PROGRESS REPORT

Literacy: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *54 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has* **No evidence** *on it in its own report.*

DIGITAL LITERACY (CIVIL SERVICE) · DIGITAL LITERACY (GENERAL POPULATION)

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

The place reports do not share one window; the period above is the range they span.

Digital literacy (civil service)

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	Four training sessions were run for finance ministry cadres in May 2026; no whole-of-government measure is held. 2026-05 - four training sessions were run jointly by a development agency and the finance ministry for its cadres, on change management among other subjects. 2025-11 - the national school of administration's own training programme was gazetted, and in February 2026 a vocational-training cybersecurity seminar was held. Each is one ministry or one event. No civil-service digital skills assessment, no headcount trained across government and no competence framework appears anywhere on this ledger.	MOVEMENT
Angola	A presidential order authorised the training of local agents, framed as the step that follows investment in digital infrastructure (order). A presidential order authorised the training of local agents, framed as the step that follows investment in digital infrastructure (order). No participant target or curriculum is stated.	MOVEMENT
Benin	About 85 security officers have been certified against a target of 100 by end-2026, and 300 police unit heads were trained in 2026. 2026-08-03 — a cohort of 25 opened, bringing about 85 officers trained against a target of 100 qualified information-security officers by end-2026, on recognised certifications with practical work at the national cyber range, with intake opened beyond central government to local authorities, state enterprises and the private sector. The figures are the agency's own and are not independently verified. Beside it, 300 police unit heads were trained in 2026, within a programme that also runs a cybersecurity-only incubator and hosts the continental cyber forum, with a statewide risk-management framework and a crisis exercise for state information-security officers. It is the only civil-service capability programme on this ledger with numbers attached, and it is entirely about security rather than about general digital skills.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Botswana	Regulators from four countries began geographic-information and data-management training in Botswana under a continental broadband mapping project. 2026-06-01 — subregional geographic-information and data-management training commenced in Botswana with the regulator and the regional association, attended by regulators from Botswana, Malawi, Zambia and Zimbabwe under a continental broadband maps project. Nothing preceded it and the publisher is a wire service flagged in the source. It is the only public-sector capability activity on this ledger. Its subject is mapping, which is also the country's clearest data gap: no broadband map has been published, reported under administrative statistics, and the fibre network's own length rests on a ministerial statement with no register behind it.	MOVEMENT
Burkina Faso	Senior managers took a second artificial-intelligence ethics session in July 2026, and about thirty lawmakers were trained on artificial-intelligence fundamentals and policy. 2026-07-13 — a two-day session on management tools for ethical and responsible artificial intelligence ran for senior managers at the Prime Minister's office, following a first round for all staff. 2026-07-16 — about thirty assembly members were trained on artificial-intelligence fundamentals, applications and policy, to prepare review of future legislation, reported the day before. Both fall in one month and both concern artificial intelligence rather than general digital capability, which matches where the policy attention is. Neither publishes a curriculum, an assessment or a headcount beyond the session; and the deputies trained in July voted the data protection law and the merger in August. 2026-09-24 - the digital ministry opened a two-day artificial-intelligence course for the secretaries general of ministries and institutions, covering generative tools and which administrative data may be put into them.	MOVEMENT
Burundi	A change-management workshop prepared administration teams to run the financial management system, against a component with no target or certification stated. The shared-infrastructure component of the national foundations project states that all its activities include targeted awareness initiatives and digital-skills training, principally for government officials who use, manage and maintain the shared infrastructure. No target number, obligation or certification is stated. 2026-04-07 — a change-management workshop began preparing public administration teams to adopt and run the integrated public financial management system, which is the first named cohort the repository holds rather than a component description. Still no establishment figure, completion count or certification standard, so the repository can record that training happens and not how many officials can use the systems being bought.	MOVEMENT
Cameroon	A smart campus and learning platform for training public agents went to stakeholder discussion on 20 August 2026. 2026-08-20 - a smart campus and learning-management platform for training public agents went to stakeholder discussion between the public service ministry and a donor partner. No launch date, cohort size, budget or platform specification is published, and nothing states how it relates to the local-government baseline recorded elsewhere in this report, on which most decentralised authorities employ no digitally trained staff. It is the only civil-service digital training instrument the repository holds for the window.	MOVEMENT
Cape Verde	The standing policy sits in the digital governance strategy's annex as a capacity-building programme for the public administration; two dated sessions in the window reached 226 justice professionals and 126 revenue staff. The strategy's annex carries the intervention area for digital literacy of human resources, with a capacity-building programme in digital technologies for the public administration and an e-learning content development team. No national figure for civil servants trained in digital skills has been published under it at any date. 2025-09-22 - the first national training on artificial intelligence for justice professionals began with 226 enrolled over thirty hours. 2026-02-12 - the national revenue directorate ran a session on personal data processing with the data-protection commission, delivered by the commission's president and attended by 126 staff, covering data protection principles, data subject rights and the obligations of processing entities, as part of a February and March cycle also covering biometrics, use of electronic means in the workplace and information protection practice. Two sessions in one institution each are what the repository can see. Against a civil service of unstated size they establish that training happens and not how much of it.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Central African Republic	A digital records-management training reached 15 participants in December 2025; no civil-service skills measure is held. The government signed a five-year partnership with Russia on 9 October 2026, implemented through HSE University, for digital-governance training of public servants, joint research and expert seminars. The repository holds no cohort, budget or start date for it. 2025-12-16 - a European mission ran a digital records-management training for 15 participants including staff of one ministry. 2025-12 - a separate mission trained ten customs judicial police officers on digital drafting of customs reports under the national border management plan. Both are donor-run and both are counted in tens. No civil-service digital skills assessment, training plan or headcount trained appears on this ledger, so the position is the sum of what individual missions record.	NO CHANGE a first stated position with no earlier account behind it
Chad	The President instructed the national administration school to take digital training into the provinces, against an intake target of 350. At the school's nineteenth intake graduation the President called for an administration resolutely turned towards digital, instructed it to accelerate continuing training and deploy it in the provinces so that territorial cadres benefit, and set an intake target of 350 (address). Delivery is workshop-sized. Credit administrators of local authorities and deconcentrated structures were trained at Koumra on 4 and 5 May 2026 on the public finance system, the tax platform and normalised electronic invoicing (training), and the education ministry's statistics directorate had a six-day workshop at Bongor in July 2026 on the school statistics application (workshop). No assessment or measure of digital skill across the service is published.	MOVEMENT
Comoros	Twenty customs officials trained at Shanghai University on smart customs; no national civil-service programme exists. No national digital-literacy or digital-skills programme for the civil service is on file at either end of the window, and no skills inventory, target or budget line exists. 2026-07 - twenty customs officials were in a second day of capacity-building at Shanghai University on smart customs, including a study visit to the Pudong development zone and exposure to an integrated customs supervision and services system. It is the clearest delivered civil-service digital training in the window, and it is one directorate, funded and hosted abroad. The adjacent record is a cooperation memorandum with Bahrain covering training programmes, workshops and capacity-building for e-government service development, with no cohort, curriculum or date attached.	NO CHANGE one directorate trained abroad and no programme behind it
Congo	State reform staff were trained on digital tools in August 2025, and a strategic reflection on digital skills was held under the acceleration project. 2025-08-29 — a workshop trained state reform managers and staff on digital tools. 2026-01-27 — a strategic reflection on digital skills was held under the acceleration project. Two events and no measure: no share of civil servants trained, and no skills baseline for the service, is published at either end.	MOVEMENT
Cote d'Ivoire	192 officials from about thirty public bodies were trained over 40 days, against a cumulative claim of more than 37,500 civil servants. 2026-07-29 - the thirteenth edition of the civil-service digital-skills programme closed at Katiola, 192 officials from about thirty public bodies trained over 40 days, against a cumulative claim of more than 37,500 civil servants. It is funded from the ministry's own budget line rather than a donor project, which is unusual on this ledger. The cumulative figure is undated as to programme start and nothing reconciles it with any other. Each programme publishes its own cumulative claim and no national digital-skills headcount exists, so what is trained nationally is unknown.	MOVEMENT on a cumulative claim nothing reconciles
Djibouti	A civil-service digital skills programme is running with no completion figures published. The programme was launched with the Digital Cooperation Organization, a vendor university and the national public administration institute and is running, unchanged at both ends of the window. No completion figures, cohort sizes or curriculum are published. It predates the window's opening by six months and nothing since revises it, so a programme in progress with no measured output is the position - which matters because the administration it trains is the one now running biometric enrolment, a mobile identity credential and a statutory single window.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
DR Congo	One ministry ran a fifteen-day digital tools training for central-office staff from 9 September 2025; another opened sessions for 580 of its own agents in August 2026. No national figure exists. 2025-09-09 - the education ministry opened a fifteen-day digital tools and microcomputing training series for central-office managers and staff, tied to its own five-year plan. 2026-08-24 - the digital economy ministry opened the first of a planned series of five-day sessions for 580 of its own agents and managers, with no curriculum, completion target or budget line on file. Two ministries training their own staff is the whole of what the repository holds. No national digital literacy rate or skills baseline of any kind is published, so neither programme can be set against the size of the administration or against a starting level.	MOVEMENT
Egypt	The civil-service capability programme runs on four pillars including digital culture and digital skills; no headcount is published. The standing programme for civil-service digital capability is structured on four pillars: developing digital culture, developing digital skills, developing the skills of employees at information centres, and leadership. What is counted is elsewhere: 2,641 trainees in the sixth batch of an artificial-intelligence ambassadors programme, open beyond the civil service. No civil-service digital skills assessment, no headcount trained and no competence framework appears anywhere on this ledger, so the programme's pillars are known and its reach is not. 2026-10-08 - the communications and labour ministries signed a memorandum to digitise the labour ministry's work and run digital-skills programmes for its staff, graduates and job seekers.	MOVEMENT
Equatorial Guinea	A digital transformation and cybersecurity programme for multisectoral officials was delivered once in August 2025 and not repeated. No later cohort, participant count or evaluation is on record (programme). It is the only civil-service training the repository holds, against a civil-service management system now in implementation and a ministry maturity study that puts data-analysis capability in the low single figures.	NO CHANGE
Eritrea	One regional training reached 108 government employees in computer technology and networking, 63 of them women (report). A workers' confederation branch provided vocational training in computer technology and computer networking to 108 government employees and force members, 63 of them women, reported in November 2025 (report). It is the clearest documented evidence that digital training reaching government employees exists, and it is a regional activity rather than a permanent nationwide scheme; no standing instrument was located at the probe date. The 2005 education ICT policy requires training only for education-sector staff (policy). The repository holds one course and no measure of civil-service digital skills.	NO CHANGE a first statement of the position and it records one regional activity, not a scheme
Eswatini	The revenue service signed a 650-employee AI literacy programme with the national university in June 2026. The revenue service and the national university signed a memorandum in June 2026 for an artificial-intelligence literacy programme covering 650 employees (memorandum). The public service ministry's own report for 2024/25 records short-term ICT training for civil servants through the management institute (report). Change agents are in training across ministries under the digitisation programme, and the auditor-general's strategic plan urges more than 80 audit officers to take up artificial intelligence and digital methods. Against it, 18 ICT professionals support the assessed government estate. The training is real and the establishment it trains into is not on the repository.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Ethiopia	A national digital financial literacy campaign reached 525 civil servants drawn from 26 public institutions (campaign). The Ministry of Innovation and Technology, with UNCDF, ran a nationwide digital financial literacy campaign reaching 525 participants from 26 public institutions, targeted at women civil servants (campaign). The government set a target of 80% of government employees digitally skilled by 2030 under Digital Ethiopia 2030 (target). The earlier position was a mandate to develop civil-servant courses under the Digital Foundations project, whose digital-literacy and training-of-trainers activities were marked complete (aide-memoire). The repository holds no measurement of how many civil servants have been trained against the 2030 target.	MOVEMENT
Gabon	A November 2024 decree makes digital competence of public agents an assigned function with a named owner; a provincial seminar trained unit heads in March 2026. The decree places a training and digital transformation support service inside the digital transformation directorate and charges it with preparing and running training and awareness programmes to accompany administration agents through their transition to digital working, supporting and advising them in acquiring the digital skills their duties require. It is the instrument that makes the competence someone's job. 2026-03 - a provincial seminar trained heads of operational units on the public expenditure management system whose expenditure module began rolling out that year. Its mission head named the constraint plainly: no permanent internet access for the computers and scanners in the units. Training against a system the trainees cannot reach is the finding. No named national digital-literacy programme is held and no figure for public agents trained is published.	MOVEMENT
Gambia	The Civil Service University's ICT department lists diploma and Cisco courses as coming, nine years into a reform programme that provided for digital-literacy training. The 2018-2027 reform strategy provides for electronic government, a human resource management system and digital-literacy training for civil servants, and publishes no delivery data against any of them. The university's ICT department lists information technology diploma and network-certification tracks as coming rather than running. The nearest delivered training is donor-funded and technical: results-based management and data analytics for officials from July 2026.	MOVEMENT
Ghana	A regional youth leadership programme completed its first cohort of 91 public-sector leaders in Accra in August 2026. The programme takes 200 participants from five West and Central African countries across online training, in-country sessions at a public administration institute and a funded 14-day study visit for top performers; the first cohort of 91 completed a two-week Accra session on 17 August 2026 (first cohort). The donor's stated US$34m African governance-training footprint is undated and its Ghanaian share is not disclosed (programme). A digital parliaments project launched at the Parliament of Ghana in August 2026 with a cohort of six African legislatures, and no funder, budget, duration or work programme is stated (parliaments project).	MOVEMENT
Guinea	A distance-training platform for state cadres was launched in April 2024, working without an internet connection, with every cadre required to be given measurable training objectives. No measured literacy figure exists. The delivery system is the finding. The government secretariat's platform was tested and approved by national trainers in seminars for government members, secretaries-general, chiefs of staff and establishment directors, works without an internet connection so as to reach remote regions, and came with a requirement from the head of government that every state cadre be given measurable and monitored training or self-training objectives. It establishes the expectation, not any measured level. 2026-04-07 - officials were convened again for a three-day workshop on electronic services and interoperability of public information systems — a design event rather than a training programme. 2026-09-23 - a feasibility study for a national digital academy, aimed first at civil servants with short certified courses in information systems, AI and cybersecurity, was put to validation; no launch date or budget is stated. The workforce it applies to is being counted rather than trained: the biometric civil-service payroll reports 233bn in national currency saved since 2024. No figure for civil servants trained in digital skills is published at any date.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Guinea-Bissau	Justice-sector staff completed a digital literacy course and an offline learning platform was installed. Provision is course-by-course and donor-financed: justice-sector staff completed a digital literacy course with an offline platform installed, data protection capacity training ran in late 2025 with a civic input application piloted, and tax officials were trained on the revenue platform ahead of the value added tax rollout. The policy that would organise it is new: the National Digital Skills Policy decree approved by the Council of Ministers in May 2026.	MOVEMENT
Kenya	A successor programme opened in July 2026 training 150 justice-sector officials on digital evidence, with no value disclosed. It follows a closed digital-rights project (programme). It is the only civil-service digital training in the repository, it covers one sector, and it is donor-funded rather than carried on any government vote.	MOVEMENT
Lesotho	Ministry-level platform training and a geospatial application course for roads engineers ran on top of the standing course list. 2025-02-19 — the public service ministry lists its courses for public-sector digital skills. 2025-11-06 — a service-delivery project funded capacity building for digital administrative platforms across key ministries. 2026-04-22 — roads directorate engineers and technicians were trained on project management and an offline-capable geospatial mobile application. No civil servants trained, pass rate or coverage of the establishment is published.	MOVEMENT
Liberia	A first structured AI programme for officials ran in November 2025 under a plan placing digital literacy in its capacity pillar. The Civil Service Agency's 2025-2029 plan places digital-literacy enhancement under its capacity-building pillar and records the Civil Service Training Center, which is the standing instrument the repository holds. A first structured artificial-intelligence capacity programme for technical officials from ministries and public institutions launched in November 2025, with no cohort size given. The agency also put a biometric-verified benefits platform in front of every public employee.	MOVEMENT
Libya	The only civil-service training on file is an Islamic Development Bank executive programme for central bank officials, run once in July 2026. The programme ran in Jeddah from 27 to 30 July 2026 for Central Bank of Libya officials on cybersecurity and artificial-intelligence risk management (programme, account). Participant numbers, curriculum and any standard it works to are unstated, and no ministry-wide or government-wide digital skills programme is recorded in this repository.	MOVEMENT
Madagascar	A technical assistance facility running 2026 to 2030 had certified 170 focal points across the administration by the end of July 2026. The facility was launched in July 2026 with development-programme support, and by the end of that month 170 focal points had been certified and proposals were being submitted through a dedicated platform (facility, account). Interventions selected by its steering committee run three to nine months. No curriculum, completion rate or measure of what the certification covers is published.	MOVEMENT
Malawi	5,014 people were reached through digital-skills development in 2025 and principal secretaries took artificial-intelligence training. The mandate is seven years old: the 2019 digital government strategy's capacity-building pillar requires digital-skills training for public servants across ministries and agencies. No completion figure against it has ever been published. 2026-02 - a development programme reached 5,014 people through digital-skills capacity development during 2025, the largest documented in the window. Nothing states how many of them are public servants. 2026-03 - principal secretaries took a high-level training session on artificial intelligence, which is the only training on file aimed at the officials who commission systems rather than operate them.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mali	The state's own systems are training their users: biometric payroll control and electronic justice platform training in July 2026. No civil service digital skills programme or measurement exists on this repository. What the window shows instead is training delivered system by system as each is deployed: user training on the electronic justice platform in July 2026, and biometric control of state agents brought into the human resources system, which obliges every agent to use it. Public bodies also train their own staff on data protection, including a course delivered by a private firm and closed at the health insurance fund in August 2026. None of this is measured, and the government intranet they would all work over is still being built.	MOVEMENT
Mauritania	A national platform for training public servants in essential digital skills was presented in June 2024, and 300 officials entered a cybersecurity programme in December 2025. The platform was presented at a ministry workshop (platform), and nothing on the record since says whether it is in use: no enrolment, completion or curriculum figure is published. The cybersecurity programme was launched for 300 state officials (programme) with no curriculum, duration, provider or completion figure beside it. A study for a national continuing training policy reached a restitution workshop in May 2026 (policy). 2026-09-08 - the education ministry opened a ten-day course for 20 secondary education inspectors in documentation, archiving, librarianship and electronic document management, its secretary-general arguing for a modern documentation centre inside the inspectorate. Twenty inspectors on one course; no curriculum, certification, system to be used or decision on the centre is published.	MOVEMENT
Mauritius	A seminar on artificial intelligence was run for named civil servants in October 2025, the same month an innovation institute was established by Act. The 2025-2029 blueprint names public-service capability as a workstream (blueprint). A public service and innovation institute was established by Act in October 2025 (Act). A seminar on artificial intelligence was run for civil servants in the same month, with participants named across departments (seminar). No training throughput, curriculum or competency framework for the service is held.	MOVEMENT
Morocco	An executive cybersecurity programme for African officials ran in Rabat in June 2026, and a skills memorandum covers acculturation across administrations. The five-day programme for senior officials of African member states was organised by the continental network of cybersecurity authorities and hosted by the national information systems security directorate, with no participant count or budget stated (programme). A memorandum signed in Rabat in July 2026 covers skills-building and acculturation across administrations, universities and research centres, support to institute-backed start-ups, and public-service use cases, with no sum attached (memorandum). Neither carries a count of officials trained. 2026-10-06 - the security directorate and the World Bank opened an executive cybersecurity programme in Rabat for leaders of African cybersecurity authorities.	MOVEMENT
Mozambique	2,032 professionals were trained across public bodies, private firms and the media under the donor project, with fourteen national maturity certifications. The cumulative figures are fourteen training actions for thirty institute technicians, 2,032 professionals trained across public bodies, private firms and the media, and fourteen national certifications on an international maturity model (training). They are the institute's own cumulative figures and the period they cover is not stated, so the repository holds a total with no rate behind it and no measure of the civil service population it reached.	MOVEMENT
Namibia	A public-service cyber training partnership was signed in June 2026 for joint training of public servants, extending to private-sector professionals. No funding, cohort size or delivery date is published, and the memorandum text is not held (partnership). It sits beside a cabinet-approved cyber-skills programme for government technology staff that has also not reported a cohort, so the civil service has two approved training routes and no trained count.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Niger	140 cadres were trained in one artificial-intelligence programme, and the country hosted a regional response-team symposium in July 2025. The training round reached 140 cadres across the interior ministry, the statistics institute and the digital agency (training). The country hosted the thirteenth edition of a regional incident-response symposium at Niamey in July 2025, at which the digital agency proposed a confederation regional cyber-defence alliance; it has been hosted once (symposium). No civil-service digital-skills programme, curriculum or trained count beyond those two events is held.	MOVEMENT
Nigeria	One state had trained over 4,800 of a targeted 40,000 civil servants by July 2025, and a data-protection officer pipeline targets 250,000 certifications a year in a sector that is 65 per cent of employment. One state set out in March 2025 to train 40,000 civil servants (state training); its digital company put the number trained at over 4,800 in July 2025 (progress). The officer pipeline targets 250,000 certified officers a year aimed at the informal sector, which is 65 per cent of employment and 58 per cent of gross domestic product, and the data-protection industry created 23,000 jobs in 2024 (pipeline, academy). The federal circular now requires every agency to appoint qualified officers, so the pipeline and the obligation arrived in the same period; no count of officers actually appointed across the federal service is published.	MOVEMENT
Rwanda	Artificial-intelligence trust and safety training for officials was delivered in the quarter reported August 2026, on the funder's own quarterly newsletter. The training was delivered with donor support and reported in the funder's own quarterly newsletter, which is the only account held (training). No participant count, curriculum or department is named. It is the only civil-service digital training in the repository for this unit.	MOVEMENT
Sao Tome and Principe	Registry and electoral technicians were trained in web and API development in September 2025 to maintain the new registration system, and a two-day AI and digitalisation intensive followed in April 2026. The training in web and API development was delivered by a Portuguese university to technicians of the registries directorate and the electoral commission so they would have technical autonomy to manage and maintain the new automatic electoral registration system (training). Certificates were awarded at a public session in September 2025 (session). A development agency ran a two-day intensive for the public administration on inclusive digital transformation, digital public infrastructure, ethics, governance, data management and protection, and practical AI applications, financed by a bilateral agency (intensive). Training built around one system's maintenance is the more consequential of the two, and it is the only instance held of a handover designed around who keeps the system running.	MOVEMENT
Senegal	Over 3,000 teachers were certified in digital and artificial-intelligence skills in February 2026, against 105,000 announced and a corps of 111,000. The certification of more than 3,000 teachers on 18 February 2026 is described by the education minister as a pilot phase, against a corps he numbers at 111,000 and the 105,000 announced in September 2025 alongside 5,000 computers for science pupils. The instrument for the civil service proper is at pilot stage: the national school of administration validated four training guides in January 2026 and tested a project-management module with about twenty serving civil servants and students. The measured cohort is education personnel, not the civil service as a whole, and no figure for civil servants trained or for their skill level is published. 2026-09-10 - a plan for the whole service was validated at a national workshop, setting role-graded competences in digital tools, data, information systems, AI and cybersecurity. No target population, budget or start date is published, so it does not yet close the gap above.	MOVEMENT
Seychelles	A three-year agreement to train 250 civil servants graduated its first cohort of 29 in May 2026. The memorandum between India's National Centre for Good Governance and the Public Service Bureau was exchanged during the February 2026 state visit as the founding instrument for a three-year programme covering roughly 250 civil servants (memorandum). The first cohort of 29 officials, from information technology, the judiciary, education and other senior posts, began on 11 May 2026 covering digital public infrastructure, electronic courts and AI-enabled governance (cohort), and graduated on 22 May (completion). No assessment, certification rate or measure of digital skill across the service is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sierra Leone	A civil service digital skills programme launched in July 2026 with 1,000 places in its first year. The programme launched with 1,000 first-year places (programme). No curriculum, completion measure or departmental coverage is published. It sits alongside the separately recorded senior civil-service training on cyber and artificial intelligence, and nothing states how the two relate. 2026-09-20 - the first cohort was in its second week, administrative staff taught to draft official letters and reports with AI tools and to keep registers in Google Workspace, and is due to finish on 25 September 2026, with a second cohort to follow.	MOVEMENT
Somalia	Internationally certified cybersecurity courses were run for government technical staff across two cities from March to May 2026. The courses ran in the capital and in a neighbouring country's capital over three months (training). No participant count, certification rate or department coverage is published. A separate fixed asset management training was launched by one regional administration in August 2026 to strengthen public financial accountability (assets), and is the only training in this ledger delivered outside the federal government.	MOVEMENT
South Africa	The public service department tendered in August 2026 to build a training programme for departmental information security officers across the public sector. 2026-08-17 — the public service and administration department put out to tender the construction of a training programme for departmental information security officers across the public sector, to implement the directive on public service information security. No officer count, curriculum, budget or compliance deadline under that directive is stated, so what the tender implies about the current state — that the officers exist and the training does not — is the most it can be read to say. It is the only civil-service digital capability instrument anywhere on this ledger, and it addresses one specialist role rather than the service's general digital literacy.	MOVEMENT
South Sudan	Digital literacy was found low but never measured; three skills centres are under renovation. Stakeholder consultations found digital literacy low but did not tabulate it, there being no national statistics or third-party surveys, and the project responded by planning a competency framework and learning programmes for civil servants and university students (consultations). Renovation began in August 2026 on three government facilities designated as digital skills centres in Central Equatoria under a five-year programme reaching more than 8,000 people including 3,000 civil servants (centres), and four ministry staff completed a public-service digital expansion programme in Wuhan (training). Three years after the finding, the measurement still does not exist.	MOVEMENT
Sudan	A unified digital personnel platform launched in August 2026; the only training programme the repository holds trained 8,000 employees by 2009. The pre-war programme run by the National Information Center offered a free 45-day curriculum in office software and the internet, training over 8,000 employees by 2009 including ministers, with state centres in four states and a target of covering all government employees by 2011 under a 2001 resolution (profile). A unified digital platform for civil-service personnel records launched in Khartoum on 5 August 2026, described as the first step towards a national digital file covering recruitment, training, career development and evaluation (launch). A cybercrime investigation workshop for prosecutors and law-enforcement ran in October 2025 (ceremony).	MOVEMENT
Tanzania	A capability maturity framework approved in February 2026 carries a human capital domain; nothing measures civil-service digital literacy itself. The e-government authority approved version 1.1 of its capability maturity framework on 18 February 2026, covering seven domains and 32 key process areas including a human capital development domain that reaches civil-service digital capacity. Its sixth national working session, with more than 1,400 stakeholders, made cybersecurity awareness and continuous upskilling of information-technology staff a cross-government priority. What exists is an instrument for assessing capacity. No assessment result, training count or measure of digital literacy across the civil service has been published against it.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Togo	Eighty digitalisation officers from 27 ministries were certified on 12 June 2026, selected from 1,442 candidates. The cohort completed three intensive sessions between September 2025 and June 2026 covering project management, product management, leadership and artificial-intelligence tools, run by the state digital agency for the digital ministry with an African training provider. A session of the same programme ran 1 to 3 April 2026 on digital project and product management, agile methods in the public sector and performance monitoring, funded by the European Union and German cooperation and taught by experts from Rwanda, aimed at a critical mass of in-house project-management skill. Separately the finance ministry trained 33 agents on digitisation, indexing, records management and its document management system to April 2026, a second phase after November 2025.	MOVEMENT
Tunisia	The statutory continuing-training framework carries a January to October 2026 online batch including e-administration and open government, and the country hosted a continental executive programme on AI governance. Continuing training for public agents at the national administration school rests on a 1993 decree as amended in 1995, and is the framework its digital-skills courses run under. A January to October 2026 batch of online courses opened to agents nominated by their ministries, including one in Arabic on e-administration and open government, with a participation certificate conditional on completing the course and passing tests. What the repository does not hold is any measurement of digital literacy across the civil service - only the training offered to it, and no completion or pass figure for that. 2026-09-08 - training at the senior end took place here rather than being offered to here: more than 40 senior policymakers and regulators from across the continent convened at Yasmine Hammamet for two days of an executive programme on AI governance, trust and digital sovereignty, delivered with a private secure-communications firm and a Canadian university, moving from the global regulatory landscape through risk-based classification to trusted-AI standards. Which countries were represented, and whether Tunisian officials attended, is not stated.	MOVEMENT
Uganda	A three-day course on digital crime and evidence opened for judges and magistrates, with more than 100 prosecuted communications offences since 2018 behind it. No cohort size, curriculum or repeat schedule is published, so whether it reaches the bench as a whole or a single sitting of it is not stated (course). It matters because the Constitutional Court has just nullified five sections of the principal computer-crime statute, and the offences that remain will be tried by the judges this course reaches or misses.	MOVEMENT
Zambia	146 officers were trained in digital skills and data protection across three district administrations — a single-province tranche rather than a coverage measure. The training covered three district administrations in one province (training). Naming it a tranche rather than a coverage measure is the point: no national civil-service digital training figure exists in this repository, and 146 officers in one province cannot stand for one.	MOVEMENT
Zimbabwe	A digital learning platform for civil servants was launched in early 2026, and training is to be made mandatory at 10,000 employees a year. The public service commission announced the launch of a digital learning platform for civil servants in its first-quarter 2026 newsletter, alongside leadership development, pension reform and results-based management training (newsletter). Digital skills training is to be made mandatory for all civil servants, with at least 10,000 public employees trained each year in artificial intelligence, cybersecurity and data management, announced at the 2026 budget pre-seminar under the science, technology and human capital reform cluster (announcement). The artificial-intelligence strategy launched in March 2026 gives public-sector skills a policy home (strategy). Neither the platform nor the mandatory scheme carries an enrolment, completion or start-date figure on the repository, so the annual target has nothing to measure against.	MOVEMENT

Digital literacy (general population)

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	A national digital empowerment programme drew 64,508 registrations across all 58 wilayas, 30% choosing artificial intelligence. The programme did not exist at the window's opening. By May 2026 it had 64,508 registrations across all 58 wilayas, of which 19,691 chose artificial intelligence against 9,678 for professional cybersecurity, and 80.4% chose remote delivery. No completion or outcome figure is held. It is by an order of magnitude the largest measured participation in anything on this ledger, and what any of those registrations produced is unpublished.	MOVEMENT
Angola	No national digital-literacy programme exists — the repository carries it only as clauses inside other instruments — and the loan's grants component still has no allocation. The repository carries digital literacy only as clauses inside other instruments, with no national programme, budget line, target or trained-population figure. A ministry or education programme document would settle it and none is held. The one named vehicle is a loan component: grants to non-governmental and community groups for community digital spaces and digital literacy, still with no allocation, grantee, disbursement or beneficiary count two years after it was named. The same loan carries a target of 100,000 people trained through digital literacy programmes by March 2030, and its people and firm outcome indicators read zero, reported under development-partner financing. The school laboratory programme reported under training is real and is a different thing: hardware in schools, not a literacy programme for the population.	NO CHANGE
Benin	The skills initiative launched in 2022, a donor digital programme reached mid-term evaluation, and an inclusion effort ran in 2025. No literacy rate is published. 2022-09-08 — the government and a continental alliance launched a digital skills initiative. 2025-10-06 — a civil-society digital inclusion effort was reported. 2026-02-01 — a donor digital programme reached its mid-term evaluation. What the repository does not hold is any measure of the thing itself: no digital literacy rate for the population appears at either end of the period.	MOVEMENT
Botswana	The regulator ran information and cyber-awareness sessions at four schools in January 2026; no national coverage figure exists. 2026-01-22 — the regulator ran information and communications technology and cyber-awareness sessions at four schools, on a wire source flagged at ingest. No baseline preceded it and no national coverage figure is published. No dated national digital-literacy or digital-skills rate is held for the country at any date. So four schools is the entire measured literacy activity of the window, against a services platform carrying 52 electronic services and a tax regime that now reaches online purchases.	MOVEMENT
Burkina Faso	No adult digital-literacy rate, financial-literacy baseline or school digital-skills figure is held. No adult digital-literacy rate, financial-literacy baseline or school digital-skills figure is on the repository, and none was at the start of the window. The one output figure the repository ever held came from a project that has now closed: 280,000 people given digital financial education against a 275,000 target, reported at the project's end. Its successor is a promotion agency running sessions in four cities with an operator, reported under consumer protection. So a state that has put criminal complaints, pension files, land titles and traffic fines online has no measurement of whether its population can use any of it, against the rural access gap reported under digital divides. 2026-09-08 - the cybercrime brigade equipped itself with an audiovisual studio to produce and broadcast educational content on digital risks, countering false information central to its remit, with capsules devoted to deconstructing fake news and to information verification. No cost, output schedule, distribution channel or audience measure is published, and no editorial safeguard is described for a police unit producing content about what is false.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Burundi	A national component finances awareness, device access and digital culture with no population baseline, instrument or numeric target stated. The national digital-inclusion component finances activities to raise awareness, increase access to broadband-capable devices and develop digital culture, targeting rural communities, women and girls, and vulnerable groups. It states no population digital-literacy baseline, no measurement instrument and no numeric target. That is the whole of the record. A programme with no baseline cannot report progress, and nothing else in the repository measures population digital literacy — so the indicator is answered by a description of intent, and will stay that way until something counts.	NO CHANGE
Cameroon	The 2025 artificial-intelligence challenge trained 100 young people across five cities; no 2026 edition or outcome figure is held. 2025-06-16 to 2025-07-18 - the challenge trained 100 young Cameroonians at strict gender parity, twenty per city across five cities. It is privately funded. No 2026 edition, follow-up or outcome figure is held, so continuation is unestablished rather than discontinued. Nothing else on this ledger measures digital literacy in the general population: there is no survey, no index reading and no national skills figure at either end of the window.	NO CHANGE
Cape Verde	The national digital-skills strategy is still not adopted a year after its draft workshop. 2026-10-09 — the economy and digital transition minister said his ministry will implement a national digital literacy programme, which already has a World Bank-financed manual and is to advance through protocols with the public university. No start date, budget or target is stated. The strategy was under preparation inside the World Bank-financed project, informed by a digital-readiness study covering more than a thousand people across several islands, and not adopted when a workshop on the draft was held in Praia. It is still not adopted: no adoption instrument, publication or target date is held a year later. The readiness study behind it is the only measurement of digital skills across the population the repository holds, and its results are not published either. The Secretary of State's claim that stronger digital skills could double national output is an official statement, not a modelled estimate.	MOVEMENT
Central African Republic	Only 4.1% of men and 1.5% of women hold the technology competences the national survey tests. The measured position comes from the national household survey, fieldwork 2018 to 2019: 4.1% of men and 1.5% of women hold the information and communication technology competences it tests. It is the source-of-truth figure and it is the only one. Nothing published since measures it again. A seventh-round survey is on this ledger as the instrument that would, and no result from it is held. Against a figure that low, what the repository holds by way of response is a digital records-management training for 15 officials.	NO CHANGE the measured figure is seven years old and nothing has replaced it
Chad	Fewer than 30 per cent of 15-to-30-year-olds in one project's target areas hold digital skills; no national programme exists. A civil-society project with the education ministry, running from October 2025 to September 2029 across two arrondissements of the capital, Moundou, Dobara, Sarh and Mandoul, records that fewer than 30 per cent of 15-to-30-year-olds in its target areas hold digital skills, and reports around a 75 per cent skills gain across more than 150 young people trained in its pilot (project). The national ICT agency opened free intensive digital-skills sessions at Bongor in January 2026 — computer initiation, office software and internet safety — for an expected hundred beneficiaries, paired with a disinformation-awareness campaign (sessions). The only official population figure is the regulator's: 14.2 per cent using internet services in 2020 (observatory). 2026-09-19 - an awareness campaign on digital citizenship and internet risks was launched at Abeche by a non-governmental organisation with the national youth council, backed by an external democracy initiative. No participant target, duration, budget or further location is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Comoros	The first community training centre was inaugurated at Iconi in April 2026, taking sixty young people; 225 trained since 2025. 2026-02 - a second cohort was launched on Moheli in web and mobile development and digital marketing, decentralising training away from the main island. 2026-04 - the first community digital training centre in the country was inaugurated at a cultural centre in Iconi, taking a first cohort of sixty young people aged eighteen to thirty-five; the francophone organisation states 225 young people and women trained in the country since 2025. That figure is the only national digital-literacy count in the repository, and it belongs to a donor rather than to the state: no national digital-literacy or digital-skills programme is on record. Against a population the cartographic unit's country report puts at 850,886 in 2019, 225 is the scale of what has been delivered and counted. A training component announced on 2 September 2026 is to reach 25,000 women across five countries including this one with financial and digital skills training, with no country allocation, timetable or provider published (component).	MOVEMENT
Congo	A first cohort of 25 pupils began coding training in March 2026, against the 2020 digital economy diagnosis. The 2020 digital economy diagnosis is the standing account, and the ledger carries the national digital-literacy programme as *Not held*. 2026-03-21 — a first cohort of 25 pupils began coding and digital training. Twenty-five pupils is the only figure the window produces, and no population digital literacy rate exists at either end.	MOVEMENT
Cote d'Ivoire	A second annual summer tech camp trained hundreds across 20 cities, and a skills memorandum was signed with the UN development programme. 2026-08-11 - a second annual summer tech camp closed, training hundreds of young people in artificial intelligence, cybersecurity and digital awareness across 20 Ivorian cities, under a programme running with a United States vendor since September 2025. No cumulative headcount has been published since. 2026-05-21 - a memorandum with the UN development programme covers training, startup support and rural and vulnerable-population outreach through a vendor digital centre; no budget, headcount target or duration is disclosed by either party. Every figure here is a programme's own, and none is a measurement of population literacy.	MOVEMENT
Djibouti	The project component for general digital skills reports no one reached on its own indicator. The instrument is a project component rather than a national programme: the founding document establishes digital transformation and skills development as a component, recording large-scale basic digital-skills training as lacking and most of the population as unfamiliar with digital tools. 2026-02 - the supervision report records the people-using-broadband indicator at zero against a target of 10,000 on its February 2025 reading. The programmes that did deliver in the period are vocational rather than general: 240 completions on a digital-trades course. No digital-literacy rate for the population is published.	NO CHANGE
DR Congo	A 30-day digital code awareness campaign mobilised 2,000 young volunteers, and a cyberviolence ambassadors network launched. 2026-08-06 - a campaign mobilised 2,000 young volunteers for 30 days at two publications a day on the code's provisions on cybersecurity, data protection and responsible internet use, carried by the digital economy ministry with UN development programme support. The code was promulgated in March 2023; no budget for the campaign and no measure of its effect is stated. 2026-08-20 - a national police network of youth ambassadors against digital gender-based violence launched with UN Police and a regional youth leadership chapter, its first session training and certifying 46 people aged 18 to 30 as community prevention relays; no budget, coverage target or reporting route is stated. 2026-10-06 - a private survey of 2,280 adults in the 26 provincial capitals found 61% aware of artificial intelligence in March 2026, against 54% a year earlier.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Egypt	Among people aware of mobile money but holding no account, not knowing how to use it affects 21% of women and 15% of men. No Egyptian digital-literacy measure is on file at the window's opening. An industry association's report finds that among people aware of mobile money but holding no account, not knowing how to use the service affects 21% of women and 15% of men. Sample and survey design are not given, and it is cited rather than absorbed. Awareness of artificial intelligence is the one series with two points on it. The cabinet information centre puts those who had heard of AI applications at 65 per cent in 2026 against 22 per cent in 2023, work the leading use at 51.7 per cent ahead of personal use and study, with about 94 per cent of users rating the accuracy of the answers they get (survey). Sample size, method and margin are not stated. 2026-09-16 — the ministry and Intel signed to train one million citizens a year in AI for three years.	NO CHANGE a first measurement with nothing earlier behind it
Equatorial Guinea	A development scheme selected 50 trainers from 466 applicants in July 2026 to cascade skills to 2,000 young people. The standing facility is a virtual training centre opened to the public in 2021, the first of its kind in the country. The window's programme is larger and time-bound: 50 trainers selected from 466 applicants in Malabo in July 2026, to cascade skills to 2,000 young people by September. A solar-powered offline digital library holding two million items was pitched to two ministries in April with no deal agreed.	MOVEMENT
Eritrea	No population measure exists. What the repository counts is people who paid or were posted: civil servants and students of a technology institute. Nothing on the repository measures digital skill in the population — no survey, no index entry, no schooling indicator. What it holds instead are two channels that reach particular groups. Government employees receive vocational training in one region, and the civil service has been the main route to skills throughout. Outside it, a private technology institute with four branches across two cities graduates roughly 700 young people a year from its computer technology, electrical and electronic and audio-visual departments. Both are real; neither is a population. With mobile connections the only published penetration figure and internet use low, the general position is inferred rather than measured.	NO CHANGE
Eswatini	The ICT minister set a target for digitally skilled citizens, and a domestic practitioner published guidance on digital workplace transformation. The target was set in February 2026 (target) and no programme, budget or measurement method is attached to it. A book by a domestic ICT practitioner is the only other literacy item in the ledger (book). A national skills target with no delivery instrument behind it, in a country whose stated internet-usage and youth-unemployment rates are recorded elsewhere in this report, is an aspiration rather than a programme.	MOVEMENT
Ethiopia	The national coding initiative passed 5,005,146 enrolments, ahead of its target date (milestone). The 5 Million Ethiopian Coders Initiative passed its enrolment target ahead of schedule at 5,005,146 enrolments in programming, data analysis, Android development and AI fundamentals, and a 7-million target was set (milestone). Digital Ethiopia 2030 was launched in December 2025 with quantified population digital-literacy and internet-penetration targets, superseding Digital Ethiopia 2025 (launch); the government states these as 70% population digital literacy and 10 million citizens trained by 2030 (targets). The standing measured baseline is the 2022 national digital literacy maturity survey, on which 60.27% of those surveyed could use a computer, tablet or smartphone and 53.71% used the internet (survey, as cited in the education strategy). The repository holds no repeat of that survey, so training enrolments are the only movement actually measured.	MOVEMENT
Gabon	A draft decree creating a basic computing and internet certificate was validated in July 2026, with no syllabus, awarding body or start date. The decree was validated at a national workshop on the digitalisation of teaching and forwarded to the competent authorities (validated texts). It is a draft only, and the repository holds no named national digital-literacy programme, no literacy measure and no cohort target against which to read it.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Gambia	400 women and girls were trained across four regions in eight workshops, with 40 community broadcasters and 80 peer mentors. The programme ran between September 2025 and March 2026 and is funded by international impact grants with Swedish development support (programme). The implementer names unreliable internet, high data costs and unreliable electricity as the obstacles to continued practice, which is the repository's only account of what stops a trained user from staying online.	MOVEMENT
Ghana	A virtual-asset literacy campaign opened its regional phase in August 2026, a privacy campaign in all sixteen regions put its reach at an estimated 25 million, and a cyber security awareness month was launched in September. The virtual-asset campaign is led by the central bank and the securities regulator, anchored on a co-authored education manual and delivered in schools, markets and churches, described as a template for national rollout with no funding, timetable or nationwide launch date stated (literacy campaign). The privacy campaign launched in September 2025 for a one-year run across all sixteen regions in English and five Ghanaian languages, to end in September 2026 (privacy campaign); the regulator put its reach at an estimated 25 million people, with no evaluation or extension statement held. 2026-09-01 - an education charity launched a nine-month programme training and certifying 60 community digital champions for 52 communities under a Mastercard Foundation fellowship. 2026-09-02 - the cyber security authority launched the 2026 National Cyber Security Awareness Month, themed on securing the digital finance system and observed each October. No reach figure is published for either. 2026-10-01 - the 2026 awareness month opened at the University of Ghana, on securing digital finance.	MOVEMENT
Guinea	A fourth FabLab Solidaire opened at Coyah on 3 June 2026, the first outside Conakry. The Fondation Orange Guinee, with the Agence Francaise de Developpement, inaugurated a fourth FabLab Solidaire at the Ecole Regionale des Arts et Metiers of Coyah on 3 June 2026, the first of the four outside Conakry; the network since 2022 runs at the Orange Digital Center de Ratoma, the Ecole Nationale des Postes et Telecommunications at Kipe and the SankuLab de Bellevue, with stated targets of training more than 125 women in green trades and digital technologies and at least 30% of beneficiaries developing an income-generating activity. This is a programme count and not a measurement: no digital-literacy rate for the population is held at any date, and the four labs are a private foundation's, not the state's.	MOVEMENT on programme count alone
Guinea-Bissau	A government and operator programme stood up its coordination committee in May 2026, to train 1,000 young people a year for four years. 2026-05-07 — a joint decree created the STARTOCODE coordination and monitoring committee, formalising a programme to train 1,000 young people a year over four years in programming, data analysis and cloud computing, with a stated emphasis on women and people with disabilities. The record is the operator's own announcement. It is the only digital skills programme on this ledger and the only training commitment of any kind. No enrolment figure, no first cohort and no completion is reported, so what exists is the governance structure rather than evidence of training delivered. No measurement of digital literacy in the population appears anywhere on the repository for Guinea-Bissau.	MOVEMENT
Kenya	97.5 per cent of online adults report monthly use of an artificial-intelligence tool, and the school device programme's second phase reached Nyeri in September 2026. The ranking is first globally, on a commercial compiler's self-reported survey of online adults rather than a population measure (survey). The literacy programme's 2022 review recorded 1,170,846 devices in 22,891 public primary schools and 216 schools connected, and found device use limited and learning outcomes unimproved (review). A second phase for 10,382 junior schools began in September 2026, with 1,000 ICT graduate interns recruited to support it; on 21 September deliveries began to 178 of Nyeri's 377 public junior schools (rollout). On 22 September the ICT state department signed with a chipmaker to deliver AI literacy through the public library network. The regulator reports supporting 23 educational institutions with no quantity or value disclosed (donations), an operator reports reaching over one million young people across six counties (youth programme), and a philanthropic grant opened three school laboratories in August 2026, taking that programme to at least 13 schools (laboratories).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Lesotho	Government digital-literacy training was reported running across all ten districts in July 2026, with no participant numbers published. The training was reported running in every district on 29 July 2026 (forum, account). No participant count, curriculum, duration or completion figure has been published (report), so the repository records national reach and no measure of what it delivers. 2023 — the regulator's household survey found 35.1% of individuals with ICT skills, 19.4% basic and 15.7% above basic, against 58.4% using the internet. No earlier skills figure is held, so the level is recorded and the direction is not.	MOVEMENT
Liberia	A digital learning platform went into service for grades 1 to 3 in local languages, and 19 young leaders were trained in information literacy. The learning platform carries curriculum-aligned video, audio and radio with sign-language interpretation on the video lessons (platform). The literacy training was the first of three sessions run by a development agency with the elections commission and the press union on Canadian funding, with no budget disclosed (training).	MOVEMENT
Libya	A skills assessment platform neared launch in April 2026 to measure digital skills against the labour market. The platform, modelled on a French instrument, is the first attempt the repository records to measure Libyan digital skills rather than assert them. Delivery around it is programme-shaped: a vendor innovation campus opened at the largest university in July 2026 with a 150-seat national artificial intelligence cohort, and a technology foundation opened a sixth two-month bootcamp in cloud tooling, software development and cybersecurity. No population-level literacy measure exists yet.	MOVEMENT
Madagascar	Two national training programmes carry targets — 40,000 people by 2028 and 1,000 by mid-2026 — and no measurement. A digital readiness assessment handed to government in December 2025 is the standing account of the country's digital capacity (assessment). The technical education ministry adopted a sector digitalisation strategy in September 2025 targeting 40,000 people trained in digital skills by 2028 at 6,000 a year, with 22 priority projects including a free open-access learning platform (strategy). An expanded skills programme launched in January 2026 to train 1,000 young people free of charge by mid-2026 (launch). No published measurement of digital literacy in the general population is held; the programmes carry targets rather than outcomes. 2026-09-11 — the vocational training ministry signed a partnership with France's Pix to certify young people's digital skills; no candidate target or start date is given.	MOVEMENT
Malawi	Two programmes launched against an 18 per cent digital-literacy score that nothing has re-measured. The only national figure is a donor's and it is three years old: an inclusive digital economy scorecard puts general-population digital literacy at 18 per cent and the overall skills component at 37 per cent. 2025-10 - the university and the development programme launched a free digital-learning platform for students and underserved communities. 2026-02 - an advocates programme certified 30 university students, each set to train 100 community members in villages, markets, schools and homes, 3,000 people in total. Both are offers with targets rather than results, and the measure they would move against has not been taken since 2023. No government series, target or budget line for digital literacy appears anywhere on file.	MOVEMENT
Mali	Training is counted by programme, not by population: 350 graduates from one centre and 1,000 young people in the access fund's 2026 programme. No measure of digital skill in the Malian population exists. What the repository counts is programme throughput. An operator's digital centre reported 350 graduates; a skills programme aimed at 15,000 people featured at the digital week's close; a girls' coding programme entered its third phase in October 2025; and the universal access fund's 2026 programme includes training for 1,000 young people alongside 80 access centres and 100 wifi points. An operator loan also carries a women's digital training target. Each counts its own participants; none counts the country. 2026-08-20 - a public awareness campaign against disinformation was launched with a target of 60,000 people; no reach figure, funder or closing date is on file.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritania	No measurement programme exists. The sector diagnostic names the skills gap; the civil service skills platform reaches officials. Nothing measures digital skill in the Mauritanian population. The repository carries a row for a national measurement programme and holds no source for it, and the whole-of-sector diagnostic names the skills gap without quantifying it at population level. What exists reaches defined groups. The national digital skills platform serves the civil service; a cybersecurity and artificial intelligence training programme runs in the public sector; and a youth digital employability project works on the other end. Each counts its own participants and none counts the country.	NO CHANGE
Mauritius	A digital literacy rate is published with household ICT indicators, and an awareness booklet was launched in October 2025. The promotion agency publishes household ICT penetration indicators including a digital literacy rate (indicators). The 2025 ICT statistics are the statistics office's own annual release (release). An awareness booklet on artificial intelligence was launched at the presidency in October 2025 (launch). The rate is measured, which is more than most of this frame's places manage; no distribution or reach figure for the booklet is published.	NO CHANGE
Morocco	A women's digital mentorship programme went operational in March 2026 and 261 teachers were certified in programming and AI during 2025, under a literacy strategy to 2035. The literacy strategy runs from 2023 to 2035 and is delivered through a roadmap covering 2023 to 2027 (strategy); its eighth strategic choice names a digital element that is not established in the French text held. The GENIE programme for ICT in education reached schools across the country, rural ones included, with 87 per cent of staff trained, on the programme's own account of 2018. 2026-02-02 - the education ministry and Samsung renewed a partnership that certified 261 teachers in programming and AI during 2025. 2026-03-04 - the digital ministry and Capgemini moved a mentorship programme for young women into operation, more than 80 per cent of its first cohort starting internships. No participant count or digital-skills measurement for the adult population is held.	MOVEMENT through schools and a women's mentorship programme; no population-wide measure
Mozambique	There is no national digital literacy programme, and in September 2026 the ICT institute signed a memorandum with a private firm for rural digital-literacy campaigns. The absence is dated rather than settled by the source: an organisation used a dialogue-series launch in Maputo on 20 August 2026 to demand a national digital-literacy programme for young people, arguing digital skills are now a precondition for meaningful democratic participation (demand). A civil-society demand is evidence that no programme exists rather than a programme. No literacy measurement, curriculum or target for the general population is held. 2026-09-21 — the ICT institute signed a memorandum with a rural mobile-multimedia firm for awareness campaigns, workshops and community forums on digital culture, cybersecurity and data protection, with content in Portuguese and where possible local languages. No budget, reach target or start date is stated.	MOVEMENT a rural awareness memorandum while no national programme exists
Namibia	No standalone national digital-literacy strategy or programme exists outside the school curriculum. The Information and Communication subject is the country's whole digital-literacy provision on this record, compulsory and assessable for school pupils and reaching nobody else (curriculum). No adult programme, measurement or target is held. The identity awareness campaign and the youth ambassador programme recorded elsewhere in this ledger are the nearest thing to population-level digital outreach, and both are about one credential. 2026-09-06 - a domestic argument put the language question at the centre of the divide: writing on two children sitting the same national examination, a commentator argues that generative tools supply the polish that growing up with English at home has always supplied silently, so the tools redistribute an advantage rather than create one. It is an opinion piece and the repository holds no measurement of examination or tool use by home language to set against it.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Niger	The statistics institute's 2025 household survey puts self-reported digital skills in single or low double figures among people aged 15 and over. The survey of 4,000 households across all eight regions reports that 29.1% of people aged 15 and over can send an email with an attachment, 25.5% can find and install software, 25.0% can copy or move a file and 0.6% can write a computer programme, against 39.5% who used the internet in the preceding three months. The rural delivery channel is the digital multiservice centre: the Villages Intelligents project reviewed its 124 centres in September 2025, which assist rural users with phone and computer use, digital education and merchant onboarding. The repository holds no earlier national measurement to compare the survey against, and no figure for how many people the centres have trained. 2026-09-19 - a first national campaign against disinformation was launched at Tillabéry, pairing online awareness with media and information literacy workshops; no reach figure is published. 2026-09-03 - a national youth digital-skills caravan reached Diffa, with about sixty participants over two days.	NO CHANGE a first national measurement with no earlier figure behind it
Nigeria	A second year of free student artificial-intelligence subscriptions runs alongside a state digital training academy admitting 16,000 to its first cohort from 72,850 applicants. From August 2026 students at accredited universities, polytechnics and colleges of education get twelve months of a paid artificial-intelligence tier free, worth N92,400, the second consecutive year of the offer and one of 27 sub-Saharan rollouts, inside a five-area alliance running since February 2025 that put N3bn into Nigeria across five partners (students, alliance, training). A US$1m commitment to train a million people over two years works out at US$1 a trainee, a ratio that drew feasibility scepticism (commitment). A federal facility leased to a state is to run as a talent city and artificial-intelligence institute, with no capacity, occupancy or programme figure published (talent city). 2026-09-09 - a free federal digital training academy admitted 16,000 people to its first cohort from 72,850 applications. It launched on 14 September 2026 with more than N10.5bn committed to train over 32,000 people in six-month courses, with two federal institutions hosting study centres; no completion target is published. 2026-10-06 - the regulator said its training institute has been designated an ITU Digital Transformation Centre.	MOVEMENT
Rwanda	The digital ambassador programme concluded its financing phase in May 2026 with no successor financing held. The programme was to be expanded to all 2,148 cells under the acceleration project, and its financing phase concluded in May 2026 (programme, expansion). No successor financing is held. A national digital-literacy programme reaching every cell is the kind of instrument a statutory identity deadline depends on, and it lost its funding a year before that deadline falls. 2026-09-04 - the online-safety half of literacy was taught to the adults rather than the children: a civil-society internet chapter trained 50 parents and teachers in Karongi District on online safety and on using the national e-services portal. A single district cohort run by a non-governmental body, with no curriculum, follow-up or national reach target published - and it sits against a restriction on minors' social-media use still in development.	STALLED
Sao Tome and Principe	Twenty-four laptops and projection equipment reached technical-vocational schools in three districts in October 2025; the only survey measure held is adolescent ICT skills, not a population rate. The equipment - 24 laptops, four projectors, four pairs of speakers and four projection screens - went to dual-certification technical-vocational schools in two rural districts and the autonomous region, stated as strengthening ICT teaching and integrating digital literacy into practice (handover). The only survey-based measure the repository holds is the percentage of girls and boys aged 15 to 19 able to carry out at least one of nine listed computer activities, reported as a development indicator (survey). It is adolescent-specific, not a whole-population rate, and the extracted figures are positionally garbled in the capture so none is restated here. Adapted computer equipment also reached an association for blind and partially sighted people in June 2026 (donation).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Senegal	A digital financial-education project closed in July 2026, and the repository held nothing on it before the closing item, so its whole life-cycle arrives at once. The project closed on 15 July 2026 with a closing workshop the following week (closure). The repository held nothing on it before 24 July 2026, so there is no record of what it did, reached or cost — only that it ended. That is a coverage limit rather than a finding, and it is worth stating because it is the second literacy instrument in this unit whose record is a single item. 2026-09-25 - an EU-funded civil-society project ran a regional workshop at Kaolack training community leaders on digital hygiene, passwords and data governance, with Saint-Louis, Bignona and Dakar to follow. No participant count is stated.	STALLED
Seychelles	The open government action plan commits to raising general IT literacy through public education, mobile training and district computer rooms. Commitment 3 of the plan, Digital Transformation and Connecting People, sets the objective of raising general-population IT literacy through public education, mobile training and district computer rooms; the same commitment's background section records that the citizen e-engagement feedback portal commitment has not begun (plan). The plan was Cabinet-approved on 13 December 2023 and runs to 2025. Nothing held records a delivery report, a district computer room opened or a literacy measure taken under it, and no national digital-skills survey exists.	NO CHANGE
Sierra Leone	The first national measure puts adult digital literacy at 26 out of 100, with district scores ranging from 2.7 to 51.8. The baseline survey reports an overall adult digital literacy score of 26 of 100, district scores from 2.7 in Koinadugu and 8.5 in Pujehun to 51.8 in Western Area Rural and 41.5 in Western Area Urban, 48.7 per cent of adults owning a mobile phone of any type, 25 per cent able to save or delete a phone contact independently and 21.5 per cent able to send a text message (survey). Basic digital skills training was extended to 600 citizens from underserved communities in October 2025 (training). Six hundred people against a population where three adults in four cannot send a text message. The 2017 multiple indicator survey is the earlier statistical baseline (survey), and no comparable earlier digital literacy figure exists to read this one against. 2026-09-16 — the information minister launched a National AI and Deepfake Sensitization Campaign with the communications ministry and the science and technology directorate. No audience, duration or budget is stated.	MOVEMENT
Somalia	The ministry and a partner trained 80 youth across four tracks in 2025, within a project targeting 1,000; no population measurement exists. A one-day workshop in Mogadishu in September 2025 reached 73 young people, 43 per cent of them women and three visually impaired, as part of a project targeting 1,000 (workshop). The partner's year-in-review reports 80 youth trained in cybersecurity, data analysis, digital marketing and online business over 2025, alongside a digital readiness assessment expected to be released in 2026 (review). No nationally representative measure of digital literacy is held. The nearest is a study of 12,408 women finding wealth and secondary education raise the odds of internet access roughly fourteen and fifteen times (study).	MOVEMENT
South Africa	A province opened its 83rd public access centre, while the only demand-side survey the repository holds is two years old. 2026-06-11 — a province opened its 83rd brick-and-mortar public access centre, adding a business corner, public access centre and training centre to a network also served by a mobile unit. No user, training or throughput figure is published for the network. The one nationally representative demand-side survey the repository holds covers household and individual access, use and affordability, held as an excerpt and two years old at the window's close. No digital-literacy or digital-skills rate is measured in it or anywhere else on this ledger. So the country is building places to go online and has no measurement of whether the people using them can.	MOVEMENT on access centres, with literacy itself unmeasured

COUNTRY	DEVELOPMENTS	PROGRESS
South Sudan	No national measure exists and one has been commissioned; the best evidence is a four-site household assessment. A 2,135-household connectivity needs and usage assessment across four refugee-hosting locations, run between 15 January and 26 February 2026, found 72 per cent of respondents aware of the internet, 66 per cent of internet users unable to use it as much as they would like on grounds of cost, devices and literacy, and 41 per cent of women and 20 per cent of men unable to read and write (assessment). A government tender closing 25 June 2026 commissions a National Digital Skills Assessment with framework development and an implementation plan (tender). The household assessment covers refugee and host-community sites only and is not nationally representative, which is why the tender exists. 2026-09-09 - the only record the repository holds of capacity building on the country's computer misuse statute. More than 20 representatives from civil society organisations, security institutions, media houses and other stakeholders were trained at Yei River County on cybercrime, the Computer Misuse Act 2026 and electoral preparedness, organised by a state branch of the journalists' union to strengthen understanding of cyber-related offences, legal responsibilities and stakeholders' roles in a credible electoral process. No funder, curriculum, further cohorts or state coverage is published.	NO CHANGE a first count with no earlier figure behind it
Sudan	The national programme's last figure is 130,855 graduates by 2007; the only current measurement finds about 10 per cent of women phone owners use them for business. The technological-illiteracy eradication project launched in March 2002 had reached 117 centres and 130,855 graduates by the end of 2007, on the last account the repository holds (profile). No later figure exists. A 2026 study combining a labour-market panel survey with fieldwork in Kassala State finds only around 10 per cent of women who own phones use them for business, and identifies practical digital skills, affordability, electricity and connectivity reliability, trust and safety, and institutional intermediaries as what actually stops use, beyond device access (brief). No nationally representative digital-literacy measurement is held.	NO CHANGE
Tanzania	Adult literacy is 83 per cent and use of information technology for learning 10 per cent, on the 2022 census. The census analysis puts adult literacy at 83 per cent, higher in urban than rural areas, and use of information technology for learning at 10 per cent, alongside mobile ownership at 82.5 per cent and household internet connection at 0.6 per cent. That is a reading of reach rather than of skill. No competency test, certification count or task-based assessment of the general population is held, and no earlier round of the same measures exists on this repository to give the figures a direction. 2026-09-18 - the National Service has put a digital patriotism subject into its training curriculum, teaching recruits the responsible use of social media, its commander saying the subject would continue to be improved. No curriculum text, hours, recruit count or assessment is held.	NO CHANGE a first census reading with no earlier series behind it
Togo	About 3,000 young people were trained in digital hygiene at a campaign in the capital in late October 2025. The event date is inferred from a relative reference in a November 2025 report, so day precision is not established (campaign). No curriculum, follow-up or repeat edition is on record. It is the only general digital-literacy activity in this unit. A training component announced on 2 September 2026 is to reach 25,000 women across five countries including this one with financial and digital skills training, with no country allocation, timetable or provider published (component).	MOVEMENT
Tunisia	47.9 per cent of internet users report using artificial-intelligence tools and 41 per cent of the population owns a computer. The telecommunications regulator's 2026 survey of internet use and digital skills reports 85.9 per cent of respondents using the internet and 84.3 per cent owning a smartphone against 41 per cent owning a computer, with 47.9 per cent of internet users reporting use of artificial-intelligence tools. That is a reading of what people reach for, not of what they can do. No competency test, certification count or task-based assessment of the general population is held, and the observatory has published only a one-page synthesis of this round rather than the full report it issued for earlier ones. 2026-10-01 - the regulator's survey breaks internet use down by age, income, sex and district: 99.2 per cent at 18 to 24 against 54.1 per cent at 60 to 70.	NO CHANGE a first reading with no earlier skills measurement behind it

COUNTRY	DEVELOPMENTS	PROGRESS
Uganda	A rider digital skilling programme onboarded 3,000 riders in one quarter of 2025 and the repository holds no later quarterly, and digital skilling for faith-based health centres launched in August 2026. The rider figure is the window-opening quarter carried forward unrefreshed, the repository holding no later quarterly report (riders). The health-centre programme launched in August 2026 (health centres). Neither carries a curriculum, completion measure or follow-up, and one is a single quarter of a series the repository cannot continue. 2026-09-18 - the largest mobile operator's mobile-classroom programme graduated 305 people in Kampala, taking the number trained to more than 6,700 in safe internet use, digital productivity and responsible use of digital financial services. No cost, geographic spread or outcome measure beyond the graduate count is published. 2026-10-07 - the communications regulator launched a child online protection campaign at a Kampala secondary school.	NO CHANGE
Zambia	ICT equipment was handed to a youth resource centre under a transformation centres initiative, with no cost, contract term, procurement route or trainee count published. The handover was made in August 2026 (centres, challenge). A digital literacy programme in six schools recorded core funding disbursed for the 2025 activity year; it is a commitment record rather than a delivery report, with no pupil count, equipment or outcome stated (schools). Two literacy items, neither with a published outcome, is the whole of general digital literacy here.	MOVEMENT
Zimbabwe	43.7 per cent of Zimbabweans hold basic digital skills on the 2025 household survey, the first national figure the repository has held. The 2025 household ICT survey found 43.7 per cent of Zimbabweans holding basic digital skills, and separately that 31 per cent of internet users now use artificial-intelligence applications (survey). It is the repository's first measurement, so it fixes a level rather than a direction. The named national programme is the 1.5 million coders initiative, whose registration portal and free modules in programming, artificial-intelligence basics, Android development and data science opened to the public in September 2025 (registrations). The ICT policy carries digital skills and rural training as priority areas (policy). No enrolment or completion count is published against the 1.5 million target, so the programme and the measurement cannot yet be read against each other.	MOVEMENT
