MONTHLY UPDATE

Data Exchange: monthly update, September – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *36 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.*

ALGERIA · ANGOLA · BENIN · BOTSWANA · BURKINA FASO · CAMEROON · CAPE VERDE · CONGO · COTE D'IVOIRE · DJIBOUTI · DR CONGO · EGYPT · ETHIOPIA · GABON · GAMBIA · GHANA · KENYA · LESOTHO · LIBERIA · MALAWI · MAURITANIA · MOZAMBIQUE · NIGERIA · RWANDA · SENEGAL · SEYCHELLES · SIERRA LEONE · SOUTH AFRICA · SOUTH SUDAN · SUDAN · TANZANIA · TOGO · TUNISIA · UGANDA · ZAMBIA · ZIMBABWE

The place reports do not share one window; the period above is the range they span.

Algeria

On 20 September the Council of Ministers ordered a presidential decree on a secure digital interoperability plan, setting the missions and representation of the sectoral bodies under the high commissioner and extended to the wilayas. State media describes a sovereign network, IRIES, linking more than 100 ministries and public bodies to the national data centres outside the public internet, with no inauguration date given.

A second unified path was proposed on 3 September. A working meeting at the digitalisation commission, chaired with the internal trade minister and attended by officials of the interior, transport, agriculture and fisheries ministries, was devoted to a unified digital mechanism for regulating the national market and a national system for tracking strategic goods, unifying the data path between the sectors that supply and distribute widely consumed goods. The record is a joint communique of one meeting: no instrument, budget, operator, architecture or delivery date is stated, and nothing names the goods in scope.

Angola

The land-concession single window is moving to the provinces: the cadastral institute trained Huambo's municipal administrations on its procedures on 14 September, under the 2025 decree that created it.

The tax and customs administration is integrating the commerce ministry's and other licensing bodies' platforms with its own, its head of systems development said on 30 September, under service-level agreements setting response times of three days for the commerce ministry and five for other bodies; importers are to follow their customs processes by taxpayer number. No go-live date is stated. The transport minister said on 28 September that the logistics single window is being completed with the tax administration and the commerce and interior ministries, to track the logistics chain across air, sea, road and rail; no launch date is stated. The interoperability framework study and its platform roadmap were completed in the first half of 2026 and the platform, an enterprise service bus on X-Road, is under tender at about US$13.0m.

Benin

At the busiest land border, the systems gap was named on the record: Nigeria's customs chief told a joint assessment at Seme-Krake that the two administrations work under one roof but not on one system, and offered real-time exchange of declarations, manifests and risk alerts. Benin's reply is not reported. The Treasury told road users to settle unpaid traffic penalties through the road-enforcement portal by 1 October, with forced recovery on the road after that date. The portal lets a driver look up what is owed.

Botswana

The identity register is being opened to banks: the bankers' association launched a national eKYC project letting banks verify customers against the national citizen database, with no go-live date or data-protection arrangement stated.

Burkina Faso

Two states that share a river proposed sharing the data that would stop it drowning people. Burkinabe and Ghanaian officials proposed a formal reservoir release protocol built on real-time data sharing and pre-agreed spill thresholds, and heard the Burkinabe power utility's chief hydrologist disclose that letters seeking closer coordination with the Ghanaian river authority, sent as far back as October 2025, had gone unanswered. Working groups mapped why warnings fail on the shared river: messages move too slowly, district assemblies lack transport and fuel, agencies holding forecast data do not always talk to disaster responders, and repeated false alarms have bred complacency. The proposal is a research project's rather than either government's, and nothing is signed.

Cameroon

Border records were put to work on the payroll. The finance ministry matched the state payroll against border-movement data and flagged 5,971 public servants as no longer resident, holding their September and October pay pending justification by 31 October. The chamber of commerce trained its staff on 29 September on the platform through which it issues electronic certificates of origin and sends them to China's customs, the condition of zero-duty entry.

Cape Verde

The project coordination centre invited expressions of interest on 21 September for a 12-month build of a digital-nomad statistics and data module inside SGIT, to be interoperable with institutional platforms and to produce the Morabeza Innovation Project's indicators automatically, financed from the African Development Bank's credit. The notice does not name the platforms it is to connect to.

Congo

The digital ministry published a national digital public infrastructure architecture on 2 September 2026: data exchange between ministries that each keep their own data, MOSIP for a unique digital identifier built on civil-registry records, and Mojaloop for a national payments switch under central bank supervision. No timetable or budget is published.

Cote d'Ivoire

The cocoa traceability system went live for the new season. Compulsory with the producer card from 1 September, it recorded about 38,000 producers selling with their cards in its first 13 days, and over 26,000 tonnes bought at the farm gate, each transaction sent to the coffee and cocoa board in real time. The rollout gaps producers raised in August over card conditions and remote collection are not reported as settled.

The credit bureau's data turned out to be mostly stale. On figures as at 10 June, 67.88 per cent of Ivorian contracts in the regional credit bureau had not been updated, against a union average of 46.20 per cent, and the country accounted for 60.17 per cent of all non-updated contracts in the union. The finance ministry opened consultations on late and incomplete reporting, with three sectoral commissions to produce a national credit-information roadmap.

Djibouti

Customs has begun preparing to put trade procedures on one platform. The administration set out an electronic single-window project at a preparatory workshop on 1 September, saying it goes beyond strengthening the declaration system customs currently uses and would shorten processing times, increase transparency and make operations more predictable for traders, working with the commerce ministry, the continental free trade secretariat and a Korean agency that has done the same in three other African countries. No design, budget, procurement or timetable is published, and no baseline clearance time exists to measure the shortening against.

DR Congo

On 28 September the digital economy minister said the Prime Minister had signed the decree creating the national electronic certification authority provided for in the 2023 Digital Code. No decree number or operating date was given. The continental health agency said it was deploying the national health data platform for Ebola outbreak data and had sent more than 150 internet devices to affected health zones to replace paper reporting.

Egypt

The financial regulator ordered consumer and small-business lenders to report approvals, repayments and legal action to the credit bureau in real time, under decisions 174 and 175 of 2026, and its Decision No. 2863 requires consumer-finance companies to consult the bureau's behavioural score, built on alternative data, from 1 April 2027. The stock exchange and the internal trade authority signed a protocol integrating the commercial registry with exchange databases (20 August), and the environment agency and the export-control body signed one to exchange industrial facilities' environmental data through a unified registry (1 September). The health minister discussed a proposed national platform linking patient records across health facilities (14 September); it is a proposal, with no build stage or date.

The non-bank regulator's Decision 2684 came into force on 24 September, requiring consumer-finance companies to build the technology to link their databases to the regulator's, including real-time purchase data. The controls that set when the data flows are due within six months.

Ethiopia

A delegation joined the UNDP Africa Accelerator for Digital Public Infrastructure's session of 2-3 September alongside Malawi, Rwanda, Sierra Leone and Zambia, on moving digital public infrastructure blueprints to execution, verifiable credentials and consented data sharing, and reusable open-source deployment code. Attendance and a published agenda are the whole of what is established; nothing on the record commits the country to a programme.

Gabon

The government interoperability platform was still being built: the sixth steering committee of the World Bank-financed programmes, on 8 September, listed it among four projects under way, with no delivery date.

The private half of the health system was brought into a standing channel for the first time. The health ministry instituted quarterly consultations with the association of private health establishments, the agenda naming the transmission of health data from private clinics among its items. No data standard, transmission route, reporting obligation or first meeting date is published, and the repository holds no measure of what share of care the private sector accounts for — so the channel exists and what will flow through it does not.

Gambia

The first register link to be agreed is between education and health rather than between the registers the interoperability indicator counts. A memorandum connects the education and health information systems to flag vulnerable children and verify enrolment. It is a memorandum rather than a live interface, and the project's own indicator for register interoperability still stands at zero.

Ghana

Kenya's president announced Masterkey, a cross-border wallet for verifiable qualification and work records whose first phase targets 150,000 placements, with Ghana, Rwanda and Kenya as its first countries, at an Accra event on the sidelines of the UN General Assembly. No Ghanaian implementing agency, cost or launch date is stated. The central bank counted 25,921,066 credit-bureau enquiries in 2025, down 12.12 per cent, while enquiries on digital borrowers rose from 13.1 million to 19.9 million.

Kenya

The head of the public service convened the examinations council, the public service commission and the education ministry to link academic credential databases directly to hiring agencies, against fake certificates. No design or date is set.

The President announced Masterkey, a wallet for verifiable qualification and work records across African borders whose first phase targets 150,000 placements with Kenya, Ghana and Rwanda, Kenya leading the first national implementation through eCitizen. He said the system will not itself award jobs, visas or professional recognition; no cost or launch date is stated.

The back end became the stated priority. The ICT principal secretary said a unified operations platform linking systems through secure APIs is being built, ahead of AI agents in service delivery, and the ICT secretary described the back end as still largely manual and the interoperability platform as still in development; no budget or date is published. The social protection project sought a consultant to upgrade the Enhanced Single Registry and the community development information system to exchange data with the health authority, the social security fund and the population register, under World Bank procurement.

The electoral commission is moving its voter-registration targets from census estimates to registration-bureau and immigration data on issued identity cards and passports, against a target of 6.3 million new voters for 2027.

Lesotho

The national single window has twelve agencies connected and cost M50m to design and implement, on the financing project's account reported on 27 September. It runs without its own law, drafting of which has started, and the government payment gateway is still to be integrated.

Liberia

The education ministry held a two-day consultation on 28-29 September 2026 to draft and validate an Education Management Information System policy, for a real-time system feeding school data to a central dashboard. The annual school census has resumed after its interruption after 2021.

Malawi

Inside government the push is toward the identity system. The communications regulator urged every ministry and agency to connect its systems to the national registration and identification system, officials saying human-resource management, agriculture and health already are, reported on 23 September; no count of connected systems or data-sharing instrument is published.

Mauritania

One sector shows what the exchange is for. The housing minister said that qualification and classification of construction firms now runs exclusively through a government platform linked electronically to the tax administration, the transport administration, the procurement commission, the social security fund and the registry administration, the purpose being to cut human intervention and fraud. A draft decree would replace the 2022 text, requiring accreditation for delegated project managers and inspection offices and cutting the commission from 22 members to 15; it is not adopted, and no file volume or turnaround figure is published.

Mozambique

The digital agency said the X-Road interoperability platform is being implemented and is expected in the fourth quarter of 2026; no operator or list of connected agencies is on record. Mozambique and four neighbours adopted a roadmap for customs-to-customs data exchange at a meeting in Pretoria ending 26 August, phased from priority corridors. The digital transformation agency trained 25 technicians from nine public bodies on the X-Road data-exchange layer, led by Estonian experts.

A regional trade facilitation agency awarded a US$174,000 contract to build the Mozambique Transport and Trade Observatory for the Beira Corridor, a platform integrating port, road, rail and customs data, to be hosted in Mozambican data centres and piloted on the Beira-Machipanda route.

Nigeria

The education repository put figures against its institution count. It now holds 907 enrolled institutions — 259 universities and 163 polytechnics among them — past 400,000 theses and dissertations with 115,000 credentials verified, reported on 7 September. Submissions run 409,456 undergraduate against 1,563 postgraduate, a ratio of 262 to one, so what is being built is a record of first degrees.

Three more exchanges were proposed in September, none yet built. The education ministry disclosed talks with the national youth service scheme on an interface to verify qualifications against the repository; at Seme-Krake the customs service offered Benin real-time exchange of declarations, manifests, transit data, risk profiles and

enforcement alerts, the two administrations sharing one post but no system; and the financial intelligence unit opened co-design with banks, fintechs and insurers of a platform to share intelligence against illicit flows. None states a legal basis for the sharing. The disease control centre signed a memorandum to pilot automated disease reporting from private facilities into its surveillance system, with no start date stated.

Rwanda

A delegation joined the UNDP Africa Accelerator for Digital Public Infrastructure's session of 2-3 September alongside Ethiopia, Malawi, Sierra Leone and Zambia, working through the move from blueprint to execution, verifiable credentials and consented data-sharing frameworks, and reusable open-source deployment code. What is on record is attendance and a published agenda; no country programme, commitment or deliverable follows from it.

Kenya's president announced Masterkey, a cross-border wallet for verifiable qualification and work records whose first phase targets 150,000 placements, with Rwanda, Ghana and Kenya as its first countries. No Rwandan implementing agency, cost or launch date is stated.

Senegal

The data protection commission and the identity-file directorate announced on 16 September 2026 that their joint work on interoperability between the civil registry and public-service identification is complete, with two options put up for arbitration.

Seychelles

Cabinet approved the establishment of a hydrographic office inside the maritime safety authority, reported on 15 September, to bring hydrographic information together from across government and international partners. No start date, staffing or data-sharing arrangement is published.

Sierra Leone

A government delegation completed a two-week learning mission to India on 7 September 2026 under UNDP's digital public infrastructure accelerator, examining identity, payment and data exchange systems. The revenue authority began consultations at the Jendema border crossing ahead of launching ASYCUDA World there.

South Africa

On 8 September the revenue service confirmed that the VAT Act has carried definitions of e-invoicing, e-reporting and the interoperability framework since 1 April 2026, before the model was put out for comment.

On 9 September South Africa and Lesotho agreed to speed up smart one-stop border posts at Maseru and Ficksburg. No date or design has been published.

South Sudan

The only description the repository holds of how import revenue is actually collected is an account of a sanctioned contractor collecting it. A UK-registered firm manages national revenue through a US-dollar e-Permit charge levied on imports before any tax assessment is issued, enforced at all border points by the Ugandan and Kenyan revenue authorities alongside the firm's own staff deployed under national revenue authority cover, and collection has

continued since the United States sanctioned the firm on 12 May over the diversion of public resources and foreign assistance. The Tanzanian and Rwandan revenue authorities have publicly dissociated themselves. No contract, legal instrument or revenue figure is published, and no national authority is recorded as answering the account.

Sudan

The first service the repository holds that names agency-to-agency links went live. A needs-disclosure service on the national platform lets an investor complete the step digitally, and wires the industry, transport, agriculture and customs bodies to each other electronically. The links are asserted in the launch announcement and nothing else: no data-sharing instrument, service volume or processing time is published.

Tanzania

The health ministry described cutting the number of health systems, linking private and public ones, and preparing a national Health Data Centre as a single access point for research and trials; no access rule beyond user role is published. The central bank signed a cooperation agreement with IFC on the credit reporting system.

The deputy communications minister called on parcel and express courier providers to register and connect their tracking systems to the national tracking and information-exchange systems, commending those already linking to the Communication Monitoring System the regulator oversees.

Togo

The state's enterprise-architecture guide defines a common interoperability framework over four levels, and its version page records version 1.0, status *Brouillon*, with an empty revision log.

Tunisia

The health ministry puts 99 facilities at various stages of implementing electronic medical records, on an account of 25 September. The loan financing information systems across 24 university hospitals has its drawdown deadline extended to 30 September 2028, with about 16 per cent drawn. The interior ministry said its strategy for the criminal-record extract rests on interconnection with the justice and finance ministries.

Uganda

The month's exchange story is a border system working for someone else. The revenue authority, with its Kenyan counterpart, continues to enforce a US-dollar e-Permit charge on imports bound for South Sudan, levied before any tax assessment is issued, on behalf of a UK-registered firm the United States sanctioned in May over the diversion of public resources and foreign assistance; the firm's staff are deployed at border points under South Sudan Revenue Authority cover, and the Tanzanian and Rwandan authorities have publicly dissociated themselves from the arrangement. The revenue authority is not recorded as answering the account, and no agreement or legal basis for the Ugandan side is published. The information technology authority said on 1 October that its integration platform connects the identity register to more than 150 agencies, banks and telecoms operators for real-time verification.

Zambia

A government delegation completed a two-week learning mission to India on 7 September 2026 under UNDP's digital public infrastructure accelerator. Zambia and four neighbours adopted a roadmap for customs-to-customs data exchange at a meeting in Pretoria ending 26 August, building on links it already runs with Malawi and Zimbabwe. Bids for the redesign of the Government Service Bus were evaluated and under the lender's review at June 2026.

Zimbabwe

Customs data crossed a border on paper this month, in the form of an agreement to stop it having to. Customs administrations from five countries adopted a roadmap and action plan for customs-to-customs data exchange at a meeting in Pretoria ending 26 August, to exchange trade information before consignments reach the border so that documentation and risk assessment happen earlier, building on a link this country already runs with Zambia. Data standards, interoperability, cybersecurity, legal authority and information quality are all recorded as unresolved, and no corridor or target crossing time is named.

The registry check reached the wallets. The central bank shut down ghost, fictitious and duplicate mobile money wallets after linking the civil registry's national database with subscriber records; no count of closed wallets is published.
