PROGRESS REPORT

Uganda: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the repository tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the repository holds nothing on that indicator. **That is a statement about this repository, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-10-01 to 2026-10-12.

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Digital transformation strategy**	A five-year technology authority strategic plan was launched in June 2026, and the plan document is not held. The plan covers financial years 2025/26 to 2029/30 and was launched in the capital (plan). Its one figure that reaches this report is an agency-integration baseline for the government data exchange, recorded separately. A five-year plan whose text is unavailable is the frame for a unit that otherwise reports a great deal: 143 sourced rows, and the governing strategy is not among them.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**ICT strategy**	The 2022 Digital Uganda Vision to 2040 is the standing frame, and both the ICT ministry and the IT authority launched five-year plans written to align to it. 2025-10 - the ICT ministry launched a Five-Year Strategic Plan for FY2025/26 to FY2029/30 with Service Delivery Standards, on a programme-based approach to planning and budgeting. Neither document is held and the account states no quantified target. 2026-06 - the IT authority launched its own plan for the same period, with the proportion of Ugandans actively using e-government services to go from 9.2 per cent to 40 per cent by FY2029/30 across six objectives, reported against quarterly. The frame itself has not moved: the 2022 Vision is unchanged and unreplaced, and sets a 2040 horizon with no dated quantitative target behind it. What the repository does not hold is either plan's text, so the targets reach this report through launch accounts. The 2014 national ICT policy replaced the 2003 framework and set targets for 2020. A final draft revising it on eight focus areas was prepared for the ministry in 2022; no adopted successor is held.	MOVEMENT
Strategies, plans and policies	**Broadband strategy**	The 2018 National Broadband Policy was reviewed with the ITU in January 2026, and a fibre-deployment framework took effect the same month. 2026-01 - a review of the 2018 policy's implementation, prepared with the International Telecommunication Union, was published and proposes interventions, resting on a situation analysis of the sector's contribution to gross domestic product, mobile coverage, internet pricing, traffic and usage, and Uganda's placing in tracked international indices. 2026-01 - the regulator's framework on optical fibre installation, maintenance, protection and disposal took effect on 1 January 2026, setting minimum standards for deploying fibre infrastructure. 2022-04 - the ICT ministry published a broadband baseline survey and infrastructure blueprint costing a ten-year plan to 2032/33 at US$70m, fibre to every district capital first and subsidised radio sites from year six; its foreword says it is not a statement of government policy, and nothing records its adoption. The repository holds neither the review's findings nor its proposed interventions in itemised form, and no successor policy has been adopted. Nothing records compliance with or deployment under the fibre framework.	MOVEMENT
Strategies, plans and policies	**Data storage / cloud strategy**	A national green data centre strategy was published with the ITU in January 2026 and a sovereign cloud launched in March; no dedicated cloud policy exists. 2026-01 - the green data centre strategy and guidelines were published with the International Telecommunication Union, addressing the environmental cost of data-centre growth alongside economic and technological competitiveness. 2026-03 - a sovereign cloud platform was launched at the Deep Tech Hub and hosted in a commercial facility at Namanve, to keep national data inside the country. The state's own storage target is utilisation rather than capacity: the IT authority's plan puts national data-centre utilisation at 70 per cent, to reach 83 per cent by FY2029/30. No dedicated national cloud policy is on record, and the green strategy is the nearest dated instrument to a storage strategy the repository holds.	MOVEMENT on a green data-centre strategy rather than a cloud policy

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data interoperability framework / roadmap**	The interoperability framework and its reference architecture were renewed in May 2026, and the exchange platform reaches 37 per cent of agencies. The technical layer has been in place since 2021: the reference architecture delivered in September 2021 provides a controlled vocabulary, architectural building blocks and a method for identifying interoperability standards. 2026-05 - renewed enterprise-architecture and interoperability documents were delivered with the e-Governance Academy and World Bank support, with no rollout reported. 2026-06 - the roadmap acquired a number: the exchange platform connects 37 per cent of ministries, departments and agencies and is to reach 73 per cent by FY2029/30. Neither renewed document is held, so what changed between the 2021 architecture and the 2026 renewal cannot be established from the repository. 2026-10-01 - the information technology authority said the platform connects the identity register to more than 150 agencies, banks and telecoms operators.	MOVEMENT
Strategies, plans and policies	**AI strategy**	A National AI and Emerging Technologies Strategy holds the same status at both ends of the window, while an AI secretariat operates with no budget line or mandate document held. The strategy was reported in development in June 2025 and again in August 2026 as due by the financial year's end; the same status at both ends of the window is the finding (strategy, outlook, crafting, policy, rights). A ministry secretariat is reported operating under a named head with no budget line, staffing figure or mandate document held (secretariat). A separate policy to regulate artificial intelligence and social media was announced to an editors' guild meeting; it is distinct from the strategy and the repository holds no other record of it (media policy). 2026-09-10 - a strategy is stated to be in development, aimed at building national capacity to develop, govern and benefit from artificial intelligence rather than depending on foreign systems, the science and technology minister naming data, computing infrastructure, energy, models, applications and skills as what must be invested in. No draft, publication date, budget, lead institution or consultation process is named.	NO CHANGE
Strategies, plans and policies	**Data localisation policies**	Cross-border transfer runs on the 2019 statute; the regulator applied it extraterritorially to a foreign platform and a satellite licence carries localisation conditions. The operative provision is section 19 of the Data Protection and Privacy Act 2019, which governs transfer of personal data outside the country; no separate localisation policy or regulation exists. 2026-02 - the data protection office ordered two foreign platform companies to comply with the Act's cross-border transfer rules, and by July all five orders had been complied with inside their 90-day timelines, with no appeal and no fine. 2026-05 - the communications regulator set out the data-sovereignty terms attached to a satellite operator's licence, and the licence as commercially launched requires a national gateway and physical point of presence, an operational office and registration of every device activated in the country. What the repository does not hold is any licence or decision text, so the localisation obligations reach this report through the regulator's and the office's own accounts.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	**Data governance policy**	A National Data Strategy is being drafted and the information security framework was updated in July 2026; no data governance policy is adopted. 2025-12 - the ICT ministry's permanent secretary confirmed a National Data Strategy under development with other agencies, civil society and the private sector, framed round data as a national asset, legal standards for collection, protection, sharing and use, and priority use cases in public health, agriculture, financial inclusion and education. No draft text, adoption date or gazette record is held. 2026-06 - a readiness assessment for artificial intelligence was validated with UNESCO, naming stronger data-governance frameworks among what the country needs. 2026-07 - the updated National Information Security Framework was launched by the ICT minister, setting minimum controls for government institutions and critical-infrastructure protection; the framework document itself is not held. So the governance layer is a security framework in force and a data strategy that has been in draft for at least nine months.	MOVEMENT the data strategy still in draft
Strategies, plans and policies	**Open data policy**	No open data policy has been adopted: the last record is a draft disseminated to ministry staff in 2021/22. Open data reaches the public through sector portals instead. The ministry's own quarterly report records a draft Open Data Policy disseminated to staff in the 2021/22 financial year. Nothing in the repository records an adoption, a gazette entry or a successor draft in the four years since, which is now a dated and cited absence rather than an unexamined one. 2025-12 - the procurement portal's open-contracting upgrade selected and validated 36 of 78 candidate data points with the procuring entities, across social, institutional, environmental, economic and climate-finance dimensions, with three ministries' inputs still outstanding and no go-live recorded. 2026-07 - the statistics side went furthest: all 155 of the 201 sustainable development goal indicators the country reports, with their metadata, are on the National SDG Open Data Portal, up from 41 indicators in 2015, with 46 goal indicators still lacking data. Publication is therefore running ahead of policy, sector by sector, with no instrument stating what government must publish or on what licence.	NO CHANGE a draft from 2022 with nothing adopted since
Legislation and regulation	**Data protection legislation**	The Data Protection and Privacy Act is in force and the office's director stated a shortfall of some 35,000 unregistered controllers against a 50,000 estimate. The statute did not change; the estimate is the office's own and no prosecution outcome is held (shortfall, enforcement, decision, order). Registration at roughly three parts in ten of the office's own estimate of the controller population, three years into the regime, is what the enforcement record below has to be read against.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Cybersecurity legislation**	The Constitutional Court nullified five sections of the Computer Misuse Act on quorum and vagueness grounds, and government declared telecom-infrastructure attacks economic sabotage. The nullification covered sections 11, 23 and 26 to 29. The movement stem records an instrument neutralised; the rights reading is the opposite (nullification). Vandalism against telecommunications infrastructure is now treated as economic sabotage, with a subscriber-card conviction obtained under the 2024 interception regulations rather than the Act (sabotage, crackdown). Which statute an offence is charged under is worth recording when the principal computer-crime Act has just lost five sections. 2026-09-15 — the regulator proposed cutting people off: it is working with parliament on targeted denial of service for repeat abusers of cyberspace. No bill, offence definition or appeal route is published.	MIXED five Computer Misuse Act sections nullified for vagueness while vandalism enforcement was stepped up as economic sabotage
Legislation and regulation	**Legislation covering digital id**	The 2015 Registration of Persons Act is unchanged, but two of its provisions were operationalised: 13.3 million renewals and first cards for resident foreign nationals. The statute has not moved: the Registration of Persons Act, Chapter 332 has stood since March 2015, establishing the registration authority and the National Identification Register, and the repository holds no amendment to it. 2025-12 - the registration authority reported that more than 13.3 million national identity cards had been renewed and extended the mass renewal and registration exercise to February 2026, to reach those missed in earlier phases. 2026-08 - the alien-registration provisions were operationalised for the first time, the authority beginning to issue identification cards to legally resident foreign nationals at its Kampala offices. So the movement here is administrative rather than legislative, and the repository holds no count of foreign nationals registered or cards issued to them.	MOVEMENT
Legislation and regulation	**Digital payments legislation**	Digital lending platform regulation was stated as intended at a finance ministry and parliamentary retreat, with no bill, instrument or timetable held. The intention was stated in August 2026 (intention). It is the only payments-specific legislative movement in this ledger, against a payments record that includes a stablecoin corridor, a tokenised-asset exchange, a currency-settlement service and a credit-scoring memorandum with nothing published about its consent or legal basis. 2026-09-14 — the central bank told Parliament it will investigate claims that mobile money operators helped digital lenders take repayments from wallets of people who never guaranteed the loans; both large operators denied it and asked for unlicensed apps to be blocked.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Legislation enabling data interoperability**	Interoperability rests on the 2009 IT authority statute and subsidiary frameworks; no dedicated data-sharing law exists, and the movement is in sectoral agreements. The enabling law is the National Information Technology Authority, Uganda Act 2009, gazetted in July 2009, under which the exchange platform, the interoperability framework and the security framework are all issued. No dedicated data-sharing or interoperability statute exists and no amendment is on the record. 2025-12 - a five-year US$2.3 billion bilateral health cooperation memorandum was signed with the United States, committing to a resilient health system; a data sharing agreement under it is on the ledger as planned. 2026-03 - parliament passed the National Drug and Health Products Authority Bill at third reading, replacing the 1993 framework and carrying a listing system for health products; no commencement date or system is named. What the repository does not hold is any legal instrument compelling agencies to share data with one another, which is why the exchange platform's coverage is reported as a target rather than an obligation.	NO CHANGE the enabling statute is unamended and the movement is in agreements under it
Legislation and regulation	**AI legislation / regulations**	The government's own assessment with the ITU finds no legal or regulatory framework for artificial intelligence, and the strategy meant to precede one is still drafting. The ICT ministry's national landscape assessment, prepared with the International Telecommunication Union, records that no legal or regulatory framework for artificial intelligence exists. That is the position at both ends of the window. 2026-03 - the ministry ran nationwide stakeholder consultations on a National AI and Emerging Technologies Strategy. 2026-06 - a readiness assessment was validated with UNESCO at a workshop in Kampala, feeding the same strategy. 2026-08 - the strategy was still drafting sixteen months after being called final, with a completion date of the end of the financial year. A strategy is not a law, and nothing in the repository names a bill, a regulation or a regulator for artificial intelligence. A four-country legal review published in 2026 reports that neither the constitution, the labour code nor the data-protection act names automated hiring decisions in Uganda or in the three states it compares. Whether the general data-protection statute's automated-decision provisions reach recruitment is left open.	NO CHANGE an assessed absence with the strategy still in draft
Legislation and regulation	**E-commerce legislation**	A Protection of Sovereignty Bill caps foreign funding at about UGX 400m a year above which ministerial approval is required, and the regulator opened nationwide enforcement against unlicensed public wireless access. The bill was assessed technically by the central bank to joint committees in April 2026; enactment is reported but unconfirmed (bill, editors). A cap on foreign funding with ministerial approval above it reaches every civil-society body in this ledger — the digital-rights submissions, the awareness campaigns and the climate-information project are all externally funded. Nationwide enforcement against unlicensed public wireless access opened on a public notice in July 2026 (enforcement).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	**Statistics legislation**	The 1998 statistics statute is unamended, and the bureau finalised a fourth strategic plan for 2025/26 to 2029/30 under it. The Uganda Bureau of Statistics Act, Chapter 310 has been in force since 1998, establishing the bureau and the National Statistical System and giving the bureau its coordination mandate. No amendment is held. 2026-01 - the bureau's own vote performance report records that the Fourth Strategic Plan 2025/26 to 2029/30 was finalised, on objectives covering production and dissemination of official statistics, coordination of the statistical system, and partnerships. 2026-08 - the finance minister called on the bureau to strengthen production and use of credible statistics for planning, budgeting, policy and monitoring at a board briefing. The plan document itself is not held, so its targets are not on the record; nor is any amendment bringing the 1998 Act into line with the administrative data now generated by the registries.	MOVEMENT
Legislation and regulation	**Access to information legislation**	The 2005 Act is unamended, but the Constitutional Court struck down its court-records exemption while the High Court widened its privacy exemption. 2025-12 - the Constitutional Court held the Act's exemption for pre-conclusion court records unconstitutional, while upholding the judicial service commission's shortlisting discretion and the privilege of its communications. 2026-08 - the High Court went the other way on a different exemption, setting aside an order that had compelled an examinations board to release a parliamentary aspirant's examination scripts to a rival, quashing a UGX 12,000,000 damages award and treating the scripts as personal data. Both moved the statute's boundaries without amending it, and the direction is opposite in each case, which is what makes this mixed rather than advanced. No amendment bill follows either ruling on the record, and the repository holds no request-and-response statistics under the Act - so whether the right of access works in practice is not something this repository can say.	MIXED one exemption struck down and another widened in the same window
Data protection	**Data protection authority**	The protection office confirmed compliance by a global messaging platform in July 2026, and its earlier orders against a search company have no recorded compliance step. The messaging decision was made in February 2026 and compliance confirmed by a letter of July 2026, which is correspondence and is not held (compliance, decision). The orders against the search company were decided in July 2025 with thirty days to register and file cross-border evidence; the precedent travelled and the compliance step was never recorded (orders, breach). A six-month awareness campaign launched in December 2025 targeted reaching 70 per cent of the population and registering 1,000 controllers (campaign). Two decisions against global platforms, one confirmed and one unrecorded, is the enforcement record.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data protection	**National data protection readiness**	The revenue authority issued more than 1,000 compliance notices for bank customer information since June 2026, and an editorial argues the identity number is handed over on request to security guards and others with no lawful basis. The demands are made under the tax procedures statute and are set by the paper against the data-protection Act; the revenue authority was unavailable for comment and no determination by the protection office is held (notices). Public grasp of data-protection principles was cited at an awareness-campaign launch, and an editorial states the identity-number problem as a lived one rather than a survey finding (grasp, editorial). A three-year child online-safety campaign was launched in August 2026 (children). 2026-10-07 - a TikTok user was charged with unlawfully obtaining and disclosing personal data over a photograph and video of a State House employee.	REGRESSED
Regional collaboration	**Regional policy collaboration**	The country won a four-year seat on a continental telecommunications council, and a harmonised regional framework for artificial intelligence and digital finance was proposed and left out of the signed communique. The seat was won in July 2026 for a four-year term; the council coordinates African positions on spectrum, cybersecurity, artificial intelligence and data governance before the international union (seat, declaration). The harmonised framework was proposed by a monetary affairs committee chair in the capital and is absent from the signed communique; the stated argument for acting regionally is regulatory arbitrage (framework, bloc). A regional artificial-intelligence policy roadmap was explored at a science conference with the country a participant rather than a sponsor (roadmap). 2026-09-07 - a memorandum with South Sudan provides for real-time epidemiological data sharing, joint surveillance and harmonised border screening, with no platform or safeguard named. 2026-09-16 — the revenue authority signed a third customs memorandum with South Sudan's, the first to cover digital interoperability and enforcement of the electronic permit system.	MOVEMENT
Regional collaboration	**Regional legal harmonisation**	Harmonisation rests on the 1999 Community treaty; under it a regional framework for AI and digital-finance regulation and an AI policy roadmap are in train. The legal base is the Treaty for the Establishment of the East African Community, signed in November 1999 and in force since July 2000, which binds partner states to cooperate and harmonise in telecommunications and related regulatory fields. It has not moved; what moves under it is programme work. A harmonised regional framework for artificial intelligence and digital-finance regulation is in preparation, and a regional artificial-intelligence policy roadmap sits beside it. None of this is yet law in Uganda. The repository holds no domestic instrument transposing a regional digital framework, and no timetable for one.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	**Shared regional infrastructure**	The regional payment masterplan was approved by central bank governors in May 2025, and four states signed a resolution for a jointly owned satellite in April 2026. 2025-05 - the Cross-Border Payment System Masterplan was approved by the partner states' central bank governors at the 28th ordinary meeting of the Monetary Affairs Committee, on four pillars covering regulatory harmonisation, payment-system modernisation including a regional instant retail switch, market deepening and capacity building, with the regional digital integration project supporting implementation. 2026-04 - ICT ministers from four states signed a resolution to undertake a feasibility study for a regionally owned communication and broadcasting satellite at a meeting Uganda chaired in Nairobi. Both are approvals of intent rather than infrastructure in service: no cost, timetable or completion date is on record for the satellite study, and no Ugandan implementation step under the masterplan is stated in what is held.	MOVEMENT
Regional collaboration	**Cross-border data transfers**	A data sharing agreement under the health memorandum is provided for and still to be executed, alongside a specimen agreement covering genetic sequence data of high-consequence pathogens. The agreement is provided for at a numbered clause and is not on record as completed; a specimen sharing agreement covering genetic sequence data during an outbreak is likewise provided for, effective for no more than five years, and is likewise incomplete (agreement, memorandum, complaint). The country has a data-protection statute in force and a protection office issuing orders against global platforms, and neither is named in the arrangement.	MOVEMENT
Standards	**National interoperability standards**	A renewed enterprise architecture and interoperability framework was delivered in May 2026, and the government data exchange sits at a 37 per cent agency-integration baseline. Neither renewed document is held, and the rollout is not reported (framework, renewal). The exchange's integration baseline comes from the authority's five-year strategy; two figures for it use different denominators and are not reconciled (exchange, case study). The single sign-on service is described in an undated agency deck, proxy-dated at ingest, so its figures must not be read as current (sign-on). 2026-10-01 - the information technology authority said the platform connects the identity register to more than 150 agencies, banks and telecoms operators.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	**National quality standards**	The standards body reported to the trade minister for FY2024/25 and was directed in August 2026 to cut certification turnaround for small firms; a compulsory-standards notice is out for objection. 2025-12 - a preliminary notice was published under section 20 of the standards Act, the National Standards Council stating it intends to recommend standards for compulsory application, with 60 days for written objections and a right to be heard before any declaration. Nothing on the list is recorded as declared. 2026-08 - the trade minister directed the standards body to improve certification turnaround for small and medium-sized enterprises and to clear substandard products from the market, with no turnaround figure, target or deadline stated. On the digital side the technology ministry will standardise information and communication technology indicators and definitions with the technology authority and the statistics bureau, with no standard, indicator list or adoption instrument held for the work. The FY2024/25 annual report was submitted under section 40 of the Act (report); no certification volume or turnaround series is extracted into this repository.	MOVEMENT
Standards	**Adoption of international standards**	The procurement authority was certified to ISO/IEC 27001:2022 in June 2026, the first of the selected institutions, and two international AI standards are working drafts. 2026-01 - the standards body's January-June 2026 work plan, notified to the World Trade Organization, carries two international artificial-intelligence standards as working draft Uganda standards, on machine-learning system frameworks and on concepts and terminology, with a council approval target of June 2026. Neither is recorded as adopted, and that target date had passed by the close of this window. 2026-06 - the public procurement authority was certified to ISO/IEC 27001:2022, the first of the government institutions selected under the digital acceleration project to reach certification; the ministry states ISO/IEC 42001 is expected to guide artificial-intelligence governance next. 2026-07 - the updated national information security framework is written to the ISO/IEC 27000 family, its policy carrying a version history running from a 2014 initial draft to an enhanced draft of September 2025. How many institutions remain uncertified is not stated in what is held, so the denominator behind the first certification is unknown.	MOVEMENT
Public debate and participation in policymaking	**Non-governmental contribution to national policy**	A joint civil-society submission was filed for the fourth-cycle periodic review, and a climate information integrity project launched in August 2026. The submission carries civil-society recommendations rather than government commitments; it carries no day on its cover and the date is padded to the month (submission, review). The climate project was launched in August 2026 with no budget or duration stated (project). Both are externally funded, which is why the foreign-funding cap in the sovereignty bill recorded separately bears on whether either continues.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	**Open discussion of government policy**	A regulator order suspended public internet around the January 2026 election, with social media still blocked a week after general restoration. A duration must name its endpoint: four days measures order to measured restoration of connectivity, almost five days measures order to the regulator's announced restoration at midnight on 18 January, and thirteen days measures order to full restoration including social media. The directive is held as a scanned document with no text layer, and no ruling in the Law Society suit is on file (order, restoration, record, directives). Social media and over-the-top services remained blocked after general internet was restored (block, signal). Revised judiciary media guidelines were issued through the case-management system for a High Court trial; the guidelines themselves are not on file (guidelines).	REGRESSED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	**Sustainable domestic financing of digital transformation**	The ICT vote is wholly domestically financed and rises from UGX 105.963bn to UGX 144.696bn, inside a UGX 84.3 trillion budget over half funded from domestic revenue. 2026-01 - the ministry's own policy statement puts the ICT vote at UGX 105.963bn approved for FY2025/26 excluding arrears and UGX 144.696bn estimated for FY2026/27, rising to UGX 256.274bn by FY2030/31, with external financing at nil in every year. The development half moves from UGX 0.574bn to UGX 46.426bn across those two years, and only UGX 40.566bn of the FY2025/26 vote had been spent by the end of December. 2026-04 - parliament passed a UGX 84.3 trillion budget of which UGX 44.18 trillion is domestic revenue, allocating UGX 1.1 trillion to science, technology and innovation including ICT, against debt servicing of about UGX 33.4 trillion. The vote is the ministry's alone and the programme runs across several votes, so this is the sharpest domestic-financing figure the repository holds rather than the whole picture. An arrears line larger than the substantive vote in FY2025/26 goes unexplained in what is held.	MOVEMENT
Financial sustainability	**Financial sustainability of digital systems**		NO EVIDENCE
MoUs and other agreements	**Strategic relationships**	Cooperation talks were held with a neighbouring state operator, with no scope, value or timetable stated. A delegation visited in August 2026 (talks). Talks only. It is the sole bilateral commercial engagement in this ledger that is not with a Chinese, Gulf or European counterparty, each of which is recorded separately.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	**Mobilisation of non-state finance**	Two operators handed the regulator UGX 42.9bn and UGX 54.27bn under a statutory 2 per cent levy; an innovation fund made a US$2m debt investment. 2026-02 - an innovation fund made a US$2m growth debt investment in a financial technology company lending to micro and small enterprises across Kenya and Uganda, on a model combining digital technology with in-person delivery. No Ugandan share of the investment is published. 2026-06 - the largest operator handed a cheque for UGX 54.27bn to the communications regulator for the universal service and access fund, which the regulator described as a statutory requirement rather than a voluntary contribution. That distinction is the finding: the largest single private flow into digital inclusion on this record is a levy, not a commitment. The repository holds no domestic venture fund, no disclosed private placement into the digital sector, and no figure for what the fund holds or disburses. 2026-05 - the second operator's remittance and the mechanism behind both: a statutory 2 per cent levy on gross annual revenues, half remitted to the Consolidated Fund and half retained by the regulator for the universal service fund and the government ICT training institute, brought UGX 42.9bn from the second-largest operator. Only half of either cheque reaches the fund.	MOVEMENT
New investments	**Development-partner project financing**	A US$200m digital acceleration project was restructured in June 2025, its backbone extension and a third data centre removed with 23 per cent disbursed, and still funds three service-centre pilots. 2025-06 - a restructuring removed the backbone extension, last-mile and rural mobile broadband, a third national data centre and most refugee and host-community activities, provisionally marked about US$113m for cancellation, and recorded 23 per cent disbursed and about 7 per cent actually spent, with the project in problem status since December 2023 and due to close on 30 May 2026. It is named as the funder of the service-centre pilots and of the 2026 information security framework (project, pilots, future). A distance-education grant of US$12.2m runs 2025 to 2030 for electronic content across 2,560 courses at ten colleges (education). One lender operation, cut back in 2025 and still named as the funder of the service centres and the security framework, is the shape of external financing here. The repository holds no disbursement figure after the restructuring and no record of the closing date moving, though the project is named as a funder in July 2026.	NO CHANGE

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Mobile penetration**	Active mobile subscriptions and smartphones in use both rose on regulator statements, and the regulator states its figures come from licensees' own submissions. The subscription figure was stated in July 2026, and the regulator states the figures come from licensees' own submissions (subscriptions, report, submission). The smartphone figure's start carries no date (smartphones). The leading operator's coverage and fibre footprint come from its own unaudited half-year results, with the repository holding no position at the window's opening (operator, sustainability). Every connectivity figure in this unit originates with an operator. 2025-05 - a regional operator's group results name Uganda among five markets sharing close to 1,500 5G sites; no national 5G site, coverage or subscriber figure is held.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**Internet usage**	The census puts internet usage at 8.9 per cent, 2,809,327 people; the regulator says internet users exceed 15 million. 2025-09 - the 2024 census final report gives the sustainable development goal measure directly: 2,809,327 people used the internet, 8.9 per cent of the population, 10.6 per cent of men and 7.6 per cent of women, against mobile phone ownership of 43.3 per cent among people aged 10 and above. 2025-12 - the regulator's annual sector report states that mobile subscriptions have climbed past 40 million and internet users now exceed 15 million, while noting that rural communities lag. The two are not comparable and nothing in the repository reconciles them: one counts people who said they used the internet, the other counts subscriptions or accounts. Taking either alone would state a position the evidence does not support, so both stand. This is the first census measurement on this definition, so no direction can be read from it.	NO CHANGE two counts four years and twelve million people apart with nothing reconciling them
Connectivity	**Mobile affordability**	A device-tax paper was stated ready for cabinet, and average monthly consumer data spend rose on volumes that moved the implied per-gigabyte cost the other way. The regulator proposed major telecom tax cuts and a device-tax paper was stated ready for cabinet in August 2026; the study itself is not held (paper, cuts). The two ends of the spend series are on different consumption volumes, so the implied per-gigabyte cost moved the other way; the reporting outlet's own per-gigabyte derivation is not the regulator's figure (spend). A regional dataset states a mobile data price printed in dollars with no exchange-rate or conversion basis (price), and buy-now-pay-later device financing is reported by a trade analysis with no default, repossession or total-cost-of-credit figure published (financing).	MOVEMENT
Connectivity	**National fibre backbone**	Parliament approved an RMB 1.05bn loan for backbone phase five in December 2023, with no newer figure, and service-centre throughput was made contingent on it. The loan approval is the last figure on file for the backbone programme (loan). Making the service centres' throughput contingent on a backbone phase whose latest reported position is a 2023 loan approval is the dependency worth stating. A 260 km commercial route carrying over 1 Tbit/s was lit before the window opened (route), and a gigabit fixed broadband product launched in May 2026 with no subscriber, price or footprint figure published (product). 2026-10-06 — the President directed cancellation of the agreement to revive the state telecoms operator, the investor having failed to inject an initial US$25m while seeking control of the national backbone; a Cabinet paper on a state-funded revival is to follow.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	**International internet bandwidth**	A 2,000 km protected route to the coast was switched on in February 2026, and a second route to the same coast launched with 1 Tbps activated. The first route was switched on in February 2026 (route, highway). The second launched in June 2026 with 1 Tbps activated, and is absent from the compiled intersection page (second). Two protected routes to the coast inside five months is the most substantive infrastructure gain in this unit, and both are commercial builds with no state instrument attached. A second international route is being procured under a presidential directive rather than by tender. The state transmission company cancelled open bidding for a commercialisation partner for its fibre network and moved to prepare a proposal for a single named company for a Uganda-Tanzania connection; the parliamentary committee on state enterprises questioned why firms that had expressed interest were dropped (committee). A State House letter of 27 August 2025 had told the ICT and energy ministers that a Tanzanian route could be cheaper than the existing route through Kenya. No contract, value or timetable is held.	MOVEMENT
Connectivity	**Internet Exchange Points**	The established exchange began and ended 2024 at 32 networks and about 40 Gbps, and the state launched a national peering exchange in April 2026. 2025-01 - the established exchange reported it began and ended 2024 with 32 connected networks and about 40 Gbps of peak traffic, with a mid-year depression after a content provider withdrew remote peering worldwide and a recovery when a cache was restored. It also launched an endowment covering 25 per cent of annual non-salary operating expenses, and names high taxes and a continuing social-media restriction as suppressing growth. 2025-10 - the IT authority established a National IP Peering Exchange with a national peering policy. 2026-04 - that exchange was launched at a workshop in Kampala, on the stated grounds that domestic traffic was being routed internationally and back. Its own launch describes it as the country's first neutral and open exchange point, which the established exchange's report contradicts, and nothing on file reconciles the two. No connected-network or traffic figure has been published for it.	MIXED a second exchange launched while the first did not grow
Connectivity	**Satellite broadband licensing and availability**	Commercial service began on 2 September 2026 under a five-year licence requiring a national gateway, a point of presence and registration of every device activated in the country. The licence text is not held; a January 2026 wholesale-model ruling and a May 2026 direct licence are unreconciled, and no subscriber or tariff figure is published (switch-on, licence, wholesale, blocking, shutdown). Two providers switched the service on in August 2026 and the held accounts differ on which was first, one naming a regional operator alone (reseller) and the other naming it alongside a domestic operator (switch-on). Either way it is a reseller launch rather than a licensing decision, with no subscriber count, price or coverage figure published. Partner states opened a joint funding account for a regional communications satellite study with deposits due 30 September 2026, and neither the study's cost nor each state's share was disclosed (satellite). 2026-09-02 — the operator began commercial service under the five-year licence signed in May 2026, whose conditions the regulator framed as security, revenue assurance and compliance with Ugandan law (launch, pricing). 2026-09-24 - the second operator launched satellite-to-mobile SMS and light data for compatible smartphones, free for 30 days and then through its data bundles.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	**Local data centre capacity (all providers)**	A colocation facility operates outside the capital, a green tier-three build finished construction in March 2026 after two missed dates, and an edge site is named with no date or capacity. The colocation facility offers 1,000 sqm, up to 250 racks and 1.5 MW of IT power, and a bank moved its core operations there in February 2026; its capital figure is group-level across seven markets, not national (colocation, stack). The green build missed a late-2025 date and then a first-quarter 2026 date (original, rebase); by March 2026 civil works and technical installation were complete, with launch given as September 2026 in one account and July in another (cleared, site visit). No opening is on record. The edge site is named as a future site with no date or capacity attached (edge). No national capacity figure appears anywhere in this ledger.	MOVEMENT construction complete but no facility opened
Data Storage	**Local data centre capacity (national providers)**	A domestic sovereign cloud launched at a commercial facility, and a national artificial-intelligence research cloud launched at the national university framed as replacing foreign cloud on sovereignty grounds. 2026-10-10 — a third national data centre, cut from the World Bank project in 2025, is provided for in the authority's strategic plan to FY2029/30, on a former regulator's account; no financing or timetable is stated. The sovereign cloud is domestically owned and the building is a commercial operator's (cloud). The research cloud launched in March 2026 with the national research and education network, framed as replacing foreign cloud on data-sovereignty grounds (research cloud). Neither publishes capacity, tenancy or utilisation. Sovereignty framing applied to a service running in someone else's building is the distinction worth keeping. The state's own pipeline narrowed before the window: a third national data centre was removed from the World Bank digital acceleration project in its June 2025 restructuring, leaving an upgrade of existing capacity.	MOVEMENT
Data Storage	**Off-site backup capacity**	The National Data Centre lists backup and disaster recovery among its services, and two agencies went to market for their own in June 2026. The central offer is a catalogue rather than a measured capacity: the data centre lists backup-as-a-service and disaster recovery alongside infrastructure as a service for government entities, with no capacity, uptake, recovery-point or recovery-time figure behind any of them. 2026-06 - the registration services bureau invited bids for a cloud disaster recovery and hybrid backup solution through the electronic procurement portal, and a bid opening was recorded for firewall and switching equipment to establish a second active instance of the electronic passport system at the National Data Centre. Both are procurement notices with no award, value or completion on record. What the repository cannot say is how much government data is actually held off site, and no source states it.	MOVEMENT on procurement rather than delivered capacity
Energy	**Sufficient energy and water for data centres**	A supercomputer centre at a hydropower plant is stated to begin rollout in 2026 at full capacity in 2028, on a single-sourced cost with a contested first-in-Africa label the repository adopts neither of. The rollout claim and the US$1.2bn cost are single-sourced, and the first-in-Africa label is contested (centre, build). The renewable-power case is a promoter's design claim tied to that rollout, with no grid-operator or generator confirmation held (power). Siting compute at a generator is the one energy argument in this unit with a physical basis, and it rests entirely on the promoter's own account.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	**Grid reliability**	The leading operator reports a share of network sites on solar or hydro in its 2025 sustainability report, on its own unaudited figure with no prior-year share held. It is the company's own unaudited figure for the year to December 2025 (sites). It is the only energy measure attached to network operation in this ledger, and no regulator or grid series accompanies it.	MOVEMENT
Energy	**Rural electrification**	Last-mile connections under the access scale-up project are being commissioned district by district, against 51 per cent national access in 2020, 19 per cent on grid. The policy baseline is the energy policy's own: national electricity access rose from 5 per cent in 2002 to 51 per cent in 2020, 19 per cent on grid and 32 per cent off grid, with generation capacity at 1,378.1 MW at the end of 2022. No later national access rate is held. 2025-08 - the distribution company and the energy ministry commissioned last-mile connections in Kiboga district, with free meters and free connection for anyone within 90 metres of a low voltage pole against fees of UGX 23,600 for inspection and UGX 6,400 for initial energy. The company had taken on 850 additional connection technicians and, with the ministry, aims to connect at least 900,000 new customers by 2027 on US$638m of lender financing. Connections actually achieved are not reported against that target anywhere in the repository, so the measure here is intent and unit price rather than delivery.	MOVEMENT
Technical Capacity	**Robustness of government hardware and software**	Security moved from each agency's problem to a central service: firewall-as-a-service was introduced in February 2026 and the security framework was updated in July. 2026-02 - the IT authority introduced a centrally managed firewall service for every ministry, department and agency consuming its IP and data-centre services, so that an agency need not procure hardware or licences or manage security infrastructure of its own. No take-up count, price or coverage figure is published. 2026-07 - the updated National Information Security Framework was launched by the ICT minister under the digital acceleration project's government network component, setting minimum controls for government institutions and critical-infrastructure protection. 2026-06 - the procurement authority became the first of the selected institutions certified to ISO/IEC 27001:2022. The repository holds no survey of what government hardware and software actually run on, no failure or downtime series, and no count of agencies on the central service - so robustness is described through the controls offered rather than measured. The one empirical measurement this repository holds is four years old: the third national IT survey sampled 132 ministries, departments and agencies, 128 districts, 3,960 households and individuals and 600 businesses between January and April 2022, developed with the statistics bureau. Its capture is truncated, so its findings are not held, and no fourth edition has followed.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	**Local capacity to maintain, manage and develop government systems**	A digital skills and competence framework went to tender in August 2026, and newly appointed officers were inducted onto government platforms in June. 2026-06 - the ICT ministry ran an induction bringing newly appointed information technology and communications officers onto government platforms. No intake number or posting pattern is published. 2026-08 - the IT authority issued terms of reference for a consultancy to develop a National Digital Skills and Competence Framework, procured under the ministry's oversight and financed by the digital acceleration project. No consultant, contract value, timetable or draft is on record. The government's own monitoring of the digital transformation programme covers the ICT professional workforce as a distinct objective (monitoring report), which is the nearest the repository comes to an assessment of in-house capacity. What is missing is a count: no establishment figure, vacancy rate or attrition series for government ICT staff appears anywhere in this repository, and the framework meant to define the competences was still at terms-of-reference stage at the close of the window.	MOVEMENT
Cybersecurity	**National cybersecurity readiness**	A National Information Security Framework 2026 was launched under the donor project with the document itself not held, and cyberattack volume was cited at the launch with base period and absolute counts unpublished. The framework was launched by the ICT ministry in July 2026 and the document is not held (framework). The attack-volume figure was cited at that launch without a base period or absolute counts (volume), and the only recorded cybercrime case figure is a police count for calendar 2024, with both ends predating the progress window (cases). An anti-piracy coordination framework is exploring dynamic address and name-system blocking, and participants flagged the dual use of blocking infrastructure built for piracy (piracy) — which is the same infrastructure question the election-period suspension raises. Legitimate pay-television subscriptions fell on the figure cited at that convening (subscriptions). The criminal investigations directorate told a parliamentary committee that its Crime Data Centre is now targeted for March 2027 and that integrating government and security databases would first need agreed legal and policy frameworks for access (directorate). A national computer emergency response team exists: the World Bank project's June 2025 restructuring lists mobile forensic kits for its forensic laboratory among its cybersecurity activities. It is the only record of the team the repository holds; its mandate, staffing and incident figures are not held.	MOVEMENT

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**National data exchange system**	The exchange platform connects 37 per cent of agencies against a 73 per cent target and is described as vendor-neutral and real-time; a spatial data store stalled at validation. The authority's own service description puts the platform as a vendor-neutral data integration platform connecting disparate government systems for real-time sharing between ministries, departments and agencies. 2026-06 - the only number attached to it in the window is a target: it connects 37 per cent of ministries, departments and agencies and is to reach 73 per cent by FY2029/30. 2025-08 - a National ICT Infrastructure Spatial Data Store reached a validation workshop, and nothing has been recorded about it in the year since. No transaction volume, uptime figure or list of connected systems has been published for the exchange platform at any date, so its reach is known only as a percentage whose denominator is not stated. 2026-10-01 - the information technology authority said the platform connects the identity register to more than 150 agencies, banks and telecoms operators.	MOVEMENT
Data Exchange	**Use of digital id in other systems**	Cabinet approved the identity number replacing the taxpayer number, while card holders were turned away from banks and SIM registration because verification failed. 2026-08 - against that, members of parliament reported that holders of newly issued cards were being denied banking and SIM services because the cards' codes would not respond, past the authority's own deadline. 2026-09-07 - the finance minister said the Cabinet decision does not make the identification number the taxpayer number but requires the two to be interoperable - "the NIN and the TIN must be able to read each other", and the revenue authority added that holding an identification number does not by itself make its holder a taxpayer. No instrument, commencement date or migration plan is published. 2026-09-15 — the revenue authority said the TIN will be phased out for individuals. 2026-09-30 - the internal affairs minister launched the integration of the national identification and tax identification systems ; no commencement date is given. 2026-09-30 - the revenue authority set out a two-stage move to the national identification number as the tax identifier, with consent given by fingerprint at a service point.	MIXED the identifier is being extended while its verification fails in the field

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of health systems**	The 2023 exchange and interoperability guidelines govern, and US$100m of donor-built systems including the exchange platform passed to the ministry in March 2026. The governing instrument is the health ministry's own Health Information Exchange and Interoperability Guidelines of January 2023, which define the exchange architecture. No conformance or connected-system count against them is published. 2026-02 - the national laboratory data repository was launched, linking laboratory information systems to the national health data warehouse. 2026-04 - ownership changed hands: digital health systems valued at US$100m were transferred from a university programme to the ministry on 31 March 2026, among them the health information exchange platform, the electronic medical records repositories and the surveillance trackers, against a record of 1,300 facilities running case-based surveillance. The valuation is the university's own rather than a transaction price, and no ministry running-cost or staffing plan for the transferred systems is published - which is the risk a handover of this size carries and the repository cannot yet speak to.	MOVEMENT
Data Exchange	**Interoperability of education systems**	Data-governance guidelines launched on 8 June 2026 make registration mandatory for every school, closing the policy absence the ministry's own account had named. 2025-03 - the education ministry's own systems assessment documented the management information system moving to a central platform with integration planned to teacher, inspection, refugee and examinations data (assessment). 2025-12 - an issue brief found that multiple unaligned systems continue to fragment education information management and that the absence of a formal policy has contributed to limited accountability and a weak data culture. 2026-06 - guidelines launched on 8 June 2026 answer that directly: compliance requirements and sanctions for officials and institutions, mandatory registration for every school, a unique learner identification number, and capitation grants determined from the system's data. Tying money to the data is the mechanism, and it is also the risk: the same account names misdeclaration of information as a standing problem, and the repository holds no audit of the data the grants are calculated from. 2026-06-09 - a press account reported the Auditor General finding that critical administration of the education information system remains largely under its private vendor's control.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	**Interoperability of social protection systems**	The single registry launched in 2021 has no operational record since, while the parish programme's system covers nearly 79 per cent of households. The instrument is the National Single Registry, launched in February 2021 as a unified platform holding common information across social protection programmes and premised on linking programme management systems to the national identity database. Five years on the repository holds no statement of its coverage, its linked programmes or the records it holds. 2025-08 - the programme system beneath it is another matter: it captures beneficiary names, identification numbers, locations, enterprises, borrowed amounts, repayments and savings, covering nearly 79 per cent of all households and tracking more than UGX 2.7 trillion sent to programme cooperatives, of which UGX 2.5 trillion reached more than 2.5 million beneficiaries, with access restricted to named implementing institutions. The system itself is short of its design: the Auditor-General found two of seven pillar modules fully implemented, 178 parish tablets dead and none with internet connectivity, and one district reported half its tablets dead in September 2026.	MIXED the programme system is thick with data while the registry meant to unify it is silent
Digital Identity and CRVS	**Robustness of system**	Over 28m legacy records migrated in the platform's first brownfield migration, while the enhanced card machine-readable code does not work and has not since at least February 2026. The migration completed with about 200,000 duplicates found over seven months (migration, brownfield, renewals, modules). The code failure was raised in Parliament in August 2026 and has stood since at least February with no published fix date and no count of affected cards. Parliament's own record has the registration authority acknowledging in February that the functionality had not been integrated into its digital operational system and promising a fix by 31 March (failure, codes, problems). 2026-09-09 - one mobile operator is the only partner fully onboarded to the information-exchange module opened in March, so new cards fail at banks and SIM counters. A register data-breach investigation was opened with the protection office and police in September 2025 with no outcome, and a civil-society body demanded a fully independent inquiry (breach).	MIXED more than 28m legacy records migrated to a new platform while the new cards' machine-readable codes do not work
Digital Identity and CRVS	**Registration of entire population**	Over 60 per cent of printed cards are uncollected, and the auditor general recorded a backlog whose figures were ten months old at publication with no current series published. The identification authority holds 36.15 million people on the national register, close to 77% of the population (figure). The mass exercise closed in February 2026 with over 60 per cent of printed cards uncollected (printed, renewals). The auditor's figures are as at late October 2025 and are reported alongside cross-district queue chaos over new-card collection; the authority publishes no current backlog series (backlog). First-time enrolment against target and renewal ran at two different rates, and the two rates are the finding: efficient for people already on the register (enrolment). In September 2026 about 5.4 million printed cards were still uncollected; a further mass drive was stated to Parliament with no start date or budget on record (drive). 2026-09-29 - figures at the registration authority's first identity expo put about 36.2 million people identified, roughly 78.8 per cent of the population, on the authority's own count. 2026-10-01 - the registration authority announced a December 2026 exercise to register learners without identification numbers and correct record errors.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**National maintenance of id and credentials systems**	Iris hardware was deployed on more than 5,665 registration kits, the authority establishment was expanded, and the system contract is single-sourced with no value, award date or term held. The iris deployment covers the 2024 to 2026 campaign; the registry figures are vendor-sourced and two roughly one-million populations are distinct and must not be summed (iris, unmatched). The establishment expansion was stated in plenary in August 2026; in September the authority put filled posts at 418 of 571, 201 client-facing, and asked for 998 (establishment, support). The contract behind the migration is single-sourced with no contract value, award date or term held, and it is the whole of that relationship in this repository (contract). 2026-09-29 - the company that prints the national identity card said it will print the country's secure documents locally at a new factory; no start date is published.	MOVEMENT
Digital Identity and CRVS	**Authentication**	The single sign-on and e-signature platform publishes no usage figure at any date, and card verification was still failing in August 2026, five months past its deadline. The state platform is described by its own operator as a single sign-on, digital authentication and electronic signature platform, and in August 2025 the authority convened chief executives to drive adoption. No user, transaction or integration figure has been published. 2026-08 - the card's own verification is the harder finding. The authority had acknowledged in February 2026 that the code function was not integrated into its operational system and promised a fix by 31 March; in August members of parliament reported holders still turned away from banking and SIM services, and an added UGX 5,000 charge for a letter letting a citizen whose card cannot be verified have their details integrated. A charge levied because the system does not work is the sharpest thing held on this indicator, and no ministry response is on record. 2026-09-17 — the authority set out a digital signature service being built on the platform, binding the signature to the holder's national identification number so land documents can be signed digitally, with real-time verification carried to the registration authority so a lands office checks the register rather than a photocopied card. Forged signatures in land transactions are the first target; no launch date is published.	REGRESSED the authentication that exists on paper is failing in the field
Digital Identity and CRVS	**Digital id from birth**	Identification numbers are issued at birth by statute and in practice: registration teams were deployed to referral hospitals and 636,000 children enrolled. The obligation is statutory: the Registration of Persons Act 2015 provides for allocation of a national identification number when a citizen child's birth is registered. 2025-09 - during the mass enrolment exercise the authority deployed registration teams to referral hospitals to register births and issue numbers on the spot. 2026-01 - by January 636,000 children had been enrolled, alongside 21.4 million of the 28.5 million records held on the old system being transferred to the new one, with hospital-based newborn registration centres in operation. What none of these accounts carries is a denominator: no source here states what share of births is registered, so the number of children enrolled cannot be read as coverage. The status report carries the completeness figure this repository does not.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	**Interoperability of birth registration and digital id**	The identity platform carries a birth and death registration module issuing a number automatically on birth notification, with a working group adopting process maps and data sharing. 2026-07 - the registration authority's own account of the architecture describes the secure identification system carrying a birth and death registration module, with an identification number issued automatically on birth notification and certification following immediately. 2026-04 - the technical working group on civil registration and vital statistics adopted a health-facility death process map and data-sharing arrangements with the statistics bureau. 2025-09 - in practice this ran through hospitals: registration teams issued births and numbers on the spot at referral hospitals during the mass enrolment exercise. The architecture is presented rather than evaluated. No share of births actually notified electronically, no time-to-certificate figure and no reconciliation between the civil register and the identity register appear in the repository.	MOVEMENT
Digital Identity and CRVS	**Use by other systems**	Seventy-four financial institutions had electronic verification access to the register as at June 2024, and a constitutional challenge to identity-based access was dismissed with each party bearing its own costs. The institution count reaches the repository through a central-bank annual report that is not itself held (institutions). The challenge was dismissed in June 2025; the case number is a specific miscellaneous cause, not the form circulated in secondary coverage (ruling, barrier).	NO CHANGE
Digital Payments and Fintech	**Governance role of central bank**	Cash-withdrawal caps take effect on 1 January 2027 for a cash-lite economy, while the national payment switch and the settlement-system replacement are unmoved. The caps were issued by circular in May 2026 for a January 2027 start, the stated purpose being a cash-lite economy (caps). The switch was reported in progress in the central bank's 2024/25 account and has not moved (switch). The settlement replacement and standards migration had a stated go-live of November 2025 which passed unverified; absence of confirmation is not evidence of non-delivery (settlement). A digital shilling pilot was announced inside a US$5.5bn settlement-network plan in October 2025 with nothing since (pilot). Capping cash before the rail that would replace it is confirmed working is the sequence.	MIXED cash-withdrawal caps set for 2027 while the payment switch and the settlement-system replacement both stand unmoved

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**G2P functionality**	Government-to-person payment runs through the parish programme's own accounts - UGX 2.5 trillion to more than 2.5 million beneficiaries - rather than through the platform its own feasibility study assessed. 2023-11 - the gender ministry's own feasibility study assessed which government payment mechanisms could carry social protection, naming the financial management system, a bank-connect channel and an electronic cash mechanism as candidates. Nothing in the repository records a decision on it since. 2025-08 - what actually moved money is the parish programme's system: it is tracking more than UGX 2.7 trillion sent to programme cooperatives, of which UGX 2.5 trillion reached more than 2.5 million beneficiaries, covering nearly 79 per cent of all households, with beneficiary identification numbers verified against the identity register. 2026-06 - the same channel took a new segment: guidelines provide UGX 4,654,147,000 in FY2025/26 as an additional grant to persons with disabilities receiving a programme loan, UGX 500,000 each on top of the UGX 1 million loan. So one programme moves money to millions of people digitally, and the cross-government mechanism the study was commissioned to choose has not been chosen. 2026-09-18 — an inter-ministerial meeting put the parish model at 3,571,108 beneficiaries against UGX 4.317 trillion capitalised through 10,589 parish SACCOs, on the government's own count.	MOVEMENT
Digital Payments and Fintech	**Revenue collection**	Tax and government payments went nationwide on a mobile-money shortcode, and expressway tolls began taking mobile money on two lanes in September 2026 after cash-only collection. The standing arrangement is consolidation: fees once collected by individual ministries, departments and agencies are now collected and accounted for centrally by the revenue authority through its electronic tax and payment reference interface. 2025-12 - an enhanced tax and government payment menu went live nationwide on a mobile-money shortcode, stated to cut queues for individuals and businesses. 2026-03 - a bill gazetted on 27 March 2026 revises the penal tax for failure to use an electronic fiscal device or to issue an electronic invoice or receipt, tightening enforcement behind mandatory electronic invoicing. 2026-08 - against that, the Kampala-Entebbe Expressway concession remains reliant on cash, with a parliamentary committee recommending the revenue authority take over collection and introduce an electronic system. No non-tax revenue total, channel split or agency count is published, so the reach of the consolidated interface cannot be stated. 2026-09-10 — the works ministry said mobile-money toll payment test runs on the expressway are complete, with launch soon, naming no platform, charge or start date. 2026-09-25 - mobile-money toll payment launched at the Busega, Kajjansi and Mpala plazas on designated lanes, the motorist approving a PIN prompt; one operator's wallet is named and no fee is stated.	MOVEMENT expressway tolls now take mobile money on two lanes alongside cash

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**B2B and B2G functionality**	A wallet insurance distribution product went live, a tokenised-asset exchange changed hands, and a bank and platform memorandum carries a credit-scoring layer with nothing on file about consent, retention or legal basis. The insurance product's first offering went live in July 2026 with no premium, policy-count or target published (insurance). A majority stake in the tokenised-asset exchange moved in April 2026 (exchange). The bank and platform memorandum's signature date is unestablished, and nothing is on file about consent, retention or legal basis for the credit-scoring layer (memorandum). A short-code micro-investing pilot reaches the repository only as a comparator in a foreign-led survey, with no domestic source, provider name or launch date held (pilot).	MOVEMENT
Digital Payments and Fintech	**P2P, P2G and P2B functionality**	Shared agent banking values rose 76.1 per cent to UGX 29.4 trillion in the year to June 2025, and one operator removed fees below UGX 5,000. 2025-10 - the central bank's own figures for the year to June 2025 show the retail rails growing and cheques receding: the shared agent banking platform carried UGX 29.4tn on 12.5 million transactions, up 76.1 per cent in value and 50.5 per cent in volume with 24 institutions signed up, while electronic funds transfers reached UGX 64.6tn and cheque values fell 3.6 per cent to UGX 4.6tn, cheques now 6.2 per cent of volume. 2025-12 - person-to-government payment widened with an enhanced tax and government payment menu live nationwide on a mobile-money shortcode. 2026-03 - the largest operator removed transaction fees on all payments below UGX 5,000 to push everyday payments off cash. The fee removal is a commercial campaign rather than a regulated tariff, with no stated duration, and the repository holds no measure of what either the campaign or the shortcode did to volumes. 2026-09-22 - a microfinance bank put deposits, withdrawals, loan repayments and bill payments on a switch operator's network of more than 21,000 agents, with debit cards on its ATMs and POS terminals.	MOVEMENT
Digital Payments and Fintech	**Population uptake**	Electronic money transaction value grew 28.6 per cent with growth in agents and handsets while both screen-based channels contracted, and active wallet users rose on the operator's own report. The growth sits in agents and handsets; both screen-based channels contracted (value). The operator's two transaction-value figures are not reconcilable and no growth rate is derived from them (users, separation). Shareholders approved separating the money business into a new financial company in July 2025 (spin-off), and the platform migrated to a cloud-native vendor platform across four markets on the vendor's own performance figures (migration).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	**Cross-border functionality**	One commercial bank went live on the continental payment rail, direct yuan settlement opened through one bank, and a stablecoin settlement corridor opened. 2025-03 - named one of eight pilot countries for the regional digital retail payments platform under a EUR10m EU-financed programme; no Ugandan corridor or participant is on record. A single commercial bank's subsidiary announced going live on the continental rail in August 2026 (rail). Direct yuan settlement opened for domestic businesses through one bank's service rather than a national rail, with no volume, fee or central-bank position stated (yuan). A stablecoin settlement corridor opened in July 2026 (stablecoin), and card acceptance was extended to nine African markets with merchant and card counts given as the two companies' own and no country-specific figure (cards). Four cross-border arrangements, none of them a national rail.	MOVEMENT
Digital Payments and Fintech	**Consumer protection**	A National Financial Inclusion Strategy 2023-2028 was published in November 2023; banks counted 6,533 cyber and fraud incidents and UGX 24bn lost in January to August 2026, a first count. It was published in November 2023 (strategy). No mid-term review, target position or consumer-protection instrument under it appears anywhere in this ledger, against a payments record that includes a stablecoin corridor, a tokenised exchange, buy-now-pay-later device credit with no published default figure, and digital lending regulation that exists only as a stated intention. 2026-09-23 — the bankers' association counted 6,533 cyber and fraud incidents in the financial sector between January and August 2026, with UGX 24bn lost and UGX 68bn estimated at risk, naming wallet and peer-to-peer fraud among the persistent threats. It is a first count, with no earlier figure to compare.	NO CHANGE
Registries	**Population register**	First alien identity cards were issued with 1,875 enrolled in ten weeks, against a scope of which about 1.95m are refugees or asylum-seekers, and a US$100 fee. Enrolment of 1,875 in ten weeks is under a tenth of a per cent of the scope, and the fee falls on a population overwhelmingly composed of refugees (cards, registration, births). Nothing is published about a waiver, an instalment route, or what happens to a resident foreigner who cannot pay yet needs a subscriber card or a bank account. That combination — a fee at that level, on that population, with no waiver published — is the sharpest exclusion finding in this unit.	MOVEMENT
Registries	**Civil register**	A birth registration drive announced community drives and a fee schedule, and no birth-registration coverage figure has been published since 2016. The drive and fee schedule were announced in June 2026 (drive, notification). Ten years without a published coverage figure means the drive cannot be measured against anything. Marriage registration transferred from the registration bureau to the identity authority in April 2025, three months before the window opened (marriage).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Address register**	A geo-referenced postcode database was built for every parish and ward in 27 central districts, and an Entebbe pilot assigned standard addresses. The vote's own target was modest: the FY2025/26 policy statement treats the addressing and postcode database as an output under development, moving from a 10 per cent baseline to a 20 per cent target, on a denominator the statement does not define. 2026-01 - the following year's statement records the achievement: a geo-referenced postcode database for all parishes and wards in 27 districts of central Uganda. 2026-07 - the postal operator's Entebbe addressing pilot assigned standard addresses, with lessons to be documented before national expansion, alongside its shift toward parcels and last-mile delivery. No national coverage figure, address count or completion date is published, so what share of the country can be addressed is not something this repository can state.	MOVEMENT
Registries	**Business register**	A non-individual register launched in May 2026 as the corporate counterpart to the national identity number, with no registered-entity count published. It launched in May 2026 (register). Giving legal persons an identifier matching the one natural persons hold is the design that lets the two be joined, and no source states whether they are.	MOVEMENT
Registries	**Social protection register**	The single registry launched in February 2021 is still described by a donor plan as needing operationalisation five years on. The instrument itself is clear enough: a unified platform holding common information across social protection programmes, premised on linking programme management systems to the national identity database, launched on 4 February 2021. 2025-10 - a donor country plan approved for 2026 to 2030 records operationalising the registry as a continuing systems priority. 2026-01 - the same donor's 2025 country report records continued support for integrating a sub-national social registry into it. Both accounts of what remains undone are a donor's. The responsible ministry has published nothing operational about the registry since the launch - no coverage figure, no list of linked programmes, no record count - and that silence over five years is the position this indicator records.	STALLED
Registries	**Electoral register**	A statutory instrument made biometric verification compulsory at every polling station, and on polling day the commission directed a fallback to the printed register. 2025-12 - the commission's chairperson confirmed that use of the biometric voter verification kit during polling is now mandatory, buttressed by a statutory instrument signed by the justice minister, and warned that unauthorised access, hosting, use or distribution of voter registration data is an offence. 2025-12 - the regulations were made as Statutory Instrument 98 of 2025. 2026-01 - on polling day the commission issued guidance that where a verification kit failed to start, voting should commence immediately using the printed National Voters Register, after reports that voting had not begun at some stations. A requirement introduced in December and suspended in practice in January is the whole finding. No count of kits that failed, stations affected, or voters verified biometrically has been published.	MIXED biometric verification made compulsory and then fell back to paper on the day

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	**Tax register**	The taxpayer identifier is being replaced by the national identification or business registration number from 1 July 2025, with a single unified identifier under consideration. 2026-03 - the revenue authority reported government considering a single unified number merging the tax, business registration and national identification numbers, to improve efficiency and curb fraud, across three separate registries. 2026-05 - the authority notified taxpayers that section 4 of the tax procedures code requires the tax identification number to be replaced by the national identification number for individuals or the business registration number for entities from 1 July 2025, and that registration details must be updated accordingly, with portal access controlled on that basis. No count of taxpayers who have updated, and no deadline or sanction for those who have not, is published - so how far the register has actually moved onto the new identifier is not on record. 2026-09-07 - what was recorded as replacement is now described as interoperability: the identification number is to be the single index with the taxpayer number retained rather than abolished, and the revenue authority states the transition will not automatically make every citizen a taxpayer. 2026-09-30 - the revenue authority set out a two-stage move to the national identification number as the tax identifier, with consent given by fingerprint at a service point.	MOVEMENT
Registries	**Land register**	44,425 freehold titles were handed out across 13 districts under systematic titling, and two separate digital land registries were announced with no procurement behind either. The statutory basis is the Registration of Titles Act, requiring a registrar of titles and a register book in which certificates of title are recorded, unchanged. 2025-08 - the lands ministry began handing over 44,425 freehold titles to landowners in 13 districts under a systematic titling programme. 2026-03 - the land commission announced a nationwide geographic-information-based digital registry of government-owned land, to protect public land from encroachment and raise revenue. 2026-04 - a month later the lands ministry announced blockchain and artificial-intelligence systems to cut transaction fraud, alongside mass titling. Two announcements of digital land registration in a month, from different bodies and covering different land, with no procurement, supplier, budget or date attached to either, and nothing on file relating them. No national count of titled parcels is held.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Health**	A national laboratory data repository launched in February 2026 extending the existing health-information stack, and the health management information system was assessed only through a cross-sectional study. The repository launched in February 2026 and extends the existing stack (repository). The management information system's newborn-data functionality was assessed across 53 data offices in four countries in a study run between November 2022 and July 2024; no national coverage or maturity figure is held (assessment). Health data is also the subject of the bilateral arrangement recorded separately, whose data-sharing agreement is still to be executed. 2026-09-03 - a private platform entered the same stack from outside it: virtual multidisciplinary ward rounds letting urban specialists work with rural inpatient teams in real time, with per-bed cryptographic tokens and triage on live vital signs across more than 260 medical wards. No facility list, patient volume, tariff, clinical evaluation or integration with the national health information stack is published. 2021-01-01 - the health ministry issued its health information and digital health strategic plan for 2020/21 to 2024/25.	MOVEMENT
Sectoral management information systems	**Education**	A baseline census counted 13,575,145 learners in 88,242 schools across 146 districts, and registration on the management system became mandatory in June 2026. The system has been defined the same way since 2019: an ICT management tool integrating people, technology and practices to collect and process data from different sources for decision making across the education sector, originally fed by the annual schools census. 2025-12 - an issue brief found multiple unaligned systems continuing to fragment education information management, with the absence of a formal policy contributing to limited accountability. 2026-05 - a baseline education census was released on a public portal, 13,575,145 learners and 88,242 schools across 146 districts on 73 indicators, drillable from national totals to a single parish. 2026-06 - guidelines made registration mandatory for every school, with sanctions for non-compliance and capitation grants determined from the system's data. A census, a policy and a sanction regime inside seven months is the sharpest movement in this chapter. What is not held is any audit of the data the grants are calculated from, against a ministry account that names misdeclaration as a standing problem. 2026-06-09 - a press account reported the Auditor General finding that critical administration of the education information system remains largely under its private vendor's control.	MOVEMENT
Sectoral management information systems	**Social protection**	A shock-responsive framework names beneficiary registration as the weak point, and a funded project is to operationalise a dynamic registry the state launched in 2021. 2025-02 - the gender ministry's shock responsive framework defines the single and social registries and names beneficiary registration as a continuing systems challenge. No activation or payout under it is recorded. 2026-01 - the FY2026/27 public investment plan carries a social action fund project of the prime minister's office with funding allocated, named as the vehicle for a dynamic national social registry. 2026-06 - the prime minister's office stated the project would be launched soon, with no date. The registry this is to operationalise was launched in February 2021 and has no operational record since, so what the repository shows is a second attempt at the same object rather than progress on the first.	MIXED a framework and a funded vehicle against a registry with no operational record

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Justice**	A human rights commission case-management system was launched in August 2026 under the government network programme. 2026-10-10 — the Judiciary is reconciling case files in nine Cluster 10 courts from 6 to 16 October ahead of their move to the electronic case management system. 2026-10-09 — it has scanned every file in the Chief Registrar's registry of advocates and bailiffs, with a searchable system due in a first phase by the end of October. A UN agency's 2023 terms of reference describe police crime data as largely manual, with the new system meant for every station. The justice sector's bulletin dates the system's start to October 2022. A June 2024 study records it in design. It was launched alongside a teacher-training platform under the same programme (system). No case volume, complaint route or public-access provision is published. It sits alongside the judiciary's case-management system, through which revised media guidelines were issued for a High Court trial — the same infrastructure serving both a rights body and a restriction on reporting.	MOVEMENT
Sectoral management information systems	**Tax**	Mandatory electronic invoicing was phased in by revenue-authority notice, the tax identification number is to merge into the national identity number, and an electronic tax software award has no work started and no performance guarantee. The invoicing rollout was mandated by a public notice of August 2026 which is not held; the account is a regional trade publication's and no compliance figures or penalties are stated (invoicing). The identifier merger was announced under a tax procedures amendment bill in November 2025 (merger, shift), and tax payment on the leading wallet launched in December 2025 with the stated rationale of making informal activity visible for the tax net (wallet tax). The software award had no work started as at July 2026 on the press account, while the revenue authority told manufacturers in September the platform has been in build since February; the contract and evaluation report are not held and press allegations are recorded as allegations (award, tribunal). 2026-09-14 — enforcement went data-led on two fronts: a compliance risk strategy for 2026/27 uses taxpayer information, transactions and sector trends to find gaps, while the authority matched taxpayer numbers to foreign income through international data-sharing and gave taxpayers until mid-2027 to regularise. 2026-09-15 — 1,680 firms are registered for digital tax stamps.	MOVEMENT
Sectoral management information systems	**Customs**	The customs platform is unchanged, but an amendment act recognised electronic customs records and a regional bond piloted here was launched region-wide in March 2026. The platform itself is stable: an online system processing all imports and exports, with self-declaration, assessment and payment by the trader and commercial documents attachable online. No declaration volume, clearance time or availability figure is published for it. 2025-08 - a regional customs guarantee replacing separate national bonds was launched with Uganda as a pilot country, letting a trader secure an entire cargo once. It was launched region-wide in March 2026, and on 22 September 2026 its operator received a US$29m Afreximbank guarantee to scale it. No uptake figure is published. 2025-09 - an amendment act to the Community's customs statute recognised electronic records in customs documentation, giving paper-light processing the legal basis it had been running without. 2026-09 - the platform is also the instrument of an unusual enforcement: the revenue authority collects a third country's import charge at all border points for a firm the United States sanctioned in May 2026.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	**Land**	Land registry digitisation is a lands ministry statement of intent, with an administrative circular the operative instrument and the technology intent only. The statement was reported in April 2026, mentioning distributed ledgers and artificial intelligence (intent). The operative instrument is an administrative circular of 2025; the technology is intent only. Distinguishing the circular from the technology talk is the whole of what can be said here.	NO CHANGE
Other GovTech and e-Gov	**e-government services**	Electronic government procurement training opened for 100 further entities with onboarding to continue each financial year, and a copyright management system targets a September 2026 rollout. The copyright system is in testing with a September 2026 target; no cost, supplier, rights-holder count or description of what it registers or pays out is published, and the target date is the only dated commitment held (copyright). A teacher-training platform launched in August 2026 (teachers). 2026-09-27 - whistleblowers asked the President and the Inspectorate of Government to halt a proposed Shs158bn works ministry purchase of vehicle registration components from the digital number plate contractor, as duplicating the original contract; the paper states the claims were not independently established. 2026-09-30 - the works and transport ministry told the parliamentary committee the number plate backlog is cleared, fitment at Kampala bonds down from 19 days to two; the committee had questioned the plate maker two days earlier. 2026-10-03 - a parliamentary committee watched police track vehicles live through the system; police said 337 of 375 stolen vehicles had been recovered. 2026-10-06 - the Attorney General told a parliamentary committee that the supplier has failed the core obligations of the 2021 number-plate contract, which a newspaper reports him declaring null and illegal. 2026-10-07 - the government printer made the electronic Uganda Gazette free to the public, digitised back to 1902.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**ICT infrastructure for local government**	Backbone fibre reached Kanungu district's offices in December 2025 and Greater Kampala's overhead cable is moving into shared underground ducts. 2025-12 - the fifth phase of the national backbone was extended to Kanungu district, connecting district and sub-county local-government offices, in a collaboration between the IT authority, the president's office and the ICT ministry. 2026-03 - in the capital the work is tidying rather than extending: overhead fibre across the Greater Kampala metropolitan area is being relocated into shared underground ducts, the arrangement the regulator's fibre framework requires. These are district-by-district accounts against 146 districts. No count of local governments connected, no target and no programme document for subnational connectivity appears anywhere in the repository, so the share of local government with usable infrastructure is not something this report can state. The only survey of what local government runs on is the third national IT survey, which sampled 128 districts alongside 132 central agencies between January and April 2022. Its capture is truncated so its findings are not held, and no later edition exists.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	**Digitalisation of local government records**	The records system reached two district local governments in August 2026, and a digital certification system for village-council letters was presented in November 2025. A March 2024 account has the auditor general crediting the system with 78% local revenue growth, with 39 of 124 live councils short of devices. The auditor found the earlier system on 71 of 2,366 sites. The local government ministry claimed 90% of local revenue sources automated in October 2025. The starting position was central: the ICT ministry's own policy statement lists the electronic document and records management system among systems deployed at user agencies and treats local government as a connectivity priority. 2025-11 - a digital certification system for village-council letters was presented at an international summit, designed to replace handwritten local council letters with digitally signed credentials linked to the identity register. It was presented rather than launched, and nothing follows it. 2026-08 - the records system reached district level with training and onboarding at two district local governments. That notice returned only its title and date at capture, so what the training covered is not on the record.	MOVEMENT
Rural digital data capture	**Digitalisation of rural health clinics**	A mortality-notification workflow was piloted in 17 districts and 306 smartphones went to village health teams in one district; no facility count exists. The instrument is the health ministry's guidelines for implementing the electronic medical records system, covering clinical, administrative and financial operations, published in September 2024. No count of facilities running electronic records against them is published at any date. 2026-04 - peer-reviewed work integrated a death-notification workflow into the electronic community health information system, piloted in 17 districts, against persistent weakness in notifying community deaths. 2026-08 - a donor handed 306 smartphones to village health teams in Masaka to capture and transmit community health data in real time. Both are below the clinic: they digitise the community layer that feeds facilities rather than the facilities themselves. The repository cannot say how many rural health facilities keep electronic records. 2026-09-19 - health workers in Kiryandongo told a public meeting that the ministry's electronic medical record system, introduced in selected facilities in 2016, stalls care for want of connectivity, stable power and computers. It is the first facility-level account on the record, and it gives no count.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	**Digitalisation of rural primary schools**	Minimum standards now require every school to use the information system and hold an administrative computer, and a termly report reached 16,766 primary schools. 2026-04 - a policy brief records the termly school report running through the health information platform reaching 16,766 primary schools, on an argument for decentralising and routinising education data management. 2026-05 - minimum standards for schools carry information management and records as an indicator in their own right, requiring use of the education management information system and an administrative computer. 2026-06 - three weeks later registration on that system became mandatory for every school, with capitation grants determined from its data. The scale of what remains is visible from the census: against 43,567 primary schools, the 16,766 on the termly report is well under half, and the standards state a requirement rather than a compliance rate. 2026-06-09 - a press account reported the Auditor General finding that critical administration of the education information system remains largely under its private vendor's control.	MOVEMENT
Rural digital data capture	**Digitalisation of rural registry offices**	Village and parish registers were compiled across all 71,214 villages, and birth registration issues an identification number on notification. 2026-07 - the widest village-level enumeration in the repository is an electoral one: the commission compiled and displayed village and parish registers across all 71,214 villages ahead of administrative-unit and women's council elections. 2026-07 - civil registration reaches the same level differently: the identity platform carries a birth and death registration module issuing a number automatically on birth notification, with certification following immediately. 2025-08 - the parish programme's system holds beneficiary records covering nearly 79 per cent of all households, which is the densest rural record-holding on this repository. None of these is a registry office. No count of rural registration offices, digitised or otherwise, is held, and the village registers belong to the electoral commission for an electoral purpose rather than to a civil registry.	MOVEMENT
Rural digital data capture	**Digitalisation of rural police stations**	Radio reached 150 of 186 police districts and computers all 186 district stations in the first half of FY2025/26; no case-system or sub-county figure exists. 2026-01 - the force's own vote report records that radio communication under the sub-county policing model is now available in 150 of the 186 police districts and divisions, 81 per cent, and that computers were provided to all 186 district police stations. The same report shows how thin the specialist estate remains: 114 canine units across 103 of the 186 districts, and 782 forensic analysis reports issued against 1,477 requests. 2026-04 - the annual crime report puts 196,155 crime cases in 2025 against 218,715 in 2024, a rate of 427 per 100,000 against 476, attributing the fall to the sub-county policing model among other measures. A station with a computer is not a digitised station. Nothing in the repository states what case- or records-management system runs at district level, how many stations are connected, or what reaches the sub-county posts the model is named after.	MOVEMENT

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Use of AI in government administration**	A homegrown language model was launched in October 2025 to widen access to government services, and a readiness assessment was validated in May 2026. The civil aviation authority has moved Entebbe airport's car parks onto AI-assisted number-plate recognition and mobile-money payment, reported 9 October 2026, and says it keeps vehicle registration records, timestamps and payment logs indefinitely, releasing them to security agencies under statutory guidelines. 2025-10 - the ICT ministry launched a homegrown artificial-intelligence language model, framed as widening citizen access to government services. 2026-03 - nationwide stakeholder consultations on a National AI and Emerging Technologies Strategy ran across the country, including at university innovation hubs. 2026-06 - a readiness assessment prepared with UNESCO was validated at a workshop in Kampala on 26 May 2026, feeding the same strategy. What is absent is deployment. No government administrative process in this repository is recorded as running on artificial intelligence: the police chatbot is planned, the strategy is unpublished, and the readiness report itself is not held - so what exists is a language model and a set of documents about intent.	MOVEMENT
AI	**Use of AI in sectoral management information systems**	A directive on artificial intelligence in medical curricula was issued to training schools with no curriculum standard, syllabus, teaching capacity assessment or funding attached. The directive was issued in August 2026 (directive). Directing every medical training school to teach a subject, with no standard, syllabus, capacity assessment or funding, is the whole of the record. The national strategy that would frame it has been due by the financial year's end at both ends of the window.	MOVEMENT
AI	**Development of national / regional AI systems**	Open-source language models for African languages were released under a permissive licence, and the developer records unreliable factual recall and weak handling of informal language. They were released in October 2025 by a not-for-profit developer with the national university; the benchmark claim is its own, and it records unreliable factual recall and weak handling of informal language (models, coverage). A wire report of another outlet's reporting states a later model was built on a Chinese open-weight base; no user count, licence terms or evaluation is held, and the same report puts Chinese open-weight models at 17.1 per cent of global downloads against 15.8 for American ones over the year (base model). 2026-09-05 - a domestic model reached a continental prize rather than a deployment: a startup building credit scoring for smallholder farmers without collateral took US$50,000 in growth funding at a Kigali food-systems summit. No user count, lender partnership or model documentation is published. 2026-09 — Mbarara University of Science and Technology leads the data-pipeline and machine-learning work in a four-year, GBP 4.4m Wellcome Trust microscopy programme led from Cape Town.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	**Control of AI abuse**	The government's own assessment finds no legal or regulatory framework for artificial intelligence; the response to election deepfakes was a published warning. The baseline is the ministry's own finding with the International Telecommunication Union that no legal or regulatory framework for artificial intelligence exists, and that has not changed. 2026-01 - three weeks before polling, the ministry's permanent secretary published a warning on artificial-intelligence deepfakes and disinformation ahead of the electoral season. It names no takedown mechanism, monitoring arrangement, offence or platform undertaking, and nothing on file records any action taken under it. 2026-06 - the readiness assessment validated in May identifies regulation and governance gaps rather than closing them. A warning is what a state issues when it has no instrument, and that is the position at both ends of this window.	NO CHANGE warnings issued against an assessed absence of any framework
ICT Industry	**National capacity in DT-related production**	An operator completed a US$63m acquisition of a regional connectivity group's parent, all regulatory approvals cleared. Completion was announced in the capital in November 2025 (acquisition). It is the only market-structure transaction in this ledger, and no regulator statement, condition or market-share analysis accompanies it. 2026-09-10 - a domestic banking-software firm passed into foreign ownership. A Nigerian technology company acquired it, bringing every stage of credit from verifying the borrower's identity to repayment onto a single platform, the companies saying the combination lets African financial institutions assess loan applications faster. No consideration is disclosed and no revenue, customer count or headcount is published for either party.	MOVEMENT
Innovation ecosystem	**Technology hubs**	Four regional innovation hubs were stated operational on the ministry's own count, and a bilateral memorandum builds on two centres that graduated 800 young women with 60 per cent reported employed. The four-hub count is the ministry's own with no user, cohort or budget figure published and the review report not on file (hubs). The bilateral memorandum was signed in February 2026 and builds on two existing centres that graduated 800 young women, 60 per cent of them reported employed (memorandum). A fintech forum was launched by the national university's incubation centre with a private partner; it is a forum, not a finance instrument (forum).	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Innovation ecosystem	**Tech startup ecosystem**	A national innovator registry excludes joint ventures with foreign firms and confers no contract, and a three-year startup income-tax exemption was proposed with no enactment recorded. The registry's gazettement was scheduled for July 2026 with no confirmation held; it excludes joint ventures with foreign firms and enrolment confers no contract (registry, prototype). The tax exemption was proposed in 2025 income tax bill amendments with no enactment recorded, and is distinct from a small-capital exemption in force from July 2025 (exemption). Startups raising disclosed funding are counted by a publisher from disclosed rounds only and are not comparable with the investment series (funding), and a diversity study samples more than 3,000 startups with no prior national figure held (diversity). 2026-08-31 — a continental alliance and the ICT ministry validated a national digital entrepreneurship and innovation assessment at a Kampala workshop, which named as priorities advancing the Startup Bill, strengthening science, technology and innovation policy, widening access to regulatory sandboxes and using public procurement to open markets to local startups. The assessment text is not published and no reform is dated or budgeted; the Startup Bill itself is carried on this ledger as not held, the repository holding no text, stage or timetable for it. 2026-09-29 - the communications regulator re-advertised its call for a partner to run the third phase of its innovation programme.	MOVEMENT

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	**Digital literacy (civil service)**	A three-day course on digital crime and evidence opened for judges and magistrates, with more than 100 prosecuted communications offences since 2018 behind it. No cohort size, curriculum or repeat schedule is published, so whether it reaches the bench as a whole or a single sitting of it is not stated (course). It matters because the Constitutional Court has just nullified five sections of the principal computer-crime statute, and the offences that remain will be tried by the judges this course reaches or misses.	MOVEMENT
Literacy	**Digital literacy (general population)**	A rider digital skilling programme onboarded 3,000 riders in one quarter of 2025 and the repository holds no later quarterly, and digital skilling for faith-based health centres launched in August 2026. The rider figure is the window-opening quarter carried forward unrefreshed, the repository holding no later quarterly report (riders). The health-centre programme launched in August 2026 (health centres). Neither carries a curriculum, completion measure or follow-up, and one is a single quarter of a series the repository cannot continue. 2026-09-18 - the largest mobile operator's mobile-classroom programme graduated 305 people in Kampala, taking the number trained to more than 6,700 in safe internet use, digital productivity and responsible use of digital financial services. No cost, geographic spread or outcome measure beyond the graduate count is published. 2026-10-07 - the communications regulator launched a child online protection campaign at a Kampala secondary school.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	**DT-related training in secondary education**	A 2025 subsidiary ICT syllabus is the operative curriculum, and 750 secondary teachers were retooled in a fortnight with the regulator. 2025-03 - the curriculum development centre issued the advanced secondary Subsidiary ICT syllabus for the education ministry, the operative curriculum instrument. No entry, examination or pass figure against it appears in the repository. 2025-09 - the ICT institute with the communications regulator reached 750 secondary school teachers from underserved communities in a programme run from 1 to 14 September 2025, designed against limited teacher access to ICT tools in rural areas. 2026-07 - a national ICT needs assessment for secondary education was disseminated and a teaching programme's ICT component launched through orientations between 28 May and 5 June 2026, with the teacher education institute, a United Nations agency and the ministry. Against a secondary system the 2025 census puts at 2,008,133 learners, 750 teachers in a fortnight is a pilot, and no target or repeat cohort is published. 2026-09-15 — seventeen new specialised technician diploma curricula carry artificial-intelligence modules, with trainer orientation run in September 2026. The vocational assessment board and its own trainers say instructors and laboratories are not yet ready, and no equipment budget or readiness date is published.	MOVEMENT
Training and skills	**DT-related university facilities and qualifications**	The technology institute reports more than 48,000 trained in one financial year, self-reported and unaudited, with fewer than 4 per cent of them government officers. The figures are the institute's own, reported to a sector performance review (output). Fewer than 4 per cent of those trained were government officers (officers), which is the finding rather than the headline count: the state's own training institute is largely not training the state. An inclusive artificial-intelligence curriculum was reported under development at the same institute, paired with a roadmap goal of functional innovation hubs in every region by 2027 (curriculum).	MOVEMENT
Training and skills	**Graduates entering DT ecosystem**	An inventory of commercialisable software was ordered on a two-week deadline, and an entrepreneurship programme launched its final cohort. The inventory addresses a past-pilot scale gap named by an operator in June 2026 (inventory, commercialisation). The entrepreneurship programme's fourth batch is the project's final cohort, and the institute states entrepreneurship becomes a standing pillar after the project closes (batch, innovators). A US$200m skills commitment running to 2030 is the largest single skills commitment in the tracked non-state set (commitment). 2026-08-31 — an operator's skilling programme graduated 503 young people in its 2026 cohort at the National ICT Innovation Hub, in a hybrid course covering ICT, digital marketing, e-commerce, cybersecurity and artificial intelligence, taking its cumulative total to 1,191. The counts are the operator's own, and no employment outcome, start year or cost per participant is published. 2026-09-14 — vocational curricula were approved in cyber security and data science, teachable only once a college is accredited for them. None is yet reported accredited. 2026-09-16 — the second of four university innovation hubs under a Shs4 billion programme was handed over at Busitema.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Research institutions	**Think tanks and academic departments contributing to DT policy**	The national university's AI lab head led the readiness assessment, strategy consultations ran at university innovation hubs, and a policy centre carries a digitalisation theme. 2024-08 - the country's main economic policy research centre carries digitalisation as a discrete research theme in its own strategic plan, positioned as a knowledge broker to government. No digitalisation output from it appears in the repository inside the window. 2026-03 - the ministry took its artificial-intelligence strategy consultations to university innovation hubs among other venues. 2026-06 - the readiness assessment validated with UNESCO was led from the national university's artificial-intelligence laboratory, which is the clearest instance in this repository of an academic department shaping a national digital policy. 2026-09 - the same university explored research collaboration with a Japanese development agency on artificial intelligence and remote sensing. What is not held is any published research output feeding a policy document - the evidence is participation in processes rather than papers.	MOVEMENT

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Citizen feedback portals**	Six of nineteen service centres were operational at a readiness inspection, and the two accounts conflict on the early-2026 operational count. Six of nineteen were operational at the inspection, and two accounts conflict on the early-2026 count (centres, construction). A further centre began construction on a USh4bn contract at the postal service's premises, on a model cabinet approved in 2019 (centre). Their throughput was made contingent on a backbone phase whose latest reported position is a 2023 loan approval, so the constraint on the one-stop centres sits outside the centre programme.	MOVEMENT
Access to services	**Citizen participation in policy**	A client charter committing to service timelines, feedback and complaint handling was launched in February 2026; no complaint or resolution figure is published against it. 2026-02 - the ICT ministry launched a client charter setting out service delivery timelines, feedback and complaint handling for digital services, framed round how long a service takes and whether anyone responds. 2026-06 - the IT authority issued its own client charter and service delivery standards alongside its strategic plan, which sets public satisfaction with e-government services to rise from 22.2 per cent to 35 per cent by FY2029/30. Consultation happened where a strategy needed it: the artificial-intelligence strategy ran nationwide stakeholder engagements, and a draft National Data Strategy is being developed with civil society and the private sector. No complaint volume, resolution rate or performance report against either charter is published, so whether participation changes anything is not something this repository can say.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	**Gender equity**	A EUR 2,250,000 girls and women digital programme ran 2021 to 2025 and its stated period has elapsed — the only gender-and-digital-skills commitment in the tracked non-state set. The commitment is recorded for 2021 to 2025 and the period has elapsed (programme). The same agency's follow-on programme runs 2026 to 2028 and is tendering a women-in-tech community platform with chapters in Kampala and Kabale, with no budget stated. A diversity study of female startup co-founders is the only other gender measure in this ledger, and it holds no prior national figure to compare against.	NO CHANGE
Access to services	**Inclusion of persons with disabilities**	An ICT hub for persons with disabilities was commissioned in August 2026 with no commitment value published, and information technology training for youth with disabilities recorded a disbursement for 2025. The hub was commissioned with no commitment value published, so the repository carries no finance record for it (hub, commissioning). The training record is a commitment rather than a delivery report, with no trainee count, curriculum or outcome stated (training). Two disability-specific instruments, neither with a published outcome, is more than most units in this frame hold and still not a measurable programme.	MOVEMENT
Access to services	**Inclusion of refugees and IDPs**	1,999,576 refugees and asylum-seekers were hosted at March 2026, one per cent up on December, against an appeal 14 per cent funded and field operations cut 23 per cent. The framework is long-standing: the prime minister's office runs refugee management under the 2006 statute and the comprehensive response framework (department). 2026-03 - the population rose and the resourcing fell. The country hosted 1,999,576 refugees and asylum-seekers, the largest refugee population in Africa and one per cent up on December 2025, 52 per cent South Sudanese and 33 per cent Congolese, with women and children 77 per cent of the total and over a million refugee children, against a quarterly appeal 14 per cent funded and a 23 per cent reduction in field operations, alongside a change in how refugee status determination is run. The digital consequence is not recorded anywhere. Refugee data sits in a database the education systems assessment names as an integration target (assessment), and nothing states what a 23 per cent cut in field operations does to registration, identity documentation or access to digital services - which is the gap this indicator now records rather than the absence of a programme. Mobile-industry research puts internet use at about a quarter of refugee women against about half of refugee men, naming handset, airtime and data costs as the main barrier.	REGRESSED
Digital divides	**Bridging of digital divides**	The universal service fund retains half the statutory levy with no balance published, and the six-year rural inclusion programme closed reporting 3.4m registered users but only about 29 per cent active. 2026-09-23 — the ICT ministry described a Smart Villages pilot classroom in Butaleja district linked to a Kampala school, with a tower and solar power also supplying 25 households; roll-out awaits a presidential launch.	REGRESSED

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	**National strategy for development of statistics**	The fourth statistical development plan targets functional statistical units from 72 to 80 per cent and its own implementation from 67 to 75 per cent, with a fourth bureau strategic plan finalised. 2026-01 - the bureau's vote statement sets the plan's medium-term targets: functional statistical units from 72 per cent to 80 per cent and implementation of the plan itself from 67 per cent to 75 per cent, on denominators the statement does not define. The same reporting records that the fourth bureau strategic plan for 2025/26 to 2029/30 was finalised. 2026-02 - under the plan the bureau handed 4,050 tablets and six computers used in the 2024 census to religious, cultural and planning institutions, to strengthen their administrative data. Neither the plan nor the bureau's strategy is held as a document, so the targets reach this report through budget papers rather than from the plans themselves. 2026-09-06 - the bureau went to cultural institutions for administrative records, signing memoranda with the Samia Bugwe and Tieng Adhola institutions to collect, manage and share community-generated information, births and deaths particularly, arguing better administrative records would strengthen the population register and reduce what a census costs. Neither text is held and no coverage or start date is published.	MOVEMENT
National statistics	**Censuses and surveys**	Eighty data collectors were commissioned for twelve months of collection on the ninth national household survey, with no sample size, budget, funder or publication date stated. The collectors were commissioned in August 2026 (survey). A statistics office block broke ground in August 2026; government states it is fully financed domestically but publishes no figure, so no finance record is built, and a bid to host the regional statistics bureau is a pledge to engage partner states rather than a confirmed award (block, bid). A twelve-month household survey with no published sample design is the instrument every population-denominated figure in this report will eventually rest on.	MOVEMENT
National statistics	**Statistics from administrative data**	A secretariat review of quarterly performance submissions found reporting quality wanting — the government's own statement about its central performance-data pipeline. The review covered 2025/26 submissions under the fourth national development plan (review). It is the government's own statement about its own pipeline, which is what gives it weight. A labour, employment and productivity reporting programme was launched in June 2026 with no budget, system name or delivery date (labour).	REGRESSED
Open data	**Use of open data**	A mapping report on procurement portal conformance with an infrastructure data standard was presented, and no delivery record has followed. The authority committed to reflecting the data points in a coming upgrade; no delivery record since (mapping). It is the only open-data item in this ledger. No national open-data portal, catalogue or policy appears anywhere in it.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	**Agricultural use of satellite data**	Two pilots run - a sugarcane monitoring demonstration and a field station at a Mayuge farm - against a state project funding agro-climatic satellite partnerships. The state's own provision is a funded subcomponent: the climate-smart agricultural transformation project, appraised on a US$325 million credit and an SDR 19.5 million grant, about US$25 million equivalent, funds satellite-based agro-climatic information partnerships. No deployment under it is recorded. 2025-10 - a European Space Agency demonstration supporting sugarcane growers and millers completed monitoring trials, on the stated problem that yields run at about 40 per cent of potential. 2026-08 - a field monitoring station was deployed at a farm in Mayuge district for real-time environmental data and later integration with European Earth-observation data. Both are single-site and neither is the state's. No national agricultural Earth-observation service, and no count of farmers reached by satellite-derived advice, appears in this repository.	MOVEMENT on single-site pilots rather than a service
Use of satellite data	**Meteorological use of satellite data**	Satellite-derived datasets are in operational use at the meteorological authority, and a regional climate payload reached the space station in April 2026. 2024-04 - an independently peer-reviewed hydromet diagnostic records the meteorological authority's satellite-derived datasets in operational use, on a legal basis established by its 2012 statute. 2026-04 - the national space programme, with the Egyptian and Kenyan space agencies, launched a climate camera payload aboard a resupply mission and installed it on a commercial platform attached to the station's European module, to deliver near-real-time weather and climate data for disaster management, natural resource planning and climate resilience across eastern Africa, after assembly and testing in Cairo and validation in Houston. The two do not yet meet: nothing states how the meteorological authority would receive or use the payload's data, and no ground segment or data-access arrangement is named. Nor does this repository carry any observation-network density, forecast skill or warning-coverage figure.	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	**USA / hyperscaler MoUs, engagements and commitments**	A United States health-data access agreement was signed in December 2025 for activities to 2030, and two accounts describe different instruments rather than a conflict. The signed memorandum is held and only provides for a future data sharing agreement at a numbered clause; a published investigation says it reviewed that agreement directly and describes direct, real-time access to nine systems for seven years. The two accounts describe different instruments, not a conflict (agreement, memorandum, record, investigation). Distinguishing the memorandum from the agreement it provides for is the whole of the reconciliation, and it is what stops this reading as either a denial or an exposé.	MIXED a signed health memorandum providing only for a future agreement while an investigation describes direct real-time access to nine systems

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
China activities	**Chinese MoUs, engagements and commitments**	A banking partnership covering eight areas was signed in Shanghai, and an artificial-intelligence skills memorandum carries jobs and economy figures that are the partner chairman's projections. The banking agreement is company-reported with no contract value, duration or delivery milestone published (banking). The skills memorandum was signed with a United Nations health industry foundation and a private foundation; the 50,000 jobs and the 2040 economy figure are the partner chairman's projections, not commitments (skills). The country's own open-source language model is separately reported as built on a Chinese open-weight base, which is the substantive dependency rather than either memorandum.	MOVEMENT
EU activities	**EU MoUs, engagements and commitments**	A regional infrastructure acceleration technical assistance tender was published with requests to participate due September 2026, and a national funding window for a sovereign infrastructure loan package was named within it. The tender was published in July 2026 (tender), and the delegation's funding is named as an added national window inside it (window). A separate regional project pipeline consultancy was tendered in August 2026 under the same programme; the record is a procurement notice, so it fixes the consultancy stage and nothing about any project it may prepare (pipeline). Three procurement notices and no financed project is the state of the European relationship on this record.	MOVEMENT
Gulf/UAE activities	**Gulf MoUs, engagements and commitments**	Six memoranda were signed with the United Arab Emirates on 8 May 2025, one of them between the IT authority and an Emirati AI company on cloud, cybersecurity and e-governance. 2025-05 - six memoranda were signed in the president's presence, covering investment, diplomatic training, energy, visa exemption, rail, and - the sixth - cooperation between the IT authority and an Emirati big-data and artificial-intelligence company on digital transformation, cybersecurity innovation, e-governance systems and cloud infrastructure. 2025-08 - the commercial relationship went further and harder in energy: a final implementation agreement for a US$4 billion, 60,000-barrel-a-day refinery at Kabaale was signed with an Emirati consortium on 16 August 2025. The digital strand is the thinnest of the six. A year and a quarter after signing, nothing in the repository records a project, procurement or system arising from the technology memorandum, and no value or timetable was attached to it - which sits beside a Gulf identity-system contract the repository does hold (contract).	MOVEMENT
India activities	**India MoUs, engagements and commitments**	The 2018 joint statement carries four memoranda, lines of credit and a commitment to ICT collaboration; no digital project under it is on record eight years on. The founding modern instrument is the joint statement issued on the Indian prime minister's state visit of 24 to 25 July 2018, the first in twenty-one years, carrying four memoranda alongside lines of credit and grants. Its technology content is a commitment rather than a project: a joint undertaking to collaborate in information and communications technology, and Uganda's stated intent to replicate Indian digital inclusion schemes while implementing its own public key infrastructure project. No dollar figure is attached to that strand. Nothing in this repository records a digital project, procurement or system delivered under the statement in the eight years since. That is now a dated and cited absence rather than an unexamined one, and it is the position at both ends of this window.	NO CHANGE a 2018 instrument with nothing delivered against its technology strand since
Digital sovereignty	**Digital sovereignty**		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Spectrum assignment and 5G licensing	a UCC spectrum award notice or a National Radio Frequency Plan	not yet probed
National data-centre installed capacity	a UCC or NITA-U facility register with MW or rack counts	not yet probed
Grid power at national backbone sites	a NITA-U or energy-ministry statement of how many backbone points of presence are grid-connected	not yet probed
National ICT and cybersecurity workforce baseline	a UCC or NITA-U ICT skills survey, or a named certified-professional count	not yet probed
PDPO action on election-period personal-data processing	any data-protection decision, complaint-register entry or public statement on the January 2026 electoral processing	not yet probed
EU-Uganda bilateral digital cooperation instrument	a Global Gateway country package, an EU-Uganda digital memorandum, or a financing agreement naming Uganda	not yet probed
Uganda ICT sector output and employment series	a statistics-bureau or UCC sector statistic, or the ICT ministry's development-plan sector targets	not yet probed
National digital-literacy rate	a statistics-bureau or UCC household ICT survey reporting a digital-literacy or digital-skills rate	not yet probed
Startup Bill	the bill's text or gazetted draft, an order paper or committee report placing it in Parliament, or a ministerial statement of its timetable	not yet probed
Legal and regulatory framework for artificial intelligence	an enacted statute, a gazetted regulation, or a named regulator with a mandate over artificial intelligence	2026-08-29
Rules governing automated decisions in hiring	a statute, labour-code provision, data-protection guidance note or regulator determination naming automated or algorithmic decisions in recruitment would settle it; probed 2026-09-08, a four-country comparative legal review finds none in the constitution, the labour code or the data-protection act	2026-09-08
Outturn against the 2025/26 digital appropriations	The Annual Budget Performance Report for FY2025/26, printing releases and spending by department and project; only the semi-annual report is held for that year.	2026-09-25
Operating, hosting and exit terms of the national identity system contract	Publication of NIRA's contract of 8 July 2024 with Tahaluf, or a NIRA or Auditor General statement, setting out who operates and hosts the system, what skills transfer it requires and on what terms it can be ended.	2026-09-25
Text of the December 2025 health data agreement with the United States	Publication by either government of the data-sharing agreement signed on 10 December 2025, stating the systems covered, the access granted, jurisdiction over the data and the terms of exit.	2026-09-25
