MONTHLY UPDATE

Literacy: monthly update, September – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *15 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.*

CAPE VERDE · CHAD · COMOROS · EGYPT · GHANA · KENYA · MADAGASCAR · MOZAMBIQUE · NIGER · RWANDA · SENEGAL · SIERRA LEONE · TANZANIA · TOGO · UGANDA

The place reports do not share one window; the period above is the range they span.

Cape Verde

The economy and digital transition minister said his ministry will implement a national digital literacy programme, which already has a manual financed by the World Bank and is to advance through protocols with the public university. No start date, budget or target is stated.

Chad

A non-governmental organisation and the national youth council launched an internet-safety and digital-citizenship campaign for young people at Abéché on 19 September. No reach or duration is stated.

Comoros

The one literacy development in the window is an announcement rather than an activity. A programme launched on 2 September 2026 by the African Development Bank and AXIAN carries a training component to give financial and digital skills training to 25,000 women across Madagascar, Tanzania, Senegal, Togo and Comoros, alongside digital financial products offered in the first three of those countries only. No Comorian allocation, timetable, provider or curriculum is published, so what the country receives from it cannot yet be stated.

Egypt

As the school year opened, the education minister put free tablets at about 700,000 secondary students a year with an extension to technical education, above 1.2 million devices announced in total, a figure set in the same account against connection costs and teacher readiness. No count of devices delivered or in use is published.

The communications ministry signed a three-year memorandum with Intel on 16 September to train one million citizens a year in AI and certify 500 trainers a year; no cost is stated.

Ghana

The cyber security authority launched the 2026 National Cyber Security Awareness Month on 2 September, themed on securing the digital finance system, and an education charity launched a nine-month programme on 1 September to certify 60 community digital champions across 52 communities under a Mastercard Foundation fellowship. Neither reports a reach figure.

Kenya

The state literacy programme's second phase began putting teacher laptops and smartboards into 10,382 public junior schools, with 91 of 98 Nairobi schools complete, and 1,000 ICT graduates are being recruited as 12-month interns to support it in schools. No learning-outcome measure accompanies either.

On 21 September deliveries of 65-inch smart boards, teacher laptops and ICT equipment began to 178 public junior schools in Nyeri County, under the World Bank-supported digital economy project, towards all 377 in the county. The ICT state department signed a partnership with Intel on 22 September to deliver AI literacy through the public library network, implemented by the national library service; no budget or target is published.

Madagascar

The vocational training ministry signed a partnership with France's Pix public-interest group on 11 September to develop and certify young people's digital skills, including exam centres, trainer training and a study of putting Pix into vocational curricula. No candidate target, cost or start date is given.

Mozambique

On 21 September the ICT institute signed a memorandum with Kamaleon, a rural mobile-multimedia firm, for awareness campaigns, workshops and community forums on digital culture, cybersecurity and personal-data protection, with content in Portuguese and where possible Mozambican languages. No budget, reach target or start date is stated.

Niger

Media literacy got a campaign of its own. Niger's first national campaign against disinformation was launched at Tillabéry on 19 September, run by the NGO Jeunesse Plus with the communication ministry's backing and pairing online awareness with media and information literacy workshops for local communities. No reach, budget or duration is published.

Rwanda

The online-safety half of literacy was taught to the adults rather than the children. A civil-society internet chapter trained 50 parents and teachers in Karongi District on online safety and on using the national e-services portal. It is a single district cohort run by a non-governmental body, with no curriculum, follow-up, national programme or reach target published — and it sits beside a restriction on minors' social-media use that is still in development.

Senegal

The civil service plan cleared validation on 10 September, setting role-graded digital competences for state employees in data, information systems, AI and cybersecurity, with no target population, budget or start date published.

An EU-funded civil-society project ran a regional workshop at Kaolack training community leaders on digital hygiene, passwords and data governance, with Saint-Louis, Bignona and Dakar to follow, reported on 25 September. No participant count or budget was stated.

Sierra Leone

The information minister launched a National AI and Deepfake Sensitization Campaign on 16 September with the communications ministry and the science and technology directorate, under the theme of misinformation and the country's information future. No audience, duration or budget is stated.

Tanzania

The national service said on 18 September that its patriotism and digital patriotism subjects will continue to be improved, for an intake that began on 8 September. No curriculum text, hours or recruit count is held.

Togo

A development bank and telecoms group programme launched on 2 September carries a component to train 25,000 women in financial and digital skills across Madagascar, Tanzania, Senegal, Togo and Comoros, the digital financial products themselves going only to the first three. No Togolese allocation, timetable, provider or curriculum is published.

Uganda

The month's only literacy movement is an operator's, not the state's: a mobile classroom run by the largest mobile operator's foundation graduated 305 people in Kampala on 18 September, taking the number trained to more than 6,700 in safe internet use, digital productivity and responsible use of digital financial services. No cost, geographic spread or outcome measure beyond the graduate count is published, so what is held is a throughput figure rather than a measure of literacy.
