalty amendment. The conformity decree was adopted in Council of Ministers on 30 July 2026 and nothing about its content is published (decree). The 2023 electronic-communications fees and royalties decree had one annex table amended at the same session; the held copy is an image scan with no text layer, so the rate tables are not machine-readable (fees, amendment). Two instruments adopted in one session, neither readable, is a recurring condition in this unit rather than an accident of one meeting. 2026-08-31 — the National Accounting Council was launched in Lomé, the body a regional directive of 28 November 1997 requires each member state to establish, tasked with making accounting information reliable, comparable and consistent with international standards (launch, directive). Twenty-nine years between the obligation and the institution is the finding; unlike the two July decrees, this one has a named text behind it. 2026-09-25 - the telecoms regulator is drafting rules requiring at least 95 per cent nationwide quality-of-service compliance, with penalties; no draft is published.	MOVEMENT
Standards	**Adoption of international standards**	The national standards body is a full member of the international standards organisation, and published 46 national standards in August 2026. The registry entry records the Agence togolaise de normalisation as Togo's national standards body with full member body status, participating as an observing member on technical and policy development committees. Under the food-system resilience programme the agency drew up 46 national standards and the accreditation committee 31 certification programmes, disseminated at Lome on 17 and 18 August 2026 and at Kara on 20 and 21 August, for market access under the continental free-trade area. The ministry says the standards were drawn up and disseminated, not homologated, and names no international or regional source texts behind them.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	The national internet governance forum held its twelfth edition on 19 June 2026, with every digital regulator on the panels. The forum has run annually since 2010 under the international multistakeholder arrangement, convening government, civil society, private sector, academia and the technical community on internet policy — the standing mechanism, and the repository holds no other. The twelfth edition, on 19 June 2026, took governing in the era of artificial intelligence, big data and geopolitics as its theme, with the digital ministry, the telecoms regulator, the digital agency, the cybersecurity agency, the identity agency and the data-protection authority named on the programme alongside civil society. The data-protection authority's own account of its panel sets out compliance duties on data controllers and announces forthcoming sectoral practical guides.	MOVEMENT
Public debate and participation in policymaking	**Open discussion of government policy**	Civic space is rated Repressed at 29 of 100, unchanged since 2020 after Obstructed in 2018 and 2019. The monitor's series shows Repressed for 2020 through 2024 after Obstructed in the two preceding years — a standing position, not a movement. The page carries no publication date and the rating is the one current at retrieval. One dated in-period statement bears directly on online speech: on 3 October 2025 the public prosecutor stated that anyone producing, circulating or sharing an unlawful publication would be prosecuted without compromise, and that even a comment endorsing unlawful content exposes the commenter — extending criminal exposure from authorship to endorsement, on the instruments of the penal code, the cybersecurity law, the data-protection law and the press code. It was published on the government's own portal, so it is the state's statement of its own position. 2026-09-22 — the communication regulator held its first official meeting with content creators and bloggers, asserting a remit over social-media content under article 78 of the 2024 Constitution; the ministry said the 2020 press code would be revised to cover them.	NO CHANGE

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The 2026 expenditure budget funds the digital, cybersecurity and identity agencies from domestic resources, beside two phases of external electronic-governance support running to 2028. The second phase was committed in 2025 and finances fibre extension and the connection of town halls, hospitals and schools (second phase), the first in 2024 (first phase), both at year precision and both running to 2028. A bilateral digital transformation programme was committed in 2022 and runs to 2028 (bilateral). The state also funds the estate from its own budget: the finance ministry's 2026 expenditure budget by chapter, like its 2025 edition, carries lines for the digital, cybersecurity and identity agencies, the data-protection authority and the state digital-infrastructure company. The figures are carried in the budget table; no execution report for those lines is held.	NO CHANGE
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
MoUs and other agreements	**Strategic relationships**	An indicative cooperation programme with Luxembourg for 2026-2031 was signed in a three-accord package carrying EUR 78,550,000, including a cybersecurity programme. The programme was signed at the capital alongside two other accords; the euro is the announcing currency, the dollar figure in circulation is a publisher's rounding rather than a dated conversion, and the two accounts date the signing a day apart (programme, accords, record). The cybersecurity component's digital and cyber share of the package is not separately quantified (cyber, agreement). A card and merchant partnership with a global payment network names the country among five markets; it is company-announced through a press wire and the principals' own release is not held (card).	MOVEMENT
New investments	**Mobilisation of non-state finance**	A EUR 50,000,000 senior loan plus up to EUR 72,000,000 mobilised is the largest private telecoms financing in the country. The loan started in May 2024 and is recorded active and invested; the disbursed figure and the 2034 end year are base-imputed patches rather than lender-reported (loan). It is the only private-capital instrument of scale in this ledger, and its terms are known through a development finance institution's record rather than through either party.	NO CHANGE
New investments	**Development-partner project financing**	A digital acceleration project has disbursed US$13,992,856 of US$100,000,000, and an additional US$20,000,000 was signed for the identity programme inside a five-agreement package. The disbursement is a single portal point rather than a series, and the government told project coordinators in July 2026 that disbursement rates would no longer count as performance (project, funding). The identity top-up was signed in July 2026 inside a package of US$429,000,000 (top-up); the implementation report gives a phase-two closing date of 30 July 2026 and no held source restates or extends it alongside the top-up (top-up, identity, regional). A public administration service-delivery modernisation project is named as live at the same portfolio review, and the repository holds the name and nothing else (modernisation). A financial governance programme closed at the end of June 2026, digitisation being one component rather than its purpose (governance).	MOVEMENT

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	Fifth-generation service on 100 MHz has been commercial since 2020, restated in a regional regulators' survey, and a licence for internet-of-things networks was authorised by decree. The fifth-generation launch date is held at year precision, and both sources are regional reports faceted to West Africa, so a national query misses them (service, report). The internet-of-things licence decree was adopted in August 2026; it authorises the grant rather than recording it, and no licence number, fee, coverage obligation or ownership of the licensee is published (licence). No subscriber, coverage or population-served figure for mobile service appears anywhere in this ledger.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Internet usage**	The regulator now publishes annual quality-of-experience studies and a quarterly market observatory; daily data use a subscriber doubled in a year. At the first quarter of 2026 the observatory records 6,652,523 mobile data subscriptions, 75.90 per cent of population, 148,560 fixed data subscriptions at 1.69 per cent, and daily mobile data a subscriber up from 58 MB in the first quarter of 2025 to 115 MB. The mobile quality study for 2025 puts fourth-generation networks at close to 85 per cent of national mobile data traffic and the two operators first and second in the monetary union at 56.37 and 53.09 Mb/s downlink, while recording that web browsing and video streaming remain well short of expectations. The fixed study records fixed experience as below mobile. Penetration is subscriptions over population, not the share of individuals online. A commercial compilation puts internet users at 3.62 million, 37.0 per cent of the population, against 8.40 million mobile connections in late 2025 (report). The regulator publishes subscription penetration rather than use. 2026-09-25 - the regulator's first national monitoring campaign of 2026 found neither operator meeting its quality standards, at 75.15 and 54.07 per cent compliance, with quality weaker outside Greater Lomé.	MOVEMENT
Connectivity	**Mobile affordability**	A regulator's decision of 19 February 2026 made the byte the sole billing unit and carried over unused bundle volumes. The decision fixes principles of transparency, non-discrimination and fairness for permanent and promotional mobile offers and takes effect on signature. Its announced content carries over unused voice and data volumes for 10 or 30 days by validity, mandates the byte as the sole billing unit so billed volume matches consumed volume, and extends inactivity before deactivation from three months to six. The decision is issued unilaterally by the regulator's director-general; the announcement's framing of it as jointly agreed with operators and consumer associations is the announcement's, not the instrument's. Prices themselves have no later published comparison than April 2023, when entry-level bundles still cost more than six times the top-range rate a gigabyte, the widest such gap in the monetary union.	MOVEMENT
Connectivity	**National fibre backbone**	The backbone is documented for the first time — about 1,500 and 800 route kilometres — and a seven-year core rebuild was signed. Government ICT specification pages describe the incumbent's backbone at about 1,500 km north-south at 24 fibres a link, doubled at Lome and on two northern axes; the second operator's at about 800 km at 96 fibres; and the government network at about 300 km linking over 600 public buildings, its core rebuilt and lifted from 10 to 100 Gbit/s. The page carries no editorial date, so its February 2023 price validity is a floor. In December 2025 the incumbent signed a seven-year agreement worth close to 60 billion FCFA to rebuild its fixed and mobile core, transmission and architecture and add more than 500 radio sites. A development policy operation approved on 15 December 2025 carries a cap on wholesale broadband prices among its prior actions.	MOVEMENT
Connectivity	**International internet bandwidth**	Capacity on a second submarine system was added for route diversity, on a pan-regional account with no country-specific figure. The country is one of eleven places tagged in the account, and no national capacity, price or route figure is published (capacity, fibre pair, ownership). Route diversity on the subsea leg is real and unquantified here. It is the only international-capacity item in the ledger.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Internet Exchange Points**	Togo's single exchange point carries nine member networks and 18 Gbps of port capacity as at July 2026. The tracker records seven of the nine members peering at the route server and five of the nine validating route origins, with no participation in the mutually agreed routing norms and no measurement anchor at the exchange. The full member list carries autonomous system numbers, port speeds and countries of registration. The underlying data are self-reported by members to the peering database, so the figures are the members' own. The national data centre separately claims direct access to submarine routes and a local exchange point. The repository holds no traffic volume, no peering ratio and no second exchange.	NO CHANGE
Connectivity	**Satellite broadband licensing and availability**	A satellite licence has not been granted twelve months after the operator listed the country as available, and spectrum royalties for satellite and machine-to-machine services were amended by decree. The operator lists the country as available from 2026 with no licence granted; twelve months without movement is the finding, and the regulator has issued no statement on any application (licence, regulation, coverage). The royalty amendment was adopted in July 2026 and framed as encouraging innovation and connectivity; the parent decree is held only as an image scan with no text layer, so the baseline rates are unreadable (royalties, adjustment). Adjusting satellite spectrum royalties while granting no satellite licence is the sequence the record shows.	NO CHANGE
Data Storage	**Local data centre capacity (all providers)**	A national data centre is certified to the third tier and wholly owned by a state company, with no commissioning date, capacity, utilisation or customer figure anywhere in the repository. The certification and state ownership are as reported (centre). Nothing else about it is published. A tier-three facility in state hands with no capacity figure is the whole of the country's hosting record on the physical side. A private operator launched a cloud hosting and backup offer on servers in Togo on 17 October 2024, with no capacity or customer figure published.	NO CHANGE
Data Storage	**Local data centre capacity (national providers)**	A sovereign private cloud is being deployed at the national data centre under a partnership between the state operator and a pan-African group. The partnership was signed in June 2026 and no launch date, capacity or price is published (cloud, group). No source relates it to the separate facility the same group had announced building in the country, so whether this is one project or two is unestablished. Management of the state facility was delegated to a private operator for five years at commissioning in 2021, and in July 2023 the minister said the centre was seeking an investor-operator, after a December 2022 decision to hand it to a private partner. No award is on record.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Off-site backup capacity**	Commercial colocation opened in October 2025 and the telecoms regulator tendered a backup link to the national data centre in June 2026. The colocation offering launched on 15 October 2025 lets Togolese organisations place their own servers in a third-tier facility with redundant power, round-the-clock supervised access, biometric control and precision cooling — the practical route to off-site copies in country. It is a vendor announcement; the facility is not named and no backup or replication service level is stated. The telecoms regulator issued a procurement notice on 12 June 2026 for transmission equipment and a point-to-point backup link between its headquarters and the national data centre, estimated at 30,000,000 FCFA with a 90-day delivery period and bids due 10 July. That is the clearest dated step by a Togolese state body towards off-site redundancy, and it is a tender rather than a commissioning.	MOVEMENT
Energy	**Sufficient energy and water for data centres**	The national data centre's operator now publishes more than 1 MW of critical power, a 99.982 per cent commitment and an efficiency figure. At commissioning on 4 June 2021 the facility had 400 square metres of private and 100 of government server halls, a cooling system, generator sets coupled with grid supply and a solar workshop, with redundancy on a chilled-water production unit, built under a regional connectivity programme with 12,760,000,000 FCFA of World Bank financing. The operator's own 2025 page states more than 1 MW of critical power, a 99.982 per cent availability commitment and a power usage effectiveness of 1.4. Self-description, with no independent certification record and no occupancy or delivered-load figure anywhere in the repository. Cooling water equipment is documented and no water source, volume or make-up arrangement is stated. The grid behind the facility entered load-shedding in 2026.	MOVEMENT
Energy	**Grid reliability**	Network access rose to 67.43 per cent in 2024, then imports collapsed and load-shedding ran through 2026. The regulator's 2024 report puts distribution network access at 67.43 per cent against 63.67 in 2023, with 53.27 per cent of national need met domestically and the balance imported mainly from Ghana and Nigeria. The full report carries the reliability series the summary lacked: interruption frequency 28, 26 then 23 over 2022 to 2024 and duration 57, 53 then 52. On 26 June 2026 the minister set out the load-shedding arithmetic to the National Assembly: peak demand about 360 MW against roughly 180 MW mobilisable domestically, with imports of 110 and 115 MW down to 20 and 70. A regulator inspection round opened in January 2026 tests against 2024 shortfalls of 11.68 hours average fault repair against a 4.60-hour target. 2026-09-21 — the energy ministry tendered 1,200 modems and 4,000 data concentrators to extend the state utility's smart metering under its revenue protection programme, financed from the IDA-backed IDEA project, with bids due 28 October 2026.	REGRESSED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	**Rural electrification**	US$160m was approved in June 2026 for electricity access in Togo and The Gambia. The financier's own release of 24 June 2026 records US$160m of concessional financing approved for the regional access and sustainable energy project, implemented with the regional commission under the West African programme. The Togolese share is not broken out, so the figure states the size of the operation rather than what reaches Togo. No connection target or rural access rate accompanies it. The off-grid solar programme had delivered 134,431 pay-as-you-go kits by June 2023 against a target of 600,000 households, with long-term tax exemptions among its demand-side subsidies (snapshot).	MOVEMENT
Technical Capacity	**Robustness of government hardware and software**	A state enterprise architecture is published as the standard the estate is to be built against, and remains a draft. The structuring elements set out a vision, twelve orientation statements and business, functional, application, technical and security layers, including single-source-of-truth registers, no re-collection of information the state already holds, open standards, modularity, interoperability and high availability. That capture is truncated at 50,000 characters and the page carries no publication date. The guide's own version page still records it as version 1.0, status Brouillon, with an empty revision log. Against that, the only dated signal on the estate's actual security posture is a dark-web listing of September 2025 offering administrator access to government systems for US$1,000 — a reported claim, with authorities saying the threat was under control and no confirmed intrusion.	MOVEMENT
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	A five-tier governance model names who builds and maintains state systems, and 80 officers were certified in June 2026. The published framework sets the digital ministry coordinating policy, the state digital agency deploying solutions and setting standards, public institutions adopting a digital-first rule, a super-integrator training integrators on the agency's low-code platforms and supervising their daily work, and integrators following the framework. It names giving itself the force of law as a step still outstanding. On 12 June 2026, 80 digitalisation officers drawn from 27 ministries and selected from 1,442 candidates were certified after three sessions from September 2025, covering project management, product management, leadership and artificial-intelligence tools. A session of 1 to 3 April 2026 in the same programme was funded by the European Union and German cooperation and taught from Rwanda.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Cybersecurity	**National cybersecurity readiness**	A cybersecurity agency and a response team operate under a strategy for 2024-2028 whose text is not held, and handled incidents rose from 39,168 in 2021 to 181,088 in 2024. The agency is created at article 6 of the cybersecurity statute of 7 December 2018, amended on 24 June 2022 (statute, amendment), and its director-general was on the record in July 2026 (agency, training). The response team issued a high-severity alert on an active account-compromise campaign in August 2026; no incident-response profile, incident report, annual report or count of affected accounts is held (team, alert, defence). The incident figures are endpoint years given by the agency's director-general with none for 2022, 2023 or 2025, no definition of an incident and no primary (incidents); the strategy running 2024 to 2028 is held at year precision with no document and no adoption date (strategy). On 27 August 2026 the agency called for expressions of interest to build a national pool of cybersecurity professionals, closing 30 October 2026; no target size, budget or engagement terms are published (call).	MOVEMENT

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	Three source-code licensing agreements for electronic-government software were signed with a foreign state agency in June 2024, and neither government published its own announcement. They are known only through foreign business press and domestic trade press (agreements). No system name, deployment, value or deliverable follows them. Acquiring source code for government platforms is a substantial sovereignty decision, and the only account of it comes from the press of the two countries involved.	NO CHANGE
Data Exchange	**Use of digital id in other systems**	A December 2024 decree compels telecom operators to collect the unique identification number for every subscriber. The decree, gazetted 23 April 2025, requires the number issued by the identity agency for nationals and residents, admits the agency's card where no other document exists, and obliges operators to retain the data and report to the regulator. It obliges collection of the number, which is not the same as querying the agency's authentication service. The consumption route for the registry itself is the order of 10 September 2024: a convention with the agency in every case, data-protection authorisation for personal data, authenticated and logged access, quarterly reporting. The supervision report held records the data-exchange platform as not in place at 30 September 2024, and nothing later restates it.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of health systems**	The health platform now ingests global climate data shared with the meteorological agency; the insurance systems agreed a federated architecture. The country profile records the climate application installed in the national health information system and malaria repository, global reanalysis datasets ingested and shared with the meteorological agency, and gridded temperature, rainfall and humidity served at district level. The exchange is institutional as well as technical: the meteorological agency has signed a memorandum with the health ministry, and a monthly climate and health bulletin is published. A workshop of 4 to 7 May 2026 settled a federated architecture for the unified health-insurance system, naming unique patient identification as a precondition. A framework convention of 14 October 2025 set structured data sharing between the two public managers and three private complementary-cover bodies.	MOVEMENT
Data Exchange	**Interoperability of education systems**	The interconnection project was recorded as not taken up in January 2025; one results channel opened in June 2026. The supervision report archived 14 January 2025 records a prototype management information system, a human-resources system in test and a learning-assessment dashboard — and then the finding that settles the indicator: the mission noted a non-appropriation of the project of interconnectivity of platforms and databases. At the June 2026 examination round results went out through a web platform, a messaging chatbot and a second bot, and the ministry supplied each establishment with its own pupils' results directly, so schools no longer wait to compute their statistics. A single results channel is not an interconnection, and no source records the project being taken up since.	MOVEMENT one channel only
Data Exchange	**Interoperability of social protection systems**	Cash transfers to more than 700,000 people launched in December 2025 without evidence that the social registry keyed them. The registry was created by decree of 24 April 2023, is held electronically, carries the unique identification number and a household number, and obliges the identity agency to assure interconnection with administrations' databases existing or future. The last supervision report held records it 75 per cent built and the data-exchange platform not in place at 30 September 2024. The transfers launched on 18 December 2025 at 25,000 FCFA a household were targeted by the statistics institute and the development agency on poverty criteria and paid through two mobile-money services. That is a statistics-to-agency-to-provider chain: no source says the list came from the registry or that the number keyed the payment.	MOVEMENT
Digital Identity and CRVS	**Robustness of system**	Robustness rests on a 2023 proof of concept; no uptime, matching-accuracy or audit figure has ever been published. The proof of concept of 4 October to 4 November 2023, over at least 2,000 people across Greater Lome and three regions, tested the vendor's ability to deploy and configure the platform, the country-specific customisations, number generation with its security options, biometric validation and deduplication, code conformity, the enrolment kits and offline operation and battery autonomy. Resilience provisions are stated concretely: a fifth biometric kit held as backup, a generator per team, a help desk, a signed consent form before capture and a daily incident report. Operating rules bearing on register integrity are on record too — double enrolment strictly forbidden even where a card has not arrived, non-receipt handled through a freephone rather than re-registration.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Registration of entire population**	More than six million unique identification numbers and biometric cards were reported at end-December 2025, a rounded floor rather than a precise count. Enrolment campaigns ran region by region through 2025 and 2026, and enrolled, number issued and card delivered are one counter because the card is handed over at the campaign (numbers, platform, campaign, phase). The figure comes from the government's own second-half 2025 reform-implementation report, which is not held (count). That the three stages collapse into one counter is unusually clean for this frame — most units in it report enrolment and issuance separately and cannot reconcile them. 2026-09-14 — identity documents were issued free to a fixed cohort: 4,200 schoolgirls are to receive nationality certificates, 300 issued in the first week. Enrolment is free and voluntary in four steps, with a receipt carrying a code in 24 to 48 hours and the card in 72, open to foreign residents and erasable on request (steps, questions). The programme is USD 72m of a USD 395.1m regional operation, targeting 8 million credentials by 2026 (financing). 2026-09-26 - with the Centrale region closed, more than six million people are registered and about 5.9 million cards produced, nearly 80 per cent reportedly distributed, and Kara, the last region, is scheduled for October to December 2026.	MOVEMENT
Digital Identity and CRVS	**National maintenance of id and credentials systems**	External funding of the register was extended in July 2026 past the closing date the agency's own material states. The agency is a public legal person under the Presidency with technical oversight shared by the digital economy and security ministries, created at article 19 of the 2020 statute and given a board, a director-general and financial autonomy by decret n 2020-093/PR. On 16 July 2026 the government signed five financing agreements including additional financing of US$20 million for the unique identification project, to continue the initial phase's activities — a completed signature, extending funding beyond the 30 July 2026 closing date the agency's own material states. It records no change of ownership, operator or maintenance arrangement. Enrolment continues territorially: the Centrale region closed on 26 September 2026 and Kara, the last region, follows from October to December 2026.	MOVEMENT
Digital Identity and CRVS	**Authentication**	The identity agency holds exclusive authentication competence by statute; no authentication service, volume or interface is documented. Article 16 of the 2020 statute reserves authentication to the agency, and article 13 makes use of the number compulsory on every administrative document, extended by the 2022 amendment to every form and document the administration exchanges with persons and households. What actually operates between systems is a paper-and-convention route: the September 2024 order has a public body request access, sign a convention with the agency, obtain data-protection clearance and be logged, with quarterly reporting. The subscriber decree obliges operators to collect the number, not to query an authentication service. No verification interface, service level or transaction count appears anywhere in the repository.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Digital id from birth**	Two catch-up campaigns regularised 11,461 children between November 2025 and July 2026, against a stated target of about 7,400. The first campaign launched at Bagbe on 12 November 2025 aimed at 5,000 pupils without a birth certificate across 25 of the 117 communes, 200 a commune, by awareness sessions, itinerant hearings issuing supplementary judgments, then transcription at civil-registration centres. The second, launched at Agbandi on 31 July 2026, regularised 6,461 more. The ministry states plainly that many children, particularly in rural areas, remain without the document despite the reforms. The scale of the problem is the country's own: 22 per cent of under-fives without a birth certificate, 31 per cent in rural areas, an estimated 400,000 children.	MOVEMENT
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	Birth registration is being wired to education and to maternity units, and not to the identity register. Togo's own account to the continental experts' meeting on 18 July 2026 claims more than 125,356 identities assigned to pupils since 2024 and an 18 per cent rise in the share of children holding an identity and sitting examinations, with an annual dashboard tracking undocumented children in schools — alongside insufficient coordination, very expensive late issuance and a legal framework needing updating. An application deployed across four communes of Vo prefecture since February 2026 lets maternity data reach the town hall once the facility head validates it, against a threshold of 90 per cent of children documented within eight days of birth. The agency's own standing statement is that the identity file is not linked to the civil registry.	MOVEMENT
Digital Identity and CRVS	**Use by other systems**	Telecom operators are compelled by decree to carry the number, the clearest case of a regulated third party doing so. The decree of 26 December 2024, gazetted 23 April 2025, requires the number for every subscriber, admits the identity card where no other document exists, and obliges operators to retain the data and report to the regulator. Statute extends the same duty inland: the number must appear on every administrative document, at the mortgage service under the land code, in health records and in employer files, and the 2022 amendment lists the registers that must carry it. Collection is not consumption. Nothing in the repository shows a system querying the agency to verify an identity, and the data-exchange platform that would let it was not in place at the last report held.	MOVEMENT
Digital Payments and Fintech	**Governance role of central bank**	Payment governance runs through the regional central bank; the repository holds its electronic-money guide and the instant platform. Togo participates in the regional instant payment platform, whose mandatory connection deadline for institutions was extended, and the regional guide to electronic-money issuance by public treasuries is the standing instrument the repository holds on the central bank's role. No Togolese-specific central-bank instrument, licensing decision or supervisory report appears in the repository for the period, and no national payments council or oversight framework document is held. What is held on the domestic side is fiscal rather than monetary: the revenue office's own electronic declaration and payment series to 2025.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**G2P functionality**	Retirement allowances began digital disbursement in July 2026 with registration of payment details required by 31 August, and no alternative is stated for a beneficiary without a bank account, a handset or an identity document. No beneficiary count, disbursed value or registration rate is published (allowances). A treasury interoperable prepaid card was announced with no launch timetable; two regional precedents exist but the central bank's own register counted only two treasury issuers at end-2024, which a three-state account does not match (card). The regional guide to electronic-money issuance by public treasuries settles closed-loop issuance, a dedicated escrow for holders' funds and a complaints route, requires tariff disclosure and sets no fee cap (guide). A hard registration deadline with no stated fallback is the access question this unit does not answer. 2026-09-14 — the social protection programme's first component is paying more than 700,000 people by mobile money on CFA 3.5bn of initial funding. The figure is the target identified, not households paid.	MOVEMENT
Digital Payments and Fintech	**Revenue collection**	Electronic filing reached 100 per cent for large and medium enterprises and 24 per cent for everyone else in 2025. Online declaration and payment became compulsory for large and medium enterprises from 15 October 2019. The 2020-2025 series shows payment at 100 per cent for those two directorates from 2021 and 2022 and holding there, while the directorates covering the remaining taxpayers reach 24 per cent payment and 26 per cent declaration in 2025, up from 13 per cent in 2024. The 2026 finance law introduces certified electronic invoicing to counter value-added tax fraud; the gazetted text is held as an image-only scan whose substantive articles are not transcribed. An exemptions platform launched September 2025 feeds the customs system automatically. Certified electronic invoicing is not yet live: the revenue office told about 50 firms on 10 September 2026 that each invoice will be certified before issue with a unique number, QR code and digital fingerprint, on a gradual rollout with no launch date. 2026-09-17 — the revenue office launched e-TPU, letting small and micro enterprises declare and pay the single business tax from a phone, extending online filing below the large and medium taxpayers already fully online.	MOVEMENT
Digital Payments and Fintech	**B2B and B2G functionality**	Business-to-government payment is compulsory by mandate, not merely enabled, for a defined class of firms since October 2019. The revenue office's notice of 7 November 2019 records that all large and medium enterprises must declare and pay their taxes online with effect from 15 October 2019, and names the three banks whose platforms were then available. It is the clearest dated evidence in the repository that business-to-government payment is compulsory for a defined class. Uptake since is a two-speed picture: 100 per cent for those directorates and 24 per cent elsewhere in 2025. Business-to-business is thinner: certified electronic invoicing is a 2026 measure not yet running. The revenue office briefed about 50 firms on 10 September 2026 on a gradual rollout, with paper invoices valid until launch (requirements); no start date, threshold or adoption figure is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	Six institutions are on the central bank's list authorised to open instant-payment services to the public, and the mandatory connection deadline moved from June to September 2026. Integrated, operational, committed and authorised to open to the public are four different claims across four accounts, and the counts are not one series (authorised, institutions, launch, sandbox, platform). The deadline moved to 30 September 2026 for banks, electronic-money issuers and payment institutions and to 30 June 2027 for microfinance institutions; the extension source is union-wide and binds domestic institutions by construction, with no national report of it held (extension, original). Four incompatible descriptions of participation and a slipped deadline are what the record supports; a single participation figure would be manufactured. 2026-09-15 — digital bus ticketing is piloting on student routes, with network rollout planned by end-2026.	MIXED six institutions authorised on the regional instant platform while the mandatory connection deadline slipped by three months
Digital Payments and Fintech	**Population uptake**	Electronic-money accounts were measured by the central bank to end-2024 and published in 2026, and mobile-money subscribers and transaction value come from regulator figures for the third quarter of 2025. The central bank observation is two years old at the point of its publication inside the window (accounts), and the regulator figures reach the repository relayed through a report on an operator product launch (subscribers). A new wallet entered service in October 2025 with a partner bank under regional electronic-money rules, built on the operator's acquisition of a foreign fintech, with no user or transaction figure on file (wallet), and an operator extended its mobile-money services at a launch event in July 2026 (extension). Neither uptake measure is current and neither product carries a figure, so the direction of use here is not establishable.	MOVEMENT
Digital Payments and Fintech	**Cross-border functionality**	An instant international payment service launched with the country as its first market, a full-service payment institution licence was granted to a domestic fintech, and a cross-border payments platform was profiled. The bank-led service launched in October 2025 with the country as first market, distinct from the central bank's platform (service). The payment institution licence was granted under the regional instruction in February 2026; the source is captured as a paywalled newsletter body (licence). A cross-border payments platform founded in 2024 was profiled by a technology outlet, and no transaction volume, corridor count, licence or customer figure is stated (platform).	MOVEMENT
Digital Payments and Fintech	**Consumer protection**	A national consumer-rights outreach tour reached its seventh edition across August 2026, covering mobile-money fraud and service satisfaction, with no attendance, complaint or outcome figure published. The seventh edition ran 3 to 28 August 2026 through the regions, with stages covering mobile-money fraud and consumer satisfaction (tour, fraud, satisfaction, regions). No attendance figure, complaint volume or outcome measure for the tour is published. Seven editions of a regulator-run outreach programme with no published complaint series is the shape of consumer protection here.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Population register**	Civil status went online in a five-commune pilot in December 2025 and the communes were equipped in April 2026. The governing statute has permitted computerised registration since 2009: article 15 of loi n 2009-010 gives computerised acts the same legal value as manually registered ones. It permits electronic registration; it does not establish that any office operated one. The online service for requesting copies of civil-status acts launched on 19 December 2025 in five communes only — Golfe 1, Agoe-Nyive 1, Ave 2, Lacs 1 and Zio 2 — to test operational effectiveness before rollout. On 8 April 2026 each received two computers, a printer and an uninterruptible power supply, after the communes reported they had none. A review of the 2009 statute opened in August 2026.	MOVEMENT
Registries	**Civil register**	A second birth-registration catch-up campaign was launched in July 2026, and an online civil-status certificate service is still a pilot in five communes. One commune's registration application lifted births registered from 700 in 2019 to 1,975 in 2020. A Lomé commune began piloting online birth and death declaration from two health facilities in March 2024. The public-service ministry tendered technical assistance for a 16-commune digitisation pilot, bids closing 10 August 2026. The report of the second campaign gives two incompatible reach figures — 6,461 on the ministry's account against nearly 7,400 on the supporting organisation's — unreconciled (campaign). The online certificate service launched in five pilot communes in December 2025 and remains a pilot on the record held, with no dated extension and no completion date for national rollout (service, platform). The 2009 civil registration law under which both operate is under review, with proposals due before the end of 2026. 2026-09-15 — the civil status law review ran a technical workshop for the cell carrying it, a month after the review formally opened. No draft text or adoption date is published.	MOVEMENT
Registries	**Address register**	A single window for infrastructure mapping and a national satellite-positioning correction network were launched together, and urban addressing in the capital began modernisation. The single window and the correction network were both launched at the capital in April 2026. No legal obligation to declare works, no user count and no data-governance or access terms are on file for the window (window), and no cost, operator, subscription model or availability figure for the correction network (network). Urban addressing modernisation in the capital began after updating the geographic address database of thirteen communes, with no completion date, address count, budget or operator, from a single source with no update since (addressing). A positioning correction network is the piece of national infrastructure that makes precise addressing and cadastral work possible, and it is recorded with no operator named.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Business register**	Registrations rose to 8,129 in the first half of 2026, the first rise after two annual declines. The register itself rests on loi n 2016-034 of 2 December 2016, which creates a national file at the Lome court of appeal and local files at six towns, sets the registrars' duties and provides for transmission to the regional file. Annual throughput fell in 2025 to 14,202 on the government's figure, down 4.8 per cent on 14,919 in 2024 — though the formalities centre's own bilan gives 14,172 for the same year, and the two figures have not been reconciled publicly. The first half of 2026 recorded 8,129 registrations, up about 5 per cent on the 7,747 of the same half of 2025. Registers of professional families across five crop value chains are being built or refreshed, with membership criteria reopened at a ministry workshop on 9 February 2026 (workshop).	MOVEMENT
Registries	**Social protection register**	The registry is 75 per cent built on the last report held, from September 2024; a policy framework was adopted around it. Created by decree of 24 April 2023, it is held electronically, carries the unique identification number and a household number, is managed by the identity agency, and obliges administrations to base aid programmes on it and keep electronic beneficiary registers. An annual audit against the targeting rules is required. The last supervision report held, from 30 September 2024, records the software 75 per cent complete, the data-exchange platform not in place and the beneficiary operations management system not yet adopted. Nothing later restates any of it. The Council of Ministers adopted a national social-protection policy by decree on 17 December 2025, the frame the registry now sits inside. The social register is named as the second project on the government roadmap, giving each household one identifier to target social programmes against inclusion and exclusion error (register).	NO CHANGE
Registries	**Electoral register**	The electoral register was revised nationwide over two weeks in April 2025 under a presidential decree. The revision ran 7 to 23 April 2025 (revision). It is a register separate from the identity agency's system, and the two must never be summed. Nothing on the record connects the six million identity numbers to electoral registration, and no source states whether the two will be reconciled.	NO CHANGE
Registries	**Tax register**	The register reached 100,292 taxpayers for 2024 and became a published verification service in April 2026. The 2024 performance report puts the taxpayer population at 100,292, of whom 73,239 active, the active population up 24.0 per cent on end-2023, with 95,535 new taxpayers registered in the year and 30,459 individual numbers issued online, 38.0 per cent of those created. On 30 April 2026 the updated register of active taxpayers was put online, with operators directed to check a supplier's active status before transacting under article 196 of the general tax code — a change in what the register does rather than in its size. A communique of 29 January 2026 requires an account on the financial-statements single window before electronic filing.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Land register**	Eight member states approved a draft land registration harmonisation directive in June 2026. The directive approved at Ouagadougou harmonises land registration and titling rules across the union and covers the establishment of urban land information systems. It is a draft approved by ministers, not a transposed rule, and nothing in the repository records Togolese implementation of it. The fifth agricultural census found that 78 per cent of 677,692 farming households hold no form of land security, and that 4 per cent irrigate (census). It is the clearest measure held of what the land registers do not reach.	MOVEMENT
Sectoral management information systems	**Health**	The national platform gained a data-quality application and climate ingestion; an electronic health record is funded but not deployed. The platform has been the health ministry's information system since 2016 and is the national repository, also used for infectious-disease surveillance, owned and maintained by the ministry with regional technical support. The chain into it is set by the 2022 procedures manual: data recorded on largely paper tools at the facility, compiled into monthly returns, then keyed in before the fifth of the following month. In July 2026 an electronic routine data-quality assessment application was field-tested into the platform across three regions. An additional credit of EUR 60.6 million approved in December 2025 funds an electronic health record, with availability in facilities as a results indicator. Immunisation data was kept in a parallel system until a donor-backed move onto the national platform lifted report timeliness from 38.2 to 83 per cent (package). A community health information system carried more than 1,000 community health workers within three months of its March 2024 pilot (account). The modules of a national malaria data repository were approved in August 2026 after a training-of-trainers workshop; no go-live date or facility coverage is on file (repository).	MOVEMENT
Sectoral management information systems	**Education**	The education management information system is mid-migration with the analytical layer distinct from the collection layer, and a pupil registration number platform has no clear evidence of numbers issued. The analytical layer is not the collection layer, so national scale cannot be claimed for it, and the same publisher gives two different start years (system, integration, platform, factors). The pupil number platform was recorded as launched in 2023 by the ministry, with no clear evidence of student identification numbers found in April 2024; the two accounts are in tension (numbers, evidence). The school-census collection system is mid-migration to online data entry with a consultant recruited in 2023, on the state's own joint-review aide-memoire (census). The destination of the education system's migration is the national health-sector platform, with school observation captured on Android devices and dashboards reaching district level (account).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Social protection**	Health insurance stood up two management systems in the period; the social registry itself has no report later than September 2024. The insurance platform for non-salaried workers was presented at the launch of 23 October 2025 as a tool easing enrolment, contribution management and beneficiary monitoring, with no enrolment figure given. On 21 and 22 April 2026 the public-sector insurer launched online services and a chip card on a system built to the same standards as the social security fund's and hosted in the fund's data centre. The registry underneath remains at the position the September 2024 report left it: 75 per cent built, no data-exchange platform, no beneficiary operations management system.	MOVEMENT
Sectoral management information systems	**Justice**	A commercial-courts reform bill was adopted by the Senate in August 2026, alongside Hague Apostille accession in first reading. The commercial-courts bill was adopted by the Senate on 21 August 2026 and the justice minister committed to enforcement and capacity-building; no entry-into-force date, platform name or coverage figure was stated (reform). Both bills were adopted in first reading a week earlier; neither text is held and no second reading, adoption or entry-into-force date is stated for the apostille accession (bills). Digitising commercial courts and joining the apostille convention together would make foreign document authentication and domestic commercial filing both electronic, and neither instrument can be read. 2026-10-07 - the Council of Ministers authorised the justice minister to set up an online repository of Togolese case law.	MOVEMENT
Sectoral management information systems	**Tax**	The customs system took two validation changes in late 2025 and the revenue office reports interconnection with three Sahel states. A notice of 12 September 2025 created a blocking field for any use of an additional code conferring preferential tariffs, making it compulsory to fill box 36 of the single declaration and upload the certificate of origin — a validation rule built into the system itself. A new zone franche code in force from December 2025 imposes more rigorous manifest structuring through the foreign-trade single window, to enforce filing deadlines and limit manual corrections. The 2025 performance report records the office's systems interconnected with those of the Sahel states, operational interconnection with Mali, and a digital land-archiving application in production. That report is held as a 50,000-character excerpt. 2026-09-01 - the finance ministry published a revenue strategy for 2027 to 2031 that puts 57.1% of its cost into digital transformation, electronic invoicing and AI-assisted risk analysis among it.	MOVEMENT
Sectoral management information systems	**Customs**	A tax-exemption platform interfaced to the customs system became mandatory from 1 January 2026, and electronic tracking of transit cargo was extended to petroleum in a pilot. It launched in October 2025 with a three-month transition to mandatory use (platform). The revenue office opened a Lome pilot on 1 September 2026 extending the transit-cargo tracking system, operational since October 2022, to trucks carrying petroleum products to Burkina Faso, Mali and Niger, with devices fitted after route, cargo, vehicle and driver details are recorded and monitored from a round-the-clock command centre that flags route deviations. No device count, cost or pilot duration is published. A single source, with no uptake, request volume or processing-time figure on file. A three-month transition before a mandate is a more generous phase-in than the cadastral submission or the retirement-allowance registration recorded elsewhere in this unit.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Land**	Digital cadastral submission was made mandatory from 17 August 2026 with no fallback channel stated, and pre-2007 land titles are being georeferenced. No fallback channel, fee schedule, submission volume or data-protection basis for the cadastral record is stated (submission). The georeferencing field operation runs under the revenue authority's cadastre directorate, reported by the revenue authority itself, with no parcel count, budget or completion date (georeferencing). Making submission mandatory before the georeferencing that would give it a reliable base is the sequence, and the positioning network that would underpin both was launched four months earlier with no operator named.	MOVEMENT
Other GovTech and e-Gov	**e-government services**	The national public service portal moved to a modernised version in September 2026, and the foreign ministry put ten procedures on it from 1 October 2026. The portal carries civil-status requests in five pilot communes and twenty-nine energy procedures (procedures), and handled more than 400,000 requests in 2024 on the government's figure (portal). Building-permit applications and architect certification were added in the week of 28 September 2026, and ten foreign-ministry procedures from 1 October 2026, with six consular services on a separate portal (procedures). On 17 September 2026 the revenue office put filing and payment of the single business tax online for microenterprises on the flat-rate regime; the day after, the credit bureau presented an SME financing portal for launch by the end of 2026. Ten services of the state broadcasters went online the same month. The identity directorate reported 241,617 online nationality-certificate applications registered and 179,690 processed (September 2026). A decree of 6 October 2026 updates the visa regime digitised in 2022; its text is not held. A trade-facilitation alliance launched a project on 9 October 2026 to digitalise the plant import permit. A decree of 26 August 2026 put investment approval through an electronic procedure (decree). The digital agency sets common standards for administrative digitalisation (remit); no standards catalogue is published.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	Two projects now fund connectivity to every town hall, at 118 and 136 on different perimeters. The appraisal document of November 2024 commits US$60 million of a US$110 million operation to backhaul and last-mile connectivity for unconnected public institutions — 118 town halls, 6,849 education establishments and 804 health establishments, in six geographic lots with vulnerable communes prioritised. The same appraisal records under 1 per cent of schools and under 10 per cent of health centres estimated connected. A second project announced in preparation in February 2026 targets 136 municipal buildings, 1,488 public schools and 253 health centres. What is actually delivered is smaller by two orders of magnitude: two computers and a printer each to five pilot communes in April 2026.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**Digitalisation of local government records**	A georeferenced municipal census runs from August to October 2026, linking households, businesses and tax position to location. Doufelgou 1 and Sotouboua 2 validated taxpayer files of 597 and 991 taxpayers built with the SIG Recettes application in March 2025. Bassar 1 validated a census of 1,358 taxpayers the same month. The repository holds no revenue collected against the files. It was launched on 11 August 2026 running to 10 October (census). No data-protection basis, custodian, retention rule or access arrangement is stated for a register linking households, businesses and tax position to location. The country has a data-protection statute and an operating authority, and neither is named in it.	MOVEMENT
Rural digital data capture	**Digitalisation of rural health clinics**	Mobile ultrasound with remote reading went live at three of twelve facilities in June 2026. The units were put into service on 9 June 2026 at the health centres of Assahoun, Agou and Kamina, with midwives performing scans on site and results interpreted immediately on a dedicated platform. No date is given for the remaining nine facilities. The standing arrangement in rural facilities is aggregate reporting: primary data on largely paper tools, compiled into monthly returns and keyed into the national platform before the fifth of the following month — not an electronic patient record. An additional credit of December 2025 funds introducing one, which establishes that it is still a reform being deployed to a limited number of facilities.	MOVEMENT
Rural digital data capture	**Digitalisation of rural primary schools**	A digital classroom pilot opened across the seven education regions in September 2025, covering rural as well as urban schools. The primary and secondary education ministry opened the programme on 12 September 2025 with a vendor partner, equipping targeted schools in urban, peri-urban and rural zones with digital teaching hardware plus teacher training, to be evaluated at year end before progressive generalisation. It is an announced and initiated pilot: no school count is given, and no evaluation appears in the repository. The wider connectivity picture is a project target rather than a delivery — 6,849 education establishments funded for connection against under 1 per cent estimated connected at appraisal.	MOVEMENT
Rural digital data capture	**Digitalisation of rural registry offices**	The online civil-status service reaches five communes of 117; computerised registration has been lawful since 2009. Article 7 of loi n 2009-010 gives every urban, rural and district commune a civil-status centre and allows secondary centres, and article 15 provides that registration may be manual or computerised with equal legal value. It permits electronic registration and does not establish that any office operates one. The pilot launched on 19 December 2025 covers Golfe 1, Agoe-Nyive 1, Ave 2, Lacs 1 and Zio 2, all of them urban or peri-urban. The five received two computers, a printer and an uninterruptible power supply each in April 2026 after reporting they had none, which sizes the equipment base outside the pilot.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural police stations**	New commissariats at Mango and Cinkasse were equipped with computer hardware in December 2025. The stations were inaugurated in the Savanes region, under security state of emergency, with all-terrain vehicles, motorcycles, patrol equipment, furniture and computer hardware, under a partnership begun in June 2025 between the national police and an international migration body. The national police data system sits at Lome: the information centre inaugurated on 29 April 2022 runs the regional police information system as the ninth national data centre in West Africa, with workstations deployed in Lome in the police, customs, gendarmerie and drugs bureau. Hardware at a station is not a connection to that system, and nothing in the repository establishes deployment to rural commissariats or gendarmerie brigades.	MOVEMENT

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	An AI-driven fraud-detection platform went into service on 12 March 2026, run from a joint tax and customs command centre. The platform uses artificial intelligence and data analysis to detect suspicious transactions and abnormal behaviour and to analyse data in real time under the mandatory secure fiscal-marking reform, staffed jointly by tax, customs and commerce ministry services. A completed commissioning, not an announcement. The government's own laboratory was scaled by a US$2 million partnership announced in December 2025 — compute clusters at two universities and a programme training 27 data specialists across all ministries, against a two-year expectation of 70 government data scientists. At the first data-infrastructure conference on 19 February 2026 its director named geospatial data and artificial intelligence essential to delivering public services; no completed integration is reported. 2026-09-17 - a public-service assistant reachable by web, mobile and voice was strongly prioritised among uses for country-hosted compute, owned by the digital ministry with the state digital agency and the AI laboratory, its procedures and data still to be prepared. No build or date is stated. 2026-09-28 - the national AI laboratory put its local-language public-services platform to a public user test, piloting Kabiye, Ewe and Moba. 2026-10-06 - the local-language AI pilot opened paid public contributions of voice and text with UNDP support.	MOVEMENT
AI	**Use of AI in sectoral management information systems**	The one documented case is the pandemic-era targeting model, and it carries its own limit as a stopgap. The discussion paper of September 2023, co-authored by the responsible minister, documents a supervised machine-learning model trained on survey data and anonymised call detail records, combined with satellite imagery, to estimate consumption and prioritise beneficiaries. It is decisive against the wider reading: the model was a stopgap for the absence of a dynamic social registry, so it is not evidence that the registry or any permanent sectoral system embeds artificial intelligence. What has moved since is capacity rather than deployment — satellite-based crop-yield forecasting in the government laboratory, and a conference that named no sectoral system and reported no completed integration.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Development of national / regional AI systems**	A national-languages speech and translation project was presented in July 2026 with four data competitions carrying US$40,000 in prizes, run by a government laboratory funded for compute clusters at two universities. The project carries targets only: no collected-hours figure, no released model and no completion date is on file (project). The laboratory running it was scaled under a US$2 million partnership announced in December 2025, funding high-performance compute clusters at the universities of Lome and Kara (partnership); in September 2026 it was recruiting a technical lead for public-sector artificial-intelligence projects, applications closing 2 October 2026 (recruitment). No budget, project list or delivery date for its work programme is published. On 3 September 2026 the United Nations Development Programme's country office sought an international consultant to draft a regional guidance note on the governance of artificial-intelligence infrastructure, for a mission running to January 2027 (notice). No source states how the language project relates to the continental coalition the ministry co-founded.	MOVEMENT
AI	**Control of AI abuse**	Control runs through the data-protection authority, which opened its first compliance procedure in March 2026. There is no AI-specific instrument. The 2019 statute bars decisions with legal effect taken solely on automated profiling, and the organisation decree gives the authority control and inspection powers and competence to issue reference frameworks including prior risk assessment. There is no artificial-intelligence-specific Togolese statute; this technology-neutral framework is what stands. On 27 March 2026 it put declaration of video-surveillance systems online with an electronic receipt and a regulatory pictogram. At the internet governance forum on 19 June 2026 it set out compliance duties on data controllers and announced forthcoming sectoral practical guides — the most recent evidence that the route runs through this authority.	MOVEMENT
ICT Industry	**National capacity in DT-related production**	A fuel marking and traceability system launched with the obligation already in the regulations from July 2026, and a digital toolbox for small enterprises was launched with donor co-financing. Neither the contract amendment nor the marking regulation is held, and no contract value, duration or data-ownership term is published for the traceability system (traceability). The enterprise toolbox was launched during a national small-enterprise week, built with German development cooperation and co-financed by three European partners, with no user or enterprise count published (toolbox). Data ownership in a national fuel traceability system is the kind of term that decides who can audit the revenue it protects, and it is unpublished.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Innovation ecosystem	**Technology hubs**	A World Bank-funded hub opened at Lome on 7 May 2026; six prefecture centres are at tender stage. The hub runs a pre-incubation and a market-stage programme, with a partnership with a pan-African incubator to support about 72 Togolese start-ups between June 2026 and July 2027 and a fund of roughly EUR 15,000 average grants for about thirty entrepreneurs. It is named the first component of a planned national network of more than a hundred spaces, none of them dated. Six centres for the prefectures of Tone, Kozah, Tchaoudjo, Ogou, Kloto and Zio were announced in April 2026 with an architecture tender closing 30 April — a procurement step for construction, not an opening. Before both, the country had one such centre, at the University of Lome.	MOVEMENT
Innovation ecosystem	**Tech startup ecosystem**	A national digital start-up association was officially launched under the digital minister in October 2025. Revenue and jobs claims are association-reported, and no membership, revenue or jobs figure has been published since launch (association). It is the only start-up item in this ledger. Ten months after launch the repository holds nothing further on it. The 2023 startup statute remains unratified against a count of more than 300 startups around a 3,000 square metre hub (account). Togo ranks 117th of 133 on the 2024 innovation index, with outputs at 108th ahead of inputs at 122nd (index).	MOVEMENT

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	Eighty digitalisation officers from 27 ministries were certified on 12 June 2026, selected from 1,442 candidates. The cohort completed three intensive sessions between September 2025 and June 2026 covering project management, product management, leadership and artificial-intelligence tools, run by the state digital agency for the digital ministry with an African training provider. A session of the same programme ran 1 to 3 April 2026 on digital project and product management, agile methods in the public sector and performance monitoring, funded by the European Union and German cooperation and taught by experts from Rwanda, aimed at a critical mass of in-house project-management skill. Separately the finance ministry trained 33 agents on digitisation, indexing, records management and its document management system to April 2026, a second phase after November 2025.	MOVEMENT
Literacy	**Digital literacy (general population)**	About 3,000 young people were trained in digital hygiene at a campaign in the capital in late October 2025. The event date is inferred from a relative reference in a November 2025 report, so day precision is not established (campaign). No curriculum, follow-up or repeat edition is on record. It is the only general digital-literacy activity in this unit. A training component announced on 2 September 2026 is to reach 25,000 women across five countries including this one with financial and digital skills training, with no country allocation, timetable or provider published (component).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**DT-related training in secondary education**	101 fabmanagers began training in August 2026 to run school laboratories teaching robotics, artificial intelligence and 3D printing. Information and communication technologies became fundamental disciplines at college level in the 2018 curriculum revision, with technology a sub-discipline of physical sciences. The curriculum text, timetables and evidence of uniform application are not held, and no instrument makes computing a standalone examination subject. Under the national digital strategy, 181 classrooms have been connected through the digital working environment, reaching 8,500 pupils, with over 1,000 computers, printers and video projectors installed in scientific secondary schools. On 24 August 2026 101 fabmanagers recruited through the teacher competition began a month-long training in programming, robotics, artificial intelligence, the internet of things and 3D printing. Staffing has moved ahead of the estate.	MOVEMENT
Training and skills	**DT-related university facilities and qualifications**	The University of Lome carries computing and artificial-intelligence degrees to doctorate, and gained two new training routes in 2026. The programme catalogue carries, at the engineering school, professional licences in software engineering and in systems and networks, fundamental licences in computing and systems and in artificial intelligence and big data, professional masters in the last two, and a doctorate in computing. It gives no enrolment or graduate figures and names no cybersecurity degree. The university joined a peer-learning coding network on 25 and 26 April 2026, teaching programming and artificial intelligence with no instructors or lectures and open to people without conventional academic backgrounds. A first artificial-intelligence summer school for 100 places ran 24 to 29 August 2026. Feasibility studies for virtual laboratories at three universities were tendered in August 2025. The first artificial-intelligence summer school finished, training 100 young people in Python, Docker, machine-learning operations, data governance and African applications, through the government data laboratory with German technical-cooperation support (completion). No selection ratio or destination for the cohort is published. A five-year academic partnership worth EUR 3.193m is building degree programmes in artificial intelligence, big data and engineering mathematics at the Lome polytechnic (project). 2026-10-06 - the data-protection authority and the Universite de Kara signed a convention for a professional master's in digital law, cybersecurity and data protection.	MOVEMENT
Training and skills	**Graduates entering DT ecosystem**	A first cohort of corporate data-protection correspondents was certified after a three-day session, and a European support programme runs to 2030. The correspondents programme flows from the 2019 statute, and no target cohort size or timetable for later cohorts is published (cohort). The European support programme for the digital transformation of the economy was committed in 2024 at year precision and runs to 2030; the aid-transparency record is the sole account and carries no activity report (programme). Certifying data-protection officers inside companies is the mechanism by which a statute with no enforcement record reaches a controller, and one cohort is where it stands. 2026-09-17 — the correspondents scheme reached the state: thirty-three ministries and public institutions were briefed on naming focal points and certified data-protection correspondents, after thirty-two were certified from the private and parastatal sectors. No deadline or count of appointments made is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Research institutions	**Think tanks and academic departments contributing to DT policy**	A district and school data-use project entered its final phase, concluding in November 2026. 2025-12-03 — Google.org committed US$2 million of research support to the Togo Data Lab, a collaboration between the digital-transformation ministry and a Berkeley research centre, to build data-science capacity at the Universities of Lomé and Kara. The start year is inferred from a three-year description and is not published (project). It is the only research activity in this ledger, and it studies whether education data is used at district and school level — which is the question the education management information system's own mid-migration state makes hard to answer.	NO CHANGE

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	There is no single national complaints portal; the telecoms regulator's channels are the sector's mechanism and a new sanitation line opened in 2026. The regulator takes complaints by free call centre, physical mail, e-mail, messaging apps, a web form, chat and callback, with the form naming the telecom and postal operators complainable against. It is the mechanism itself, not a description of one. From 26 May 2026 it ran a nationwide mobile-user satisfaction survey covering call quality, coverage, internet connection, service availability and the handling of complaints, with results to feed operator performance assessment. On 19 January 2026 the sanitation agency opened a dedicated messaging line for Greater Lome taking photographs, video and geolocation alongside its existing green line. Both are sector-specific and neither is national in scope.	MOVEMENT
Access to services	**Citizen participation in policy**	One ministry publishes a suggestions procedure; no general right to comment on draft laws or decrees was located. The procedure on the national service portal lets any person aged 18 or over, resident in Togo or in the diaspora, submit suggestions to improve security services, administrative procedures and civil protection free of charge, with a stated examination and decision step. It is the mechanism itself; the page carries no publication date. Scope is one ministry. This run found no general national procedure giving citizens a right to comment on every draft law or decree, the constitutional consultation route running through the economic and social council instead. The standing multistakeholder route for digital policy specifically is the internet governance forum, annual since 2010.	NO CHANGE
Access to services	**Gender equity**	An offline-capable platform for reporting gender-based violence and routing victims to the nearest care point was piloted (pilot). An offline-capable platform for reporting gender-based violence and routing victims to the nearest care point was piloted (pilot). It is a pilot; no case volume or coverage is stated.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Inclusion of persons with disabilities**	The treaty body's 2023 review found incomplete enforcement of accessibility standards; no digital accessibility requirement is held. The concluding observations, adopted 24 March 2023 and issued 11 April, are the dated assessment of the standing position after Togo's initial report under a convention ratified in 2011. They name the instruments in force and the gaps found, including the medical model in the 2004 statute and its unfinished revision, incomplete enforcement of accessibility standards, and weak integration of disability into social protection. The statute itself is not held in its operative text: the copy reachable was an undated draft, so the treaty body's own observations stand as the baseline in its place. Nothing in the repository sets an accessibility requirement for Togolese digital public services, and no digital service in this ledger states one.	NO CHANGE
Access to services	**Inclusion of refugees and IDPs**	10,972 refugee identity cards were distributed in the Savanes in 2025, and a grant now funds 5,000 more registrations. The national refugee body states that after four registration operations between 2023 and 2025, 41,773 Burkinabe obtained refugee status, and that a decentralised operation from 22 May to 16 July 2025 produced and distributed 10,972 identity cards across the Savanes, with records updated in its own database and the cards opening access to basic services. A training workshop addressed the finding that socio-economic sections of that database were poorly populated, so reliable data could not be extracted despite the system's completeness. A US$1 million grant approved 4 August 2026 funds registration and documentation of 5,000 new arrivals in a region hosting more than 55,000 refugees and close to 16,000 displaced people. None of this evidences enrolment on the national identity register.	MOVEMENT
Digital divides	**Bridging of digital divides**	A community network to connect 2,000 inhabitants was announced as imminent in May 2025, as a response to the absence of traditional operator coverage. It was stated by an internet society chapter as a response to the absence of operator coverage (network). Nothing since. A single village-scale community network, announced fifteen months ago and unmoved, is the whole of the divide-bridging record for this country — against a universal-service instrument that appears nowhere in the ledger.	NO CHANGE

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The 2020-2024 strategy has expired with no successor adopted; the council set orientations for 2026-2031 in June 2026. The second national strategy for the development of statistics was adopted by the statistics council on 27 August 2020 for 2020 to 2024. Its capture is truncated at the fetch cap, and nothing in the repository shows it replaced. At its thirteenth ordinary session on 30 June 2026 the council adopted strategic orientations for the national statistical system in support of the 2026-2031 government roadmap, and approved the 2023 and 2024 statistical activity reports. A workshop of 7 to 9 July 2026 validated the operational tools for a statistical visa — a prior-authorisation mechanism for national statistical operations — to be adopted at the council's next session. Orientations are not a strategy.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**Censuses and surveys**	Two major surveys opened within six weeks in early 2026, including the first demographic and health round since 2013-14. The standing count is the fifth population and housing census of November 2022, whose definitive results were published in September 2023 at a resident population of 8,095,498, broken down by region, prefecture, sex and urban or rural. Field preparation for the third harmonised household living-conditions survey opened on 9 February 2026 with cartographer and enumerator training to regional and World Bank standards. The fourth demographic and health survey launched on 13 March 2026 over 385 clusters and about 10,000 households across five regions and Greater Lome, with final results expected in 2027 — closing a gap of more than a decade in that series. The third harmonised household living-conditions survey is in the field to December 2026, covering poverty, income and employment (survey) — the second of two survey rounds opened within six weeks, after a demographic and health gap of more than a decade.	MOVEMENT
National statistics	**Statistics from administrative data**	The national statistical yearbook is the standing product, compiled from sectoral administrative systems and ministry returns. The 2024 yearbook was reissued in a revised edition in August 2026 after a first edition of December 2025, with a corrigendum stated in the document. Its capture is truncated at the fetch cap and the document is tabular. The institute's mandate for it rests on the 2011 statistics statute, whose fifteen missions include coordinating the national statistical system and examining visa applications for public statistical surveys. What is changing around it is the dissemination layer rather than the compilation: a second-generation open data portal with statistical data and metadata exchange modelling, for the institute and the sector ministries.	NO CHANGE
Open data	**Use of open data**	A national digital observatory went live in November 2025 centralising sector data for citizens, researchers and business. The observatory went live on 13 November 2025, built by the digital transformation ministry with German technical support, as a public platform centralising digital-sector data with an annual report planned. The general portals launched 19 December 2024 — an open data portal and a geoportal for infrastructure data — and are being rebuilt to a second generation with standard metadata modelling. Use is where the repository is thinnest: no download, reuse, dataset-count or user figure is published for any of the three, and no adopted licence tells a reuser what they may do with what they take. An open-data platform and a geoportal were launched in December 2024, drawing on a 2021-22 collection across 23 ministries and more than 550 administrative units (launch).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	**Agricultural use of satellite data**	Satellite data moved from forecasting to payment: index insurance claims were paid to producers in April 2026 on satellite analysis. Under the food-system resilience programme the meteorological agency was equipped with a satellite image reception antenna and new agrometeorological stations, with agro-hydro-climatic forecasts pushed to producers by SMS and voice call. On 7 and 8 April 2026 index-insurance claims were paid to producers in three agricultural zones after the 2025 season, the index resting on satellite analysis and climate data — a completed, dated use rather than an announced intention. The government's data laboratory uses imagery to track agricultural plots and forecast maize and sorghum production, crossed with field and administrative data. No Togolese satellite exists and no national earth-observation programme document is held. 2026-09-15 — the SIHAM agricultural information system was handed to the farmers' organisation to run, sending forecasts and prices free by SMS. 2026-10-04 - the digital minister announced an earth-observation cooperation under which Kyrgyzstan is to transmit satellite data for agriculture and train local staff.	MOVEMENT
Use of satellite data	**Meteorological use of satellite data**	A national climate-risk data platform was reported available online in August 2026, and the source gives no launch date. It was reported available as at 24 August 2026 (platform). No launch date, data source, custodian, update cycle or access terms are stated. It is the only environmental data system in this ledger.	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	The United States terminated its threshold programme on 18 December 2025, with US$11.1 million of US$20.5 million committed. The grant agreement signed 14 February 2019 and in force from 27 November 2020 was the most formal United States instrument with Togo bearing on this sector, its project covering regulatory independence for the telecoms regulator, sector competition, the universal service fund and expansion of access. The board voted to terminate in August 2025 and the programme ended on 18 December 2025, with US$11,085,643 of the project's US$20,500,000 committed and US$7,456,920 spent at 30 June 2025. The only other United States digital engagement found in the period is small: an embassy grant training 50 young entrepreneurs to use artificial intelligence on smartphones across five regions.	REGRESSED
China activities	**Chinese MoUs, engagements and commitments**	The standing instrument is a 2024 protocol with Huawei whose text, amount and timetable are unpublished. The government portal records a strategic partnership protocol concluded in the margins of the China-Africa forum in Beijing, signed for Togo by the trade minister, to strengthen cooperation in information and communication technology. The protocol text is not published and no amount, scope or timetable is stated. The only in-period Chinese engagement located is a capacity visit: Togolese officials toured the G60 science and technology corridor on 31 July 2026 during a commerce-ministry seminar in Shanghai, seeing drones and robotics, with partnerships, internships and training named as prospects. Nothing was signed, and no Chinese financing of a Togolese digital project appears in the repository.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
EU activities	**EU MoUs, engagements and commitments**	The largest European digital commitment found is about EUR 24 million signed in May 2026 under a European guarantee. Poland's development bank signed long-term financing of about EUR 24 million on 18 May 2026 as the first phase of an investment of more than EUR 80 million over twelve years in the cybersecurity joint venture, secured by a European guarantee; the European Union ambassador is quoted calling it the first European-supported digital investment in Togo under the connectivity strategy. The standing framework is the joint programming document for 2021 to 2027, associating the Union with Germany and France and naming the digital economy within a broader inclusion priority, with no digital-specific amount or date stated. European money also funds training — the digital ambassadors sessions and the summer school.	MOVEMENT
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	No Gulf-state digital instrument was located; the only digital component found is a multilateral procurement notice. The expression of interest issued on 13 August 2025 under an Islamic Development Bank loan covers digital feasibility studies for integrating virtual laboratories into three new university laboratories at Lome, Kara and the teacher-training school at Atakpame. A multilateral bank headquartered in the Gulf is not a Gulf-state instrument, and the notice is a procurement step rather than a bilateral engagement. No Emirati, Saudi, Qatari or Kuwaiti digital memorandum, financing or partnership with Togo appears anywhere in the repository.	NO CHANGE
India activities	**India MoUs, engagements and commitments**	The one India-Togo digital engagement found is a ministerial panel appearance in February 2026, with nothing signed. India's own press release records Togo's digital transformation minister on a high-level panel at the summit, setting out Togo's artificial-intelligence priorities, its use of artificial intelligence over satellite imagery and telecom metadata for aid targeting, and an in-house data science team established in the ministry. It is a ministerial engagement, not a signed instrument: no memorandum, financing or programme between the two states appears in the repository. The substance the minister described is documented elsewhere in this ledger — the targeting model and the government data laboratory — and rests on Togolese and multilateral rather than Indian arrangements.	NO CHANGE
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
National artificial-intelligence strategy	The strategy document, or the Council of Ministers communique or ministerial statement adopting it; a July 2026 report refers to a national strategy engaged by the government and the repository holds no instrument, date, scope or budget	2026-09-06
Text of the spectrum-royalty amendment	The gazetted decree with its number and the amended rate table; the regulator's site carries no 2026 royalties text and the rates reach the wiki only through a Council of Ministers communique	not yet probed
Internet shutdown or throttling in 2025	A network-measurement or shutdown-tracker country entry with dates and duration; the continental table the repository holds names the event in two words	2026-09-06
Mobile network population coverage	The regulator's annual market observatory or quarterly statistical bulletin, the equivalent of the series the repository already holds in full for Nigeria	2026-09-06
National 5G strategy	A digital economy ministry or regulator strategy document; the regional regulators' association positively records that none is published, so this may close as a stated absence	not yet probed

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Incident response team operational record	An incident-response profile of the kind the repository holds for Rwanda and Ghana, an annual incident report, or a membership record with an international response network; the 333,000-incident total is a single news attribution with no breakdown	not yet probed
Data-protection authority's authorisation for biometric and identification-number processing	The authority's published register of authorisations, or the authorisation decision itself for the identity agency's processing; article 8 of the 2019 statute requires prior authorisation both for biometric data and for use of a national identification number, and the authority's own organisational decree is also unheld	2026-09-06
National citizen account or single sign-on	Technical or service documentation for the public-services portal, or any statement on which agency systems federate to the identification number; the volunteering agency's new mobile application is the immediate test case	2026-09-06
The data-collection start-up named as the flagship project's partner	A company filing, an agency or association member listing, or a founder profile establishing founding date, size and funding	not yet probed
Declaration issued at the Lome space forum	The declaration text as issued at the close of the forum on 31 July 2026, or its publication by the organisers or the regulator	not yet probed
Digital sector share of gross domestic product	A national accounts series or ministry statistical annex; the repository holds a government figure of about 4 per cent for 2022 against a stated target of 10 per cent, relayed by trade press with no target date and nothing measured since	not yet probed
Start-up statute or legal framework	A law or decree on start-up labelling and incentives, or a ministerial statement that none exists; the industry association's own remedy for legal uncertainty was a private law-firm partnership	not yet probed
Gender-disaggregated digital access measure	A sex-disaggregated figure from an international telecommunications or financial-inclusion series, or the national statistics institute's own household survey; the only gender figure in the section is a 2020 programme statistic carried by a 2023 reference study	2026-09-06
Rural and urban connectivity gap measure	A regulator coverage or penetration series broken down by region or by rural and urban area; the repository holds only a sub-Saharan regional figure and Togo's rural population share	2026-09-06
Universal service fund	The fund's constituting instrument and any published annual report or regulator accounts showing its balance, governance body and disbursements; the only held reference is the article of the fee decree allocating 30 per cent of fine proceeds to it	2026-09-06
Gulf-state digital or technology cooperation instrument	Any investment, data-centre agreement or sovereign-fund commitment naming Togo; the subject returns no Togolese source at all	2026-09-06
Indian digital or technology cooperation instrument	Any memorandum, credit line, training-programme participation or supplier contract naming Togo; the subject returns no Togolese source	2026-09-06
Loi n 2017-006 d'orientation sur la societe de l'information	The statute's own text or a gazette reference; it is known only from another decree's visas	2026-09-06
Loi n 2017-007 relative aux transactions electroniques	The statute's own text or a gazette reference; it is known only from another decree's visas	2026-09-06
Data localisation requirement	An enacted localisation obligation, or a dated regulator statement that the objective has been dropped	2026-09-06
Accessibility of digital public services for persons with disabilities	An accessibility standard or requirement binding on government digital services, or the operative text of the 2004 disability statute and its revision	2026-09-06
Source of financing against the FY2026 digital lines	A 2026 budget volume printing the source-of-finance key per chapter, as the 2024 and 2025 volumes did; the 2026 chapter volume prints none and external origin is inferred from the draft budget programme.	2026-09-25
Outturn against the digital appropriations	The Cour des comptes report on the execution of the 2024 finance law (held, not yet read into the budget extract), or a loi de règlement printing execution by chapter.	2026-09-25
Decree on the operation and financing of the Digital Sovereignty Fund	The Council of Ministers decree under article 7 of Law 2018-026 setting the fund's operation and financing, and any budget line or account carrying it.	2026-09-25
Location and jurisdiction of the IDEMIA/Atos private cloud hosting the e-ID database	The ANID contract with IDEMIA/Atos or an ANID statement of where the e-ID database is physically hosted and under which law.	2026-09-25

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Data jurisdiction, portability and exit terms of the e-ID, NITEC and SIN-ST Digital agreements	Publication of the IDEMIA/Atos contract, the NITEC licence terms or the SIN protocol with ST Digital of 26 May 2026.	2026-09-25
Operator of the Lomé Data Centre after the five-year Africa Data Centres contract	A SIN or ministry statement of who operates the Lomé Data Centre from 2026, whether the cession authorised in December 2022 was completed, and on what terms.	2026-09-25
