MONTHLY UPDATE

Sectoral management information systems (HMIS, EMIS, etc.): monthly update, September – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *41 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.*

ALGERIA · ANGOLA · BENIN · BURKINA FASO · BURUNDI · CAMEROON · CAPE VERDE · CENTRAL AFRICAN REPUBLIC · CHAD · CONGO · COTE D'IVOIRE · DR CONGO · EGYPT · EQUATORIAL GUINEA · ESWATINI · ETHIOPIA · GABON · GAMBIA · GHANA · GUINEA-BISSAU · KENYA · LIBERIA · MADAGASCAR · MALAWI · MALI · MAURITANIA · NAMIBIA · NIGERIA · RWANDA · SENEGAL · SIERRA LEONE · SOMALIA · SOUTH AFRICA · SOUTH SUDAN · SUDAN · TANZANIA · TOGO · TUNISIA · UGANDA · ZAMBIA · ZIMBABWE

The place reports do not share one window; the period above is the range they span.

Algeria

A second joint session of the digitalisation high commission and the domestic trade ministry took the data sources themselves as its subject — how they are produced, updated and kept consistent — towards a unified digital mechanism for regulating the national market. The market-supply system reached the government meeting of 9 September as a unified digital system for regulating and supplying the national market.

On 22 September the justice minister extended the electronic window for the administrative courts to the administrative courts of appeal and the Council of State, so that litigants and lawyers track cases and obtain copies of administrative rulings from any administrative court. The solidarity ministry launched Morafikokoum, through which parents of pupils in its specialised schools for deaf and blind children view grades and attendance and file transfer requests online.

The industry sector's PRODNAT platform closed first-half 2026 production declarations from goods-producing firms and kept registration open past its mid-September deadline, asking each firm for its tax and statistical identifiers, its manager's biometric identity card, the production unit's coordinates and half-yearly purchases, stocks and sales. Second-half declarations are due between 1 January and 28 February 2027; no count of registered firms is published.

Angola

Customs control got its own procurement in September. A presidential order of 14 September authorised about AOA 90.5bn, some US$98m, in two lots by direct award for a customs supervision project covering centralised supervision, automated inspection and data analysis, and delegated the contract to the finance minister. The order names no supplier and no timetable, and does not say how the project relates to the logistics single window announced in July.

Benin

Customs now issues the laisser-passer for foreign vehicles wholly online, announced on 9 September. The Council of Ministers of 2 September approved an agricultural package that includes a platform to identify and geolocate producers and plots. Benin is taking part with seven other West African states in the pilot of a demographic dividend monitoring platform, tested at a meeting in Abidjan on 7 to 9 September.

Burkina Faso

On 21 September the health ministry put a digitalised, geolocated health map at the centre of its sector council, to show disparities in care in real time and to plan facilities, staff, essential-medicine supply and biomedical equipment under the health transformation strategy for 2026-2030. No go-live date, coverage or budget line is stated. The security minister listed it, with the SYGESS system, as computerised among his department's 2022-26 results in October 2026.

Burundi

A platform to link the penal chain from the judicial police to the prisons was reported in preparation on 5 October, with online complaints and case tracking planned for citizens. No date, funder or supplier is stated. The same report sets the plan against internet use of 11.1% of the population at the end of 2025.

Cameroon

The water utility awarded a CFA721.76 million contract on 17 August 2026 for 3,000 smart meters, 7.5 per cent of the 40,000 a World Bank-supported programme plans for the two main cities. First installations are not expected before October 2026.

Cape Verde

The justice information system reported on its second year. The justice institute's evaluation, released on 16 September, counts 46,000 criminal case files handled digitally across all 17 comarcas, an estimated 2.3 million sheets of paper saved, 401 justice professionals signing with qualified digital signatures and 110 trained in artificial intelligence; the civil-process component waits on authorisation for three pilots.

Procurement opened behind the announced health digitalisation. Expressions of interest close on 18 September 2026 for a consultancy to train and support use of the health information system, its portal and the open-source district health platform, under a US$29m concessional health-security project. It is a training and support contract rather than a build — which is the part an announced system usually lacks, and the part that decides whether it is used.

Central African Republic

The first integrated criminal database was established on 9 October 2026, the UN mission financing the centre, equipment and servers and UNODC providing expertise, training and connectivity; extension to the judicial police and the regions is the stated next step. A second report records the centre's inauguration at the interior ministry.

Chad

A regional platform for digitising health campaigns was piloted in a district of N'Djamena province during the June 2026 polio campaign, the WHO regional office said when it launched the initiative on 25 September. No coverage, cost or decision on national roll-out is stated.

Congo

The social affairs ministry and a US NGO met on 10 September on implementing a digital tool to monitor children placed in care institutions; the NGO undertook to support building the platform, training staff and supplying hardware.

Cote d'Ivoire

Four days into the invoicing checks the traders' federation answered with an institution rather than a boycott, creating a National Observatory on Electronic Standardised Invoicing, announced at a press conference in Adjamé on 5 September. The observatory has no published mandate, membership or reporting arrangement, and the federation's earlier demand that the checks be suspended is not withdrawn on the record — so the position is opposition converted into a channel, not resolved.

DR Congo

The revenue side of the digitisation put a number on itself. On a broadcast accountability programme on 3 September the finance minister said monthly value-added tax collection had passed FC 320bn against an average of FC 280bn — about US$141.4m a month — attributing the rise to generalised e-filing at the tax directorate and the phased rollout of the standardised invoice. The attribution is his own, with no counterfactual, compliance rate or invoice-volume series behind it. In the same broadcast he named the interconnection of the three revenue agencies and a data warehouse as under way, alongside a digital public-finance programme he put at more than US$150m to be built with a Chinese network vendor — the largest figure attached to any digital programme the repository holds for the country, and one with no contract, procurement route, scope document or timetable published behind it. The tax directorate began nationwide checks of the standardised invoice on 5 October 2026, after the moratorium ended.

Egypt

The procurement authority told the prime minister on 2 September that it is building a national medical-stock database and has moved stocktaking onto a mobile scanning application, putting the system at 38,000 health-sector users, 11,000 medical facilities and 2,000 suppliers across the procurement, storage, dispensing and reconciliation cycle, with warehouses standardised by actual operating state and stock balances updating in real time. The figures and the claim that the design meets audit and finance requirements are the authority's own; about EGP 90bn is allocated this financial year for medicines and medical supplies, and no completion date or independent audit of the system is published.

The justice ministry's E-Court platform went live on 31 August for first-instance criminal courts, charging lawyers EGP 500 a year, EGP 500 per remote felony hearing and EGP 10 a page for case-file copies, with EGP 100 for detention renewals. Lawyers asked the Administrative Judiciary Court to annul the fees as not set by statute, and the ministry replied that use is optional and was requested by the bar.

The finance ministry began surveying road-freight companies at land ports to link them to Nafeza, the single window already used for sea and air cargo, with consolidated land bills of lading and pre-arrival cargo data planned. The account rests on unnamed officials, and no timetable is set.

On 23 September the agriculture ministry's spokesman said its digital register of agricultural holdings ties each holding to the crop actually grown across about 4.4 million farmer cards, to target subsidised fertiliser and record encroachment on farmland. No launch date or coverage of all holdings was given. A former chair of the communications ministry's legislation committee reports that the House's legislative committee has proposed deferring the new Criminal Procedure Law by a further year, and ties the deferral to gaps in its provisions on electronic notification and remote hearings; no parliamentary record of the proposal is held.

Equatorial Guinea

Customs also appears on a list of intended work: an undated page of the PAMFP public finance reform programme names a second phase of the SYDONIA customs software for Bata, Mongomo, Ebebiyin, Corisco, Aconibe, Cogo and Rio Campo, with computer equipment and network links to carry it beyond Malabo. No installation, cost or timetable is attached to it.

Eswatini

The Integrated Financial Management Information System was among the systems the ICT ministry listed as disrupted on 23 September, with technical experts engaged and no cause or restoration date given.

The science park confirmed on 24 September that an incident at the National Data Centre lies behind the disruption, without saying what it was. The outage was blocking new loans to civil servants, lenders being unable to check applicants against the salary-deduction ceiling.

Ethiopia

The revenue ministry re-advertised on 8 October 2026 for a technical lead to govern the system's architecture, oversee vendors and integrate it with its data warehouse and e-invoicing systems, with expressions of interest due 29 October.

Gabon

The education ministry's priorities for the new school year restate the delivery counts: 1,000 tablets and 500 interactive screens delivered over 2025-2026, with the digital rollout continuing into 2026-2027. These are the ministry's own device counts and nothing is published against them for learner reach, usage or maintenance — the same shape the connected-schools figures have carried all year. The supplier of the Gabon Connect project presented the integrated customs operations system it is developing, whose first lot covers mineral clearance and the special hydrocarbons warehouse.

Gambia

The month's one management system came from outside government. The Gambia Red Cross Society launched a Volunteer and Membership Management System at its Kanifing headquarters on 31 August 2026, replacing branch paper registers with one record covering registration, profiling, branch assignment, validation, deployment and direct communication, its secretary-general putting the cost of the paper system as delay in emergencies. No volunteer count, cost, funder or vendor is published.

Ghana

The health insurer described electronic claims, biometric member verification and one-time attendance codes as in operation, with active membership at 70% in August 2026 against an 80% year-end target, its own account with no claims or rejection figures.

The education ministry said more than 6,000 of 8,000 complaints against this year's computerised school placements had been resolved, with reopening left at 18 September.

The revenue authority said collection of the tax on cross-border digital services through its Sentinel system starts on 15 October 2026.

Guinea-Bissau

The prime minister pledged computerised teacher posting, salaries paid through banks or mobile money, and a digital audit of the education payroll, with no timetable published. The platform's developers signed an agreement to support the public health institute in strengthening the national health information system, with new HIV and tuberculosis patient-tracking tools.

Kenya

The claims platform was quantified from the settlement end for the first time. The health ministry and the counties jointly put settlement at 78% across all 47 counties with KSh 159.3bn paid, and reconciliation and sign-off completed for legacy insurance-fund claims, at an intergovernmental budget council session on 31 August. It is their own joint figure, published without a denominator, an ageing profile or a rejection breakdown.

The education register failed its first money test. The principal secretary told the Public Accounts Committee in late August that the latest capitation round used neither the new system nor its predecessor but manually verified data, because the new system is incomplete; schools reported failed logins and unsaved submissions during the Grade 10 selection it was required for, and MPs had already flagged KES 103.99bn paid against unverified numbers on the old one.

The health authority made a functioning electronic medical records system a condition of provider contracts for the cycle opening 1 October and running to June 2029, with onboarding only through its central digital platform. The health ministry extended to 30 October the deadline for public level 5 and 6, faith-based and private facilities to move from the health insurer's provider portal to the health management information system: 6,427 county public facilities have moved, and 38 of 518 contracted faith-based facilities. The health minister said the change makes each facility's own system the primary one, exchanging data with the insurer's systems, and that 28 existing hospital platforms have been certified. The health ministry and the governors' health committee agreed that current facility contracts will not be extended again and set contracting clinics in every county to 14 October. The health ministry put migration at 6,427 public, 38 private and 38 of 518 faith-based facilities.

Liberia

A private company said its offline-first electronic health record went into clinical use on 1 September and reached seven clinics and health centres across Liberia and Ghana in about three weeks, with the national public health institute as its surveillance partner. No link to the national health information system is on record.

Madagascar

On 18 September a Japan-funded International Organization for Migration project closed after two years, having deployed mobile kits of the MIDAS migration-data system at the port of Mahajanga that transmit directly to the national headquarters. No count of entry points covered is given.

Malawi

The health ministry's care information system is in pilot at a central hospital and selected health centres, giving each patient a unique identifier; the ministry expects most facilities digitised within about a year. The examinations board released the 2026 MSCE results online on 7 September: of 188,169 candidates, 111,510 passed.

Mali

The national health information system publishes its own description — case detection, the launch of interventions to prevent transmission and reduce morbidity, and the surveillance behind them, running under a health and social information strategic plan for 2020-2024 whose period has expired and a national digital health plan for 2024-2028.

The education ministry validated the specification and mock-up of a portal to manage teacher postings and attendance, under a project funded by the European Union and run by NGOs. No build contract or launch date is stated.

Mauritania

A news site reported registration and transfer of pupils for the 2026-2027 school year opening on the Siraj platform on 28 September 2026.

Namibia

The statistics agency launched the first national labour-market information system on 24 September, pulling labour data held by government bodies and the private sector into one platform. No coverage or publication schedule is stated.

Nigeria

The delivery end of the social-protection architecture failed its audit. The Auditor-General's 2024 report states that the government could not provide auditors with sufficient evidence that ₦33.75bn of cash transfers intended for more than 3,295,207 vulnerable households reached genuine beneficiaries, the payment platform's statements not having been supplied, and a civil-society organisation puts over ₦78.8bn across social protection programmes as diverted, unaccounted for or irregularly spent. The audit report itself is not held, and no response from the agencies named is on file — but the finding is about the same register and the same rail the unified architecture is being designed on top of.

The health ministry inaugurated the steering committee of a new office to coordinate, standardise and integrate health technology and data systems, charged with implementing the national digital health architecture. No staffing or budget is published.

The Gates Foundation and MTN's group foundation announced a maternal health programme on 23 September with an initial investment of about US$25m for 2026 to 2030, combining AI-enabled decision support for health workers and mothers with affordable phones, data and facility connectivity, and targeting 500,000 women, 5,000 health workers and 500 facilities by 2030. The funders' shares are not stated.

The statistics bureau, the ILO and UNICEF opened a three-day dialogue on 22 September to introduce a Social Protection Management Information System and agree regular sharing of administrative data the ILO calls fragmented and inconsistent, after pilots in four states under an EU-funded programme; no outcome is yet reported.

Opening a dialogue on the AGROW programme on 29 September, the agriculture minister called for a national digital farmers register, with states leading enumeration and verification, a federal agricultural data department coordinating one interoperable standard, and farmers linked to their national identity number.

Rwanda

The judiciary set technology as a priority for the year ahead. At the launch of the 2026/2027 judicial year on 4 September the Chief Justice said the judiciary would continue promoting the use of technology to accelerate the delivery of justice services, alongside greater use of alternative dispute resolution and a revision of the Code of Judicial Procedure to provide for pre-filing mediation. It is a priority: no target, budget or measure is attached to it. The national digital services platform's chief executive described a move into health that would let patients see their records, follow them across facilities and book appointments; no launch date or user figure is published.

Senegal

The agricultural information layer is to be rebuilt rather than extended. The market regulation agency and a Belgian development agency held a workshop on 4 September to design a modernised market information system, with funding sought through the 2027 budget. No design document, cost, coverage or timetable is published, and the funding is sought rather than secured — which is the difference between this and the satellite work already running on the same crops. The agriculture ministry launched the nationwide digitalisation of subsidised seed and fertiliser distribution through the ERP Pass application on 9 October 2026; producers are notified by text message, and the minister said the state now holds a digital register of beneficiaries and allocations.

Sierra Leone

Government bodies and partners held a workshop on 17-18 September 2026 on a shared health digital public infrastructure architecture, mapping the digital health estate for gaps and duplication; a technical working group is to finalise the implementation plan.

Somalia

The planning ministry launched a digital system on 8 September to monitor National Transformation Plan projects across all 26 federal ministries against performance indicators, after reviewing 153 donor-funded projects.

South Africa

The state IT agency is procuring a 36-month incident management system for the police, with bids closing on 22 September. The tender states that the police have no single system for logging reported incidents. The fragmentation reached students: funding was restored for 182 students at one university after incorrect qualification codes and institution-to-scheme data-sharing defunded them under the N+ rule, and a further 1,212 in accredited accommodation and 115 funded after the portal closed remain unpaid.

South Sudan

The social insurance fund reports more than 1,200 registered workers and has opened talks with a commercial bank on linking its digital platform to the bank's systems, ahead of contributor registration from 1 October 2026 with a three-month grace period.

Sudan

The civil-service platform's purpose was argued rather than measured. A commentary holds that its value lies in removing manipulation and favouritism from civil-service appointments rather than in the digitisation itself. It is an opinion piece, and the repository holds no appointment volume, grievance count or audit against which the claim could be tested — which is the same gap the platform's own launch left. The zakat chamber signed a contract with a national company to complete an integrated resource-planning system linking its banking, staff and financial systems, a project stopped during the war. The chamber says the new platform will unify all of its databases.

Tanzania

Community health work is being tied to the payment rail. Local government's ICT director said a blueprint exists for community health worker systems, with a joint dashboard to track services and payments, built by local experts; the blueprint itself is not published.

The planning ministry presented e-Delivery as the system that will track every state development project from planning through funding to execution, with fund releases matched to what it records. No coverage figure or start date is given. The Prime Minister's Office said its Persons with Disabilities Management Information System is connected to 11 government systems and issues a reference number to students applying for higher-education loans; no count of people registered is stated.

A development partner said its tool mapping disability care and support services, piloted in Unguja, has been integrated into Zanzibar's Jumuishi management information system; no integration date is stated.

Togo

An agricultural information system changed hands: SIHAM, which sends forecasts, prices and input availability to farmers free by SMS, was handed to the national farmers' organisation to run on 15 September.

Tunisia

Remote enrolment on the school platform reached 1.691m pupils by 3 September 2026, 81% of those eligible, of whom 1.587m — 76% of the eligible total — had also paid the fees. The shares are the education ministry's own, and nothing is published about the fifth of eligible pupils who had not enrolled online.

The health ministry and UNICEF set the priority needs for a national digital platform covering the care of mothers, newborns and children, after a benchmarking study; no build date or host is stated.

The family ministry brought a case system for child-protection delegates into service on 11 September, digitising notifications on children at risk; no access rule or volume is published.

The social affairs ministry launched its Gestion du travail platform for labour inspectors on 23 September, built under an ILO project, in a pilot to the end of December with full operation from early 2027; its enterprise module is to exchange data with the business register and the social security fund. No user count or exchange date is published.

The health ministry announced a national platform to track medicine stocks and the generalisation of e-pharmacy, with no supplier or launch date. The religious affairs ministry launched a digital platform to manage mosque staff, presented on 9 October 2026: it tracks personnel files, identifies vacant posts and links central and regional services.

Uganda

A private platform entered the health stack from outside it. A digital-health company launched a platform on 3 September letting urban specialists run virtual multidisciplinary ward rounds with rural inpatient teams in real time, with per-bed cryptographic tokens and triage on live vital signs, covering more than 260 medical wards it says often lack cardiologists, neurologists and intensivists. No facility list, patient volume, tariff, clinical evaluation or integration with the national health information stack is published.

The parish programme's system was audited short of its design. The Auditor-General found two of seven pillar modules fully implemented, 178 of 13,253 parish tablets non-functional, 29 with ineligible users and none supported with internet connectivity, and in September one district reported 31 of its 61 tablets dead and parishes back on manual records.

The tax stamps system published its scale: more than 1,680 manufacturers and importers registered across 13 excisable products, run for the revenue authority by SICPA since 2018.

The parish model's reach was restated. An inter-ministerial meeting put it at 3,571,108 beneficiaries against UGX 4.317 trillion capitalised through 10,589 parish SACCOs, lending up to UGX 1 million at 6 per cent a year. The count is the government's own.

The facility record system drew its first district-level complaint on this record. Health workers in Kiryandongo told a public meeting on 19 September that the ministry's electronic medical record system, introduced in selected facilities in 2016, stalls care for want of connectivity, stable power and computers. No national count of facilities running it is published.

The Judiciary is running a data-cleaning exercise in nine Cluster 10 courts from 6 to 16 October 2026, reconciling physical files against the Court Case Administration System before the courts move to the electronic case management system.

Zambia

Beneficiary checks for the Keeping Girls in School programme moved from paper forms to a tablet application on which each girl is captured and signs for herself, replacing forms others could sign on her behalf; 25 guidance teachers in Lavushimanda District were trained on it. No national count of schools on the application is published.

Zimbabwe

The health ministry said its laboratory information management system runs at 117 main laboratories, against a 2030 target of 80% of facilities, with results sent electronically including by SMS. The electronic case management system went live in Midlands and Mashonaland West on 1 October 2026. The home affairs minister told the National Assembly the police are piloting a crime management system built by a state technology institute at Warren Park and other stations.
