MONTHLY UPDATE

Other GovTech and e-Gov: monthly update, September – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *42 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.*

ALGERIA · ANGOLA · BENIN · BOTSWANA · BURKINA FASO · BURUNDI · CHAD · COTE D'IVOIRE · DR CONGO · EGYPT · EQUATORIAL GUINEA · ESWATINI · ETHIOPIA · GABON · GAMBIA · GHANA · GUINEA · KENYA · LESOTHO · LIBERIA · LIBYA · MADAGASCAR · MALAWI · MAURITANIA · MAURITIUS · MOROCCO · MOZAMBIQUE · NAMIBIA · NIGER · NIGERIA · RWANDA · SENEGAL · SIERRA LEONE · SOUTH AFRICA · SOUTH SUDAN · SUDAN · TANZANIA · TOGO · TUNISIA · UGANDA · ZAMBIA · ZIMBABWE

The place reports do not share one window; the period above is the range they span.

Algeria

The national portal reached 150 services on 9 September on the high commission's account, against 21 at launch, when three water-sector services went live, alongside five tax certificates and attestations. Seven youth-sector services and the sports ministry's job service followed in mid-September, with no updated total. On 22 September the high commission put the portal at one million registered users and more than five million visitors, about ten weeks after its 5 July launch, a count of its own, and the Prime Minister instructed every administration to accept documents issued through it.

On 1 September the public works ministry opened online filing of firms' qualification and classification files and design-office accreditation.

On 9 September the president ordered the investor single window effectively in service by the end of September and all investment procedures digitised with the tax, state-property and customs administrations.

The national pension fund added a website chatbot on 24 September to remote services that already let some pensioners prove they are alive by facial recognition, against a ministry target of halving office visits by year end.

Angola

The in-person counterpart to the missing online service inventory does publish numbers. The one-stop citizen service network stands at 16 subunits with eight more committed by 2027, units at Kilamba and Cuito due this year, and recorded 1.49m visits in the first half of 2026 and Kz2.47bn paid to the treasury. They are the secretary of state's own figures, published without a service breakdown, a waiting-time measure or any online equivalent — so the state can say how many people came through a door and still not say what it does online.

The Constitutional Court is preparing its own systems for the 2027 elections: on 22 September it opened a limited tender with pre-qualification, valued at Kz 20 billion, to modernise its platform for registering candidacies and to migrate the records of earlier electoral cycles in full. The tender document is not published.

Benin

UnivServices.bj went live for the 2026-2027 academic year at four public universities, with transport its first service and catering, housing and health announced to follow. The national police moved loss certificates wholly online from 1 October, with electronic payment; police stations no longer issue the certificate and are to assist people declaring a loss.

Botswana

A newspaper reported the transport ministry extending permits and clearing vehicles by hand after a systems outage at the road transport department.

Burkina Faso

The system's first month is measured, and the gap is collection. 19,910 offences were recorded between 1 and 31 August 2026, generating CFA146.559m in fines, of which CFA16.1m had been recovered at the review of 4 September. The state's answer is a body rather than a system: a motorised police brigade created on 2 September specifically to trace drivers who evade the camera-issued fines. Barely a ninth of the month's fines were collected, and no appeal, error or contested-notice figure is published — which is what a reader would need to tell non-payment from wrongly-issued notices.

The asset recovery agency opened another on 3 September, letting people who bought plots or buildings from three court-seized property companies register their claims remotely and upload scanned identity and title documents. Neither carries a use figure.

Automation also failed publicly for the first time. The civil service ministry admitted that part of one examination centre's scanned scripts were not carried over at the transfer to the marking machines in the 2026 recruitment competitions, affecting results published on 25 August, and that re-marking added candidates to the successful lists. It is the one account on file of a digitised process being checked against its own output.

Electronic signature then arrived on its announced date. FasoSign was launched on 15 September already integrated into the mission-order, administrative-mail and cadastre platforms, its keys and certificates presented as held by the state itself; no signature count or adoption list is published. At the same council the Prime Minister named weak citizen uptake of the digital service platforms as a persistent shortcoming, without a figure for it.

The state airports company signed a memorandum with ACI Africa and a German software firm to pilot a platform for runway inspections, certification, document management and safety management, reported on 25 September. No cost, duration or hosting location is stated. The ministry's mid-year report said 222 administrative procedures were described in the first half of 2026 and were being loaded onto the online-procedures platform at 30 June.

Burundi

The presidency adopted a locally built messaging application as a channel for citizens' grievances, with no terms disclosed and no rule stated on control of the servers.

Chad

The freight platform's roll-out reached two more places. Training ran at Ngaoundéré for transporters and forwarders, and on 4 September the steering committee presented the platform to authorities and freight operators of Logone Occidental province, at a meeting chaired by the province's secretary general. Three of the seven named locations are now on the record.

Cote d'Ivoire

The investment promotion centre runs an e-Licences platform taking investor licences, permits and authorisations online, with ministry focal points trained in late August 2026 to keep its content current. No count of licences carried or processing time is published.

September gave the programme a shortlist. A national prioritisation workshop closed on 4 September having examined 140 of 620 inventoried public services through nine working groups and retained 59 for immediate priority, with ten quick wins expected by the end of 2026 — among them diploma authentication, digital proof of life for pensioners, the computerised patient record and a digital post box. The list is not published, and the minister put a governance framework for the digital transition ahead of it as the first priority, against ministries each building their own tools and platforms; no such framework is on the record.

The prioritisation workshop's second day produced something more consequential than the list. The nine working groups, sitting on different sectors, converged on the same diagnosis — procedures still largely manual — and on the same answer: shared public infrastructure rather than nine separate builds, with a national single sign-on tied to the population register and the national identification number, 47 of the 49 bodies invited attending. That is a design decision arrived at by the departments who would have to use it, which is a different thing from one imposed on them.

The administration's electronic signature reached local government: the civil service ministry enrolled Marcory's mayor and secretary-general in the system on 15 September, letting them sign administrative documents from any location. No count of enrolled officials is published.

DR Congo

The foreign trade minister told the WTO Public Forum in Geneva that 93 of the 98 documents required for foreign-trade operations are now paperless, with the remaining five due by the end of 2026. The figure is the government's own and no independent count is held.

The minister said on 28 September that the Prime Minister had also signed the decree creating a Guichet numérique to give access to administrative services online. No service or launch date has been announced. The electoral commission launched on 28 September a programme to digitise the electoral archives produced since 2005 into a single document repository, with training for 762 staff; no cost or funder is stated.

Egypt

The card is issued free as a prepaid, fingerprint-authenticated card through the postal service, carrying bread and ration subsidy alongside health insurance, and usable at point-of-sale terminals and cash machines; no issuance count, coverage figure, governorate list or completion date is published.

The prime minister said on 3 September that faults in the unified electricity platform and discrepancies in prepaid-meter readings are a government priority and that remedial steps will be announced transparently, the question put to him describing the platform as having stopped working. The operator has published no outage notice, fault count or restoration date.

At its UN award shortlisting the services platform reported 12.9 million registered citizens, more than 240 services and about 60 million transactions, integrated with 109 government entities, the ministry's own figures. The prosecution put five personal-status documents - marriage, divorce and acknowledgement records - on its portal on 10 September, behind the national digital identity, and the environment ministry launched IDEIA on 1 September, moving environmental impact assessment applications, review and approval online.

The investment ministry's digital transformation aide described a capital-increase platform linking the eight government bodies involved, from the investment authority to the commercial registry and central depository, with digital-identity log-in, remote signing and e-passport checks on foreign investors on 22 September. No transaction count or go-live date was given.

Key ration card services became available on the Digital Egypt platform: heads of household can update card data, replace or activate cards, transfer a file between governorates and add family members, with the data-update service introduced in Port Said for an initial three months.

Equatorial Guinea

The government announced a digital edition of the official gazette with free online access and search.

Eswatini

The prime minister publicly acknowledged the e-Visa platform failing on reliability, payment processing and turnaround, worst at peak periods, with no manual fallback while it is fixed; tourism operators at the same conference described five-day waits.

On 23 September the ICT ministry acknowledged an ongoing outage across government web services, among them e-Visa, road transport permits, scholarship applications, the elderly grant service and deeds registration. It gave no cause and directed users to government service centres; a press report of a breach at the science park and a ransom demand was not confirmed by government.

The science park confirmed on 24 September that the outage stems from an incident at the National Data Centre, affecting parts of the Government in Your Hand application and online company registration among at least 12 services; the commerce ministry directed company applicants to the registrar's offices. What the incident was has not been stated.

Ethiopia

A service portal was built inside an agency rather than procured. The commodity exchange launched one using its own information-technology staff, replacing in-person visits to offices that drew more than 150 callers a day in peak season with a stated thirty-minute service-level target. Both figures are the exchange's own, and no user count, service list or measured turnaround is published — but an in-house build is a different capability claim from a procurement, and it is the first of its kind the repository holds here.

State logistics followed on 4 September, when the shipping and logistics company launched an all-in-one web and mobile self-service platform for shipment orders, cargo tracking, storage locations, freight payment and documentation, and the Ethio-Djibouti Railway operationalised a freight booking portal. No user or transaction figures are published.

Gabon

The road-safety directorate inspected the first road-offence cameras across Grand Libreville on 29 September, ahead of going live; how notices will be served and fines collected is not published. The digital economy ministry announced an electronic document management project, piloted at the general secretariat of the government and the elections directorate. A government messaging system is due before the end of 2026, and two public Wi-Fi spaces and a driving-licence enrolment centre were delivered at Makokou. The postal company presented an application hosted in Gabon that combines payments, public services such as birth-certificate requests, postal services and insurance, its app-store launch still to come.

Gambia

The revenue authority announced on 20 September a memorandum with the Liberia Revenue Authority, which will help design and build a prototype revenue collection dashboard; the developer of Liberia's dashboard is to spend an initial three weeks in Banjul. No build start or go-live date is published. The finance ministry, the revenue authority and the national single window introduced a digital duty waiver application system in place of a paper process, promising a decision within 72 hours where requirements are met; no go-live date is stated. The government began issuing a biometric driving licence valid for three years, replacing annual renewal. The procurement authority trained a second cohort of its cadre from 8 to 10 October 2026 on the 2022 Act, the 2024 Regulations and the rollout of the Electronic Government Procurement system, with the new instruments mandatory from January 2027.

Ghana

The paper record gained a contract. The ministry said on 7 September that a contract had been signed on 13 August to digitise 3.5 million public records held by the Public Records and Archives Administration Department, as part of moving public administration off paper. No contractor, value, timetable or completion date was stated.

The Rent Control Department's acting commissioner called for an investigation into a digitisation programme on which US$1.7m was reportedly spent, having found four computers at the facility. No audit finding is held.

The tourism authority's chief executive said on 18 September that a Ghana Tourism Information System will carry the sector's registration, licensing and renewal, levy filing and payment, establishment records and public verification. No launch date, cost or vendor is stated.

Guinea

A second citizen-facing platform launched, and one already running was presented abroad as evidence. The youth fund launched a national platform for youth information, orientation, training, support and job placement, live on the web and on one mobile app store with the other to follow, with a national call for partners — no user count, vacancy volume, placement figure or funding arrangement published. Days later the anti-corruption agency took the procurement platform and the mining cadastre to the United Nations convention review group at Vienna as evidence of transparency reform, which is the first time the repository records either system being used as an argument rather than described as a service. The civil service minister presented the one-stop public-service counter

project to the mayors of Conakry's 13 communes. The procurement regulator and the World Bank reviewed the e-procurement platform, in a new phase of use since September 2026, with the price reference list and partnerships not yet integrated and a new procurement law in draft.

Kenya

The election system's own procurement was sent back. The electoral commission had said the tenders were temporarily halted after a request for review, with the Register of Voters to undergo a 30-day biometric verification and an independent audit before certification; on 4 September the review board ordered it to correct and re-publish the tender, finding it disclosed neither the methodology and objective benchmarks for the 100-point technical evaluation nor the evidence establishing compliance with mandatory requirements, ownership or manufacturer authorisation, and directing it to take advice from the procurement regulator and allow bidders not less than seven days. The board rejected a claim that the specifications were tailored to one supplier.

On the one citizen survey held, digital-government adoption stands at 49% and net satisfaction fell five points from 2024 to 64%, with 12% of users reporting no problems, the lowest share of 44 countries surveyed.

Cargo seals left state hands. The revenue authority approved 15 private vendors for electronic seals on transit cargo and set 26 October 2026 for retiring its own, with users choosing and contracting their vendor directly under the regional cargo tracking system.

At the UN General Assembly the ICT cabinet secretary put eCitizen at more than 22,500 services. The government, the UN in Kenya and a commercial bank signed a declaration of intent on 20 September for a Kenya Diaspora Impact Platform, a digital gateway to verifiable investment opportunities; no launch date or cost is given.

The High Court at Marsabit dismissed on 5 October 2026 a constitutional petition against mandatory travel health insurance for foreign visitors, holding the claim that insurance data collected through the electronic travel authorisation system was insecure to be generalised and unproven. The Senate's ICT committee questioned the transport authority's director general on 8 October over the Instant Fines Traffic Management System, whose automated penalties the High Court halted on 12 March 2026 and whose launch notice the authority withdrew on 27 March.

Lesotho

The data blueprint opened in July reached validation in September. A national workshop in Maseru with Smart Africa and GIZ validated the draft Data Value Creation Blueprint, the first country to do so, reviewing its vision, pillars, use cases and a diagnostic that calls the country's data landscape emerging but fragmented. Validation is not adoption, and the text is not published.

Liberia

The internal audit agency launched an audit management system on 10 September to automate audits across ministries, agencies and public corporations, a year after tendering a consultancy to build it; no cost, vendor or onboarding count is published.

The state auditor is following it: the General Auditing Commission has begun automating public-sector audits, with KPMG contracted under a World Bank-supported project to build the software, disclosed on 22 September with no cost or go-live date. The deputy information minister said the online police clearance platform had generated more than US$200,000 since its introduction in May 2026.

Libya

A complaints route was put behind the visa system. The citizen service centre and the passports authority agreed a joint mechanism to receive and handle citizens' and residents' enquiries and complaints on the electronic visa, and to unify the communication channels between the agencies involved. No caseload, response standard or list of the channels being unified is published, so the mechanism is established and its capacity is not.

Customs met international contractors on 15 September to revive automated inspection and coastal monitoring contracts concluded earlier and never completed; no value, date or company list is published. The central bank governor proposed an electronic system and single database to record and track international grants, programmes and projects to the committee formed for the purpose; it is under discussion.

Madagascar

On 21 September the commerce ministry began training its regional directorates at Mahamasina on Alalana, a platform for export-authorisation requests covering products including vanilla and clove; no launch date, cost or vendor was given. The tax directorate launched the Torohy platform on 9 October 2026 for the public to report corruption and related offences in the tax administration; the head of state asked for the same mechanism at customs and the treasury.

The digital ministry said its e-Pasipaoro online passport application portal is in testing, for first applications, renewals and replacements with online filing, payment and tracking, while biometric capture and signature stay in person. No go-live date is stated.

Malawi

The procurement authority reported 7,417 suppliers registered and 216 of 250 targeted procurement plans published on the e-procurement system at 5 October 2026.

Mauritania

The tax directorate said public establishments must use an electronic platform for invoicing, tax declarations and payment of taxes and withholdings from 1 November 2026: suppliers register invoices on it first, and no invoice within the system may be paid unless validated there. The platform is not named and no legal instrument is cited. The national solidarity agency launched a unified digital platform for social assistance, opening with transport costs for 11,656 pupils and students from households in the social registry, verified by facial recognition.

Mauritius

The environment ministry made online filing of Waste Carrier Licence applications through the Economic Development Board platform compulsory from October, for individuals, firms, parastatals, local authorities and ministries alike; an online submission does not itself authorise transport.

Cabinet noted that online applications for the State Age Pension opened on 7 October 2026, with a pension estimate tool on the KOREK! super-app and assisted applications at 38 Social Security Offices for people with limited digital literacy or access.

Morocco

The digital transition ministry relaunched the national Idarati portal on 18 September as a single access point to 874 online services and 2,533 published administrative acts, with a marketplace of AI tools attached. No user count is given.

The interior ministry made the elections portal the compulsory route for candidacy declarations to the 23 September legislative elections, closing it at noon on 8 September. No filing count, or fallback for candidates without access, is stated.

Mozambique

The citizen portal was presented as a single counter for about 140 public services, resting on the government network, the government cloud storage platform, state electronic payments and digital identity. Early in the month the agency counted 21 services already offered, citing 66% of Mozambicans without identification; on 21 September it said about 26 were available, including road-transport licensing and the taxpayer number, and that more than 3,000 citizens had used the portal ahead of an official launch not yet held. Which of the four dependencies is in service behind it is not stated.

The road transport institute moved applications for special transit licences for oversize and overweight vehicles to an end-to-end online process on 1 September. The prime minister directed the state digital certification system extended across all sectors.

The government's own email went down: the digital agency announced CorreioGOV restored on 14 September, with some services still restricted, without giving the cause or when the outage began. The digital transformation agency held the country's first digital service delivery design lab, with the World Bank and a policy institute.

Namibia

One service moved online and the warning about it came from the people it is for. The health ministry launched a digital disability assessment system, and disability advocates warned that poor rural connectivity, inadequate equipment and limited digital skills could turn it into a new barrier rather than remove one, a youth disability organisation welcoming the digital shift but making its success conditional on whether the system is accessible beyond the major urban centres and on whether follow-up support exists. No launch date, site coverage, assessment volume, accessibility standard or offline fallback is published, and the ministry's own account of the system is not held.

The civil-service pension fund is building an integrated pension administration system with a Kenyan firm at about N$40m over some 16 months, with under N$5m spent so far, and has signed data-sharing memoranda with the revenue agency, the finance and home affairs ministries and participating financial institutions. The figures are the fund's own. Cabinet directed the ICT ministry to develop a standardised template for reporting the government services available online.

Niger

Hamani Kargné took over the communications and information-technology ministry on 22 September, and named digitalisation of public services through a reliable and secure government intranet among his priorities. No design, operator, budget or date was given.

Nigeria

A state payroll moved onto one record. Ondo State launched Ondo Pay on 4 September, bringing employee records, salary computation, approvals, reporting, payroll processing and pension migration into one environment with a mobile self-service application for payslips and permitted record updates; the state says bank-verification-number integration, controlled access and auditable workflows are meant to remove duplicate and non-genuine records and unauthorised payments. No cost, vendor or headcount is published, so the claim cannot be tested against a payroll figure.

The police opened a public fraud-reporting channel on 1 September, and it is the fourth such platform in a decade. The app lets people report suspected financial fraud, upload evidence, track cases and receive feedback, built by the force's own ICT department with financial-sector stakeholders, and it arrives over a cybercrime centre already logging about 146,000 reports and about ₦58bn in recovered assets. Nothing published says how the new channel routes against the centre already running, or what became of the three earlier platforms.

Two September measures reach further into the state. A single 112 emergency number, approved by the National Economic Council, went to a rollout committee of the police, communications regulator, emergency agency and road safety corps on 8 September, with funding promised once the roadmap exists. And the procurement bureau's Digital Submission Portal was made mandatory for every federal agency's procurement requests, an internal record that publishes no award. On the one citizen survey held, digital-government adoption stands at 50% while net satisfaction fell five points from 2024 to 64%.

Ondo State followed its payroll platform with Ondo AI, launched to automate personnel administration, payroll, retirement processing and pension migration. The report does not say whether it is the same platform as Ondo Pay or a second one, and gives no launch date.

The National Assembly's library trust fund said on 28 September it is building electronic repositories, a legislative app and a Bills Tracker, and will translate federal laws into Hausa, Yoruba, Igbo and other Nigerian languages. No launch date is stated.

The state network operator said more than 30 federal agencies have moved onto one platform for paperless approval of documents and memos, with no list of agencies or adoption target.

Rwanda

The e-government platform's own numbers reached the record this month through an account of other governments coming to study it. Two hundred and forty-eight public services from close to 50 institutions are online, birth, celibacy and marriage certificates issued through the platform rose from 683,560 in 2020 to 1,977,628 in 2024, and the share processed in under an hour went from 61 per cent to 70 per cent over the same period. The figures are the operator's own and the most recent year is 2024; nothing for 2025 or 2026 is published.

Senegal

A second single-window model was announced alongside the one already operating. The civil service minister, speaking in Baku, said the country plans a single public services centre modelled on Azerbaijan's ASAN Khidmet within three to four months — with no site, budget, service list, legal basis or stated relationship to the citizen single window that has been running passport, business-creation, police-clearance and nationality services since March. The constraint on delivering any of it outside the capital was named the same day: closing a tour of Louga, Saint-Louis, Dagana and Matam, the director of the state's deconcentrated service network put connectivity as the absolute priority, on the ground that without it there is no the removal of paper at the service centres at all.

Sierra Leone

The audit management system cleared its acceptance stage. It is through user acceptance testing after post-configuration training for 25 audit service staff on 3 to 5 August, built for the state audit service with lender funding and regional audit-body support. No go-live date, module list, cost or audit-cycle coverage is published, and the account comes from the regional audit body rather than from the audit service itself.

South Africa

The electoral commission's audit trail shows no system activity in two of the six disputed councils in the two hours before the nomination deadline, and 2,274 candidates from 45 parties captured but never submitted as final. The governing party had said technical problems stopped its operators from submitting. On 23 September the commission said the party had lost its court challenge, that it had concluded end-to-end testing of its results system for the 4 November elections, and that parties could test the system through their own experts from 5 to 12 October.

On 15 September the Border Management Authority introduced a Port Health Management System at Durban Harbour, replacing shipping agents' e-mailed requests with online service requests, inspections, free pratique applications, endorsements, invoicing and payment. Durban is the pilot site; no date has been given for other ports. Gauteng's transport department launched a digital system to clear its operating-licence backlog. The minister told Parliament that the state IT agency moved from a qualified audit opinion to an unqualified one for 2025/26. The electoral commission opened its results system to audit by experts designated by four parties, after an independent external audit. The communications minister said the roadmap's first phase closes in February 2027 and that government digital systems remain fragmented. The social security agency set its messaging self-service channel inside a wider programme: online applications, payment-detail changes and electronic life certification, self-service kiosks, free Wi-Fi at offices, and integration of its systems with other government institutions to detect fraud. No uptake figure is published for any of it. The Auditor-General told Parliament the integrated justice system programme has not achieved its vision after about R4.9bn spent over a decade, with 63 of 506 planned network upgrades completed.

The Inter-Ministerial Committee on Migration said on 11 October that Home Affairs is to introduce an online, biometric intention-registration and appointment system for asylum applicants by 10 November 2026, while government asks the courts for a supervisory order on implementing the Constitutional Court's July judgment. The minister said the platform would check an applicant's biometrics against earlier rejected applications.

South Sudan

Tax audit moved off paper on 21 September, when the revenue authority launched an electronic tax audit module with support from Crawford Capital Pay, after its commissioner general banned manual audits by directive. No count of the audits or taxpayer files it covers is published.

Sudan

Identity services are being rebuilt in the capital. The police reopened the Omdurman and Bahri service complexes, with transactions rising from 206,362 in 2025 to 522,225 in 2026, and set out a plan to issue passports, ID cards and licences from home, with cash abolished at the counters through seven banks.

The education ministry launched online application and electronic fee payment for the Sudan School Certificate on 29 September, with the certificate collectable inside or outside the country; no uptake figure is published. The animal resources ministry launched an official website for producers, breeders and investors on 7 September, and a government platform was put before the national economic management committee in a meeting on stabilising the exchange rate; what the platform does and who runs it are not stated.

Tanzania

Zanzibar's automated road cameras reached the House of Representatives, members calling the 50 km/h limit too low and the Sh230,000 fine too high and asking why government vehicles go unpenalised.

The same board approved an emerging technologies governance framework for public institutions on 31 August, setting principles, roles and risk and impact duties for AI, blockchain, the internet of things and other technologies before an institution adopts them.

Togo

The transit-tracking system took on a new cargo type: the revenue office opened a Lome pilot on 1 September extending electronic tracking to trucks carrying petroleum products in transit to Burkina Faso, Mali and Niger, under a system operational since October 2022. No device count, cost or evaluation criterion is published.

The public-services portal moved to a modernised version in September that keeps existing logins and past requests, after handling more than 400,000 requests in 2024. The foreign ministry put ten administrative procedures on the portal from 1 October, and six consular services on a separate portal for Togolese abroad. The revenue office put filing and payment of the single business tax online for microenterprises on the flat-rate regime, on a procedure designed for a basic handset and accepting three mobile money services, taxpayers it covers no longer needing to attend a tax centre (launch). The day after, the credit bureau presented an SME financing portal for launch by the end of 2026. Ten services of the state broadcasters went online, from death-notice requests to advertising orders; no usage figure is stated. The Council of Ministers authorised the justice minister to set up an online repository of Togolese case law. The Council of Ministers adopted a visa decree updating the regime digitised in 2022, with new categories and stronger personal-data protection. A trade-facilitation alliance launched a project in Lomé on 9 October 2026 to digitalise the plant import permit for the agricultural production directorate, funded by the European Union and the German Government.

Tunisia

The national administrative services application registered 50,000 users in the ten days after launch. The trade network opened a web portal for electronic invoicing on 15 September, and the capital's municipality launched a building permit platform on 14 September. The vocational training agency's registration platform took about 112,000 applications by 17 September, against 70,000 in 2025. A legal commentary reported the industrial property institute's digitalised system for trade marks, patents and designs, launched in June 2026.

On 11 October the ministry put its Khadamat public-services app, reached through the mobile digital identity, on a second mobile platform after an Android release at the end of August.

Uganda

The procurement system was restated as a fiscal-discipline instrument rather than a procurement one, the finance minister setting it alongside budget-execution controls and the accounting profession's own role in evidence-based decision-making at a professional seminar on 3 September. No new onboarding or throughput figures came with it.

The revenue authority told manufacturers its replacement tax platform has been in build since February 2026, web-only and keyed on national identity and business registration numbers, an account that sits unreconciled with the award the Appeals Tribunal set aside. The government printer made the electronic Uganda Gazette free to the public, with the gazette digitised back to 1902.

Zambia

The office platform was ordered across the whole of government. The Secretary to the Cabinet directed every government institution to adopt the Smart Office Platform and instructed the Smart Zambia Institute to report to his office by the end of October 2026 on the onboarding of ministries, provinces, spending agencies, state-owned enterprises and other public institutions, the direction given at the handover of the system to the airports corporation at Chongwe. It is a direction with a reporting deadline rather than a measured rollout: the repository has carried the platform as a health-ministry pilot since 2025 and holds no count of institutions onboarded.

The office system moved beyond ministries for the first time. The airports corporation became the first state-owned enterprise onboarded, the system commissioned and handed over by the Secretary to the Cabinet, with a further 406 staff to be trained across its stations by the end of November — the same directive that told every government institution to adopt it now reaching the commercial arm of the state.

The Public Service Management Division said on 23 September that a digital platform for the public service funeral scheme, run with an insurer, will roll out in the first week of October, letting members update their details, register beneficiaries and track claims by phone or computer instead of on paper. The meteorological department and the agriculture ministry are building a national digital climate advisory service that sends farmers localised forecast and agronomic advice by text message.

Zimbabwe

The ICT minister set a 2030 deadline on 18 September 2026 for turning more than 250 post offices into technology-driven service centres, under a three-phase plan; no cost or site schedule is published.

ABOUT THIS DOCUMENT
