PROGRESS REPORT

Tanzania: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	A Digital Economy Strategic Framework 2024-2034 opened its implementation year, and the repository holds no dated 2025 progress position against any of its targets. Targets were restated at an annual conference in January 2026, and the framework is held as stated intent only (framework). The sector's contribution to gross domestic product carried into that restatement is a 2022/23 figure carried forward, with nothing dated 2025 or 2026 on file (contribution). A ten-year framework whose headline economic measure is three years stale at its own implementation launch is the position, and it is the frame for the delivery counted below. 2026-09-16 — the planning ministry presented e-Delivery as the system to track every state development project from planning to execution, with fund releases matched to it. 2021-04 - the e-government agency's five-year strategic plan set targets to June 2026, among them shared government data-centre infrastructure and 300 institutions on the government network and data centres; the ledger holds no outturn against them.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**ICT strategy**	The 2016 policy is still the standing instrument, with a successor infrastructure plan out for consultation. The 2016 national policy, revising the 2003 one, is the operative standing instrument; a 2023 draft successor went out for stakeholder review and no evidence of its enactment was located. A ministry consultation in March 2026 opened a new national infrastructure development and construction plan with an accompanying construction guideline. The 2026/27 ministry budget of 222.589 billion shillings sets eight priorities including backbone strengthening, technology parks and rural connectivity. The money and the plans are moving; the policy under them has not been replaced in ten years.	NO CHANGE a ten-year-old policy with an unenacted successor
Strategies, plans and policies	**Broadband strategy**	The 2021-2026 strategy's steering committee met for the first time in June 2026, in the strategy's final year. The ministry confirmed the 2021-2026 broadband strategy actively overseen at its steering committee's first meeting in June 2026, with the regulator reporting 94 per cent high-speed internet coverage and 35 per cent 5G access. A parliamentary committee inspected and confirmed the 758-tower project complete, with 304 towers upgraded to 4G and 5G under a 126 billion shilling programme. No primary text of the strategy is locatable, and a steering committee meeting for the first time in the strategy's final year is what the oversight record shows.	MOVEMENT
Strategies, plans and policies	**Data storage / cloud strategy**	A binding data-centre standard was approved in February 2026, superseding earlier guidance, alongside financial-sector cloud rules. The government data-centre standard, board-approved in February 2026 under the e-government statute, governs public-sector data-centre siting, tiering and hosting and supersedes earlier guidance, setting site-selection, power, cooling and utility requirements and confining public institutions to government-approved hosting environments. Central bank guidelines of August 2025 raise the financial sector's cloud governance baseline, barring mission-critical data from offshore hosting and setting contract requirements for redundancy and backup. A locally hosted private cloud launched in November 2025 as a domestic alternative to offshore providers. No list of approved hosting environments, and no count of workloads moved, is published.	MOVEMENT
Strategies, plans and policies	**Data interoperability framework / roadmap**	A 2016 framework sets the interoperability standards, and a data governance strategy reached validation in March 2026. The 2016 interoperability framework defines nine technical-standards areas that public institutions must follow. A national validation workshop in March 2026 advanced a draft electronic data governance strategy, setting interoperability, data-sharing and stewardship direction aligned with the digital economy framework, toward formal adoption; the government's own representative described it as not yet adopted. The 2024/25 audit of 133 entities records continuing system fragmentation and weak controls despite the statutory framework. A ten-year-old framework and an unadopted strategy is the roadmap on this record.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**AI strategy**	The ICT Commission said in September 2026 that the National AI Strategic Framework 2026-2031 is awaiting approval, after the ministry called the strategy completed in March; no text is published. The ministry's permanent secretary said in March 2026 that the national artificial intelligence strategy was completed and would provide governance and oversight of the technology, and Tanzania's own July 2026 statement to the United Nations global dialogue describes an implemented national strategy framework of 2026. Independent assessments published at the end of July still record no adopted national instrument, with work proceeding off existing digital, data-protection and science frameworks. No strategy text is held from any source, which is what would settle it. The government's own statement acknowledges that liability and oversight rules remain to be developed whatever the strategy says. The one sectoral AI instrument held is the education ministry's National Guidelines for Artificial Intelligence in Education, issued January 2025 under the National Digital Education Strategy 2024/25-2029/30, held in full as published. No implementation report, school count or review date under them is held. 2026-09-29 - the ICT Commission's head of ICT development said the National AI Strategic Framework 2026-2031 is awaiting approval, and that the commission proposes a readiness and compute-demand assessment feeding a planned AI observatory. The government's own accounts now describe a framework drafted but not adopted.	MOVEMENT a framework drafted and awaiting approval, with no text published
Strategies, plans and policies	**Data localisation policies**	Public institutions may host only in government-approved environments, and mission-critical financial data may not leave the country. Part V of the 2022 data protection statute sets the transborder data-flow regime, requiring an adequacy assessment and commission-authorised safeguards for transfers to states without adequate protection. The government data-centre standard requires public institutions to host only in government-approved environments and bars the use of cloud platforms not owned by government. Central bank guidelines bar mission-critical financial-sector data from being hosted outside the country. The minister gave a final three-month registration ultimatum in January 2026 and directed the commission to prepare nationwide compliance audits. No adequacy determination for any destination country has been published.	MOVEMENT
Strategies, plans and policies	**Data governance policy**	A National Data Management Framework was reported at stakeholder stage with completion targeted for January 2026, and eleven months have passed with nothing later on file. It is positioned within a continental data policy framework (framework). Nothing has entered the repository since August 2025. The country has a data protection Act in force and an active commission, so what is missing is the management layer above them rather than the protection layer itself.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Open data policy**	Release runs on the statistics bureau's 2024 dissemination policy rather than a general open data policy, so what governs it is sectoral, and a statistical portal is in service. The operative instrument governing the release of official statistics is the statistics bureau's 2024 dissemination policy, which sets an open-access tier and principles of transparency, accessibility, timeliness and confidentiality. The procurement authority's 2025 policy mandates publication of procurement data in open contracting format through its portal. The two statistics offices run an integrated portal bringing administrative, demographic and survey data together. Three sectoral instruments in place of one policy is the position, and no dataset count or reuse measure is published for any of them.	NO CHANGE no general policy has ever been adopted
Legislation and regulation	**Data protection legislation**	The Personal Data Protection Act, 2022 commenced in May 2023 with regulations in force, and practitioners record that key terms remain undefined and there is no adequacy mechanism for cross-border transfers. Practitioners record that security breach and without undue delay remain undefined, that there is no adequacy mechanism for cross-border transfers, and that there is no duty to notify data subjects (Act). Those three gaps bear directly on the rest of this unit: the identity register connects to more than 138 institutions, the social-media tax-credential rule publishes trader identifiers, and the financial consumer-protection regulations cross-reference this Act as their data basis.	NO CHANGE
Legislation and regulation	**Cybersecurity legislation**	Critical infrastructure registration opened in June 2026, eleven years after the statute that provides for it. The cybercrimes statute, in force since September 2015 and consolidated in 2023, criminalises illegal access, interception, data interference and computer-related fraud and forgery, and provides for the protection of critical information infrastructure. The ministry opened a six-month registration window from 19 June to 19 December 2026 activating that regime across finance, health, water, energy, mining, transport, agriculture, industry, education and defence, with mandatory 24-hour incident reporting and penalties of at least 100 million shillings, three times the loss caused, or five years' imprisonment. Central bank guidelines of August 2025 add encryption, multi-factor authentication, vulnerability remediation, access controls, audit rights and incident provisions for regulated financial-sector cloud arrangements.	MOVEMENT
Legislation and regulation	**Legislation covering digital id**	A 1986 statute is still the law under which digital identity is issued, reported on to parliament in August 2026. The founding 1986 statute establishes registration of persons and identity-card issuance and is still in force as the 2023 consolidated edition. The home affairs minister presented the identity authority's and immigration department's implementation report to parliament's foreign affairs, defence and security committee on 19 August 2026. A statute written three decades before the digital identity built on it, with no amendment covering that layer, is the whole of the legal basis on this record. The bill that would extend it to registration from birth has not been enacted.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Digital payments legislation**	New complaint-handling guidelines replaced the 2015 set in November 2025, under the 2015 payment systems statute. 2026-06-30 — regulations made proof of a digital payment facility a condition of every new or renewed business licence from 1 July 2026. The founding payment-systems statute of 2015 regulates payment-system licensing, electronic payment instruments and electronic money and assigns licensing and supervision to the central bank. Guidelines issued in November 2025 replaced the 2015 set, mandating standardised, no-fee, multi-channel complaint handling with digital channels required of providers operating digital platforms, statutory resolution timelines and a central-bank appeal and determination process. Regulations gazetted in December 2025 bring non-interest banking windows into a prudential and governance framework, including a mandatory core banking system able to process compliant transactions. No complaint volume or resolution-time series is published against the guidelines.	MOVEMENT
Legislation and regulation	**Legislation enabling data interoperability**	The 2019 e-government statute mandates interoperability, and two technical standards were approved under it in February 2026. The 2019 e-government statute mandates integration and interoperability of government systems, establishes the authority's data-sharing and exchange platform mandate, and provides the basis for its technical data standards. A board-approved application standard of February 2026 requires secure development-lifecycle controls, vulnerability testing, audit logs and privacy by design, and mandates open interoperable design with government-controlled source-code hosting. A companion data-centre standard of the same date sets site, power, cooling and utility requirements for approved government hosting environments. The public data centre rules gazetted alongside them could not be captured and are not held.	MOVEMENT
Legislation and regulation	**AI legislation / regulations**	Tanzania told the UN it has a strategy framework and no artificial-intelligence liability or oversight rules. Tanzania's own statement to the United Nations global dialogue on artificial-intelligence governance describes an implemented national strategy framework of 2026 and positions responsible use, human oversight, transparency and data governance as national priorities, while acknowledging the legislative gap and that artificial-intelligence-specific liability and oversight rules were still being developed. What is in force instead is a content rule: a 2025 amendment adds unethical, fabricated and artificial-intelligence-generated material to the prohibited online content list and requires service providers and platforms to filter and remove it. Prohibiting output is not regulating a system. 2026-08-31 - the first rule reaching a system arrived as a standard rather than a law: AI standards for public institutions, issued under the e-Government Act and effective on board approval, requiring impact and risk assessments and prohibiting fully automated decisions with significant outcomes. They bind public institutions only; no AI statute or liability rule is on the record.	MOVEMENT by a binding e-government standard rather than a statute

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**E-commerce legislation**	The Electronic Transactions Act was amended by the Finance Act 2026, and a review of more than 1,000 laws was announced with no list, sequencing, responsible body or timetable. Section 13 of the Act was amended on 30 June 2026; the land, building and motor-vehicle requirement is a substantive obligation in its own right and is not part of the scheduled transaction classes the separate order lists (amendment). The thousand-law review was announced in August 2026 with nothing stated about scope, sequencing, responsible body, timetable or consultation route (review). Distinguishing the Act amendment from the order made under it matters: secondary accounts treat the mandatory-payment regime as regulations, and it is neither. 2026-09-22 - the Citizen Budget 2026/27 lists the digital service tax on foreign digital service providers as raised from 2 to 3 per cent; its effective date and statutory clause are not held.	MOVEMENT
Legislation and regulation	**Statistics legislation**	The statistics statute establishes the bureau, its board and the national statistical system, unchanged across two revised editions. The Statistics Act, in its 2019 revised edition of the 2015 statute, establishes the statistics bureau as a continuing body, its governing board and the national statistical system, and is the principal statute for the production, coordination and dissemination of official statistics. A 2023 revised edition of the same statute is separately held, placing the initiation of official censuses and surveys under the Statistician General. No amendment bearing on data sharing, administrative-data access or statistical confidentiality in a digital system is held.	NO CHANGE
Legislation and regulation	**Access to information legislation**	The 2016 statute is unamended, but a civic platform was suspended and a nationwide shutdown is before a regional court. The founding right-to-information statute was gazetted on 30 September 2016 and came into force on 1 July 2017, applying to mainland Tanzania only. The regulator suspended the country's leading civic discussion and whistleblowing platform for 90 days under the online content regulations in September 2025, ahead of the general election. A rights organisation filed a reference at the East African Court of Justice in December 2025 challenging the nationwide internet shutdown of 29 October to 4 November 2025 as an unlawful restriction on access to information under the regional treaty and the African Charter. No request or appeal statistics under the statute are published for any year. 2026-09-17 — the accreditation duty was read onto a new population: the board holds that content creators doing journalistic work fall under the Media Services Act, so that none may report news or conduct interviews without accreditation requiring at least a diploma, and that a creator doing journalism must register their platform with the communications regulator as a media outlet. It is a reading of a 2016 statute rather than a new instrument, and no enforcement action or count of accredited creators is published.	REGRESSED the statute stands while access itself was suspended and shut down

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data protection	**Data protection authority**	The commission issued a seven-day completion ultimatum on registration and officer duties, and launched a certified data-protection officer programme with the open university. Inspections were announced to begin in April 2026 and the ultimatum followed in June; the repository holds no count of registered controllers and no inspection outcome, fine or enforcement decision after that start date (ultimatum, inspections). The officer programme is the capacity answer to the statutory mandatory-officer duty, with no intake number, fee or first cohort date on file (programme). An inspection regime announced, an ultimatum issued and no outcome published is the enforcement position here. 2026-10-07 - the data protection commission reported 15,146 institutions registered with it and 445 personal-data complaints received by August 2026.	MOVEMENT
Data protection	**National data protection readiness**	39,117 numbers were blocked for registration fraud against 56 incident reports to the police — blocking is not prosecution. The regulator gave full-year and quarterly enforcement figures to parliament in August 2026 (enforcement, joint response, fraud). Fifty-six incident reports stand against 39,117 numbers blocked (figures), and no conviction or restitution figure is held. Administrative disconnection in those numbers, with prosecution three orders of magnitude below it, is the shape of enforcement rather than a gap in reporting. 2025-08 — the commission awarded TZS 20m in damages and a TZS 5m fine over a child's photograph used commercially without parental consent, reported as its first decision of the kind. The decision text is not held.	MOVEMENT
Regional collaboration	**Regional policy collaboration**	Somalia sent a delegation to study the labour digital systems and is seeking the wider e-governance model (visit). A Somali government delegation studied the labour and employment digital systems in Dodoma on 28 August 2026 (visit), and Somalia is seeking to learn from the public-service digitalisation experience more broadly (report). The consultations were held in February 2026; no adoption date, text or national ratification step is on file and the source is held as an excerpt (strategy). The pipeline consultancy was tendered in August 2026 under a European and regional programme; the record is a procurement notice, so it fixes the consultancy stage and nothing about any project it may prepare (pipeline). The country is consulting on a regional artificial-intelligence strategy while its own has missed its release date.	MOVEMENT
Regional collaboration	**Regional legal harmonisation**	All eight partner states reaffirmed a shared data-governance agenda in May 2026; the project's own report finds nothing delivered. All eight East African Community partner states reaffirmed at the regional digital integration project's third steering committee in May 2026 their commitment to inclusive regional data-governance frameworks supporting secure cross-border data flows. Part V of Tanzania's own 2022 data protection statute sets the national transborder regime that any harmonised framework would have to meet, requiring an adequacy assessment and commission-authorised safeguards. A reaffirmation is not an instrument. No harmonised regional legal text, mutual-recognition arrangement or adequacy decision between partner states appears anywhere in this repository.	NO CHANGE commitment reaffirmed and no instrument produced

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Shared regional infrastructure**	A twenty-year Zanzibar broadband agreement was signed, ten months after the same agency signed an unpriced memorandum with another operator that produced nothing on file. Nothing is on record being built under the twenty-year agreement and no first-phase start date is held (agreement, memorandum). The earlier memorandum covered broadband, digital inclusion and public services and produced nothing on file (earlier). One agency, two operators, one priced and one not, and no build under either — which is why the priced agreement is recorded as planned rather than as delivery. The foreign minister said in September 2026 that the two countries would fast-track a fibre-optic cable from Kigoma to Kalemie in the Democratic Republic of Congo through Lake Tanganyika, alongside a railway link through Burundi and a joint economic commission. No route survey, cost, financing or delivery date is published.	MOVEMENT
Regional collaboration	**Cross-border data transfers**	Part V of the 2022 statute sets the transfer regime, and the eight regional states reaffirmed a shared data-governance agenda. Part V of the 2022 data protection statute sets the substantive rules for transborder data flow, requiring an adequacy assessment and commission-authorised safeguards for transfers to states without adequate protection, with the commission itself established by section 6. All eight East African Community partner states reaffirmed at a project steering committee in May 2026 their commitment to inclusive regional data-governance frameworks supporting secure cross-border data flows. No adequacy determination for any destination country, and no authorised-transfer count, has been published; a reaffirmation of commitment is not a framework.	MOVEMENT
Standards	**National interoperability standards**	A 2016 framework sets nine technical-standards areas for public institutions, joined by an application standard in February 2026. The 2016 interoperability framework defines nine technical-standards areas — interconnection, access, collaboration, data integration and the rest — that public institutions must follow. A board-approved application standard of February 2026 requires secure development-lifecycle controls, vulnerability testing, audit logs and privacy by design for government applications, and mandates open interoperable design with government-controlled source-code hosting. A service directory launched in June 2026 with more than 500 institutions onboarded under a directive to connect to the government service bus. No conformance regime and no compliance count is published against either instrument.	MOVEMENT
Standards	**National quality standards**	A digital trust initiative was launched at an inaugural forum by a private-sector-founded body naming public regulators as partners. No constitution, funding, membership list or statement of the regulators' role in it is held (initiative, sandbox). A private body naming regulators as partners, with no published account of what that partnership commits either side to, is worth recording as exactly that. 2026-09-09 - Zanzibar's government told its House of Representatives a guideline on shared fibre poles and a single fibre contractor is being prepared, after each provider put up its own.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	**Adoption of international standards**	More than 130 standards are compulsory, and the central bank issued sustainability and climate-risk guidelines for 2025. The accountancy board's 2018 pronouncement assigns full international financial reporting standards, public-sector accounting standards and the small-entity variants by entity category, effective for periods from April 2019. The standards bureau's October 2025 compulsory list carries more than 130 mandatory standards enforceable under the standards statute, including identical or closely referenced international electrotechnical adoptions. The central bank's supervision report for 2025 confirms new guidelines on sustainability-related and climate-related financial risk aligned to the international sustainability standards, alongside continued Basel implementation. None of the adopted standards on this record is digital or information-security specific.	MOVEMENT
Public debate and participation in policymaking	**Non-governmental contribution to national policy**		NO EVIDENCE
Public debate and participation in policymaking	**Open discussion of government policy**	An influencer sued a platform company alleging government-directed account suspensions (suit). An activist and social-media influencer sued a platform company in the United States, alleging her accounts were disabled at the government's direction (suit). The allegation is untested and the repository holds no government response. No gazetted instrument, directive or regulator order for the shutdown is held; the record is third-party monitoring only, and the monitor states its counts are subject to revision (shutdown, integrity, economy). Licensed online content outlets fell on the regulator's quarterly count to June 2026 (licences). A civil-society study measures online gendered violence against election candidates across cycles; the repository holds no regulator, electoral-commission or platform figure for the same phenomenon, so it is the only measurement on file and it is the researcher's own (violence).	REGRESSED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The communications vote fell 24 per cent year on year, and the whole reduction is external finance — domestic development finance is unchanged. Estimates were presented to Parliament in April 2026 (estimates, vote, forward). That the entire fall sits in external finance while the domestic line holds is the finding, and it is the opposite of the pattern most units in this frame show, where the domestic share shrinks. 2026-09-17 — the identity system has a stated development allocation: more than 132bn/- for 2026/27, including 31 registration offices. It comes from a speech rather than an appropriation document, and no prior-year figure is held to read it against.	NO CHANGE
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
MoUs and other agreements	**Strategic relationships**	Three bilateral cooperation tracks were opened in one week with no signed instrument, and a digital economy memorandum was signed with a Chinese vendor. Cooperation frameworks with three states were agreed at an international summit, memoranda proposed and none signed; no signed instrument, amount or timetable is held for any of the three (tracks, frontier). The vendor memorandum was signed in Shanghai by the ministry's permanent secretary and witnessed by the minister; no commitment amount, term or financing structure is stated in the ministry's own release, and device manufacture is placed inside a vendor memorandum rather than an industrial policy (memorandum). Putting domestic device manufacture inside a supplier agreement rather than a policy instrument is the substantive point. 2026-09-12 — a Korean track was pressed at the KOAFEC ministerial, the minister agreeing to accelerate a stated US$2.5bn commitment and to deepen a university partnership on AI and digital skills. Neither is signed, allocated or dated.	MOVEMENT
New investments	**Mobilisation of non-state finance**	A US$25m credit facility extendable to US$50m was announced for payment rails, and startups raising disclosed funding fell on an annual tracker. The facility is debt rather than equity; the repository's prior record for the same company is a different instrument, and no local-currency figure is published (facility). The startup count comes from a third-party tracker of disclosed rounds only, with both ends from the same report (startups). The leading operator reported network investment and coverage at its annual general meeting; those are the operator's own figures, not a regulator series (operator). 2026-08-21 - the competition regulator opened a review of a Kenyan bank's acquisition of 22.23% of a payments company, which gives it indirect control of the company's Tanzanian payment-service subsidiary; the price is undisclosed and no approval is on record. Before the window, a US$10.35m foundation grant supported development of the national instant payment system over 2018 to 2022. 2026-09-28 - the government presented TZS 7,000bn of digital infrastructure investment to 2031, still to be mobilised, to European investors in Helsinki, spanning fibre, the Kilimanjaro One cable, device manufacture and a technology park. No financier or public-private split is published. 2026-03-24 - the British development finance institution reported a second US$20m disbursement into a tower group's public bond.	MOVEMENT
New investments	**Development-partner project financing**	A US$150m digital project scheduled to close in 2026 has no closure, disbursement figure or completion report on file, and a US$170m concessional loan was approved for an artificial-intelligence training institute. 2026-09-15 — the flagship programme reached its end date: the US$150m first phase completes on 31 October 2026, with a second phase signalled around artificial intelligence. Nothing about a second phase is committed or costed.	MOVEMENT

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	Fifth-generation facilities rose 139 per cent from 754 in June 2024 with data consumption up from 426 to 932 petabytes, while the smartphone user count fell quarter on quarter as the percentage rose. The regulator's quarterly report to March 2026 carries the fifth-generation facilities and data-consumption figures. The smartphone user count fell quarter on quarter while the percentage rose, and the regulator names low smartphone penetration and a 23.7 per cent geographic broadband gap as sector challenges; the repository does not reconcile the two counts. Active subscriptions and penetration come from the regulator's own quarterly report for the quarter to June 2026, now held first-hand. The regulator scored quality for the quarter to June 2026: the state operator highest at 98.1 per cent, ahead of the largest operator at 97.7 and the third at 97.1 - the state operator leading on quality while holding a small share of the market. 2026-09-10 - the largest independent tower operator is targeting 4,500 sites by the end of 2026 against more than 4,000 now. The counts are the operator's own, and no tenancy ratio or coverage contribution is published. 2026-09-28 - a government presentation to European investors put smartphone penetration at 44.74 per cent in June 2026, up from the regulator's 42.5 per cent for March; no user count accompanies it.	MOVEMENT
Connectivity	**Internet usage**	The state operator reset its fibre-to-the-home target to 2028 with about 200,000 of 280,000 financial-year connections delivered, and a second operator launched fibre service in the capital. The target slipped to 2028 with roughly seven-tenths of the year's connections delivered; the event date is not stated so the publication date stands, and subscriber ranks are regulator data to end-March 2026 (target). A second operator launched fibre-to-the-home and business service in the capital in August 2026 (launch).	MOVEMENT
Connectivity	**Mobile affordability**	Bundle data fell 2 per cent while voice rose up to 14 per cent, on 42.5 per cent mobile broadband penetration. In the quarter to September 2025 industry-average bundle data tariffs fell 2.0 per cent from 2.12 to 2.08 shillings a megabyte while bundle voice tariffs rose, on-net by 14.2 per cent and off-net by 4.7 per cent. The regulator's report for the quarter to March 2026 puts basic voice at 29 shillings a minute and bundle data at 9.35 shillings a megabyte, with mobile broadband penetration at 42.5 per cent and smartphone penetration at 32.83 per cent. An operator and vendor device-financing offer put a 5G router at 80,000 shillings upfront and 80,000 a month for twelve months with unlimited internet up to 10 Mbps. The two tariff series are quoted on different bases and the regulator publishes no reconciliation between them.	MIXED data tariffs fell while voice tariffs rose

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**National fibre backbone**	The prime minister committed to further national backbone investment and higher rural fund allocations (statement). The prime minister committed to continued investment in the communications sector, including strengthening the national backbone and raising funding for the rural communications fund (statement). No amount or route length is stated. A contradiction between three figures is resolved: 16,280 km is the planned total, 13,820 km the length laid at April 2025, and 15,167 km the length at December 2025 (backbone); the "over 15,000 km" quoted at an international summit in July 2026 is that December figure, correctly stated (backbone, budget, zanzibar, sector). It is built as a state network: the regional manager states phase one connected government offices and public institutions, with individual citizens only next. A backbone user figure for one region was given to the minister and no national connected-user total is held (users). A cross-border terrestrial link was launched in July 2026 with no capacity, cost or financing stated, and its relation to a 2025 connection is unreconciled (link). The state operator agreed with the Burundian backbone operator to raise cross-border capacity from 4Gbps to 10Gbps, reported 9 September 2026 (capacity).	MOVEMENT
Connectivity	**International internet bandwidth**	A submarine cable was announced in November 2025 with no construction start, contractor or cost confirmed since, and cables and landing stations are counted on two unreconciled bases. The cable announcement has produced nothing further in the repository (cable). Cables and landing stations are not the same unit and nothing in the repository reconciles the two counts, one from the regulator to December 2025 and one from a ministerial statement at an international summit (cables, summit). 2023-08-15 - the 2Africa cable's Dar es Salaam landing went live with a mobile operator's cable centre, launched in the President's presence; no capacity lit for the country is stated. The 2Africa landing station at Mbezi, Dar es Salaam, was activated in September 2024, a year after the cable's East African section went live. 2026-09-25 - the regulator's director general put available international capacity at 17,690 Gbps, of which 2,731 Gbps, or 15.4 per cent, was in use in June 2026. No earlier figure is held, so the level is stated and the direction is not.	MOVEMENT
Connectivity	**Internet Exchange Points**	Six exchanges operate on the association's own account, and the Dar es Salaam exchange's core was upgraded to 100G as its traffic rose by more than 80 per cent in a year. The service providers' association operates six exchanges — the Dar es Salaam exchange plus nodes at Arusha, Dodoma, Mbeya, Mwanza and Zanzibar. A carrier-neutral data-centre operator joined the association and the peering community with effect from 19 September 2025, opening peering, cross-connect activation and capacity roadmaps to others. A second developer passed 380 million dollars of committed capital in July 2026 with a Tanzanian carrier-neutral facility in its pipeline, exchange and peering connectivity among its intended services. 2026-09-23 - the association upgraded the Dar es Salaam exchange's core switching to 100G; the exchange connects 66 networks and averaged about 205 Gbps in late September 2026 against about 110 Gbps a year earlier, on its own statistics. No member count or traffic figure is published for the other five.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Satellite broadband licensing and availability**	Satellite broadband went live in November 2025 through operator partnerships, under landing-rights guidelines the regulator issued in July 2025. The service went live at month precision, with the satellite operator moving from rival to partner of two mobile operators (service, partnership). No subscriber or pricing figure is held. Arriving through operator partnerships rather than a direct consumer licence is a different market structure from most units in this frame. The licensing instrument is the regulator's July 2025 guidelines for satellite landing rights; no authorisation granted under them is on file.	MOVEMENT
Data Storage	**Local data centre capacity (all providers)**	A commercial data-centre estate is counted in a sector review, a tier-three facility hosting the national internet exchange has had no update in seventeen months, and a local cloud exchange platform launched here first. The commercial count is a trade-magazine count rather than a regulator's, and it sits alongside a separate count of public centres which is the state's own and is not the same measure (estate). The tier-three facility's second phase launched in March 2025 and hosts the national internet exchange to keep domestic traffic local; seventeen months with no update is the finding (facility, phase). A cloud exchange platform launched here as its first market in November 2025 at month precision (exchange), and a further site is named at group level on a funding item tagged to seven places with no local site, size, cost or date given (site). 2023-10-10 - a regional carrier introduced the country's second Azure hyperconverged stack in a carrier-neutral data centre, having brought the first in 2021; no capacity or customer figure is stated. An older operator estate is also held: colocation offered in 2022 in ISO 27001-certified data centres in Dodoma, Mwanza, Arusha, Mbeya and Dar es Salaam, with no capacity stated for any site.	MOVEMENT
Data Storage	**Local data centre capacity (national providers)**	Three public data centres were commissioned between March 2021 and December 2025 with no rack, floor-space or power capacity published, and national centres at two sites are named as active investment. No rack, floor-space or power capacity is published for any of the four, so the state's own estate cannot be sized (commissioned). The two national centres are named as active government investment with no commissioning date, capacity or completion percentage held for either (centres, allocation, budget). A national artificial-intelligence data centre is stated by the minister to be under construction, and the power claim attached to it is the one sovereignty argument in this unit with a physical constraint behind it (AI centre). 2017-01-18 - the state operator's US$93.6m tier-three centre at Kijitonyama, completed in 2016, was barely occupied, and the minister told public agencies to stop building their own server space and move in. No later occupancy figure is tied to the site. 2026-10-03 - Zanzibar's communications minister said more than TZS 53bn is set aside for a data centre and public internet.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Off-site backup capacity**	Off-site backup has been required of government since 2017, and a domestic private cloud launched in November 2025. The 2017 security architecture standard requires a three-tier backup strategy — daily, weekly and monthly — and an off-site data-storage facility, under the systems continuity domain of the ten government security domains. Central bank guidelines of August 2025 bar mission-critical financial-sector data from being hosted outside the country and require cloud contracts to cover infrastructure redundancy and backup arrangements. A locally hosted private cloud with storage and security services launched in November 2025 as a domestic alternative to offshore providers, able to support resident backup and disaster recovery. No tested-recovery statement, capacity figure or compliance count against the 2017 standard is published.	MOVEMENT
Energy	**Sufficient energy and water for data centres**	A February 2026 standard sets power, cooling and water requirements for government data centres, on a grid that failed nationally in June. The government data-centre standard sets site-selection, power-system, cooling and utility-services requirements — electrical capacity, backup generators, water delivery and reservoir provision — that approved hosting environments must meet. The grid those facilities draw on suffered a nationwide blackout on 27 June 2026 from a transmission-line and generation-station chain-reaction fault, prompting a government investigation and a directive to add load-shedding capability. A standard that requires backup generation and a grid that failed nationally in the same year are the two halves of this indicator. No data-centre load figure, water withdrawal figure or grid-capacity assessment for the sector is held.	MOVEMENT
Energy	**Grid reliability**	A nationwide blackout on 27 June 2026 prompted a government investigation, against a statutory quarterly index series. The regulator publishes statutory quarterly interruption-frequency, duration, average-interruption and unserved-energy indices under the electricity statute, reporting the position at 31 March 2026. A nationwide blackout on 27 June 2026, running from about seven in the evening to midnight, was caused by a transmission-line and generation-station chain-reaction fault; the government appointed an investigation team and directed that load-shedding capability be added. The index values themselves did not survive into this repository as figures, so the series is held as a source rather than as a level; the blackout is what the record shows of the position.	REGRESSED
Energy	**Rural electrification**	Contracts worth 1.2 trillion shillings were signed to electrify 9,009 hamlets, with all mainland villages reported reached. The founding statute establishes the rural energy board, fund and agency responsible for improving access to modern energy services in rural mainland Tanzania. The agency signed thirty contracts worth 1.2 trillion shillings in January 2026 to electrify 9,009 hamlets across 25 mainland regions, serving 290,300 initial customers over three years, and reported all 12,318 mainland villages reached by the end of 2025 with 39,003 of 64,359 hamlets electrified and 2,435 in progress. Village-level and hamlet-level coverage are different denominators — every village reached, three in five hamlets not — and the agency's own figures are the only ones held.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	**Robustness of government hardware and software**	Enforcement was tightened on a government asset management information system, with no count of assets recorded, entities complying or value reconciled published. The tightening was reported in August 2026, and the two named investments are cited as scale rather than as entries in the system (system). An asset register whose own contents are unpublished cannot evidence the control it is meant to provide, which is the same gap the identity, tower and data-centre counts show in this unit.	MOVEMENT
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	A cyber-skills partnership announced in August 2025 has produced nothing further in twelve months, and practical backbone training with a technical institute has no intake number or cadence published. Twelve months with nothing further on file is the finding for the cyber-skills partnership (partnership). The backbone training was reported in July 2026 with the visit date not stated, and no intake number, cadence or programme name is published (training). A state backbone of the length recorded elsewhere in this report, and two training arrangements with no measured throughput, is the maintenance capacity the record supports.	NO CHANGE
Cybersecurity	**National cybersecurity readiness**	Registration of critical ICT infrastructure was directed with no criteria or deadline published, and reported fraud cases fell 69 per cent to 7,334 between September 2023 and June 2026. The registration direction was given in August 2026 (register), and cybercrime investigation centres were stated to Parliament with the 2026/27 budget with no cost line, timetable or staffing figure. An international cybersecurity index placement is cited and not absorbed, with the underlying edition and its date not established (index). A national cybersecurity forum held a fourth edition in April 2025 with no 2026 edition recorded, and a Zanzibar cybersecurity capacity memorandum was signed with no value, term or deliverable named. 2026-09-10 - the first national count of the harm reaches the repository: 7,334 mobile fraud and online scam cases reported nationally, of which 2,495 or 34 per cent in Rukwa and 2,079 or 28.4 per cent in Morogoro, published alongside a three-day regulator awareness campaign in Morogoro. 2026-09-25 - the regulator's director general put reported cases at 23,328 in September 2023 against 7,334 in June 2026, a 69 per cent fall, and said awareness campaigns may have raised reporting. Stakeholders in the worst-affected region want the response at enrolment, proposing a 24-hour waiting period before a person may register another line and closer regulator work with other agencies.	MOVEMENT

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	A government enterprise service bus was named by an external maturity index as the backbone underpinning a top-tier classification, and no held source states how many institutions joined by the deadline. The index named it as the backbone of the classification; the release date is month-precision and no held source states the actual onboarding count (bus, deadline). A separate exchange platform is a distinct build from the service bus and is routinely conflated with it in secondary accounts; the ICT minister said in 2024 the ministry was still coordinating its construction (exchange, systems). Public institutions connected under the digital economy framework are counted to December 2025; that is a network-connection count and must not be read as a service-bus onboarding count (connections).	MIXED a service bus credited with a top-tier maturity classification while no source states how many institutions actually joined
Data Exchange	**Use of digital id in other systems**	The identity register's database reaches more than 138 connected institutions — the hardest adoption figure the repository holds for any African identity-verification rail. The count comes from an annual financial-inclusion report (integrations, numbers). It is the hardest adoption figure this repository holds for any African identity-verification rail, which is a claim about the corpus and is stated as one. What it does not establish is query volume, uptime or the lawful basis for any individual integration, and the data protection Act it operates under has no adequacy mechanism for transfers and no duty to notify data subjects.	MOVEMENT
Data Exchange	**Interoperability of health systems**	More than 45 health systems are linked and about 220 facilities exchange data, against more than 180 standalone applications. The 2024 sector performance report records the health information exchange and its mediator alongside more than 180 standalone applications, private electronic medical records largely unable to submit to the national platform, and a universal health application-programming-interface guideline still in development. In October 2025 a permanent secretary announced an integrated electronic medical record linking patient data from community level through district hospitals to national level for the first time. By May 2026 the minister reported more than 45 digital health systems linked through the national interoperability platform, with about 220 facilities exchanging data digitally. No denominator of facilities is given against the 220, so how far that reaches is not established. 2026-09-09 - the health permanent secretary said the number of health systems is being cut, private and public systems linked, and a national Health Data Centre prepared as one access point for research. No access rules beyond user role are published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of education systems**	Institutions were directed in July 2026 to integrate their platforms into the education system, which is built and in testing. The education ministry reported in January 2026 that its sector management information system had been built and testing begun, designed to integrate data from the identity authority, the registration agency, immigration, foreign affairs and the local government ministry. In July the permanent secretary directed institutions to fast-track integration of their own digital platforms so enrolment and other statistics are reachable without manual requests. A national validation workshop in March 2026 advanced a draft electronic data governance strategy setting interoperability and data-sharing direction across sectors including education, which the government's own representative described as not yet adopted. No go-live date or connected-institution count is published.	MOVEMENT
Data Exchange	**Interoperability of social protection systems**	A 250 million dollar credit approved in March 2026 expands a social registry over the government exchange bus. The government's own technology roadmap of February 2024 records the enterprise service bus, the cross-agency exchange platform, as established and in use by public institutions; it is the only exchange instrument the repository holds with evidence specific enough to serve as a baseline here, social protection having no dedicated exchange of its own. The World Bank board approved a 250 million dollar credit in March 2026 for the third phase of the productive social safety net, expanding digital delivery systems including a social registry and strengthening the links between social protection and other systems. What the registry holds, and what it exchanges with, is not stated.	MOVEMENT
Digital Identity and CRVS	**Robustness of system**	The authority published tenders for iris and facial recognition contractors for a second expansion phase, and identity card printing stays centralised after a request to print in Zanzibar was declined on security grounds. Two independent parliamentary accounts agree on the expansion's scope (tenders, expansion). The government declined a request to print identity cards in Zanzibar on security grounds; passports are printed there and identity cards are not (printing). A free short-code service was launched for checking identity status by message (status). Adding iris and face to a register already connected to more than 138 institutions is an expansion of what can be matched, and no data-protection assessment for it is on file.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Registration of entire population**	Digital acquisition of identification numbers and cards is under development, aimed at rural access (report). Measures are under development to let citizens obtain identification numbers and cards digitally, aimed at rural access (report). The repository holds no enrolment figure against it. The coverage figures run to December 2025 in an annual financial-inclusion report (coverage, usage). Issuance and distribution are stated separately in the same report; the bases differ between personalised, issued and distributed, both counts rose and the gap did not close (issuance). At the window's start the repository held only a deadline to deactivate the numbers of people who never collected cards, with no count (uncollected). A one-year window opened for more than 14,000 dismissed public servants to correct records and obtain cards, closing inside the next reporting year (window). 2026-09-17 — the backlog is now the finding: 2,027,103 processed identity cards stand uncollected, against more than 300,000 at the start of the year. The Prime Minister told the registration authority to put a legally backed reminder-and-penalty mechanism into law, to remind every registered person once a card is ready, and to integrate more deeply with employment and social-service institutions so identity data can be cross-checked, putting more than 132bn/- to its development projects for 2026/27 including 31 registration offices.	MOVEMENT
Digital Identity and CRVS	**National maintenance of id and credentials systems**	27.2 million registered and 22.7 million numbers issued at April 2026, with a Child Registration Act still undrafted into law. The home affairs budget speech reports 27.2 million people registered, 22.7 million identification numbers issued and 147 institutions linked as at April 2026, with 2026/27 commitments to registration infrastructure upgrades. The identity authority's director general announced a forthcoming draft Child Registration Act to extend the maintained credentials system to registration from birth. A separate financial-inclusion report puts 22.3 million numbers issued and 20.6 million cards physically distributed for December 2025, a gap of 1.7 million between a number and a card in a hand. That gap, not the registration total, is what the maintenance question turns on, and no explanation of it is published.	MOVEMENT
Digital Identity and CRVS	**Authentication**	147 institutions were linked to the identity register at April 2026, under 2023 regulations governing access. Government Notice 96 of 2023 is the operative instrument regulating external access to the identity register, the data-sharing contracts under which it is granted, and verification of identity information against it. The home affairs budget speech puts 147 institutions linked as at April 2026, against more than 138 across banking, insurance and social security in a July 2026 financial-inclusion report — two counts that are nowhere reconciled. Registration of vital events is framed by the responsible minister as the front end of the chain authentication depends on. No query volume, uptime figure or authentication-failure rate is published. The central bank backed a credit bureau's locally hosted fraud detection, anti-money-laundering screening and know-your-customer verification for Tanzanian lenders (backing). Local operation is the point: the checks run inside the country rather than offshore. No directive, licence or hosting requirement is held.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Digital id from birth**	Registration from birth is in pilot with under-fives linked to the mother's identity because no biometric solution works for them, and the pilot ran about six months ahead of its enabling bill. The registration agency and identity authority are linking to issue the identifier from birth; under-fives are linked to the mother's identity, and as at August 2026 the minister reports over 22 million people holding a national identification number as of April 2026 and describes the two agencies' integration as the route by which the identifier is issued from birth, with no integration milestone, date or technical description accompanying it (pilot, children, rollout). The enabling bill was set for a session opening in January 2026 and was not tabled; one source's headline says the scheme rolls out where its body says only that government is preparing to table, and the body governs (bill, registration). The identifier as a distinct issued credential was named a 2026/27 budget priority, having been declared design-complete in March 2024 with an end-2025 conclusion target (identifier, design). 2026-09-16 — the identity authority restated its plan for a Jamii Namba carrying social services, with no identifier yet issued. 2026-09-16 — the Prime Minister directed the identity authority to drop the age bar and register young children; no start date is published.	MIXED a from-birth registration pilot running about six months ahead of the bill that would enable it
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	A 2021 amendment requires an electronic birth register and authorises sharing with identity bodies; a Child Registration Act is drafted. The 2021 omnibus amendment adds section 19A to the Births and Deaths Registration Act, requiring an electronic register and authorising the sharing and exchange of registration information with institutions mandated to identify and register persons — the enacting instrument for civil registration to digital identity interoperability. The registration agency operationalised 48-hour birth certificate issuance, framed by its chief executive as the gateway to national identity, passports, health insurance and education services. The identity authority's director general announced a forthcoming draft Child Registration Act extending national enrolment to registration from birth; it was scheduled for the January 2026 session and no enactment is on file. No figure for identifiers issued at birth is held.	MOVEMENT
Digital Identity and CRVS	**Use by other systems**	25 of 37 identified systems were connected to the civil registration system, and certificates now issue in 48 hours. The performance audit quantifies stakeholder-system integration with the civil registration system at 25 of 37 identified systems connected, 68 per cent, naming the local government hospital system and the health ministry's own records system among them. The registration agency operationalised 48-hour birth certificate issuance, which its chief executive framed as the gateway to national identity, passports, health insurance and education services. Which twelve systems remain unconnected, and what falls through as a result, is not stated. 2026-09-16 — the registration authority said it will link the national identity to nine services from four today, among them birth certificates, health insurance, the taxpayer number and driving licences. No timetable is given.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Governance role of central bank**	The central bank's first sandbox cohort approved one solution for live testing, launched a sovereign yield curve system, and a digital currency remains under study. The sandbox throughput comes from an annual report; the sandbox existed earlier but no earlier throughput figures are held (sandbox). The yield curve system was launched in August 2026, with the investor counts the governor's own given at the launch (yield curve). A central bank digital currency remains under study with no design, pilot or timetable in any held source (currency), and a national code payment standard had 27 participating providers at end-2025 (standard).	MOVEMENT
Digital Payments and Fintech	**G2P functionality**	Digital crop payments to farmers were reported by season at a national agricultural exhibition, all figures the operator's own. The figures were given at a promotional exhibition at which the operator also awarded vehicles and phones to loyal users; no farmer total, fee schedule or default rate on the linked credit is published (payments, northern, southern). Crop payment digitisation is the largest routine government-to-person flow in an agricultural economy, and the only account of it comes from the company that carries it.	MOVEMENT
Digital Payments and Fintech	**Revenue collection**	A mandatory electronic payments order made nine scheduled transaction classes electronic-payment-only, an order under the electronic transactions Act rather than regulations, and cash remains legal tender. The order came into operation in 2026 and is widely mis-reported as regulations (order, drive). Mandatory electronic settlement for named transactions was explained to traders under the 2026/27 tax law changes; no commencement date or penalty is stated in the record held (settlement). A central electronic ticketing system carries transport ministry figures to March 2026 alongside a companion vehicle tracking system on 13,843 buses (ticketing). Zanzibar moved a fare box and a set of municipal charges onto one wallet: fares on the fifteen electric buses that entered service on 1 August 2026 are paid by smart card, and the same platform carries municipal parking fees, traffic fines and state payments to clove farmers (Zanzibar). The Medium-Term Revenue Strategy 2025/26-2027/28 names the Government electronic Payment Gateway among the revenue-administration systems it relies on, beside the revenue authority's IDRAS and TANCIS; no transaction count for the gateway is held. 2026-09-24 - the transport regulator put electronic payments at 6.8% of fares collected over four years, with 95.3% of 62.18m ticketed passengers paying cash, despite electronic transactions being required by law on the main modes. 2026-10-05 - a bank and the Zanzibar health fund signed a memorandum on enrolment and contribution collection.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**B2B and B2G functionality**	All 47 participating providers are connected, 113 payment service providers are licensed with the central bank described as licensing aggressively to break monopolies, and merchants accepting digital payments rose. All 47 participants are connected on the annual report's count, with no earlier participant count held (participants). The finance minister told Parliament 113 providers were licensed, with the central bank described as licensing aggressively to break monopolies and no earlier count held (licensed). Merchant acceptance comes from the central bank's national payment systems annual report for 2025 (merchants, cashless), and a credit reference data system was developed and deployed with onboarding under way — extended by regulation rather than by architecture, and its data subjects are borrowers (credit). 2026-10-05 - the central bank signed a cooperation agreement with IFC on the credit reporting system.	MOVEMENT
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	Instant payment value nearly doubled year on year on calendar-2025 volumes reported to Parliament, and a US$28m mobile money core upgrade added interoperability with a global payment provider. The throughput figures were reported in the 2026/27 budget; a third figure on a different basis is held and cannot be charted with these (throughput, platform). The core upgrade launched in 2026 with wallet interoperability to a global payment provider added in May (upgrade, alliance). A school-fee payment service connected more than 800 schools (schools), a wallet-based investment platform recorded more than TZS 370bn in customer investments to March 2026 on the operator's own results (investing), and a government payments programme was described by a ministry official as still to be created (programme). 2026-08-30 — the state operator and the Zanzibar Football Federation agreed to introduce stadium e-ticketing on the operator's N-Card platform; no launch date, ticket volume or fee is stated. 2026-09-17 — payments to Zanzibar's seaweed farmers moved onto a mobile money service under a foundation's programme, with savings and group lending added; no farmer count or payment volume is published. 2026-09-18 — a commercial bank began a nationwide rollout of a school-fees platform giving each student a single control number, with 18 schools on it; no payment volume is stated.	MOVEMENT
Digital Payments and Fintech	**Population uptake**	Active mobile money subscriptions reached 87.05 million in June 2026 (report). Active mobile money subscriptions reached 87.05 million in June 2026, as the country pressed a cashless agenda (report). A bank and the stock exchange launched digital share trading through the bank's own channel (launch). The series is flattening and the regulator's own report draws that conclusion (index, usage gap). Active mobile-money accounts and the annual transaction count are on different bases and the stated growth rate does not reconcile against the earlier one (accounts). Financial access points grew through agent build-out rather than branch build-out, and the council says so itself (access points). A third national inclusion framework was reported on for 2025, with the repository holding no framework position at the window's start, no text and no mid-term review (framework).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Cross-border functionality**	The cross-border instant payment proof of concept with Rwanda gained a joint cybersecurity and interoperability roadmap (mission). A joint cybersecurity and interoperability roadmap for the cross-border instant payment proof of concept with Rwanda was advanced at a technical mission in Kigali (mission). It remains a proof of concept; nothing on the repository records a live corridor. The corridor's technical meeting ran over five days in July 2026 (corridor). The card acceptance extension covers nine markets, with nearly 900 participating merchants and about 7 million cards issued in Africa given as the two companies' own figures and no country-specific count (acceptance, expansion).	MOVEMENT
Digital Payments and Fintech	**Consumer protection**	Per-instrument fee caps were set with card-scheme negotiations moving the card fee from payer to merchant, and the governor rejected a general price cap saying competition will cut fees within six months. The caps are per-instrument rather than a general tariff (caps, interoperability). The general cap was rejected on the ground that charges are already low; an analyst put the worked cost at about TZS 3,500 per TZS 100,000 paid and argued the mandate manufactures avoidance (rejection). Financial consumer protection amendment regulations moved the dormant-account period from five to twelve months, set complaint maxima of twelve hours for mobile money and fourteen days for credit, and fines of TZS 1m a day; the data-protection cross-reference is what wires the payments regime into the data regime (regulations).	MIXED per-instrument fee caps set and a general cap rejected while the regulations tighten complaint deadlines
Registries	**Population register**	Child birth registration rose from 55 per cent in 2020 to 68 per cent in 2025, against a 13.7 million record backlog. The responsible minister stated on civil registration day that child birth-registration coverage rose from 55 per cent in 2020 to 68 per cent in 2025, with a target of 100 per cent by 2030. An independent audit found only 29 per cent of the whole population birth-registered by December 2024, 43 per cent of the 4,742 registration centres reviewed not operating, and a backlog of about 13.7 million records. The registration agency reports 11.5 million certificates issued and 20 million people registered by November 2025. Child coverage and whole-population coverage are different denominators, so the two headline figures measure different things rather than contradicting each other; the backlog is what stands between them.	MOVEMENT
Registries	**Civil register**	Under-five birth registration is quoted at 65 per cent and 68 per cent a week apart by the same minister, which is the clearest demonstration that the figure is quoted rather than published. The repository holds several differently-based estimates and does not reconcile them to one series; the two newest are a week apart from the same minister (coverage, partner, framework, foundation). An upgraded platform reports issuing birth certificates within 48 hours, and the government has stated an intention to integrate the identity and registration agencies (certificates). A national partner was sought for a birth registration programme running August 2026 to August 2027, starting inside the next reporting month (programme). 2026-09-17 — registration of children from birth is being piloted in three districts; no coverage or enrolment figure for the pilot is published.	MIXED birth registration rising on estimates the repository cannot reconcile to one series

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Address register**	Twelve million housing addresses were registered alongside a continental postal certification, and a Zanzibar address programme has assigned more than 450,000 digital addresses. The repository holds that the population rate and the address count are not derivable from one another and must not be charted together (addresses, registration). The Zanzibar programme has been operational since June 2025 with more than 450,000 digital addresses assigned (zanzibar); twelve months with no update is itself the finding, and the first payoff was student finance (zanzibar). An addressing system whose first evidenced use is disbursing student loans is a useful thing to be able to say about what an address register is for.	MOVEMENT
Registries	**Business register**	The electronic government agency gave a registered-society count for a cooperative management system at an agricultural exhibition. No spend, timeline or denominator is given, so the count stands unbenchmarked (system). A registry count with no denominator cannot show coverage, and the exhibition at which it was given is the same venue at which the crop payment figures and the university prototypes were presented.	MOVEMENT
Registries	**Social protection register**	A Zanzibar dynamic social registry reached a briefing on what establishment would require — research commissioned to specify a registry rather than a decision to build one. The briefing was held in August 2026, on a blueprint prepared the previous year (briefing, blueprint). No custodian, budget, data-protection arrangement or timetable is stated. Distinguishing commissioned research from a build decision is the whole of what this cell can honestly record.	MOVEMENT
Registries	**Electoral register**	A permanent national register was created by the 2024 elections act and carried 37,647,235 voters in 2025. The 2024 elections act establishes the permanent national voters' register alongside a preliminary register, repealing the 1985 and 1979 election laws. The electoral commission announced receipt of Zanzibar's finalised figures, reconciling the national register at 37,647,235 ahead of the 2025 general election. Its director of elections had earlier explained the register's growth as about 3,113,931 previously eligible but unregistered people now registered, answering an opposition party's dispute over the numbers. No audit of the register, and no statement of whether it draws on the national identity register, is held.	MOVEMENT
Registries	**Tax register**	An integrated revenue administration system went live in February 2026, and the budget commits to registering all local traders. The tax administration statute requires taxpayer registration and identifier issuance linked to the national identification number. The revenue authority completed its integrated domestic revenue administration system with pre-launch verification of migrated taxpayer records ahead of a 9 February 2026 go-live. The 2026/27 budget commits the authority to integrate that system with the property register for direct data exchange, to apply artificial intelligence, big data and blockchain, and to register buildings, owners' identity and tax details and all local traders. No registered-taxpayer count and no migration-error rate is published against any of it.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Land register**	Digital payment proof became mandatory for land transfers from 1 July 2026, with 3.13 million citizens using digital land services. The consolidated land registration statute requires a land registry and a land register and provides for a Registrar of Titles. The lands minister's 2026/27 budget presentation reports continued nationwide expansion of the digital land system and 3.13 million citizens benefiting from land and housing registration services. From 1 July 2026 verified digital-payment records became a mandatory condition for land, building and motor-vehicle ownership transfers processed by the lands ministry, the revenue authority and the business registration agency. The 3.13 million is a services figure from a budget speech, not a count of registered parcels, and no parcel count is held. 2026-09 - a National Land Data Infrastructure project is building a central land database and access platform on new aerial imagery, with no financier, cost or completion date stated. 2026-09-12 — the land-services system reached Kigoma, with officers from four councils trained on it. No count of councils live or transactions processed is published. 2026-09-20 - the land-services system lets citizens sign title deeds from any region and is in use in five named regions and several councils; no count of titles signed remotely is published.	MOVEMENT
Sectoral management information systems	**Health**	Electronic records, interoperable systems and artificial intelligence entered the health sector's procurement agenda (report). Electronic medical records, interoperable health systems and artificial intelligence entered the sector's procurement agenda (report), alongside a bilateral exploration of artificial intelligence and hospital information systems with South Korea (report). The functionality reading is a cross-sectional study run between November 2022 and July 2024, and a flow-share figure three years older is not restated by it (assessment, analysis). The cardiac institute reported its tracking system in use for medical-camp follow-up; it is at a single specialist institute and institution-reported (institute). Naming the one working deployment as such, at one institute, is more useful than a general claim about health artificial intelligence that the record would not support. 2026-09-10 - local government's ICT director described a blueprint for community health worker systems with a joint dashboard tracking services and payments; the blueprint is not published.	MOVEMENT
Sectoral management information systems	**Education**	The sector system is built and in testing and a school system became mandatory in January 2026. The education ministry reported in January 2026 that its sector management information system had been built and testing begun. Head teachers in one town council were trained ahead of mandatory nationwide use of the school information system from 13 January 2026 on the local government ministry's direction — local reporting of a national directive rather than a national launch notice. The permanent secretary separately announced plans for a system following students from early childhood through higher education, prompted by the gap between 907,803 students selected for Form One in 2022 and 595,816 sitting Form Four in 2025. That gap of a third of a cohort is the finding; the tracker that would explain it does not yet exist.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Social protection**	535,536 households are paid through bank or mobile accounts, under a 250 million dollar credit. The 2023 sector policy describes programme-level management systems and the absence of a fully integrated national social-protection system. The social action fund reports its management information and electronic-payment infrastructure as the operating backbone of the third safety-net phase, with 535,536 households paid through bank or mobile accounts. A 250 million dollar credit approved in March 2026 expands the registry and the cash-transfer and electronic-payment system to 2.2 million people. Whether a fully integrated national system now exists, three years after the policy said it did not, is not stated anywhere.	MOVEMENT
Sectoral management information systems	**Justice**	A criminal justice single-window system was announced in the 2026/27 budget statement, alongside a draft national policy. The minister for constitutional and legal affairs announced in the 2026/27 budget statement a draft national criminal justice policy and a Criminal Justice Single Window System integrating information-technology platforms across police, courts and prosecution. A donor-recorded digital legal assistant for access to justice sits alongside it. The single window is an announcement in a speech: no design, timetable, budget line or statement of which systems it would join is published. The e-justice estate is held only as a financier's record: court record digitisation and e-justice services were built under a US$155m operation that closed in December 2025 with US$151.3m disbursed. What is in service now is not held.	MOVEMENT
Sectoral management information systems	**Tax**	A tax identifier display duty for online traders was made by the finance minister, and named creators and traders object that publishing the credential exposes them to impersonation. The instrument is held: it was made by the Minister for Finance rather than the revenue authority, it amends regulation 58 of the 2016 regulations, and the display duty is the whole of the new sub-regulation, with no penalty provision and no non-resident provision attached (regulations, display). The objections are those of named creators and traders reported by the paper, not a regulator finding; the instrument carries no penalty provision and says nothing about how a published credential is to be protected from the impersonation the objectors describe (objections). Mandatory electronic invoicing reaches the repository through a regional comparative account, and the order held is the mandatory payments order of the same date with no separate invoicing instrument held (invoicing). A Zanzibar electronic receipt mandate had its penalty band cut, the authority's own account of non-collection being the stated reason (receipts).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Customs**	A Zanzibar single window replaced visits to more than 14 institutions, on a customs estate an audit finds fragmented. The national audit office's 2024/25 audit of 133 entities treats the customs system as operating while recording integration and control gaps and continuing fragmentation across government despite the e-government statute. A Zanzibar single window launched in June 2026 replaced the need to visit more than 14 institutions for trade clearance, and a government-backed baseline assessment found 33 of 92 inter-agency trade services digitised and still fragmented across nine agencies. The revenue authority's own launch page for its enhanced customs system does not resolve, so the standing position rests on the auditor rather than on the operator.	MOVEMENT
Sectoral management information systems	**Land**	146,345 land records were updated against a 500,000 target for the year, with devices delivered to 184 councils. The lands ministry's own budget speech puts 146,345 land records updated against a 500,000 target for 2025/26 by mid-May, with 22 continuously operating reference stations and five regions plus selected districts operational. It delivered 1,429 information-technology devices worth 5.2 billion shillings, geographic information system computers among them, to land offices across 184 local authorities. Zanzibar's own land registry programme launched in July 2026 with aerial mapping under way, financed by a French investment bank and a Tanzanian one. The shortfall against the year's own target is the ministry's own figure and no explanation of it is published.	MOVEMENT against a records target under a third met
Other GovTech and e-Gov	**e-government services**	A maturity classification placed the country in the top group in its 2025 edition with the rank unstated, and the islands' government is introducing a project monitoring framework. The classification's release date is month-precision and the 2025 rank is not stated in any held source; digital citizen engagement is the weak pillar region-wide (leaders). 2026-09-10 - the islands' government is introducing a monitoring framework to curb delays in development projects, its deputy minister for finance and planning told the House of Representatives at Chukwani, Unguja. It is announced rather than in service, with no system name, supplier, cost or timetable published. 2026-09-16 — Zanzibar's automated road cameras were challenged in the House of Representatives over speed limits, Sh230,000 fines and unenforced government vehicles. The islands' own programme is older: an e-government centre with fibre links was launched at Mazizini, Zanzibar, by January 2013; nothing later on what it runs is held. 2026-03-30 - the auditor found 31 central-government entities procuring TZS 5.94bn outside the national e-procurement system in 2024/25, the one compliance figure held for it. 2026-09-25 - the World Bank puts procurement processing on the national e-procurement system at 79 days against 234 on paper, with 21 government systems connected, figures reported at second hand.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	A constituency digitalisation programme was launched at an equipment handover, announced by the ICT minister in the constituency she represents. No funding is disclosed for any phase beyond the donated equipment (programme). It is the only local-government item in this ledger, and the fact that it sits in the responsible minister's own constituency is stated because it is the sort of thing a reader should be able to weigh.	MOVEMENT
Digitalisation of sub-national government	**Digitalisation of local government records**	An audit of 184 local authorities records national systems in use alongside manual processes, while a service directory onboarded over 500 institutions. Lender evaluators recorded the earlier revenue system, built for 8 councils, scaled to all 185 mainland authorities. Its successor had 169 councils on it by February 2023. The auditor's 2023/24 report found 16 councils still on the retired system. An October 2025 account gives unconfigured revenue sources and incompatible devices as reasons councils collected outside it. The national audit office's 2024/25 audit of the local government ministry, 26 regional secretariats and 184 local authorities records the payments, payroll, asset, hospital and financial-management systems in use alongside continuing manual and paper-based processes. A government service directory and an accompanying security system launched on 23 June 2026, centralising service records including those of regional secretariats and local authorities, with more than 500 institutions onboarded under a directive to connect to the government service bus. A separate digital project-records system became mandatory for all development stakeholders, local authorities included, from 1 July 2026.	MIXED new central systems arrived over local records still partly on paper
Rural digital data capture	**Digitalisation of rural health clinics**	The ministry's eHealth estate is named and an immunisation module was piloted at six facilities; dispensary-level reach is unstated. The health ministry's own service page lists the health management information platform, the human resources system, the health facility registry, the immunisation information system and the supply-chain platform as its eHealth estate. The chief medical officer said in November 2025 that the priority was strengthening the existing primary-care system and the national health information platform rather than building new parallel ones, and an enhanced immunisation module was deployed and piloted at six facilities in Tanga and Mbeya. The primary-care digital transformation roadmap that would say what reaches a rural dispensary is not held: its published address does not resolve and no archived copy exists.	MOVEMENT
Rural digital data capture	**Digitalisation of rural primary schools**	A tablet programme reached 50 Manyara schools and 24,000 pupils, and offline servers put a teacher platform into eight schools with no network. A tablet-based literacy and numeracy programme launched regionally in August 2026 reached 50 rural primary schools and more than 24,000 pupils in Manyara, with a second 50-school phase under way. An offline local-server pilot put the national teacher-learning system into eight hard-to-reach schools in Dodoma and Kigoma that have no network at all. Both are pilots at the scale of tens of schools. No national count of rural primary schools with power, connectivity or devices appears anywhere in this repository. 2026-09-28 - a tower company and UNICEF announced a multi-year school-connectivity partnership under Giga starting in the country; no funding figure or school count is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural registry offices**	Zanzibar decentralised registration to community level across all eleven districts, against an audit finding 43 per cent of mainland centres not operating. An independent performance audit found civil registration only partly digitalised: 29 per cent of the population registered by December 2024, 43 per cent of the 4,742 centres reviewed not operating, and a backlog of about 13.7 million records. The mainland agency then operationalised its platform to issue birth certificates within 48 working hours, cutting repeat district-office visits, with 11.5 million certificates issued and 20 million people registered by November 2025. Zanzibar's registration agency reported all eleven of its districts decentralised to community level on a web platform with a community mobile application. The audit's coverage finding and the agency's throughput figures measure different things, and neither supersedes the other.	MOVEMENT
Rural digital data capture	**Digitalisation of rural police stations**	The crime statistics system ran at 20 city stations and regional offices in 2021; the 2026/27 budget funds radios, towers and fingerprint identification. The police and statistics bureau's own 2020 crime report states that the criminal statistics management information system then operated only at 20 major stations in the largest city and at regional crime officers' offices, which is the district and rural coverage gap stated in the state's own words. The home affairs budget speech for 2026/27 commits to police radios, towers and an automated fingerprint identification system, alongside the identity authority's own infrastructure upgrades. No later station-coverage figure for the crime statistics system has been published, so a five-year-old count is the whole of what the repository holds on where a rural station sits.	NO CHANGE the only coverage statement on the record is five years old

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	A ports authority enquiry chatbot carries the only measured outcome attached to a public-sector artificial-intelligence deployment anywhere in this repository. It reaches the repository through a design-and-evaluation study published in a peer-reviewed journal (chatbot). Fifteen domain experts is a usability study rather than a deployment audit, which is why the measurement is worth recording and worth bounding in the same sentence. 2026-08-31 - the e-government authority approved a governance framework for public institutions adopting emerging technologies and AI standards that require every public institution to identify and evaluate the AI systems it already runs. No inventory under them is published. 2026-10-06 - the state power utility launched an AI-powered customer channel and a portal for large customers.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in sectoral management information systems**	The revenue authority is committed to applying artificial intelligence and blockchain, four years after a health-sector framework found use extremely limited. The founding sectoral policy of February 2022 proposes a centre for digital health and records that routine use of artificial intelligence in the health management information system was then extremely limited. The 2026/27 national budget commits the revenue authority to use artificial intelligence, big data and blockchain and to integrate the property register with the revenue system for direct data exchange. Four United Nations agencies separately signed a joint programme linking machine-learning agricultural extension services to an agriculture ministry data-sharing framework and interoperable database, targeting 500,000 farmers. All three are commitments rather than deployments; no operating model, accuracy figure or evaluation is held for any of them.	MOVEMENT
AI	**Development of national / regional AI systems**	A Kiswahili large language model is described by the minister as a commitment written into the 2050 vision rather than something under construction. The minister's text describes it as something the vision sets out, not something being built, and no held source connects a 61-million-word database to the model (model, achievements). University artificial-intelligence prototypes were shown at a national agricultural exhibition; they are student prototypes, self-reported, and admitted deliberately without a hub line (prototypes). Reading a vision commitment as a build is the specific error this cell is written to avoid.	MOVEMENT
AI	**Control of AI abuse**	AI-generated content is prohibited online, and public-sector AI standards approved in August 2026 ban fully automated decisions with significant outcomes. A 2025 amendment adds unethical, fabricated and artificial-intelligence-generated content to the prohibited online content list and requires service providers and platforms to filter and remove it. A board-approved government application standard of February 2026 requires secure development-lifecycle controls, vulnerability testing, audit logs and privacy by design for government applications including artificial-intelligence-enabled ones. Tanzania's own statement to the United Nations global dialogue acknowledges the legislative gap and that artificial-intelligence-specific liability and oversight rules were still being developed. Until August 2026 control ran to content and to government software. 2026-09-03 - the only movement is in the argument, not the rule: technology, academic and creative voices backed digital watermarking of machine-generated content as a way to restore accountability, after the European transparency duties that took effect on 2 August 2026. No domestic proposal, consultation or instrument follows from it. 2026-08-31 - the e-government authority approved standards binding every public institution's AI systems, existing ones included, prohibiting fully automated decisions with significant outcomes made without human control and the scoring of individuals on their behaviour. They are a standard under the e-government statute, not an AI law, and no compliance count is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
ICT Industry	**National capacity in DT-related production**	ICT manufacturing sits at 0.004 per cent of manufacturing output, with technology parks still among budget priorities. The ministry's own investment prospectus puts information and communication technology manufacturing at 0.004 per cent of manufacturing output and presents a local device-assembly venture and technology parks as pending investment projects. The 2026/27 ministry budget of 222.589 billion shillings names technology parks among eight priorities alongside backbone strengthening and rural connectivity. The sector's contribution to national output is separately put at about 1.5 per cent for 2022/23 against a target of 3 per cent by 2029, with no intervening annual figure held. A prospectus is a pitch; the pending projects in it are still pending two years on.	NO CHANGE
Innovation ecosystem	**Technology hubs**	An international acceleration centre received final board approval two years after its host agreement, with no opening date attached. Final approval came at an international innovation board meeting in April 2026; two years from host agreement to board approval with no opening date is the finding (centre). One domestic company was named in a fifteen-startup accelerator cohort — the repository's only named accelerator placement in the window (placement).	MOVEMENT
Innovation ecosystem	**Tech startup ecosystem**	842 startups were counted with no dedicated startup act, and a four-year ventures programme targets 1,000 by 2029. A four-year national ventures programme launched in March 2026 targeting 1,000 startups by 2029, run by the science commission. A joint intellectual-property programme launched in August 2026 targets 5,000 trainees and 120 innovator assessments in its first year. Nothing since has closed the absence of a startup statute. 2026-09-07 - a private channel opened alongside the state programme: a three-year partnership between the leading mobile operator and a global entrepreneurship network to reach 1,000 entrepreneurs and 40 ventures. 2026-09-10 - a UN innovation programme disbursed TZS 1.3bn to a fifth cohort of 14 businesses, putting its total since 2021 above US$3m. 2026-09-17 — domestic hardware reached a second prototype: AI glasses for visually impaired users, at a target price of US$200 to US$300 and market entry set for March 2027. The price and the date are the developers' own, and no funding or manufacturing route is published. 2026-10-02 - the ICT ministry launched a TZS 5 billion loan programme for youth-owned ICT start-ups with a commercial bank. 2026-10-03 - Zanzibar's communications minister said a draft startups bill creating a fund of grants and low-cost loans is due for first reading in November or December 2026.	MOVEMENT

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	A capability maturity framework approved in February 2026 carries a human capital domain; nothing measures civil-service digital literacy itself. The e-government authority approved version 1.1 of its capability maturity framework on 18 February 2026, covering seven domains and 32 key process areas including a human capital development domain that reaches civil-service digital capacity. Its sixth national working session, with more than 1,400 stakeholders, made cybersecurity awareness and continuous upskilling of information-technology staff a cross-government priority. What exists is an instrument for assessing capacity. No assessment result, training count or measure of digital literacy across the civil service has been published against it.	MOVEMENT
Literacy	**Digital literacy (general population)**	Adult literacy is 83 per cent and use of information technology for learning 10 per cent, on the 2022 census. The census analysis puts adult literacy at 83 per cent, higher in urban than rural areas, and use of information technology for learning at 10 per cent, alongside mobile ownership at 82.5 per cent and household internet connection at 0.6 per cent. That is a reading of reach rather than of skill. No competency test, certification count or task-based assessment of the general population is held, and no earlier round of the same measures exists on this repository to give the figures a direction. 2026-09-18 - the National Service has put a digital patriotism subject into its training curriculum, teaching recruits the responsible use of social media, its commander saying the subject would continue to be improved. No curriculum text, hours, recruit count or assessment is held.	NO CHANGE a first census reading with no earlier series behind it
Training and skills	**DT-related training in secondary education**	A school innovation lab opened at one secondary school, and teacher training now runs against the ICT competency standards held from 2015. The lab was opened by an operator foundation and an incubator in August 2026; no funding figure, student number or programme length is stated, and one school is the whole of it (lab). The education grant is the only literacy-tagged commitment in the whole finance base, on a year-padded date with no disbursement, midline or school count (grant). 2026-09-07 - the instrument behind teacher training entered the repository: the 2015 ICT competency standards, built with the United Nations education agency on the global framework and covering six modules across two knowledge stages, with a 2025 revision referred to but not published. Delivery against it moved: government secondary school teachers took a four-day programme in Arusha from 1 to 4 September 2026 covering 10 of the revised standards' 15 modules, under a third phase funded through a Korean funds-in-trust arrangement. No teacher-reach figure is published against the target the digital economy framework carries.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**DT-related university facilities and qualifications**	A Zanzibar postgraduate technology campus held a second graduation of data-science, artificial-intelligence and ocean-structure cohorts, the only campus of its parent institution outside its home country. Student and startup figures are institution-reported (campus). A three-year memorandum was signed for Zanzibar public-service artificial-intelligence and cybersecurity training, with no value, curriculum, certification or selection rule for the 600 stated (memorandum). A university information technology college building was inspected under construction by a parliamentary committee; its parent higher-education project is held nowhere in the repository, neither as a source nor as a finance record (building).	MOVEMENT
Training and skills	**Graduates entering DT ecosystem**	Workforce training opened for 110 participants across four priority areas, and sixteen graduates travelled on overseas artificial-intelligence scholarships with 34 more expected. The workforce training opened in the commercial capital with European partners; no budget, duration, certification or repeat cadence is stated (training, resilience). The education minister told a parliamentary committee that sixteen graduates had travelled and 34 were expected; no budget, selection criteria, bonding terms or return-placement plan is stated, and nothing later confirms the second cohort travelled (scholarships). An operator foundation expanded a digital skills programme for young people with no cohort size, curriculum, cost or completion figure published (foundation). 2026-09-23 - 50 government scholarship holders in data science and AI are in a ten-month camp at a national science institute; whether they are the cohort expected abroad is not stated.	MOVEMENT
Research institutions	**Think tanks and academic departments contributing to DT policy**	The country was selected as the sole national member of a global artificial-intelligence capacity development network. The selection was announced in August 2026 (membership). No member institution, work programme, funding or obligation is named. It is the only research-capacity item in this unit that is not a building or a student cohort.	MOVEMENT

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	Using the national feedback system is a legal requirement for public bodies, and complaints can now be routed to named leaders. Use of the national citizen-feedback system is a legal requirement for all public institutions, reachable by website, application and short code, with a first cohort of 105 trained feedback officers. An upgrade announced in the President's Office hundred-day report lets citizens direct complaints to national, regional and district leaders through web, application, short code and text message. A legal duty to operate the channel is on the record; no complaint volume, response time or resolution rate is, so whether the channel is answered cannot be told from what is published.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen participation in policy**	Village assemblies, councils and ward development committees are the statutory machinery; nothing digital attaches to them. The founding local government statute, in its 2023 consolidated edition, establishes village assemblies, village councils and ward development committees — the statutory machinery through which citizens take part in local decisions. Nothing on the record connects that machinery to a digital channel: no online consultation, no published participation rate and no meeting record. The national feedback system is a complaints route rather than a policy one, and no instrument requires consultation before a policy or a draft law is adopted.	NO CHANGE
Access to services	**Gender equity**	A digital transformation centre for rights and gender equity carries a EUR 3,000,000 commitment for 2024 to 2027 — the only commitment in the whole finance base tagged to digital divides. It is recorded in the compiled finance layer on a year-padded date, with no disbursement, outturn or beneficiary count held (centre). That it is the only such commitment in the finance base is the finding, in a unit whose only measurement of online gendered violence is a civil-society researcher's own study.	NO CHANGE
Access to services	**Inclusion of persons with disabilities**	The central bank launched braille editions of its publications in August 2026. 2026-10-12 — a development partner said a tool mapping 32 disability care and support providers in Unguja has been integrated into Zanzibar's Jumuishi management information system; no integration date is stated. The communications regulator reported at a regional cohort meeting of 5 to 9 October 2026 that its initiative on assistive technologies for persons with disabilities was 80 percent complete, its website accessibility work recognised under a new national standard on accessibility of ICT products and services. No print run, distribution channel or digital-accessibility counterpart is published (braille). Braille editions of financial publications are the only disability-specific measure in this ledger, and the absence of a digital-accessibility counterpart is worth noting in a unit whose financial system is overwhelmingly mobile. 2026-10-01 - the Prime Minister's Office said its disability information system is connected to 11 government systems and issues a reference number to student loan applicants.	MOVEMENT
Access to services	**Inclusion of refugees and IDPs**	A disaster management strategy names refugees and displaced people among vulnerable groups; no standalone instrument exists. The 2022-2027 national disaster management strategy expressly lists refugees and internally displaced people among vulnerable groups and commits to mainstreaming their needs across disaster-risk management. That is the best combined-scope official instrument on the record, and there is no standalone statute on internally displaced people. Nothing states whether a refugee can obtain a national identifier, and the identity statute's own terms do not reach non-citizens. Mobile-industry research finds that national identity requirements for SIM registration leave refugee women relying on local citizens or intermediaries to register lines. No figure for refugee SIM ownership or any exemption from the requirement is held.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital divides	**Bridging of digital divides**	Mobile ownership runs at 82.5 per cent against household internet connection at 0.6 per cent, with sharp rural and gender gaps. The census analysis puts adult literacy at 83 per cent, higher in urban than rural areas, with mobile ownership at 82.5 per cent, household internet connection at 0.6 per cent and use of information technology for learning at 10 per cent, each carrying sharp rural-urban and gender gaps. A rights and gender equity centre with EUR 3,000,000 committed is the one instrument on the record aimed at the divide itself. The distance between a phone in four fifths of hands and a connection in one household in every hundred and sixty is where this indicator sits. No programme with a stated divide-closing target, and no disability- or age-disaggregated access measure, is held. 2026-10-06 - the universal service fund said it will build 250 ICT laboratories of 20 computers each in public schools this financial year, where it had supplied about five computers a school.	NO CHANGE the census reading is the first on this series and the gaps in it are wide

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The statistics master plan reported 88.9 per cent implemented in July 2026, a year before it closes. The second Tanzania Statistical Master Plan, published in December 2021, is the current national strategy for the development of statistics, running 2022/23 to 2026/27 and budgeted at 384 million dollars for harmonisation, production and infrastructure across the statistical system. The finance ministry's steering committee reported 88.9 per cent implementation since 2022/23 and approved the 2026/27 work plan and budget in July 2026, ahead of the plan's completion in June 2027. A first national assessment of the skills, infrastructure, policy and data-sharing constraints on big-data use was published in October 2025, positioned as extending the plan beyond censuses, surveys and administrative sources. The implementation percentage is the committee's own, with no output-level accounting behind it.	MOVEMENT
National statistics	**Censuses and surveys**	The first integrated mainland and Zanzibar labour force survey joins an annual agricultural survey under a 2023 statute. The founding statute, in its 2023 revised edition, continues the statistics bureau as an autonomous public office, establishes the national statistical system and places the initiation of official censuses and surveys under the Statistician General. The 2025 integrated labour force survey, released in 2026, is the first nationally integrated round covering both the mainland and Zanzibar, across 14,232 households in 593 enumeration areas. The 2023/24 annual agricultural sample survey covered 8.97 million agricultural households through 1,504 enumeration areas and 18,048 holdings. No microdata release policy or response-rate series is held for either.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**Statistics from administrative data**	Tax records lifted the business register 17.3 per cent to 257,405 establishments in a year. The statistical business register updated in October 2025 shows establishments rising from 219,371 to 257,405, a gain of 17.3 per cent, built by integrating mainland and Zanzibar tax records with other administrative sources — a substantive finding and a sampling-frame improvement at once. The statistical master plan treats administrative-record integration as a central development priority and records the statistical system's continuing weaknesses in data sharing, information technology and harmonisation. The manual for strengthening and integrating administrative data that would set the method is not held; its published address returns nothing and no replacement is discoverable.	MOVEMENT
Open data	**Use of open data**	An external fiscal transparency assessment found the country not meeting the minimum requirements in 2026. It is an external assessment on a foreign government's own criteria, and it is the only recurring transparency measure the repository holds for this country (assessment). No national open-data portal, catalogue or policy appears anywhere in this ledger, so a foreign assessment of fiscal transparency is doing the work an open-data indicator would otherwise do. 2026-09-15 — community mapping was put to a use: ward flood preparedness plans were handed to five Dar es Salaam wards under an externally funded project. Whether the underlying data is openly published is not stated.	NO CHANGE
Use of satellite data	**Agricultural use of satellite data**	The three-year precision livestock farming project closed, with no successor recorded (report). A three-year precision livestock farming project, run by a national research institution with a foreign university and foundation funding, closed on 27 August 2026 and presented its results (report). Nothing on the repository records the work continuing under national funding. Both systems were described at the exhibition (systems). No user counts, spend or timeline are given. They are the only agricultural data systems in this ledger, and they reach the repository through the same exhibition as the cooperative count and the crop payments.	REGRESSED
Use of satellite data	**Meteorological use of satellite data**	An educational cubesat appears as a line item in the ministry's 2026/27 budget request. It is the only satellite object in the repository other than commercial low-orbit connectivity (cubesat). No cost, partner, launch window or educational programme is attached to the line.	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	A 2023 package carries export financing and a 5G-security memorandum; a US-backed developer plans a Tanzanian data centre. The March 2023 package includes an export-financing memorandum of up to 500 million dollars covering digital technology, and a 5G-security and cyber-cooperation memorandum signed on 27 March 2023. A Tanzanian organisation was selected in June 2026 for a hyperscaler social entrepreneur accelerator, gaining cloud and artificial-intelligence technical support. A data-centre developer whose major shareholder is American-founded passed 380 million dollars of committed capital in July 2026, with a Tanzanian carrier-neutral facility in its pipeline. The capital funds multi-country growth rather than a bounded Tanzanian allocation, and no hyperscaler-owned deployment in the country is held.	MOVEMENT
China activities	**Chinese MoUs, engagements and commitments**	A 2022 joint statement founds the partnership and carries digital development as one clause; a vendor memorandum sits under it. The joint statement of 3 November 2022 establishes the comprehensive strategic cooperative partnership, covering investment, infrastructure, trade, energy, minerals and digital and green development alongside implementation of the belt and road memorandum. The digital content is one clause of a general partnership statement, and no digital-specific state-to-state Chinese instrument with Tanzania is held. What is digital-specific is corporate: a digital economy memorandum with a Chinese vendor, which carries no value on this record.	NO CHANGE
EU activities	**EU MoUs, engagements and commitments**	The first Samoa Agreement dialogue recorded EUR 726 million for 2021 to 2027 and named no digital instrument. The first partnership dialogue under the Samoa Agreement, held in December 2024, produced a joint communique recording European commitments of EUR 726 million for 2021 to 2027, a planned security dialogue and Tanzania's first request under the European Peace Facility. No standalone digital instrument is named in it. European digital money reaches Tanzania through project financing instead — a rights and gender equity centre with EUR 3,000,000 committed is the repository's clearest example — so the bilateral record and the funding record do not meet.	NO CHANGE
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	A May 2025 Emirati visit produced customs, mining and business-council instruments, none of them digital-specific. A visit by the Emirati foreign minister on 5 May 2025 produced a signed customs cooperation agreement, a memorandum on mining-sector investment and a memorandum establishing a bilateral business council. Customs cooperation is the closest of the three to this report's subject, and its digital content is not stated. No Gulf-state digital instrument, financing commitment or data-centre investment in Tanzania appears anywhere on the record.	MOVEMENT
India activities	**India MoUs, engagements and commitments**		NO EVIDENCE
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
National cybersecurity strategy or response team	the instrument establishing the national response team under the regulator, or a national cybersecurity strategy document with its approval date	not yet probed
Online content and cybercrime regulation	the gazetted online content regulations or cybercrime Act text, or a dated regulator notice	not yet probed
Earth-observation or national geospatial data programme	a ministry, regulator or lands primary naming a geospatial data programme with a dated status	not yet probed
India-Tanzania technology cooperation	a dated India-Tanzania technology memorandum, or a funding and enrolment series for the Zanzibar campus	not yet probed
National ICT or AI research programme or fund	the science commission's budget or annual report, the higher-education project appraisal document, or a national AI or ICT research strategy	not yet probed
Outturn against the 2025/26 digital appropriations	The fourth-quarter budget execution report for 2025/26, or the 2027/28 development estimates printing 2025/26 actual expenditure by project; only in-year releases to March 2026 are held.	2026-09-25
Data jurisdiction, source code and exit terms of the identity register's Korean-financed expansion	Publication of the EDCF loan agreement for the resident registration expansion, or NIDA's phase I and II supply contracts, stating who holds the source code, keys and hosting and on what terms the supply can be ended.	2026-09-25
