MONTHLY UPDATE

Rural digital data capture: monthly update, September – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *15 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.*

CAMEROON · CHAD · COTE D'IVOIRE · EGYPT · KENYA · LIBYA · MALAWI · MAURITIUS · NIGERIA · RWANDA · SENEGAL · TOGO · TUNISIA · ZAMBIA · ZIMBABWE

The place reports do not share one window; the period above is the range they span.

Cameroon

Four platforms built under the World Bank-financed digital transformation project were handed to the agriculture ministry on 1 October: two for its training schools, a soil-fertility map and an agro-pastoral statistics system. Soil sampling was launched the same day, and no user count is published.

Chad

A delegation studied three agricultural platforms in Lome on 28 August 2026, built by the Togolese arm of the same regional programme: a hydro-agrometeorological information system, an alerting service and an advisory service.

Cote d'Ivoire

Medical drone delivery is to leave the centre-west. The Council of Ministers noted on 9 September a partnership with Zipline for ten drone hubs supplying health facilities, a 27-month first phase at Daloa, Biankouma, San Pedro and Kouto, a US grant building them and the state paying operations. No contract value is published.

Egypt

The communications minister told a cabinet meeting on digital projects that the village fibre sits inside the incumbent's national programme to replace copper with fibre optic cable across the country, laying fibre in the villages of the rural development initiative to bring high-speed internet to rural residents. No route length, cost or completion date accompanies the wider programme, and the village and line counts held here are June's.

Kenya

Rural digitalisation arrived as a marketplace rather than an office. Mkulima Bora, built by a private developer with a German development agency and Rift Valley county governments, connects smallholders directly with bulk buyers and verified input suppliers, with search by county, sub-county and ward, a map view, negotiated offers and logistics booking. It is built on reusable components and open standards rather than as a closed system, so that registration, consent management, registries, messaging and scheduling connect to existing government infrastructure. The account is the standards initiative's own, and it states no county list, user count or public funding.

Libya

The renewable energy authority's off-grid programme is now on the record at 400 solar systems, 310 kW peak, for remote clusters and border posts.

Malawi

UNDP reported digital forensics training for the police on 1 September. No count of police stations connected or equipped outside headquarters is on record.

Mauritius

The virtual reality programme in primary schools is the second digital programme now running in the primary estate, after the education platform launched in January under the operator pilot. Neither publishes a school count or a pupil reach. On an island of this size the rural indicators are answered by national programmes rather than by a rural one, and what the repository cannot say of either programme is how much of the estate it has reached.

Nigeria

The regulator's investment forum resolved on a blended funding model for community-owned rural networks, with a six-month target to secure funding.

Rwanda

A company's solar-powered connectivity and power unit for health posts, deployed with the health ministry and a vaccine alliance and launched on 1 October 2026, has reached 65 health posts in 21 districts, with 85 more planned.

Senegal

The head of the deconcentrated service network said the thing his own network runs on is missing. Closing a tour of four regions, he said that without connectivity there can be no deconcentration of public services, and listed connectivity, workstations, IT equipment, archive and mail management and communications security among the problems found in prefectures and gendarmerie posts, while announcing the forthcoming integration of civil registration into the national platform for administrative acts. No centre count, connectivity rate or remediation budget is published against the diagnosis.

The online civil-status certificate platform has left its pilot: by August it was operating in 189 municipalities, with the management software it depends on deployed in 74 per cent of civil-status centres, on the agency's own figures. Certificates requested online are still collected at the centre.

Togo

A four-member Chadian delegation visited Lome on 28 August to study three agricultural platforms built under the West Africa food system resilience programme — a hydro-agrometeorological information system, an alerting service and an advisory service — which produced and distributed more than 80,000 agrometeorological and climate bulletins in 2024. The government's own account is that Chad drew on the Togolese experience of deploying agricultural digital solutions. No reach figure later than 2024 is published.

Tunisia

A European and health-ministry programme's own results page, recorded on 3 September, sets out the digitalisation of the first-line care information system for basic health centres: diagnosis, governance, a national computerised medical record and deployment on pilot sites at Nabeul. A telecommunications foundation's programme page puts 185 public primary schools on offline-capable digital kits since 2014. Neither page carries a publication date.

Zambia

A larger programme followed on 15 September: 70 schools are to be connected by satellite with solar power over three years, free for the first year and sold at affordable rates after.

Zimbabwe

A company partnering the postal operator reported at a conference, reported 9 October 2026, that it has set up 28 nurse-staffed digital health sites in post offices and modular container clinics, connected by satellite and a state mobile operator, and reached 118,000 people.
