PROGRESS REPORT

Other GovTech and e-Gov: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *54 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has* **No evidence** *on it in its own report.*

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

The place reports do not share one window; the period above is the range they span.

e-government services

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The national portal carried 150 services by 9 September 2026 and one million registered users by 22 September, both on the high commission's account, while the interior minister named ministry projects as stalled. 2026-09-22 - the high commission reported one million registered users and five million visitors, its own count; no transaction figure is published. 2026-09-24 — the pension fund added a website chatbot to its remote services.	MOVEMENT
Angola	No inventory of online services exists — the transition agenda counts projects, not services — while an at-home identity-card service and a public-finance programme launched. What is missing first: no service catalogue is published and the transition agenda counts projects rather than services, so the count of public services available online is not knowable from the record. 2026-04-27 — opening a tourist establishment moved to an online prior notification, paid through the state's single payment reference. 2026-07-28 — an at-home identity-card service launched in one province at Kz 250,000 for at-home processing and Kz 10,000 for delivery alone, on a 48-hour issuance target, with requests through a web portal and a messaging number. The ministry called the fee a product of exclusivity, and no ministry publication naming the portal is on file. 2026-09-04 - the in-person counterpart to the missing online service inventory does publish numbers: the one-stop citizen service network stands at 16 subunits with eight more committed by 2027, and recorded 1.49m visits in the first half of 2026 and Kz2.47bn paid to the treasury. They are the secretary of state's own, with no service breakdown or online equivalent published. 2026-10-01 - the public e-services system stayed online and functional after a ransomware group claimed an attack on it; the claimed intrusion is unconfirmed.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Benin	More than 230 public services had been moved online by July 2025, while the e-procurement platform was retired and its build tender failed. 2025-07-02 — more than 230 public services had been moved online, electronic payment included, and more than 250 digital services are cited in the 2031 strategy material. The country was ranked a 2025 GovTech Maturity Index top performer, a reference index cited and not absorbed. Against that, 2025-09-16 — the first tender to build a new e-procurement platform was declared unsuccessful, after a decree had already retired the previous system and portal for a replacement costed at 3.3bn FCFA on World Bank financing. The old platform is gone and the new one is not built. 2026-07-24 — a joint circular requires every state structure to move archive and procedure management onto digital tools, with returns stated as fiscal and environmental rather than as service improvement, and no deadline, budget, scope definition or compliance mechanism. 2026-07-31 — one university made its academic records platform the sole channel for certificates and transcripts, with no fee schedule, turnaround or appeal route published. 2026-09 — UnivServices.bj went live for students at four public universities with transport as its first service, catering, housing and health to follow. 2026-10-01 - the national police moved loss certificates wholly online, ending issuance at police stations.	MOVEMENT
Botswana	Electronic services rose from 33 to 52 under a Digital Services Act in force with a compliance clock to November 2027, while the payslip portal went offline. 2026-03-18 — the government services platform records electronic services increased from 33 to 52, including teacher registration, appointment scheduling and business facilitation. No usage, transaction or uptake figure is held for either end. The Digital Services Act came into force on 21 November 2025 with a 24-month compliance window running to November 2027, the clock confirmed in February. 2026-07-22 — against that, the government payslip portal is offline with no reopening date after the data-protection regulator's enforcement notice, a privacy notice, an impact assessment, multi-factor authentication and disaster recovery having been added since. It is the only government system on this ledger taken offline by the regulator. Procurement has not moved: the electronic procurement system is still due at the beginning of 2027, and the authority still states it has no real-time data on procurement transactions, against a strategy approved in June 2025. 2026-10-05 - a newspaper reported the transport ministry extending permits and clearing vehicles by hand after a systems outage at the road transport department.	MIXED the services platform grew from 33 to 52 while the regulator took a government portal offline
Burkina Faso	A central portal carries 1,672 information sheets, 95 procedures and 183 institutions, against a ministry count of 146 procedures live of 272 platforms initiated. 2026-05-05 — a central gateway launched with 1,672 information sheets, 95 online procedures and 183 public institutions, partly to counter fraudulent administrative websites. Its 95 do not reconcile with the ministry's count of 146 operational procedures out of 272 platforms initiated since 2023, reported against objectives contracts at 91%. Volume is real: over 600,000 criminal-record certificates and nearly 70,000 nationality certificates issued through justice platforms, against internet access of 72% urban and 27% rural. 2026-09-07 - the enforcement system's first month is measured, and the gap is collection: 19,910 offences recorded between 1 and 31 August 2026 generating CFA146.559m in fines, of which CFA16.1m had been recovered at the 4 September review. A motorised police brigade was created on 2 September specifically to trace drivers who do not pay. No appeal or contested-notice figure is published. 2026-09-15 — FasoSign went live across three administration platforms. The counterpart measure is where the platforms sit: the zero-data-abroad programme's own inventory counts 120 platforms hosted outside the national territory, with migration into the two national data centres begun. 2026-10-06 - 222 administrative procedures were described in the first half of 2026 and were being loaded onto the online-procedures platform at 30 June.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Burundi	One-stop service desks are under operationalisation with archive management still largely manual, a paperless Council of Ministers is reported, and a finance system award is contested. 2026-07-31 — operationalisation of one-stop service desks is named in the civil-service ministry's reform programme, with the ministry itself stating that archive management is still largely manual and service digitisation unfinished. 2026-06-12 — a paperless Council of Ministers is reported as operating, with no instrument or date published. 2026-04-20 — the integrated public finance management system is under procurement at an envelope of about US$30m, and the single-source award is contested by a non-governmental organisation. The allegations are reported and not established, and no primary from the organisation or the ministry is held. No count of services available online, no service catalogue and no usage figure appears anywhere for the country.	MOVEMENT on announcements rather than on a countable service estate
Cameroon	Second-generation consular services launched across 46 posts, and a utility commercial platform entered rollout. The consular platform carried entry visas online only at the window's opening; second-generation consular cards and travel documents launched in October 2025 and the platform now runs across 46 consular posts and two international airports. 2026-08-10 to 14 - the water utility trained staff ahead of rollout of a centralised platform replacing decentralised commercial management, with automated meter reading and expanded electronic payment channels; the account is the director general's and no customer count, cost or completion date is stated. The electronic public-procurement platform runs on a US$12m grant-funded upgrade with no dated update, a further US$12.5m for interoperability described as due in 2026 and unconfirmed.	MOVEMENT
Cape Verde	A single services portal went live on 24 February 2026, against an unmeasured target of 60% of vital services online by 2026. 2026-02-24 - a single web and app gateway went live covering finance, civil registration, identity, tax, higher education, transport and social services, with departmental portals to migrate into it; no count of migrated services is published, and the Prime Minister's own account is that departmental platforms did not communicate with each other before that date. It follows the justice portal launched in December 2024 behind the identity platform, serving land, commercial, vehicle and criminal-record certificates, civil-status certificates, identity-card renewal and appointment booking. The target of at least 60% of vital public services online by 2026 and 80% by 2030 was restated at a World Bank mission and remains unmeasured. The procurement platform was re-let at CVE 70,000,000 over four years on perpetual licensing, unlimited users, national deployment and full source-code control, its requirements redefined to extend it to local administration, and its use is compulsory for state purchasing in 2026.	MOVEMENT
Central African Republic	A unified public-services portal launched in December 2025, a whole ministry moved onto one platform, and a treasury single account application was deployed. 2025-12-12 — a single entry point for administrative tasks, request and complaint tracking and access to official documents went live, with expansion to health, education and tax stated as planned. Its external financing attribution is asserted only by the launch report, and no usage, registration or transaction figure is held. 2026-02-27 — one ministry put human resources, budget, document management, project management, macroeconomic modelling and donor-financing tracking on a single platform, with a central register of government, international and humanitarian projects, launched under presidential patronage. The vendor pre-financed earlier phases from its own funds with no stated recovery mechanism, the platform's cost is stated nowhere, and its efficiency figures are projections rather than measurements. 2026-07-28 — a treasury single account application was deployed, tied to regional banking rules, with the stated object of centralising state balances and eliminating parallel and opaque accounts, and integration with the regional settlement rails. No cost, financier, vendor, timetable or number of accounts closed is stated, and the architecture is explicitly regional rather than national.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Chad	The 2027 budget orientations provide for an electronic visa as the sole channel and fully online business creation, and a sovereign data platform produced a biennial delivery report. A biennial delivery report on the presidential programme was produced through a sovereign data platform; no custodian, supplier, hosting arrangement or public access to the platform or its data is stated, and the report itself is not held (platform). An integrated transport-services platform was discussed at a ministerial meeting in September 2025 with nothing further on file, its stated scope covering vehicle registration, driving licences, technical inspection, transport licences and permits (transport). The freight platform's roll-out reached two more places: training at Ngaoundéré for transporters and forwarders, and a presentation to authorities and operators of Logone Occidental on 4 September chaired by the province's secretary general (province). Three of the seven named locations are now on the record. 2026-09-15 — a second town began digitising: Abeche's town hall, the provincial telecommunications delegation and the ICT agency met to digitise municipal services and train staff. No service, budget or delivery date is published. 2026-10-01 - the National Police said the e-Visa platform takes more than 100 applications a day against fewer than 10 at its December 2024 launch, and has been mandatory since 11 May 2026.	MOVEMENT
Comoros	The e-government project's general procurement notice opened in March 2026; the scholarship portal has not gone live. 2026-03-12 - the notice was issued on a loan of 5,000,000 Islamic dinars, about EUR 5,960,000, with submissions open to 12 March 2027: one component covers a national data centre, an incubator and an orientation centre on the university campus, and another a portal, essential services, an administration payment system and an interoperability platform, each financed entirely by a different lender and none by any domestic appropriation. The online scholarship portal has been marked under way on the agency's own delivery log since a technical meeting of June 2024 and is not live on the record; no delivery date was ever published, so it is not recorded as stalled. No government services portal or single window exists.	MOVEMENT procurement only
Congo	A task force was gazetted under the Prime Minister on 6 August 2026, with four priority services committed within two years. 2026-08-06 - a decree created a task force under the Prime Minister with four organs: a strategic committee chaired by the Prime Minister seating thirteen ministers and meeting at least four times a year, a steering committee under the Vice-Prime Minister, a technical committee chaired by the digital-economy minister seating five agency directors-general, and an investment committee chaired by the finance minister, with interoperability of public information systems a standing objective. Its first listed task is to audit the level of digitisation across the administration, so no baseline is stated. The roadmap commits civil status, passport, criminal record and company creation as digitised priority services within two years. The one service actually compulsory is certified electronic invoicing, mandatory for every economic agent.	MOVEMENT
Cote d'Ivoire	A prioritised list of 59 digital public services was agreed in September 2026, a driving licence is carried on a phone, and electronic signature is spreading across ministries. 2026-09-04 - a national prioritisation workshop closed, examined 140 of 620 inventoried public services, retaining 59 for prioritisation, with ten quick wins expected by the end of 2026 including diploma authentication, digital proof of life for pensioners and the computerised patient record. The list is not published; the minister put a governance framework first. 2026-05 - the driving licence is carried on a phone and accepted at roadside checks against the central database. 2026-08-12 - the electronic-signature programme reached the commerce ministry, after the civil service, the tax administration and two others. No certificate authority or enrolment total is held. 2026-09-04 - the same workshop converged on shared plumbing rather than nine separate builds: the groups agreed on a national single sign-on tied to the population register and the national identification number, on the common finding that procedures remain largely manual. 2026-09-21 - a lender-financed governance project presented its digitisation results, among them electronic state-to-person payments and online company creation, and its coordinator said a second phase was in force. No usage figure is given for any of the services. 2026-10-07 - the animal resources ministry said data from its planned livestock identification system will be hosted in Côte d'Ivoire.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Djibouti	A business platform entered design in December 2025, and the state archive programme signed an accord in August 2026. 2025-12-15 - a design phase was launched for an integrated business platform on three pillars: a startups portal, a government-to-business counter and an extension of the one-stop counter, reported the same week. Nothing is reported built. The archive programme has run state-funded since 2023 with over 200,000 secured digital files for the Presidency, and signed a letter of accord with the UN development programme on 2 August 2026 extending it to the audit and integrity institutions from September 2026. The accord's text, value and duration are not stated, and delivery is asserted by the parties at signature rather than independently measured. A US$15m public administration modernisation credit, working through the state information systems agency, closed and was reported on in June 2025. 2026-08-24 - the labour ministry presented Djibouti Emploi, a single portal for jobseekers, employers and the administration; no registration or placement figure is published.	MOVEMENT
DR Congo	The digital government platform's first-quarter 2026 target passed with neither launch nor delay announced. A functional digital government platform was targeted for March 2026, announced alongside an interbank payment platform, an online tax portal and a customs system. No platform, revised date or announced delay is held, and none of the companion systems is established as live. 2026-06-24 - technical training closed for ministry staff on a platform to authenticate documents against forgery for economic inspections; training completion is the only milestone on file and whether the platform is in production is not established. 2026-09-28 - the minister said the Prime Minister had signed the decree creating a Guichet numérique for online administrative services. No service is reported live.	MOVEMENT
Egypt	The services platform reported more than 240 services and 12.9m registered citizens in September 2026, and the country rose 47 places on the govtech index. The platform had about 170 services, 8.1m registered users and 7.8m transactions in 2024 and now has 242 services and about 20m transactions since the start of 2026, with 73 services exclusive to it and other digital channels. Usage reached 10.7m users, up 32.1%, and more than 25m transactions and enquiries in 2025, and 12.9m registered citizens with 109 government entities integrated by September 2026. 2026-09-05 - the unified card's terms reached the repository: it is issued free as a prepaid fingerprint-authenticated card through the postal service, carrying bread and ration subsidy alongside health insurance, and usable at point-of-sale terminals and cash machines. No issuance count or coverage figure is published. 2026-09-01 - environmental impact assessment applications, review and approval moved online. 2026-10-04 - a ministry source said the unified platform was switched off and replaced with an untested system, and the minister ordered the fault fixed.	MIXED the services platform grew while the electricity billing platform faulted
Equatorial Guinea	The document agency opened two provincial offices with online appointment booking, and a civil-service management system is in implementation. The offices opened in June 2026 at two interior cities, with booking through the agency's own site, where citizens had previously travelled to central offices (offices, tariffs). An administrative-procedure tracker launched in 2021 lets citizens follow a procedure's status through the public service ministry's site, with no processing-time or usage figure published in five years (tracker). A civil-service management system with biometric attendance and automated payroll is in implementation on an estimated eighteen-month timeline, with a steering committee convened in March 2026 and a monitoring strategy (steering committee, timeline). 2026-10-06 - the government announced a digital edition of the official gazette with free online access and search.	MOVEMENT
Eritrea	The one government digital system inaugurated in the window is an internal customs platform (account). Eritrea inaugurated a customs platform in January 2026, replacing legacy software operational since 2007, with full source-code transfer to the government, an intranet architecture connecting all customs stations independent of continuous internet access, solar-powered servers and a ten-month capacity-building programme (account). It serves customs officials, not the public. The standing external measurement is the 2024 United Nations e-government survey (technical appendix); its country-level index values for Eritrea are not in the text held, so the repository names the measurement without carrying its numbers. No online government service a citizen could use is recorded anywhere on the repository.	NO CHANGE a first statement of the position with no citizen-facing service on the repository

COUNTRY	DEVELOPMENTS	PROGRESS
Eswatini	A citizen application and a tax application launched together, and the prime minister told the House that a memorandum signed without proper consideration for data protection is meaningless. Both applications launched in May 2025, for government services and for tax accounts and clearance certificates (launch, applications). The prime minister's written responses tabled to the House of Assembly in March 2026 say the application must be watertight and that a memorandum signed without proper consideration for data protection is meaningless (responses, criticism). An assessment count of government services available online is held (services), and an electronic-government strategy is being founded on that same assessment with nothing yet produced (strategy). 2026-09-17 — the prime minister acknowledged the e-Visa platform failing on reliability, payments and turnaround, with no manual fallback. 2026-09-23 — the ICT ministry acknowledged an ongoing outage across government web services, among them e-Visa, deeds registration, the elderly grant service and the financial management system, giving no cause. 2026-09-24 - the science park confirmed an incident at the National Data Centre behind the outage, disrupting at least 12 services including parts of the citizen application; it has not said what the incident was. 2026-10-05 - the outage was blocking new loans to civil servants, lenders being unable to check applicants against the salary-deduction ceiling.	MIXED two citizen applications live while the prime minister states a memorandum signed without proper data-protection consideration is meaningless
Ethiopia	The unified platform's own catalogue lists more than 180 services from 23 organisations, against 41 services and 12 agencies a year earlier. Electronic government procurement is credited by the Auditor General with the decline in cash shortages across 163 audited federal institutions, in a report that also finds billions of Birr uncollected (audit report). The transport and logistics ministry launched three national systems with the incumbent operator: a cross-country public transport service system, an integrated fuel supply system and a national traffic point-based penalty management system. A trade magazine account of the launch is the record; no coverage, volume or data-handling rule for a penalty system keyed to drivers is published. 2026-09-06 - a service portal was built inside an agency rather than procured: the commodity exchange launched one using its own information-technology staff, replacing office visits that drew more than 150 callers a day in peak season with a stated thirty-minute service-level target. Both figures are the exchange's own. 2025-12-17 - the World Bank's 2025 GovTech Maturity Index placed the country in Group B, significant maturity, the group it held on the 2022 edition. 2026-09-13 — state logistics moved to self-service: the shipping company launched an all-in-one digital platform on 4 September and the railway a customer portal, both covering booking, tracking and payment. No user or transaction figures are published.	MOVEMENT
Gabon	A public finance system went live and connected to the Treasury, while a single window and an internal civil-service suite remain presentations. The public finance system, launched on a presidential directive of October 2025, is live and connected to the Treasury, with extension intended and no transaction or coverage figure published (public finance system). A tourist electronic visa platform operates, with no volumes or processing times published (visa platform). 2026-08-31 — a government services portal is in pilot preparation, after interministerial consultations in June 2026 across five ministries with at least ten services to be integrated by December. Whether this is the single digital window already held or a second instrument is not stated. 2026-09-16 — the document-management project began as a pilot at the general secretariat of the government and the elections directorate, with a separate ordonnance on electronic archiving as its footing. Neither text is held. 2026-09-08 - the sixth steering committee set a government messaging system securing professional communications within the administration for commissioning before the end of 2026. 2026-10-02 - the digital-infrastructure agency presented the PROXIGAB platform and handed it to the directorate-general of small and medium enterprises. 2026-10-09 - the postal company presented an application hosted in Gabon combining payments, public services, postal services and insurance, its app-store launch still to come.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Gambia	The financial management system has no statement of coverage or condition since 2020, and a staff verification round was suspended in August 2026. The procurement authority trained a second cohort of its cadre from 8 to 10 October 2026 on the 2022 Act, the 2024 Regulations and the rollout of the Electronic Government Procurement system, with the new instruments mandatory from January 2027. The system is in service across ministries with revenue and treasury interfaces; the last date attached to it is a financing operation's closing year rather than a statement about the system (financing). The provincial round of a civil servant and pensioner verification exercise, scheduled for 17 to 23 August 2026, was suspended until further notice over unspecified technical difficulties, with the Greater Banjul round confirmed to start on 20 August; the difficulties are not described and no rescheduled date is given (suspension). 2026-08-28 — the public service ministry told a ministerial interface that national identity card, passport and immigration procedures had been simplified and built into a digital services platform, which has not launched because of unresolved contractual issues over passport issuance, with rollout targeted before the end of 2026 starting with the machine-readable passport (statement). A platform complete and blocked on a contract is the same failure mode as the verification round suspended on unstated technical difficulties.	MIXED the financial management system has run unreported for years while a verification exercise was suspended mid-round
Ghana	Electronic procurement is mandatory for all state institutions, the services portal is still at about 2,000 services against a 16,000 target, and a contract to digitise 3.5 million public records was signed in August. The finance minister directed all state institutions onto end-to-end electronic procurement with pre-disclosed evaluation criteria, integrated with the national payment system (procurement). The citizen portal's fourth-quarter 2025 relaunch target passed with nothing recording delivery and no service count published since July 2025 (relaunch, target), and the online passport service went down on 25 August 2026. A fiscal electronic device pilot ends in August 2026 with 40,000 devices approved on a projection of GH¢7.2bn a year, unit cost not disclosed to Parliament; an automated fire-safety compliance system rolls out from late August 2026; and salaries of employees whose identity details do not match the payroll will be suspended from 15 September 2026. A labour market information system and a privately run, government-branded farmer platform piloting from 15 March 2026 are being introduced, neither with a published cost or contract text. 2026-09-18 — the rent control head sought an investigation into a US$1.7m digitisation that left four computers. A paperless courier licensing platform linked to the services portal and identity authority launched ahead of enforcement from 1 April 2026. 2026-09-18 - the tourism authority announced one system for sector registration, licensing, levies and verification; no launch date, cost or vendor is stated.	MIXED procurement and fiscal devices advanced while the citizen portal's redesign slipped and its payments broke
Guinea	An e-procurement platform now digitises the full procurement cycle, with a decree of August 2026 fixing the rules for taking paper out of the process. The decree of 21 August 2026, made under article 56 of the 2019 procurement code, provides for a national electronic platform for public contracts and public-private partnerships managed by the finance ministry, mandatory registration of contracting authorities and bidders, and encrypted bid submission; it does not state whether the national platform is this one or a successor (decree, platform). An industrial-permits platform issues licences in 72 hours as successor to an earlier system (permits). 2026-09-03 - a second citizen-facing platform launched: a national platform for youth information, orientation, training, support and job placement. No user count, vacancy volume or funding arrangement is published. 2026-09-17 — the procurement regulator opened an operation to build and clean up a database of the officials who run public procurement and public-private partnerships, reaching contract officers, controllers, PPP experts and section heads across ministries, state companies, local authorities and donor-financed programmes. No filing deadline or publication commitment is stated. 2026-10-06 - the civil service minister presented the one-stop public-service counter project to the mayors of Conakry's 13 communes. 2026-10-08 - the procurement regulator and the World Bank reviewed the e-procurement platform, in a new phase since September 2026, with a new procurement law in draft.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Guinea-Bissau	A one-stop digitalised transport counter opened at Gabu, the first outside the capital. Electronic government is assessed as thin by the one academic study the repository holds: blocked by weak infrastructure and the absence of a legal framework. Against that, delivery has started: a one-stop digitalised transport licensing counter opened at Gabu in March 2026, the first outside Bissau, and the digitisation action plan for the main public services was delivered in November 2025. The national programme launched in August 2026 carries electronic government among its four strands.	MOVEMENT
Kenya	Draft regulations would vest ownership of the platform in the Treasury (regulations), and the Auditor-General found Sh36.5bn of 2023/24 collections unsupported by bank statements. The eCitizen payment platform failed for much of 26 August, leaving transport services unusable and some payments made twice (outage). The tax invoicing platform reached through eCitizen was then down for three days to 31 August, stalling invoice-dependent payments (outage). Against that, the Treasury presented draft regulations on 27 August to replace the convenience fee with a statutory access fee and vest the platform in the Treasury (regulations), and members of parliament demanded clarity on ownership (demand). No uptime figure for the platform is held. On the one citizen survey held, adoption stands at 49% and net satisfaction fell five points to 64%, with 12% of users reporting no problems, the lowest of 44 countries. 2025-12-17 - the World Bank's 2025 GovTech Maturity Index placed the country in Group A, up from Group B in 2022. 2026-09-11 — the transport authority acknowledged an unresolved error blocking online driving-licence renewals and first applications, with no timeline for a fix. 2026-09-18 — the 61st Huduma Centre opened at Mwea, offering identity, civil-registration, tax and pension services in person. 2026-09-21 - the ICT cabinet secretary put eCitizen at more than 22,500 services, not reconciled with the Controller of Budget's onboarding count.	MIXED the platform's legal footing advanced while its availability regressed and Sh36.5bn of its reported collections went unsupported
Lesotho	An e-Parliament system was completed, a digital outreach studio opened, and a decision support system is under development. The 2025/26 budget speech reported the e-Parliament system implemented, described as a milestone in modernising legislative processes, with no further detail published (budget speech). A Digital Outreach Studio was launched in June 2026 under the second phase of the eGovernment Infrastructure Project (studio). A decision support system for planning and budgeting was presented as under development in February 2026, with no scope, host or date published (review). 2023 — the regulator's household survey found 6.7% of individuals interacting with government services online, against a 40% target for that year under the ITU Connect 2030 agenda. It is the first such figure held.	MOVEMENT
Liberia	A coordinating office was established by executive order in April 2026, and three government platforms are in service including one now studied abroad. The office coordinates standards, interoperability, technical clearance of technology investments and baseline cybersecurity, with twelve months to draft an institutionalising law (executive order). The electronic procurement platform launched nationally in February 2025 and began its second-phase equipment distribution in August 2026, when a neighbouring country's procurement authority studied it; no transaction count, entity coverage or procurement value is published (regional model, cooperation). An automated telecom licensing and renewal platform entered service in August 2026, and no licence count, processing time or fee schedule is published (licensing platform, rollout). A civil-service power-of-attorney platform went live in December 2025 with 5,000 enrolled across 16 government entities, tying civil-servant purchases to fingerprint verification (platform). 2026-09 - the internal audit agency launched an audit management system across ministries and public corporations, tendered in June 2025, and the state auditor disclosed that KPMG is building software to automate its audits; neither cost is published. 2026-08-26 - the special economic zone authority made the case for a trade information portal; nothing is commissioned. The labour ministry launched LiberiaWorks on 7 October 2025, a job board, placement programme and hub for employers' workforce-compliance filings; no user or filing count is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Libya	Four state platforms moved in 2026: e-visas, an export window, a government reporting tool and an exhibitions register, with usage published for two. The electronic visa service took 2,325 applications from 103 nationalities between 1 July and 17 August 2026, of which 67.1 per cent were approved (usage). The Electronic Unified Export Window processed LD 79.5m of exports from April to July 2026, with 354 companies registered and 190 products exported, two thirds of orders going to Tunisia (export window). LY-GOVREP was activated on 9 April 2026 as the unified performance-monitoring tool for public entities (activation), after preliminary operation with 60 cabinet entities (preliminary). An exhibitions and conferences platform was launched on 9 August 2026 as the first specialised system for that sector (launch). 2026-09-05 - the citizen service centre and the passports authority agreed a joint mechanism for visa enquiries and complaints. 2026-06-30 - a cabinet follow-up meeting confirmed the Wafed and E-Visa systems in operation with about 6,000 electronic visas issued, every earlier electronic visa type discontinued and the two made the only official channels for entry visas. 2026-08 and 2026-09 - a platform to track government project execution was designed and a database of international grants proposed; neither has a go-live date.	MOVEMENT
Madagascar	The national interoperability platform launched in April 2026, days before the project that built it passed on its institutions. 2026-10-11 — the digital ministry said an online passport application portal is in testing, with filing, payment and tracking online and biometrics in person; no go-live date is stated. The interoperability framework of 2022 established the coordinating unit's role and the first set of interoperable systems (framework). The platform's first stage launched in April 2026, with the first usage conventions signed (launch). The donor project that built the identity, interoperability and data-centre layers passed on its institutions in June 2026 (closure). No catalogue of services available online, transaction volume or successor operating budget is held. A consultancy working with the digital governance unit reports that the unit had concentrated its resources on the Torolalana online portal, which served only the 20% of the population able to use services online, with no user count. 2026-09-21 — the commerce ministry began training its regional directorates on Alalana, a platform for export-authorisation requests; no launch date is stated.	MOVEMENT
Malawi	E-procurement became mandatory for all public entities in April 2026, while the passport system carries an unresolved backlog and queue transparency is only accepted in principle. The electronic procurement system built under the foundations project became mandatory nationwide from 1 April 2026 under a March directive covering all public entities, with remote submission and registration; no post-mandate uptake figure, tender count or exception list is held (mandate, initiative). A US$29.9m passport contract awarded in January 2025 had a troubled transition and a backlog of over 100,000 applications (contract); printing resumed at Mangochi in July 2026, and a member told the House that applicants who filed nine months to a year earlier are being overtaken by same-day issuances (printing, queue). A sequence number at application, message notification and an online portal were accepted in principle and deferred until the passport system stabilises (transparency), and an electronic auctions platform is being scoped to replace paper government auctions (auctions). 2026-10-07 - the procurement authority reported 7,417 suppliers registered and 216 of 250 targeted procurement plans published on the e-procurement system at 5 October 2026.	MIXED e-procurement made mandatory nationwide while passport applicants who filed a year earlier are overtaken by same-day issuances
Mali	A diaspora services platform, a driving licence and vehicle registration service, a territorial administration system and an HR management system are the recorded stack. The diaspora services platform launched in February 2025 with no usage figure published (platform). The driving licence and vehicle registration service is live and linked to the treasury payment service and the customs system (service, presentation), while the territorial administration data management system is in build with no deployment figure (territorial system). An integrated human resources management system was reported in build in July 2026, with no scope or completion figure published (human resources). Not one of the four carries a usage number. 2025-06-20 — the employment agency launched its BAARA-ANPE platform; no user figure is held.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritania	An administrative procedures portal consolidates more than 800 procedures, consular services went online in July 2026, and water utility transactions joined the services portal in August. The procedures portal launched in February 2026 as a directory of more than 800 procedures with documents, processing times, agencies and tracking; no usage figure is published (portal). A consular platform launched on 9 July 2026 with nine online services covering registration, the consular card, travel authorisation, legalisation, powers of attorney, appointments and burial and repatriation permits, built by diaspora engineers with the ministry after consultations in twenty-two countries (platform, services). The water utility's transactions became available remotely from 4 August 2026 (utility), and a remote transactions platform named in a roadmap is now the subject of integration work with the territorial-administration system, reported as under way rather than delivered (integration). 2026-06-26 — the Mourchid platform put the youth ministry's employment, training and entrepreneurship programmes in one place.	MOVEMENT
Mauritius	An online motor vehicle licence and road tax service launched in August 2026, with electronic gates, visa and judiciary funded and a clinical-trial licensing system provided for in statute. The licence and road tax service is live for taxi operators, who renew and pay online instead of at post offices and counters, and the ministry states it will also build a database of operators; the transport authority's underlying system is stated as outdated with a tender launched to upgrade it (service). Electronic gates, an electronic visa and an electronic judiciary are funded in the budget alongside a healthcare innovation and artificial-intelligence unit, with no procurement, vendor or delivery date published (funding). The omnibus bill would put concurrent submission, review and processing of clinical-trial applications through a statutory electronic system, with the council and ethics committee empowered to meet virtually; the electronic channel and the procedure that runs on it are in the same statute, which makes the channel enforceable against the regulator (licensing). A metrology platform for bookings, payments and certificates is separately in build (metrology). 2025-12-17 - the World Bank's 2025 GovTech Maturity Index placed the country in Group A, extensive maturity, the group it held on the 2022 edition. 2026-09-21 - the environment ministry made online filing of Waste Carrier Licence applications through the Economic Development Board platform compulsory from October 2026.	MOVEMENT
Morocco	600 services are online, 22 certificates were abolished under the simplification law, and the procedures portal carries over 2,500 transcribed procedures. The official e-visa portal failed from 20 August 2026, freezing after the travel-conditions step so applicants could not reach the personal-details stage (report). No restoration date or official acknowledgement is held. Law 55.19 has been in force since September 2020 and created the procedures portal by its article 26: only procedures published there are legally recognised and enforceable on citizen and official alike, certified copies and legalised signatures are dropped for most procedures (law). The ministry reports a 45 per cent reduction in documents demanded of users where its simplification method has been applied, on perimeters it does not name (method). An interior ministry circular abolished 22 certificates in 2026 and replaced them with sworn declarations (circular). 2026-04-16 - the road safety agency launched a NARSA Services portal for its procedures. 2026-09-18 — the ministry launched a new version of the Idarati portal with its e-services as a single access point to administrations' digital services. No service or user count is stated. 2026-02-26 - the craft secretariat, the chambers and the digital development agency signed a convention to digitalise the craft chambers on a budget of nearly MAD 36m.	REGRESSED on the availability of a service the state runs

COUNTRY	DEVELOPMENTS	PROGRESS
Mozambique	A citizen portal enters experimental phase with about 140 services inventoried, an environmental licensing platform launched, and a two-hour notification certificate was decreed. An end-to-end environmental licensing system launched in August 2026 carrying a permit from application through issuance into monitoring, audit and inspection (platform, upgrade). 2026-09-01 — the road transport regulator launched a digital licensing system, moving applications for special transit licences for oversize and overweight vehicles and for emergency warning-device certificates to an end-to-end online process (launch). It is the second sectoral licensing platform in a month, and neither is stated to connect to the citizen portal now entering its experimental phase. 2026-09-03 - the agency's own account of the citizen portal names what it rests on: the government network, the government cloud storage platform, state electronic payments and digital identity. Which of them is actually in service behind the portal is not stated, and 21 of the planned services are stated live, with no user figure published. 2026-09-21 - the agency put the portal at about 26 services, among them driving licences, the taxpayer number and the one-stop desk, used by more than 3,000 citizens before any official launch. 2026-10-06 - the digital transformation agency held the country's first digital service delivery design lab, with the World Bank and a policy institute.	MOVEMENT
Namibia	The digital government roadmap targets digital identities for at least a quarter of the population by 2026, electronic signatures missed a February 2026 launch, and full digitisation is targeted for 2029/30. The roadmap runs 2024-2026 and no digital-identity coverage figure has been published, with card issuance beginning only in September 2026; the document is known through one outlet's account (roadmap). Accreditation of electronic-signature service providers was under way with nationwide deployment targeted for February 2026; that target passed without a launch on record, and the capability is now described as a component of the September 2026 identity card (signatures, accreditation). Full digitisation of government services is targeted for 2029/30 with no delivery measure published (target), and a N$13 million roads project control system was commissioned in August 2026 with no public access to its dashboard stated (roads). One service did go live: computerised learner's licence testing and a book-and-pay system launched at one traffic centre on 9 June 2026, with N$1.2 million spent there and N$25 million budgeted for 288 testing units across 43 centres by March 2027. The first 450 applicants passed at 14 per cent, which the minister presented as evidence that leaked papers had been removed rather than as a problem. 2026-10-08 - Cabinet directed the ICT ministry to develop a standardised template for reporting the government services available online.	MIXED a roadmap target of digital identities for a quarter of the population by 2026 against card issuance beginning only in September and electronic signatures that missed their launch
Niger	An application putting payslips on a phone launched in April 2026, on a procedures portal running since 2021. The finance minister launched the payslip application on 30 April 2026, letting every state employee consult, download and print their payslip history from a phone instead of attending the pay directorate, a regional budget directorate or a personnel department. The national procedures portal has been live since January 2021, presenting administrative procedures for individuals and businesses by sector, some consultative and some linking to online processing. The policy validation workshop of March 2026 names modernising public governance through e-government as an explicit aim of the draft 2026-2035 policy. No count of transactional services, or of users, is published. Niger scored 0.2116 on the 2024 e-government development index, 187th of 193, alongside 0.178 on a separate government-technology maturity measure (review, country record). The administrative procedures portal was built under a 26-month mission from January 2020 (mission). 2026-09-22 - the incoming communications minister named digitalisation of public services through a reliable and secure government intranet among his priorities at his installation, with no design, budget or date.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Nigeria	A single sign-on gateway is in pilot, a centralised service gateway launched in August 2026, and academic certificate authentication is stated fully online. The sign-on gateway is piloting on a four-year foreign-funded project reported at US$13m inside an electronic-government master plan; the load-bearing feature is the once-only data exchange behind the login rather than the portal itself. A centralised gateway launched in August 2026 as a single point of access to federal services previously spread across agency websites, with no stated relationship to the sign-on gateway. A national transport data bank of drivers, vehicles and plates was approved on a build-operate-transfer model, with no data-custody arrangement disclosed. 2026-09-10 - academic certificate authentication is stated fully online through a government portal, on the education ministry's account, with no volume or turnaround published. 2026-09-09 - the procurement bureau's Digital Submission Portal was made mandatory for every federal agency's procurement requests, an internal record that publishes nothing to the public. Use is outrunning satisfaction on the one survey held: digital-government adoption at 50% and net satisfaction down five points since 2024 to 64%, on a consultancy's survey. 2026-10-09 — the state network operator said more than 30 federal agencies have moved onto one platform for paperless approval of documents and memos, with no list or adoption target.	MOVEMENT
Rwanda	The government services platform reported more than 600 services at a national infrastructure day, against 248 a year earlier on the operator's own count. The scale figure comes from coverage of the national infrastructure day (platform). The near end of the window is now firm: the operator's own account put the platform at 248 services from nearly 40 institutions on 9 July 2025, and a local-government impact assessment dated September 2025 counted 247, citing the operator's website. A secondary account of August 2026 attributed a hundred-plus figure to that assessment; the assessment does not state it. The electronic procurement platform is being adopted and co-developed by another state; a July meeting reports areas identified rather than agreements reached (procurement, meeting). Both rows are the same shape: a working national system, reported through its export or its launch event rather than through a service, transaction or uptake series. 2025-12-17 - the World Bank's 2025 GovTech Maturity Index placed the country in Group A, extensive maturity, up from Group B on the 2022 edition.	MOVEMENT
Sao Tome and Principe	A citizen portal entered beta in March 2026, funded by a lender and a foundation with external technical advisory. The beta was launched at the identity institute's eighteenth anniversary (portal, launch). Two accounts frame the same launch differently — one as the institute's portal, the other as the lender and foundation's citizen portal — and they are treated here as one object. No service count, user figure or exit-from-beta date is published. It sits on the same interoperability platform and digital identity prototypes recorded separately, none of which is confirmed delivered.	MOVEMENT
Senegal	A citizen single window was launched and declared operational in March 2026, and a public procurement platform carries state acquisition procedures with no onboarding or volume figure published. The portal was launched by the prime minister on 24 March 2026 and declared operational, presented alongside a sovereignty cloud, a unified government payment system and a consular platform (portal, year on). The procurement platform launched in October 2025 to carry state acquisition procedures, and no count of administrations onboarded, procurement volume, availability record or security accreditation is stated (procurement). The telecommunications regulator has deployed eight platforms of its own, with no usage figures held, and an equipment tender for a parliamentary system opened in August 2026 with no function or go-live on record. 2026-09-04 - a second single-window model was announced alongside the one already operating: the civil service minister said the country plans a single public services centre modelled on Azerbaijan's ASAN Khidmet within three to four months. No site, budget, service list or relationship to the existing citizen single window is published. 2026-09-04 - the constraint on delivering any of it through the deconcentrated centres was named by the state operator's director: closing a tour of four northern regions, he put connectivity as the absolute priority, on the ground that without it there is no the removal of paper at the service centres.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Seychelles	The government portal was relaunched in June 2026, a business one-stop portal entered pilot with fifteen or more services, and a social protection delivery platform was briefed to stakeholders. The portal relaunch coincided with the fiftieth independence anniversary (portal). The business portal launched with a vendor in November 2025 covering two service journeys and fifteen or more services, with full rollout targeted for June 2026; the account is a vendor press release not verified against a ministry primary (business). The social protection platform was briefed rather than launched in August 2026, with no go-live date, beneficiary count or service list published (platform). Against a 2030 target of full digitalisation, no source states how many services exist or how many are online. A single front door to government e-services signs individuals in through the national credential and organisations through a separate business authorisation portal (portal). It runs beside the relaunched government portal, and nothing states how the two divide services between them.	MOVEMENT
Sierra Leone	Digitisation of government services is agency-reported with no service list or definition published, and three back-office systems — procurement, monitoring and audit — are in progress. The electronic procurement platform's supplier registration module was live by January 2026, with the platform hosted in the finance ministry's data centre ahead of full rollout (inspection). A delegation later studied a neighbour's system described as a regional model (procurement, model). A national monitoring and evaluation system is expanding with no coverage figure, publication rule or public access to the tracked project data stated (monitoring), and an audit management system completed post-configuration training with no cost, go-live date or audit scope stated (audit). 2026-09-03 - the audit management system cleared its acceptance stage: it is through user acceptance testing after post-configuration training for 25 audit service staff on 3 to 5 August 2026, built with lender funding and regional audit-body support. No go-live date, module list, cost or audit-cycle coverage is published, and the account comes from the regional audit body rather than the audit service. 2026-09-24 — the communications minister presented the Cabinet-approved open source policy at a UNICEF showcase on the UNGA81 sidelines, aimed at duplicated government systems, proprietary-technology costs, systems that cannot interoperate and vendor lock-in. The policy text is not published.	MOVEMENT
Somalia	A national job portal launched as a centralised, domestically hosted platform, and a federal electronic visa is contested, with a fee exemption for one region under negotiation. The job portal launched in February 2026 as a centralised platform hosted in the country, which is the only service in this unit whose hosting is stated (portal). The electronic visa is in force and contested: a fee exemption for one region was under negotiation in August 2026, and no issuance count, fee schedule or outcome is published (visa). A federal digital service whose application to part of the territory is a matter of negotiation is the same territorial limit the identity register meets.	MOVEMENT
South Africa	The single citizen application reached a production-ready pilot with a stable platform due September 2026, and the electronic travel authorisation went live at four airports. 2026-08-12/16 — the electronic travel authorisation went live at four airports, with full visa-type rollout targeted by end-2026. No series is published and the counts do not reconcile, among them over 75,000 processed with nearly 4,500 rejections. 2026-09-15 - the Border Management Authority replaced e-mailed port health requests at Durban Harbour with an end-to-end platform for requests, inspections, free pratique, endorsements, invoicing and payment. Durban is the pilot; no date is given for other ports. 2026-09-18 — the social security agency set its messaging self-service channel inside a wider programme: online applications, payment-detail changes and electronic life certification, self-service kiosks, free Wi-Fi at offices, and integration of its systems with other government institutions to detect fraud. No uptake figure is published for any of it. 2026-10-02 - the home affairs department said the travel authorisation makes automated, risk-based decisions by machine learning, with human review of anomalies. 2026-10-06 - Gauteng's transport department launched a digital system to clear its operating-licence backlog. 2026-10-06 - the transport department briefed Parliament on draft regulations extending light-vehicle licence cards from five to ten years, citing breakdowns of the card printing machine.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
South Sudan	An exclusive e-Government services contract was signed in 2019 without competitive tender, with the profit share put at 75 per cent by a United Nations commission and at 2 per cent by the company. The commission puts the profit share at 75 per cent to the contractor (commission); the company says it takes a 2 per cent platform service fee, which describes a separate tax contract (commission). The two accounts have not been reconciled (commission, denial, defence, partnership). The electronic visa portal runs inside that concession, applications online only with a stated 72-hour processing time and fees denominated in United States dollars, so the charge is levied through a privately operated channel (visa). The regulator separately launched its own services platform in February 2026, digitising licensing, payments and regulatory workflows (platform). Underneath the platforms is one account: eServices.gov.ss carries a single username and password across revenue-authority permits, standards-bureau accreditation, eTax taxpayer identification and business registration, with payment by mobile money, card or local online banking and permits returned as PDFs (account).	MIXED three platforms live while the exclusive concession behind them was signed without tender and its revenue share is disputed
Sudan	The national platform became the sole channel for all foreign-trade transactions with permits issuable from any location, and no coverage or uptake figure is published for any service tranche. No coverage or uptake figure is published for any of the announced tranches. A public procurement platform launched in August 2026 (procurement), and a finance-ministry platform for public-sector companies launched the same month, with no supplier, cost or scope published (finance platform, launch). 2026-09-15 — electronic collection of standards fees reached the White Nile branch, and a government platform was put before the national economic committee without a stated function or start date. 2026-09-16 — the finance ministry began practical steps to launch Itzan, a national budget system said to have reached its final stages, planned for the 2027 budget and full operation in 2028. No cost or supplier is published. The traffic police launched a platform renewing driving licences online, including from abroad, with the national number as the login (service). No use figure is published. 2026-09-29 - the education ministry put Sudan School Certificate applications and fees online; no uptake figure is published. 2026-10-01 - company registration and two services for the legal profession were added to the platform. 2026-09-07 - the animal resources ministry launched an official website for producers, breeders and investors.	MOVEMENT
Tanzania	A maturity classification placed the country in the top group in its 2025 edition with the rank unstated, and the islands' government is introducing a project monitoring framework. The classification's release date is month-precision and the 2025 rank is not stated in any held source; digital citizen engagement is the weak pillar region-wide (leaders). 2026-09-10 - the islands' government is introducing a monitoring framework to curb delays in development projects, its deputy minister for finance and planning told the House of Representatives at Chukwani, Unguja. It is announced rather than in service, with no system name, supplier, cost or timetable published. 2026-09-16 — Zanzibar's automated road cameras were challenged in the House of Representatives over speed limits, Sh230,000 fines and unenforced government vehicles. The islands' own programme is older: an e-government centre with fibre links was launched at Mazizini, Zanzibar, by January 2013; nothing later on what it runs is held. 2026-03-30 - the auditor found 31 central-government entities procuring TZS 5.94bn outside the national e-procurement system in 2024/25, the one compliance figure held for it. 2026-09-25 - the World Bank puts procurement processing on the national e-procurement system at 79 days against 234 on paper, with 21 government systems connected, figures reported at second hand.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Togo	The national public service portal moved to a modernised version in September 2026, and the foreign ministry put ten procedures on it from 1 October 2026. The portal carries civil-status requests in five pilot communes and twenty-nine energy procedures (procedures), and handled more than 400,000 requests in 2024 on the government's figure (portal). Building-permit applications and architect certification were added in the week of 28 September 2026, and ten foreign-ministry procedures from 1 October 2026, with six consular services on a separate portal (procedures). On 17 September 2026 the revenue office put filing and payment of the single business tax online for microenterprises on the flat-rate regime; the day after, the credit bureau presented an SME financing portal for launch by the end of 2026. Ten services of the state broadcasters went online the same month. The identity directorate reported 241,617 online nationality-certificate applications registered and 179,690 processed (September 2026). A decree of 6 October 2026 updates the visa regime digitised in 2022; its text is not held. A trade-facilitation alliance launched a project on 9 October 2026 to digitalise the plant import permit. A decree of 26 August 2026 put investment approval through an electronic procedure (decree). The digital agency sets common standards for administrative digitalisation (remit); no standards catalogue is published.	MOVEMENT
Tunisia	The national administrative services application registered 50,000 users in its first ten days, and thirty-four digital service houses were completed across 21 governorates by June 2026. The national administrative services application registered 50,000 users in the ten days after its launch at the end of August 2026, and was released on a second mobile platform on 11 October; it is reached through the mobile identity. Thirty-four digital service houses were completed across 21 governorates between December 2025 and June 2026, a single administrative services portal was reported delivered by end-2025, and 114 projects were counted in execution in August 2026. The industry ministry opened a unified platform on 28 August, its first service filed online and interconnected with customs (launch). The trade network opened an electronic invoicing portal on 15 September, the capital's municipality a building permit platform on 14 September, the social affairs ministry a labour inspection platform in pilot on 23 September, and the religious affairs ministry a mosque staff platform, presented on 9 October. The vocational training agency's registration platform took about 112,000 applications by 17 September 2026, banks moved honour-loan applications wholly online, the industrial property institute's digitalised system launched in June 2026, and the Office of Trade presented an in-house stock and sales application not yet live. No services inventory or consolidated usage figure is published.	MOVEMENT
Uganda	Electronic government procurement training opened for 100 further entities with onboarding to continue each financial year, and a copyright management system targets a September 2026 rollout. The copyright system is in testing with a September 2026 target; no cost, supplier, rights-holder count or description of what it registers or pays out is published, and the target date is the only dated commitment held (copyright). A teacher-training platform launched in August 2026 (teachers). 2026-09-27 - whistleblowers asked the President and the Inspectorate of Government to halt a proposed Shs158bn works ministry purchase of vehicle registration components from the digital number plate contractor, as duplicating the original contract; the paper states the claims were not independently established. 2026-09-30 - the works and transport ministry told the parliamentary committee the number plate backlog is cleared, fitment at Kampala bonds down from 19 days to two; the committee had questioned the plate maker two days earlier. 2026-10-03 - a parliamentary committee watched police track vehicles live through the system; police said 337 of 375 stolen vehicles had been recovered. 2026-10-06 - the Attorney General told a parliamentary committee that the supplier has failed the core obligations of the 2021 number-plate contract, which a newspaper reports him declaring null and illegal. 2026-10-07 - the government printer made the electronic Uganda Gazette free to the public, digitised back to 1902.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Zambia	The national portal reports over 400 services onboarded — a figure stated for the service bus, gateway, portal and payment platform together rather than the portal alone — and an electronic government amendment bill is in development. 2026-09-05 - the office system moved beyond ministries: the airports corporation became the first state-owned enterprise onboarded, with 406 staff to be trained by the end of November. 2025-12-17 - the World Bank's 2025 GovTech Maturity Index placed the country in Group B, significant maturity, the group it held on the 2022 edition. 2026-09-14 — procurement moved online in volume: 103,326 tenders were published through the electronic system in 2025, more than twice the 45,724 of 2024. Tenders published, not contracts awarded. 2026-09-24 - the public service management division said a digital platform for the public service funeral scheme, letting members register beneficiaries and track claims online, would roll out in the first week of October. 2026-09-25 - the information ministry launched an in-house media monitoring and reporting system that also tracks the presidential delivery priorities; no cost or rollout date is stated. 2026-09-30 - the finance minister put the national portal at 572 services across 52 providers and about K9.8 billion collected since 2019. 2026-10-06 - the meteorological department and the agriculture ministry are building a national digital climate advisory service that sends farmers localised forecast and agronomic advice by text message.	MOVEMENT
Zimbabwe	An electronic procurement system operational since January 2024 has added chatbots and machine-assisted bid evaluation, and there is still no national services portal in this ledger. The procurement system was launched in October 2023 and became operational on 1 January 2024 for all public entities and bidders; the regulator says it has since added chatbots and virtual assistants and bid evaluation assisted by artificial intelligence, with no volume, saving or accuracy figure attached (procurement). The denominator of local authorities is not given in the record held, so the share filing on time cannot be stated (filing). The parliamentary programme is a first-hand account by the implementing partner with no national participant count (programme). There is still no national services portal, service count or government online-service measure anywhere in this ledger, which is itself the finding for a unit of this size: the state has automated the buying and not the serving. 2026-09-18 - the ICT minister set 2030 as the deadline for turning more than 250 post offices into technology-driven service centres, with no cost or site schedule.	MOVEMENT
