MONTHLY UPDATE

# Registries (population, land, address, etc.): monthly update, September – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *39 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.*

*The place reports do not share one window; the period above is the range they span.*

## Algeria

The prime minister ordered an immediate national census of economic land on a unified template, with a consolidated map due at the investment agency's one-stop window by the end of September.

## Angola

The education ministry made school enrolment independent of documentation. Two more objections followed in mid-September: the main opposition party said state means were being used to register the governing party's own members early, and a civic movement said parties and civil society have been kept out of supervising the proof-of-life step, leaving nobody scrutinising it. The electoral administration's answer is not held. On 22 September the territorial administration ministry put more than two million adults updated, against more than 16.7 million targeted by 31 March 2027; it gave no provincial breakdown, so the audit the opposition asked for is still not possible.

## Benin

One commune is now completely mapped, and the map shows who the register cannot see. Parakou became the first commune with complete cadastral coverage, 196,474 parcels across about 56,390 hectares, presented to a Netherlands embassy delegation on 1 September, with more than 11,500 cadastral registration certificates distributed door to door. The ownership breakdown is the part worth carrying: 38 per cent of registered parcels are in men's ownership against 7 per cent women's and 3 per cent collectivites, and the owners of 21 per cent cannot be identified at all, with no parcel recorded as contested. A free campaign from 16 to 30 September issued a first birth certificate to 50,109 children under 14, on the identification agency's count. The campaign rests on a 2025 decree that allows a child under 14 with no legal identity to be registered on the public prosecutor's requisition and on witness testimony.

## Burkina Faso

Civil registration is being digitised one commune at a time, and the training is the visible part. Delegated officers and transcribing agents in Pouni were trained over 72 hours from 31 August to 2 September on smartphone configuration and real-time entry of births, marriages and deaths at central and secondary registration offices, funded under a regional local-governance project in the 2026 budget year. Thirty communes hold fully digitised registers; no count of officers trained or acts entered through the platform is published.

## Burundi

The register, not the card, is what carries the right to vote. The electoral commission said more than one million new voters are expected for the 2027 presidential election, with partial registration planned for October 2026 in more than 4,000 centres that will also serve as polling stations, targeting those under 18 at the 2025 registration and citizens returned since 2025, and its president said a voter who loses their card keeps the right to vote provided they are in the electoral database. That is the clearest statement this repository holds of how identity works at the poll here. No register size, audit terms or duplicate-detection method is published.

## Cameroon

The civil registration bureau's director said on 14 September that digitalising birth, marriage and death records, begun in 2020, has stalled for want of funds, that FCFA 52bn is being sought, and that completion could come in 2029-2030 if it is found.

## Cape Verde

The social registry now has a coverage figure: the UN country team put the Cadastro Social Único at 64% of the population at the government's high-level partnership meeting on 10 September, where discussion of the next cooperation framework, for 2028-2032, opened.

## Chad

A register of a different kind opened. The youth and sports ministry launched MJS CONNECT in N'Djamena on 4 September to register sports federations, youth associations and movements and build a national directory of them, letting registered associations enrol, hold a digital space and file administrative formalities online, and recording who is active, in what field and where, with performance indicators intended to inform how the ministry allocates resources. No registration count, cost, vendor or data-protection provision is published.

## Comoros

The government's secretary-general said on 16 September that the investment agency is deploying an EU-financed platform to put business creation and investment procedures online; the economy minister states an objective of a fully operational system by the end of 2026. The agency, with a United Nations trade experts' mission and the economy minister, discussed deploying the operational phase of a European Union-financed platform to move business-creation and investment procedures online, adding artificial-intelligence features to simplify the user path; the minister stated an objective of a fully operational system by the end of 2026.

## Congo

Control arrived before the system did. A circular of 1 September 2026 from the territorial administration bans antedating of civil-status acts and changes of identity or filiation without a court decision. It is an administrative control placed on a paper process while the validated integrated civil-status software waits for deployment funding, and no volume of irregular acts is published to say how large the problem it addresses is. The system itself moved on 22 September, when the state information-systems agency handed it and its technical documents to the territorial administration, with seven undated steps still ahead of deployment.

## Cote d'Ivoire

The animal resources ministry said data from the electronic livestock identification system it plans with a French firm will be hosted and secured in Côte d'Ivoire. At the Abidjan land days of 5 to 7 October 2026 the cadastre director presented the e-Cadastre platform as part of moving cadastre procedures and land-tax payment online by stages.

## DR Congo

A second registry-shaped system was announced on the certification side. The standards control office plans a national QR-code system letting consumers scan a product — medicines included — to verify its certification status, with consumer checks stated as opening within weeks and resting on 88 laboratories across 29 sites. No launch date, register, cost or enforcement route is published, and the laboratory counts are the office's own. The President gave the government three months, at the Council of Ministers of 25 September, to define a single identifier for businesses recognised across administrations; no lead agency or system is named. The land affairs minister said implementation of the land law had begun, with digitisation directorates created, more than 350 officials trained and three of Kinshasa's nine land districts in the first phase.

## Egypt

The supply ministry's figure of 850,000 people removed from the food-subsidy system since June 2026, with millions more slated for exclusion next year, was reported on 12 September. Under a protocol reported on 3 September, eFinance is to host Rashid, the national platform cataloguing state-owned and state-contributed companies.

The financial regulator surveyed creditors on the Egyptian Movable Collateral Registry's services and electronic system and reviewed the findings with its operator, E-Finance; the proposals go to technical and legal review, and no registration count is published.

## Eswatini

Addressing left the pilot stage in one town: Matsapha became the first municipality to roll out the national postcode and addressing project, with street signs due within eight weeks. The electoral commission is adding biometric capture to continuous voter registration ahead of the 2028 elections.

The social registry is moving beyond its pilot region. The deputy prime minister briefed Lubombo's members of parliament on 16 September ahead of household data collection there, asking them to build community trust in it. No count of registered households has been published.

## Gabon

A domestic commentary put the governance question on transport digitalisation in public: it places the digitalisation of transport titles and documents among the state's modernisation projects and asks who governs it and whether local suppliers are used. It is an opinion piece rather than a programme document — no contracting authority, supplier, scope, cost or timetable is on the record — which is why it reaches this report as the only account of a project the state has not described.

The beneficiary file behind the social register's intended base is unreliable: the Court of Accounts found about 120,000 of the roughly one million people on the economically weak persons' health fund file improperly registered.

Three ministers met SNEDAI Groupe on 14 September on digitalising land tenure and civil registration, the company offering prefinancing; administrations were asked to name focal points, and no contract is held.

The social security fund launched e.CNSS, letting employers register online from Gabon or abroad instead of queueing at a counter. No registration count or link to the business register is stated. The preparatory workshop for the national civil-registration conferences closed with a diagnosis of badly kept archives, irregular data entry and a Civil Code dating from 1972.

## Gambia

The land system has consultants drafting a land information system with the draft due at the end of September 2026, the lands minister putting land disputes at 62% of court cases — which is worth reading against what a parliamentary committee found a year earlier: leases taking up to five years, no land policy behind laws dating from the 1990s, and the survey department down to two of its eight vehicles.

On 22 September the lands minister told the National Assembly that contracts for the World Bank-supported land digitalisation had been awarded, that leases would issue within three days once it is fully operational, and that the ministry was releasing about 50 backlogged lease files a week. No contractor, value or go-live date was given. The largest opposition party put the supplementary voter dataset it was given at 183,163 against the 212,095 the commission announced, and said its requests for the de-duplication method had gone unanswered.

## Ghana

A third registry arrived as a private product reading public records. Marrify launched in Accra on 28 August, letting users search and verify registered marriage and divorce records drawn from the registrar-general's department, the courts, district assemblies and the Gazette, presented by the gender ministry as answering the need for reliable information before people marry. No data-sharing agreement, fee schedule, coverage figure or record count is published, so what is established is that the records are searchable, not that they are complete.

The household registry published its national total: 11.24 million people in 2,906,288 households across all 16 regions, 508,870 households classed extremely poor, the base for cash-grant targeting as that programme's ceiling rises to 450,000 households.

## Guinea

The agriculture ministry presented its farmer-card pilot on 16 September, with 20,463 producers registered and 23,507 farms mapped in Kindia, Kankan and Mamou, each producer given a card with a QR code and NFC chip that opens verified data to authorised users on a secure portal. No national enrolment target or date is stated. A nationwide stockout of the secure paper that digital birth certificates are printed on stopped printing for about two

weeks: registration continued and no certificate could be issued. The procurement regulator opened an operation on 17 September to build and clean a database of the officials who run public procurement and public-private partnerships, with no filing deadline or platform stated.

### Kenya

The lands ministry announced a fresh outage of the Ardhisasa land platform on 21 September 2026; users asked for an explanation, a restoration timeline and an assurance of no penalties. The communications regulator hosted Lesotho's regulator on 2 September to benchmark the national addressing system, whose bill has been in committee since April 2026.

### Lesotho

No national address register exists. The communications regulator visited Kenya's regulator in September to benchmark its national addressing system and legal framework.

Government reported that a World Bank urban and land team expressed interest in supporting a nationwide digital address system; no commitment or amount is stated.

### Liberia

The central bank and the banking institute then trained 35 lenders on it, registration of security interests being mandatory, and named planned links to the national identity, land and traffic registries. No technical route, agreement or date is given for the links, and no registration count has been published since launch.

The credit reference arrangement is now in court. A private bureau licensed in November 2025 sued the central bank for about US$1.2 million, alleging it never received the historical loan data it needed and was later told the bank lacked clear authority to license private bureaux.

### Libya

The economy ministry made registration on the unified digital trade system compulsory for importers, exporters and foreign suppliers under decree 465 of 14 September 2026; a transitional period runs to the end of 2026. Pilot electronic issuance of the Unified Economic Number began on 9 September, free of charge through the national digital government services platform.

### Madagascar

The social registry reached about 2.7 million households, nearly 12 million people, with eight districts added to the 20 already surveyed.

On National Identity Day a second phase of the Izaho Tokana 2.0 registration drive opened, answering a 2025 survey finding that close to 20 per cent of children under five hold no birth certificate. The same week the first 124 cooperatives received biometric cards under a national cooperative census.

The beneficial-owner register moved into operation on 18 September, when the tax directorate signed four protocols to cross-match it with the trade and companies register, the anti-corruption bureau, the economic development board and the chamber of notaries.

## Malawi

The tobacco regulator's new biometric grower registration broke down at centres in Lilongwe, Ntcheu and Rumphi: devices failed to sync with the central server and scanners failed to capture elderly farmers' fingerprints, leaving farmers camped for days. An unregistered grower gets no quota and no access to the auction floor. The account is one outlet's; the regulator's response is not held.

## Mauritania

The digital and land ministers presented a national digital addressing system for consultation at a four-day workshop from 29 September 2026, under the World Bank-financed regional digital integration programme; a pilot version is expected by the end of 2026. Holders of rural land concessions inside the capital's urban zone were called to register on a national platform by 18 September.

## Mozambique

Birth registration is moving into the maternity ward. The justice sector is installing 100 civil-registration posts in health units with maternity wards so that newborns are registered before leaving hospital, beside about 250 already operating in health units. No completion date is given.

## Namibia

The home affairs minister told the National Assembly that some marriages remain unregistered because church and court registers reach the ministry late or never, a gap the records digitalisation begun in 2021 exposed. The system relies on physical submission and does not track delivery.

## Nigeria

The electoral roll got its own numbers on 8 September. The commission said the register was approaching 100 million ahead of the 2027 general elections, on 10,772,421 new registrants in the latest continuous registration exercise, with a real-time election readiness tracker to be deployed across the 36 states and the federal capital territory. The totals are its own and no register audit or duplicate rate accompanies them, though on 15 September the commission told an African Union mission it has integrated national identity numbers into cleaning the register; and the devices that read the roll failed at a state election three weeks earlier.

A second register was put on the same path, without a date. The maritime administration says it is moving towards full automation of the Nigerian ship registry so that operators can register and transact remotely, including payment, without attending its offices, framed as part of reforms to remove human contact, block revenue leakages and cut delays. It is a statement of direction: no date, cost or vendor accompanies it.

The companies registry announced AI across business registration with Google, in English, Hausa, Yoruba, Igbo and Pidgin, with no contract or launch date published. The postal service launched the national digital postcode system on 1 October, and the communications ministry opened its API to organisations that pass business verification; no coverage figure is published. The communications ministry describes the postcode as an 11-character code for every addressable location, looked up at postcode.gov.ng. The electoral commission's chairman said the register stands at more than 103 million after the final biometric clean-up, with card collection nationwide from 9 October.

## Rwanda

A phone-based system for notifying community deaths, introduced nationwide in spring 2026, logged about 10,000 community deaths in its first months, and 94% of registered deaths now receive a verbal autopsy, with the government planning to drop the US$1 death-certificate fee, on a funder's account of 28 September.

## Senegal

On 28 July an audit mission launched across 74 communes, 59 already audited and fifteen selected on risk analysis; no findings are stated. On 30 July the mines ministry and the deposits fund signed a convention commissioning professional cards and a nationwide database of artisanal gold miners, with no enrolment target, host or data-protection provision reported.

The digitisation the audit is measuring has its own figures. The civil-status agency puts 471 of 629 centres digitised, 43% activation of the citizen portal and 15,352,830 records centralised on pilot data at 13 July, with a remediation push at Kaolack from 10 to 20 August before extending to Kaffrine and Tambacounda. The figures are the agency's own and no national completion date is stated; the gap between three quarters of centres digitised and two in five citizens activating the portal is the one the remediation is aimed at.

## Sierra Leone

Cabinet approved a national land title certification scheme, reported on 15 September; it needs parliament's approval before it runs. The lands minister says registration and certification will be free. No cost, timetable or register design is published.

## Somalia

Somaliland's central bank met banks and mobile-money operators on 11 September 2026 and it was agreed that the central bank will lead a credit information bureau. No design, timetable or funding figure is on file. The migration agency, the federal government and the Netherlands launched a programme that will support civil registration and legal identity systems and expand registration in underserved areas.

## South Africa

The companies commission launched on 29 September a disclosure module giving law enforcement agencies real-time access to beneficial ownership information, with search and connection-mapping. KwaZulu-Natal announced the launch of a portal listing its 10,067 audited public-works properties.

## Sudan

Company commercial registration was added to the national e-government platform, with two services for the legal profession, reported on 1 October. It is the first movement on the register since administrative work in Port Sudan was suspended in December 2025; no count of registrations made online is published. A survivors' fund opened a tender for a secure, offline-capable digital victims' registry, built with a national organisation in an 18-month project from 1 November 2026, with about 500 survivors to be documented first and hosting outside the country.

## Tanzania

The lands ministry inspected a National Land Data Infrastructure project building a central land database and access platform on new aerial imagery, with no financier, cost or completion date stated.

## Tunisia

From September the tax administration's TEJ platform adds real-time filing status, delegated access, supplier tax-standing checks for public enterprises and all withholding-tax certificates.

## Uganda

A sectoral register was added beside them. The trade, industry and cooperatives ministry, with the National Sugar Stakeholders Council, launched a Sugar Industry Information Management System to register every sugarcane farmer in the country and centralise data across cane cultivation, harvesting, milling, processing, distribution and market trends. No farmer count, registration deadline, cost or data-protection provision is published, and nothing states how it relates to the national identification register.

The country's other identifier-bearing register went the other way. Parliament's infrastructure committee opened a fact-finding inquiry into the digital number plate system on 2 September after complaints from vehicle dealers: daily production has fallen from about 350 plates to about 100, and members put the cost of the backlog at more than 4bn shillings a week against a first-registration fee of 714,300 shillings. The weekly loss is legislators' own estimate rather than an audited figure, and the operator has published no account of the shortfall.

The same contractor is the subject of a further purchase. Whistleblowers asked the President, the Inspectorate of Government, the Auditor General and the procurement regulator to halt a proposed Shs158bn works ministry procurement of vehicle registration components from the digital number plate contractor, arguing that it pays twice for functions in the original contract and ties the vehicle registry to one foreign vendor. The paper states that the claims were not independently established, and no ministry response is held. On 30 September the works and transport ministry told Parliament's infrastructure committee the number plate backlog is cleared, component supplies having been restored in August, with fitment at Kampala bonds down from 19 days in December 2025 to two; the committee keeps the project under oversight. The Attorney General told a parliamentary committee that the supplier has failed the core obligations of the 2021 number-plate contract, which a newspaper reports him declaring null and illegal.

The Judiciary is digitising the Chief Registrar's records on advocates and bailiffs: all files have been scanned, data capture into a searchable system comes next, and the first phase is due by the end of October 2026.

## Zambia

One district office in Muchinga Province reported registering more than 3,000 children under five in the four months to September 2026, working with the health ministry's environmental health departments.

## Zimbabwe

The justice minister told Parliament on 9 September that when the 24-month validation period for securitised deeds ends in July 2027, the Digital Land Administrative Platform becomes the sole authoritative property register and unvalidated paper deeds cannot be used in formal transfers, at a validation fee of US$215.
