PROGRESS REPORT

Research institutions: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *54 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has* **No evidence** *on it in its own report.*

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

The place reports do not share one window; the period above is the range they span.

Think tanks and academic departments contributing to DT policy

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	A High Council of Scientists and Researchers was announced in June 2026 as being created under the Presidency. The council did not exist at the window's opening. 2026-06-20 - its creation under the Presidency was announced. No membership, remit, first opinion or reporting arrangement is published. It sits alongside a fifteen-member scientific and technical committee seated at the high commission for digitalisation in October 2025 and a national artificial-intelligence research and innovation strategy drawn up by 150 experts - three advisory bodies of academics in a year, none of which has published anything the repository can point to.	MOVEMENT
Angola	A university chair in open science and responsible digitalisation was inaugurated in June 2026, and the largest public university joined the African engineering network. Two academic bodies with a digital remit appeared in the window, which is two more than the repository previously held. Angola's first chair under the education and culture agency's programme, on open science, responsible digitalisation and social impact, was inaugurated at a private university in June 2026 with the higher-education minister presiding; its declared remit covers open data, diamond open access, open-source software and interoperable infrastructure. The largest public university was formally presented as a member of the African engineering and technology network in Dakar in October 2025, framing it as part of becoming a digital university. The Luanda science and technology park is the institutional setting both would work in.	MOVEMENT
Benin	The national university adopted its own AI strategy, ethical framework and usage charter, and a research institute launched a national-language AI project. The national instrument these align to is the national AI strategy. 2025-11-10 — a research institute launched a national-language AI project. 2026-07-16 — the national university formally adopted its own AI strategy, ethical framework and usage charter aligned with the national strategy. An academic institution producing governance instruments of its own is what this indicator asks for, and it happened once.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Botswana	The national research agenda spent P9.5m across the same 45 projects in the year, five completed and none added. 2026-03-25 — P9.5m was spent across 45 projects, five completed and no new projects added, on an agenda Cabinet approved in July 2025 with eight focus areas and 22 thematic priorities. The 45 were approved in 2024 and carried forward, so the project count is unchanged for a second year. A research agenda that adds nothing in a year is not a pipeline. Nothing on this ledger records a think tank, a policy institute or a university department contributing to digital policy, and the roadmap reported under strategy names no research input.	NO CHANGE
Burkina Faso	An interdisciplinary artificial-intelligence research centre at the virtual university carries over fifty doctoral students and public-sector risk analysis; an international conference was hosted with a national university in June 2026. The standing institution is the interdisciplinary artificial-intelligence centre hosted at the virtual university, with over fifty doctoral students and active projects in fundamental and applied research, training and public-sector risk analysis. The repository carries no account of it since April 2025. 2025-10-29 - a private university held an inaugural conference on artificial intelligence and African development under the digital transition ministry's patronage. 2026-06 - the ninth international conference on emerging technologies for developing countries was held in Ouagadougou, co-organised with a national university and indexed by an international publisher. Conferences and a centre are what the repository holds. No research funding line, publication count or commissioned policy input is on it, and the roadmap the universities were consulted on has not published its text.	MOVEMENT
Burundi	A first documented research workshop drew university lecturers, doctors, developers and students, with no funded programme behind it. 2026-07-27 — the first documented workshop on artificial intelligence and data drew university lecturers, doctors, developers and students. No baseline was held and no funded programme, research centre or academic department is named. One convening by an alumni association is the whole of the country's research contribution to digital policy on this ledger. The national strategy's education and research pillar names no institution, and no university programme, publication or advisory body appears anywhere for the country.	MOVEMENT
Cameroon	Two independent institutes publish on digital policy — a 2026 brief turning the artificial intelligence strategy into an implementation agenda and a December 2025 review of technology-sector law and readiness. One institute issued a note in November 2022 analysing digitalisation and the performance of public administrations, and a brief in January 2026 translating the national artificial intelligence strategy into an implementation agenda covering infrastructure and energy, skills, governance and inclusion of the informal sector. Another published in December 2025 a review of technology-sector law, the digital transformation project, the artificial intelligence strategy and readiness indicators, with policy recommendations. Neither is commissioned by government and no research funding line is held. The academic side is newer and narrower: a chair in digital governance is being set up to structure research and training, fund doctoral study and provide advanced training for regulator staff.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cape Verde	Two centres were constituted inside six weeks: a university research centre in business and governance on 31 October 2025 and an independent fact-checking centre on 10 December. 2025-10-31 - the university's business and governance school launched a research centre in business and governance, its tenth active centre, with 25 members and 81 publications and research lines including governance, public policy and development. Its director states the centre exists to produce endogenous knowledge supporting government decision-making, and one of its named projects is an observatory turning official statistics and central bank data into indicators such as cost of living and municipal development indices as input to public policy. 2025-12-10 - the university, the media regulator and the journalists' union signed the institutional protocol creating and regulating an independent non-profit fact-checking centre on a hybrid model of regulation, academic research and journalistic practice: the university hosts the scientific and academic nucleus responsible for studies, reports and knowledge production on information integrity, the regulator holds editorial and operational coordination, and a United Nations joint office supports implementation of a monitoring platform. The rector frames generative artificial intelligence and circulating false videos and audio attributed to public figures as the threat the centre answers. Neither is funded from a national research line: no national research funding line for digital or artificial-intelligence research is held.	MOVEMENT
Central African Republic	The national university's multimedia resource centre, established in 2002, is the clearest academic unit with a digital remit held. The university's multimedia resource centre, established in 2002, is the clearest academic unit with a digital remit the repository holds, and its own page is the source. 2026-05 - a conference paper by researchers based in the country studies the university's deployment of a communication platform as a digital-sovereignty case; its full text is behind a paywall and only the abstract is held. No instance of either being cited in a government instrument, and no think tank contributing to digital policy, appears anywhere on this ledger.	NO CHANGE a first stated position with no earlier account behind it
Chad	The national research centre carries an AI team and gained a dedicated research laboratory in August 2026. The centre was created by restructuring and renaming an earlier research support body under arrete of 3 September 2015, is a scientific and technical establishment with legal personality and management autonomy, and carries an artificial-intelligence team spanning health, farming, education and governance (centre). The first national artificial-intelligence scientific days were held there from 29 December 2025, opened by two ministers, with plenaries, thematic round tables and research presentations (scientific days). Arrete n. 095 of 3 August 2026 created an interdisciplinary artificial-intelligence research laboratory inside it with a mandate to draw up a national research plan (laboratory).	MOVEMENT
Comoros	A research institute delivered the country's first national data strategy through a continental project, validated in August 2026. 2026-07 - the institute reconvened ministers, regulators, private sector, universities, researchers and development partners for a two-day review and collective validation of the draft strategy, after an initial capacity-building phase in May. 2026-08 - the strategy was validated, delivered through a joint African Union, European Union and German cooperation project after technical capacity-building on localising the continental data policy framework; it is the third the project has delivered, after the Gambia and Somalia. 2026-01 - separately, a peer-reviewed article examined integrating the Comorian vernacular into information-technology solutions across tourism, public administration, education and telecommunications, recommending a national language and culture laboratory and mobile-first design. The policy research on file is one foreign institute's and one article's.	MOVEMENT
Congo	Eleven university establishments were connected to broadband, and the research ministry shaped the opening of the AI strategy. 2026-01-27 — eleven establishments of the national university were connected to broadband. 2026-05-20 — the research ministry's ICT director recommended a national ethics committee at the workshop opening the AI strategy's drafting. That is an academic contribution to a policy instrument, which is what this indicator asks. The ledger also carries rules for artificial intelligence in research, in development.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cote d'Ivoire	A university laboratory with four digital research teams runs a 2023-2027 programme, and a national workshop opened work on scientific governance. The clearest documented academic unit with an explicitly digital mandate is a multi-disciplinary laboratory hosted since 2017 at the national higher school for information and communication technology, with four named research teams covering intelligence and security of digital systems, digital economy and ICT law, optical networks and telecommunications, and mathematics, algorithms and complexity, on a 2023 to 2027 programme. 2025-12-15 - the science, technology and innovation fund opened a two-day workshop on integrating emerging technologies into the financing, execution and evaluation of research, across working groups on modernising scientific governance, quality and integrity of output, and digitalised research steering with scientific data governance. Its stated outputs - a national roadmap, quality standards and institutional recommendations - are not published. No instance of either body's work being cited in a government instrument is on the repository.	MOVEMENT
Djibouti	Academia joined the artificial-intelligence strategy workshop; no research programme in a digital field is on record. This is a searched absence rather than an unexamined one. The sole public university's own regional strategy is structured around training, research and governance, and the text held names no digital or data-science research programme. 2026-01-22 - the national artificial-intelligence strategy workshop of about eighty participants included academia alongside government, the United Nations, the private sector and civil society - the one recorded instance of academic contribution to digital policy. No think tank, no research centre mandate, no funded programme and no published research output in the field appears on file.	NO CHANGE
DR Congo	The national university created a centre of excellence in artificial intelligence and geomatics in 2024 and awarded its research prize to an applied traffic-governance tool in August 2026. No domestic research funding line is held. 2024-08-17 - the national university's rector signed a memorandum creating a centre of excellence in artificial intelligence, geomatics and climate change, confirming its existing master's programmes in artificial intelligence and in geomatics, run under a regional academic mobility programme with six other institutions. 2026-08-29 - its transdisciplinary research programme awarded its excellence prize to a project developing an artificial-intelligence and spatial-analysis decision-support tool for traffic governance in the capital — locally produced applied research from a national department. 2026-07-09 - a research institute launched a citizen barometer tracking government commitments and their implementation. All three run on external programmes or their own resources: no domestic public funding line for digital or artificial-intelligence research is held at any date.	MOVEMENT
Egypt	An applied innovation centre works at the intersection of policy, research and execution, and a working paper analysed 28,311 job postings. The centre was established in 2019 to turn emerging digital technologies into practical solutions for national challenges, working at the intersection of policy, research and execution. It sits inside the ministry rather than outside it. 2026-04-07 - an independent working paper analysed 28,311 online job postings during 2025 to construct an automatability index, finding clerical work most exposed - the clearest non-governmental research contribution on the country's own digital labour market the repository holds. Nothing records either being cited in a government instrument.	MOVEMENT
Equatorial Guinea	Doctoral findings on big data, interoperability and digital identity were presented at the July 2026 forum, the only national research on record. No research programme, funding line or publication is held (presentation). The national development strategy proposes a science, technology and innovation fund that may be financed by a special tax on oil and gas exports, and that fund does not exist, so one doctoral presentation is the whole of the research record.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Eritrea	The 2002 proclamation gives a state agency a research mandate covering information science. The legal foundation is strong and dormant. The 2002 proclamation establishes a national science and technology council chaired by the head of state, a development agency and an advisory board, and gives the agency's research office a mandate covering information science and technology, with power to establish research and education institutions in the field. No output of that agency appears on the repository. What research capacity is visible is delivered from outside — geospatial workshops run by a regional economic commission — or argued in a long-form piece making the case for an Eritrean internet gateway, several international routes and domestic hosting. Independent domestic publication is itself absent.	NO CHANGE
Eswatini	A university computer science department names a health-informatics research group and a cybersecurity and forensics group alongside a masters programme. The department runs undergraduate and masters programmes in computer science, information technology and information science, and lists two research groups, one in health informatics and one in cybersecurity and forensics, with pages for publications and conferences and for research grants (department). It also hosts an ICT fair, a deep learning event and a hackathon, and acknowledges a development agency for sponsoring student data during remote teaching (activity). No funding line, output count or contribution to national digital policy is stated for either group, so what the department contributes to policy is not established.	NO CHANGE
Ethiopia	A university law school is drafting the online-infringement amendment with the intellectual property authority. The amendment to the copyright proclamation is being drafted with the Addis Ababa University School of Law after several rounds of consultation (drafting). That is the whole of the record: no think tank, research centre or academic department is otherwise named as contributing to digital policy, and no commissioned research, submission or advisory appointment is held.	MOVEMENT
Gabon	The national research body holds a department of scientific and technological information; a university hosted ministers on artificial intelligence in November 2025. The nearest standing institutional capacity sits inside the national research body: a department of scientific and technological information attached to its general commissariat, charged with the collection, conservation, processing and diffusion of that information and with establishing a scientific and technical information network. 2025-11-11 - a university hosted a day of reflection around the human development report themed on artificial intelligence, attended by the higher education and digital economy ministers, a United Nations resident representative and the Secretary-General's special representative for the sub-region — the clearest instance of a university convening policymakers on digital questions. 2026-05-04 - the first international forum held in the capital closed after two days on economic transformation, with the national research body's commissioner general speaking on sovereignty over strategic resources. Convening is not commissioning: no national research funding line for digital technology or artificial intelligence is held.	MOVEMENT
Gambia	Cabinet approved a bill to establish a national research, development and innovation council (approval). Cabinet approved a bill to establish a national research, development and innovation council (approval). The council does not yet exist. The academic side is teaching rather than research: the national university's technology school offers three bachelor's degrees and six-month diplomas in artificial intelligence, cybersecurity and data science, and a memorandum with a regional mathematics institute signed on 10 December 2025 maps a satellite centre with no site or funding yet. No Gambian think tank or academic department is recorded contributing a published output to digital policy.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Ghana	A GH₵100 million national research fund and a US$30 million grant for a science and technology university put public money behind research capacity for the first time in this repository. The Ghana National Research Fund (fund), established under Act 1056 and launched in June 2026, carries GH₵100 million, about US$8.88 million, for 2026 across competitive research grants, doctoral and postdoctoral programmes and priority research projects, with 2026-2030 priorities of research talent, competitive funding and industry partnerships; it is separate from the US$250 million committed to a national artificial-intelligence computing centre (fund). A planned university of science and technology at Damongo, intended as a centre for robotics, digital sciences and artificial intelligence, has a US$30 million Chinese government grant (grant) against a cost the education minister puts at more than US$100 million to complete and equip (shortfall). No construction timetable is stated. A university white paper written with a professional institute and the cyber-security authority remains the repository's only academic contribution to policy itself (white paper).	MOVEMENT
Guinea	A West African mathematics institute is teaching a pilot cohort of 45 students inside the national university. The Institut Ouest-Africain de Mathematiques has been structured inside the Universite Gamal Abdel Nasser de Conakry, with two associate lecturers recruited from Benin and Senegal and a pilot cohort of 45 Guinean and foreign students already teaching ahead of the official opening. No research output, funding line or programme budget is held for it, and nothing states what it contributes to digital or data policy.	MOVEMENT
Guinea-Bissau	A master's dissertation finds electronic governance blocked by weak infrastructure and no legal framework. Two pieces of research bearing on Guinean digital policy appeared in the window, and neither was produced by a Guinean institution. A master's dissertation at a Portuguese polytechnic finds electronic governance thin, blocked by weak infrastructure and the absence of a legal framework, and a preprint maps the online networks of around 445,000 followers behind political mobilisation since 2013. The domestic research network the ledger carries remains planned.	MOVEMENT
Kenya	Civil-society bodies made formal submissions on three artificial-intelligence instruments inside a year, and published research on election misinformation ahead of 2027. A network annual report for 2024 sets out a standing programme of policy work and community convening (report). A memorandum on the Artificial Intelligence Bill was submitted to the Clerk of the Senate in May 2026, welcoming the bill and putting comments to it (memorandum). A separate submission on the draft artificial intelligence and emerging technologies policy went to the ICT state department's committee in August 2026 (submission). What the repository does not hold is any record of a submission changing a published draft. 2026-09-09 - research as well as submissions: a report titled 'Many Microphones, Little Accountability' was launched at a webinar, warning that alternative media platforms are reshaping how Kenyans get political news and opening a path to misinformation ahead of the 2027 general election, The report text is not held, only the launch account, and no methodology or measured prevalence is stated in it. 2026-09-24 - the same regional network submitted comments on the data regulator's draft guidance notes on AI and on emerging technologies, asking for impact assessments before any biometric processing and audits of platform feed algorithms.	MOVEMENT
Lesotho	One joint review of digital public infrastructure with the national university's mathematics and computer science department is the whole of the record. The ministry and the National University of Lesotho reviewed digital public infrastructure progress together on 20 February 2026 (review). No research programme, funding, publication or output has followed it into the repository, and no other academic body or think tank is recorded contributing to digital policy.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Liberia	A university design pack for a first AI master's, and an independent tracker of the government's digital commitments. A three-day co-design workshop in November 2025 produced a programme design pack with draft curriculum, partnership strategy and infrastructure recommendations for Liberia's first master's degree in artificial intelligence, following a service agreement signed earlier in the year. On the think-tank side, an independent monitoring report covering January to December 2025 tracks 378 government interventions including biometric identity, electronic procurement and digital government. The structural constraint is unchanged: four of about 30 tertiary institutions offer IT-related bachelor's programmes and no IT master's degree yet exists.	MOVEMENT
Libya	The one analytical contribution on file is the Seventh National Human Development Report, in preparation under a UNDP memorandum with the identity authority. UNDP and the identity authority signed a memorandum on data systems and human development in July 2025 (memorandum), and the report was in preparation as at February 2026 (progress). No domestic think tank, university department or research centre is recorded contributing to digital policy, and the report itself has not been published.	NO CHANGE
Madagascar	A university connectivity and artificial-intelligence initiative was announced in January 2026, with no campus connected or facility opened on record. The initiative would bring high-speed internet and artificial intelligence to universities (initiative). Nothing has been recorded delivered under it since. No university department, research centre or think tank is recorded contributing to national digital policy, so the academic side of the record is an announcement and a funded skills line elsewhere in this ledger.	MOVEMENT
Malawi	A national research repository launched and a university project began evaluating language models in healthcare. The dedicated institution is one: a not-for-profit company incorporated under the companies statute whose stated mission is independent digital-policy advocacy, consultancy and research. No publication, submission or funding figure for it is on file. 2026-02 - the research and education network launched a national federated repository with digital object identifier support, to raise the visibility of Malawian research output. 2026-04 - a university began a twelve-month project evaluating large language models for primary-healthcare settings, with the health ministry and the medical council. It is the only applied artificial-intelligence research with a government counterparty the repository holds, and its findings are not yet on the record.	MOVEMENT
Mali	The repository holds no long-term national research strategic plan, and the higher-education digital framework validated in 2024 is the nearest thing to one. The national higher-education and scientific research policy document of 2009 is the repository's oldest source for the country, and it records no long-term research strategic plan and a teacher-student ratio of one to a hundred at the main university (policy). No think tank, research centre or university department is recorded contributing to national digital policy, and the sovereignty proposals adopted in 2026 were produced by a government week rather than by any research body.	MOVEMENT
Mauritania	The university's computing and data sciences research unit lost its accreditation period in May 2024 with no renewal published, having held sixteen doctoral candidates. The unit at the science and technology faculty was accredited for May 2021 to May 2024 and held sixteen doctoral candidates concentrated in artificial intelligence and data science, covering network optimisation, distributed-ledger and internet-of-things process mining, health-data management and cloud-resource elasticity, with three theses defended in 2022 (unit). The accreditation period ended in May 2024 with no renewal published. It is the only research capability on the country's digital questions in the repository, and its formal standing lapsed two years ago.	STALLED
Mauritius	A national research and innovation institute was established by Act in June 2026, five years after a technologies council bill that went nowhere. An emerging technologies council was provided for in a bill of May 2021 (bill); the repository holds no evidence it was enacted or the council constituted. A national research and innovation institute was established by Act in June 2026 (Act). The higher education regulator issued amended guidelines on the use of artificial intelligence in May 2026 (guidelines). No research output, funding line or policy submission from any institution is held.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Morocco	A national research and innovation programme commits MAD 1bn to 2028 with no digital share stated, and university research now runs to an e-voting prototype and AI for climate adaptation. The programme has been in force since April 2025, funded jointly by the higher-education ministry and an industrial group, with MAD 1bn across four editions between 2025 and 2028 of which MAD 200m is directed at mobilising Moroccan researchers resident abroad. The first edition's three sub-programmes, covering research and development, young researchers and technology transfer, opened for applications between June and October 2025. No award or disbursement record is held, and no digital share of the fund is stated. 2026-09-07 - two published outputs now show what the departments are working on. Researchers at two universities built an electronic voting model combining biometric verification, blockchain and operation where connectivity is weak or absent, tested with 300 participants and published on 4 September in a peer-reviewed cybersecurity journal. It is a research platform, not a system any authority has adopted. 2026-09-10 - a review available from 1 September records an expansion of Moroccan research applying artificial intelligence to drought, water scarcity and rising temperatures, across water, agriculture, energy, cities and natural hazards. Neither account carries a paper count, funding figure or record of operational adoption.	MOVEMENT
Mozambique	The minister proposed transferring the research and education network from his ministry to the universities, with no date or instrument named. The proposal was made at the university data-centre inauguration in August 2026, with no date, instrument or governance model named (proposal). It is the only recorded move to put a national digital asset under academic governance. No research programme, publication or think tank is otherwise recorded contributing to the country's digital policy.	MOVEMENT
Namibia	Three of the four UNESCO Chairs held in Namibia sit at the science and technology university, one of them in secure high-performance computing. Only four UNESCO Chairs have been established in the country and three are housed at one university, their programmes covering water research for climate adaptation, gender and digital technologies, and secure high-performance computing for higher education and research (chairs). The university also hosts a bilateral centre of excellence in information technology and an earth observation and satellite applications research and training centre (listing). No publication record, funding line or policy output is attached to any of the chairs in the repository, so what they contribute to digital policy is not established. 2025-11 - fifty members of parliament took a four-day training on artificial intelligence and the rule of law, run by the research commission with a United Nations agency.	NO CHANGE
Niger	A statistical and economic research laboratory is being formalised between the statistics institute and Abdou Moumouni University, and is not yet operational. The statistics institute recorded a working session in March 2025 with the dean of the economics and management faculty to formalise a partnership framework and establish a statistical and economic research laboratory, pooling data collection, processing and analysis to inform national policy. Nothing in the window records the laboratory becoming operational, and the repository holds no Nigerien think tank or academic department publishing on digital transformation or data governance. 2026-08-21 - the Council of Ministers took decisions on research and innovation; the repository holds the published conclusions, not the instruments.	NO CHANGE
Nigeria	An education-technology fellowship has supported 72 companies since 2019, and its fourth cohort funds education and workforce data systems in their own right. The eighteen-month accelerator offers each company up to US$100,000 in equity-free funding and structured technical assistance, with twelve startups in cohort four and 72 companies supported since 2019 (fellowship); the intake is targeted rather than open, across learners with disabilities, displacement-affected and rural communities, girls and young women, and education and workforce data systems, the fourth category funding sectoral education data infrastructure in its own right. The reach figure of more than 700,000 new learners is the hub's own (fellowship). A vendor-run academy sits inside a government skills initiative with a startup pitch competition and a developer bootcamp, its prize partly denominated in the sponsor's own advertising credits and no cohort size, curriculum or cost published (academy); a talent-export platform partnership has run since April 2025 (export).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Rwanda	An African academic security operation centre operates through a university network based here, with no monitored-estate, incident or staffing figure published. The centre runs through a university network based in the country (centre), and a continental research and education partnership carries a grant of about US$9m from 2022 to 2027 with no progress or outturn report held at any date (partnership). An academic security operation centre is an unusual asset for a country of this size, and the absence of any operational figure means it cannot be counted as national cyber capacity in the readiness assessment recorded elsewhere.	MOVEMENT
Sao Tome and Principe	The identity institute's revised statutes give it autonomy and a research and policy-advice mandate, and a national scientific repository launched in March 2026. The statutes, approved in Council of Ministers in September 2021 and revoking the institute's 2008 founding decree, give it scientific, administrative, financial and asset autonomy under the Prime Minister, and state its purpose as implanting the information and knowledge society, promoting research and technological innovation, and coordinating the design of all state information systems (statutes). Its listed competences include recommending draft laws and budget provision on ICT matters and operating an excellence centre. The national scientific repository launched by videoconference alongside a common regional repository that has run since 2021 and aggregates more than two and a half million documents (repository). No think tank, university department or research programme is recorded producing digital policy analysis. The mandate sits with the institute that also builds the systems.	MOVEMENT
Senegal	Two artificial-intelligence research laboratories launched in January 2025 with three ministers present, and eighteen months have produced no follow-up item. They are the only standing artificial-intelligence research infrastructure the repository holds for the country, and no follow-up item has entered it in eighteen months (laboratories). A council of ministers communiqué proposes a national research and innovation fund alongside applied research laboratories, and none of the proposals is an adopted instrument (fund).	NO CHANGE
Seychelles	The science and innovation institute came into operation in April 2026, reversing the 2021 dissolution an UNCTAD review criticised. UNCTAD's policy review, commissioned by the government, documents the institute's 2021 dissolution into a departmental unit as having weakened science and technology policy implementation, and recommends re-establishing an autonomous institution (review). The statutory instrument bringing the December 2025 Act into operation was published on 28 April 2026 (commencement), and a chief executive took office on 1 June (appointment). In July 2026 the Vice-President agreed to bring the university into the consultation and planning stages of national digitalisation and AI initiatives (university).	MOVEMENT
Sierra Leone	The science and innovation council is developing its first strategic plan, with digital transformation named among the priorities funded research should answer. The Center for Information Privacy, Human-Centered Technology and Ethics Research launched in Freetown on 6 October 2026 to research the handling of personal data, train on data-subject rights and feed evidence into data-protection law and policy. A three-day workshop on strategic development, research funding and grants management convened the higher education ministry, the National Science, Technology and Innovation Council, the National Council for Higher Education and the Southern African Research and Innovation Management Association; the Deputy Minister named digital transformation among the national priorities alongside food security, healthcare, climate resilience, industrialisation and quality education (workshop). The research and education network connecting the universities has run from a secretariat at Njala University since 2016 (network). A council without a strategic plan and a network without a published output list is the whole of the research contribution the repository can see. No think tank, department or published policy paper is named.	MOVEMENT
Somalia	The national university launched an artificial-intelligence centre in July 2026, and a research partnership on official microdata closed a technical workshop with three partner universities. The centre was launched in July 2026 (centre). The microdata partnership closed a three-day technical workshop with three partner universities in July 2026, opening official microdata to academic research (partnership). Neither states a staffing level, output or funding source. Together they are the country's entire research capacity on the record, and both were stood up in the same month.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
South Africa	The country places 18th worldwide and is the only African country in the top 20 for digital-privacy research output, on a review of 4,760 articles from 2005 to 2025. 2026-08-18 — a bibliometric analysis of 4,760 articles over twenty years places the country 18th worldwide and the only African country in the top 20 for digital-privacy research output. It is the one place on this ledger where the country ranks near the top of anything. Two qualifications carried by the same review. It measures volume of output, not the coverage of the populations most exposed — refugees, people with disabilities, older people and racial and ethnic minorities are found notably underrepresented in that literature. And it is a first measurement here, with no earlier standing on the repository to compare, so the level is stated and the direction is not. What the repository does not hold is any link from that research capacity to policy: no research council submission, advisory panel or commissioned study appears in the instruments recorded elsewhere in this report.	NO CHANGE first measured in this window with nothing before it to compare
South Sudan	Two clause-level analyses of the 2026 statutes were published from outside government; no public research programme exists. A regional information and communications technology policy think tank analysed the 2021 Cybercrimes and Computer Misuse Provisional Order, recommending court-order requirements for data access, enactment of a data protection law, ratification of the African Union convention and deletion of the offensive-communication provision (analysis). A South Sudanese civil-society chapter published a clause-level breakdown of the Cybercrimes and Computer Misuse Act 2026 covering extraterritorial jurisdiction, 180-day data retention, content-moderation duties, critical infrastructure designation and new digital-harassment offences (breakdown), and a digital rights research organisation argued for a genuinely independent and resourced data protection authority rather than a bill alone (argument). Every contribution on record is from outside government, and none is answered in a text.	MOVEMENT
Sudan	Three research outputs were published in the window: a digital-payments policy brief, a privacy-gap series and a working paper on digitalised food assistance. A Sudan-based research institute founded in 2021 published a brief on 22 March 2026 analysing digital payments in Sudan through a digital public infrastructure frame; only its abstract is reachable (brief). A five-part series opened on 19 July 2026 on the absent data-privacy legal framework, reading wartime adoption of digital finance and AI platforms against the regional convention and the November 2025 decree (series). A working paper by researchers at the University of Khartoum and a London institution, based on 83 interviews across four states in 2025, treats wartime digitalisation of humanitarian cash as a question of political economy and data extraction (paper).	MOVEMENT
Tanzania	The country was selected as the sole national member of a global artificial-intelligence capacity development network. The selection was announced in August 2026 (membership). No member institution, work programme, funding or obligation is named. It is the only research-capacity item in this unit that is not a building or a student cohort.	MOVEMENT
Togo	A district and school data-use project entered its final phase, concluding in November 2026. 2025-12-03 — Google.org committed US$2 million of research support to the Togo Data Lab, a collaboration between the digital-transformation ministry and a Berkeley research centre, to build data-science capacity at the Universities of Lomé and Kara. The start year is inferred from a three-year description and is not published (project). It is the only research activity in this ledger, and it studies whether education data is used at district and school level — which is the question the education management information system's own mid-migration state makes hard to answer.	NO CHANGE
Tunisia	A state-linked institute published Tunisia's first study on artificial intelligence and the social role of the state in December 2025, carrying 143 recommendations. The Institut tunisien des etudes strategiques published the first Tunisian study on artificial intelligence as a lever for the social role of the state on 11 December 2025, with 143 recommendations across five sectors and built with about 125 participants. The repository holds no other Tunisian think tank or university department contributing a published position to digital-transformation policy, and nothing on what the state did with the recommendations.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Uganda	The national university's AI lab head led the readiness assessment, strategy consultations ran at university innovation hubs, and a policy centre carries a digitalisation theme. 2024-08 - the country's main economic policy research centre carries digitalisation as a discrete research theme in its own strategic plan, positioned as a knowledge broker to government. No digitalisation output from it appears in the repository inside the window. 2026-03 - the ministry took its artificial-intelligence strategy consultations to university innovation hubs among other venues. 2026-06 - the readiness assessment validated with UNESCO was led from the national university's artificial-intelligence laboratory, which is the clearest instance in this repository of an academic department shaping a national digital policy. 2026-09 - the same university explored research collaboration with a Japanese development agency on artificial intelligence and remote sensing. What is not held is any published research output feeding a policy document - the evidence is participation in processes rather than papers.	MOVEMENT
Zambia	The revenue authority signed a research memorandum and a non-disclosure agreement, so the terms — and whether taxpayer microdata moves — are not disclosed. The memorandum and the accompanying non-disclosure agreement were signed in July 2026 (memorandum). A research agreement whose confidentiality clause conceals whether taxpayer microdata moves is worth recording as exactly that, in a country whose data-protection regulator has no recorded action. The domestic base has a date and a founding source: the university's computing and informatics department was established in September 1998 with Belgian development funding through a university cooperation programme, which paid for the refurbishment, the equipment and two networked laboratories across two five-year phases meant to end in self-sufficiency. It opened with a postgraduate diploma and admitted its first degree students in August 2000.	MOVEMENT
Zimbabwe	The research council's 2023 and 2024 annual reports both confirm no gross research and development expenditure figure is published. The absence is stated by the council's own annual reports, which is what makes it a finding rather than a gap in capture (2023, 2024). No research and development expenditure figure, and no share of gross domestic product, exists for this country in either report. Against an artificial-intelligence strategy proposing four institutions and a corpora programme led by universities, the country's own research council publishes no measure of what it spends on research. 2026-09 - the regulator opened a national digital technologies policy research programme with the research council, inviting proposals on AI governance, data sovereignty and platform regulation by 3 October, with no grant size stated.	MOVEMENT
