PROGRESS REPORT

# National statistics: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *54 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has* **No evidence** *on it in its own report.*

NATIONAL STRATEGY FOR DEVELOPMENT OF STATISTICS · CENSUSES AND SURVEYS · STATISTICS FROM ADMINISTRATIVE DATA

**Progress values.** *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

*The place reports do not share one window; the period above is the range they span.*

## National strategy for development of statistics

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Algeria** | A national statistics strategy for 2024 to 2028 was recalled by the statistics office; its text is not held.<br><br>2024-11-18 - the statistics office's director general recalled a national statistics strategy for 2024 to 2028 at a finance ministry information day. That single mention is the whole of what the repository holds about it.<br>The strategy's own text is not held, and no indicator, target, budget or progress report from it appears anywhere. The institutional movement around statistics has been real - oversight of the office transferred by decree in November 2025 - and none of it is stated to be under the strategy. | NO CHANGE<br>a first stated position with no earlier account behind it |
| **Angola** | A statistics development strategy for 2026 to 2032 was announced as forthcoming, with a statistics-law revision to follow.<br><br>2026-06-12 — a new strategy for the 2026 to 2032 cycle was announced as forthcoming, widening the national statistical system, with a revision of the statistics law to follow. None existed before it.<br>No source confirms that the council session, the law revision or the promised user survey took place, and no strategy document is held. What is on the record is an announcement of an approval that was to come, which is the weakest form of instrument this frame records.<br>The statistical machinery it would govern is producing: the 2024 census and its portal are reported under censuses and surveys, and the capacity loan behind them under development-partner financing.<br>2026-09-29 - the draft 2026-2032 statistics strategy went to public consultation until 2 October 2026. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Benin** | A national development plan to 2035 was approved in May 2026 with its own monitoring indicators. No current statistical development strategy is held.<br><br>2026-05-13 — the Council of Ministers approved the national development plan for 2026 to 2035, with explicit monitoring indicators including a Gini index and a rule-of-law index. It is a results framework the next statistical strategy will have to support.<br>The strategy itself is absent: no current national strategy for the development of statistics, and no dated successor to one, is on this ledger. | MOVEMENT |
| **Botswana** | A second statistics development strategy for 2026 to 2030 was launched in August 2026, and a substantive statistician general took post.<br><br>2026-08-12 — the second statistics development strategy for 2026 to 2030 launched, aligned to the twelfth national development plan, jointly with the university. No budget, delivery milestones or indicator set is published with it.<br>2025-10 — a substantive statistician general was appointed, succeeding an acting holder, with data quality described by a named analyst as worryingly uneven.<br>Both are institutional repairs rather than outputs, and the unevenness the analyst names is visible throughout this report: two irreconcilable internet penetration figures, a fibre length with no register behind it, and a grant-payment figure restated a year later as if current. | MOVEMENT |
| **Burkina Faso** | The statistics institute formulated a 2026-2030 strategic plan that sets out platforms to exploit administrative data, under an organic statistics law requiring a visa before any collection of individual data.<br><br>2025-10-01 — the statistics institute's 2026-2030 strategic plan was formulated, setting out platforms to exploit administrative data, civil registration included, for demographic statistics disaggregated below national level, where no statistical development strategy was on file.<br>The governing statute is older and stricter than it looks: an organic statistics law of December 2021 requires a statistical visa from the minister before any collection of individual data. It defers its operating detail to regulation at least five times, which is the same pattern as the data protection law reported under legislation, and with the same consequence — a duty asserted without machinery.<br>Nothing states whether the visa requirement has been applied to any of the enrolment, registry or platform collections described in this report. | MOVEMENT |
| **Burundi** | A third-generation strategy is in force and its mid-term evaluation was reported to the statutory sector group in July 2026.<br><br>The 2022 decree replacing the former institute with the national statistical authority charges its coordination department with elaborating and coordinating implementation of the national strategy for the development of statistics — the mandate in national law rather than in donor commentary.<br>2026-05-08 — a validation workshop was held for the national statistical system's communication and dissemination strategy, aligned to regional guidelines.<br>2026-07-28 — the statutory sector statistics group met with the recommendations of the third strategy's mid-term evaluation on its agenda, establishing both that a third-generation strategy is in force and that its mid-term evaluation has reported. Neither the strategy nor the evaluation is published, so the repository can date the process and not read its findings. | MOVEMENT |
| **Cameroon** | The 2021-2030 strategy rests on the 2020 statistics law, whose articles 20 to 22 place it at the centre of statistical activity; a regional harmonisation project's steering committee first met in February 2026.<br><br>The strategy's copy held carries no adoption date and the capture reaches its front matter and the opening of the preface only, so its own axes and costings are not on the repository. Its legal basis is the 2020 statistics law and the 2021 decree fixing its modalities.<br>2026-02-25 - the steering committee of a financier-backed regional harmonisation project met for the first time; for this country the project is to enable migration by 2029 from the enhanced general data dissemination system to the special data dissemination standard, in support of the strategy.<br>2026-04-07 - the statistical information council's first extraordinary session examined the 2027 annual work plan and recorded that the 2026 plan totalled FCFA 31.5bn, FCFA 12.8bn domestic and FCFA 18.2bn external, funding the sixth household survey, a multiple indicator survey, the population and agriculture censuses and the quarterly employment survey. External financing is the larger share of the programme. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Cape Verde** | The fourth national statistics strategy runs 2022-2026, and the budget support group called in November 2025 for a dedicated fund to give it predictable financing.<br><br>The strategy is authored by the statistics institute on four strategic objectives — widening and coordinating the national statistical system, strengthening human, material, technological and financial capacity, improving coverage and quality of statistical production, and strengthening communication, dissemination and use of official statistics — with an evaluation of its predecessor, a diagnosis, a logical framework, an action plan and a budget and financing plan.<br>2025-11-28 - the budget support group's mission communique records progress on implementation, presses the importance of timely reliable statistics for policy, calls for creation of a dedicated fund for statistical production to give the strategy predictable and sustainable financing, notes the announced implementation of new methodologies for the household income and expenditure survey, and asks that gender indicators be consolidated in the national statistical system.<br>2026-07-07 - a consultancy to evaluate and modernise the fisheries statistical system went to expressions of interest under a World Bank credit.<br>The strategy's term ends in 2026 and no successor is held, while the institute itself is under an independent evaluation ordered by the head of government into alleged interference and manipulation of data. | MOVEMENT |
| **Central African Republic** | The second statistics strategy is being implemented through a development-bank-financed regional project.<br><br>2026-10-10 — a mid-term evaluation held in Bangui on 7 to 9 October, financed by UNDP, is to update the strategy with revised indicators and a realigned calendar.<br>2026-06-08 - the statistics institute's own workshop report is the most current statement that the second national strategy for the development of statistics is being implemented, through a development-bank-financed regional statistics project.<br>Two strands sit under it. A national data management, processing and dissemination policy was validated in March 2026, and an initiative under way since September 2025 would include forcibly displaced people and those at risk of statelessness in national statistics for the first time.<br>The strategy's own text is not held, and no indicator from it is published. | MOVEMENT |
| **Chad** | The 2021-2025 statistics strategy runs out this year, with 105 million dollars financing the system.<br><br>The strategy was adopted by decret of 14 October 2021, and 126 of 234 sustainable development indicators had a published baseline at the 2024 assessment (assessment).<br>The World Bank is financing the national statistical system at 105 million dollars, more than a third of it for the third population and housing census and for human resources, with 78 bursaries to regional statistics schools granted (financing).<br>The institute trained 90 national and regional journalists over three days in November 2025 on the statistical system and the census (training). No successor strategy is held. | MOVEMENT |
| **Comoros** | A statistical capacity project funded census-cartography training in April 2026, against US$1,500,000 over five years.<br><br>The project was described in a note as US$1,500,000 over five years to close the statistical gap, with no delivery held.<br>2026-04-13 to 24 - it funded a ten-day mapping and field-survey training for the statistics institute with external expertise, ahead of the census in 2027.<br>It is the one document in the country-year quoted in dollars and should not be converted into the local-currency series, and no separable domestic statistics appropriation exists - so the country's statistical capability, like its data-protection authority and its interoperability layer, is financed entirely from outside.<br>A joint programme supports the government in monitoring development indicators through a digitised, innovative and accessible statistical system and ran from January 2022 to December 2023 on a total budget of US$1,350,400; no output or indicator count is stated, so it is a programme description rather than a results record. | MOVEMENT |
| **Congo** | The statistics institute validated indicators for the fifth census, and a regional statistics programme validated its 2026 work plan.<br><br>2025-11-29 — the statistics institute held a workshop validating indicators for the fifth population and housing census.<br>2026-02-11 — the steering committee of a regional statistics harmonisation programme validated its 2026 annual work plan.<br>The standing instrument is the statistics statute the ledger carries. The strategy itself runs to 2026 and no successor is held. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Cote d'Ivoire** | The 2026-2030 statistics strategy reached technical validation on 30 April 2026, described as the final step before adoption, which is not yet recorded.<br><br>2025-09-17 - a workshop adopted the diagnostic report on the national statistical system by consensus as the basis for the strategy, with public administrations, the private sector, partners, civil society, media and academia present.<br>2026-04-30 - technical validation of the drafted strategy opened, described as the final step before official adoption; it carries a diagnosis, strategic orientations and a costed action plan, is aligned to the national development plan, and expressly takes in digital transformation, big data and artificial intelligence. Adoption is not recorded since.<br>2026-06-08 - the planning and housing ministries agreed to accelerate reliable indicators on rents, land dynamics and household expenditure, on a mechanism the statistics agency presented. | MOVEMENT |
| **Djibouti** | The third statistics development strategy was validated in April 2025 and has no adoption instrument held.<br><br>The 2025-2029 strategy was validated at a statistics institute workshop on 29 April 2025 with no adoption instrument held, and the position is identical at both ends of the window.<br>Seventeen months after validation no adoption decree, budget or indicator set under it appears on file. The institute did publish in the period - the census locality directory and the definitive census results - and nothing on file ties either to the strategy. | NO CHANGE |
| **DR Congo** | The only strategy on file expired with no successor formally adopted; what has moved is the normative frame, with the continental statistics charter authorised for ratification in September 2025.<br><br>The country's own strategy, prepared by the statistics institute, is the only one the international statistical partnership records on file, expired with no successor formally adopted as of its January 2026 status table. The capture covers the title page, contents, acronyms and opening context section.<br>2025-09-03 - the head of state authorised ratification of the continental statistics charter, the planning minister stating that the statistical system had operated on an obsolete normative framework inadequate to international standardisation requirements — the government's own account of the gap.<br>2026-08-28 - the council of ministers adopted draft ordinances modernising the legal and institutional framework for statistical activity, covering collection, processing, production, dissemination, conservation and protection of official data, presented as the country's first legislation on the subject. A new legal frame is being built over a strategy that lapsed nine years ago. | STALLED |
| **Egypt** | The sixth economic census results were announced with a new agency website; the strategy behind them is not published.<br><br>2025-10-27 - on World Statistics Day the agency announced the results of the sixth economic census, adding three new fields - electronic commerce, outsourcing services and the green economy - and launched a new website.<br>2025-11-30 - it published the annual marriage and divorce bulletin for 2024: 936,739 marriage contracts against 961,220 the year before, and 273,892 divorce cases against 265,606.<br>The strategy itself has been in preparation for nearly two years and no text, indicator or timetable from it is held, so the outputs are visible and the plan is not. | MOVEMENT |
| **Equatorial Guinea** | A successor strategy for 2027-2031 was opened in April 2026 and the first national indicator catalogue launched in June.<br><br>The 2022-2026 strategy carries a diagnosis, an action plan and costed activities, and its term is ending.<br>The institute's committee reviewed 2025 progress and opened work on a 2027-2031 successor in April 2026, and the first national indicator catalogue was launched with regional statistical support in June to standardise definitions across producers.<br>2026-08-25 — the government adopted a national quality-assurance framework for official statistics, a standard protocol for collecting, processing and disseminating socio-economic data. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Eritrea** | A two-week training in national accounts compilation and a database system was delivered in Eritrea in January 2026. No statistics law sits under it.<br><br>The training delivered in the country covered compilation of output by the production approach under the 2008 international standard, and the national accounts database system over two weeks in January 2026. That is methodology and infrastructure together, and it is the most substantial statistical capacity work the repository records.<br>It has no statutory foundation. A mid-term review recorded the draft statistical proclamation as submitted and pending in 2007, and no later enactment has been located, so the office operates without a statutory mandate. The population and health survey completed in 2025 is the other half of the picture: capacity being built without a strategy naming what it is for. | MOVEMENT |
| **Eswatini** | The international statistics partnership's January 2026 table records the strategy as Designing, with no title or period against the country's name.<br><br>The table gives a strategy title and period for most countries in the region and records Eswatini as Designing with neither (table).<br>The statute beneath it is the Statistics Act of 1967, unamended on this repository (Act).<br>Capacity is being built in pieces rather than by strategy: a food-balance-sheet training in November 2025 established a national technical working group under the statistics office to regional standards (training).<br>The largest statistical operation of the decade, the 2027 census, is funded at E130.5 million and under way without a strategy behind it. | NO CHANGE<br>recorded as Designing while neighbours are implementing |
| **Ethiopia** | The strategy of record is the second national statistics-development strategy, whose period ran to 2019/20 (NSDS II).<br><br>The second National Strategy for the Development of Statistics, covering 2015/16 to 2019/20, was adopted by the Statistics Council and succeeded the 2009 first strategy (NSDS II).<br>What moved in the window was legislative rather than strategic: the House of People's Representatives approved the Ethiopian Statistical Service Proclamation on 30 June 2026, intended to strengthen the service's independence and align the national statistical system with international principles (approval).<br>No third strategy was located at the probe date of 28 August 2026, so the planning instrument has been out of period for six years while the statutory basis is being replaced. | NO CHANGE<br>the strategy on the repository expired in 2019/20 and no successor is held |
| **Gabon** | The only statistical-capacity finance the repository holds closed against US$50m committed, with no successor operation.<br><br>The project was committed in 2017 and closed in 2023, before the window opened, and nothing has replaced it (statistical project).<br>No national strategy for the development of statistics, no statistical office output and no successor capacity operation is on file, so the census now under judicial verification is being run without any of them recorded. | NO CHANGE |
| **Gambia** | NSDS III runs 2024-2028 and its finding that the governing statute needs revision is unactioned.<br><br>The strategy is in force for 2024-2028 and found more than a third of officials unaware of the Act it says needs revising.<br>It is delivering surveys — a national food security survey across all eight local government areas was published in May 2026 — while the legal reform stays where the African Union peer review left it in November 2025: urged, not done. | NO CHANGE |
| **Ghana** | The third statistics strategy is a funded commitment carrying GH207m for rebasing and is named among three forthcoming instruments.<br><br>2025-11-13 - the budget carries GH207m for rebasing gross domestic product and the consumer price index by 2026, explicitly aligned with the forthcoming third national statistics strategy for 2026 to 2030 - the budget-line evidence that it is a live commitment.<br>2025-12-09 - at the first national data producers forum the deputy finance minister announced a GH209m 2026 allocation for statistical operations covering rebasing, surveys and real-time measurement tools, and plans to integrate administrative data systems using the national card identifier, projected to cut future census costs by over 70%.<br>2026-03-12 - the strategy is named among three forthcoming policy instruments alongside a data quality assurance framework. No text is held. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Guinea** | The second strategy was adopted for 2016-2020 and no final text of the third for 2021-2025 has been published; execution runs on donor-financed operations instead.<br><br>The council adopted the second strategy as the reference framework for all actors in the statistical field, with four strategic axes, eleven operational objectives, a diagnostic and an action plan costed at 444.2 billion in national currency.<br>Nothing has replaced it on the record. The institute published a validation workshop in May 2022 and a mid-term update in December 2024, and no final adopted text of the 2021-2025 strategy is on its portal.<br>2025-11-16 - what the programme actually runs on is visible: collection for the first wave of the second harmonised living-conditions survey was launched with 108 enumerators covering 4,140 households over three months, executed with World Bank technical and financial support through a regional statistics project. The census that preceded it put the resident population at 17,521,167 with digital technology used at every stage for the first time and a post-enumeration survey validating coverage, funded by two international agencies with over 22,000 enumerators deployed. | STALLED |
| **Guinea-Bissau** | The ENDE 2018-2020 statistics strategy was validated in October 2018 after its predecessor executed at 24.13%.<br><br>The ENDE 2018-2020, validated in October 2018, programmed a population census and an agricultural census for 2019.<br>Beside it stand the statutory frame and the operation: the 2007 framework law on the ledger, and the fourth census launched into field enumeration in June 2026 after recruitment opened for about 5,000 staff. | NO CHANGE |
| **Kenya** | A second national statistics strategy was published in July 2025, followed by a gender sector plan under it.<br><br>The second strategy for the development of statistics was published in July 2025, the government stating the role of data and statistics in legislation, policymaking, resource allocation and service delivery (strategy).<br>A gender sector statistics plan for 2024 to 2028 was published in March 2026 (plan).<br>A bill published in April 2026 would replace the governing statute with one establishing a statistics authority (bill). The strategy is published and no implementation or mid-term report under it is held. | MOVEMENT |
| **Lesotho** | The strategy covering 2022/23 to 2026/27 is in force and was peer-reviewed for the first time.<br><br>2026-08-29 — the Bureau of Statistics lists the strategy for 2022/23 to 2026/27 alongside the 2001 Act as its current framework.<br>2025-12-12 — the first independent peer review of the national statistical system assessed the strategy and recommended legal and coordination reforms, the fourth Statistics Bill among them.<br>2026-02-27 — an EU-funded initiative launched to strengthen the Bureau's institutional framework and system coordination.<br>The strategy runs out in 2026/27 and no successor is on the record. | MOVEMENT |
| **Liberia** | NSDS III was signed at Monrovia on 15 December 2025 for 2026-2030 on three pillars.<br><br>The third national strategy for the development of statistics was signed on 15 December 2025 and runs 2026-2030 across three pillars. It is the instrument this indicator asks whether exists, and it now does.<br>Its evidence base followed a month later: the first national diagnostic of how the statistical system is used and where it fails users, published in January 2026. | MOVEMENT |
| **Libya** | The 2018-2023 strategy expired unrenewed, with no adoption decree ever located.<br><br>The strategy was Libya's first, produced with international support, and the repository could locate no decree adopting it.<br>Its term ended in 2023 and no successor has been published, leaving the statistical system running on a 1963 statute and no current plan.<br>The Ibrahim Index scored the capacity of Libya's statistical system at 15.2 out of 100 for 2023, last of 54 African states and 20.2 points lower than in 2014, the year the strategy's term ended. | NO CHANGE |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Madagascar** | The second-generation statistics strategy is in force; no implementation or mid-term report under it is held.<br><br>The strategy was published as the second generation of the national statistical development plan (strategy).<br>The statistics office marked African and world statistics day in November 2025 (observance).<br>What the repository does not hold is any implementation report, mid-term review or costing under the strategy. The activity recorded in the window — a microdata platform, a census project document, alignment of public finance statistics — cites projects and external assistance rather than the strategy as its authority.<br>A continental governance index scores the capacity of the statistical system at 42.9 out of 100 for 2023, 34th of 54 and up 20.1 points since 2014, among the country's most improved indicators.<br>The index does not attribute the gain to the strategy. | NO CHANGE |
| **Malawi** | The strategic plan is finalised and implementing for 2026 to 2030, expanding participation from 17 to 35 agencies.<br><br>The international statistical partnership's January 2026 country-status table lists the national statistical system strategic plan as finalised and implementing for 2026 to 2030, which is the most current authoritative statement of where the instrument stands.<br>2026-04 - the statistics commissioner described the finalised plan as expanding participation in the national statistical system from 17 to 35 ministries and agencies.<br>The plan's own text is not on file, so what it commits those 35 bodies to is not knowable from the repository, and the 17 to 35 figure is the commissioner's, given in an interview rather than in a document. | MOVEMENT |
| **Mali** | The statistics master plan covered 2020-2024 and its annual review reached a seventeenth technical session in August 2026 ahead of the adoption of a fourth plan for 2026-2030.<br><br>2026-10-09 — the Council of Ministers took note of the fourth statistics master plan and its action plan for 2026 to 2030, set on four axes. No budget is stated and the text is not held.<br>The public statistics law of 2016 is the instrument behind the plan and the national statistics council that oversees it (law, council).<br>The institute publishes a quarterly bulletin of statistical activity and a manual harmonising collection methodologies and indicator definitions across the system (bulletin, manual).<br>A review still running against a plan whose period expired two years ago is the clearest thing the record says about the planning cycle. | MOVEMENT |
| **Mauritania** | The decadal statistics strategy runs to 2030 but its first action plan covered 2021-2025 and no successor plan or implementation report is held.<br><br>The strategy carries an action plan for 2021-2025 whose period has run out (strategy).<br>The statistics agency's orientation council was named in Council of Ministers in March 2026 (council), and the agency publishes monthly statistical bulletins carrying a communications price index (bulletin).<br>The country's position on the continental statistics charter is recorded on the union's own list (charter). | STALLED |
| **Mauritius** | The 2020-2025 statistics strategy was externally assessed in December 2025; its own period has ended with no successor held.<br><br>The strategy covers 2020 to 2025 (strategy).<br>An observance of standards and codes data module assessed the statistical system in December 2025 (assessment).<br>The 2026-2027 budget annex carries the statistics office's independence (annex). The strategy's horizon has passed; what replaces it is a governance change rather than a published successor strategy. | MOVEMENT |
| **Morocco** | A 51-article statute promulgated on 28 July 2026 remakes the planning commission as an autonomous good-governance body.<br><br>The reform was announced before it was legislated: the commission's head set out a peer-reviewed overhaul of official statistics, a 2026 employment survey reform and administrative data agreements in October 2025.<br>The statute followed, adopted unanimously by the second chamber in July 2026 and promulgated on 28 July, splitting the statistical and evaluation functions across 51 articles, alongside the law creating a national statistical information council.<br>The reform starts from a high measured position: the Ibrahim Index scored the capacity of the statistical system at 88.7 out of 100 in 2023, first of 54 African states and up 28.6 points since 2014. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Mozambique** | An updated national statistical strategy is named as in preparation, with no draft, timetable or publication held.<br><br>It is named as one of several strategies in preparation in a December 2025 diagnostic (diagnostic). Nothing else about it is on record: no lead institution beyond the statistics office, no period, no costing and no consultation. It sits alongside a data governance policy, a digital transformation strategy and an artificial-intelligence strategy all in drafting at the same time. | MOVEMENT |
| **Namibia** | A national strategy for the development of statistics runs 2023/24 to 2026/27 at N$58,995,000, alongside the agency's own institutional strategic plan.<br><br>The strategy sets four goals covering better use of statistics for policy, efficient data processes, a better funded national statistics system and improved integration with spatial data, resting on ten first-phase sector plans, at a total implementation cost of N$58,995,000 over four years (strategy).<br>The agency's separate institutional plan covers 2022/23 to 2026/27 on four focus areas including spatial data coordination and alternative data sources, and records that funding was relatively adequate until about 2016 and that the population census slipped twice for want of funds (plan).<br>The two are distinct documents and should not be merged. | MOVEMENT |
| **Niger** | The third statistics development strategy runs to 2026, and a legal reform strengthening its governance and financing was adopted in January 2026.<br><br>The December 2025 assessment of the national statistical system confirms the third-generation strategy for 2022 to 2026 as the operative instrument, adopted in 2022 and under implementation, and names funding execution and staff training gaps as its constraints.<br>The Council of Ministers of 23 January 2026 adopted draft texts instituting the fundamental principles of statistical activity, creating a national statistical development fund, redefining the council that proposes the strategy and its execution reports, and updating the statistics institute's legal status.<br>No successor strategy for the period after 2026 is on file, and the repository holds no execution report against the current one. | MOVEMENT |
| **Nigeria** | The third statistical strategy was issued in December 2025 and the statistician-general committed to implementing it.<br><br>The government issued the strategy on 15 December 2025 alongside a national data action plan and a review of the sustainable development goals — a dated launch event distinct from the catalogue record the repository had held.<br>The statistician-general's 2026 new year message commits to implementing its reforms; the page gives no exact day.<br>The strategy text itself is still held only as a catalogue record, and no implementation report, funding line or mid-term review is published against it. | MOVEMENT |
| **Rwanda** | The fourth strategy runs July 2024 to June 2029, and the international statistical business process model was formally adopted under it in January 2026.<br><br>The fourth-generation strategy covers July 2024 to June 2029 (strategy).<br>The statistics institute formally adopted the generic statistical business process model in January 2026, alongside three companion models for information, activity and architecture (adoption) — a standardisation step under the strategy, and an adoption of an international standard in its own right.<br>The statutory basis beneath both is the 2013 statistical activities law (law). | MOVEMENT |
| **Sao Tome and Principe** | The third national statistics strategy covers 2025 to 2029, succeeding plans for 2009 to 2018 and 2018 to 2021.<br><br>The strategy sets medium-term priorities for the national statistical system and states that it succeeds the two earlier strategies (strategy). The document carries no explicit publication date and the year is taken from its own period.<br>The system it plans for rests on a 1998 statute (law) and has since returned to the field with a census (census) and a household budget survey (survey).<br>No execution report against the strategy is held, and the note recorded against the previous plan is that it was 52.8 per cent physically executed (strategy). | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Senegal** | An IMF standards and codes report found the system reliable but running at two speeds; the latest full strategy text obtainable is from 2019.<br><br>The report found macroeconomic statistics generally reliable while the system runs at two speeds, crediting the statistics agency, the regional central bank and the finance ministry and finding sector-specific agencies constrained by staffing and finance, and recommended a clearer coordination mandate through a permanent inter-agency committee (report).<br>The strategy the recommendations were accepted under is not held in its current edition: the third strategy, dated December 2019, carries the review of its predecessor, the diagnostic of the system and its own pillars and action plan, and its own period expired in 2023.<br>A fourth covering 2024 to 2028 is referenced as published in October 2025 and its revision was launched on 27 March 2026, but its text is not held and no decree adopting any edition was found. | MOVEMENT |
| **Seychelles** | The first national statistics strategy covering 2023-2027 reached mid-term evaluation in February 2026.<br><br>The African Union peer review, conducted in May 2025 and published in October, records adoption of the first National Strategy for the Development of Statistics, aligned to Vision 2033 and Agenda 2063, notes the bureau's professional independence and recommends a new Statistics Bill (review).<br>A mid-term evaluation mission ran from 16 to 20 February 2026, with its document deposited in the regional repository on 5 March (mission).<br>In June 2026 the bureau completed an externally funded organisational-structure review recommending it strengthen its coordinating role over the national statistical system (review).<br>Neither evaluation nor review is itself published. | MOVEMENT |
| **Sierra Leone** | The extended second national statistics strategy is in force, and a Power of Data framework to 2030 was published in December 2025.<br><br>The extended strategy was issued by Statistics Sierra Leone in November 2023 as the national statistical system's modernisation strategy (strategy).<br>The Power of Data Sierra Leone Country Framework 2026-2030 was reviewed nationally in November 2025 (review) and published with the planning ministry, the statistics office and UNFPA in December (framework).<br>Two overlapping frames now run over the same system, one to 2030 and one extended from a period that has closed. Neither carries a costing or a delivery report in the repository. | MOVEMENT |
| **Somalia** | A second national statistics strategy covering 2024 to 2029 was published in December 2025, superseding the 2017 to 2023 strategy.<br><br>The statistics bureau published the second strategy on 7 December 2025, replacing the first, which had run from 2017 to 2023 (launch). An external status table records it as implementing and due for mid-term review, corroborating it as the operative document.<br>The statutory basis is the 2020 statistics law, which established the bureau in place of a 1970 statute (bureau).<br>The strategy sits above an active survey programme — a census under way, a cluster survey launched and a socio-demographic survey published — rather than in front of an empty pipeline. | MOVEMENT |
| **South Africa** | The statistics office achieved 399 of 414 targets against a 23% vacancy rate and an R2.2 billion shortfall, and a strategy is now being procured under a regional project.<br><br>2026-06-23 - 399 of 414 targets were achieved for 2025/26 and an integrated indicator framework was built linking indicators to the national development plan, against a 23% vacancy rate and an R2.2 billion funding shortfall, on a published work programme for the year.<br>A near-complete target achievement rate reported alongside a quarter of posts vacant and a two-billion-rand gap is the sort of pairing this frame exists to show: the delivery figure and the capacity figure point in opposite directions and both are official.<br>2026-09-09 - until now the work programme was the nearest thing to a statistical development strategy the repository held. That changes: an expression of interest for an individual consultant to develop South Africa's National Strategy for the Development of Statistics was issued under reference BW-SADC-563161-CS-INDV, under a regional statistics project financed through a World Bank concessional arm and run by the regional community's secretariat. It is a procurement notice, not a strategy: no scope, timetable, budget or completion date is stated. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **South Sudan** | The first strategy ran to 2020 on a US$58 million budget; a second is being built out through an agricultural statistics plan.<br><br>The bureau's first strategy, covering 2014 to 2020, set legal and institutional, human resource capacity, statistical infrastructure and data development objectives on a US$58 million budget (strategy).<br>The finance minister publicly committed government support to the bureau in January 2026, covering the second strategy, legal reform, sustainable financing and administrative data (commitment), and a five-day diagnostic workshop in May 2026 produced the foundation for a Strategic Plan for Agricultural and Rural Statistics for 2026 to 2031 aligned to it (workshop).<br>The second strategy's own text is not held. Six years after the first expired, what the repository shows is work aligned to a document it cannot read. | MOVEMENT |
| **Sudan** | The 2012 to 2016 strategy has expired, and a technical support programme with Egypt's statistics agency opened in March 2026 to lay the ground for a new one.<br><br>Sudan's first strategy for the development of statistics, coordinated by the statistics bureau with development support, covered 2012 to 2016; a later 2017 to 2021 iteration is recorded as due for end evaluation and update (strategy).<br>Egypt's statistics agency received Sudan's bureau director on 30 March 2026 to launch a technical-support programme covering training, census and economic-statistics methods, and an institutional assessment explicitly framed as laying the foundation for a national statistical-system development strategy (programme).<br>The legal frame beneath both is a 2003 Act assessed as outdated (assessment). | MOVEMENT |
| **Tanzania** | The statistics master plan reported 88.9 per cent implemented in July 2026, a year before it closes.<br><br>The second Tanzania Statistical Master Plan, published in December 2021, is the current national strategy for the development of statistics, running 2022/23 to 2026/27 and budgeted at 384 million dollars for harmonisation, production and infrastructure across the statistical system.<br>The finance ministry's steering committee reported 88.9 per cent implementation since 2022/23 and approved the 2026/27 work plan and budget in July 2026, ahead of the plan's completion in June 2027.<br>A first national assessment of the skills, infrastructure, policy and data-sharing constraints on big-data use was published in October 2025, positioned as extending the plan beyond censuses, surveys and administrative sources.<br>The implementation percentage is the committee's own, with no output-level accounting behind it. | MOVEMENT |
| **Togo** | The 2020-2024 strategy has expired with no successor adopted; the council set orientations for 2026-2031 in June 2026.<br><br>The second national strategy for the development of statistics was adopted by the statistics council on 27 August 2020 for 2020 to 2024. Its capture is truncated at the fetch cap, and nothing in the repository shows it replaced.<br>At its thirteenth ordinary session on 30 June 2026 the council adopted strategic orientations for the national statistical system in support of the 2026-2031 government roadmap, and approved the 2023 and 2024 statistical activity reports.<br>A workshop of 7 to 9 July 2026 validated the operational tools for a statistical visa — a prior-authorisation mechanism for national statistical operations — to be adopted at the council's next session. Orientations are not a strategy. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Tunisia** | A statistics code promised for end-2025 was still being drafted alongside the SNDS 2026-2030 in June 2026.<br><br>The economy and planning minister told a joint parliamentary session on 21 November 2025 that the Code de l'information statistique would be finalised by the end of 2025 with wide consultations in 2026, and tied the statistical system's reinforcement to a strategy led by the Conseil National de la Statistique.<br>In June 2026 the acting president of that council said a new statistics law was being drafted alongside the SNDS 2026-2030, replacing the 1999 law and covering big data, administrative-data access, the governance roles of the council and the statistics institute, and staff retention.<br>No draft text and no adoption date is held, and the strategy itself is named on the record without being published on it.<br>2026-09-17 — the council reviewed the statistics institute's own development strategy and its 2027 work programme at its second ordinary plenary of the year, alongside the annual statistical programme and the progress of the general agricultural census. Neither the strategy nor the work programme is published with the communique, so the pattern of a named but unpublished text holds here too. | STALLED<br>the promised end-2025 finalisation passed with the text still in drafting |
| **Uganda** | The fourth statistical development plan targets functional statistical units from 72 to 80 per cent and its own implementation from 67 to 75 per cent, with a fourth bureau strategic plan finalised.<br><br>2026-01 - the bureau's vote statement sets the plan's medium-term targets: functional statistical units from 72 per cent to 80 per cent and implementation of the plan itself from 67 per cent to 75 per cent, on denominators the statement does not define. The same reporting records that the fourth bureau strategic plan for 2025/26 to 2029/30 was finalised.<br>2026-02 - under the plan the bureau handed 4,050 tablets and six computers used in the 2024 census to religious, cultural and planning institutions, to strengthen their administrative data.<br>Neither the plan nor the bureau's strategy is held as a document, so the targets reach this report through budget papers rather than from the plans themselves.<br>2026-09-06 - the bureau went to cultural institutions for administrative records, signing memoranda with the Samia Bugwe and Tieng Adhola institutions to collect, manage and share community-generated information, births and deaths particularly, arguing better administrative records would strengthen the population register and reduce what a census costs. Neither text is held and no coverage or start date is published. | MOVEMENT |
| **Zambia** | A national data science training hub launched and a donor-funded nutrition platform moved into government structures.<br><br>The second national strategy for the development of statistics runs 2023-2027, grounded in the Statistics Act.<br>2025-09 — the statistics agency launched a national data science training hub, explicitly aligned to the Act and the eighth national development plan, with bilateral support.<br>2026-04 — a donor-supported national information platform for nutrition transitioned from funded pilot into sustainable government structures. A pilot surviving the end of its funding is the test most such platforms fail, and it is the clearest evidence the strategy is producing durable capacity rather than projects. | MOVEMENT |
| **Zimbabwe** | The third statistics strategy ran to the end of 2025 and an orientation workshop for a fourth was held in May 2026; the fourth strategy is not held.<br><br>The third strategy, covering 2021 to 2025, sets the framework for planning, budgeting and implementing statistical activities across the national statistical system, and carries an annex of thematic working groups mapped to ministries and agencies (strategy).<br>An orientation workshop for the fourth strategy was held in May 2026, at which economists and financial-sector experts called for more investment in the national statistics systems, arguing reliable economic data is a precondition for investment and long-term planning (workshop).<br>A data for development and innovation technical working group met in December 2025, the statistics agency's director-general saying the arrangement with United Nations agencies had reduced duplication and improved resource allocation (working group).<br>The fourth strategy itself is not on the repository, so what stands is a lapsed strategy and a preparation process. | MOVEMENT |

## Censuses and surveys

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Algeria** | No census or survey result is published in the window. The statistics strategy and the regulator's annual series are what the repository holds.<br><br>Nothing in the twelve months to September 2026 reports a census, a household survey or a national sample result for Algeria. The statistical machinery is documented and its output is not: the national statistics strategy and the modernisation of the statistics office's systems.<br>The published series that does exist is sectoral: the telecommunications regulator's annual report for 2024, which carries the market and subscription figures this repository draws on. Where population data appears it appears as administrative output rather than as survey, through the civil status register and the social card's unified database. | NO CHANGE |
| **Angola** | The 2024 census published definitive results in November 2025 and a public portal and mobile application in July 2026.<br><br>2025-11-20 — definitive results of the 2024 census were published. They are the source of most of what this report can say about the population: identity-card coverage, birth registration and household electricity access all rest on them, and each is reported under its own indicator.<br>2026-02-20 — provincial reports began to issue, and the first does not agree with the summary: the Icolo e Bengo report gives the province 1,523,457 people, 150,787 more than the summary report, and differencing the two municipal tables places the whole gap in Sequele. No reconciliation is on file.<br>2026-07-02 — a public portal carrying demographic, social, economic and housing indicators by geographic level, plus a mobile application with macroeconomic series, was launched and built by the statistics office's own staff, where census results had previously been available only as reports.<br>Behind both, a US$60m statistical capacity loan has run since 2022 to 2027 supporting statistics-office modernisation, household surveys and dissemination, with no disbursement, restructuring or results figure on file — it financed the census machinery this report leans on, though no source links the two. | MOVEMENT |
| **Benin** | Living-conditions survey indicators were published in January 2026 and the first national time-use survey was released in March.<br><br>The fourth population and housing census results are the standing baseline.<br>2026-01-22 — the statistics institute published the main indicators of the second harmonised household living-conditions survey.<br>2026-03-31 — the first official diffusion of summary tables from Benin's first-ever national time-use survey was announced. Two survey releases in the window, one of them a first of its kind. | MOVEMENT |
| **Botswana** | Preliminary 2024/25 household survey results put unemployment at 21.0 per cent, against 17.6 per cent in 2015/16.<br><br>2026-03-01 — preliminary labour-force results from the 2024/25 multi-topic household survey put unemployment for people aged 15 and over at 21.0 per cent, against 17.6 per cent in 2015/16, with a full analytical report to follow.<br>2026-07-08 — the first tourism satellite account was launched alongside the 2025 inbound visitor survey.<br>2010-12-01 — the Statistics Act carries the ten-yearly census mandate.<br>No date for the next population and housing census is on the record. | MOVEMENT |
| **Burkina Faso** | The 2024 business census counted 389,172 economic units, 96.5% of them operating informally, with definitive results restituted in May 2026.<br><br>2026-05-06 — definitive results of the 2024 general business census were restituted: 389,172 economic units counted, 96.5% of them operating informally, published by the statistics institute.<br>The repository holds no earlier census to compare against.<br>The informality figure is the single most consequential number in this report. Every formalisation instrument described here — the estate-agency register, the certified electronic invoice, the trade single window, the taxpayer identifier — addresses the small formal remainder, and the census is the only measurement of the rest.<br>No population census, household survey or repeated access survey appears on this ledger for the window. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Burundi** | The 2024 census published preliminary results by decree, enumerating 12,332,788 residents, with definitive results still to come.<br><br>Burundi hosted an Equatorial Guinean delegation over 10-16 August 2026 to share its digital census experience under south-south cooperation (visit).<br>2025-03-27 — a decree published the preliminary results of the 2024 census for all purposes pending definitive results: 12,332,788 residents, 5,901,069 men and 6,431,719 women, with 9,255,195 rural against 3,077,593 urban, with the tables released by the statistics institute. The repository's prior population figure was a projection off the 2008 enumeration.<br>Definitive results have not followed in the seventeen months since, and the results are reported against the five provinces created by the 2023 territorial reform rather than the eighteen that preceded them, which breaks comparison with everything published before.<br>No household survey, no statistics law and no national strategy for the development of statistics appears on this ledger. | MOVEMENT |
| **Cameroon** | The fourth population and agriculture census is still in the field, on a complementary period running to 15 September 2026.<br><br>The last census was in 2005; a pilot ran October to November 2025, and enumeration used smartphones combined with satellite imagery and sample estimation for areas inaccessible through insecurity or isolation - the only satellite-data item the repository carries for this country.<br>2026-07-31 - an order made public extended the field work: a complementary period runs from 1 August to 15 September 2026 to complete identification of households, persons and agricultural holdings missed by the 29 May close, enumeration having run with 32,059 agents at a budget of FCFA 13.28bn against FCFA 64bn initially projected, with no results published.<br>2026-09-15 — the census closed with coverage below expectation, after two extensions. | **Cape Verde** | The household income and expenditure survey fielded in December 2022 is still unpublished more than three years on.<br><br>Fieldwork began in December 2022 and definitive results were unpublished at the window's opening. They are still unpublished at 25 July 2026, so the World Bank microsimulated its July 2026 poverty estimate from the 2015 survey; the statistics institute states an under-reporting of food expenditure was identified and corrected, and that a new fully digital survey was planned for July 2026.<br>No source records the replacement survey starting. A poverty figure microsimulated from a survey eleven years old is the practical consequence, and the institute has separately rejected accusations bearing on its technical independence.<br>The two headline series are not comparable: the institute's extreme-poverty rate of 2.28% for 2023 sits against World Bank estimates of 53.8% for 2024 and a projected 49.2% for 2026, the difference being which threshold was applied rather than any change in living conditions. | STALLED |
| **Central African Republic** | The fourth census completed its third data-cleaning phase in August 2026, a household survey opened six months of collection by tablet, and a seventh indicator survey convened its steering committee.<br><br>2026-08-06 — the country's first digital census completed the third phase of data cleaning, running since May 2026, as a step toward definitive results, financed through a regional statistics project with a United Nations agency as technical partner. No enumeration total, publication date or provisional result is stated.<br>2026-07-23 — enumerator teams deployed nationwide for a harmonised household living-conditions survey covering about 7,000 households in three two-month waves, entirely by tablet, with a public commitment to statistical secrecy and aggregates only. The field period ends around January 2027 and no prior harmonised survey is held.<br>2026-08-18 — a seventh multiple indicator cluster survey convened its steering committee for the first time, budgeted at 1,942,332,190 FCFA or US$3,531,513, of which about 1.1 billion FCFA was mobilised — about 43 per cent unmobilised on the institute's own figures, with no fieldwork or publication date stated.<br>Three national collections running at once is the most active part of the country's digital record. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Chad** | A decree extended the main census enumeration to 6 August 2026, and days from the close one nomadic district had still not seen an enumerator.<br><br>The extension decree was issued on 20 July 2026 (extension).<br>Neither census decree is held: the country has no reachable online gazette and the statistics institute's site has no address record. Days from the close, one nomadic district had still not seen an enumerator (nomads).<br>A statistical development project closed in 2022 at year precision, on the same unverified instrument label as the revenue project (project). | MOVEMENT |
| **Comoros** | The fifth population census was launched as the first fully digital and geospatial one, with enumeration in September 2027.<br><br>2026-08-10 to 17 - a retreat finalised the methodological and digital instruments, abandoning paper enumeration for tablet-based collection over high-resolution digital cartography and georeferencing, with a pilot phase from September 2026 and general enumeration in September 2027, about 60 per cent of the financing stated as already secured. The total census budget is not stated in any held source, so the secured share has no denominator; the census was officially launched in June 2026.<br>Cartography staff were trained on desktop and online mapping, field survey and dashboard tools over 13 to 24 April 2026, with a separate fifteen-day programme for the territorial development ministry's unit.<br>An annual agricultural survey ran a sensitisation campaign and trained national instructors ahead of rollout. | MOVEMENT |
| **Congo** | A quarterly labour-market and informal-sector survey is in preparation, a first for the country.<br><br>Earlier surveys produced one-off data only. The statistics institute and the labour organisation are now harmonising concepts to international standards with four series of indicators a year planned, a first for the country.<br>2026-08-19 - a nine-day regional workshop opened at Pointe-Noire with forty statisticians from the six member states to validate a harmonised regional methodological guide, the organisers stating that no member state currently runs a regular labour force survey and putting informal employment above 65 per cent of jobs across the bloc, with the workshop running to 27 August.<br>No fieldwork date, first-publication date, sample or budget is stated.<br>2026-10-06 - the statistics institute held a workshop to set up a permanent statistical system for informal cross-border trade, with a baseline survey planned for 2027. | MOVEMENT |
| **Cote d'Ivoire** | The enterprise census enumerated 1.4 million entities to 5 June 2025, and a cashew producer census began in August 2026.<br><br>2025-06-05 - the enterprise census had 1.4 million entities enumerated, with aggregated results promised before the end of the year. Nothing on file says whether they were published.<br>2026-08-11 - a producer and plantation census was launched at Korhogo as the database step before any producer card or traceability system; no timetable or budget for it is stated, and the sector produced about 1.5 million tonnes in 2025 on the regulator's figures.<br>2026-08-11 - producers at Meagui pressed the coffee and cocoa board on the conditions attached to the producer card, collection in remote zones, deceased and expired cardholders, and bank fees tied to the card, the regional delegate saying pilot-phase issues are feeding refinements; no enrolment count or coverage figure is held.<br>2026-05-14 - field collection opened for the fifth multiple indicator cluster survey, the first with biomarkers; household listing covered all 695 clusters and enumerated more than 120,000 households, on FCFA 180m of equipment handed over.<br>2026-09-01 — the traceability system became compulsory with the producer card, about 38,000 producers selling with their cards in its first 13 days and over 26,000 tonnes bought at the farm gate, each transaction reported to the board in real time. | MOVEMENT |
| **Djibouti** | The census published its definitive results and a second national survey began fieldwork in December 2025.<br><br>2025-11-18 - the statistics institute published the census directory of localities and resident populations, covering every region, commune, district, quarter, village and hamlet.<br>2025-12 - fieldwork began across the regions on the seventh round of the household survey on children, adolescents, women and family wellbeing.<br>2026-01 - the definitive results report of the third census was published.<br>The institute's own statistics strategy remains validated with no adoption instrument held. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **DR Congo** | The second population census reached its cartography phase, run with digital tools and satellite imagery (broadcast).<br><br>The census cartography phase is being operationalised with digital tools and satellite imagery, on the central census bureau's technical coordinator's account (broadcast).<br>2026-08-20 - the statistics institute launched training of trainers in census mapping, with general enumeration scheduled for July 2027. It would be the first census since 1984.<br>No budget line, financing source, implementing contract or cartography completion figure is held, and the exercise is framed by the institute as the basis for reliable planning data. Every population-denominated figure in this report - coverage rates, penetration, inclusion - currently rests on projections from a census forty-two years old.<br>2026-09-28 - census cartography was launched, the operation costed at USD 192 million with enumeration from July 2027. | MOVEMENT |
| **Egypt** | The 2027 census is designed to match a full electronic field count against state digital records keyed on the unified national property number; the authorising decree is still pending.<br><br>The repository carries no position at the window's opening. The census is designed to build central statistical registers of buildings, households, individuals and establishments by matching electronic field enumeration against digital registers and state databases, keyed on the unified national property number, with the property-wealth map and secure electronic data exchange to be finalised before a presidential decree authorises the count.<br>The exchange is a precondition of the census rather than a by-product of it, and no data-protection regulator role is named in the design. The property number it keys on comes from a law whose implementing decree has not been made, so the census depends on an identifier the state has not yet commenced. | MOVEMENT |
| **Equatorial Guinea** | The fifth population census and a first agricultural census had their strategic documents validated in August 2026, with no enumeration date published.<br><br>The census programme drew on a south-south exchange studying Burundi's digital census experience (exchange), and the statistics council reviewed progress on the country's main statistical operations (council).<br>Both run together under a decree of March 2025, with scientific committees created by a resolution of April 2025, and the last population census was in 2015 (validation).<br>The validated project document is stated to set objectives, methodology, timetable and the agricultural sample size, none of which is published; preparation has now been validated twice in four weeks without an enumeration date being fixed (earlier validation). | MOVEMENT |
| **Eritrea** | The fourth Eritrea Population and Health Survey completed fieldwork in 9,794 households across all six regions, with the report due in 2026.<br><br>2026-05-08 — the National Statistics Office reported the fourth Eritrea Population and Health Survey complete: 9,794 households across 405 enumeration areas, a 98.4% household completion rate, and collection by computer-assisted personal interview.<br>Around 400 tables over 20 chapters are drafted, with writing, printing and dissemination scheduled through 2026, so the fieldwork is finished and the published output is not. Technical support came from UNECA and an Oslo consultancy under the UNDP-led Joint Programme on Data for Development. It is the most substantial statistical work the repository holds for Eritrea. | MOVEMENT |
| **Eswatini** | A consumer financial survey launched its 2026 round, replacing a 2018 measurement, and a communications sector study was tendered at about E2.8m.<br><br>The survey round was launched in July 2026, replacing a measurement eight years old (survey).<br>The sector study tender was awarded in January 2026 (study).<br>Both are commissioned measurements rather than recurring statistical series, and both are being stood up to replace figures the country has been reading from foreign reference studies — which is what the account-ownership and cash-share cells in this report rest on. | MOVEMENT |
| **Ethiopia** | The fifth demographic and health survey reported (summary report); the census behind current population figures is still 2007's (census).<br><br>The 2024/25 Ethiopia Demographic and Health Survey released its key indicators in January 2026 (key indicators) and its full summary report in July 2026, covering 22,540 households surveyed between August 2024 and April 2025 (summary report).<br>The statistics service records three national censuses — 1984, 1994 and 2007 — and states that current population estimates are still projections from the 2007 census (census page).<br>The repository holds no date for a fourth census and no statement from the statistics service on when one will be held, so the survey programme is delivering against a population denominator that is now nearly two decades old. | MIXED<br>the demographic and health survey reported in full while the population census remains that of 2007 |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Gabon** | The Constitutional Court moved to field verification of the population census across all nine provinces before deciding whether to certify it.<br><br>The Court heard the planning minister on 12 August 2026 and then deployed teams to test the reliability of the figures; in one province the governor reported enumeration coverage above 95% and asked for more river and sea transport to reach remote populations (verification).<br>A second census, of economically weak citizens, has its terms fixed and fieldwork from September 2026, drawing on the population census and health-insurance records (second census).<br>Certification of the definitive results awaits the Court's analysis, so no certified population figure is established. | MOVEMENT |
| **Gambia** | The labour force survey published its fifth round in July 2026 with the first systematic comparison across three rounds.<br><br>A sixth round is confirmed for later in 2026; both reports are donor-financed with international technical support, no domestic recurrent budget line for the series is established, and neither report's release date is published (fifth round, trend volume).<br>Participation rose from 43.6 per cent in 2023 to 54.5 per cent in 2026, and unemployment fell from 7.6 per cent to 6.2 per cent, with labour underutilisation the wider measure at 23.6 and 32.1 per cent and no earlier round published for comparison (figures).<br>Agriculture's share of employment is given as 17.8 per cent, which the bureau states is a definitional change under a revised international standard excluding own-use food production rather than a movement out of farming (findings). | MOVEMENT |
| **Ghana** | The governance series published its third six-monthly wave in August 2026, while quarterly employment statistics remain unpublished.<br><br>The series is a repeat panel run by the statistical service across all 16 regions, its findings put by the Government Statistician to remedies that are digital ones, among them digitising public services and publishing official fees; the report text is not held and the wave figures come from the launch as reported (third wave).<br>The finance minister asked the service in July 2026 to develop a methodology for quarterly employment statistics; none is published and no timetable is given (employment statistics).<br>Fieldwork began in the week to 7 September 2026 on the Global Development Network's five-country DPI Inclusivity Survey, with the University of Ghana as the partner research team in Ghana, engaging more than 5,000 households through to April on how people experience digital identity and digital payment systems. No results are published. | MOVEMENT |
| **Guinea** | The fourth population census produced a population of 17,521,167, carried into the electoral file.<br><br>The figure reaches the repository through the electoral file's own account rather than through a statistical publication (census figure).<br>No census report, survey programme or dissemination platform is held, so the country's population is established by the register that consumed it.<br>2026-09-16 — the planning minister launched the first general census of enterprises, with two months of field work in the Kindia pilot region.<br>2026-09-18 - a presidential decree instituted the enterprise census under a national council chaired by the prime minister and a technical bureau at the statistics institute, and tasked it with building a national business register for statistical purposes. | MOVEMENT |
| **Guinea-Bissau** | The fourth census released preliminary results in July 2026 putting the population at 2,191,202, in the country's first fully digital count.<br><br>2026-07-23 — the national statistics institute released preliminary results of the fourth General Population and Housing Census: a population of 2,191,202, 50.7% women and 45.7% urban, across 304,939 households and 559,303 dwellings, against 1,449,230 at the 2009 count.<br>It is the country's first fully digital census, collected by computer-assisted personal interview and leaving a digital cartography and technology base for future operations, with UNFPA as lead technical agency and World Bank support for the statistical capacity behind it.<br>Full tabulations are pending. One record's headline population differs from its own body and from the other two, and the repository resolves it against them. No statistics law, no national strategy for the development of statistics and no other survey appears on this ledger. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Kenya** | A mini demographic and health survey went into the field in October 2025 and the annual economic survey published in April 2026.<br><br>The Statistics Act of 2006 is the governing statute for official statistical collection (act).<br>Fieldwork for the 2025/2026 mini demographic and health survey was launched in October 2025 by the statistics bureau with the health ministry and partners (launch).<br>The 2026 economic survey was published in April 2026, recording real gross domestic product growth of 4.6 per cent in 2025 against 4.7 per cent in 2024 (survey). Neither publication reports a response rate or a coverage figure in the captures held.<br>The communications regulator and the University of Nairobi began reviewing preliminary findings from a joint national survey on child online protection and safety on 9 September 2026, agreeing the report structure and thematic areas ahead of validation (survey); no sample size or fieldwork period is stated. | MOVEMENT |
| **Lesotho** | The seventh census has finished enumeration with mop-up still running in Maseru and is in analysis; the 2016 round is still the last with published results.<br><br>2018 — the 2016 census summary is the most recent completed round with published results.<br>2026-03-13 — 2,750 tablets and 1,045 power banks were delivered for the first fully digital census.<br>2026-06-05 — nationwide enumeration for the seventh census was completed and moved to analysis.<br>Ten years separate the last published census from the one now in analysis, and no publication date for the new results is on the record.<br>2026-09 — a second phase of the financial access points census was tendered to update the 2018 baseline of 5,597 geo-referenced points; no budget or completion date is given.<br>2026-09-17 — mop-up operations were still running in Maseru, and the round is the first to ask questions recognising gender identity and sexuality, after the statistics bureau brought an advocacy organisation into the first census consultation. Advocates welcomed the inclusion while warning that the answers need explicit privacy and confidentiality safeguards. Results are to be published after review. | MOVEMENT |
| **Liberia** | 2024 agriculture survey microdata published in July 2026, on top of the 2022 census final results.<br><br>The standing demographic baseline is the final results of the 2022 population and housing census.<br>The survey programme has since produced the first annual agriculture survey after the 2024 agriculture census, run on tablet-based collection with satellite location checks and validated estimates.<br>Its public-use microdata were released in July 2026, and a first women's empowerment and nutrition module was attached to the same survey. | MOVEMENT |
| **Libya** | A 2024-25 household survey was published, and the authority declared census readiness in July 2026.<br><br>The multiple indicator cluster survey for 2024-25 is the most recent national household evidence the repository holds, and supplies most of what is known about Libyan connectivity by sex and household.<br>The census is a different matter: the information authority confirmed its technical readiness for the general population census and accompanying censuses in July 2026, and the census itself remains unscheduled. | MOVEMENT |
| **Madagascar** | The statistics institute runs a registration-gated microdata platform advertising census and household-survey microdata, with no documentation beyond the landing page.<br><br>The platform was captured in August 2026 advertising household surveys covering 2020 to 2022, an enterprise survey and third-census microdata (platform).<br>The datasets themselves sit behind account registration and were not retrieved, and no dataset documentation, sample size, licence or reuse terms are established beyond the landing page, so the repository records that the microdata exists and not what is in it. | MOVEMENT |
| **Malawi** | A fourth national ICT survey is in the field across all districts covering 12,000 households, with its field-staff recruitment publicly questioned.<br><br>The survey covers mobile and computer ownership, internet access, digital financial services, e-commerce and cybersecurity awareness, including the refugee camp at Dzaleka, run by the statistical office with the communications regulator to inform national planning; no publication date for the results is stated (survey).<br>Field-supervisor and enumerator recruitment drew public questions when training opened in August 2026; the repository holds the complaint and no response to it, and a survey whose fieldwork staffing is contested is one whose results will be read against that (recruitment). | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Mali** | The statistics institute's microdata archive holds 107 studies, and the fifth population census was externally funded across three records.<br><br>The institute's own archive held 107 studies at capture in August 2026, led by the 2022 census and near-annual agricultural surveys running back to the late 1990s (archive).<br>External support to the fifth population and housing census runs across an original contribution and an agreement amendment from 2018 and a special review committed in April 2024 (review, contribution, amendment). Those are commitment records rather than a census report: no enumeration date, publication or result is on file. | MOVEMENT |
| **Mauritania** | The fifth population and housing census was conducted entirely electronically for the first time, with final regional results presented from August 2026.<br><br>Mapping, collection, processing and analysis were all digital, and final results were presented at regional workshops from 3 August 2026 (census).<br>The all-electronic claim is the statistics agency's own and no methodology document is held, so what the repository establishes is that the agency says the operation was digital end to end and not how it was done. | MOVEMENT |
| **Mauritius** | The release programme runs to schedule: annual labour force results in May 2026, quarterly results in June, ICT statistics in July.<br><br>Annual labour force, employment and unemployment results for 2025 were published in May 2026 (release), and first-quarter 2026 results in June (release).<br>The 2025 ICT statistics followed in July (release).<br>The Statistics Act 2000 is the statutory basis (Act). No population census date is held, and the releases carry no response rate in the captures on file. | NO CHANGE |
| **Morocco** | A redesigned labour force survey ran for the first quarter of 2026 with the sample raised by half.<br><br>The census fixed the legal population at 36.83m at 1 September 2024, which is the frame every survey is drawn against.<br>The survey programme was then rebuilt: a redesigned labour force survey aligned to international methodology for the first quarter of 2026 with the sample up 50 per cent, a third time-use survey covering more than 14,000 households with field collection from 20 April 2026, and a third disability survey launched in January. | MOVEMENT |
| **Mozambique** | The fifth census is scheduled for August 2027 as the first run entirely in digital format, on a pilot costing US$430,000 and a US$68m funding shortfall.<br><br>The pilot launched in Magude district in August 2026 at a cost of US$430,000, covering 177 enumeration areas across five administrative posts with 177 enumerators and 38 controllers selected from 260 trained, testing digital cartography, the collection application, the electronic questionnaire, data validation and synchronisation (pilot, training).<br>The 2027 operation is costed at EUR 96.2m and the institute reported in March 2026 a shortfall of US$68m against the US$110m required, with a funder committing US$12.7m of initial financing (costing). Which operation pays for the census is unestablished, and no supplier, device count or data-hosting arrangement is reported. | MOVEMENT |
| **Namibia** | The 2023 population and housing census was the country's first fully digital census and remains the reference count at 3,022,401.<br><br>It is cited by the statistics agency as a step in modernising the national statistical system (census, awareness).<br>The agency's own institutional plan records that the census slipped from August 2021 and again from August 2022 for want of funds, so the digital operation was delivered two years late and no successor is scheduled on this record. | NO CHANGE |
| **Niger** | The fifth general population and housing census is in preparation, with traditional chiefs trained as mobilisers in one region and no enumeration date published.<br><br>Chiefs were trained as mobilisers in Diffa in July 2026 (preparation).<br>No enumeration date, budget, methodology or digital arrangement is published. The same mobilisation mechanism is used for civil registration in the same region, which is the country's working answer to reaching households without addresses. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Nigeria** | A first biometric census remains planned with a budget of about ₦980bn under review, and the last census was 2006.<br><br>A committee will review the roughly ₦980bn budget, and no date has been set (census). Twenty years without a census is the baseline against which every population-denominated figure in this report has to be read.<br>An inclusive-data initiative widened from three countries to five in July 2026, putting the national statistics office into the programme (initiative).<br>2026-08-28 - Katsina State launched a general household survey report and a statistical yearbook. | NO CHANGE |
| **Rwanda** | The 2025 demographic and health survey reported in August 2026, and a foreign private capital census covered 424 enterprises at an 89.6 per cent response rate.<br><br>The fifth population and housing census, fielded in August 2022, is the most recent national round (report).<br>The seventh demographic and health survey, collected June to November 2025, was announced in January 2026 (release) and its final report published in August (report).<br>A foreign private capital census covering 424 enterprises at an 89.6 per cent response rate reported in February 2026 (census) — a distinct programme output from the household surveys. | MOVEMENT |
| **Sao Tome and Principe** | The fifth census was enumerated in late 2024 and its results published in July 2025, and the household budget survey returned to the field in March 2026 after nine years.<br><br>The census results report is the census itself rather than news of it, reporting population, household, housing and demographic results by district, with enumeration from 15 November to 15 December 2024 (census).<br>The statistics institute returned to the field with a new household budget survey nine years after the 2017 round, with more than a hundred enumerators across the territory over two months collecting spending on education, health, food and transport, results expected by year end (survey).<br>A new phase of tourism satellite accounts work opened in February 2026 with a national tourism survey at its centre, six of the ten accounts tables already complete (accounts). Three field operations in eighteen months is the densest statistical activity this repository holds for the country.<br>2025-07-23 — data collection opened for the third general agricultural census, financed by the European Union and FAO. No results are held. | MOVEMENT |
| **Senegal** | The national statistics agency hosted the first second-phase peer exchange of an inclusive-data initiative in Dakar.<br><br>The exchange was hosted in July 2026; the repository holds a month-precision date and the exact dates are not published (exchange).<br>The same agency used a graduation ceremony the following month to press ministries to recruit statisticians into sectoral services, so it is convening internationally on inclusive data while stating a staffing problem at home. | MOVEMENT |
| **Seychelles** | The 2022 census was the first conducted digitally; a business census entered its second pilot in April 2026.<br><br>The Population and Housing Census of 2022 — the sixth since independence and the first digital one, conducted under the Census Act — was reported in March 2024 (report).<br>A new Census of Economic Activities entered a first pilot in November 2025 as a nationwide business-data census scheduled for full rollout in 2026 (pilot), and a second pilot opened in April 2026 ahead of a main round in 2026 and 2027 (second pilot).<br>The census report held is the preface and contents of a 233-page document; its statistical annexes were not captured. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Sierra Leone** | The 2026 census and the 2026 demographic and health survey are both launched, five years after the first digital census.<br><br>The 2026 Population and Housing Census was launched on 1 December 2025 alongside the national data initiatives of the Power of Data framework (launch), and the 2026 Demographic and Health Survey was officially launched on 4 August 2026 (survey).<br>The 2021 mid-term census was the country's first digital census and its final results are published (census).<br>Fieldwork began in the week to 7 September 2026 on the Global Development Network's five-country DPI Inclusivity Survey, with the Institute for Development as the partner research team in Sierra Leone, engaging more than 5,000 households through to April on how people experience digital identity and digital payment systems. No results are published.<br>2026-09-10 - the president set Census Night for 1 December 2026 and put the financing gap at US$37m, against US$24m committed by government.<br>2026-09-15 — the census technical committee received the national mapping completion report for the country's first digital census, leaving Census Night on 1 December 2026.<br>2026-10-07 - the statistics agency deployed the technology for the digital census, with enumeration by tablet set for 2 to 16 December 2026. | MOVEMENT |
| **Somalia** | The first census since 1975 is under way, and a cluster survey covering 17 of 18 regions launched in March 2026.<br><br>The census programme, launched in 2023, covers all federal member states plus the capital region and Somaliland, with remote sensing and satellite imagery used for inaccessible areas; the last completed census was in 1975, and a 1986 round's results were never released (programme).<br>The seventh multiple indicator cluster survey launched in March 2026 across 17 of 18 pre-war regions, to produce 168 indicators including 47 development-goal measures (launch).<br>A separate socio-demographic survey published in July 2026 estimates population for five districts using geospatial modelling with field collection (survey). | MOVEMENT |
| **South Africa** | The 2022 census counted 62,027,503 people in the country's first digital census, and a continuous population survey is being built to carry the interval between censuses.<br><br>A deputy minister in the Presidency said in a keynote address on 9 October 2026 that Census 2031 is in development, and called statistical independence a constitutional safeguard. The repository holds no plan, budget or method for it.<br>The 2022 census was the country's fourth post-1994 census and its first conducted digitally, counting a population of 62,027,503. It is three years old at the window's close.<br>A frame update was published for the continuous population survey and household survey programme redesign, the instrument intended to carry population statistics between censuses.<br>The page is undated and no first release is named.<br>The running series beside it is the labour force survey, which put unemployment at 33.6% in the second quarter of 2026 and recorded questionnaire updates intended to keep the statistics internationally comparable. | MOVEMENT |
| **South Sudan** | The statistics bureau published a national population estimate, with about 2.2 million of the increase attributed to migration from a neighbouring conflict.<br><br>It was published at a population day dialogue in July 2026 (estimate).<br>It is a projection rather than an enumeration, and it is the denominator under every coverage figure in this unit — identity, nationality certificates, birth registration and internet penetration all rest on it. | MOVEMENT |
| **Sudan** | There has been no census since 2008, while a fourth welfare monitoring round was fielded across all 18 states in 2025.<br><br>The country programme document states no national census since 2008, statistical and health information systems collapsed after the 2023 conflict, and a 2024 common operational population dataset used in lieu of a census (document).<br>Against that, a fourth mobile-phone welfare monitoring round was fielded between May and July 2025 across all 18 states with a dedicated refugee sample, covering food insecurity, displacement, employment, education and health (catalogue entry).<br>The first national multidimensional poverty survey was published in 2026 for a 2023 reference year; its full report was not fetchable and is raised as an acquisition (launch page). | MIXED<br>no census and an active survey programme |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Tanzania** | The first integrated mainland and Zanzibar labour force survey joins an annual agricultural survey under a 2023 statute.<br><br>The founding statute, in its 2023 revised edition, continues the statistics bureau as an autonomous public office, establishes the national statistical system and places the initiation of official censuses and surveys under the Statistician General.<br>The 2025 integrated labour force survey, released in 2026, is the first nationally integrated round covering both the mainland and Zanzibar, across 14,232 households in 593 enumeration areas.<br>The 2023/24 annual agricultural sample survey covered 8.97 million agricultural households through 1,504 enumeration areas and 18,048 holdings.<br>No microdata release policy or response-rate series is held for either. | MOVEMENT |
| **Togo** | Two major surveys opened within six weeks in early 2026, including the first demographic and health round since 2013-14.<br><br>The standing count is the fifth population and housing census of November 2022, whose definitive results were published in September 2023 at a resident population of 8,095,498, broken down by region, prefecture, sex and urban or rural.<br>Field preparation for the third harmonised household living-conditions survey opened on 9 February 2026 with cartographer and enumerator training to regional and World Bank standards.<br>The fourth demographic and health survey launched on 13 March 2026 over 385 clusters and about 10,000 households across five regions and Greater Lome, with final results expected in 2027 — closing a gap of more than a decade in that series.<br>The third harmonised household living-conditions survey is in the field to December 2026, covering poverty, income and employment (survey) — the second of two survey rounds opened within six weeks, after a demographic and health gap of more than a decade. | MOVEMENT |
| **Tunisia** | The regulator's observatory published a one-page synthesis of its 2026 internet and digital skills survey, and the full report is not published.<br><br>The synthesis carries no printed date and is dated from the earliest press report of its publication.<br>The full survey report — sample design, fieldwork dates, question wording — is not published, and the observatory has issued full report documents for 2023, 2021 and 2019 but only this synthesis for 2026 (synthesis, survey).<br>Use of online public administration comes from the same survey (e-government).<br>A statistical series that has published full reports for three previous rounds and a single page for this one is a regression in transparency rather than in measurement, and it is the source under this report's usage figures.<br>2026-10-01 - the regulator's survey breaks internet use down by age, income, sex and district: 99.2 per cent at 18 to 24 against 54.1 per cent at 60 to 70. | MOVEMENT |
| **Uganda** | Eighty data collectors were commissioned for twelve months of collection on the ninth national household survey, with no sample size, budget, funder or publication date stated.<br><br>The collectors were commissioned in August 2026 (survey).<br>A statistics office block broke ground in August 2026; government states it is fully financed domestically but publishes no figure, so no finance record is built, and a bid to host the regional statistics bureau is a pledge to engage partner states rather than a confirmed award (block, bid).<br>A twelve-month household survey with no published sample design is the instrument every population-denominated figure in this report will eventually rest on. | MOVEMENT |
| **Zambia** | The 2022 census national analytical report was published in August 2025, putting the literacy rate for those aged five and over at 62.6 per cent.<br><br>The twelve-chapter national analytical report of the 2022 census was released in August 2025. It puts the national literacy rate for those aged five and over at 62.6 per cent, 65.3 for males and 60.1 for females, and 78.2 per cent in urban areas against 49.8 in rural ones; the rate for those aged 15 to 24 is 77.1 per cent, and the figure for those aged five and over has risen from 55.3 per cent in 2000.<br>No release calendar is held, so what else the agency has scheduled is not established. | MOVEMENT |
| **Zimbabwe** | An ICT access and use survey released its 2025 round on 9,245 households at 91.3 per cent response, and only one outlet's account of it is held rather than the report.<br><br>Only one outlet's account is held, not the report itself (survey).<br>Household internet access rose and household computer ownership fell on that survey; the ownership measure is five years apart and the intervening trend is not held (access, ownership).<br>A household budget survey ran a nationwide listing exercise in August 2026 with no stated field or release date (budget survey), and the regulator's quarterly sector report bears no date on its face, the held copy being a rehost with a proxy publication date (sector report). | MOVEMENT |

## Statistics from administrative data

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Algeria** | A national agricultural information system launched in June 2026 with one live module, alongside market-supply and enterprise systems.<br><br>2026-06-29 - the agriculture minister inaugurated the national agricultural information system as part of the ministry's 2026 action plan. One module is operational: daily collection and analysis of field data on the grain harvest campaign. The farm register, agricultural land register, livestock and support-programme modules are stated as to be deployed progressively, not as live.<br>2026-04-27 - a unified market-supply monitoring system went live, built under the data-governance decree, and went to the government meeting of 9 September as a unified system for regulating and supplying the national market. 2026-05-17 - a small and medium enterprise economic information system went live.<br>Two more are at memorandum or intention stage: an automated water-meter reading pilot agreed in July 2026 with no site, scale or start date, and tachograph monitoring of heavy goods vehicles and coaches, presented as a shift from traditional inspection to continuous monitoring, with no implementing instrument, deadline or fleet coverage stated.<br>2026-09-23 - the industry sector's PRODNAT platform had closed first-half 2026 production declarations from goods-producing firms and kept registration open past its mid-September deadline, with second-half declarations due by 28 February 2027.<br>None of the six publishes an output. | MOVEMENT |
| **Angola** | The higher education yearbook is compiled from seven administrative registers, and the statistics institute took peer training on administrative data in December 2025.<br><br>The repository holds one worked example and one capacity step. The example is the higher education ministry's yearbook, compiled from seven administrative primary registers and recording 29,652 graduates for 2019, of whom 3,777 in science, technology, engineering, arts and mathematics, with per-course tables. That is official statistics produced from registers rather than from a survey.<br>The capacity step is the statistics institute taking peer experience on administrative data from a partner institute in December 2025, under a statistical capacity project. A statistics development strategy for 2026 to 2032 and the institute's new organic statute sit above it. | MOVEMENT |
| **Benin** | The statistics office is named among four being displaced as primary data producers by platform, satellite and privately held data.<br><br>2026-03-11 — the national statistics office is named among four case studies of offices being displaced as primary data producers by platform, satellite and privately held data, with the report recommending legal reform to formalise the custodian role.<br>No such reform has followed, and no statistics law, national statistical strategy, census or survey appears anywhere on this ledger for the country. Meanwhile the administrative systems this report tracks — the population register, the cadastre, the school system, the customs platform — are producing counts in volume, and the office that would turn them into official statistics has no stated relationship to any of them.<br>2026-09-08 - the country is taking part with seven other West African states in the pilot phase of a platform to monitor progress on the demographic dividend, at a regional meeting in Abidjan whose sessions test and improve the tool before wider deployment. No indicator set, data source, host institution or deployment date is published. | NO CHANGE |
| **Botswana** | Subregional broadband mapping training is under way with three neighbours; no Botswana broadband map has been published.<br><br>2026-06-01 — geographic-information and data-management training is under way in Botswana with Malawi, Zambia and Zimbabwe under a continental broadband maps project, and no Botswana broadband map has been published. The publisher is a wire service, flagged in the source frontmatter.<br>A published coverage map would settle several of the disputes in this report at once: where the fibre network actually runs, which villages the connectivity project has reached, and what the difference is between the two penetration figures in circulation. The training is the first step toward one and no output date is stated.<br>2026-09-02 — a dated absence: no gambling participation statistics are held as the country moves to lower the legal betting age, while an investigation reports unregistered betting influencers drawing 4,000 to 15,000 responses to a single betting slip. The activity is documented and the population is not counted. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Burkina Faso** | A geospatial locality information system is being built by the statistics institute, its geospatial analysis report in validation.<br><br>2025-09-23 — a geospatial locality information system is being built by the statistics institute, with its geospatial analysis report in validation. No baseline was held.<br>It is the nearest thing on this ledger to a national geographic reference, and the country has no address register to sit beside it, reported under registries. The statistical plan's stated aim of integrating administrative data, reported above, has this as its most concrete piece of work; the tax administration's interface upgrade to the institute is the only other named route from an administrative system into official statistics. | MOVEMENT |
| **Burundi** | Two further sectoral yearbooks were published in the window, one from the annual school census and one built from a ministry's own records.<br><br>The national statistical yearbook is described by the institute itself as a compilation, centralising figures otherwise dispersed across specialised publications and ministry annual reports — which is the administrative-data chain stated in the institute's own words.<br>2025-12 — an education yearbook was published for the 2024-2025 school year, produced from the annual school census, the clearest working example of official statistics drawn from an administrative source.<br>2026-01 — a trade, transport, industry and tourism yearbook was published, built entirely from the ministry's own administrative records: licences and permits issued, certificates of origin, import-export codes, port and airport traffic and technical-control certificates. Three yearbooks and no register-based statistics: the chain runs from paper forms to a book, not from a database to a series. | MOVEMENT |
| **Cameroon** | Regional statistical yearbooks are built from data collected from sectoral administrations, local authorities and enterprises, under guidelines the institute issued on statistics from administrative sources.<br><br>The recurring output is what demonstrates administrative data in use rather than in principle: the institute's regional yearbooks draw on sectoral administrations, decentralised territorial authorities and parapublic and private enterprises, supplemented by national survey data disaggregated to local level.<br>The framework above them is the 2020 statistics law with its implementing decree, under which the institute's guidelines on statistics from administrative sources run.<br>2026-02 - the regional harmonisation project's stakeholder plan names sectoral administrative-data systems and information systems among the project's components.<br>No count of contributing administrations, no timeliness measure and no completeness rate is published for any of it. | MOVEMENT |
| **Cape Verde** | An independent evaluation of the statistics institute was ordered over alleged data manipulation, and no audited state account exists after 2023.<br><br>The integrity dispute stood as anonymous technicians' allegations of August 2025 against the institute's rejection of September 2025. 2026-08-03 - the Prime Minister ordered an evaluation to establish alleged interference and manipulation of data, which the institute's board said it would host, offering all technical documentation; nothing is established about its terms of reference, who conducts it, when it reports, or whether findings will be published.<br>Separately, the audit court's published opinion series ends at the FY2023 account, so the 2024 general account published in September 2025 remains unaudited and the finest published record of digital spending is the executive's own quarterly provisional account. | REGRESSED |
| **Central African Republic** | National accounts were rebased from a 2005 to a 2019 base under the newer standard, the review's aide-memoire published in August 2026.<br><br>2026-08-07 — national accounts moved from a 2005 base under the 1993 standard to a 2019 base under the 2008 standard, drawing on the 2021 agriculture survey and the harmonised household survey to widen coverage of agriculture, household consumption, self-build, imputed rent and informal activity, with the joint technical and peer review held in February 2023 and its aide-memoire released publicly under a World Bank-financed project.<br>The review it documents was held three years before publication: what is new is the publication, and no rebased output level is stated in the record held.<br>Publication three years after the work is the pattern of this country's statistics, and it is better than the alternative visible elsewhere in this report — a complete quarterly budget execution series published on time as page-image scans whose digits do not extract, with settled accounts running only to 2019. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Chad** | The education ministry validated its 2024-2025 school statistical yearbook from administrative returns in October 2025.<br><br>The ministry's planning and school-mapping directorate held a validation workshop for the 2024-2025 school statistical yearbook in the capital on 7 October 2025, with provincial education delegates present — the clearest located instance of administrative returns becoming national statistics (workshop).<br>The assessment records 126 of 234 sustainable development indicators with a published baseline (assessment).<br>The institute publishes through five named channels under the 2019 statistics law, on terms that bar redistribution of microdata without written agreement (policy). | MOVEMENT |
| **Comoros** | A statistics-modernisation project is running with the institute as national owner, prioritising disaster and fisheries data.<br><br>The legal frame is fifteen years old and unamended: the 2011 act constitutes the national statistical system as the Council, the institute and the statistical services placed within ministries and public bodies - the ministerial services being where administrative data would come from.<br>An initiative with the institute as national project owner prioritises disaster and fisheries data and the modernisation of its digital infrastructure for statistical collection, processing, dissemination and storage; it is ongoing, with no output or completion date stated.<br>No statistical series drawn from an administrative register appears anywhere on file. The registers that would feed one - civil status, tax, social protection - are each held elsewhere in this report and none of them publishes an aggregate. | MOVEMENT |
| **Congo** | Balance-of-payments collection ran at 41.81% for 2025 against 98% for 2024, while an insurance data platform launched.<br><br>2026-04-21 - the regional central bank's national director launched the 2026 collection and disclosed 41.81% for 2025 against 98% for the 2024 balance of payments on a sample of 136 declarants, calling the fall a collective concern. The 2025 figure is a running total at the launch date rather than a closed-year rate, so the comparison is indicative.<br>2026-06 - a public-transport insurance data platform launched under the financial-institutions directorate, centralising sector data with real-time transaction visibility, with insurer participation hoped for rather than mandated. No coverage or participation figure is published, and the launching official publicly asked what the centralisation saves the end user. | MIXED<br>an insurance-sector data platform went live while balance-of-payments collection fell from 98% to 41.81% |
| **Cote d'Ivoire** | A labour-market platform publishing 91 indicators in 299 tables was launched, and a transport data platform was handed over.<br><br>2026-06-23 - the national employment and training observatory launched a platform carrying 134 of an identified 315 indicators across 14 themes, 91 of them published in 299 statistical tables disaggregated by sex, age, education, residence and region.<br>2026-04-15 - a platform collecting and analysing road, port, airport and rail flow data was handed over, with corridor and checkpoint mapping and decision dashboards.<br>Both are new and neither has a published update cycle, so whether either is being refreshed from the administrative sources it draws on is not established. | MOVEMENT |
| **Djibouti** | A specialised statistical corps was created by decree in May 2026, charged with compiling and projecting national data.<br><br>The standing instrument is older: the employment observatory's founding decree expressly requires a periodically updated employment and skills database built from diverse administrative sources, the clearest statement on file that administrative records are worked into statistics.<br>2026-05-12 - a decree created a specialised corps of statisticians, engineers, senior administrators and technicians charged with compiling, analysing and projecting socio-demographic, economic and environmental data.<br>2026-06-11 - the finance ministry was assigned responsibility for the national strategy on collecting, processing and disseminating official statistics. | COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **DR Congo** | Administrative data systems are assessed as weak, production fragmented, with no population census since 1984; a first statistical compilation from state personnel records was published on 14 May 2026.<br><br>The most recent authoritative statement confirms that the statistics institute coordinates a system founded on legal and institutional reforms of the late 2000s, and describes weak administrative data systems, fragmented production and no population census since 1984. That absence is the frame everything here sits in: administrative data is what the country has instead of a census, and the systems producing it are assessed as weak by the body proposing to fund their repair.<br>2026-05-14 - the public service ministry's reform unit published the first edition of a statistical compilation covering nine categories of central-government personnel drawn from state payroll and human-resources records. No periodicity commitment for further editions is stated.<br>The legal frame is being rebuilt around it: draft ordinances covering collection, processing, production, dissemination, conservation and protection of official data were adopted in council in August 2026. | MOVEMENT |
| **Egypt** | A Senate proposal for a national labour-market data platform was examined by a joint committee, alongside a ministry platform of its own.<br><br>The repository carries no position at the window's opening. A proposal for a national platform integrating databases and forecasting future skills demand was welcomed by the minister, who pointed to the ministry's own forthcoming digital labour platform.<br>No launch date, budget, governing instrument or lead body is established for either, and the two are not stated to be the same thing. It is the only proposal on this ledger to build a statistical product out of administrative data, and it arrives as two parallel intentions rather than one. | MOVEMENT |
| **Equatorial Guinea** | The eighth national yearbook publishes 19,586 civil servants and 10,468 online visas approved, from administrative sources.<br><br>The yearbook series is administrative statistics in practice: the eighth edition carries 19,586 civil servants, 10,468 online visas approved and public debt at 33.3 per cent of output.<br>Vital events are the other stream, compiled from hospital and community records into a first report in 2024 and a second the following year. What administrative data cannot supply is the denominator: the population is still projected off the 2015 census.<br>2026-09-03 - the institute went out to the ministries: a ministry-by-ministry supervision tour of statistical services began on 2 September at the interior and education ministries and runs to 9 September, ordered by the national statistics council's eighth session of 27 August, to assess each service's state and consolidate the national statistical system. No findings, service inventory or report from the tour is published, and the account is the institute's own.<br>2026-09-25 - the ninth yearbook, covering the last five years, was presented in Malabo, the institute naming weak administrative registers, undigitised processes and poor information-system interoperability among its outstanding challenges. | MOVEMENT |
| **Eritrea** | The statistics office compiled national accounts for 2023 and began collection for 2024, the only administrative statistical production the repository records.<br><br>2026-05-08 — alongside the household survey, the National Statistics Office is reported to have compiled the 2023 national accounts and started data collection for 2024.<br>That is the whole of the ledger's evidence on statistics drawn from administrative sources, and it is second-hand: the accounts themselves are not on the repository, and no statement of which administrative systems feed them appears either. No statistics law and no national strategy for the development of statistics is on record for Eritrea, so this production rests on the office's own practice. | MOVEMENT |
| **Eswatini** | Civil registration produces the annual vital statistics report, and community health workers now capture records digitally in real time.<br><br>The annual vital statistics report compiles administrative records from the population register and health systems into official vital statistics (report), and completeness reached 61 per cent of births and 62 per cent of deaths in 2025.<br>The community-based health information system launched in September 2025 moved rural health motivators from paper to offline-capable real-time digital capture, linking community records to the national health systems (launch).<br>The proposed national exchange platform is aimed at the fragmentation across government systems that keeps administrative data from being reused (proposal).<br>The regularly published administrative series is vital statistics and nothing else: no administrative-source statistics are published for education, tax, land or social protection. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Ethiopia** | The statistics service took the lead of a regional migration data working group under a signed data-sharing protocol (workshop).<br><br>A three-day IGAD workshop operationalised the memorandum and Migration and Displacement Data Sharing Protocol signed by Ethiopian institutions in January 2025, with the statistics service empowered to lead the Migration Data Technical Working Group (workshop).<br>The standing framework is the Code of Practice for Official Statistics, which expressly recognises administrative records, registers and government systems as sources of official statistics, assigning the statistics service the operational role and the planning ministry the regulatory one (code of practice).<br>The repository holds the mandate and one sectoral working group, and no count of which administrative systems actually feed published statistics. | MOVEMENT |
| **Gabon** | The energy ministry is building an energy information system to produce national energy balances, drawing on the 2026 census; no balance is published.<br><br>2026-09-23 — the ministry's statistics director described an energy information system being set up to produce national energy balances and SDG 7 indicators on capacity, demand, costs and efficiency, fed by the 2026 population and housing census. It is to feed a common regional system.<br>No start date, budget or first energy balance is stated, and no other statistical product compiled from administrative registers is on record for the country. | NO CHANGE<br>a first system being built with no output yet |
| **Gambia** | The central bank convened producers and users of official statistics in July 2026, naming gaps, inconsistency and inaccessibility as the constraints.<br><br>The convening was with the International Monetary Fund and the statistics bureau, and no framework or workplan has been published (convening).<br>It is the first convened coordination process on the record, and the three constraints it names are the same ones that make several figures on this ledger unverifiable: the authority's own tax numbers, the commission's own registration counts and the ministry's own attributions all lack an independent series to test them against. | MOVEMENT |
| **Ghana** | The statistical service signed data-sharing memoranda with 25 ministries and agencies in March 2026, operationalising its statutory coordination powers.<br><br>2026-03-12 - the service signed memoranda with 25 ministries, departments and agencies - the health service, police, immigration, environment agency, disaster organisation and births and deaths registry among them - operationalising its statutory powers to coordinate administrative-data sharing, with designated focal persons, technical interoperability standards and review mechanisms; about 17 already had draft data-sharing policies.<br>2026-07-22 - the service, the education ministry, the education service and the identity authority discussed a pilot to replace periodic surveys with continuous statistics drawn from trusted administrative records tracking learners across their education journey, with the education minister to chair its steering committee.<br>2026-09-22 - a third three-year phase of the statistical cooperation with Denmark was designed around integrating and harmonising administrative data held by ministries and agencies, with no start date or funding figure.<br>No statistic published from an administrative source under either arrangement is yet on the record. | MOVEMENT |
| **Guinea** | A public finance statistics committee was relaunched in August 2026 and still faces inconsistent data across the Treasury and the central bank.<br><br>Created in 2023, it is sitting again and producing a regular statement of state financial operations against the 2014 international manual (relaunch).<br>The account of the remaining inconsistency is the finance ministry's own, which makes it the repository's only admission that two arms of the state hold different numbers for the same transactions. | MOVEMENT |
| **Guinea-Bissau** | Civil registry professionals were trained in data skills in August 2025.<br><br>The training of August 2025 is the repository's only evidence of statistical capacity being built inside the register that produces vital statistics.<br>The administrative streams that would feed a compilation are themselves being rebuilt — the education database, the school inspection dashboard and the tax platform — and none is recorded reaching the statistics institute. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Kenya** | The statistics office's ICT chapter runs to 2024 and a year behind the regulator's quarterly returns, with no 2026 edition held.<br><br>It puts mobile subscriptions at 71.4m and 136.1 per 100 inhabitants in 2024, fixed and wireless internet subscriptions at 57.8m and mobile-money subscriptions at 42.3m (survey).<br>A collaboration to explore anonymised aggregated mobile data for population, mobility and socio-economic insight was announced in June 2026, with no scope, governance terms or start date (partnership). | NO CHANGE |
| **Lesotho** | Vital statistics are produced from civil registration records; the peer review flagged integration gaps.<br><br>2024 — the fourth vital statistics report was produced from home affairs civil-registration records for the 2022 reference year.<br>2025-12-12 — the peer review confirms administrative data in use across health, education and civil registration, and flags integration gaps and legal constraints.<br>2026-02-26 — the 2026 work plan strengthens the identity and civil-registration infrastructure underneath.<br>The legal constraints the review names are the same ones the fourth Statistics Bill is meant to lift, and that Bill is not yet enacted. | MOVEMENT |
| **Liberia** | The socioeconomic statistical bulletin compiles ministry and agency administrative records for 2016 to 2022.<br><br>The fourth volume, published December 2023, is the standing compilation of official statistics drawn from ministry and agency administrative records across 2016 to 2022, and the repository's evidence that Liberia produces statistics from administrative data at all.<br>No later volume is on the record. The administrative streams that would feed one are being digitised separately — emergency patient care reporting and the 2025/26 school census among them — with no statement that either now reaches the bulletin. | NO CHANGE |
| **Libya** | More than 8,000 procurement tenders were analysed from platform data for 2025.<br><br>The information authority completed an analysis of key indicators from the government procurement and tenders platform covering more than 8,000 tenders for 2025.<br>Sector capacity is being built to the same end: the agriculture ministry and the food agency closed a two-week programme training 32 staff for the national agricultural statistics plan in July 2026.<br>2026-09-10 - a second ministry published from its own register. The industry ministry's green industry centre issued an engineering report of industrial and environmental indicators compiled from its database of industrial facilities, recording 305 registered industrial establishments of which 301 are private, and 26,034 workers. The source gives no reference year for any figure; none can be read as a series.<br>The health ministry's information centre and the Civil Registration Authority compiled births and deaths for 2020, with a summary back to 2013, from the authority's single automated database across 12 branches, 133 issuing offices and 400 service offices. No later edition is held.<br>2026-09-14 — the information authority met ministries' information centres in Tripoli to agree how they supply indicators to a Unified Directory for National Indicators, and set the order for completing it. The directory is not yet published. | MOVEMENT |
| **Madagascar** | The statistics office signed the first interoperability usage conventions in April 2026, opening a route to administrative data.<br><br>The civil status law of 2018 mandates the unique identification number that would key administrative records to individuals (law).<br>The statistics office's director general was among the signatories of the first usage conventions when the national interoperability platform launched in April 2026 (launch).<br>An external technical assistance mission on government finance statistics ran in March 2026 and reported in June (mission). No statistical product compiled from administrative registers is held, and the mission report itself is a separate download not captured. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Malawi** | The National Payments System Report series continues quarterly and annually, and a public sector reforms information system tracks agencies against reform targets.<br><br>The payments series is in publication with the 2024 annual report reported in April 2025 (2024), a quarterly report in November 2025 (quarterly) and the 2025 annual report in March 2026 (2025); the repository holds the reports only through press accounts (growth).<br>A reforms information system launched in December 2025 as a dedicated platform tracking how agencies perform against reform targets, with no user, coverage or output figure held (reforms).<br>Against those, the copyright levy is distributed entirely on records submitted by licensed disc-burning centres rather than on digital consumption, and tax reconciliation against a rights holder's taxpayer number is not automatic (levy). | MOVEMENT |
| **Mali** | The statistics institute reviewed its statistical master plan in August 2026 and published a manual harmonising collection methods across the system.<br><br>The statutory basis is the 2016 public statistics law, and the institute under it is working on exactly the question this indicator asks. It published a manual harmonising data collection methodologies across the national statistical system in December 2025 and held the seventeenth annual review of the statistical master plan in August 2026, alongside a microdata catalogue.<br>The administrative systems that would feed it are the sectoral ones: education statistics worked against school health data, and the national health information portal. No statistic is yet published as derived from a register. | MOVEMENT |
| **Mauritania** | A National Youth Empowerment Index was published in preliminary form at 60.5 out of 100 for 2026, built from 43 secondary indicators across five domains.<br><br>The reference document was presented at a Nouakchott workshop on 29 July 2026, with education and training strongest at 69.5 per cent and health and sport weakest at 46.1 per cent (index).<br>It is built from secondary indicators rather than new collection, which makes it a use of administrative and survey data the state already holds. No methodology note, weighting scheme or update cycle is published. | MOVEMENT |
| **Mauritius** | A national fisheries information system was endorsed at a validation workshop in August 2026 for submission to a multilateral funding window.<br><br>The proposal was endorsed at a workshop convened by the fisheries ministry, for submission under a fisheries fund's project-implementation grant window (proposal).<br>It is a proposal for submission with no award, budget or build on record. It is the only sectoral data system in this unit that would produce statistics rather than administer a service. | MOVEMENT |
| **Morocco** | The commission announced administrative data agreements alongside its statistical overhaul in October 2025.<br><br>The statistics directorate has long been charged with processing administrative and civil-registration statistics; what it lacked was the agreements to get at the sources.<br>Those were announced in October 2025 alongside a peer-reviewed overhaul and the 2026 employment survey reform. The national statistical information council created in July 2026 is the body that would govern such flows, and no published series yet rests on them. | MOVEMENT |
| **Mozambique** | A microdata catalogue holds 79 statistical operations from four ministries and the statistics office, all under licensed access rather than open download.<br><br>The catalogue held 79 operations at capture in August 2026, depositing from the statistics office, the education ministry, the science ministry and the public works ministry (catalogue).<br>Access is licensed, not open, which is the distinction between a microdata archive and an open-data holding. It is the country's only cross-ministry data catalogue. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Namibia** | The producer price index moved off spreadsheets onto an automated engine with revisions back to 2015, and the quarterly bulletin is now held as a primary.<br><br>Compilation moved to an automated processing engine, disclosed in the second-quarter 2026 bulletin and carrying retrospective revisions of producer price estimates back to 2015: missing prices are now imputed as a turnover-weighted average of observed price relatives within the product group, imputation is capped at three consecutive periods before an item must be replaced, and automated validation flags extreme swings and entry errors (system).<br>The bulletin itself is held in full where the repository had carried its figures only as reported, and it carries no digital-sector breakout (bulletin).<br>The country has subscribed to an international data dissemination standard since December 2022, one of about seven African countries (subscription), and held an inaugural statistics awareness day in July 2026 themed on statistics in the digital age (day).<br>2026-09-24 — the statistics agency launched the first national labour-market information system, pulling labour data held by government bodies and the private sector into one platform; no coverage or publication schedule is stated. | MOVEMENT |
| **Niger** | National accounts and statistical exchange standards both moved in 2026, on a legal duty in force since 2004.<br><br>The statistics institute adopted an operational roadmap in February 2026 after training national accountants on the ERETES software for accounts compliant with the 2008 System of National Accounts, noting that 2025 estimates will be revised as survey results and administrative data are integrated.<br>A national workshop in April 2026 covered SDMX data modelling and migration to the ODP 2.0 platform, aimed at standardising and improving dissemination across the system.<br>The duty itself is long-standing: the 2004 statistics law makes administrative files a formal source category, obliges bodies to supply them on request and makes the institute responsible for centralising what the system produces. The repository holds no count of administrative registers actually feeding official statistics. | MOVEMENT |
| **Nigeria** | A health sector review compiled from routine administrative records reported in November 2025, and two ministries agreed a central government data repository.<br><br>The 2025 health sector joint annual review tracks indicators compiled from routine health-sector administrative records and put implementation of the health compact at 84% — the clearest case in the repository of administrative data driving a published performance assessment.<br>The finance and budget ministries agreed on 2 September 2026 to create a central government data repository and a standing committee on macroeconomic data, after a validation workshop found significant gaps between past budget assumptions and outcomes, particularly for oil production and revenue (repository); no host institution, membership or commencement date is stated.<br>The legal base remains the Statistics Act 2007.<br>2026-09-29 - the agriculture ministry said it had finalised a federal department of agricultural data and analytics to set one standard for a national farmers register; no establishing instrument is held. | MOVEMENT |
| **Rwanda** | The statistics programme appropriation fell as the programme moved between ministries, and the national statistics function is 87 per cent externally financed.<br><br>The appropriation fell in the 2026/27 finance law and the programme moved between ministries in the same period (appropriation, prior).<br>The function is 87 per cent externally financed (financing). The statistics office also holds governance of the national data-sharing policy, so the body that owns the country's data governance is the one whose own funding is almost entirely donor-carried.<br>2026-09-16 — the higher education council said it is building a national performance measurement framework to capture, digitise and publish standardised data on students, staff, research and graduate outcomes, having lacked comparable data before. No publication date is set.<br>Kigali hosts the UN regional hub for big data and data science, run with the statistics institute to help African statistical offices use new data sources for official statistics; no output figure is stated. | REGRESSED |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Sao Tome and Principe** | An automatic electoral registration law came into force in March 2026 entering citizens ex officio from registry data - the clearest case held of an administrative dataset driving an official register.<br><br>The law was published in the gazette on 26 March 2026 and establishes an automatic and permanent registration model under which citizens are entered in the electoral database on reaching 18, on the basis of data sharing between the registries directorate and the electoral commission (law).<br>The health ministry's statistical yearbook is the clearest recurring publication compiled from routine service records rather than a survey, developed by the health information system office with a statistics institute representative on its working team (yearbook).<br>A 2025 enterprise survey was catalogued in January 2026, the first firm-level survey since 2014 (survey). What administrative data has not produced is a published series: the registers carry counts and the repository holds no regular statistical output from them. | MOVEMENT |
| **Senegal** | The civil-status agency and the statistics agency signed an interoperability protocol in January 2026, on a statutory duty to transmit civil-status data.<br><br>The protocol signed on 23 January 2026 is described as a convention allowing better management of civil-status data; it states no scope, no data categories, no technical arrangement and no timetable, and its text is not published.<br>The duty behind it is standing: the agency is charged with producing a statistical yearbook of civil-status data and transmitting that data to the statistical services, and with a centralised national and consular database interfaced with other producers' databases.<br>The largest administrative dataset moved in the window: the single social register was extended to 996,194 households at the start of 2026 against 545,000 before, and is the single targeting base for social programmes.<br>Terms of reference were issued to rebuild the national digital-indicators observatory, which has been offline since January 2025. | MOVEMENT |
| **Seychelles** | Cabinet approved measures operationalising a multidimensional vulnerability index, naming enhanced data and institutional capacity as the instruments, and an island states resilience data programme launched nationally.<br><br>The Cabinet measures name enhanced data and institutional capacity and the alignment of planning and budgeting frameworks as the instruments for operationalising the index (index).<br>The resilience data programme was launched nationally in August 2026; the grant figure attached to it covers a nine-country programme and the national share is not published (programme, launch).<br>Both are about building the data on which small-island vulnerability is measured, which for this country is the statistical question with the most policy weight attached to it. | MOVEMENT |
| **Sierra Leone** | Two administrative systems now publish: the school census from the education system and the financial system's annual report.<br><br>The education management information system runs the annual school census and its 2021 final report is published (census).<br>The Accountant General's 2025 annual report records that Phase II of the integrated financial management system reached 56 further ministries, departments and agencies, that 56 subvented agencies were trained on it and on electronic funds transfer, and that those agencies must process all withdrawals and petty cash through it from January 2026 (report).<br>Neither is published as a statistical series. The rebased gross domestic product on a 2018 base year is the one national account output in the repository (GDP), and it is a survey product rather than an administrative one.<br>2026-09-10 - the civil registration authority put a draft 2025 vital statistics report to stakeholder validation, the first administrative statistical series in the repository to reach that stage. | MOVEMENT |
| **Somalia** | An economic update reached its eleventh edition in May 2026, held as a primary with no digital-sector chapter broken out.<br><br>The edition was published in May 2026 (update).<br>It is a macroeconomic publication and no digital-sector chapter or indicator is separated out of it here. It is recorded because it is the only recurring statistical publication the repository holds for this country, and because the figures this report uses for mobile money and for identity coverage come from lender and survey sources rather than from a national statistical series.<br>2026-09-08 - the planning ministry launched a system monitoring plan implementation across all 26 federal ministries against performance indicators, with no public dashboard published. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **South Africa** | An insolvencies series was restored after five years, its administrative supply having been cut off by a cyber incident, and index methods built on customs records were published.<br><br>2026-07-21 — the monthly insolvencies series was restored, having been interrupted since a 2021 cyber incident at the justice department cut off the administrative supply, with a first release covering June 2026 and a time series back to January 2023.<br>That is the clearest cost of a security failure anywhere on this ledger: an official statistical series lost for five years because another department's systems went down, and recovered only now.<br>2026-03-19 — the export and import unit value indices had their basket and weights revised effective with the January 2026 index, a series built from customs administrative records, and sources and methods were published for the residential property price index. Both depend on another agency's systems continuing to supply them. | MOVEMENT |
| **South Sudan** | Health is the only sector publishing from administrative data - a statistical abstract of about ninety tables built on the national instance.<br><br>The abstract covers health status, risk factors, service coverage and health systems indicators across about ninety tables, built on administrative health data (abstract).<br>The health agency's 2025 annual report, organised by quarter and cluster, covers strengthened health information systems and administrative-data reporting alongside emergency response and primary health care (report).<br>No other sector publishes a statistical product from its own administrative records, and the education, land and justice systems recorded separately have no data to publish from. | NO CHANGE |
| **Sudan** | A hospital management system launched integrating vital statistics with clinical records, and health reporting coverage reached over 56 per cent.<br><br>Phase one of the hospital digitisation programme launched at two hospitals, integrating civil registration and vital statistics, electronic patient records, laboratory and pharmacy systems, the health management information system, disease surveillance and human-resources information — a direct administrative-data-to-statistics pipeline (launch).<br>The health ministry reports routine reporting coverage up from 13 per cent at the onset of the crisis to over 56 per cent by the end of 2025, and calls for coordination with the civil registry and the statistics bureau (declaration).<br>In education, an information system pilot and monitoring dashboard began in Red Sea State (handover). | MOVEMENT |
| **Tanzania** | Tax records lifted the business register 17.3 per cent to 257,405 establishments in a year.<br><br>The statistical business register updated in October 2025 shows establishments rising from 219,371 to 257,405, a gain of 17.3 per cent, built by integrating mainland and Zanzibar tax records with other administrative sources — a substantive finding and a sampling-frame improvement at once.<br>The statistical master plan treats administrative-record integration as a central development priority and records the statistical system's continuing weaknesses in data sharing, information technology and harmonisation.<br>The manual for strengthening and integrating administrative data that would set the method is not held; its published address returns nothing and no replacement is discoverable. | MOVEMENT |
| **Togo** | The national statistical yearbook is the standing product, compiled from sectoral administrative systems and ministry returns.<br><br>The 2024 yearbook was reissued in a revised edition in August 2026 after a first edition of December 2025, with a corrigendum stated in the document. Its capture is truncated at the fetch cap and the document is tabular.<br>The institute's mandate for it rests on the 2011 statistics statute, whose fifteen missions include coordinating the national statistical system and examining visa applications for public statistical surveys.<br>What is changing around it is the dissemination layer rather than the compilation: a second-generation open data portal with statistical data and metadata exchange modelling, for the institute and the sector ministries. | NO CHANGE |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Tunisia** | The 2024 census was linked to social-scheme administrative records in September 2025, alongside an annual business-register series.<br><br>The statistics institute publishes annual business statistics derived from the Repertoire National des Entreprises, itself fed by tax and social-security administrative files; the 2023 edition is dated 3 June 2025.<br>A September 2025 bulletin combined 2024 census results with CNSS, CNRPS, CNAM and Amen Social records to produce social-coverage indicators — 66.3 per cent effective social-security coverage of the occupied population, 82.1 per cent health coverage and SDG indicator 1.3.1 at 65.7 per cent — broken down by sex, age, governorate and employment status.<br>The legal and technical basis for the linkage is not held: no data-sharing instrument between the statistics institute and the social schemes is on the record. | MOVEMENT |
| **Uganda** | A secretariat review of quarterly performance submissions found reporting quality wanting — the government's own statement about its central performance-data pipeline.<br><br>The review covered 2025/26 submissions under the fourth national development plan (review).<br>It is the government's own statement about its own pipeline, which is what gives it weight.<br>A labour, employment and productivity reporting programme was launched in June 2026 with no budget, system name or delivery date (labour). | REGRESSED |
| **Zambia** | Digitising death notification raised completeness from 11.9 to 17.4 per cent and cut reporting time from six days to three.<br><br>The Statistics Act, 2018 establishes the agency and the national statistical system, the framework administrative statistics are produced under.<br>2025-09 — a Zambia case study digitising the death-notification form raised completeness from 11.9 to 17.4 per cent and cut reporting time from six days to three. Both figures matter and the first is the sobering one: after digitisation, fewer than one death in five is captured.<br>2026-04 — a multisectoral nutrition information platform integrating administrative data moved into government structures, an example of the same chain working across sectors rather than within one. | MOVEMENT |
| **Zimbabwe** | The 2025 national accounts were compiled from surveys and administrative sources on a new base year, and civil registration is being wired to feed vital statistics.<br><br>The national statistical system is defined in the Act as the producers, researchers and data providers of official statistics, its main producers the statistics agency and government ministries and departments, with the agency to coordinate and supervise it (system).<br>The 2025 annual gross domestic product figures were released compiled from surveys and administrative sources with 2025 as the new base year, output at constant 2025 prices rising 8.29 per cent from ZWG 1,431.9 billion in 2024 to ZWG 1,550.5 billion in 2025 (release).<br>The civil registration and health interoperability work is the clearest case of an administrative system being built to feed statistics, with automated validation against the national population register and a three-province pilot due in the first half of 2027 (presentation).<br>The constraint is the statute: the agency itself said in October 2025 that the Act does not adequately support the efficient provision of official statistics. | MOVEMENT |
