PROGRESS REPORT

Registries (population, land, address, etc.): progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *54 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has* **No evidence** *on it in its own report.*

POPULATION REGISTER · CIVIL REGISTER · ADDRESS REGISTER · BUSINESS REGISTER · SOCIAL PROTECTION REGISTER · ELECTORAL REGISTER · TAX REGISTER · LAND REGISTER

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

The place reports do not share one window; the period above is the range they span.

Population register

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	A national unique identification number is governed by decree and the automated civil status register was created in 2014. The identifier the estate is built to use is governed by an executive decree of 6 September 2023. The register beneath it was created by article 25 bis of the 2014 law amending the 1970 ordinance on civil status, and its digitalisation was presented at the annual regional meeting of civil-registry directors general in July 2026. No population coverage figure, record count or issuance total for the identifier is published at any point, so the instruments are established and their reach is not.	NO CHANGE a first stated position with no earlier account behind it
Angola	A presidential decree created an interministerial commission to de-duplicate and update the adult-citizen database, carrying a US$275m supplementary credit. 2026-06-08 — a presidential decree created an interministerial commission to stabilise civil-identification and adult-citizen database interoperability, biometrically de-duplicate, update residence and consolidate the electoral base. No technical standard, interface or completion date is on file. 2026-02-26 — the money came first: US$275,000,000 was opened inside the 2026 budget for the proof-of-life update of the adult-citizen database, more than doubling the territorial administration ministry's allocation, on reporting rather than a held gazetted order. The register is the base of the electoral roll, which is why the proof-of-life operation reported under the electoral register is contested. A biometric de-duplication of the adult population, financed at this scale and governed by a commission rather than a statute, has no data-protection basis stated anywhere on this ledger.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Benin	The register connects more than 80 institutions at about 200,000 biometric authentications a day, with 25m know-your-customer verifications in 2025. 2026-02-02 — the national register of natural persons connects more than 80 institutions at about 200,000 biometric authentications a day, and in 2025 at least 75% of identification services went digital, across 10.5m services and 25m electronic know-your-customer verifications, reported alongside mass adoption of the digital identity. It was already operating at the start of the window, so what moved is volume, and the volume is the largest of any system on this ledger. Nothing published states the error rate, the failed-authentication rate or what happens to a person the register cannot match — which is the question the failed fingerprints found during the charity card campaign, reported under registration of the population, put directly.	MOVEMENT in volume
Botswana	The National Registration (Amendment) Act commenced in November 2025, and a biometric card is funded within the wider identity programme. 1986-12-31 — the National Registration Act establishes the register, its contents and the registration requirement. 2026-02-24 — the amending Act of 2025 commenced in November 2025, and funding for an electronic and biometric identity card was folded into the broader digital identity initiative. No registered-population figure, deduplication rate or register-quality measure is published.	MOVEMENT
Burkina Faso	There is no continuously updated population register; the base figure is the fifth census, enumerated in 2019 and published in June 2022 at 20,505,155 residents. The definitive census results put the resident population at 20,505,155, enumerated in November and December 2019 and published in June 2022. It is a periodic count, not a register, and it is the figure against which any dynamic register would be measured. What would become one is at the enrolment stage: the decree organising nationwide mass biometric registration was adopted and a vendor recruited, with committees run entirely by public structures so that fingerprint and iris data stay sovereign. No enrolment total against the census population is published. 2026-10-09 - the digital-transition minister said enrolment for the digital identity, budgeted at over FCFA 40bn, was due to start in October 2026.	NO CHANGE a standing position the repository holds for the first time
Burundi	The national identification file has an administrative procedure page and no instituting instrument; further texts remain to be adopted. The official administrative procedure page for the Fichier National d'Identification and the national identity card states that further texts remain to be adopted to institute the file. A population register that issues a card without an instrument constituting it is the position this row records, and it is the reason every identity question in this report resolves to a document rather than to a database. The page itself carries no date and served an expired security certificate when it was captured, which is a small fact about how much of this estate is maintained.	NO CHANGE the instituting texts remain unadopted
Cameroon	There is no population register: the census is still in the field, its enumeration extended by order of 30 July 2026 to 15 September, and the register in production is the electoral one at about 8.2 million. 2026-07-30 - an order set an additional collection period for the joint enumeration operations of the fourth population and housing census and the core module of the agriculture and livestock census. The complementary period runs to 15 September 2026 to complete identification of households, persons and holdings missed by the May close. A census in the field is not a register. The only person-level register in production is electoral: about 8.2 million voters under deduplication ahead of the October 2025 presidential vote, with more than 350,000 biometric cards uncollected in one region alone. The civil registration programme that would underpin a population register has an implementation partner engaged and a 2029 target, to integrate with the biometric identity card and the voter kits.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cape Verde	There is no population register distinct from civil identification: the national identification and authentication system is the umbrella, and the issuance chain runs off it under two 2026 contracts. The umbrella system operates as the civil identification and authentication system, carrying the identity card, the residence title for foreign nationals and a middleware release that lets a holder use the card; there is no separate population register and no published resident count derived from one. 2026 - the national press signed two contracts underpinning national personalisation and distribution of sovereign documents: with a Portuguese mint for raw material, technical support and maintenance of the document personalisation centre, and with the postal operator for collection, dispatch and distribution of the personalised documents. That is the contractual base for the issuance chain that runs off the civil identification database. Production is domestic: the press states a daily capacity of 1,200 identity cards and residence titles and 2,400 passports. No enrolment or holder count against the resident population is published.	NO CHANGE a standing position the repository holds for the first time
Central African Republic	No population register is held; what exists is late registration catching up on people already born. The repository holds no national population register. The nearest thing is the civil-registry estate, whose archive holdings are being diagnosed by a recruited expert before any digitisation, and a late registration campaign reporting 61,000 additional registrations in the capital prefecture. The one register-shaped statement on the record is that the unique identification number is mandatory, with nothing said about what it is drawn from or how many hold one.	NO CHANGE a first stated position with no earlier account behind it
Chad	The integrated population and secure-documents system has run since January 2020 and assigns every enrolled resident a unique number. The agency's site names Ordonnance n. 001/PR/2016 as its founding instrument and states that the system, after enrolment and deduplication, assigns every enrolled individual a unique national identification number across 29 centres (agency); its director-general dates the system's launch to January 2020 (memorandum). The register is being extended to populations outside the ordinary enrolment path — the diaspora through embassy postings from September 2025 (diaspora) and Sudanese refugees at Abeche from November (refugees). No cumulative enrolment total or coverage rate is published by the agency.	MOVEMENT
Comoros	The 2023 law provides for a national civil-status and population register; the agency is a draft decree. The law promulgated on 25 September 2023 provides for computerised civil-status data, a national civil-status and population register and a civil-status agency, with registration centres sited at commune chefs-lieux. Three years on the agency is a draft decree in island consultation and is not recorded as created, which leaves the register without a body to hold it. 2025-09 - a registration campaign was launched to reach unregistered people in remote areas, widening the population such a register would have to carry. No count of records, coverage estimate or completeness figure is on file at either end of the window.	NO CHANGE the register exists in law and the agency to keep it has not been created
Congo	Identity documents were distributed to vulnerable households at Talangaï, on the computerised identity card created by decree in 2024. 2024-11-21 — a decree created the computerised national identity card. 2026-01-16 — identity documents were distributed to vulnerable households at Talangaï. The integrated civil-status system remains in development, and no population register coverage figure is held.	MOVEMENT
Cote d'Ivoire	The identification office's director general put holders of the national identification number at roughly 11 million, in a substantially larger population. 2026-07-30 - the identification office's director general put holders of the national identification number at roughly 11 million. It is the first such figure the repository holds, so no direction can be stated from it. It is also relayed through a commentary piece rather than established from an official publication, and it carries no as-of date. No enrolment series, coverage rate or target for the register has been published by the office, and the population denominator it would be read against is not stated in the same source. 2026-08-14 - the office opened a civil-registry and identification agency inside a Yopougon shopping centre with a private mobility company, presented as bringing identification services closer to citizens: one site, with no service volume, opening hours or fee difference published.	NO CHANGE a first published holder count with nothing earlier behind it

COUNTRY	DEVELOPMENTS	PROGRESS
Djibouti	The register of natural persons is the statutory spine of a modernised administration; no enrolment figure is published. The register was created by the 2019 law as the unique reference for identifying individuals, with a national identification number attached, and the population directorate now describes it as the spine of a modernised and interconnected administration. What moved in the period is what runs on it: a biometric card issued nationwide with mobile enrolment kits and a mobile identity service launched in February 2026. The register's own size, completeness and update rule are not published, and the prior-authorisation regime for national-identifier processing has no supervisory body on record.	MOVEMENT
DR Congo	Digitalisation of the Kinshasa population register began in November 2025. Digitalisation of the population register began in Kinshasa in November 2025, under the general population file instituted by Decret 22-07 of 2 March 2022. Communal agents were being trained on digitalised enumeration by August 2026. No enrolment count, coverage figure or completion date is held for any commune.	MOVEMENT
Egypt	Registration completeness is high on the country's own figures, and a citizens' data update form was piloted in one governorate. The register rests on the 1994 civil status law and the civil status organisation at the interior ministry, with completeness put at 96.6% for live births and 95.3% for deaths. 2025-09-10 - the communications and supply ministries launched a citizens' data update form in one governorate as the initial phase of a gradual nationwide expansion, described as an organising instrument for keeping citizen records current. No completion, record count or further governorate is recorded. The 2027 census is in preparation under a high committee the prime minister chairs.	MOVEMENT
Equatorial Guinea	Birth and death coverage above 90 per cent from administrative records, against a population still projected off the 2015 census. Registration has improved sharply — from 46 per cent of children unregistered in 2019 to coverage above 90 per cent for 2024. The denominator has not: the 2025 compendium still projects population off the 2015 census. The fifth population census has its legal basis in a 2025 decree and resolution and a scientific committee at work.	MOVEMENT
Eritrea	Population registration runs on six separate regional registers with no central national register (technical description). Eritrea's population registration has been digital at regional level since 2001: six separate registers, one per zoba, each recording an identity number, family and resident numbers, nationality and civil data, from which residence cards and family identity cards are printed as extracts. Birth registration feeds them through the local family register. There is no central national register (technical description). A regional treaty body, reviewing Eritrea's fourth periodic report in April 2026, recognised the development of a five-year strategic civil registration and vital statistics plan for 2024-2028 (concluding observations). A country-of-origin report carries a dedicated section on the register and the cards drawn from it (report). The repository holds no coverage rate and no statement that the six registers reconcile with one another.	MOVEMENT
Eswatini	A compulsory civil register has run since January 1984 under a 1983 statute, and nothing in the repository shows it has been digitised. The register commenced on 6 January 1984 under a births, marriages and deaths registration Act, administered by a registrar in the home affairs ministry (statute, assessment). It is a paper-based statute and nothing shows digitisation. The electronic identity planned for 2027 would therefore be built on a register whose current form is unrecorded, in the ministry whose card production stopped for five months and which is under investigation for a data breach.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Gabon	Two registers were opened as implementation workshops in June 2025, with no build reported: a biometric register of natural persons and a national digital identity system. The biometric register was to be seeded from the IBOGA biometric voter file (appraisal), and its implementation workshop opened in June 2025 with no build reported (stocktake). The digital identity system's workshops opened at Ntoum under the donor-financed digital project, and the last mention is a governance-day framing of 16 September 2025 (governance day). Fourteen months of the window have passed with no build, pilot or delivery date published for either.	NO CHANGE
Gambia	More than 1.4m cumulative civil registrations by June 2026, a total rather than a coverage rate. The registrar general reported more than 1.4m registrations under the electronic civil registration system by June 2026. It is a cumulative count of records, not a share of the population registered, and no coverage rate is published. The legal frame is moving: a Civil Registration Bill 2026 cleared first reading on 5 March 2026. The identity credential that would sit on the register was first issued in June 2026.	MOVEMENT
Ghana	The mass-registration phase for those aged 15 and over closed at about 20 million captured, and registration of children aged 6 to 14 began in May 2026. 2026-05-05 - registration of children aged 6 to 14 began in two regions against a nationwide target of about 3.1 million children, with children's health-insurance records integrated into their card data and guardian records linked as an anti-fraud and tracing mechanism; the mass-registration phase for those aged 15 and over closed at about 20 million captured against a target of about 19 million. The authority publishes live registration statistics, stated as updated at 19 May 2026, but the page is a counter rather than a dated report, so the repository carries the fact of publication and not a figure from it. What no source states is the register's coverage against population - the denominator - or how many of those captured hold an issued card. 2026-10-05 - the identification authority began school-based registration of children aged 6 to 14 in the North East and Upper East Regions.	MOVEMENT
Guinea	There is no continuously maintained population register: the census figure of 17,521,167 was given legal force by decree on 6 March 2026, while the register proper is still being constituted through the administrative census. 2026-03-06 - the head of state formally acted the preliminary results of the fourth population and housing census, conducted from 1 to 31 July 2025: a total resident population, foreigners included, of 17,521,167, with distribution by region, prefecture and sub-prefecture and by sex, which is what gives the results their official character for public policy. A periodic count given legal force, not a register. 2025-10-30 - the quality layer under it was a first: a post-enumeration survey giving for the first time a precise measure of coverage rates and enumeration error, with 189 enumeration zones selected at random and 337 collection staff deployed using digital tablets. No coverage or error result is published. The only person-level register in production is the electoral one: 6,768,458 electors across 16,722 voting centres and 23,662 polling stations at the start of card distribution in September 2025, now 6.95m electors and 23,681 stations. The persons register that would replace it is fed by the administrative biometric census.	MOVEMENT
Guinea-Bissau	The fourth census launched field enumeration in June 2026, the first fully digital count since 2009. The institute opened recruitment for about 5,000 census staff in September 2025 and launched field enumeration in June 2026, the country's first fully digital census since 2009. The continuous register beside it is the civil register, whose first fully digital office opened at Santa Luzia. No population register linking the two is described.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Kenya	An integrated population registration service runs under the immigration and citizen services department, with nothing published about what it holds. The population registration service is run by the State Department for Immigration and Citizen Services (service). The held capture is the department's own service page, whose substantive content did not render to the fetch. No record count, participating-agency list, query volume or access rule is established. That matters more here than elsewhere, because the repository separately holds an electoral commission engagement with the registration bureau on identity verification and a planned civil-register link to police facial recognition, both of which would query this register.	NO CHANGE
Lesotho	The National Identity Register is established by the 2011 Act; the movement is a modernisation framework, not enrolment. 2011-03-21 — section 3 of the Act establishes the register itself. 2026-02-26 — the 2026 work plan ties open-source platform development to the register. 2026-06-29 — a consultation opened on a systems architecture design and modernisation framework for the registry. No registered-population figure later than 2022, no deduplication rate and no register-quality measure is published.	MOVEMENT on the platform rather than the register
Liberia	The 2011 Act makes the biometric system the population register in law; enrolment remains partial. The Act creates the autonomous registry and gives it the biometric system, the card and the Social Security Number as the primary government identity number, which is the statutory basis for a population register. Coverage has not kept pace. The registry put enrolment at 759,223 individuals, 14.6 per cent of an estimated 5.2 million, in June 2025 across 30 permanent centres, and the presidential proclamation of September 2025 cited 720,000, as did the proclamation of September 2026 with issuance still suspended. The registry is not a complete population register and no statutory alternative exists.	NO CHANGE
Libya	The interior and labour ministries agreed a unified national database of expatriate workers in August 2026, with a dedicated platform and no authorising instrument. The two ministries agreed the database on 3 August 2026 and named a dedicated platform for it (agreement). No build or timetable is published, and the repository holds no register of the citizen population against which to set it, so the only population-register movement on file covers non-citizens. 2026-08-23 - the anti-illegal-immigration agency began connecting a unified digital system across its branches; no branch count, data-protection basis or completion date is on file.	MOVEMENT
Madagascar	Biometric enrolment opened in January 2026 and a special registration law for unregistered adults cleared review in May. The civil status law of 2018 is the founding instrument, mandating a unique identification number at birth (law). Ceremonial launch of biometric enrolment for citizens aged 18 and over opened a district pilot in January 2026 (launch). A derogatory birth-registration law for adults without birth certificates, verified by local officials, was cleared for promulgation in May 2026 (decision). The register's completeness is not stated anywhere in the repository, and the two routes into it — enrolment and derogatory registration — have no published reconciliation.	MOVEMENT
Malawi	Marriage and divorce registration transferred to the registration bureau on 12 February 2026, a third vital event under one roof. The register runs on the national registration system, hosted in the national data centre since January 2026, with the bureau's own plan putting 99 per cent of adults biometrically registered. 2026-02 - the first phase of the national birth registration campaign synchronised 970,400 of 1.1 million targeted child records into the central database across five districts. 2026-02 - marriage and divorce registration transferred from the Registrar General to the bureau with effect from 12 February 2026, its director becoming Registrar of Marriages. Births, marriages, divorces and identity now sit with one body; death registration coverage is still not held.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mali	A national digital directory of diaspora skills was launched in Washington in August 2026, with no data-protection basis stated. The directory registers professional profiles across economic, administrative, academic, private-sector and emerging fields so that ministries can identify expertise against specific needs; it is run by the embassy to the United States and was launched on 22 August 2026 (launch). The minister described it as an accreting database whose usefulness depends on take-up and on profiles being kept current. Questions at the ceremony went to registration terms and to how the recorded data would be used, and no data-protection basis is stated.	MOVEMENT
Mauritania	A unified digital consular registry went live for three countries in 2026, registering residence, distribution and permitted activities of citizens abroad. The registry is live for the Riyadh mission's zone of competence, covering Saudi Arabia, Bahrain and the Maldives, and builds a digital register of national skills abroad (registry, services). The consular registration desk remains the competent authority, so the platform layers onto the registry rather than replacing it. No enrolment count for the diaspora it covers is published.	MOVEMENT
Mauritius	The civil status register's system is being replaced, announced September 2025, with the 2026 Finance Act amending around it. The register operates under the Civil Status Act of 1981 (Act). The civil status division announced a revamping of its system in September 2025 (communique). The Finance Act 2026 carries the statutory changes behind the budget's registry measures (Act). No completeness figure, record count or migration timetable for the replacement is published.	MOVEMENT
Morocco	Law 72-18 creates the national population register and the agency to run it; the agency has no establishment date, budget or operating record. The statute creates the population register, the unified social register and a national register agency, with article 45 deferring force to implementing texts (statute). The agency was named in December 2024 as a component of the identity and targeting project to be operationalised, and nothing since records it established (agency). So the register operates and the body the law puts in charge of it does not yet exist.	MOVEMENT
Mozambique	The 2018 revision of the civil registration code is the founding act of the civil registration and vital statistics system; the repository holds no separate continuously updated population register. The statutory foundation is the 2018 revision of the civil registration code, which establishes the electronic civil registration and vital statistics system and governs the digitisation and notification duties of registry offices. What the repository does not hold is a population register distinct from civil registration: no separate continuously updated register, no coverage figure and no statement of how the civil register would serve that function. The distinction matters because a civil register records events and a population register records a current resident population, and the record here answers only the first.	NO CHANGE and the repository holds no register distinct from civil registration
Namibia	The national population registration system has been operating since at least 2020 and is the register the September 2026 card is built on. A 2021 baseline found obsolete software, siloed databases and little interoperability; the system now operates with remote biometric enrolment tested through hand-held devices (system, case study). No enrolment count, coverage share or performance figure is published for it, so the register underneath the country's identity programme is described and not measured.	NO CHANGE
Niger	A National Population Register is in build assigning every citizen a unique identifier, with a sensitisation tour running ahead of a register that does not yet accept enrolments. The register is designed as a central secure database with a first enrolment phase opening at the capital and other regions following in 2027; officials on the tour cite the April 2026 ordonnance as the legal basis and describe the register as forthcoming (register, tour, texts, restructuring). No enrolment target, budget, supplier or start date is published, and a sensitisation campaign preceding a register that does not yet accept enrolments is the whole of what is dated here. A separate diaspora and expert data bank was undertaken by the foreign minister in July 2026, with no enabling instrument, custodian, data-protection basis or timetable named (diaspora). Article 74 of the 2019 civil-status law, now held in full, constitutes the national population register and abrogates the 2007 law it replaced (law).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Nigeria	A diaspora health-workforce registry was launched standing on no stated legal basis. It is described as newly launched, with no launch date, custodian agency, enrolment terms or data-protection basis stated in anything held: a register standing up ahead of its governance (registry). It is the pattern this unit repeats across the mortgage registry, the cooperative credential and the addressing framework, each announced before the instrument that would govern it.	MOVEMENT
Rwanda	All nine modules of the digital civil registration system were reported complete in January 2026, ahead of schedule, and biometric enrolment reached 1.8 million submissions. The local government ministry announced in January 2026 that all nine modules — the last two being guardianship and legitimisation — are digitalised, ahead of the government's own 2024 schedule (announcement). The biometric identity rollout reached over 1.8 million submissions against a 15 million target by 22 February 2026, reported directly to the Senate (report). The integrated system launched in June moved registration authority from sector to cell level and connected it to the national population registry (launch).	MOVEMENT
Sao Tome and Principe	A central civil and criminal identification service keeps the national records, and a free identity-card campaign closed in March 2026 feeding automatic voter registration. The registries directorate describes the centre as the central service charged with centralising, organising and keeping up to date at national level the records on civil and criminal identification, seated in the capital with jurisdiction over the whole territory (service). A national campaign giving a free identity card to every citizen over 17 without a valid one ran until 15 March 2026, implemented by the directorate with technical and financial support from the electoral reform project, and the card is to become the base document for automatic and permanent voter registration (campaign). No population coverage figure, issuance total or de-duplication statement is published for the register itself. The page describing the service carries no date and the year is inferred.	MOVEMENT
Senegal	A biometric audit of the public-service headcount began enrolment in June 2026 and a biometric register of artisanal gold miners was agreed by convention, neither stating a data-protection provision. The headcount audit runs physical and biometric enrolment from 23 June 2026. It is identity infrastructure whose beneficiary is the treasury, and no correction or grievance route is stated for an agent the audit fails to find (audit). The miners' register was agreed by a convention signed on 30 July 2026 between the mines ministry and the deposits fund; no enrolment target, timetable, cost, host, retention period or regulator role is stated, and the reported design carries no data-protection provision (register). Two new biometric collections in two months, in a country whose identity directorate was breached in February and whose data-protection law is still under revision.	MOVEMENT
Seychelles	The National Population Database sits with the Civil Status Division and sustains the statistics bureau's population releases. The Division holds custody of the database and issues identity cards to all residents under the Civil Status Act and the Identity Card Act (division). The statistics bureau's 2025 releases draw on those civil-status and immigration administrative records (releases), giving 123,097 residents at 31 December 2025 and life expectancy of 77.0 years (year-end). The land-system tender of 2024 named the database as one of the systems a new registry would interface with (tender), which is the only account held of it being read by anything else. The database was established in 1988, civil status was computerised in 1989 and the national identity number made compulsory in June 1995, with records kept in parallel manual and digital form since (account).	NO CHANGE
Sierra Leone	The national biometric register covers about 93 per cent of the population, under the 2016 Act that created the authority. Coverage stands at about 93 per cent with a unique identification number each, on a Tier III data centre with a live eKYC platform (register). The register's statutory basis is the National Civil Registration Act 2016, which vests it in an independent authority with a confidentiality duty (Act). Ninety-three per cent is a coverage figure and not a currency figure: no deaths-recorded rate, no update cycle and no de-duplication audit is published against it.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Somalia	Law 46 of 2026 gave civil registration a statute in April, and the interior ministry was briefed on expansion in June. The Population Registration and Civil Status Statistics Law was published in the Official Bulletin on 5 April 2026, establishing the civil-registration and vital-statistics layer beside the national identity infrastructure (law). The registration directorate briefed the minister in June on expansion of services and implementation of the law (briefing), following a coordination meeting in February (meeting). The policy behind this dates to January 2021, and the assessment that accompanied it found no operational national civil-registration office and 4 per cent of under-twos registered (profile). No later coverage figure exists.	MOVEMENT
South Africa	Cabinet approved the white paper anchoring the intelligent population register, and 2,202,368 blocked identity numbers were unblocked on a different count from the court-supervised one. 2026-04-08 — Cabinet approved the white paper anchoring the conversion of the population register into an intelligent population register, on biometrics, interoperability and real-time integration, and the core biometric technology is live for the citizenship portal while the digital identity front end is still being built. The successor had been announced in June with the green identity book to be de-recognised and a biometric case-management system and 600 handheld readers tendered. The exclusions are reported on two counts that do not reconcile. A national campaign unblocked 2,202,368 identity numbers blocked before November 2022, while the court-supervised cohort fell only from 384,189 to 377,060 in roughly seven months, with unserviceable addresses given as the obstacle and a deadline running to March 2027. Both are the department's own figures and no source states how the two populations relate.	MIXED a biometric successor anchored in Cabinet policy while the register's own exclusions clear on two incompatible counts
South Sudan	The Register of South Sudanese Nationals is statutory, and more than 4,000 cards were distributed across Greater Yei in July 2026. The Nationality Act 2011 establishes the directorate and requires it to maintain the register, with the Nationality Certificate as the credential (Act). Distribution of more than 4,000 processed national identity cards and passports began in Yei River County covering the four counties of Greater Yei, with European Union support (distribution). No national coverage figure exists. A county-level distribution count is the most precise measure of the register the repository holds.	MOVEMENT
Sudan	The Civil Registry Act 2011 founds the register and its national number; coverage was 88.8 per cent in 2021 and has not been measured since. The Act repealed the 2001 statute and establishes the national civil registry and its unique national number, requiring the registry to supply data to competent state organs and coordinate with them (Act). Sudanese authorities reported 35.5 million of 40 million inhabitants registered by 2021, up from 82 per cent in 2016 (report). Issuance resumed in Port Sudan and Kassala over the window, and registry data was reported recovered to 13 April 2023 (resumption). No post-war coverage figure exists.	MOVEMENT
Tanzania	Child birth registration rose from 55 per cent in 2020 to 68 per cent in 2025, against a 13.7 million record backlog. The responsible minister stated on civil registration day that child birth-registration coverage rose from 55 per cent in 2020 to 68 per cent in 2025, with a target of 100 per cent by 2030. An independent audit found only 29 per cent of the whole population birth-registered by December 2024, 43 per cent of the 4,742 registration centres reviewed not operating, and a backlog of about 13.7 million records. The registration agency reports 11.5 million certificates issued and 20 million people registered by November 2025. Child coverage and whole-population coverage are different denominators, so the two headline figures measure different things rather than contradicting each other; the backlog is what stands between them.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Togo	Civil status went online in a five-commune pilot in December 2025 and the communes were equipped in April 2026. The governing statute has permitted computerised registration since 2009: article 15 of loi n 2009-010 gives computerised acts the same legal value as manually registered ones. It permits electronic registration; it does not establish that any office operated one. The online service for requesting copies of civil-status acts launched on 19 December 2025 in five communes only — Golfe 1, Agoe-Nyive 1, Ave 2, Lacs 1 and Zio 2 — to test operational effectiveness before rollout. On 8 April 2026 each received two computers, a printer and an uninterruptible power supply, after the communes reported they had none. A review of the 2009 statute opened in August 2026.	MOVEMENT
Tunisia	The citizen identifier register was created in 2020; no figure for what it holds has been published since. An implementing decree of May 2020 created and specified the register of the citizen unique identifier, together with its governance unit and oversight council. The statistics institute published a new projection series to 2054 in May 2026, built on the 2024 census population of 11.97 million and on civil-registration data using a UN-standard Bayesian methodology. The register itself publishes nothing: no enrolment count, no coverage rate, and no statement of how it stands in relation to the civil register or to the unified population registry still being worked toward.	NO CHANGE
Uganda	First alien identity cards were issued with 1,875 enrolled in ten weeks, against a scope of which about 1.95m are refugees or asylum-seekers, and a US$100 fee. Enrolment of 1,875 in ten weeks is under a tenth of a per cent of the scope, and the fee falls on a population overwhelmingly composed of refugees (cards, registration, births). Nothing is published about a waiver, an instalment route, or what happens to a resident foreigner who cannot pay yet needs a subscriber card or a bank account. That combination — a fee at that level, on that population, with no waiver published — is the sharpest exclusion finding in this unit.	MOVEMENT
Zambia	A sample based registration system was launched to capture deaths occurring outside health facilities. 2026-05 — the health ministry launched a sample based registration system with vital statistics, extending continuous civil-registration coverage to deaths outside health facilities — what the reporting describes as the silent deaths the register was missing. Deaths outside facilities are the harder half of civil registration everywhere, and a sample-based system is an acknowledgement that universal capture is not close. No coverage estimate, sample size or first result is published, and the repository holds no statement of the population register's own completeness to read it against.	MOVEMENT
Zimbabwe	The population register is being modernised and now takes automated validation from civil registration, with the voters' roll moving under the same authority. The register of residents sits under the National Registration Act as consolidated to 31 December 2016 (Act), and its modernisation has been under way since about 2023 with no completion date and no coverage figure held. The registrar-general's ICT deputy set out automated validation and synchronisation with the national population register as part of the civil registration and health integration under way, with a three-province pilot due in the first half of 2027 (presentation). From 18 August 2026 voter registration and the voters' roll are being transferred nationwide to the registrar-general, folding electoral identity into the same institution that holds the population register (handover). No registered-population count, update cycle or accuracy measure is published.	MOVEMENT

Civil register

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The register's digitalisation was presented to the regional directors' meeting in July 2026, and an appointment platform was reported. The register was created by article 25 bis of the 2014 law amending the 1970 ordinance. 2025-11-23 - an appointment platform for civil-status services was reported. 2026-07 - the register's digitalisation was presented at the annual regional meeting of civil-registry directors general, alongside the mandatory acceptance of electronic civil-status documents this ledger holds separately. No coverage rate, document volume or completeness figure accompanies any of it.	MOVEMENT
Angola	Birth registration reached 63.0% overall but only 39.2% among children aged nought to four, with registration posts rehabilitated in two provinces. 2025-11-20 — census definitive results put birth registration at 63.0% overall and 39.2% among children aged nought to four, from 53.5% and 24.8% at the 2014 census. Both rose, and the gap between them is the finding: the pipeline that feeds the identity card is under-registering the newest cohort fastest. 2026-04-06 — under a US$250m local-governance project, eleven birth-registration posts were rehabilitated in one province with five operating since August 2025, thirteen more were nearing completion in another, and mass registration campaigns reached several thousand people, on a project running across eight provinces and 53 municipalities. Only two provinces have published delivery counts. Nothing on the ledger states a national registration target, a backlog figure or a death-registration rate. The education ministry made school enrolment independent of documentation: circular 05/2026 of 19 August 2026 orders every school teaching primary and first-cycle secondary education to enrol children holding no birth certificate and no identity card, and to compile by the end of October a survey of undocumented pupils for the justice ministry's registry directorate, whose services are then to travel to the schools and register them (circular).	MOVEMENT though the youngest cohort is registering worst
Benin	A single-window pilot at ten maternities lifted birth registration to 76.56% against about 22% nationally, and generalisation slipped three to four months. Behind near-universal biometric coverage sits a weak civil-registration leg: about 2.5m births were declared between 2021 and 2025 against under 1m actually registered, because parents had to make a second trip. 2026-07-16 — a single-window pilot at ten maternities lifted registration to 76.56%, against about 22% nationally in 2025. 2026-02-26 — the six-month review recorded generalisation slipping three to four months into a consolidation phase. This is the sharpest finding in the country's identity estate. A register authenticating about 200,000 times a day is fed by a civil registration process capturing roughly a fifth of births nationally, and the fix works where it has been tried and has not been extended. A 2025 decree permits children under 14 to be registered on the prosecutor's requisition and witness testimony, and birth certificates were issued free to 30 September 2026 to under-14s whose births were registered but never collected. The decree's text is not held. 2026-10-04 - the identification agency said a September campaign issued a first birth certificate to 50,109 children under 14.	MOVEMENT in the pilot rather than in generalisation
Botswana	Civil registration runs on a partially automated system across 35 district offices and 17 on-site points. 1969 — the Births and Deaths Registration Act is the founding statute. 2026-08-01 — the registration system is described as partially automated and decentralised, introduced in 2003 and operated through 35 district registration offices and 17 on-site registration points at major health facilities, with the marriage register still manual. 2026-02-24 — online registration of births, deaths and marriages was reported complete, awaiting the government platform's launch. No registration-completeness figure is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Burkina Faso	Thirty communes hold fully digitised registers and 121,000 acts were issued to displaced people in 2025 against a 65,000 target, with 60.65% of births declared within the legal deadline. 2026-02-02 — thirty communes hold fully digitised registers, and 121,000 civil-status acts were issued to internally displaced people in 2025 against a 65,000 target, against 3,391,907 acts digitised across 54 communes and 145,655 birth certificates issued in 2024. The two ends count different things, so no rate of progress can be derived from them. The coverage figure is the one that bites: 60.65% of births were registered within the two-month legal deadline in 2024, leaving nearly four in ten births undeclared in time. The figure is the modernisation directorate's own, carried in a partner programme document. Delivering acts to displaced people at nearly twice the target, in a country where two fifths of births miss the deadline, is the shape of a system doing well at recovery and badly at capture. 2026-09-10 - a decree replacing the 1963 rules on consular civil status introduced mobile consular missions for citizens abroad.	MOVEMENT
Burundi	Biometric enrolment is operating in 13 pilot communes and decentralised to zone level, with 84% of under-fives registered but 66% holding a certificate. 2026-08-13 — biometric enrolment for the digital civil registry is operating in 13 pilot communes and has been decentralised to zone level, against a starting position in which the platform had been presented, every citizen was to re-register afresh and a family-code amendment was required. 2026-08-11 — coverage was stated on Africa Civil Registration Day: 84% of under-fives registered at birth and 66% holding a birth certificate, on a survey whose date is not given. The eighteen-point gap between registration and certificate is the finding, and it is the gap a digital registry is supposed to close. The ambitions and constraints of the programme were set out in May. No national rollout timetable beyond the pilot communes is published.	MOVEMENT
Cameroon	Tenders to digitalise civil registration in Bamenda and the East region were issued in August 2026. UNDP issued a tender in August 2026 to digitalise civil registration through the SIGEC system in the East region at Bertoua, and a companion tender covers Bamenda. Integration of civil registration with identity systems was argued for in May 2026. The statistics institute has published civil-status statistics for 2018 to 2022. No national registration rate after 2022 and no coverage figure for the digitalisation is held. 2026-09-14 — the civil registration bureau's director said digitalising birth, marriage and death records, begun in 2020, needs FCFA 52bn and could be complete in 2029-2030 if funded, under the 2025-2029 strategic plan.	MOVEMENT
Cape Verde	The register runs under the 2014 Civil Registration Code, which requires a national electronic civil registry database, and the registries directorate began publishing its own activity figures in August 2026. The code makes birth, marriage and death registrable facts, defines the registry structure, requires a national electronic civil registry database managed by the registries, notary and identification directorate, and repeals the 1967 regime. 2025-10-01 - the statistics institute released its fifth vital statistics report, for 2023, built entirely on the registries directorate's administrative records: 6,760 births, 2,925 deaths and 2,435 marriages, the 2016-2023 series, and register-quality detail including 5.9 per cent of birth records made without paternal identification, highest in one island at 14.4 per cent. The register is the statistical source, which is the strongest evidence the repository holds that it is complete enough to be one. 2026-08-04 - the directorate opened a statistical bulletin of its own, reporting 2,944 births registered nationally in the first half of 2026 across 23 conservatorias, an average of 16 a day, and stating that the bulletin exists to publish performance indicators and the volume of acts practised by the services — the register publishing about itself rather than only through the statistics office.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Central African Republic	A civil-status modernisation programme targets 400,000 birth certificates by 2028 and put its 2025 activities at 90% complete, beside a 3,000-certificate regional project. 2026-02-20 — a steering committee validated the implementing partner's 2025 activities on an externally funded civil-status modernisation programme run with the territorial administration ministry, extending from a capital-and-corridor pilot to new communes, with a target of 400,000 birth certificates by 2028 and 2025 activities put at 90% complete. It is a single source with no financing figure, contract or end date stated. 2025-08-12 — beside it, a regional birth-registration project targets 3,000 certificates in the country, launched eleven days into the window with no progress, delivery or completion record since. It is an order of magnitude smaller than the modernisation programme. Civil registration is the input to the identity card and to the digital identity system announced for 2027, and both programmes carrying it are externally run.	MOVEMENT
Chad	Digital civil registration was launched with message transfer from registry offices, hospitals, camps and mobile units to the identity agency for validation. The architecture is reported as message transfer from registry offices, hospitals, camps and mobile units to the identity agency for validation (registration, interoperability). A civil-registration application is dated to 2021 by an international official, at year precision from a single sentence, and no source connects it to the programme launched in September 2025 (application). Birth registration within the legal deadline is reported from ministry data for 2024, and three accounts round the undeclared total to 2.948m, 2.95m and 2.958m — three figures for one number (deadline). Birth registration stood at 25.5 per cent in 2019, against 47 per cent across west and central Africa, with USD 2.4m of a USD 105.6m operation carrying the registration work (account).	MOVEMENT
Comoros	The civil-registry modernisation programme is running on two islands with a residual financing need of EUR 9,009,900. A strategic plan was adopted in 2024 with the preliminary study not launched. The study was validated and the programme is running on the main island since 2 October 2025 and the third island since 10 October, with a residual financing need of EUR 9,009,900 put to an international resource-mobilisation mission and a partners' conference on 14 August 2026, the study launch reported from the third island. The financing need is a consultant's and no share of it is committed on the record. The agency provided for by the law of 27 July 2023 is in island consultation on a draft implementing decree and is not recorded as created. The directorate that holds the population register and criminal record was appropriated KMF 4,000,000 for 2026, wholly goods and services.	MOVEMENT
Congo	The integrated civil-status system was handed to the interior ministry in September 2026 with seven steps still ahead of deployment; no funding decision for rollout is on file. The system was named as the civil-status reform vehicle at a July 2025 workshop with no build state published, and validation closed with recommendations in February 2026. 2026-08-07 - three modules - birth, marriage, death - plus exceptional-procedure paths were validated and the system named before the Senate as the remedy for document fraud, with deployment still unfunded. It is built in-house by the state information-systems agency. The interior minister told the Senate that ministry and municipal staff are among those selling forged civil-status documents, and no funding decision for deployment is on file. 2026-09-06 - control arrived before the system did: a circular of 1 September 2026 from the territorial administration bans antedating of civil-status acts and changes of identity or filiation without a court decision. It is an administrative control placed on a paper process while the validated software waits for deployment funding, and no volume of irregular acts is published. 2026-09-22 - the state information-systems agency handed the system and its technical documents to the interior ministry's territorial administration, with seven steps to follow, among them data centralisation, user training, finalising the civil-status law's digitisation phase and deployment. None is dated.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cote d'Ivoire	The network reaches 699 centres and more than four million digitised records, while on-time registration sits at 55.4% and falling. Software and hardware are now installed in every municipal and sub-prefecture civil-status centre for digital recording of births, marriages and deaths, financed by the European Union, with the national system covering 699 centres and more than four million records digitised. The outcome measure went the other way. The 2024 yearbook, presented on 30 June 2025, puts on-time birth registration at 55.4% for 2024 against 56.6% in 2023 and 66.8% in 2021, and is still the latest published. The director general separately put the birth-declaration rate below 60%. No 2025 yearbook is held, so the falling trend has not been updated in over a year. The electronic basis is a 2019 decree: civil-status acts may be drawn up by computerised as well as manual means, automated processing by registration centres requires prior authorisation from the data-protection authority, and hosting may be delegated to a private body only where it is established and hosting on Ivorian territory. 2025-09-01 - the largest commune brought a second interactive kiosk into service issuing birth, marriage and death extracts from its own records, taking stated capacity above three thousand extracts a day; the throughput figure is the municipality's own claim.	MIXED the digital civil-status network reached 699 centres while the on-time birth registration rate stands at 55.4% and has not been republished
Djibouti	Civil-registry archive digitisation is running alongside enrolment, with staffing and archive space named as the constraints. Terms of reference of February 2024 describe the capital's civil-status system as running since 2011 at three commune centres and five maternity antennas on one central server, and commission a diagnostic of it under a city governance project. The repository does not hold the diagnostic's findings. The programme was not on record at the window's opening. It is under way alongside biometric enrolment, with staffing and archive space named as the constraints and no completion date published. No record count, coverage figure or registration rate is held at any date. The directorate that runs it is the same one preparing real-time identity verification for banks and social protection, so a register whose digitisation is constrained by staffing and shelf space is the intended source for those checks.	MOVEMENT
DR Congo	The register runs under the Family Code as amended in 2016, which structures the civil status offices and governs the birth, marriage and death registers. Delivery is not uniform: one sector stopped newborn registration outright. The statute creates and structures the principal and secondary civil status offices at commune, sector, chiefdom and diplomatic-post level, and governs the birth, marriage and death registers themselves. The capture runs through the opening of the register-keeping provisions. What it provides for is not uniformly delivered. One rural eastern sector went several months without birth registers and stopped registering newborns outright, the province promising resupply with no date — a register that has run out of paper is not a partial register but an absent one. 2026-04 - the movement toward digitalisation is a consultancy: a tender to assess the current digitalisation status, design mobile registration and integration with health and education data, and engage the interior ministry and civil-status authorities. No registration rate, office count or digitised-record figure is published.	MOVEMENT
Egypt	Registration completeness is put at 96.6% for live births and 95.3% for deaths on the country's own submission. The statutory basis is the 1994 civil status law, whose article 1 places implementation with the civil status organisation at the interior ministry and empowers the minister to establish civil-status information systems. An electronic birth and death registration system was recorded as under way from 2017, and the country's own submission puts estimated completeness at 96.6% for live births and 95.3% for deaths. 2026-07-17 - the country's own presentation to the annual registrar generals' meeting contrasts the position in 2017 with 2026.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Equatorial Guinea	The civil registry remains paper-based, with a 2018 digital pilot and fraudulent birth certificates identified as a control problem. The country hosted the continental civil-registration meeting in June 2025 and no digitisation milestone or registration coverage figure has followed (meeting). The government has stated it wants a rigorous control mechanism for issuing birth certificates, which is the same document the identity document depends on (control mechanism). A continental governance index scores civil registration at 37.5 out of 100 for 2023, 47th of 54 and up 37.5 points over the decade, the second most improved of its indicators for the country. The composite score does not measure whether records are digital.	NO CHANGE
Eritrea	The 2025 vital statistics return leaves registration completeness blank; the only structural account of the system is from 2002. The country's return to the United Nations vital statistics questionnaire for reporting year 2025 leaves the completeness fields for birth and death registration blank, so no registration completeness estimate is reported at all - which is itself the most current statement the repository has. The only description of the system's shape is twenty-four years old and is stated as such: birth registration then ran under a transitional civil code in eight named urban areas only and not in rural areas, was optional rather than obligatory even there, was kept for administrative purposes with no statistical data retained, and the urban offices did not know their own annual registered births. The same account records that no proper registration system or population census had been conducted before or since independence in 1991. Nothing between those two dates is held, so whether the 2002 position still describes the system cannot be stated - only that nobody has reported a completeness figure since. What is known about document practice comes from outside: a foreign ministry's country of origin report of December 2023 describes how passports and civil documents are applied for, including from abroad. No national registration figures are published.	NO CHANGE
Eswatini	A proposed DNA requirement for birth certificates is costed at about E126m a year, roughly 46 per cent of the home affairs budget. The costing is reported against the ministry's budget (proposal). It is a proposal only. Requiring genetic testing to register a birth would be the most invasive civil-registration rule in this frame, and the account that reaches the repository is about its cost rather than its lawful basis, consent model or effect on registration rates. The improvement work has a structure behind it: a national steering committee and technical working group were established under a continental mentorship programme whose second phase launched in February 2022 (programme), with a university partner supporting the government since 2015 on foreign health-programme funding (support). Over 10,000 of the births occurring in 2021 were registered late.	MOVEMENT
Ethiopia	A home-grown national civil registration architecture was set out with a phased rollout plan, and the register was extended to refugees (presentation). Ethiopia's national electronic civil registration and vital statistics architecture — home-grown, decentralised and multi-tenant — was presented in July 2026 with its phased pilot-to-national rollout plan (presentation). The refugee service and the Immigration and Citizenship Service ran a joint training of trainers, financed by UNICEF, implementing the updated civil registration system for refugees under the amended proclamation (training). The city-level pilot established connectivity from the central level down to woreda level, with family and vital-event registration running digitally (statement). The repository holds architecture and plans, and no registration coverage rate for births or deaths.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Gabon	The biometric civil registry has operated since 2012 and remains the seed base for the register that would replace it. It was built under a supplier contract of September 2012 (the registry) and is named as an existing system in the 2025 stocktake of legal identity (stocktake). No registration count, coverage figure, birth-registration rate or interoperability arrangement is held for it, so what is recorded is that it operates and nothing about how much of the population it holds. 2026-09-28 - a ten-day inter-ministerial workshop began preparing the national civil registry centre for operation under the World Bank-financed Gabon Digital programme; no operating date is published. 2026-10-09 - the preparatory workshop for the national civil-registration conferences closed with a diagnosis of badly kept archives, irregular data entry and a Civil Code dating from 1972.	NO CHANGE
Gambia	The electronic civil registration system holds about 1.17m people with a unique identification number, and its integration with the identity card has produced no milestone. A mass birth-registration and health-insurance campaign reached about 1.17m people, and the system is described as the interoperability backbone (campaign). A June 2025 commitment to integrate it with identity cards and the passport has produced no published integration milestone in the fourteen months since (commitment). That matters more now than it did: an identity system went live in June 2026 and the register that would feed it is on the same unchanged footing it held two years ago. 2026-09-04 - the marriage half of the register is documented for the first time: the registrar general publishes the civil marriage registration steps, the documents required and a fee schedule in dalasis. Nothing states whether any part of it reaches the electronic civil registration system.	NO CHANGE
Ghana	A civil registration strategic plan for 2025-2030 was validated in July 2025, above a registry that received 181,000 security papers against a 881,000-copy backlog. Printing is decentralised across 470 offices in 261 districts with electronically signed certificates, the registry having received 181,000 security papers against a 881,000-copy backlog. Nothing dated has followed, so whether the backlog cleared is not established, and the repository holds no registration completeness rate, no digital birth record count and no link between the registry and the identity card. 2025-07-31 - the registry validated a civil registration and vital statistics strategic plan for 2025-2030, drawn up with the United Nations children's and population funds and the regional economic commission; it is validated, not approved, and no publication or funding statement has followed. 2026-09-07 - a privately operated platform launched in Accra on 28 August lets users search and verify registered marriage and divorce records drawn from the registrar-general's department, the courts, district assemblies and the Gazette. It reads state records rather than being one: no data-sharing agreement, fee schedule, coverage figure or record count is published.	MIXED a strategic plan has been validated while the certificate backlog it sits above is unresolved
Guinea	An administrative census delivered secured civil-registry inputs to the population register, which is now the single official source for the electoral roll. Enumeration ran from 15 April 2025 and its outputs feed the population register and the census (census). A convention between the elections directorate and the civil-registry office institutionalised data sharing from the register to the roll, making it the roll's single official source (convention). No registration completeness figure, record count or update rule for the register itself is published.	REGRESSED
Guinea-Bissau	Birth registration stands at about 46% of under-fives, with SIREC digitising births, deaths and marriages and no fresher figure since. The Ministry of Justice's civil registration office describes SIREC digitising civil registration with UNDP-trained officers, roughly three months after it began, with registration of under-fives at about 46%, up from 23.4% and against a target of at least 90%, in a modernisation beginning in Bissau. A parallel account covers the digitisation of civil identification, registry and notary services. Behind them, a UNDP project co-financed by Switzerland is setting up a digitisation centre and software to digitise the paper civil-registry books, held at year precision. All of it predates the twelve-month window. No dated confirmation of regional extension, no fresher registration rate and no death or marriage registration figure appears in it.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Kenya	Birth certificates became downloadable and printable online after application, where collection had required a visit. The change was announced by the Interior Cabinet Secretary in June 2026 (announcement). It completes online delivery for one document at the point where the statute now requires a civil-registration office in each of 290 sub-counties, so the register is being made both more local and less visited at once.	MOVEMENT
Lesotho	Digital birth registration has run since April 2025 with no enrolment figure, while the Ibrahim Index scored civil registration at 100.0, first of 54 for 2023. The programme launched on 2 April 2025 with the European Union and UNICEF (launch). No registration count, coverage share or link to the national identification system has been published since, so the repository records that the registration is digital and not how much of the population it reaches. 2024 — the Ibrahim Index scored civil registration at 100.0 of 100 for 2023, first of 54 African states and 12.5 points above 2014. The score is a composite of expert assessments, not a count of registrations.	MOVEMENT on an index score rather than a registration count
Liberia	A Birth and Death Registration Policy 2026-2031 was launched in August 2026, superseding the 2017 policy. The 2017 policy placed birth and death registration under the health ministry's Bureau of Vital Statistics and Principal Registrar and stated plainly that the system had never been fully developed. Its successor was launched at the national health review conference of 4-6 August 2026, with no policy text, target or budget line reported. The ministry's own statement of priorities for 2026-2036 names expanding digital registration, improving cause-of-death reporting and interoperability with the identity registry — objectives, not achieved conditions. Birth registration runs on a DHIS2-based information system across 58 centres in all 15 counties, with the registration rate put at 66 per cent in 2019/20 against 4 per cent in 2007. In 2019 it worked from 15 centres in county urban districts keeping combined paper records, with online registration then being introduced.	MOVEMENT
Libya	Project Intilaqa matched the civil registry's electronic and paper records across 257 offices to 97 per cent, and no later figure has been published. The project matched electronic data to paper records in 257 offices and printed 1.8m family records, reaching 97 per cent completion as at September 2024 (matching). It had been outstanding since the mid-1970s. Nothing has been published in the two years since on the remainder, on error rates found, or on how the matched register is now maintained.	NO CHANGE
Madagascar	About ten million civil records were digitised across 1,695 communes, under an EUR 8.5m registry and database contract awarded in May 2025. The digitisation covered about ten million records across 1,695 communes using optical character recognition and machine indexing, carried out with mobile satellite and solar units (digitisation). A civil registry and database management contract of EUR 8.5m was awarded in May 2025, with no delivery milestone published since (contract). No error rate or count of records still on paper is held. World Bank staff put birth registration coverage at 74% in 2021, down from 80% in 2009, with two-thirds of civil registration offices lacking stable internet access (October 2023). 2026-09-15 — close to 20 per cent of under-fives lack a birth certificate, and a second registration drive opened.	MOVEMENT
Malawi	A national birth registration campaign runs seven phases across 25 districts targeting about 4.6m unregistered children, using primary schools as registration centres. The campaign's first phase was witnessed at Dedza; the bureau had registered about 3.8m children since 2015 as at January 2026 (campaign, partnership). MWK 17.8bn is required in total, MWK 5.4bn was allocated for phases one and two, and MWK 12.4bn is outstanding. No mid-campaign registration total is on record.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mali	Birth registration stands at 89.5 per cent across 747 functional centres while death registration is about 20 per cent, and the village register remains hand-kept. Birth registration was recorded at 89.5 per cent across 747 functional primary centres in mid-2025, with no later figure published (births). Death registration stood at about 20 per cent on the same account (deaths). A civil register that captures nine births in ten and one death in five cannot support the population arithmetic that other systems would draw on. The village census ledger from which family record books are issued was formalised in a draft ordinance adopted in July 2026, replacing a 2006 statute, and remains a hand-kept ledger (ordinance).	MIXED birth registration near ninety per cent against death registration near twenty, on a village ledger still kept by hand
Mauritania	The national register holds more than 5.1 million people and enrolment is described as a permanent public service; the civil status code was amended in 2025. The interior minister gave the figure to parliament on 18 June 2026 and separately described enrolment as having become a permanent public service guaranteeing every citizen's right to be registered (figure, enrolment). The system for running the register and secure documents was renewed in August 2021 across 153 reception centres (system), and the ministry's own half-year report for 2026 records the biometric interconnection of the register with civil status (interconnection). No denominator, coverage rate or age breakdown accompanies the 5.1 million, and no independent audit of the register is held.	MOVEMENT
Mauritius	The civil registration base is recorded as complete and underpinning the identity system, on a performance report for 2023-2024. The civil status division's performance report for 2023-2024 is the most recent account held (report, presentation). No later performance report is held, and no registration rate, backlog or error measure has been published since. A complete base is the assumption on which the identity wallet and the social-security digitisation both rest.	NO CHANGE
Morocco	The digital register created by law 36.21 is operational; ten governors were given three weeks to digitise paper stock. The law creates the national digital civil-status register and the birth-linked identifier, and the implementing decree of July 2023 put the platform into operation. Catching up on paper is the live task: ten regional governors were given three weeks in October 2025, and a further bill adopted unanimously in December 2025 lets the civil-status commission sit without its president to clear the name-change backlog. The municipal programme records the registry system live in 59 of 97 municipalities. The casework system is the interior ministry's SGEC, in use in every civil-status office with over 1.3m acts declared or issued by October 2024; the paper archive behind it went to international tender in April 2025 at MAD 194m across five regional lots, to digitise more than 38m acts dating from 1915. No award is on file.	MOVEMENT
Mozambique	The electronic civil registration system established by the revised Civil Registration Code runs behind a free birth registration campaign targeting about seven million people to the end of 2026. The national civil registration system is administered by the justice ministry through the national directorate of registries and notary services, established by the Civil Registration Code as revised in 2018 and integrated with the national identity and health systems; the Code mandates registration of all vital events, compulsory free birth registration within 120 days, and electronic transmission of data to the statistics institute (code, portal). The campaign launched in March 2026 and runs to 31 December, targeting about seven million people at 25,000 registrations a day through up to 500 mobile brigades, with costs met by a donor-funded governance project (campaign); no mid-campaign total is on record (campaign, launch). A tender for services to strengthen civil registration and identification closed in February 2026, requiring bidders to show a US$7m or two US$4m track record and a US$90,000 bid security (tender); no award, contractor or contract value is established (tender). Two earlier vital-statistics programmes closed fully disbursed at the end of 2023, at CAD 19.5m and CAD 6.5m (first phase, second phase). 2026-09-24 - the justice sector is installing 100 more registration posts in maternity units, beside about 250 already in health units; no completion date is given.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Namibia	The civil registration department had N$178,122,000 for 2025/26 and no 2026/27 allocation is on file. A separate N$70m was allocated to the digital identity within a N$7.4bn ministry budget (allocation). No 2026/27 civil-registration allocation is on file (budget), which matters in the year the electronic card is to be issued and the school-based registration drive is running. 2026-10 — the home affairs minister told the National Assembly that some marriages remain unregistered because church and court registers reach the ministry late or never, a gap the digitalisation begun in 2021 exposed.	NO CHANGE no 2026/27 allocation published against the previous year's N$178.1m
Niger	A National Civil Register was instituted in April 2026, birth declaration reached 79 per cent on one series, and 68 per cent of communes are computerised. The civil-status and identification reforms were taken on a national awareness tour, whose fourth stage opened in Agadez to mobilise local actors for inclusive governance (workshop). The register was instituted by the April 2026 ordonnance and is designed to interoperate with the population and nationality registers (register). Birth declaration is given at 79 per cent against 53.48 per cent in 2022 on one series, while the interior ministry separately gave 80 per cent in 2026 against 60 in 2023 and an agency put one region alone at a rise from 69 to 75 per cent (rate); three differently based series are on record and none is reconciled to another (rate, commemoration, tour). An agency puts 68 per cent of communes nationwide computerised on its own account of the support it has given, and no ministry count of computerised communes is held (communes). Birth declaration reached 68.61 per cent in 2024, against 62.86 per cent in 2023 and 32 per cent in 2008, with 85 per cent targeted by 2027 (strategy review). 244,310 civil-status acts have been digitised across 13,939 declaration centres (programme).	MOVEMENT
Nigeria	Paper registration was discontinued from July 2026, but none of 371 targeted health facilities is live, 120,469 certificates were issued against 443,162 registrations, and the platform showed charges for documents stated to be free. Registration went nationwide on a single platform through 4,011 centres toward a target of about 8,000, with newborn registration requiring at least one parent to hold a valid identity number and the register run as a public-private partnership (platform, state). It has stalled at the health-facility layer: none of 371 targeted facilities is live despite completed training, zero birth notifications were recorded in the reporting year, 120,469 certificates were issued against 443,162 registrations, and an estimated 3.5 million children across seven southern states hold no certificate (gap). The platform displayed charges of US$30 to US$80 for documents the commission says are free, and carried one man's record with a wife and a son unknown to him until the commission corrected it free of charge the day after publication (corrections, records).	MIXED paper registration discontinued nationwide while the health-facility layer recorded zero birth notifications
Rwanda	A fully digital civil registration chain runs from hospitals to village administration, and the system is documented as a foundation model in published case studies. Birth-registration completeness is reported in the 2025 vital statistics report, on a chain that runs digitally from hospitals through to village administration (completeness). The identity agency issued standard operating procedures in December 2023 for a national centralised and integrated system, making health facilities responsible for registering the births and deaths occurring in them; that is the earliest position the repository holds for the system (procedures). The system is documented as a digital public infrastructure foundation model in published case studies; the account and its figures are those of the advocacy organisation that has worked on the system since 2016, and no government statement of the same figures is held (case studies). That qualification matters at exactly the point the system is being held up as a model for others, and the immunisation registry recorded separately is integrated with it. 2026 - a phone-based community death notification keyed to the national ID number, introduced nationwide in spring, logged about 10,000 community deaths in its first months against a target of 70% of community deaths this year; notification is not registration, and no registered share is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sao Tome and Principe	The life-events system has run nationally since 2018, and birth registration is now entered electronically at every maternity unit, eliminating paper at the point of birth. The directorate's service page sets out the registrable acts - birth registration including free registration under one year, acknowledgement of paternity, marriage and transcription, name changes, nationality and death entries - with fees, deadlines and the offices at which each is requested (services). The country diagnostic records the system as implemented in 2018 enabling digital registration of life events across the country, with a centralised database holding birth data from 1920 to 2010 (diagnostic). The chief conservator reports registration entered directly into the database from computers at every maternity, with 3,077 births and 1,063 deaths registered in 2025 (registry). Death registration is a quarter of birth registration and nothing held explains the gap.	MOVEMENT
Senegal	Civil-status software reached 437 of 629 centres, 15.3m records are loaded live, and the archive totals are given as two unreconciled figures. The deployment figure was given at African Civil Registration Day in August 2026 against a denominator of 629 centres; the agency's director-general frames civil registration as an instrument of sovereignty, and the same agency says its 2026 budget has not been notified (deployment, progress, presentation). The live database holds 15.3m records loaded, a subset of archive stock rather than a replacement figure; English coverage calls them birth records where the agency's own term covers all events (database). The June 2026 closing report gives 10m digitised and 20m indexed as two separate totals, unreconciled with the August 2025 reading (archive, agency). Remediation ran at one region in August 2026 on the agency's own pilot data, with no national completion date stated (remediation). 2026-09-16 — the civil-status agency put modernisation at 77 per cent of 629 centres, live in six regions with Tambacounda next and the south in the last quarter, the data held on three state-owned data-centre sites. 2026-05-20 - the President ordered an emergency plan to strengthen civil-status management by the end of June and national consultations by the end of August. Neither is recorded as delivered.	MOVEMENT
Seychelles	Civil-status certificates are issued online with two-working-day delivery, saved to the identity platform's document wallet. Birth, marriage and death certificates are available online with delivery in two working days, saved into the identity platform's document wallet (certificates). That is a working registry-to-credential link — the certificate lands in the same wallet as the identity — and it is one of very few in this frame where the two systems are joined at the point of issue. No transaction volume, registration completeness or uptake figure is published.	NO CHANGE
Sierra Leone	Supplier engagement opened for an integrated digital mortality surveillance, registration and certification system, and no cost, supplier, timetable or coverage target is stated. Engagement opened in August 2026 (system). The coverage figure attached to it is the agency's own. Death registration at that level means the civil register captures a small fraction of deaths, which is what the system is meant to change and what nothing yet measures.	MOVEMENT
Somalia	A unified digital civil registration system was documented in January 2026, following a nineteen-district pilot. The unified system was documented on an open-source civil registration platform in January 2026 (system), after a nineteen-district pilot in 2025 (pilot) and an overhaul begun at the start of that year (overhaul). No registration volume, district coverage or link to the identity register is published, so whether a birth registered here produces an identity credential is unestablished. 2026-10-07 - the migration agency, the federal government and the Netherlands launched a programme that will support civil registration and legal identity systems and expand registration in underserved areas.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
South Africa	360,000 identity documents sat uncollected at the end of July 2026, on the department's own statement; the repository holds no prior figure to compare. 2026-07-31 — the department opened every office nationwide for the final voter registration weekend, stating that 360,000 identity documents sat uncollected. A valid document is a precondition of registering to vote, so the count is a measure of exclusion and not of stock control. It is a first count. No prior figure, no breakdown by office or province and no statement of how long the documents have been waiting is published, so the direction cannot be stated and the level can. Separately, a court found statutory exclusions from birth registration unconstitutional within the window, which goes to the same register from the entry end rather than the collection end.	NO CHANGE a first count with no earlier figure behind it
South Sudan	A centralised civil registration system was announced with health facilities notifying births, one issuing authority and compulsory death registration, against birth registration coverage that has not moved. The announcement came in July 2026 (announcement, statelessness). Birth registration coverage has not moved on the figures held, which come from an identity diagnostic and a statelessness study rather than from a national series (coverage, study). Making death registration compulsory and centralising issuance are both enforcement designs, and neither the register nor the statute behind it exists yet.	MOVEMENT
Sudan	Issuance resumed in two eastern states over the window, while Darfur's offices remain shut and children go unregistered. Port Sudan resumed national identity card issuance on 27 December 2025 after more than two years, with a digital identity project launched alongside it (resumption). Kassala followed on 15 February 2026, having restored vital records and fingerprint data, with extended hours and dedicated counters planned (resumption). In Gezira the state governor launched service in Umm al-Qura locality and the registry director pledged six locality centres for rural residents (launch). A lawyer reports Darfur's offices shut, leaving thousands of children without birth certificates or a national number (account).	MIXED resuming in the east and closed in Darfur
Tanzania	Under-five birth registration is quoted at 65 per cent and 68 per cent a week apart by the same minister, which is the clearest demonstration that the figure is quoted rather than published. The repository holds several differently-based estimates and does not reconcile them to one series; the two newest are a week apart from the same minister (coverage, partner, framework, foundation). An upgraded platform reports issuing birth certificates within 48 hours, and the government has stated an intention to integrate the identity and registration agencies (certificates). A national partner was sought for a birth registration programme running August 2026 to August 2027, starting inside the next reporting month (programme). 2026-09-17 — registration of children from birth is being piloted in three districts; no coverage or enrolment figure for the pilot is published.	MIXED birth registration rising on estimates the repository cannot reconcile to one series
Togo	A second birth-registration catch-up campaign was launched in July 2026, and an online civil-status certificate service is still a pilot in five communes. One commune's registration application lifted births registered from 700 in 2019 to 1,975 in 2020. A Lomé commune began piloting online birth and death declaration from two health facilities in March 2024. The public-service ministry tendered technical assistance for a 16-commune digitisation pilot, bids closing 10 August 2026. The report of the second campaign gives two incompatible reach figures — 6,461 on the ministry's account against nearly 7,400 on the supporting organisation's — unreconciled (campaign). The online certificate service launched in five pilot communes in December 2025 and remains a pilot on the record held, with no dated extension and no completion date for national rollout (service, platform). The 2009 civil registration law under which both operate is under review, with proposals due before the end of 2026. 2026-09-15 — the civil status law review ran a technical workshop for the cell carrying it, a month after the review formally opened. No draft text or adoption date is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Tunisia	A digital birth declaration platform is running at one hospital, with 202 births registered. The interior ministry launched remote issuance of birth certificates through the national services platform (launch), with a remote translation service alongside it (report). It is the first national platform of its kind and is running at a single hospital (platform, pilot). Two hundred and two births is a pilot volume, and no rollout plan, second site or completion date is published. The country hosted the Arab conference of civil-status directors in the same month. The national civil status system manages birth, marriage, divorce and death records and issues them regardless of place of registration, exchanging them electronically with the social security funds (system). The account is the operator's own and carries no coverage figure.	MOVEMENT
Uganda	A birth registration drive announced community drives and a fee schedule, and no birth-registration coverage figure has been published since 2016. The drive and fee schedule were announced in June 2026 (drive, notification). Ten years without a published coverage figure means the drive cannot be measured against anything. Marriage registration transferred from the registration bureau to the identity authority in April 2025, three months before the window opened (marriage).	MOVEMENT
Zambia	The birth registration rate is an external agency figure cited by the Registrar General, so a 50 per cent target for end-2026 has no measured mid-point on file. The rate is cited rather than measured domestically (rate, target). Civil registration runs on a three-pillar strategy stated at a continental civil registration day (registration), and a modernisation programme was launched on the same three pillars (programme). A target with no measured mid-point, four months from its date, is the position.	NO CHANGE
Zimbabwe	The civil register published a 2023-2024 vital statistics report, and computerisation now covers all ten provinces with ten rural sub-offices being equipped. The statistics agency and the civil registry department published a 79-page vital statistics report for 2023-2024, reporting registered births, deaths, marriages and other vital events by province, age and sex (report). All ten provinces and 63 districts are computerised, reported to a meeting of African registrars general in July 2026 (registrars). Ten decentralised sub-offices across eight districts are being computerised, digitalised and solar-powered under a China-funded, UNICEF-managed project, extending the register below district level for the first time on this repository (project). The statute behind all of it is unchanged since 2020 (Act). No completeness or timeliness rate for death registration is held.	MOVEMENT

Address register

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The national address register is reaching one province at a time, on a 2022 procedures guide. The standard is a national addressing procedures guide of June 2022 setting a data model and procedural standard - not just a registry fact but a national data model. 2026-05-09 - generalisation was launched in one southern province. 2026-06-26 - a two-day workshop series for district officials ran in a northern province, convened by the national addressing commission. Two provinces in two months is the observed pace, and no coverage figure, address count or completion date is published against a country of 58.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Angola	No national address register. The 2019 toponymy regulation makes place names and house numbers a municipal function. Addressing exists as an administrative act rather than as a database. The 2019 regulation of the toponymy law governs the assignment and alteration of place names and the assignment or suppression of house numbers across every territorial unit, and vests execution in the municipal administrations. There is no single consolidated national address register, and this is the closest enacting act to one. Two steps in the window make one more tractable. The territorial unit codification law of September 2025 gives every administration the same geographic keys, and the single social register launched in July 2026 records georeferencing among its validations. Neither is an address register.	NO CHANGE
Benin	A harmonised national addressing strategy is in preparation, consulted on 21 May 2026. The environment and transport ministry convened the sector's principal actors on 21 May 2026 for a strategic consultation on street and door addressing, under the implementation of a national strategy, the Council of Ministers having taken up addressing in April 2026. No adopted strategy, addressed-area coverage figure or address count is held, and nothing connects the work to the population register.	MOVEMENT
Botswana	No national addressing system exists; the addressing component of the land project was never implemented nationally. 2024-06-20 — a case study on rural addressing records that no national addressing system is in place and that the addressing component of the land administration project was never implemented nationally. 2026-03-04 — a four-year modernisation of the land information and geospatial systems was funded in the lands budget, the nearest thing to address infrastructure now moving. The absence was searched on 31 August 2026 and nothing settling it was found.	NO CHANGE
Burkina Faso	The capital's externally financed addressing programme moved on to arrondissements 5 and 12 in April 2025 after arrondissements 1 and 2. The capital's EU-supported addressing programme moved on to arrondissements 5 and 12 in April 2025, after arrondissements 1 and 2, covering more than 2,277 streets and 43,000 doors. Nothing has moved since, and a national addressing instrument, or a register covering more than one commune, would settle it. The absence is load-bearing. The land and cadastre platform, the social register and the enrolment committees reported elsewhere all locate people and property, and none of them can reference a national address. The statistics institute's locality information system, reported under administrative statistics, is the nearest substitute and is still in validation.	NO CHANGE
Burundi	An urban property-owner census began building a geo-referenced register with a unique identifier per parcel, over postal address formats. An international addressing country file gives the national postal address formats — the whole of what the repository held on addressing. 2026-07-14 — an urban property-owner census was launched to build a digitised, geo-referenced land register with a unique identifier per parcel, interoperable with other national registers and feeding a web mapping service and future digital land titles, first phase covering three communes of the capital and three towns, at about 3 billion BIF, with enumeration in August and September 2026. It is an address register arriving as a property register, which is a different object: it will number parcels and their owners rather than places, and no plan to extend it beyond the six urban areas is stated.	MOVEMENT
Cameroon	A bank partnership made a certified geolocated postal address a condition of account opening, reaching more than 700,000 clients. About 15,000 addresses had been generated since a 2024 postal-operator agreement underpinning the national postal location plan. 2025-06-19 - a bank partnership required every new customer to supply a geolocated postal address certified through the startup's postal-operator tie-up, reaching more than 700,000 clients of that bank, at FCFA 2,000 a certification. It is a privately run register entering the identity-verification stack without a legislative act. No address count since, no coverage figure, no data-controller arrangement and no obligation on the operator to serve anyone who will not pay the fee are on file.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cape Verde	There is no national address register; the nearest artefact is a national toponymy dataset published in June 2023, and two municipalities are building address infrastructure of their own. The territory institute's dataset is a completed national vector dataset published on 10 June 2023 covering islands, ilheus, lugares, bairros, vilas, cidades, ruas and door numbers, distributed as map services and shapefile download under an open licence, maintained as needed, and grounded in the 2012 decree regulating national and municipal toponymy. Street names and door numbers are a geospatial dataset plus municipal numbering programmes, not a register with a per-address identifier. 2026-04-04 - the capital's council reported that its municipal toponymy platform is live in the municipal online shop, letting residents look up official street names and building numbers with regular updates as door numbering and street naming continue across the neighbourhoods; the platform was launched in October 2025. It is the first operating municipal address lookup in the country and covers one municipality. 2026-05-22 - a second council announced the start of its toponymy project, beginning with photographic field survey of the island and door numbering in its main town, stating that the plan will produce a database supporting postal delivery, medical emergency response, census enumeration and home deliveries. Address coverage is accumulating municipality by municipality, which is why no national figure exists.	MOVEMENT
Central African Republic	The addressing convention is post-office-box based, with no street numbering, postcode or national physical address register. The international postal reference for the country records the operative addressing convention as post-office-box based, with no street numbering, no postcode and no national physical address register. That is a dated, cited statement of absence rather than a gap in the record, and nothing since 2022 changes it. No addressing project, digital address system or geocoding initiative appears anywhere on this ledger - which bears on everything that would need to reach a household: registration, transfers and service delivery alike.	NO CHANGE a first stated position with no earlier account behind it
Chad	There is no national address register; N'Djamena's addressing, officialised in 2016, is still incomplete. The only documented Chadian street-addressing programme ran in the capital from 2013 to 2016 at 700,000 euros co-financed by the European Union, the municipal association and the city, defining addressing as city mapping, street codification, enumeration surveys and a simple information system feeding the local tax base (programme). A 2026 study finds numbering begun in 1990 across the first five arrondissements and officialised in 2016, with the administrative system still incomplete, untouched in the old quarters and in some newly planned ones, so official and popular addressing coexist (study). A National Addressing System instrument exists in no form the repository holds, and the 2026 finding rests on a survey of sixty respondents.	NO CHANGE
Comoros	An addressing and directory process was launched in December 2022 for completion by end-2023; no completion is on record. The programme was launched to assign a street address and a directory entry to every household and business across the three islands, with a cadastral and urban-planning payoff, and a stated completion target of end-2023. That target passed. No second record of the programme exists in the repository, no coverage figure has been published, and no authority is named as holding the resulting register. What did move is adjacent and separate: the cartographic unit's fourteen-theme national geospatial database was validated at a restitution workshop in January 2026. A themed map layer is not a street-address register, and nothing on file connects the two.	STALLED the programme's own completion target passed three years ago with nothing recorded since
Congo	The addressing project has sat at the regulator for two years untransferred to the postal operator, with no deployment on file. A postal codification decree was adopted in council of ministers in July 2025, presented as bringing the country to international postal standards. 2026-07-14 - the minister recorded that the regulator has run the addressing project for two years and the ministry has not taken it up for deployment at the postal operator, so the project is still held at the regulator with no deployment, code range or address database on file. His own framing is that without the handover the work done has not had the expected impact.	STALLED

COUNTRY	DEVELOPMENTS	PROGRESS
Cote d'Ivoire	A digital post box became compulsory from 1 March 2026 for all individuals and businesses with postal addresses, tied to the identification number. 2026-01-20 - the digital post box was made obligatory from 1 March 2026 for all individuals and businesses with postal addresses and tied to the identification number, at annual fees from FCFA 2,000 for an individual to 50,000 for a large business. No count of boxes assigned is published and no account of enforcement after the March deadline is on file. A compulsory paid credential with no published take-up, no exemption regime and no stated legal instrument behind the obligation is the shape of the evidence here; it is also the nearest thing the country has to an address register.	MOVEMENT
Djibouti	A national locality directory with resident counts was published in November 2025; no civic address register exists. 2025-11-18 - the statistics institute published a directory of localities and resident populations from the third census, covering every region, commune, district, quarter, village and hamlet - a georeferenced locality reference rather than a street-address register. 2026-01 - a territorial portal was launched combining the census demographic data with national boundary layers. The addressing service a resident can actually use is commercial and postal: a three-word geocoding grid offered by the post office. No addressing law, no naming authority and no register of addresses appears on file.	MOVEMENT
DR Congo	There is no national address register: a postal-code directory was launched in 2021-22, a utility database of over 800,000 households was shared with the capital in April 2026, and one commune began fixing numbered plates with codes. The postal operator set up an addressing plan and launched a postal-code directory during a period it dates 2021 to 2022, the article giving no more precise date than that window. 2026-04-24 - the capital city and the water utility signed a convention to share and mutualise the utility's database of over 800,000 households and dwellings for property, land and rental-income tax identification, brokered by the presidency's digital development agency — an operational utility database converted into a cross-institutional addressing asset, and a tax instrument before it is a civic one. 2026-07-31 - one commune of the capital began fixing parcel-numbering plates carrying a scannable code, stated purpose rapid address identification, traceability and administrative management, aiding emergency services and delivery. Three partial arrangements, one city. No national coverage figure exists because no national register does.	MOVEMENT
Egypt	Nearly 30 million property identification numbers have been issued under the unified real estate identifier database. 2025-06-17 - a law establishes a unified non-repeating national identifier database for all real estate - land, buildings and installations - built on a unified base map. It is the closest thing to a national address register the repository holds. 2025-12-18 - the platform's first phase carries more than 3,000 units in one new city, all issued unique real estate identification numbers. 2026-07-05 - nearly 30 million National Property Identification Numbers have been issued under the nationwide digital property inventory, each a permanent digital identifier linkable to utilities, municipalities and the tax authority. The lender that reports the count stresses that assigning one is not legal registration or proof of ownership, which continues to rest exclusively on the Real Estate Registry. 2025-09-06 - the statistics agency chaired a meeting on the law, reviewed the explanatory memorandum and the draft executive regulations it had itself prepared, and formed a subcommittee.	MOVEMENT
Equatorial Guinea	No street coding exists: the responsible minister told parliament in March 2026 that its absence undermines the cadastre. The postal union's filed address format for the country carries no postcode field in any delivery mode, which is the formal position. The minister responsible put the practical one on the record: colonial-era plans and the absence of street coding undermine both the cadastre and the address system. No addressing programme has been announced against that statement.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Eritrea	Eritrea does not appear on the postal union's list of countries operating a postcode system (reference). The Universal Postal Union's addressing reference, dated August 2026, does not list Eritrea among the countries that require or use a postal-code system, establishing that no national postcode system exists (reference). The document does not itself state whether any other national addressing scheme operates, and the repository holds nothing else on the question — no street-naming programme, no digital addressing initiative and no geocoding of the population registers.	NO CHANGE
Eswatini	National addressing standards launched in July 2026 with two municipal pilots; no address register exists yet. The Eswatini National Addressing Standards, the ISO 19160 parts 1 and 2 domesticated as SZNS, launched on 20 July 2026 by the standards authority with the communications regulator and the ICT and housing ministries (launch). Mbabane is leading implementation of a national street addressing and house numbering programme, framed as a smart-city initiative to make deliveries, emergency response and navigation work (Mbabane), and Ezulwini is among the pilot municipalities (Ezulwini). 2026-09 - Matsapha became the first municipality to roll out addresses under the national project. No address register, count of addressed properties or national coverage figure is held.	MOVEMENT
Ethiopia	Nationwide expansion of the digital address system to all urban centres was named a priority (report). The Space Science and Geospatial Institute stated that Digital Ethiopia 2030 makes nationwide expansion of the national digital address system to all urban centres a named priority (report). The institute's mandate to build and administer geospatial data including a digital addressing system rests on the 2022 regulation establishing it (regulation). The repository holds a priority and a mandate, and no count of addresses assigned or urban centres covered.	MOVEMENT
Gambia	A national digital addressing steering committee was launched in October 2025, on a policy dating from 2023. No national coverage figure or rollout milestone has been published since (committee). The only measured addressing anywhere in the repository is municipal, which makes a national committee launched two years after its own policy the weaker half of the record.	MOVEMENT
Ghana	The national digital address system is live and its application added ride and delivery ordering keyed to an address in October 2025. The system is live and publicly reachable through its own application; the page carries no internal publication date, so the date is proxied to capture. 2025-10-15 - the application added ride and delivery ordering keyed to a digital address - the first third-party service on this ledger built on the address as an identifier rather than on the map. No address count, coverage figure, update cadence or public-sector use of the register appears anywhere on the repository, so what is established is that the register exists and is being built on, not how complete or how used it is. The one independent assessment on file is unfavourable: a peer-reviewed design-reality gap study, six years into implementation and finding no outward evidence that the announced goals had been met, sets out to judge the likelihood of success or failure and reads the rollout as a partial failure. It is held as abstract and front matter; its remedial measures did not extract.	MIXED the register is live and being built on while an independent evaluation reads its rollout as a partial failure
Guinea	There is no national address register: street addressing was dropped in all communes of the capital except three, reaching 3 municipalities against an original target of 6. The completion report is the most authoritative statement of the negative. It records the indicator for municipalities with street addressing in place and operational at 3 against an original target of 6 revised down to 3 during restructuring, and states plainly that street addressing activities were dropped in all communes of the capital except three, along with the parallel fiscal-register work. It also shows what the address file was for: the project unit worked with the tax directorate on the street addressing programme and local taxation, so the register was a tax-base instrument rather than a civic addressing utility. The document fixes the historical position rather than the current one. The successor work is procurement, not a register: a digital addressing tender opened in November 2025 with implementation expected mid-2026.	NO CHANGE a standing position the repository holds for the first time

COUNTRY	DEVELOPMENTS	PROGRESS
Guinea-Bissau	No addressing system, postcode scheme or street register appears in the repository for Guinea-Bissau. Nothing in the repository records a Guinean address register, a national addressing programme or a postcode scheme. The geographic reference work that is happening is agricultural and meteorological: eleven hydrometeorological stations sited across three southern regions and satellite growing-season monitoring produced by international agencies.	NO CHANGE
Kenya	A national addressing system has been in preparation by the communications regulator since 2016, reaching draft standards and a draft county addressing law in 2017. The framework sits under the regulator's numbering and addressing mandate, made under the Kenya Information and Communications (Numbering) Regulations 2010, and provides for the naming and numbering of streets and the numbering of buildings and land parcels so that a parcel or dwelling can be identified and located on the ground (system). The regulator's project page is the whole of the held record. It carries no coverage, timetable or completion figure, and nothing after May 2023 is held, so whether any street or parcel has been numbered under it is unestablished.	NO CHANGE
Lesotho	No state address register exists; a private nationwide platform launched in May 2026. 2026-10-12 — a World Bank urban and land team told the communications ministry it is interested in supporting a nationwide digital address system; no commitment or amount is stated. 2011-02-24 — the land regulations carry the allocation and identification registers, the closest operative instrument to an address register. 2026-05-08 — officials proposed a national spatial development infrastructure policy, stating that no spatial-data policy currently exists. 2026-05-22 — a private nationwide digital-address platform launched, filling the gap the officials had described a fortnight earlier. The addressing layer a state usually owns is in private hands here, and the repository holds no arrangement governing that.	MIXED a private platform where the state has none
Liberia	A national digital postal address rollout is stated as begun across all fifteen counties, with no completion date or addressing standard published. The statement was made at a technology summit in July 2026 (rollout). Digital addressing is one of the eight priority areas of the national digital strategy, and this is the only delivery statement against any of them.	MOVEMENT
Libya	National postal addressing is in phase one covering 42,000 buildings in one Tripoli district, and a digital address for every company was under discussion in June 2026. Phase one covers 42,000 buildings in Hay Al-Andalus, Tripoli, and was under way at the start of 2025 (phase one). No later count and no extension to other districts has been published, so the address layer that other systems would draw on does not yet exist beyond one district. 2026-06-15 - a second addressing project was put forward for businesses: the economy minister and the head of Libya Post discussed giving each company a unified digital postal address tied to its physical location and linked to the Commercial Registry and company registration systems. It was a discussion of launch mechanisms, with no timetable, coverage target or start date.	MOVEMENT a planned company address project only
Madagascar	Spatial data infrastructures are not yet implemented on the national geographic institute's own account, and no state address register exists. The institute's own status report states under its ninth item that spatial data infrastructures are not yet implemented, the most recent dated authoritative statement located on the country's addressing and geospatial register infrastructure (report). The only in-window addressing development is a community-built mobile layer whose publisher states it is not a government service and that its codes have no legal value (layer). No addressing standard, no state register and no mandate for one is held. The gap is a dated, searched absence rather than an unexamined one.	NO CHANGE
Malawi	The National Addressing System Project has had nothing published about it since February 2024, and the absence of any update is itself the finding. The regulator-coordinated programme would give every property a physical address, spanning a national postcode system, addressing standards, an address database, physical infrastructure and geographic information systems (project). No completion date and no delivery figure were given then, and nothing dated after February 2024 is held, so the position is carried forward rather than re-established.	STALLED

COUNTRY	DEVELOPMENTS	PROGRESS
Mali	Addressing is being built through the land system: a unique national cadastral identifier for every parcel, under the 2025 domains and cadastre decree. There is no standalone national address register, and the function is arriving through land administration. The decree of 2019 gives each parcel a unique national cadastral identification number, the tax administration was presented with the NINACAD-Adresse addressing application in January 2026, and systematic registration of parcels began in 2025 under the domains and cadastre decree gazetted in January 2026. A regional instrument would harmonise it: the union directive on property registration, still planned. No coverage figure for parcels or addresses is published. 2025-03-10 — a national addressing system was presented: NINACAD-Adresse gives each address a six-digit code across about 1,500,000 places in Bamako, Kati and Segou.	MOVEMENT
Mauritania	Terms of reference were issued in March 2025 for a geolocated addressing system to be implemented through the postal company, and nothing has followed on the record. The terms of reference were issued under the regional digital integration programme, presenting the system as favouring the development of commerce and electronic commerce in particular (terms). Eighteen months on, no award, supplier, coverage, address standard or delivery date is on the record, so what exists is a specification and not a register. 2026-09-29 - the national digital addressing system was presented for consultation under the World Bank-financed regional programme; no launch date is published. 2026-09-29 - the digital ministry presented the national addressing system, with a pilot version expected by the end of 2026.	NO CHANGE
Mauritius	No national address register exists; the national data strategy identifies addressing as a data gap. The strategy of January 2026 is the instrument that names the gap (strategy). The closest work on file is the verifiable-credential wallet's identity attributes, market-sounded in September 2025 (request). The island's postal addressing is not organised as a state register, and no addressing standard, register or mandate for one is held. The absence is dated and searched rather than unexamined.	NO CHANGE a searched absence the data strategy itself names
Morocco	From 9 December 2025 the identity card address is the sole legal domicile for judicial notices. Addressing is a communal competence under a 2017 decree and organic law 113-14, which sets the system but not its legal weight. That changed: from 9 December 2025 the address on the national identity card became the sole legal domicile for judicial notices, ending the proxy arrangement that preceded it. An address on a credential now carries legal consequence, which is a stronger position than a register alone.	MOVEMENT
Mozambique	A national postal address code was piloted at one district in 2020 against a five-year, US$33 million rollout, and nothing on it since is held. The regulator inaugurated a pilot covering 1,500 homes and other premises and more than 1,200 streets at Manhica in July 2020, with Chimoio in preparation and Matola, Beira, Quelimane, Nampula and Nacala to follow over five years (pilot). The regulator's feasibility study puts the cost of implementing the code at at least US$33 million, from state funds and cooperation partners (study). The repository holds nothing on the code after July 2020, so the five-year rollout would have run its course unobserved.	NO CHANGE
Namibia	No address register exists. The postal code system covers sorting and delivery only, and a national addressing system is named as a memorandum objective. The postal operator regrouped its codes from postal administrative regions into political regions, changing the numbering for some towns, and states that this phase covers postal sorting and delivery only and not administrative or geographic addressing, with a physical-address phase still to come (codes). The communications regulator's chief executive named development of a national addressing system as an objective of an April 2026 memorandum with the statistics agency on data sharing and spatial information management (memorandum); no specification, budget or date follows it. The National Digital Strategy launched in August 2025 is the enabling framework (strategy). An addressing system is named in a memorandum and absent from every instrument that could fund or mandate it.	NO CHANGE a postal code system that says it is not an address register

COUNTRY	DEVELOPMENTS	PROGRESS
Niger	The only addressing system on file is the Niamey geoportal run by the city modernisation agency; there is no national register. The city modernisation agency was created by decree in February 2021 and is responsible for Niamey's addressing geoportal, the only addressing system located in the country. Nothing in the window moves it, and the repository holds no national street or building address register, no coverage figure for a national scheme, and no instrument providing for one.	NO CHANGE
Nigeria	A national alphanumeric postcode has a launch date of 1 October 2026, and the addressing council ratified a framework replacing the 2017 policy. The postcode is explicitly property-level rather than cluster-level, with integration to existing government identity databases to follow; no lawful basis, custodian or data-protection arrangement for that integration is stated (postcode). The council, chaired by the Vice-President, ratified a preliminary framework naming the science ministry as secretariat and assigning individual verification to the identity commission, business address verification to the corporate registry, postcode administration to the postal service and implementation to states; it would replace a 2017 standard described as obsolete, focused on mail delivery and silent on business address verification (framework, standard). A state is separately piloting digital house-numbering (pilot). 2026-10-01 - the postal service launched the national digital postcode system, and the communications ministry opened its API to organisations that pass business verification. 2026-10-01 - the communications ministry described the postcode as an 11-character code for every addressable location, looked up at postcode.gov.ng. 2026-10-02 - the application was reported to show homeowners' names against postcodes and allow search by name, a day after launch; the postmaster-general said field teams recorded addresses as residents describe them.	MOVEMENT
Sao Tome and Principe	There is no enacted national address register; the postal base bill referring to a postcode system and an address database was submitted for debate and is not shown in force. The parliamentary gazette carries the government's postal base bill, which refers to a postal code system and an address database among the postal service obligations (bill). It is a bill submitted for debate, not an enacted law, and the record consulted does not show it in force (bill). Four years on, nothing records its passage. The absence bears on more than post: the property registry holds an estimated 162,000 property records (registry) with no national addressing scheme behind them.	NO CHANGE
Senegal	A national digital addressing project was relaunched at a workshop in August 2026, with no budget, lead implementing agency or pilot geography stated. The relaunch workshop opened on 5 August 2026 (relaunch). The government states the project made conceptual and technical progress in earlier years, and the repository holds no position for it before the relaunch — so what is being relaunched cannot be measured against what existed.	MOVEMENT
Seychelles	Cabinet approved implementation of a national addressing and postcode system on the S42 standard, and approved the enabling Bill in April 2026. The standard was adopted and a technical committee drafted the legal framework with the attorney-general's office (system). Cabinet approved the Seychelles National Addressing System Bill 2026 on 3 April 2026, establishing a National Addressing Department and a National Addressing Database Unit to govern it (Bill). Adopting the international standard before drafting the law is the right sequence for an addressing system whose value depends on conforming to something. The Bill is approved rather than enacted.	MOVEMENT
Sierra Leone	A national base map is in development, phase one covering Western Area Urban; the only addressing scheme in service is Freetown's use of Plus Codes. Phase one of the base map covers Western Area Urban District, built on OpenStreetMap with Japanese technical direction, with no cost, timetable, hosting arrangement or data licence stated (map); the innovation directorate announced the work in August 2026 (announcement). Freetown City Council's property reform uses Plus Codes for addressing (reform). There is no national address register. A base map is the layer under one, not the register itself, and the only operating scheme covers one city. The science and technology directorate partnered a commercial mapping provider on a standardised residential digital address system, beginning with police and fuel stations (partnership).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Somalia	No national address register and no instrument creating one. The land register and cadastre remain planned. Nothing on this repository names a national address system, a postcode scheme or a street-addressing programme for Somalia. The register that would carry addresses is itself prospective: the national land register and cadastre are planned, on a ministry strategy. The registers that do operate key to people and businesses rather than to places: the business register, the taxpayer register, the unified social registry, and civil registration at pilot stage. None of them records where a person lives in a form another system could use.	NO CHANGE
South Africa	A 2024 act puts a duty on the post office to build a national address database. Its commencement is still to be proclaimed. South Africa now has a statutory basis for a national address register and not yet an operative one. The post office amendment act of 2024 inserts a duty on the post office to implement a national address system and to develop and maintain a national address database — the clearest legal basis for such a register the repository has held. Whether it binds is the load-bearing question, and the government's own record answers it: the act's commencement is by presidential proclamation and its status is marked to be proclaimed. Nothing since records the proclamation being made, so the duty exists on the statute book and not in force. No address count or coverage figure is published.	MOVEMENT
South Sudan	*Not held*, searched 2026-09-06 - the statutory duty to establish addresses and postal codes has stood unused since 2012. The National Communication Act 2012 requires the Authority to establish a national postal system for addresses and postal codes (Act). No address register, postcode scheme or addressing project is recorded under it. Fourteen years of an unexercised statutory duty is the finding, and it bears on every service that would need to reach a household.	NO CHANGE
Sudan	An address register exists only as a statutory mandate on the regulator; no deployed national register was located. The regulator's own statement of its duties under the Telecommunications and Post (Organization) Act 2018 includes establishing a postal addressing system and managing and regulating it (mandate). That is the most authoritative reachable statement, and it establishes an obligation rather than a system. The Act's own text would not fetch, so the institutional page stands in for it. No addressing standard, coverage figure, or deployment record was found for any part of the country.	NO CHANGE
Tanzania	Twelve million housing addresses were registered alongside a continental postal certification, and a Zanzibar address programme has assigned more than 450,000 digital addresses. The repository holds that the population rate and the address count are not derivable from one another and must not be charted together (addresses, registration). The Zanzibar programme has been operational since June 2025 with more than 450,000 digital addresses assigned (zanzibar); twelve months with no update is itself the finding, and the first payoff was student finance (zanzibar). An addressing system whose first evidenced use is disbursing student loans is a useful thing to be able to say about what an address register is for.	MOVEMENT
Togo	A single window for infrastructure mapping and a national satellite-positioning correction network were launched together, and urban addressing in the capital began modernisation. The single window and the correction network were both launched at the capital in April 2026. No legal obligation to declare works, no user count and no data-governance or access terms are on file for the window (window), and no cost, operator, subscription model or availability figure for the correction network (network). Urban addressing modernisation in the capital began after updating the geographic address database of thirteen communes, with no completion date, address count, budget or operator, from a single source with no update since (addressing). A positioning correction network is the piece of national infrastructure that makes precise addressing and cadastral work possible, and it is recorded with no operator named.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Uganda	A geo-referenced postcode database was built for every parish and ward in 27 central districts, and an Entebbe pilot assigned standard addresses. The vote's own target was modest: the FY2025/26 policy statement treats the addressing and postcode database as an output under development, moving from a 10 per cent baseline to a 20 per cent target, on a denominator the statement does not define. 2026-01 - the following year's statement records the achievement: a geo-referenced postcode database for all parishes and wards in 27 districts of central Uganda. 2026-07 - the postal operator's Entebbe addressing pilot assigned standard addresses, with lessons to be documented before national expansion, alongside its shift toward parcels and last-mile delivery. No national coverage figure, address count or completion date is published, so what share of the country can be addressed is not something this repository can state.	MOVEMENT
Zambia	A national spatial data infrastructure policy and geoportal launched, over a 2017 regulation assigning the postcode and address database. A 2017 regulation under the postal services statute assigns the communications authority responsibility to regulate, allocate and manage postcodes and to maintain a national address database, and sets the technical postcode model. The legal duty has existed for nine years. 2026-06-16 — a national spatial data infrastructure policy and a national geoportal were launched, which government describes as ending fragmentation of address and geospatial data across agencies. A geoportal is not an address register, and the record does not say whether the postcode database the 2017 regulation requires was ever built — which is the question the launch implicitly answers by describing fragmentation.	MOVEMENT
Zimbabwe	No address register is held. A national addressing system was named in the 2016 ICT policy as a matter for a postal sector policy, and named again in 2026 as a topic for expansion. The 2016 national ICT policy names a national address system among the matters a postal sector policy would need to cover, alongside market structure, post office infrastructure and universal service (policy). Ten years later the regulator's call for chapters for a book on the postal sector lists expanding the national addressing system as a topic, framed around last-mile accessibility and rural inclusion (call). Between the two the repository holds nothing: no address register, no coverage figure, no implementing instrument, no operator and no postal sector policy. What both ends of the decade record is the same intention, restated.	NO CHANGE named in policy for a decade and never described

Business register

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The electronic commercial register recorded 173,651 new registrations against 125,195 struck off in 2025, and trade platforms went live. The register recorded 173,651 new registrations against 125,195 struck-off registrations in 2025, with business registration and stamp duties moved online in December 2025. 2026-03-18 - a national export-data platform went live, reported in French the same day, followed on 24 March by a national import-tracking system. 2026-08-01 - a services-import platform entered operation as the exclusive route for services-import applications, covering software and licences, cloud services, maintenance and engineering, consultancy and training, with no fallback or assisted channel stated. One producer register completed before the window: the National Chamber of Agriculture announced on 3 November 2024 that digitisation of the National Agricultural Registry was complete ahead of schedule, across all 58 wilayas. No registered-farmer count, dataset description or connection to other government systems is published, and the agricultural information system launched two years later still lists a farm register among modules to be deployed rather than live.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Angola	The one-stop company counter reached Huambo in June 2026, and parliament approved the beneficial ownership bill in May. The register itself is old and its reach is what moves. Company formation was simplified by the 2015 law, and the one-stop counter that implements it opened a new service at Huambo in June 2026. The larger change is what the register will have to hold. Parliament approved the beneficial ownership bill in May 2026, which adds a layer the company register has never carried. A separate decree of February 2026 provides a digital platform for industrial development poles. No count of registered companies is published at any date.	MOVEMENT
Benin	Business registration runs online as the formalisation route for the informal sector, with no registration total published; a regional credit bureau reports union-wide figures only. The business registration platform registers economic units online from desktop and mobile, as the formalisation route for the informal sector. The account held is a 2021 case study and carries no registration total; nothing later is on file, so the position is unchanged and unmeasured. 2026-08-13 — beside it, the regional credit information bureau operates across all eight union states with 321 data providers, about 48 million contracts and more than 20 million active borrowers, and at its first Cotonou data forum the finance ministry framed data quality as the route to cutting credit-approval turnaround to 48 hours. Those figures are the operator's own and union-wide: no Benin coverage, dispute or data-protection statement is held.	NO CHANGE
Botswana	The enterprise agency ran nationwide consultations to March-May 2026 and is lobbying for mandatory small-business registration; no database is in build. 2026-04-29 — nationwide consultations ran from March to May 2026 with the enterprise agency lobbying for mandatory registration of small and medium enterprises into a national database. It is proposed only: no instrument, no penalties intended and no database in build. Nothing else on this ledger touches business registration, so the country's record here is a consultation and an intention. The comparison worth making is with the taxi financing product reported under payment uptake, where formalisation is being achieved by a bank offering credit against a transaction history rather than by a register compelling registration.	MOVEMENT a proposal with no instrument behind it
Burkina Faso	A compulsory estate-agency register launched in July 2026, applied for and tracked wholly online with a queryable public register and commissions capped. 2026-07-21 — a compulsory national card for property brokers launched under an April 2026 interministerial order, applied for and tracked wholly online, with a legally recognised virtual card issued on validation, a register the public can query, and commissions capped. Before it, brokering private residential leases required no licence and no register. No count of cards issued or applications received is published, so the register's coverage of the trade is unknown a month after launch. It is the clearest example on this ledger of digitalisation used to formalise an informal trade, and it sits against a business census finding that 96.5% of the country's economic units operate informally.	MOVEMENT
Burundi	The commercial register is established in the 2015 code, and the historic manual stock is being converted onto a digital platform. Title V of the commercial code establishes the registre de commerce et des societes and the tax identification register and names the holding agency — the statutory basis, in force since 2015. 2026-06 — the development agency extended the deadline for persons and companies registered before the digital platform to re-register on it. That operation is what converts a historic paper stock into a digital register, and an extension is what happens when it is going slowly; no count of firms re-registered, no total on the old register and no closing date for the manual one is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cameroon	The commercial register's computerisation covers 30 sites, equipped and trained by April 2024 and awaiting handover to the State; tax registration moved to a new application mandatory from 1 July 2026. 2024-04-02 - a quadripartite review recorded that the programme financed by a French development agency had acquired equipment for all 30 sites, court registries and training centres, carried out electrical and network works and standards upgrades, and trained administrators and users on the register management software, with the remaining sites to be finished in the following weeks ahead of official handover to the State. No handover, register size or filing volume is recorded since. Registration of businesses for tax purposes changed hands in 2026: a finance ministry communique of 10 April 2026 announced a new registration application replacing the previous platform, the old one closing on 30 June 2026, the new one mandatory from 1 July 2026, a registration fee of FCFA 1,000, and existing taxpayers given until 31 December 2026 to re-register. The one volume figure the repository holds for business registration is external: more than 25,000 small and medium enterprises registered through an international agency's platform.	MOVEMENT
Cape Verde	A company-lifecycle platform entered beta with a pilot user group in March 2026. 2026-03-20 - a beta platform for online company-lifecycle procedures was presented at a socialisation ceremony in Mindelo, developed by a private supplier with the registry and notary directorate and resting on interoperability between public systems. No user count, cost or full-launch date is published, and the developer rather than the state describes the interoperability design - which matters because the standards instrument that would govern it was announced for 2024 and never adopted.	MOVEMENT
Central African Republic	The single-window agency states complete digitalisation of registration procedures and opened a third territorial branch. The agency's own history states a 2025 milestone of complete digitalisation of business-registration procedures, including online pre-registration and electronic handling. 2026-02-02 - it opened a third territorial branch, after the capital and one other town, extending on-the-spot company registration, modification and dissolution beyond the capital. Both accounts are the agency's own. No registration volume, processing time, register size or online-versus-counter split is published, so what is established is that the procedure is digital and the counters are spreading, not what either delivers.	MOVEMENT
Chad	The business register was computerised in February 2020; the one-stop shop's creation fees became payable by mobile money under a September 2026 convention. The regional business-law organisation handed Chad the integrated local-registers and national-file software and equipment for four local sites and the national file on 28 February 2020, World Bank-financed (handover). A technical workshop on 18 February 2026 validated the digitalisation of the one-stop shop for company creation, explicitly a review rather than a deployment (workshop). In August 2026 the commerce ministry restated what the register does not confer: registration alone never authorises a regulated activity, and naming an activity in the statutes or the extract does not replace a licence (communique). 2026-09-18 - the investment agency signed a convention with a mobile-money operator to take company-creation and formalisation fees at the one-stop shop electronically, adding a payment rail to the online platform it describes as set up. No fee schedule, launch date or count of companies formed online is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Comoros	The investment agency is deploying the operational phase of a platform to move business creation online, targeting full operation by end-2026. The standing register is a public online business directory, filterable by island, sector, year, registration number and city; its results render in the browser, so no total record count or last-update date is visible on it. 2026-06 - the agency, with a United Nations trade experts' mission and the economy minister, discussed deploying the operational phase of a European Union-financed platform to move business-creation and investment procedures online, adding artificial-intelligence features to simplify the user path; the minister stated an objective of a fully operational system by the end of 2026. The agency's own post is the only account of the platform in the repository, and no procurement, supplier or budget is named. 2026-09-16 — the government's secretary-general described the window for foreign and diaspora investors, run by the diaspora commissariat with the investment agency, as centralising administrative, tax and legal formalities and allowing company formation at a distance. No user, file or turnaround figure accompanies it.	MOVEMENT
Congo	An online company creation platform launched in December 2025 and the agency published a 2025 statistical bulletin. The company creation agency stands on statutes approved by decree in 2017. 2025-12-05 — an online company creation platform was launched. 2026-04-01 — the agency published its annual statistical bulletin on company formalities for 2025. A register that publishes its own throughput is rare on this repository.	MOVEMENT
Cote d'Ivoire	The register runs on a three-tier file structure with electronic filing carrying the force of paper and recorded 26,948 creations in 2025. The register runs on the regional uniform act's local, national and regional file structure. A 2021 decree designated the commercial court as the national file, obliging every jurisdiction to transmit its files in paper and digital form and the national file to transmit onward to the regional file; electronic filing and transmission carry the same legal force as paper, applications run through two online portals, and issued acts carry a QR code for verification. 2026-02-19 - the investment promotion centre published the year's throughput: 26,948 enterprises created in 2025, up 6% on 2024, alongside 154 approved investment projects and FCFA 5,108bn of stated investment intentions. 2026-04-17 - the trade ministry validated the business-process designs for a single window intended to centralise internal-trade and industry services and take administrative acts off paper; no launch date, service list or cost is published for it.	MOVEMENT
Djibouti	An online company creation platform was launched by the Prime Minister on 26 January 2026, completing formation without attendance. The platform did not exist at the window's opening. 2026-01-26 - it was launched by the Prime Minister and is in service, with company formation completed without attendance. No registration count through the platform is published. The company-creation and survival figures that accompany the announcement are the investment agency's own study and cover the one-stop counter rather than the platform, so nothing on file measures what the online route has actually done. The register behind that platform is described by its own registrar: a statutory register of the natural and legal persons carrying on commerce, accepting civil companies, professional civil companies, and participation companies which are expressly not registered and have no legal personality. No record count, filing volume or statement of whether the historic stock is digitised appears anywhere in the repository.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
DR Congo	A single-window portal and application now issue sole-trader attestations in under 48 hours, but full online company creation is not possible. 2026-07-28 - a ministerial inspection presented a portal that proposes a legal form and tracks a file in real time and an application that issues sole-trader attestations in under 48 hours, while full online company creation remains impossible, the chain still spanning the revenue directorate, a collecting bank, the notariat and verification. The 48-hour figure describes the attestation segment, not the registration process. 2026-08-07 - a financial-sector package announced a modernised credit-risk registry and an electronic movable-collateral registry to be built with the central bank, with no instrument, custodian, timetable or access rule stated, and no data-protection provision reported for the credit file. 2026-09-07 - a second registry-shaped system was announced on the certification side: the standards control office plans a national QR-code system letting consumers scan a product, medicines included, to verify its certification status, with checks stated as opening within weeks and resting on 88 laboratories across 29 sites. No launch date, register, cost or enforcement route is published. 2026-09-25 - the President gave the government three months to define a single identifier for businesses recognised across administrations.	MOVEMENT
Egypt	A single investment window offers 460 licences from 41 issuing bodies, and a state-companies platform is being built. The repository carries no position on either at the window's opening. The investment platform is a single electronic window offering 460 licences, approvals and permits from 41 government issuing bodies, with electronic fee payment, real-time tracking and licences issued within 20 working days where documents are complete; no count of licences actually issued through it, and no measurement of the 20-day undertaking, is held. A platform to enumerate and classify every company the state owns or holds a stake in is under protocol for hosting, secure storage and compute for its artificial-intelligence applications, which analyse and monitor the financial and operating performance of the state's corporate portfolio; no value, term, data-governance instrument, company count or launch date is disclosed, and the host is a listed company in which the state is the dominant shareholder. An economic entities platform is announced as a single gateway for establishing companies and obtaining approvals electronically, with no build stage, launch date, budget or governing instrument stated. 2026-09-22 - the investment ministry described a capital-increase platform linking eight government bodies, from the investment authority to the commercial registry, with digital-identity log-in and remote signing; no transaction count is given.	MOVEMENT
Equatorial Guinea	The single window reached two provincial capitals during 2025, and chamber registration is now a condition of state payment. The founding decree folds the notary step, the tax identification number and the treasury into one digitised deed, which remains the country's clearest working data exchange. It is spreading and hardening: extended to the provincial capitals of two mainland provinces during 2025, and from 1 January 2026 registration with the chambers of commerce is required before any state contract or payment. A single annual trade licence system opened training in February with a 40 per cent tax cut pitched at informal traders.	MOVEMENT
Eritrea	The statutory business register is still operated manually, with no registration website and clearance through six offices (assessment). An investment climate assessment records that Eritrea has no business-registration website and requires manual registration and clearance through six government offices (assessment). The register itself is statutory: a 2002 proclamation requires the trade ministry to establish and maintain a business information register covering trade, manufacturing, services, fisheries and commercial farming, specifying the fields collected, annual reporting obligations, penalties and judicial review (proclamation). A register that exists in law and on paper is a different thing from a digital one, and nothing on the repository records the register being computerised or published.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Eswatini	Company registration runs online with incorporation in a day, and a Bill to replace the 2009 Act and digitise registration is between the two Houses. Company name search and reservation run online with incorporation in a day (procedure), and a one-stop shop for investors opened in July 2025 offering a trading licence and a taxpayer number in one place. The Companies Bill of 2024, which would replace the Companies Act of 2009 and digitise company registration, passed the House of Assembly on 18 September 2025 (passage) and the Senate moved on 5 March 2026 to take it at the stage it had reached (order paper). The Bill is not assented or commenced, so the register still runs under a statute of 2009 (Act). No count of registered companies, or of registrations completed online, is published at any date. 2026-09-24 - the commerce ministry said online company registration was unavailable in the data centre incident, directing applicants to the registrar's offices.	MOVEMENT
Ethiopia	First-time central bank account numbers are now issued to new traders through the customs single window, removing a separate registration step (service). The central bank and the customs commission introduced a digital service issuing first-time account numbers to newly licensed importers and exporters directly through the customs electronic single window, removing a separate registration step and tightening interoperability of trade registration data (service). The founding instrument is the 2016 Commercial Registration and Business Licensing Proclamation, which establishes the nationwide central commercial register and trade name register and is carried as in force in the justice ministry's law catalogue (proclamation). The repository holds no count of registered businesses and no measure of how much of the register is digital.	MOVEMENT
Gabon	A single file of state participations was reported established in January 2026 to centralise data on the state's shareholdings. It was stated established at the ministerial session of 13 January 2026 (ministerial session). The account is a single secondary one, and no register, scope, publication or operator is held, so nothing establishes what it contains or who keeps it. The repository holds no commercial business register at all. 2026-09-17 — the social security fund launched e.CNSS, letting employers register online from Gabon or abroad instead of at a counter. No registration count or link to the business register is stated.	MOVEMENT
Gambia	A digital single-window business registration system is being finalised, with more than 350 agricultural enterprises digitally mapped. The trade minister stated on 4 August 2026 that the system is being finalised, inside a programme reaching more than 4,050 firms (registration system); no launch date is published (registration system). The mapped enterprises are a sector programme's output rather than the register's, so what exists is a mapping exercise and a system said to be near completion. 2026-09-04 - the portal itself is now held: a single-window registry on the government domain offering user accounts and sole-proprietorship registration, business licensing and trading permits.	MOVEMENT
Ghana	A business registration platform is in pilot for end-to-end filing with no physical submission, integrating with national identification. It covers name search to certification, and a companion beneficial-ownership verification service pilots with banks on a subscription basis (platform). Launch is given only as the coming months, and no registration volume, processing time or fee is published, so the pilot's scale is unmeasured. What it replaces is a service catalogue rather than a paper office: the registrar publishes name search and reservation, business-name and company registration, amendments, professional bodies, mergers and divisions, annual returns and liquidation under the Companies Act 2019, with no end-to-end online filing route stated.	MOVEMENT
Guinea	The movable-collateral electronic registry has software built and none of the institutional, legal or regulatory provisions it needs. A rescue consultancy was tendered under the donor programme in July 2026, opening on the 27th and closing on 17 August (rescue tender). Its security posture and user base are also not in place, so a system that exists as code has no legal effect, which is the clearest instance in this ledger of a build running ahead of its statute.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Guinea-Bissau	743 new companies were registered in 2025, up 24 per cent, with formation taking about five hours. The registry's own director general gives the figures: 743 new companies in 2025 against 598 in 2024, with company formation now taking about five hours. It is the one Guinean register in the repository publishing a throughput series and a service-time claim. On the tax side, the tax identification number has been issued solely through the payment platform since December 2025.	MOVEMENT
Kenya	A one-stop registration service carries the companies, collateral and hire-purchase registries with name reservation and registration merged into one online step. It was signed in August 2026 between the chamber of commerce and the council of governors, with a national digitisation strategy called for to track growth, output and employment (memorandum). No budget, milestone or data-governance arrangement for the pooled enterprise data is stated, which matters because the pooling would cross all 47 county jurisdictions. The service carries the companies registry, the official receiver in insolvency, the movable property security rights collateral registry and the hire purchase registry, with name reservation and business registration merged into one online application taking three preferred names. No registration volume, processing time or register size is published on it.	MOVEMENT
Lesotho	A single window is in development at the one-stop business facilitation centre, and registration fees were waived for small firms. 2011-09-02 — the Companies Act establishes the Registrar of Companies and the incorporation regime. 2025-11-20 — a competitiveness project confirms a business facilitation single window to simplify registration and licensing. 2026-05-07 — the Senate backed a registration and licensing fee waiver for micro, small and medium enterprises, already yielding new registrations. No count of registered companies, and no processing time, is published.	MOVEMENT
Liberia	An enhanced collateral registry launched, extended to immovable property (notice). The central bank launched an enhanced collateral registry on 27 August 2026 under an amended secured transactions regulation, extending it to immovable property (notice) and presenting it as a way to curb duplicate claims and expand business credit (report). The bank's own account adds the delivery figures for the credit reference system modernisation behind it (release). It forms part of a wider financial-sector reform (registry). No registration volume or relationship to the land registry is stated, which matters because extending a movable-assets registry to immovable property crosses into the land registry's own subject. 2026-09-04 - the registry got users rather than only a regulation: the central bank and the banking institute trained 35 lenders on it, registration of security interests being mandatory, and named planned links to the national identity, land and traffic registries. The links are stated as planned with no technical route, agreement or date, and no registration count is published. The central bank's credit reference system answered 470 credit-check letters covering 14,957 borrower names in 2025, up 2.3 per cent on 2024; the 2024 count was 501 letters. 2026-09-16 — a licensed private credit bureau sued the central bank over withheld loan data.	MOVEMENT
Libya	A Unified Economic Number was authorised in July 2026, the chambers of commerce system went live in March, and the one-stop shop is again promised. Decision No. 348 of 2026 authorised implementation of a Unified Economic Number with a national council constituted for it, and no timetable, budget or legal basis for the data linkage is stated (decision). The Unified Digital System for Chambers of Commerce went live on 1 March 2026 with digital certificates of origin, chamber registration and a verification channel for customs (system). Reactivation of the One-Stop Shop for company registration under Law No. 23 of 2010 was agreed in February 2026, against a record of repeated past failures to reform registration and nothing yet delivered (reactivation). The health ministry's registration portal has registered 131 local and 53 foreign pharmaceutical companies and is being extended to the products themselves, confining attendance at the ministry to the final stage and licence collection (portal) - a sectoral register rather than the general one. 2026-09-15 — trade registration was made compulsory: importers, exporters and foreign suppliers must register on the unified digital trade system for a certificate and electronic identification number, biting from January 2027 for businesses trading US$1m a year or more.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Madagascar	The online business registration platform reached two more regions in the window as the investment board decentralised. A decree of November 2024 established the platform, administered exclusively by the investment board with interoperability across the courts, tax and statistical registers, and preserved the paper procedure in regions where it is not deployed (decree). A regional antenna opened at Manakara in May 2026, the platform having been live there since July 2025, coordinating registration between the tribunal, the statistics office, the tax administration and the board (antenna). A further antenna opened in the Sava region in July 2026, allowing local operators to register a company without travelling to the capital (antenna). No registration volume through the platform is held. 2026-09-15 — the first 124 cooperatives received biometric cards under a national cooperative census.	MOVEMENT
Malawi	A new registration centre launched in June 2026, replacing the Registrar General's department and extending online processing. The statutory basis is the Business Registration Act, which establishes the business registration database and the office of the Registrar of Businesses. 2026-01 - the pre-transition reform report puts 2025 revenue at 10 billion kwacha, largely from business registrations, with archiving and digitalisation under way. 2026-06 - the Companies, Registrations and Intellectual Property Centre was formally launched, replacing the department and extending online processing on the registration system to stamp and estate duty. Revenue is the only number on the record. No count of registered businesses, no processing time and no online share is published at either end of the window, so what the reorganisation changed for a person registering a company is not knowable from the repository.	MOVEMENT
Mali	A single window for business creation has existed by decree since 2008; the investment agency's quarterly newsletter is the newest account of its work. Decree n. 08-276/P-RM of 13 May 2008 fixes the administrative formalities for creating a business through a single window (decree). No registration volume, processing time or online channel is published, so the single window exists in law and its performance is unmeasured (newsletter).	NO CHANGE
Mauritania	Law 2021-005 amends the Commercial Code and carries the trade register and the movable securities regime; nothing states whether either runs electronically. The law of 10 February 2021 amends, completes and repeals provisions of the Commercial Code of 2000 (law). An investment code of February 2025 and its application decree of August 2025 carry a single-window arrangement for investors (code, decree), and no operating single window, service list, processing time or investor count is on the record. Nothing says how many entries either register holds.	NO CHANGE
Mauritius	The register runs under the 2006 Act and feeds quarterly enterprise statistics. The Business Registration Act has been in force since October 2006 (Act). The register feeds quarterly enterprise-dynamics statistics, published for the second quarter of 2026 in July (statistics). The economic and financial measures bill debated in July 2026 touches its statutory base (debate). No registration volume, processing time or online-share figure for the register itself is held. Incorporation, annual returns, trade-fee payment, free search and structured financial-statement filing all run through the registry's own portal (portal).	NO CHANGE
Morocco	109,644 enterprises on the register in 2025, up 14.6 per cent, with 42,905 new registrations to May 2026. The register was founded by the 1996 commercial code and given electronic filing by law 88-17. Its throughput is published and rising: 109,644 enterprises in 2025, up 14.6 per cent, with the country climbing to 57th in the global innovation index, and 42,905 new registrations in the first five months of 2026 with legal persons rising to 75 per cent of the total. Company creation moved online through DirectEntreprise, piloted in Rabat in February 2023 and nationwide from March 2025 with over 12,000 firms created; by May 2026 it had passed 50,300 online creations, 44 per cent of the year's new companies, on the office's own figures.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mozambique	74 per cent of legal-entity registrations were submitted electronically by June 2026, on the justice minister's figure. The share was stated by the minister at an international legal forum, with no published series behind it (share). No absolute registration count, processing time or rejection rate is held. A three-quarters electronic share with no denominator is the shape of most of this unit's administrative evidence.	MOVEMENT
Namibia	A Corporate Laws Bill at third draft would require every company to keep a beneficial-owner register in Namibia, above existing online registration services. The draft consolidates and re-enacts the Companies Act with the business and intellectual property authority as registrar, and its clause 114 would require every company, and every external company establishing a place of business in the country, to keep a register of beneficial owners recording each owner's name, date of birth, identity-document number and residential, business, email and postal addresses; company process is routed through the electronic transactions statute (bill). Online name search, name reservation and application-status verification are already offered, with no transaction or uptake figure published (services). 2026-08 - a N$250.5 million bond was converted into an electronic record in the central securities depository, the first listed corporate bond to be held there in electronic form only.	MOVEMENT
Niger	Business formalities are moved online for completion through a single window, on a register held at the commercial court. The commerce minister stated on 30 June 2026 that business-formality procedures are being moved online so investors can complete them through a single window, alongside investment-code and small-business charter measures; the statement names no technical milestone. The register's legal basis is the 2019 commercial courts law, whose article 15 establishes the commercial and movable credit register at the commercial court, makes the Niamey register serve as the national file pending offices elsewhere, and provides for electronic documents and electronic dissemination of registry information. No count of registered businesses, and no public search interface, is on file. The 2022 enterprise census counted 169,228 economic units, of which 97.6 per cent informal and 94.1 per cent holding no tax identification number (analysis, notice). It is the clearest measure held of how far the business and tax registers reach the economy.	MOVEMENT
Nigeria	A beneficial ownership register launched in 2023 is in use by enforcement agencies, alongside a national electronic assets register live since March 2025. The electronic assets register went live in March 2025; no asset count, agency coverage or update cycle is published. The beneficial ownership register, launched in 2023, is open to government institutions, civil society, journalists and citizens, and regulatory and enforcement agencies are using it for transparency, enforcement and asset recovery; it is named as contributing to Nigeria's exit from the Financial Action Task Force grey list. Compliance by legacy companies and digitisation of the corporate registry's records remain outstanding. Business registration itself reaches the repository only through the centralised service gateway that offers it as one of several services. 2026-09 - the registry announced AI across registration with Google, in five languages, with no contract or date published. 2026-09-15 — beneficial ownership is recorded three times over: the registrar-general called for the three separate registers to be harmonised and centralised. No instrument, owner or date for doing so is stated.	MOVEMENT
Rwanda	The registrar's own page states that registration is wholly online and free of charge, with incorporation completed within six working hours. Registration moved fully online in January 2026 on a market-expansion report's account, which puts incorporation at 24 to 72 hours at a cost among the continent's lowest (platform). The Office of the Registrar General's own page states the process is wholly online, free of charge, and completed within six working hours on delivery of a certificate of incorporation (registrar). The page carries no date of its own, so which of the two processing times is current cannot be settled from what the repository holds. No registration volume is published, so what the move changed for the stock of registered businesses is not measurable from the repository.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sao Tome and Principe	The company one-stop window performs formation, alteration, dissolution and branch filings and requires the taxpayer identifier throughout, over a modernisation diagnostic completed in 2025. The directorate's page sets out the acts performed - company formation, alteration of the articles, dissolution, branch registration and sole-trader registration - and shows the taxpayer identifier in operational use: the taxpayer card is required of the applicant, the identifier of shareholders, foreign non-resident partners and companies, and a negative certificate of tax debt is required to dissolve (window). A legal and technical diagnostic toward a modern, data-oriented registry was presented by a lender mission in September 2025, with the directorate and the identity institute flagging the need for offline access given electricity and internet limits (diagnostic). The window is operating and the modernisation is a diagnostic. No registration count, turnaround figure or online filing route is published.	MOVEMENT
Senegal	A business registration platform launched in February 2025 for the enterprise and association identification number, and eighteen months have passed with no update. The platform launched in February 2025 (platform). Eighteen months with no update in the repository means the object may have moved without the repository holding it, which is a limit on this reading rather than a finding about the platform.	NO CHANGE
Seychelles	The President toured the registrar general office, praised its digitalisation and announced unspecified legislative reforms. The tour was in February 2025 and the reforms were not specified (tour). Nothing has entered the repository since. A business one-stop portal was separately launched in pilot with a full rollout targeted for June 2026, and no source connects it to the registry. Business registration is now online, the form capturing entity details, addresses, partners, supporting documents and share capital (form) — against a public search interface whose own footer is unchanged since June 2012 (search).	MOVEMENT
Sierra Leone	A Companies and Business Registration Bill 2026 is drafted, following a budget proposal to launch 24-hour registration. The draft bill was published by the National Investment Board in March 2026 (bill). The board proposed a Le 22 million budget in October 2025 to drive investment and launch 24-hour business registration (budget); its own statutory basis is the National Investment Board Act 2022 (Act). No registration figure, no current turnaround time and no parliamentary stage for the bill is held, so the 24-hour claim has nothing to be measured against.	MOVEMENT
Somalia	The registration system expanded into second-tier cities and rural areas, and women's share of registrations rose from 21 to 31 per cent between 2024 and 2025. The founding instrument is the 2021 company law regulations, which established the registrar's office, the general register, online registration, a fee schedule and an industrial classification code (regulations). Expansion into second-tier cities and rural areas under a financial-services project raised women's share of business and identity registrations from 21 per cent in 2024 to 31 per cent in 2025 (feature). A statistical business register drawn from the 2024 establishment census was published in January 2026, recording 174,149 establishments (booklet).	MOVEMENT
South Africa	A simplified beneficial-ownership declaration processed more than 23,000 filings in three weeks, a partnership register was operationalised, and a bill would add deregistration for non-filing. 2025-08-22 — a simplified online beneficial-ownership declaration entered service, with more than 23,000 declarations processed by the notice date three weeks later, against the companies commission's own annual reporting. 2026-05-20 — the revenue service operationalised a structured partnership beneficial-owner register and filing workflow, generating persistent partnership and partner reference numbers for later validation and pre-population. Two beneficial-ownership registers now run in parallel and no source states whether they reconcile. 2026-05-27 — a bill was published requiring reporting of material beneficial-ownership discrepancies, deregistration after prolonged failure to file required registers, and tribunal review of administrative fines. It is the enforcement half of the two registers and it is not enacted. 2026-09-29 - the companies commission launched a disclosure module giving law enforcement real-time access to ownership information.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
South Sudan	An online Business Registration Service automates company registration on the single government account, against a statutory register created in 2012. The Companies Act 2012 establishes the register and the office of Registrar (Act). The Ministry of Justice and Constitutional Affairs runs a Business Registration Service that automates what were manual processes and offers a free route to validate a company's ownership record; it is reached through the single eServices.gov.ss account rather than a registry site of its own (service, account). No registration count, search interface or turnaround figure is published, so the register can be filed into and not read out of.	MOVEMENT
Sudan	The register runs on a database built from 2003, and all administrative work in Port Sudan including trademarks was suspended in December 2025. Company registration was added to the national e-government platform in October 2026. The justice ministry's description of the commercial registrations department records its divisions, a computerised company database built from 2003, and 13 state branch offices; it still cites the 1925 Companies Act rather than the 2015 Act (description). The registrar suspended all administrative work in Port Sudan, including the trademark office, from 14 December 2025 as part of moving institutions back to Khartoum, with no resumption date given (suspension). In April 2026 the justice and communications ministries agreed to activate a digital-transformation partnership with the registrar present (partnership). 2026-10-01 - company commercial registration was added to the national e-government platform.	MOVEMENT online registration added after the December 2025 suspension
Tanzania	The electronic government agency gave a registered-society count for a cooperative management system at an agricultural exhibition. No spend, timeline or denominator is given, so the count stands unbenchmarked (system). A registry count with no denominator cannot show coverage, and the exhibition at which it was given is the same venue at which the crop payment figures and the university prototypes were presented.	MOVEMENT
Togo	Registrations rose to 8,129 in the first half of 2026, the first rise after two annual declines. The register itself rests on loi n 2016-034 of 2 December 2016, which creates a national file at the Lome court of appeal and local files at six towns, sets the registrars' duties and provides for transmission to the regional file. Annual throughput fell in 2025 to 14,202 on the government's figure, down 4.8 per cent on 14,919 in 2024 — though the formalities centre's own bilan gives 14,172 for the same year, and the two figures have not been reconciled publicly. The first half of 2026 recorded 8,129 registrations, up about 5 per cent on the 7,747 of the same half of 2025. Registers of professional families across five crop value chains are being built or refreshed, with membership criteria reopened at a ministry workshop on 9 February 2026 (workshop).	MOVEMENT
Tunisia	Paper filing at the national business register was discontinued from 1 July 2026 under a February decree, and a register of community companies launched in July. Paper filing ended on 1 July 2026 under the finance minister's decree of 12 February (register). That is the same date the mobile identity credential became compulsory for business registration, so the paper channel closed and the digital credential became mandatory together. A national register of community companies launched on 20 July 2026 under a 2025 decree-law (community). 2026-09-21 - the register became a full member of the European Business Registry Association, the first African registry to join.	MOVEMENT
Uganda	A non-individual register launched in May 2026 as the corporate counterpart to the national identity number, with no registered-entity count published. It launched in May 2026 (register). Giving legal persons an identifier matching the one natural persons hold is the design that lets the two be joined, and no source states whether they are.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Zambia	9,163 companies were registered between January and May 2026, and a project began rebuilding the register in house. The registration agency reported 9,163 companies incorporated between January and May 2026, against 8,551 in the same months of 2025, a rise of 7 per cent. 2025-12-30 — an amendment Act strengthened beneficial-ownership disclosure, verification and periodic review obligations on the register of companies and the register of beneficial owners. 2026-03 — a multi-year project was launched with the registration agency and a donor funder to build a next-generation, in-house business and beneficial ownership registration system. In-house is the operative word: a register rebuilt by its own agency rather than licensed from a vendor is a different long-run proposition, and no cost, timetable or go-live date is published for it.	MOVEMENT
Zimbabwe	The deadline for re-registering onto the electronic registry was moved out two years in April 2026, from 20 April 2026 to 20 April 2028. The Companies and Other Business Entities Act constitutes the registration office under a chief registrar and defines the electronic registry and electronic records the register runs on (Act). Statutory Instrument 108 of 2025 set 20 April 2026 as the deadline for companies and private business corporations registered before the electronic registry to re-register, with automatic deregistration and removal from the register for those that did not (regulations). Three days before it fell due, Statutory Instrument 76 of 2026 deleted that date and substituted 20 April 2028 (amendment). No count of entities re-registered, or still to re-register, is published at either date. Separately, of 204,798 establishments surveyed, more than 76 per cent were found operating informally (establishments).	STALLED

Social protection register

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	A unified portal taking solidarity-allowance enrolment and the digital disability card entered pilot in two communes to 31 March 2026. The repository held no account of a social protection register at the window's opening. 2026-03-12 - the solidarity minister and the High Commissioner for Digitalisation inspected pilot testing of a unified portal carrying electronic enrolment for the lump-sum solidarity allowance and the national digital card for persons with specific needs, the pilot running in the communes of Dar El Beida and Hussein Dey until 31 March 2026. The pilot covered verification of the information system, service accessibility, database integration and interconnectivity, so the register is being built as a connected system rather than a standalone list. The ministry reports high citizen engagement and publishes no enrolment count, national rollout date or service list, which leaves the size of the register it is assembling unstated. 2026-09-06 - the social card's working group reached its fifth session, setting the card's indicators and data and building towards a unified database, with the President's June 2026 three-month deadline putting delivery before the end of September. The deadline is the President's; no delivery, data-sharing instrument, beneficiary count or governing decree is published.	MOVEMENT
Angola	A single social register launched in the capital in July 2026 as the centralised targeting database, with no governing instrument stated. 2026-07-25 — a single national social registry launched to map vulnerable households and act as the centralised database directing social supports, replacing a position in which social-transfer targeting rested on one programme's own registry. No enrolment target, data-protection basis, interoperability plan or governing instrument was stated at launch. That is the whole of the record: a database of the country's poorest households, built to direct payments to them, with nothing published about who may read it, how long it holds what it holds, or which other system it connects to. The transfer programme it now targets is reported under government-to-person payments, and reached about 6.5 million citizens.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Benin	A single social register was created in January 2026 to decide eligibility across programmes from one secured socio-economic database. 2026-01-21 — the Council of Ministers created an information system registering households and deciding eligibility across social-protection programmes, classifying them as non-poor, non-extreme poor and extreme poor and updated periodically, so that cash and in-kind transfers, health insurance, training, credit and pension schemes draw on one secured socio-economic database. The two social-protection programmes already running are named among its users. Nothing existed before it. No enrolment figure, no data-protection assessment, no retention rule and no appeal route against a poverty classification is published — and a classification that gates health insurance and credit is the most consequential automated decision on this ledger.	MOVEMENT
Botswana	The Single Social Registry reached 98 per cent coverage of beneficiaries in the five main programmes by March 2025, against a 75.8 per cent target. 2022 — a review dates the registry's development to 2016, a pilot in four districts across 2019 and 2020, and six districts uploaded by May 2021. 2025-10-07 — coverage of beneficiaries in the five main poverty-targeted programmes reached 98 per cent by March 2025 against a target of 75.8 per cent. 2025-11-11 — the registry's operationalisation was announced from the podium. No figure for people recorded, as against beneficiaries of existing programmes, is published.	MOVEMENT
Burkina Faso	The single social register holds 362,698 households and 2,217,518 people across 99 communes, with about fifty further communes prepared for 2026. 2026-01-06 — the register holds 362,698 households and 2,217,518 people, of whom 1,191,859 women, across 99 communes in ten regions, after extension to 24 new communes during 2025, with about fifty further communes prepared for 2026. It is stated to interoperate with the unique identifier to prevent duplicates. That is the largest population database on this ledger with published figures, and it is being built to interoperate with an identifier that has not yet been enrolled — so the de-duplication it promises is prospective. No data-protection basis, retention rule, appeal route or eligibility formula is published for it, and the supervisor that would examine those questions is mid-merger, reported under data protection.	MOVEMENT
Burundi	The unified social registry holds 249,671 households against a target of 290,000, across all 3,044 collines and quartiers. The unified social registry and its management system are the foundation of the national social protection system, reused by two named programmes. 2026-06-16 — the national social protection commission put the state of the registry on its own oversight agenda at its ninth annual general assembly, alongside the programme and the 2024-2033 national policy. 2026-06-30 — the modernised system is deployed in the government data centre and 249,671 households are recorded against a final target of 290,000, with coverage extending to all 3,044 collines and quartiers. It is the most completely reported register on this ledger: a count, a denominator, a target and a host. 2026-09-07 - the obligation behind any future register is now on the record: an ordinance of 7 February makes acquisition of the medical assistance card compulsory, a scheme dating from 1984 and reformed in 2012. No enrolment count, card format, register or digital component is described, so what the repository holds is the obligation and not a system. Beside it sits an obligation rather than a system: the carte d'assistance médicale was made compulsory by ordinance of 7 February. No enrolment count, card format or register is described.	MOVEMENT
Cameroon	The unified social registry stands where it was appraised in February 2022, with nothing on file since on what has been built. The registry is provided for under the adaptive safety nets and economic inclusion project, whose component on shock-responsive digital delivery systems - a social registry and a digital payments system - is appraised at US$5m equivalent, with safety nets estimated to reach 25% of the poor population, as set out at project identification. Nothing on file since appraisal reports what has been built. Later reporting on the registry is in the repository but is not citable, so the position stated here is four years old and older than the record.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Cape Verde	The single social registry now queries held data directly instead of taking paper declarations. The Cadastro Social Unico stopped requiring paper declarations in December 2025 and queries the data directly. Portaria Conjunta 16/2026 of 13 February 2026 extends it to the allocation of state housing, and in June 2026 the government called households in climate-vulnerable zones to register in it. It was created by Decreto Regulamentar 7/2018 and is run by the family and social inclusion ministry. 2026-02-05 - a World Bank restructuring paper recorded 16,036 additional households registered and the registry holding data on over 91,164 households, 64 per cent of the population, the coverage figure the UN country team repeated in September 2026.	MOVEMENT
Central African Republic	A safety-nets project finances the social registry and a second additional financing of US$50m was approved in May 2026. A closed project established a social registry and a fully digitised payment system as the foundations of a social-protection system, transferred to the responsible ministry. The registry's development is financed by a safety-nets project appraised in May 2024, and a second additional financing of US$50m, taking emergency support to US$150m, was approved on 28 May 2026, scaling emergency cash transfers. No registered-household figure, coverage rate or update cycle for the registry is published at any point.	MOVEMENT
Chad	The unified social registry carries 684,500 households, with a pastoral component of 37,449 across 13 provinces. The registry is described as a centralised, dynamic, spatially aware database interoperable with other systems, carrying 684,500 households under the adaptive social protection strategy for 2025-2030 (registry). Its pastoral component enumerated 37,449 households across 13 provinces and more than 250 pastoral concentration zones, presented in March 2026 with an instruction to extend the survey (mapping). An adaptive safety-nets project financed at 120 million dollars launched at Mao on 3 April 2026, deploying across nine provinces (project).	MOVEMENT
Comoros	The register's technical build was near complete at December 2025, with project disbursement at 82.8 per cent. The founding instrument is now on file: decret n 20-090/PR of 23 June 2020, fifteen articles creating the register and setting its organisation and functioning, signed by the president at Moroni. 2025-12 - the supervision mission put the register and its information system near complete and project disbursement at 82.8 per cent, up from 31 per cent in October 2023, crediting the digitisation of operations, electronic payments and a digitised monitoring system for the delivery. The same mission lists interoperability with the identity, civil-registration and health systems as work still recommended. 2026-07 - the World Bank's representative described it as the most complete socio-economic database ever built in the country. No inter-administration sharing protocol is in force.	MOVEMENT
Congo	The single social register reached its tenth implementation status report and was given premises with its own data centre. 2025-12-22 — the tenth implementation status report for the social protection and productive inclusion project was issued. 2026-04-14 — the register was inaugurated in a headquarters with its own data centre, described as the centralised base for identifying beneficiaries. No count of households or individuals on the register is published.	MOVEMENT
Cote d'Ivoire	The single social register is to be interconnected with the identity system, with more than 200,000 households registered against a two-million target. The register held more than 200,000 households in the process of registration in April 2025, against a 2021-2025 target of more than 2 million poor and vulnerable households. Its own indicators were elaborated and validated in August 2025. 2026-04 - a convention was signed to interconnect it with the national register of natural persons to remove duplicates, curb fraud and cut inclusion and exclusion error. No household count has been published since April 2025, so the register is sixteen months without an update on the measure that would show whether the target is reachable.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Djibouti	The registry held 515,730 people in February 2025 and the scaling to 600,000 had not begun by January 2026. The registry sits at the social affairs ministry, founded by decree in 2017 and amended in 2020, with provisions to include refugees, and held 515,730 people as of February 2025, undergoing an audit, an operational-manual revision and an interoperability upgrade. 2026-02-05 - the first supervision report since the project became effective in August 2025 records the scaling component, targeting growth to 600,000, had not commenced activities as at 31 January 2026. No coverage figure later than February 2025 is published.	NO CHANGE the scaling component effective in August 2025 had not begun by January 2026
DR Congo	A draft decree creating the single social register was adopted in Council on 25 July 2025 and signed as Decree n°25/041 on 4 December 2025. 2025-07-25 - the 53rd Council of Ministers adopted a draft decree creating and organising the register. 2025-12-04 - Decree n°25/041 created the register, centralising beneficiaries' biographic, demographic and biometric data under a steering committee and a technical management unit, with interoperability provisions. The decree text is held only as a summary, and no operator, household enrolment or link to the identification office is on file. It creates a second population register beside the identification office's, and nothing on file states how the two would relate.	MOVEMENT
Egypt	The unified social registry covers about 12m households and reaches 4.7m active households; no fresher figure is held. The registry covers about 12m households, reaching 4.7m active households and about 17m individuals, roughly a fifth of families, with payments by national scheme card, national-identity-based monitoring across more than 3,000 offices and targeting by proxy means testing plus home verification. No fresher registry, caseload or payment figure is held. It is a candidate base for automatic enrolment into universal health insurance per a February 2025 policy note, and nothing establishes that this has been done. 2026-09-12 — the register's suspensions were documented at household level: a Cairo family's subsidy card was suspended, leaving the household counting out what bread it could afford. No count of cards suspended, reinstated or appealed is published.	NO CHANGE
Equatorial Guinea	A 2025 census purged 2,282 untraceable pensioners from a roll of 137,445 affiliates. The institute's roll stood at 137,445 affiliates in the 2025 compendium, and a 2025 census removed 2,282 pensioners who could not be traced, with benefits moved to bank-only payment. The register runs on a system its own delegate calls obsolete, unreplicated and dependent on a single internet provider, and the social protection law passed in March 2026 specifies no successor.	MOVEMENT
Eritrea	A vulnerability database in the welfare ministry collecting gender-segregated data, under a social protection policy running to 2026. The register exists and its shape is described in the government's own periodic report: a national social protection policy and strategic plan for 2022 to 2026, a disability policy revised in 2021, and accession to the disability rights convention in December 2024. Behind them sits the labour and welfare ministry's vulnerability database, collecting gender-segregated data on persons with disabilities and other vulnerable groups. Nothing in the window changed its coverage, its size or its operation. The external committee's observations of July 2026 are an assessment of the framework rather than a change to it.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Eswatini	A social registry is piloting in one of four regions, with 44,683 households enrolled and targeting run on a proxy means test. The national dynamic social registry published the results of its Shiselweni region pilot, including disability data (results). The Shiselweni pilot covered 47,766 households, registered 44,683 of them and recorded 3,088 as vacant or non-consenting, against a projected 47,260 households in the region. Targeting uses a proxy means test built on 20 variables from the household income and expenditure survey, and the programme carries US$2.5 million, about E42.5 million, of World Bank funding; each region is to be given three months to implement. No national rollout date, no statement of which grant programmes will draw on the registry, and no data-protection or grievance arrangement for it, are on record. 2026-09-16 — the registry moved beyond its pilot region: the deputy prime minister briefed Lubombo's members of parliament ahead of household data collection there. No registered-household count is stated.	MOVEMENT
Ethiopia	The national social registry moved from a concept-stage activity into funded implementation (approval). The concept-stage project document of June 2025 named development and rollout of a national social registry as a project activity, showing it as a build rather than an established system at appraisal (project document). The World Bank board approved the US$200m sixth Productive Safety Net Project in March 2026, moving that registry into funded implementation (approval). The programme's existing management information system is further advanced: 444 of 492 woredas use it for programme tracking and 5.1 of 7.9 million beneficiaries' data had been synchronised to the federal system, with 252 woredas on electronic payments (restructuring paper). A registry and a programme management system are different things, and the repository holds no enrolment figure for the registry itself.	MOVEMENT
Gabon	The unified social register presented its first deliverable in July 2026, and a second census of the economically weak begins fieldwork in September. Technical work was finalised at a closing workshop in August 2025 with nothing delivered (technical close); the first deliverable was presented at Libreville in July 2026 alongside a commitment to full digitalisation of non-contributory social protection under the national plan (first deliverable). An interministerial committee fixed the terms of a second census of economically weak citizens in July 2026, with fieldwork from September drawing on the population census and health-insurance records, because the existing social file is not reliable enough to target protection (census terms). The state's own source uses three different names for the register, and no beneficiary count, coverage or platform is published. Between the two, a working session on 7 May 2026 brought the social affairs minister together with lender experts and the register's national coordination office to review progress and next steps, at which it was still described as a centralised national database to come. That session published no milestone, budget or delivery date either. 2026-09-11 - an audit found about 120,000 of the health fund's roughly one million beneficiaries improperly registered.	MOVEMENT
Gambia	The social registry holds 203,022 households across 40 of 43 districts, about 70 per cent of the population, with no coverage update since. It was built in two years and carries the national cash transfers (registry). Its coverage is cited internationally as a systems-building success (global comparison). No update has been published since 2024, so a register described as near-complete is measured at a point two years old, and its relationship to the identity system launched in 2026 is not stated anywhere.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Ghana	The household registry publishes registered-household figures by region as at May 2026 and is the system of record behind the cash-grant reassessment. The registry publishes its registered-household figures by region, stated as at May 2026. The region-by-region tables are served as an interactive tool and did not render as text at capture, so the national total is not held. 2026-04 - a registry-based nationwide reassessment enrolled 400,000 newly eligible households into the cash-grant programme - the registry working as the targeting instrument it exists to be. What is not published is the registry's own coverage: how many households it holds against how many there are, when each region was last enumerated, or how a household corrects its record. The registry describes itself as a single national household database collected by trained enumerators on electronic devices and serving as the primary platform for targeting the cash-grant programme, school feeding and national health insurance - three programmes off one enumeration, which is what makes its coverage the question it does not answer. 2026-09-16 — the gender ministry said the household registry now profiles 11.24 million people in 2,906,288 households across all 16 regions.	MOVEMENT
Guinea	The unified social register, created by a 2019 decree, was recast in October 2024 with a randomly generated unique identification number. It was created by decree in October 2019 (register) and recast by a decree of 13 October 2024 as the single entry point for social-protection interventions, holding a randomly generated unique identification number for its records (2024 decree). The first public coverage figure, presented on 8 July 2026, is 977,610 households (coverage report); no link to the civil registry is published.	NO CHANGE
Guinea-Bissau	A National Social Registry is being established and expanded under a World Bank project running to 2030, while the blockchain platform tracks public salaries and pensions. A Social Registry of beneficiaries begun in 2015 held 6,200 individuals in 2,250 families at the end of July 2017, and a National Social Registry is being established and expanded under a World Bank project approved in January 2025. What exists is a payment rail on the ledger — the blockchain wage bill and pensions platform — and a financial system too thin to carry transfers widely: one payment institution and one electronic money issuer nationally, and 22 per cent of women holding an account.	NO CHANGE
Kenya	The register gained a statutory framework in 2025, with general regulations out for comment and backed by a lending operation. The Social Protection Act commenced in August 2025, establishing the National Board for Social Protection (act). Draft general regulations went out for public participation in February 2026 (notice). A USD 750 million development policy operation approved in June 2026 names those regulations among the actions it supports (operation). The register itself is not described anywhere in the repository: no enrolment figure, no coverage rate and no account of how households enter or leave it.	MOVEMENT
Lesotho	NISSA holds data on more than 90 per cent of households and has a child-centred redesign piloted in one district. The registry holds data on more than 90 per cent of households, categorised by vulnerability, and a child-centred redesign was piloted in Mafeteng District under the Universal DPI Safeguards Framework (redesign). The registry and its companion management information system were procured together in 2024 (procurement). No update to the coverage figure and no evaluation of the redesign is held.	MOVEMENT
Liberia	The household social registry holds over 442,000 poverty-ranked households, 35 per cent of the population. The crisis response plan of May 2026 puts the registry at over 442,000 verified and poverty-ranked households, 35 per cent of the population, across 14 of the 15 counties, with transfers delivered through mobile money. The implementation report of July 2025 carried the same order of magnitude with integration to other systems ongoing. The project that carries it is scheduled to close in late 2026 with no successor operation named, which is the open question the register faces.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Libya	A Unified Social Registry draft was approved by the prime minister in June 2025 and nothing on its build has been published since. The draft was approved on 23 June 2025 (approval). No build, budget, timetable, lead agency or data source has been published in the fourteen months since, and no count of households or beneficiaries held in any existing social-protection list is available in this repository.	NO CHANGE
Madagascar	The social registry covered about 2.7 million households, nearly 12 million people by September 2026, having passed its June target of 2.5 million households in May. A decree of September 2017 created the beneficiary register for non-contributory social protection, the legal basis of the current registry (decree). The registry reached 2.6 million households by May 2026, up from 990,000 in February 2023, exceeding the ministry's target of 2.5 million by June, with registration continuing in 99 districts to December 2026 (count). A proposed USD 50 million additional financing would expand it across all 23 regions and extend the project to December 2027 (financing). The merger with the biometric identity database remains unfinished. 2026-09-10 - the registry reached about 2.7 million households, nearly 12 million people.	MOVEMENT
Malawi	A six-month pilot is testing on-demand registry updates, moving the registry from a static list to one households can change. The standing arrangement is the unified beneficiary registry, named the harmonised targeting mechanism by the national social protection policy. 2026-02 - a programme at concept stage, 119.2 million US dollars, carries a dynamic delivery systems sub-component covering the social registry, an integrated management information system and digital payments. 2026-06 - a six-month pilot in Balaka and Dowa began testing on-demand updates through district offices, a mobile short code and village development committees. A registry compiled once ages from the day it closes; this is the first attempt on file to let a household change its own entry between sweeps.	MOVEMENT
Mali	An enrolment campaign for the unified social register was running in November 2025, against a safety-net programme reviewed for its operation amid conflict. No household count, coverage figure, targeting method or grievance route is published for the register, and the campaign's own reach is not stated (campaign). The technical paper reflects on the safety-net programme's operation amid fragility, conflict and violence (paper). Against it, humanitarian caseload reporting is current: the refugee agency publishes quarterly operational updates and the food programme a monthly brief (update).	MOVEMENT
Mauritania	The social register carries more than 2 million citizens, and a separate database for disaster-affected households was created by decree in October 2025. The delegation ran a coordination round to update the register across the Nouakchott wilayas in April 2026 (update), and the safety-net programme behind it was re-established by decree in May 2024 (decree). Decree n. 2025-162 creates a special database for poor and vulnerable households affected by disasters (disaster database); no operator, household count or relationship to the social register is stated for it.	MOVEMENT
Mauritius	The social register targeted the 2026-2027 budget's measures and a free-internet decision, with its platform being replaced. The register was decided in Cabinet in March 2009 (decision). Cabinet used it in February 2026 to target a free-internet measure (Cabinet), and the 2026-2027 budget's measures are targeted on it (budget). The social integration division reported on its performance for 2024-2025 (report). No enrolment figure for the register is published in any source held.	MOVEMENT
Morocco	The population and unified social registries hold 22 million of 39 million on a June 2026 account, built on an open-source identity platform adopted in 2018. Enrolment stood at about half the population when the second identity and targeting project was approved in December 2024 (approval). A June 2026 account gives 22 million of 39 million registered, on a platform the country adopted first, in 2018 (account). The figure reaches the repository through the press rather than a programme report, and no error, exclusion or appeal measure for the registries is held.	MOVEMENT on a press figure

COUNTRY	DEVELOPMENTS	PROGRESS
Mozambique	A biometric register of humanitarian-aid recipients completed validation for national launch in October 2026, built to interoperate with the national social-support database. Validation of the beneficiary and humanitarian assistance management system is complete, with national launch stated for October 2026 after a pilot at Beira, at a costed investment of about 20 million metical (validation, register). It is built to interoperate with the national social-support database so responders can see who has and has not received aid and duplicate or fictitious registrations are curbed. No data-protection basis, retention rule or enrolment target is published, and the country has no data-protection statute.	MOVEMENT
Namibia	An integrated beneficiary registry and social assistance system has run since 2022, and 15,825 old-age grants were suspended in June 2026 over unverified names. The registry and the social assistance system were built under the second national prosperity plan, launched in March 2022 and piloted to June 2022 at a cost of N$4.63 million, with memoranda to exchange data with the pension fund, the social security commission, the tax administration system, the financial management system and the veterans system. At the May 2026 payment cycle 15,825 old-age grants were suspended because the names could not be verified against the national population registry; pensioners were turned away at pay points and told to bring an identity document and birth certificate to a regional office for reinstatement in the next cycle, with back payment promised. The ministry states beneficiaries must verify twice a year with a month's grace, and that it is planning to link its system to the home affairs ministry's for better death reporting (suspensions). No figure for reinstatements, nor any count of beneficiaries on the register, is published.	REGRESSED the register is in use and 15,825 pensioners were cut off by a verification it failed to reach them about
Niger	The unified social registry passed 500,000 households by September 2025, the first enrolment figure the repository holds. At a capacity-building workshop on 8 September 2025 a partner official stated that more than 500,000 vulnerable households are registered in the unified social registry and receive adapted services, with targeting to be expanded to the worst-affected zones. The third phase of the Sahel adaptive social protection programme, announced on 12 May 2026 and running from 2025 to 2030, names strengthening social registries, digital payment mechanisms and secure data platforms among its priorities — a financing commitment rather than a delivered change. The registry's governance rests on founding acts from 2018 to 2022 under the prime minister's office. No coverage rate against the eligible population is published. The unified social register is not yet nationwide and is behind on its updates, against 41.2 per cent of the population below the national poverty line (roadmap).	MOVEMENT
Nigeria	The national social register expanded to 19.7m people from 13m, using artificial intelligence, satellite imagery and telecoms data to find urban-slum households. The expansion used artificial intelligence, satellite imagery and telecoms data to reach households the register had missed, and 74 per cent of prison inmates hold an identity number (register). No exclusion, appeal or error measure for the register is published, and finding households by satellite and call-detail inference is a targeting method the data-protection regime does not separately address.	MOVEMENT
Rwanda	An appeals process for the social registry was reported on in August 2026, and the correction rate is the social affairs directorate's own figure. The registry has an appeals process and the correction rate published for it comes from the directorate that runs the registry rather than from an independent review (appeals). A social register with a working appeals route is more than most units in this frame can show. That the only measure of how well it works is the operator's own is the qualification.	MOVEMENT
Sao Tome and Principe	The social protection directorate stated a coverage figure for the single social registry and clarified that it is not a poverty count. The single social register now covers more than 12,500 households, up from 8,000, and the vulnerable families programme is to expand from 5,000 to 6,000 households, on the prime minister's account (statement). The clarification was issued in August 2026 (clarification, mission). An agency publicly correcting a misreading of its own registry figure is unusual in this frame and worth recording as such: a registry count measures who is enrolled, not who is poor, and conflating the two misstates both. No enrolment total, update cycle or link to the identity system is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Senegal	The single national social register rose from 542,000 to one million households over 2024, and no later figure is held. The agriculture ministry launched the nationwide digitalisation of subsidised seed and fertiliser distribution through the ERP Pass application on 9 October 2026; producers are notified by text message, and the minister said the state now holds a digital register of beneficiaries and allocations. The growth was reported in December 2025 and ingested in July 2026, so it is a 2024 event rather than movement in the window (register, brief). The unified social-protection information system now being designed would sit above it, and the workshop that opened that design names data governance as an output rather than an input.	MOVEMENT
Seychelles	A statutory duty since 2011 to hold a beneficiary database has a platform behind it only since October 2025. Section 5(e) of the Agency for Social Protection Act 2011 requires the agency to maintain a national database of every applicant for and beneficiary of social assistance (Act). The Electronic Social Protection System announced in December 2024 for a third-quarter 2025 go-live (announcement) launched internally on 15 October 2025 through the SeyID portal (launch); in March 2026 Cabinet extended vendor support through 2026 and directed the ICT department to lead the transition to government ownership (Cabinet). The lender's June 2025 report had the management information system behind the social registry still pending (status).	MOVEMENT
Sierra Leone	The social registry is being expanded towards national coverage, on data structures set out in a 2023 technical note. The registry's development began in 2014 under the Social Safety Net project, and its data structures and operationalisation are described in a World Bank technical note (note). The social action commission and the statistics office signed an amended memorandum on 8 April 2026 to take it to national coverage (memorandum). No household count, coverage percentage or update cycle is published, so national coverage is an intention with no distance from it stated.	MOVEMENT
Somalia	The unified social registry supports over 500,000 households and carries a USD 112 million operation to strengthen it and survey 12 million people. The operation approved in September 2025 and announced in October is expected to benefit over 738,000 people, strengthening the registry and running a national socio-economic survey covering 12 million (announcement). Its appraisal names the registry and the delivery system as established government-owned platforms, and makes a registry survey, quality assurance and standard operating procedures conditions of effectiveness (appraisal). The ministry reported both supporting over 500,000 households at its final implementation mission in November 2025 (mission).	MOVEMENT
South Africa	The grant payment system was confirmed in Parliament as administering payments to more than 18 million monthly beneficiaries. 2025-07-01 — a ministerial reply confirmed the system administering grant payments to more than 18 million monthly beneficiaries. Nothing was held on it before, so what moved is the record rather than the register. It is the largest beneficiary count of any system on this ledger by a wide margin, and the repository holds no architecture, uptime, modernisation programme or replacement plan for it. That absence is the finding. The systems this report describes as advancing — the biometric register, the exchange pilot, the verification portal — all assume a social protection register they can query, and the register itself appears in the record only as an answer to a parliamentary question.	NO CHANGE the system established in the record for the first time
South Sudan	87,867 households, 615,069 people, biometrically registered across 15 counties - project-scoped, not universal. The registry is a government-led management information system linked to biometric beneficiary registration, described in its financing paper as project-scoped rather than a standalone universal social registry (paper). It had registered and paid 87,867 households across 15 counties by September 2025 (scale). Fifteen counties of eighty. No plan to widen it into a national registry, and no other programme drawing on it, is recorded.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sudan	Ministers reviewed progress on a Unified Social Registry, a foundational social-protection targeting database, in April 2026. A survivors' fund opened a tender for a secure, offline-capable digital victims' registry, built with a national organisation in an 18-month project from 1 November 2026, with about 500 survivors to be documented first and hosting outside the country. The review took place at a ministerial meeting on digital transformation and civil-service reform (review). No coverage, household count, targeting rule, data source or completion date is published. In a country where humanitarian cash transfers are a principal channel of assistance, a targeting database with no published design is the instrument that most needs one.	MOVEMENT
Tanzania	A Zanzibar dynamic social registry reached a briefing on what establishment would require — research commissioned to specify a registry rather than a decision to build one. The briefing was held in August 2026, on a blueprint prepared the previous year (briefing, blueprint). No custodian, budget, data-protection arrangement or timetable is stated. Distinguishing commissioned research from a build decision is the whole of what this cell can honestly record.	MOVEMENT
Togo	The registry is 75 per cent built on the last report held, from September 2024; a policy framework was adopted around it. Created by decree of 24 April 2023, it is held electronically, carries the unique identification number and a household number, is managed by the identity agency, and obliges administrations to base aid programmes on it and keep electronic beneficiary registers. An annual audit against the targeting rules is required. The last supervision report held, from 30 September 2024, records the software 75 per cent complete, the data-exchange platform not in place and the beneficiary operations management system not yet adopted. Nothing later restates any of it. The Council of Ministers adopted a national social-protection policy by decree on 17 December 2025, the frame the registry now sits inside. The social register is named as the second project on the government roadmap, giving each household one identifier to target social programmes against inclusion and exclusion error (register).	NO CHANGE
Tunisia	The social registry carried more than 333,000 households on cash transfers as of December 2023, and a social housing application platform has beneficiary-database interconnection still under way. The registry figure is from December 2023 and nothing later is held (registry, nexus). The housing platform's completion timetable was set at a follow-up meeting in August 2026, with beneficiary-database interconnection still under way (housing). A social identifier is separately being worked on inside a social-security reform, so three social-data systems are in motion and none states how it relates to the others.	NO CHANGE
Uganda	The single registry launched in February 2021 is still described by a donor plan as needing operationalisation five years on. The instrument itself is clear enough: a unified platform holding common information across social protection programmes, premised on linking programme management systems to the national identity database, launched on 4 February 2021. 2025-10 - a donor country plan approved for 2026 to 2030 records operationalising the registry as a continuing systems priority. 2026-01 - the same donor's 2025 country report records continued support for integrating a sub-national social registry into it. Both accounts of what remains undone are a donor's. The responsible ministry has published nothing operational about the registry since the launch - no coverage figure, no list of linked programmes, no record count - and that silence over five years is the position this indicator records.	STALLED

COUNTRY	DEVELOPMENTS	PROGRESS
Zambia	The social cash transfer reached 1,555,840 households in February 2026, up from 1.3 million, after 305,000 were added against a plan for 250,000. The ministry reported the nationwide scale-up complete in February 2026, taking coverage from 1.3 million to 1,555,840 households. More than 300,000 households were added where 250,000 had been planned for 2025, which the minister attributed to the reach of the sensitisation campaign and to demand. The count is the ministry's own, given at a press briefing, with no independent verification held, and it sits against a unified national social registry approved by cabinet in April 2025 that is still in early implementation.	MOVEMENT
Zimbabwe	The social registry completed first-phase enumeration in December 2025 and has a funded second phase aiming at a further 4 per cent of the population. The first phase of enumeration was completed in Mangwe district in December 2025 and extends to Nkayi and Mudzi, aiming at about 2 per cent of the population, roughly 80,000 households (project document). A proposed second phase would enumerate at least a further 4 per cent, about 160,000 households, with US$1.7m for enumeration and US$300,000 for IT and capacity building (project document). Field collection began publicly in Nkayi district in March 2026, gathering demographics, education, employment, housing, land ownership, access to services and economic activity (launch, survey). No enrolled-household count, hosting arrangement or completion date is held, and the registry has not yet carried a live targeting decision.	MOVEMENT

Electoral register

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The 2025 revision closed with 24,503,060 registered electors, and the system was reformed by organic law in April 2026. The register's legal regime is set by the organic ordinance of 10 March 2021 on the electoral system - a statute establishing the regime, not merely a fact about the register. 2026-01-14 - the electoral authority announced the completed 2025 periodic revision: 24,503,060 registered electors. 2026-04-04 - an organic law reformed the system around it: one third of candidate-list seats reserved for women, at least one half for candidates under 40, and state financing for independent young candidates. No biometric or deduplication measure for the register itself is held.	MOVEMENT
Angola	A proof-of-life operation runs 254 of a planned 634 counters against a universe of 16,707,455 citizens, and four opposition parties demand an independent audit. The count is the problem. The electoral administration has published no enrolment series since the operation opened, only ministerial totals; four parties contesting the operation allege administrative discretion, uneven deployment of brigades and recurring biometric-system failures, and say the refusal to release figures by province, municipality and commune blocks any audit. The electoral commission had earlier refused accreditation to a civic monitor. None of it has been adjudicated. At provincial level, one government reports over 40,000 residents updated and is pressing mining-sector workers to register through one-stop service desks. Ahead of all of it, a law replaces in-person registration with automatic enrolment from the civil identity database, with the voter card used for the last time in 2027. 2026-09-15 — the update is contested: the main opposition party says state means are being used to register the governing party's members early, and a civic movement says parties and civil society are kept out of supervising the proof-of-life step. 2026-09-22 — the territorial administration ministry put more than two million adults updated against more than 16.7 million targeted by 31 March 2027, and the Constitutional Court opened a Kz 20 billion tender to modernise its candidate-registration platform.	MOVEMENT contested

COUNTRY	DEVELOPMENTS	PROGRESS
Benin	The population register compiled and managed the roll for the April 2026 presidential poll, with regional observer missions satisfied on preparedness. The register is the single source of electoral data under the 2017 law, and platforms to modernise the electoral process were presented in August 2025, untested at a presidential poll. 2026-04-12 — the agency compiled and managed the list for the presidential poll, and regional and continental observer missions assessed its preparedness and pronounced themselves satisfied. Card fees were waived, with web, mobile, unstructured-menu and photo-update channels open to polling morning. It is the clearest test any system on this ledger has been put to, and it passed on the observers' assessment. The one published intervention against it came from the data protection authority, which required extraneous fields stripped from the roll before publication, reported under data protection.	MOVEMENT
Botswana	P50,000,000 was appropriated for electronic voter registration, with government committing to a reform package built on one-time registration and a verified electronic roll. 2026-08-19 — government committed in Parliament to an electoral-reform package built on one-time voter registration, the national identity card and a verified electronic voters' roll accessible to political parties, after the commission pressed for digital reform in June. P50,000,000 is appropriated within the commission's development budget — the first time the voter register carries a price in any document held. The package has no bill, timetable or procurement on record. 2026-07-06 — an elections management system is built and under extensive testing, replacing platforms developed in the 1990s, with deployment planned for the 2029 general election, and no supplier, cost or acceptance date held. The commission's secretary separately states, as personal opinion, that voters do not want electronic voting machines. The reform rests on the identity card, whose replacement service is failing, reported under digital identity.	MOVEMENT
Burkina Faso	The Electoral Code establishes a biometric national electoral register built from permanent, annually revisable communal and provincial lists. The commission it names was dissolved in 2025. The consolidated code establishes the independent national electoral commission, a biometric national electoral register built from permanent, annually revisable communal and provincial lists, and the national identity card or a birth certificate as the elector's proof of identity. The text held runs through the 2012 amendments and does not reflect the commission's dissolution in 2025, so the institution the code names no longer exists in the form it describes, and the repository holds no instrument putting the register in anyone else's hands. No register size, revision record or annual revision result is published at any date.	NO CHANGE a standing position the repository holds for the first time
Burundi	Preparations for the 2027 electoral register are under way and contested, with opposition parties demanding suspension; no biometric card is in use. 2026-05-09 — opposition parties demanded suspension of the electoral commission's preparations for the 2027 register. No baseline was held before it and the substance of the objection is not resolved on the record. The biometric card that might have underpinned the roll is not in use: it was confirmed as unavailable for the 2025 enrolment and is still waiting on its governing instrument. So the register is being prepared on the old basis, under objection, while the credential intended to modernise it sits ready and unusable. No enrolment figure, audit or de-duplication statement is published. 2026-09-03 — partial registration is planned for October 2026 across more than 4,000 centres, and the card is explicitly not the credential: the database is. That is the clearest statement the repository holds of how identity works at the poll here. No register size, audit terms or duplicate-detection method is published.	MOVEMENT
Cameroon	A register of about 8.2 million voters went through deduplication before the October 2025 vote, with hundreds of thousands of cards uncollected. The register ran on third-generation kits at the window's opening, the elections board having acquired a thousand biometric enrolment kits. 2025-09-11 - about 8.2 million voters were under deduplication ahead of the 12 October presidential vote, with hundreds of thousands of biometric cards uncollected - more than 350,000 in the Littoral region, about 50,000 of 115,000 collected in the South, 31,861 of 66,515 distributed in the South West - some printed in 2018 or earlier, the board warning that a registered voter without a card cannot vote. No post-election collection figure, deduplication result or audit is on file.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cape Verde	419,755 electors on the roll at 28 April 2026, published by constituency in the gazette. The global electorate map puts the roll at 419,755 electors at its reference date of 28 April 2026, broken down by constituency. It reaches the repository as a republication: the original gazette text of 28 April was found inexact and the full corrected table was reissued two days later, which is the register's own correction mechanism working in public.	NO CHANGE
Central African Republic	The definitive electoral list reached 2,398,158 registered voters, 757,075 of them registered in 2025, used across 3,910 voting centres. 2025-08-23 — the electoral authority published a definitive list of 2,398,158 registered voters, 1,641,083 carried from the 2020 revision plus 757,075 registered in 2025, used on 28 December 2025 across 3,910 voting centres. Adding almost half again to the roll in one revision is the largest registration operation on this ledger. The defect is small and telling: the authority's own provisional results state a turnout percentage computed on an electorate 5,212 lower than its definitive list, which no source reconciles. The roll rests on the identity card reported above, whose issuance at one prefecture is reported as religiously targeted and informally priced.	MOVEMENT
Chad	8,204,830 electors were registered for the December 2024 polls; a revision owed for June 2026 is unconfirmed. The most recent published national figure is 8,204,830 registered electors for the coupled legislative, provincial and communal elections of 28 and 29 December 2024, 8,173,058 of them inside Chad and 31,772 abroad (figures). Partial legislative and senatorial elections of 20 and 21 June 2026, convoked by decret of 22 May 2026, put the electoral agency under an explicit obligation to revise the register within the deadline; nothing held confirms the revision was carried out (obligation). In June 2026 the permanent political dialogue framework published a roadmap whose second strategic objective runs from a reliable electoral register to equitable party financing (roadmap).	STALLED
Comoros	The file is computerised and centralised by article 7 of the 2023 electoral code; an audit sits in the 2029 roadmap. The electoral code promulgated on 8 March 2023 computerises and centralises the national voter file at article 7 and admits the biometric identity card as one of two identity documents for registration at article 11. 2026-04 - a three-day seminar evaluating the 2023 to 2025 electoral cycles produced a roadmap to 2029 including an independent audit of the file and a single electoral code. 2026-07 - a national workshop covered the file's revision, the interior minister announcing first implementing activities from August 2026 over a twelve to eighteen month rollout. No registration figure, audit finding or revision result is on file. The two records are both plans, ten weeks apart.	NO CHANGE an audit and a revision are both scheduled and neither has begun on the record
Congo	The electoral roll is permanent and public by statute, and definitive presidential results were proclaimed in March 2026. Article 7 of the 2012 electoral law provides that electoral lists are permanent and public. 2026-03-31 — the definitive results of the March 2026 presidential election were proclaimed, so the register was exercised in the window. No registered-elector count appears in either record.	MOVEMENT
Cote d'Ivoire	The definitive 2025 electoral list was closed by the electoral commission on 2 June 2025 after revision and a public audit. 2025-06-02 - the electoral commission's central commission closed the definitive list, following the revision of 19 October to 17 November 2024 under decret 2024-792, deletion of the deceased and of those stripped of civil rights on lists supplied by the justice and interior ministries, and a public audit of the provisional list, the commission stating that residual imperfections are neutralised by the register's biometrics. The release states no enrolment total, so the register's size is not on file. Nothing states how the justice and interior lists are supplied, on what cycle, or whether the biometric deduplication is audited by anyone outside the commission.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Djibouti	The voter card is produced from the register of natural persons by law; no electoral roll or its size is held. The only statement the repository holds is statutory: the founding law makes the register of natural persons the unique reference for producing every secure national document, the voter card among them, alongside the identity card, passport and driving licence. Nothing dated inside the period touches it. What is absent is the register itself: no electoral roll, no registered-voter count, no revision cycle, no instrument governing its compilation, and nothing on whether the identification number has been applied to it. The biometric identity card issued in the period carries no stated electoral use.	NO CHANGE
DR Congo	The statute assigns the commission the mandate to establish, publish and maintain the register; its own renewal roadmap had not been executed a year after publication. The coordinated text of the 2004 statute as amended in 2016 assigns the electoral commission the mandate to organise voter identification and enrolment and to establish, publish and maintain the register, makes registration a civic duty and sets eligibility and operational structures. 2026-03-15 - the renewal has not happened. The commission's own 2025-2029 roadmap planned identification and enrolment in a pilot province between April and October 2025, and as of March 2026 it had not been executed, on the record of two election-observation coordinators, with the constitutional timetable for 2028 named as the risk. No register size, revision result or enrolment figure is published at any date, so the gap between the statutory duty and the delivery cannot be measured, only observed. 2026-09-28 - the electoral commission launched a programme to digitise the electoral archives produced since 2005 into a single document repository.	STALLED
Egypt	69,891,913 electors were registered at the 2025 House elections, of whom about 22 million voted. The register is governed by the 2014 law on the exercise of political rights. 2025-10-17 - the electoral authority launched an updated voter database through its own site and application, letting a voter query their polling committee and its location. 2026-01-10 - final statistics put 69,891,913 electors registered in the database at the 2025 House elections, with about 22 million votes cast. No deduplication, biometric or roll-maintenance measure for the register is published.	MOVEMENT
Equatorial Guinea	The 2022 decree orders a periodic electoral census with no biometrics and no digital register. The decree is the operative instrument and is explicit in what it does not provide: no biometric capture, no digital register, a periodic census taken as an exercise rather than a maintained roll. Nothing since records a change of method, and no register size is published.	NO CHANGE
Eritrea	The electoral law provides for a voter register, and nothing records one ever having been compiled (electoral law). The hosted electoral law, its proclamation number left blank, establishes an independent electoral commission and defines a voter register and voting cards (electoral law). The repository holds no record of a national election held under it, no commission constituted and no register compiled. The hosted text of the law is itself undated. This is a register that exists as a statutory design and not as a system.	NO CHANGE
Eswatini	The commission runs continuous voter registration, and a proposed compulsory chief code and residency rule are under review. Continuous voter registration was operationalised from 19 to 28 September 2025 for two by-election divisions, open to newly eligible voters and to prospective candidates (registration). The commission's own account of the process describes voter registration on an optical-mark-recognition identification system, production of a preliminary register and validation at chiefdom level (process). A proposal to make the chief code compulsory at registration, alongside a six-month residency rule, divided residents at Ezulwini and is under commission review (debate). The same code is the one the home affairs ministry asked citizens to correct on their identity documents in August 2026. Biometric capture is being added to continuous registration ahead of 2028; no registered-voter count is held. 2026-09-12 — registration is running on presentation of an identity card, with a national cultural event used to reach young people. No count of registrations or of those still unregistered is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Ethiopia	The electoral roll and its registration framework rest on the 2019 electoral proclamation, unchanged in the window (proclamation). The controlling instrument is the 2019 electoral proclamation, which defines the electoral roll and the voter and candidate registration framework and confirms the national election board as the impartial election administration (proclamation). The voter and candidate registration system and the count of voters registered for the seventh general election are carried on the ledger from April 2026 and nothing in the window moved them. The repository holds no statement on whether the electoral roll is checked against the civil register or the national digital identity.	NO CHANGE
Gabon	An electoral-roll verification platform is live for the 2025 cycle, keyed on the personal identification number. The platform was published by the digital agency for the electoral cycle and lets a voter check the roll against the identification number (verification platform). No usage figure is published at either end of the window, no register size is held, and the source page is undated so the position carries year precision only.	NO CHANGE
Gambia	212,095 supplementary registrations were announced against 179,445 records on the data given to parties, with 1,600 objections filed. The commission attributes the gap to unverified processing outputs; the discrepancy was raised by opposition parties at a stakeholder forum ahead of the December 2026 presidential election, and no reconciled figure has been published (discrepancy). The objections, on eligibility and residency, are being heard by revising court magistrates before the provisional register merges with the 2021 register; the chairman states the register will be credible once the court finishes, that the names removed were multiple registrations covered by an earlier amnesty, and that no eligible registrant has been omitted (assurance, objections). Partial digitalisation of the December polls was announced in March 2026, covering polling-station mapping, results transmission and tablets, with no procurement, test or audit arrangement published (digitalisation). 2026-09-04 - the register behind December's poll is being updated by an external contractor on its fourth Gambian biometric voter registration engagement, working on site from March to July 2026. The contractor's own announcement is the only account of it; no contract value, scope or acceptance arrangement is published. 2026-10-05 - the largest opposition party put the dataset it was given at 183,163 against the 212,095 announced and asked for the de-duplication method.	MOVEMENT
Ghana	The certified 2024 register held 18,774,159 valid voters, all but 1,870 with biometric data, and a reform programme was set out in August 2026. The certified 2024 register carries 18,774,159 valid voters, 18,640,811 of them with biometric data, 131,487 special voters and 1,870 without biometric data. The commission's page did not render its own table as text; the figures come from a same-day wire account of the release. The register is a funded outcome indicator in the commission's budget, rising from 17.03m in 2023 to 18.77m in 2024. 2026-08-12 - the commission set out a medium-term reform programme of upgraded biometric registration equipment, an election-technology inventory system, continuous registration procedures and detection of deceased and duplicate records. None of it is recorded as delivered.	MOVEMENT
Guinea	The permanent biometric electoral file held 6.95m electors across 23,681 stations for the May 2026 coupled elections. It stood at 6.77m at the September 2025 referendum (earlier file) and at 6.95m with 23,681 stations by April 2026 (current file). It is the repository's most precisely stated register, and its precision comes from an election timetable rather than from a registry publication.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Guinea-Bissau	The updated electoral register was handed to the elections commission on 18 August 2026 recording 966,152 voters, unchanged in size from the last update. 2026-08-18 — the electoral register was handed to the elections commission in both physical and electronic form ahead of the 30 August referendum, recording 966,152 registered voters. 2026-08-17 — the operation behind it issued 25,146 replacement voter cards over thirty days from 13 July, worked by 51 brigades covering every region. The electorate total is unchanged from the previous update, so the operation replaced cards rather than added registrants. No audit, no de-duplication statement and no link between the register and the biometric identity system is published. It is the only register on this ledger that moved in the window.	MOVEMENT
Kenya	KSh 74.8bn was appropriated for 2027 election technology, while two bills would remove the duty to livestream polling-station results. The Treasury allocated KSh 41.3bn and Parliament approved a further KSh 33.5bn; it is an appropriation, Sh9.3bn of it for replacing the 2017 voter-identification kits (appropriation). The two bills would remove the commission's statutory duty to create a livestreaming mechanism; neither is enacted and the repository does not establish how they relate procedurally (bills). A clause vesting ownership of the election technology's intellectual property and access to the election servers in the commission passed the Senate in December 2024 and has sat in committee with no report since February 2025 (server access). Optional iris capture was added to voter-registration kits under a roughly KSh 7bn upgrade, with nothing on file since October 2025 on deployment or enrolment (iris). The commission confirmed an engagement with the registration bureau on voter data and identity verification, with no data-sharing agreement published. 2026-10 — the electoral commission is moving voter-registration targets from census estimates to registration-bureau and immigration data on issued identity cards and passports, against a 6.3 million new-voter target for 2027.	MIXED the appropriation nearly doubled while two bills would remove the livestreaming duty and one to vest server ownership has stalled
Lesotho	A voter registration strategy was formally endorsed in June 2026, with constituency readiness assessments under way. 2013 — the electoral commission's report describes the constitutional mandate for the general register of electors and the 2011 electoral Act. 2026-06-15 — constituency readiness assessments began ahead of registration intensification, with a commissioner deployment framework covering register audits. 2026-06-25 — the commission, government and international partners formally endorsed the voter registration strategy. 2026-06-04 — a Bill before the Senate would tie registration and verification to the national identity number. No registered-elector count is published.	MOVEMENT
Liberia	The electoral commission will assess the 2023 roll first; any renewal would be fully biometric from January 2027. The commission's chairman set out in August 2026 that the viability of the 2023 voter roll will be assessed first, and that if a fresh exercise is needed it would be fully biometric with same-day card issue over satellite connectivity, with intensive preparation from January 2027 ahead of the 2029 general elections. Nothing has begun. The register in use remains the 2023 roll, and the repository holds no procurement, budget line or technical specification for a biometric exercise. The commission and the identity registry keep separate databases, an integration a 2025 study argues would curb the trucking of voters between counties. Cooperation so far is equipment: the commission handed more than 500 biometric registration kits to the registry on 2 July 2025, which needed licensing and technical changes before use.	NO CHANGE a stated intention with no exercise begun
Libya	Biometric voter verification was piloted in four municipalities at the 2024 municipal elections and no extension has been published. The commission used biometric verification in four municipalities at the municipal council elections of August 2024 (pilot). No evaluation, no extension to national elections and no register size have been published since, so the register's coverage and its link to the national identification number cannot be established from this repository.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Madagascar	A full reconstitution of the electoral roll opened in July 2026, running four months and gated on presentation of a national identity card. The reconstitution began at Talata Volonondry and runs to 24 November 2026 through five registration channels, replacing a roll the commission records as contested (reconstitution). The commission states that an unregistered citizen may not observe polling in their own place of residence, lodge a complaint or contest results, which makes the identity-card gate a condition on political participation and not only on voting.	MOVEMENT
Malawi	6,500 electoral management devices were deployed for voter verification at the September 2025 elections, with offline glitches reported at rural polling stations. The voter register is held electronically and the devices were deployed for verification at the elections of 16 September 2025 (deployment). Two million voters had been registered using offline digital identities in 2024. The commission had refused an observer coalition electronic access to the roll in June 2025 (refusal), so the register is digital for the commission's own use and not for scrutiny of it.	MOVEMENT offline failures recorded
Mali	The annual revision of the electoral lists ran from 1 October to 31 December 2025, and the electoral authority trained agents on a mobile register application in February 2026. The electoral law of 24 June 2022 is the instrument behind both and its text is held from the official journal (law). No registered-voter count, revision outturn or relationship to the national identification number is published, so the process is dated and the register's size and quality are not.	MOVEMENT
Mauritania	1,939,343 registered voters on the Constitutional Council's proclamation of the 2024 presidential result. The figure is the roll as it stood at the 2024 presidential election, taken from the Council's own deliberation proclaiming the definitive results (proclamation). No later revision, audit or statement of the register's relationship to the national population register is on the record, so the repository holds one dated count and no series.	NO CHANGE a single count with no earlier figure behind it
Mauritius	The register is compiled annually from a statutory house-to-house inquiry; no digital enrolment route is described. The Representation of the People Act requires a house-to-house inquiry for the compilation of the register, carried out again in 2026 (inquiry). The electoral commissioner issued a public communique on elector registration in May 2026 (communique). The inquiry is a door-to-door canvass. In a country whose identity card carries a mobile form and whose government runs a credential wallet, the electoral roll is still compiled by knocking on doors. Twelve breakdowns of the 2024 roll are published — by constituency, polling station, town, ward, village, sex, age group and citizenship (register).	NO CHANGE
Morocco	Online registration took two of every three new entries in the 2026 revision, and an organic law institutionalises internet-based enrolment. The interior minister's account of the annual revision records new registrations running two to one in favour of the online channel over in-person enrolment, on a roll of about 16.5m voters with about 1.4m entries removed (revision). Organic law 55.25 institutionalises internet-based electoral-roll registration for residents and expatriates and bars artificial-intelligence tools and social platforms from publishing referendum poll results; it was adopted in committee across four sessions in November 2025 and companion law 54.25 was constitutionally cleared in December (committee report, decision). Filing became electronic for the September poll: the interior ministry made the elections portal the compulsory route for candidacy declarations to the 23 September 2026 legislative elections, closing it at noon on 8 September (communiqué). No filing count or fallback for candidates without access is stated.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mozambique	A new voter register is produced for each election rather than maintained continuously, and the observation mission records a notable lack of confidence in its reliability. The European Union observation mission on the 9 October 2024 general elections records that a new voter register is produced for each election, which it names as part of what makes elections expensive, and a notable lack of confidence in the register's reliability given discrepancies between it and the statistics institute's population projections (mission). The election administration published no report on the voter registration process, and the mission recommends updating the register from other reliable existing data sources, naming the civil registry (mission). No register size, update cycle or duplicate rate is published by the election administration.	NO CHANGE
Namibia	General registration closed on 1 August 2024 with 1,467,604 voters enrolled, 91 per cent of those eligible, against 1,358,468 in 2019. The general registration period for the 2024 presidential and National Assembly elections closed on 1 August 2024 with 1,467,604 voters registered in-country and at diplomatic missions, about 91 per cent of the roughly 1.6 million the statistics agency put as eligible. Of these, 763,700 men and 852,100 women registered, two regions reached 97 per cent and the lowest region 83 per cent. The 2019 register held 1,358,468 voters, of whom 820,227 voted. The commission publishes supplementary registration and party-registration procedure, including a requirement that a party produce 500 declarations from names on the national register (procedure). No statement of how the roll is deduplicated against the population register, and no post-2024 roll size, is held.	MOVEMENT
Niger	The biometric voter roll rests on the pre-2023 electoral code, with no successor body or roll update on record. The electoral code of August 2017, as amended in July 2019, establishes the biometric electoral file as the unique national voter roll at articles 36 and 37, assembled from communal, regional and embassy lists and managed by the electoral commission's dedicated directorate. That is the pre-coup regime. No post-2023 successor electoral body, and no update to the roll, is on file; the 2026 civil-status and population-register reforms are an identity track rather than a rebuilt electoral roll.	NO CHANGE
Nigeria	The roll is approaching 100 million on 10,772,421 new registrants, and accreditation devices failed at a state governorship election. The commission put the register at close to 100 million ahead of the 2027 general elections, recording 10,772,421 new registrants in the latest continuous voter registration exercise, and said a real-time election readiness tracker would be deployed across the 36 states and the federal capital territory (commission). The totals are its own and no register audit, duplicate rate or link to the national identity number is given. The bar association's election working group recorded devices failing to boot and delaying a poll's opening, fingerprint and facial capture failing on some voters — elderly voters recurrently — so that they could not vote at all, slow processing at units of over 1,100 registered voters, an export failure and a complete device stoppage at one unit (report). It recommends comprehensive pre-election testing of biometric capture, network connectivity, battery performance and volume handling, and an upgrade before the general election (upgrade); a second observer mission separately called for a full post-election technical audit (audit). No commission response, failure rate or audit commitment is on record, and the observations are limited to the units the teams visited. 2026-10-05 - the register stands at more than 103 million after the final biometric clean-up.	MIXED the roll approaches 100 million while the devices that read it failed at a state election
Rwanda	The electoral commission reported more than 9.5 million registered voters ahead of the July 2024 elections. The commission reported more than 9.5 million people on the voter list by 13 May 2024, ahead of presidential and parliamentary elections held on 15 July (list), of whom more than two million were registering for the first time (first-time voters). Both counts were given during the registration period and neither was restated at its close, so the repository holds no final register size for the 2024 elections and nothing since. How the register is built from, or reconciled against, the national identity system is not stated in either account.	NO CHANGE a first count with no earlier figure behind it

COUNTRY	DEVELOPMENTS	PROGRESS
Sao Tome and Principe	The automatic electoral roll carries 146,510 voters for the September 2026 elections, added after a process failure that had missed about 1,860 eligible voters. The reform project closed in September 2025, the new system was ready in February 2026 and automatic registration was inaugurated in April (project, system, inauguration). The provisional roll carries 146,510 voters, added after a fix to the process failure (roll). The finding is what the failure was: the first automatic derivation from the civil registry reproduced that register's own omissions. Automating a derivation inherits the source's gaps, and the electoral commission launched a consultation and update campaign in response. The data-protection authority supervises the interconnection, which is recorded separately.	MIXED the first automatic roll derived from the civil registry while that derivation reproduced the register's own omissions
Senegal	The 2025 ordinary revision completed with cards available from 2 June 2026, and a May 2026 law narrowed the grounds for striking a citizen off. The elections director-general announced on 2 June 2026 that voter cards arising from registrations, modifications and status changes during the 2025 revision were available at prefectures and sub-prefectures, collection requiring the deposit receipt and the biometric identity card. No revised national total is stated. Loi 2026-10 of 12 May 2026 narrows the grounds on which a citizen is struck from the roll to offences the text expressly names, and caps the resulting bar at five years from the date a conviction became final, closing the previous absence of any time limit. The last stated size is the 2024 election's: 7,371,890 registered voters of whom 338,040 abroad, held by the interior ministry with the file-automation directorate running the centralised processing and the voter card coupled to the biometric national card.	MOVEMENT
Seychelles	The 2026 register of voters was certified on 31 March 2026, after an online registration portal and tablet voter-tagging debuted in 2025. The provisional register went out for inspection from 27 January to 13 February 2026 under section 8(1) of the Elections Act (gazette), and the chief registration officer certified the register on 31 March 2026, with certified copies distributed to eight political parties (certification). The Commission's own 2025 report records 73,627 voters certified in March 2025, the register reopened on 14 October 2025 for 1,597 post-election transactions to the end of the year, and an online registration portal and tablet-based voter tagging deployed for the September and October 2025 elections (report). The 2026 certified total is not stated in what is held. Online voter registration is not permitted by law; an elector may check the roll by sending the national identity number to a short code (questions). The Elections Act carries the certification provisions behind the annual 31 March certification (Act).	MOVEMENT
Sierra Leone	Voter registration is under review, with a UNDP feasibility study published in December 2025. Registration is conducted under the Public Elections Act 2022 (Act). A feasibility study on voter registration, with analysis and recommendations, was published in December 2025 (study), and the tripartite technical sub-committee engaged the Electoral Commission in February 2026 on constitutional reform and on implementing the tripartite recommendations (engagement). No registered-voter figure, no decision on the study's recommendations and no link between the electoral roll and the national identity register is held. The 2023 roll was drawn from the civil register and closed at 3,374,258 electors, with photograph quality judged inadequate in 55 per cent of polling stations observed (final report).	MOVEMENT
Somalia	Nearly a million voters were registered biometrically across Mogadishu in the city's first registration in more than 55 years. The electoral commission presented digital voter registration equipment in March 2025 (equipment). The exercise itself was the first held in Mogadishu in more than 55 years, run by the National Independent Electoral and Boundaries Commission on biometric fingerprint capture with digital scanners, and the commission announced nearly a million voters registered across the city's 16 districts (paper). A poll of Mogadishu residents found 29 per cent of those registered saying they had been registered without their consent (paper). No relationship between the roll and the national identity register is published, and the registration total is the commission's own.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
South Africa	Voter registration opened inside a messaging platform on 4 August 2026 and carried 1.7m transactions over the final weekend, while candidate lists were admitted to carry unverified identity numbers. 2026-08-04 - the electoral commission launched voter registration inside a messaging platform three days before the deadline for the November local elections, running one-time-password authentication, document upload, address verification and voting-station confirmation over it. The final weekend carried 1.7m registration transactions and 291,016 first-time registrations, of which the online portal alone carried 238,000, and 46% of new registrations were by people under 29. 2026-09-08 - at the other end of the same election, the governing party's secretary-general admitted that some branch-submitted candidate lists carried inaccurate and unverified identity numbers, and said an internal review of the nomination process had begun. 2026-09-11 - the commission's audit trail shows no system activity in two of the six disputed councils in the final two hours, and 2,274 candidates from 45 parties captured but never submitted, against the party's account of technical failure. 2026-09-23 - the party had lost its court challenge over the nomination platform, and the commission said it had concluded end-to-end testing of its results system, with parties to test it through their own experts from 5 to 12 October 2026. 2026-10-06 - the electoral commission opened its results system to audit by party-designated experts, after an independent external audit.	MIXED enrolment through a messaging platform delivered at scale while candidate nomination surfaced unverified identity numbers
South Sudan	An election date of 22 December 2026 was set with registration to follow; as at August it had not begun. The National Elections Act 2012 requires the Commission to prepare, revise, update, approve and maintain the General Electoral Register (Act). The Commission announced 22 December 2026 as the election date and said a nationwide registration exercise, expected to take about a month, would follow (date). After assessment missions across all ten states and the three administrative areas, it said in August 2026 that registration was expected to begin soon (status). A month of registration, four months before the poll, and it had not started. No register of any size exists to update.	MOVEMENT
Sudan	The National Elections Act 2008 still founds the general electoral register, and no operational post-2023 register was found. The Act establishes the general electoral register and the commission that prepares, revises, approves and keeps it, repealing the 1998 statute (Act). No authoritative evidence of an operational register after 2023 was located. The war and the absence of elections leave this an operative but dormant framework. That matters for more than voting: an electoral register is one of the few population-wide datasets a state maintains independently of the civil registry, and Sudan's has not been refreshed.	NO CHANGE
Tanzania	A permanent national register was created by the 2024 elections act and carried 37,647,235 voters in 2025. The 2024 elections act establishes the permanent national voters' register alongside a preliminary register, repealing the 1985 and 1979 election laws. The electoral commission announced receipt of Zanzibar's finalised figures, reconciling the national register at 37,647,235 ahead of the 2025 general election. Its director of elections had earlier explained the register's growth as about 3,113,931 previously eligible but unregistered people now registered, answering an opposition party's dispute over the numbers. No audit of the register, and no statement of whether it draws on the national identity register, is held.	MOVEMENT
Togo	The electoral register was revised nationwide over two weeks in April 2025 under a presidential decree. The revision ran 7 to 23 April 2025 (revision). It is a register separate from the identity agency's system, and the two must never be summed. Nothing on the record connects the six million identity numbers to electoral registration, and no source states whether the two will be reconciled.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Tunisia	The electoral authority holds and permanently updates the register of electors under its founding organic law, with nothing published on its size or upkeep. The electoral authority's own account of its duties states that it holds and permanently updates the register of electors and finalises and publishes the electoral lists for each election, under its founding organic law of December 2012 as modified by a decree-law of April 2022. Nothing beyond the mandate is held: no registration count, no update cycle, no audit, and no statement of how the register relates to the civil register or the citizen unique identifier.	NO CHANGE
Uganda	A statutory instrument made biometric verification compulsory at every polling station, and on polling day the commission directed a fallback to the printed register. 2025-12 - the commission's chairperson confirmed that use of the biometric voter verification kit during polling is now mandatory, buttressed by a statutory instrument signed by the justice minister, and warned that unauthorised access, hosting, use or distribution of voter registration data is an offence. 2025-12 - the regulations were made as Statutory Instrument 98 of 2025. 2026-01 - on polling day the commission issued guidance that where a verification kit failed to start, voting should commence immediately using the printed National Voters Register, after reports that voting had not begun at some stations. A requirement introduced in December and suspended in practice in January is the whole finding. No count of kits that failed, stations affected, or voters verified biometrically has been published.	MIXED biometric verification made compulsory and then fell back to paper on the day
Zambia	The final register was certified at 8,786,300 voters with polling-station detail across 13,529 stations, after 1,615,922 were added. 2026-03-06 — a ministerial statement reported a 48-day mass registration exercise that added 1,615,922 new voters, bringing the provisional register to 8,861,918, followed by inspection and biometric verification. 2026-05-02 — the commission announced certification of the register for the general election on 4 May. 2026-05-08 — the final register was published at 8,786,300 registered voters with polling-station-level detail across 13,529 polling stations. The difference between the provisional register and the certified one is what inspection and biometric verification removed, and neither account explains it — which for an electoral register is the thing a reader most wants explained.	MOVEMENT
Zimbabwe	A third constitutional amendment on the voters roll has begun implementation, transferring the roll to the registrar-general — the office that determines identity and vital status would also determine the electorate. The justice minister told the Senate implementation had begun, with remaining work described as administrative rather than legislative (amendment, transfer). The office that determines identity and vital status would also determine the electorate. That is the finding, and the ledger states it directly rather than leaving it to inference. It lands in a unit where the responsible minister says he is unaware of any identity-document backlog and where the national digital identity has never started.	MOVEMENT

Tax register

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	Tax data integration runs on the revenue platform, beside an electronic commercial register publishing statistics. The register itself is not counted, and the systems around it are working. Tax data integration runs on the revenue administration's platform, and the electronic commercial register publishes registration statistics — the nearest thing on the repository to a measure of how many economic actors are on record. Two adjacent registers were reorganised or built in the window: the investment promotion agency by decree in April 2026, and an economic information system for small and medium enterprises. No taxpayer count, filing rate or compliance figure is published. 2026-09-09 - the president ordered the investor single window live by the end of September, with investment procedures digitised across tax, state property and customs.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Angola	More than 50,000 taxpayers had joined electronic invoicing by August 2026, on a taxpayer number governed by a 2021 decree. The register's legal basis is the 2021 decree establishing the legal regime of the taxpayer identification number, with procedures set out in the tax offices' 2026 procedures manual. What moved is what the register is used for. Mandatory electronic invoicing came into force in January 2026 after a postponement, and by August more than 50,000 taxpayers had joined it. The authority also began serving its compliance certificate to other state bodies. No total registration count is published.	MOVEMENT
Benin	The Identifiant Fiscal Unique has been instituted since Decret 2017-215 of 10 April 2017. Decret 2017-215 of 10 April 2017 institutes the Identifiant Fiscal Unique, and the tax directorate deployed the SIGTAS system from March 2018. No registered-taxpayer count under the identifier is held, and nothing states whether it is keyed to the national register of natural persons.	NO CHANGE a standing position the repository holds for the first time
Botswana	The Tax Administration Act 2026 was assented in June, carrying a registration framework the previous law spread across several statutes. 2026-06-29 — the Act was assented, its 128 sections covering taxpayer registration, assessment and collection. 2026-05-29 — regulations under the VAT Act set the registration and compliance machinery for foreign suppliers of remote services. 2026-02-26 — the finance ministry described a modernisation programme covering real-time taxpayer accounts, automated risk scoring and third-party data integration, and an electronic VAT invoicing solution. No registered-taxpayer count is published.	MOVEMENT
Burkina Faso	Every user of the tax administration holds a financial identifier recorded in the taxpayer register and required for banking, customs and public procurement; the register now issues the tax clearance certificate online within 48 hours. The register is the identifier: an eight-digit-plus-letter number assigned to every user of the tax administration and recorded in the taxpayer register, a prerequisite for banking, customs and public-procurement transactions. No count of registered taxpayers is published. 2025-06 - the register was extended into document delivery: a platform for online delivery of administrative tax documents starting with the tax clearance certificate within 48 hours, with those requests exclusively online from 1 September 2025. 2026-01-06 - certified electronic invoicing was launched. The systems behind it are to be interconnected over the state network under the 2025-2027 operational plan, which also sets an action to upgrade the interface with the national statistics system.	MOVEMENT
Burundi	Registration exists but is not integrated with filing and payment, and the value-added tax threshold was reset from 1 July 2026. An international assessment records the register's position: taxpayer registration exists but is not yet integrated with the filing and payment modules, the revenue platform is phased to full operation around mid-2027, and about 13,000 electronic billing machines are deployed against a 40,000 target. 2026-07-01 — the value-added tax threshold was set at 25,000,000 BIF of taxable turnover under a statute of 30 June 2026, with invoicing from 1 July and monthly declaration by the fifteenth. A threshold change is a change in who the register must carry, which is the register question rather than the platform question, and no count of taxpayers on either side of it is published.	MOVEMENT
Cameroon	Registration moved to a new application mandatory from 1 July 2026, with re-registration required by 31 December, over a base of 400,000 registered taxpayers in 2024. The repository is thin and growing: 400,000 registered taxpayers in 2024, a fivefold rise in a decade, with individuals contributing a historically low 7 per cent of tax receipts before 2024 against 17 per cent in comparable economies. 2026-07-01 - the registration front end was replaced: the old platform closed on 30 June 2026, the new application became mandatory from 1 July, registration carries a fee of FCFA 1,000, and existing taxpayers have until 31 December 2026 to re-register. A compulsory re-registration is the sharpest test of a register's quality, and no result from it is published. The core system behind it is also being replaced: an integrated tax and duty management system was contracted on 10 April 2026 to a four-firm consortium at EUR 5.997m excluding tax, and the tax directorate's own 2026-2028 strategic plan sits over both.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cape Verde	The tax and customs authority's first governing board was appointed with effect from 1 August 2026. The resolution approved in council on 29 July 2026 appoints the members of the authority's governing board with effect from 1 August, which is the body constituted rather than the register moved. No taxpayer count or registration series is published against it.	MOVEMENT
Central African Republic	The first structured official report evaluating the tax and customs measures describes the online tax platform as the operative system. 2026-05 - the first structured official report evaluating the measures describes the online tax platform alongside the customs system as the operative digitalisation. The platform was launched in 2023 with European funding for online enrolment, declaration and payment. 2025-10 - the fiscal risk statement accompanying the budget bill records tax administration weaknesses among five risk categories to revenue mobilisation. No taxpayer count, enrolment figure or online-filing share is published, so the register behind the platform cannot be sized.	MOVEMENT
Chad	The tax platform runs registration, filing and payment online, and protocols now link tax, treasury, customs and the central bank. The tax directorate's platform covers tele-registration, tele-declaration and tele-payment, alongside a mobile application and a normalised electronic invoicing system (platform). A protocol signed on 1 April 2026 with the treasury provides automated real-time exchange of tax issuances, receipts, arrears and payments (protocol), extended on 21 July 2026 to customs and the central bank (extension). No taxpayer count is published on the platform, so the register's size is not established. The monetary fund's 2024 assessment records the standardised electronic invoice as a first in the regional community and the taxpayer register as still incomplete (report). Online filing became mandatory from January 2024 and the identification number is no longer conditional on taxes being paid (summary).	MOVEMENT
Comoros	The general tax code builds a declarative system around a single taxpayer file; no registration count is on file. The code, adopted by loi n 11-07 of 3 May 2011 and promulgated by decret n 11-151 of 23 July 2011, established a modern declarative tax system built around a single taxpayer file, following a refoundation of the tax system worked through in 2009 and 2010. What the repository holds is the code's landing page, not its operative articles, so what the file must contain and who must be on it cannot be read from it. 2026-01 - the current fund review names mobilising domestic revenue through tax and customs administration reforms among its key policy priorities. Fifteen years after the code, no registration count, coverage estimate or cleansing exercise has been published.	NO CHANGE a single taxpayer file provided for since 2011 with no coverage figure ever published
Congo	The unique identification number is the compulsory taxpayer registration, and the 2026 finance law rests on it. The founding decree makes the unique identification number the compulsory registration of every taxpayer, attributed by the tax directorate. 2026-01-05 — the 2026 finance law was published. The ledger separately carries a tax filing portal in service. No registered-taxpayer count is published.	MOVEMENT
Cote d'Ivoire	The taxpayer register gained statutory footing in 2025 and paper filing ends for its smaller tiers from 2027. Before 2025 the administration registered taxpayers by attributing an account number and attaching them to a managing office, an established practice not expressly provided for in law and so contestable; the 2025 annexe fiscale gives it statutory footing, requiring every taxpayer carrying on a professional activity, lucrative or not, to be attached to the competent office after an account number is issued. 2025-12-19 - the following year's annexe fiscale ends paper filing for the smaller tiers: microenterprise taxpayers must transmit financial statements and every annexed document electronically only from 1 January 2027, and taxpayers under the entrepreneur state tax from 1 January 2028, on a penalty of FCFA 1,000,000 rising by FCFA 100,000 for each further month of delay; the obligation already applied to the large and medium enterprise directorates. No register size, coverage rate or filing-compliance figure is published for any tier.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Djibouti	No taxpayer register is held; no returns were filed and paid on time in January 2026 through the integrated tax system that would carry one. The register question turns on a system that does not run. The share of returns filed and paid through the integrated tax administration system stood at 0% in January 2026 against a 70% target for 2029, with the follow-on project's effectiveness extended a third time to 9 March 2026. No taxpayer count, registration figure or register instrument is published. The authorities' plan is to finalise digitalisation and integration of information systems across tax administrations over 2026-30.	STALLED the system that would hold the register is not operational
DR Congo	The tax number instituted in 2003 is the sole identifier for tax purposes; the directorate confirmed in December 2025 that registration is free and online, denying claims it was being sold. The founding decree institutes the number and makes it the sole identifier for tax purposes, delegating the conditions of its attribution to ministerial order. It underlies the general taxpayer register and today's online registration service. 2025-12-02 - the tax directorate issued a communique confirming that registration is free, transparent and accessible, directing applicants to the online platform or to tax offices, and formally denying circulating claims that the number was being sold. A registry integrity statement of that kind is itself evidence of what was happening at the counter. The register's role widened at the same moment: standardised electronic invoicing became mandatory from 1 December 2025 for firms liable to value-added tax, carrying a QR code and the tax number, which extends the register from identification to transaction-level traceability. No count of registered taxpayers is published. 2026-10-09 - the tax directorate began nationwide checks of the standardised invoice on 5 October 2026, after the moratorium ended.	MOVEMENT
Egypt	A new tax work automation system began operating from October 2025, on a unified registration number. The statutory basis is the 2020 unified tax procedures law, whose article 26 assigns every taxpayer a single unified tax registration number across all taxes. 2025-10-01 - a new tax work automation system began operating at the first Cairo office. 2025-11-12 - a finance ministry decree opened application to a simplified regime for businesses under EGP 20m of annual turnover, and a national electronic receipt specification for education-service returns was issued in August 2026. No register size or filing-compliance figure is published.	MOVEMENT
Equatorial Guinea	The revenue system's registration, filing and audit modules were detailed in May 2026 as the route to a reliable taxpayer roll. The system was launched with development bank finance in October 2023, contracted to a supplier and due in the first quarter of 2026. In May 2026, after that date, the finance ministry was still setting out its tax registration, filing and audit modules. A single annual trade licence system opened training in February with a 40 per cent tax cut pitched to draw informal traders onto the register, and a draft decree would recode the tax identification number itself.	MOVEMENT
Eritrea	The system that would hold it reached 67.21 per cent disbursement with hardware and software installed. No register size is published at any date. The taxpayer register is being built rather than counted. The financier's supervision report records software and hardware delivered and installed, the first release's requirements specification complete, and disbursement at 67.21 per cent as of June 2026, with implementation progress rated satisfactory against a project put to tender in September 2023. What no source states is how many taxpayers are registered, at this or any earlier date, or what proportion of economic activity the register reaches. Until the first release runs there is no register to measure, and the repository carries the project's progress in place of the thing it will produce.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Eswatini	Taxpayer identification number registration is free but paper-based, on a form collected from an office or downloaded, with twelve supporting documents. The procedure is free and administered by the revenue service under the value added tax statute, with the form collected from an office or downloaded and twelve supporting documents required, from a certified certificate of incorporation to evidence of a fixed place of business and the capacity to keep accounting records (procedure). There is no online submission route, which sits against company registration in the same ministry running through the government portal (company). No count of registered taxpayers is published, and the underlying forms the procedure page links carry dates of April 2020.	NO CHANGE
Ethiopia	A directive materially widened who must enter the value-added tax register, with a 30-day window for those already affected (directive). Directive 1104/2025, issued by the finance ministry in September 2025 under the value-added tax proclamation, expanded who must register: Category A taxpayers, mandatory and voluntary book-keepers, businesses with turnover above two million birr, and specified professional-service providers below that threshold, with a 30-day registration window for existing affected taxpayers (directive). The statutory basis is the 2016 federal tax administration proclamation, which requires taxpayer registration and establishes the taxpayer identification number (proclamation). The repository holds no count of registered taxpayers before or after the widening, so the size of the change is not measurable from it.	MOVEMENT
Gabon	Registration is compulsory within two months of starting a taxable activity, and the register is being widened by a 45-day field census running 22 June to 11 August 2026. The rule constituting the register is in the tax code: every natural or legal person carrying on a taxable activity must be registered with the tax administration within two months of starting activity, at the territorially competent tax centre, and changes of director, transfer of the business, change of place of activity and cessation must be declared within fifteen days. 2026-06-22 - the register is being widened by field operation rather than by online enrolment alone: a 45-day campaign across the capital region to census economic activity, register taxpayers not yet on the file, tax and recover from them, and enrol them on the online platform. That a census is needed is itself the finding about the register's completeness. No count of registered taxpayers is published at either end, so the campaign's effect cannot be measured.	MOVEMENT
Gambia	The tax administration system was re-awarded at US$7.27m after the first supplier went bankrupt. The joint press release of October 2025 records the original award collapsing in the supplier's bankruptcy and a replacement consortium selected at US$7.27m after negotiation. That is a two-year delay to the register's modernisation, stated by the two agencies themselves. Around it the revenue stack is running: excise stamps are in the authority's own March 2026 inventory, and a four-party memorandum of April 2026 is to build telecom revenue assurance, with no go-live date or cost given. 2025-10-07 - the tax system moved from planned to contracted: a US$7.27m, 24-month contract with a consortium was signed on 7 October 2025 on lender funding, and the revenue authority has since briefed manufacturers ahead of rollout and pledged fully online filing. No go-live date, module list or taxpayer-coverage figure is published.	MOVEMENT
Ghana	The revenue authority maintains the taxpayer identification number system under the 2016 revenue administration Act; no register size is published. The authority's own page is the operative description: the taxpayer identification number system is maintained under sections 10 to 12 of the revenue administration Act, which authorise the commissioner-general to keep it. It carries no register size, no coverage rate and no active-taxpayer count. What is moving is the system the register sits in rather than the register itself: the tax administration system's pilot had more than 400 taxpayers onboarded at one office by June 2026, with a second phase to integrate the companies registrar, the social security trust and the identification authority. That integration is where a register's completeness would be tested, and it has not happened yet.	NO CHANGE the register's statutory basis is stated and no size or coverage figure is published

COUNTRY	DEVELOPMENTS	PROGRESS
Guinea	The register exists and is only visible through one published extract: fiscally active taxpayers for November 2019, carrying both the permanent and the legacy identification numbers. The extract is the register rather than a description of it: one row per taxpayer with the permanent tax identification number, the older number, the business name, the managing section and the activity code. It shows the coexistence of the two numbering schemes, rows with a blank legacy number and an unidentified management category — the structure of the file, including its untidiness. It is an extract of fiscally active taxpayers rather than the whole register, the row count is not a national taxpayer count, and it is six years old. The core system has moved on since: the directorate published a performance analysis covering 2020 to September 2025 and presented its successor system. No count of registered taxpayers has been published under either.	NO CHANGE a standing position the repository holds for the first time
Guinea-Bissau	The tax identification number is issued solely through the payment platform from December 2025, with a taxpayer census as a reform action. The revenue directorate's order of December 2025 bans the older financial management system and makes the payment platform the sole channel for producing and issuing the tax identification number. The register behind it is to be rebuilt: the fund's eleventh review confirms the revenue administration platform and a taxpayer census among the reform actions. No taxpayer count is published.	MOVEMENT
Kenya	The revenue authority's online tax service carries the verification checkers the tax identification number and the electronic invoicing regime run on. The service carries verification checkers for the personal identification number, tax compliance certificates, exemptions and excise licences, withholding certificates and agents, application status, and the control-unit serial and invoice numbers that the electronic invoicing regime turns on (service). The held capture is the platform's public landing page. No registered-taxpayer count, filing volume or availability figure is published on it, so the register's size is not established.	NO CHANGE
Lesotho	The taxpayer register is now fed by mandatory structured electronic transaction data. 2001 — section 7(1) of the Revenue Authority Act authorises systems for taxpayer identification. 2026-03-27 — the e-invoicing regulations legally establish structured electronic transaction data in taxpayer records. 2026-02-10 — a bank payment gateway with automatic reconciliation went live. No registered-taxpayer count is published.	MOVEMENT
Liberia	165,608 registered taxpayers in 2024, segmented, on a tax system that replaced its predecessor in December 2023. The resource mobilisation strategy gives the register as 165,608 taxpayers in 2024 across large, medium, government and non-profit, natural-resource, small and micro and real-property segments, with 7,662 inactive, and records the integrated tax administration system replacing its predecessor for transaction processing from 1 December 2023. That system is recorded as integrated with six systems including the identity registry, which is the only working data exchange the repository holds against a service bus carrying none.	MOVEMENT
Libya	The tax administration was entirely paper-based with no register system in August 2024; a unified tax system has since gone live. The fund's technical assistance report of August 2024 is blunt: Libya's tax administration ran entirely on paper with no register system behind it. The unified tax system carried on the ledger since December 2025 is the answer to that finding, and the electronic revenue collection mandate of March 2026 extends the same logic to collection. No taxpayer count has been published against either.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Madagascar	A beneficial owners register launched in June 2026 moved into operation in September, when four data-sharing protocols were signed. A tax administration diagnostic mission in October 2022 assessed the integrity of the taxpayer register, the taxpayer number and its online service, the second such assessment (diagnostic). A new version of the online tax declaration service was released alongside the integrated administration system in October 2025 (release). A central register of beneficial owners was launched in June 2026 under the transparency and domestic revenue agenda, against illicit financial flows estimated at USD 330 million in 2024 (launch). The diagnostic's own register-integrity scores are not in the repository; only its contents and preface were captured. 2026-09-18 - the tax directorate signed four protocols to cross-match the beneficial-owner register with the trade and companies register, the anti-corruption bureau, the economic development board and the notaries, which the finance ministry presents as the register's move from build to operation.	MOVEMENT
Malawi	About 8,000 landlords were registered for rental income tax through property-registration exercises across low- and high-density areas. The drive was announced in February 2026, starting in the three main cities with data collectors recruited (announcement), and about 8,000 landlords had registered by July (progress). It is a registry drive riding on a revenue platform rather than a land registry, which is the only way a property register is being built in this repository.	MOVEMENT
Mali	The revenue directorate has published its list of active taxpayers online since 2019 and opened three filing options in April 2026. No filing share, taxpayer count or processing time is published for the three options, and the newest annual report held is for 2022 (report, options). A digital addressing application was presented to the same directorate in January 2026 and is forthcoming rather than in service (address).	MOVEMENT
Mauritania	The tax procedures book carries the tax identification number and the obligations attaching to it. The common provisions of the procedures book are what the repository holds on the identifier (provisions). No registered-taxpayer count, coverage figure or link to the business or population registers is published, so the identifier exists in law and its reach is unmeasured.	NO CHANGE
Mauritius	The register extended in two directions inside a year: a changed VAT threshold and a tax agent registration regime. The register is maintained under the Income Tax Act, in force since July 1996 (Act). The compulsory value-added tax registration threshold changed following the Finance Act, notified in September 2025 (communique). A registration regime opened for tax agents, with eligibility, procedure and obligations published in June 2026 (guide). No registered-taxpayer count is published in the sources held.	MOVEMENT
Morocco	The tax directorate publishes two online routes to a tax identifier, against a 24.6 per cent tax take. The directorate's live procedure page shows two online routes to obtaining a Moroccan tax identifier, which is registration as a service rather than a counter visit. What the register produces is measured: the fund attributes a tax take of 24.6 per cent of output in 2025 to the full digitalisation of collection. The directorate is also piloting artificial-intelligence property valuation in two cities, which uses the register rather than extending it. The directorate identified 136,165 new taxpayers in 2023, 54.2 per cent of them individual professionals and 45.8 per cent legal entities; no later annual count is held. An IMF-led assessment of November 2025 found 18 of 32 indicators improved on 2018 while the register's relevance and accuracy stayed at D, held back by slow deactivation of inactive taxpayers and no online updating by users.	MOVEMENT
Mozambique	A nine-digit single taxpayer identification number assigned by the revenue authority is required of natural and legal persons for all income including customs. The number is assigned by the revenue authority to natural and legal persons regardless of income level and is required for all income including customs, obtained at a tax office against an identity document, passport, birth certificate, voter registration card or driving licence (guidance). The held record is the revenue authority's own guidance page, retrieved from a web archive after the live site failed to answer. No register size, issuance figure or linkage to the national identity system is published.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Namibia	The register reached 1.0 million taxpayers by March 2025 and a trader identification number became mandatory on every customs declaration from April 2026. 1.0 million taxpayers were registered at 31 March 2025, of whom 575,136 were electronic filers, on 1.04 million active accounts (report); the year before the agency recorded 477,164 electronic filers (2023/24). From 1 April 2026 a trader identification number is required on every import and export declaration, joining the customs register to the taxpayer register (notice). The amnesty programme added 28,157 taxpayers by 30 September 2025 (amnesty). One million registered taxpayers in a population of about three million. Registration is not the constraint on this repository; nothing published says how many of the 1.04 million accounts are active in the sense of filing.	MOVEMENT
Niger	A nationwide rental-housing census and regularisation drive was announced in July 2026 to broaden taxpayer identification. A ministry communiqué of 27 July 2026 announced a nationwide census of rental housing and a regularisation drive for landlords, sub-lessors and second-home owners under the general tax code, to broaden identification of taxable property owners; the communiqué is held only in syndicated copies, not on a government site. The register itself is long-standing: the tax authority describes the taxpayer identification number as unique, exclusive and invariable, issued under a 2023 implementing order that sets out enrolment dossiers for individuals, companies and other filers. No public count of registered taxpayers, and no open register, is on file.	MOVEMENT
Nigeria	A central tax identification portal went live on 1 January 2026, linking tax identifiers to the national identification number. The portal went live nationwide on 1 January 2026, run jointly by the revenue board and the revenue service, linking tax identifiers to the national identification number for individuals and to corporate registration numbers for businesses, and replacing previously issued taxpayer identification numbers. The revenue service briefed federal bodies in July 2026 on the platform that replaced its predecessor and consolidates taxpayer registration, returns filing, payment and communications on one system. The statutory duty is the Tax Administration Act 2025. No register size, coverage figure or registration outturn is published under any of them.	MOVEMENT
Rwanda	The 2023 tax procedures law gives the register its legal basis through a registration duty and a taxpayer identification number. The statute enacted on 31 March 2023 establishes, in its second chapter, the taxpayer registration duty and the taxpayer identification number (law). The order of April 2026 extends the register's reach into online payment: financial institutions facilitating them must integrate with the tax administration's systems (order). No count of registered taxpayers is published in anything the repository holds, so the register's coverage cannot be stated.	MOVEMENT
Sao Tome and Principe	The taxpayer identifier is required throughout company registration, and a February 2026 memorandum created a permanent data-sharing mechanism with the tourism directorate. The company window requires the taxpayer card of the applicant and the identifier of shareholders and companies, and a negative certificate of tax debt to dissolve (window), which is the identifier in operational use across another register. The memorandum creates a permanent mechanism for sharing data on licensed tourism and hospitality businesses, cross-checking that firms are properly registered and tax-compliant and reinforcing the obligation to issue electronic invoices (memorandum). The credit facility review reports a domestic revenue mobilisation strategy covering VAT administration, large-taxpayer follow-up and digital tax systems (review). No register size, coverage of the informal economy or compliance rate is published.	MOVEMENT
Senegal	The statistics agency publishes a quarterly series of new registrations to the enterprise register that issues the taxpayer identifier. The bulletin records 26,685 new registrations in the fourth quarter of 2025, up 32.0% on the previous quarter and down 1.1% year on year, 76.0% of them sole traders. It is a flow series only: no stock total for the register and no figure for the tax directorate's own taxpayer file is published in it. The register the identifier attaches to is administered alongside the tax directorate's five tele-procedure platforms, none of which publishes a registered-taxpayer count.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Seychelles	The 2022 business registration regulations govern the taxpayer register and TIN issuance; lodgement acknowledgment went digital in April 2026. The regulations, in force from 1 January 2023, govern registration with the revenue commission, the issuing of tax identification numbers and active, suspended, dormant and deregistered taxpayer status (regulations). From 1 April 2026 taxpayers receive a digital acknowledgment notice on lodgement in place of a paper assessment letter (notice), under regulations of November 2025 giving electronic filing its legal basis (regulations). No count of registered taxpayers, or of returns filed electronically, is published.	MOVEMENT
Sierra Leone	The Finance Act 2026 extends the tax register to suppliers of digital services with no physical presence in the country. The register was constituted by the Finance Act 2020, which amended the Income Tax Act 2000 to require the Commissioner-General to keep a register of all persons liable to be assessed and to assign each a system-generated Tax Identification Number (2020 Act). The Finance Act 2026, in operation from 1 January 2026, brings within charge a person making a taxable supply of digital services to consumers in Sierra Leone whether or not they have a physical presence, and requires such a supplier to appoint a resident representative (2026 Act). The ground was laid in 2024, when the Finance Act made income from digital products and services supplied to consumers in Sierra Leone, by residents and non-residents alike, Sierra Leone-source income taxable in full. No registered-taxpayer count is published, and no enforcement against a non-resident digital supplier is on record.	MOVEMENT
Somalia	Registrations rose by 48,197 between July 2024 and August 2025, a 76 per cent increase on a corrected baseline of 62,948. The mid-term review recorded in the November 2025 status report puts the corrected baseline at 62,948 registered taxpayers across the federal government and member states at June 2024, rising by 48,197 new registrations to August 2025, excluding one member state (report). The same report notes the integrated tax administration system contracted after the review, with online filing by large taxpayers still at nil. The operative framework is the income tax manual of November 2025, implementing the 2025 Act that replaced the 1966 direct taxation law, setting registration on a single form and a taxpayer number (manual).	MOVEMENT
South Africa	The Tax Administration Act's 2026 amendment enables a simplified express customs regime and a voluntary electronic value-added-tax reporting system, and a reference-number enquiry service is documented. The Tax Administration Act of 2011 is the register's statutory basis. 2026-04-01 — an amendment Act was enacted creating the enabling framework for a simplified customs regime for door-to-door express imports and exports and for a voluntary value-added-tax electronic reporting system. Voluntary is the operative word: the reporting system the amendment enables carries no obligation, no commencement date and no uptake figure on the record. 2026-08-14 — a self-service channel for retrieving and verifying a taxpayer reference number is documented in an external guide, a service guide rather than a service report, with no usage figure published.	MOVEMENT
South Sudan	A presidential order routes all government revenue through the electronic collection system, and 1,897 of 83,000 registered taxpayers filed on time. The Taxation Act 2009 requires the revenue authority to run a registration system giving each taxpayer a unique identifying number, with registration mandatory and a certificate issued (Act). Presidential Order No. 35 of 2025, signed 3 December 2025, requires every government institution to collect and remit public revenue exclusively through the authority's electronic collection system, and its enforcement was endorsed in March 2026 (order). The domestic tax division gave taxpayers until 15 May 2026 to clear arrears and warned that unregistered businesses without an identification number are acting illegally (notice). The denominator arrived in May 2026. The authority put the register at 83,000 taxpayers, 21,000 of them organisations and 62,000 individuals, of whom 1,897 filed returns within the 15-day statutory deadline (briefing). It put collections at 157 billion pounds by April 2026 against below 5 billion before digital collection began in 2021 (briefing).	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sudan	The register runs on a single tax identification number with monthly commercial-register feeds, and an expansion initiative opened in July 2026. The chamber's own procedural statement sets mandatory registration within 30 days, a single tax identification number covering all tax types including customs, a per-taxpayer account kept for ten years, and monthly data sharing from the commercial register (procedures). An initiative launched in July 2026, backed by an April ministerial decision forming a cross-agency committee, aims to close the war-widened gap between economic activity and registered taxpayers, citing an estimate that over 60 per cent of activity sits outside the net (initiative). The electronic invoice system went live from the start of May, linking invoice data to taxpayer accounts (launch).	MOVEMENT
Tanzania	An integrated revenue administration system went live in February 2026, and the budget commits to registering all local traders. The tax administration statute requires taxpayer registration and identifier issuance linked to the national identification number. The revenue authority completed its integrated domestic revenue administration system with pre-launch verification of migrated taxpayer records ahead of a 9 February 2026 go-live. The 2026/27 budget commits the authority to integrate that system with the property register for direct data exchange, to apply artificial intelligence, big data and blockchain, and to register buildings, owners' identity and tax details and all local traders. No registered-taxpayer count and no migration-error rate is published against any of it.	MOVEMENT
Togo	The register reached 100,292 taxpayers for 2024 and became a published verification service in April 2026. The 2024 performance report puts the taxpayer population at 100,292, of whom 73,239 active, the active population up 24.0 per cent on end-2023, with 95,535 new taxpayers registered in the year and 30,459 individual numbers issued online, 38.0 per cent of those created. On 30 April 2026 the updated register of active taxpayers was put online, with operators directed to check a supplier's active status before transacting under article 196 of the general tax code — a change in what the register does rather than in its size. A communique of 29 January 2026 requires an account on the financial-statements single window before electronic filing.	MOVEMENT
Tunisia	Tax-file and transfer-pricing filings became exclusively electronic in March 2026, on a register whose identifier procedure dates from 2008. The finance ministry's own service description has the tax identifier granted by the territorially competent tax-control office after a declaration of existence, under article 56 of the income and corporate tax code and a decree of January 2008. The tax administration made filing of the tax file and transfer-pricing declarations exclusively electronic through its TEJ platform in March 2026, and required taxpayers to regularise omitted filings and update legal-representative identity data on it. A February 2026 ministerial order separately mandates an electronic tax identity card sealed by the national certification agency and issued within one working day through the business register. No count of registered taxpayers or of filings made electronically is published. 2026-09 - the platform added real-time filing status, delegated access and supplier tax checks for public enterprises.	MOVEMENT
Uganda	The taxpayer identifier is being replaced by the national identification or business registration number from 1 July 2025, with a single unified identifier under consideration. 2026-03 - the revenue authority reported government considering a single unified number merging the tax, business registration and national identification numbers, to improve efficiency and curb fraud, across three separate registries. 2026-05 - the authority notified taxpayers that section 4 of the tax procedures code requires the tax identification number to be replaced by the national identification number for individuals or the business registration number for entities from 1 July 2025, and that registration details must be updated accordingly, with portal access controlled on that basis. No count of taxpayers who have updated, and no deadline or sanction for those who have not, is published - so how far the register has actually moved onto the new identifier is not on record. 2026-09-07 - what was recorded as replacement is now described as interoperability: the identification number is to be the single index with the taxpayer number retained rather than abolished, and the revenue authority states the transition will not automatically make every citizen a taxpayer. 2026-09-30 - the revenue authority set out a two-stage move to the national identification number as the tax identifier, with consent given by fingerprint at a service point.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Zambia	Register holders rose to 6,571,699 while active tax accounts rose only from 379,985 to 388,779. A 2023 amendment made obtaining a taxpayer identification number a statutory obligation, effective 1 January 2024. 2026-07 — the revenue authority's annual report shows register holders growing from 6,015,533 in 2024 to 6,571,699 in 2025, while active tax accounts rose only from 379,985 to 388,779. Six per cent of the register is active. A statutory registration obligation produces a register, and this is what a register produced that way looks like. 2025-10 — an amendment bill enabling information exchange among revenue authority divisions and with the entities it establishes was tabled, commencing 1 January 2026, which is the reform aimed at the gap.	MIXED the register grew while active accounts barely moved
Zimbabwe	The tax register runs on a platform fully implemented in 2024; a new statutory registration category took effect in January 2026 and a compulsory master data update closed in April. The revenue authority's tax and revenue management system reached full implementation with a fifth-module release on 1 October 2024, adding case management, debt management, investigations and audit and risk and compliance, with taxpayer-facing services through a self-service portal (notice); a second phase integrating third-party stakeholders is being readied. The Finance Act 2025 inserted a new Part IIIB into the Income Tax Act with effect from 1 January 2026, creating a compulsory registration category of registrable proprietors, the owners, lessees and sub-lessees of premises let to tenants liable for presumptive tax (Act). Every taxpayer was required to confirm and correct the names, contacts and business classifications held for them by 30 April 2026 (update). No registered-taxpayer count is published at any date, so neither the statutory expansion nor the cleanse can be measured.	MOVEMENT

Land register

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	About 60% of private land is not legally registered, behind an electronic land-title system whose nationwide rollout began in January 2026. The coverage figure the digital system sits on is now held: about 60% of private land carries no land title and most private land transactions are informal, while 63.8% of all private land is held in joint possession and the number of properties registered nationwide rose by 30% between 2022 and 2023. The machinery is older than the window by decades: Decree 75-74 of 1975 governs the cadastre and instituted the land register for privately owned land only, the National Agency for Cadastre was established in 1989 under the finance ministry, and a digitalised mapping system to integrate with the land title database began in 1993. The system did not exist at the window's opening. 2026-01 - its nationwide rollout began, replacing paper titles gradually with end-to-end traceability, and no coverage figure is published. No count of titles issued, parcels covered or transactions processed has followed. It is one of six registers or platforms this country put into service inside the window, all announced as live and none accompanied by a volume figure - which is the shape of the whole govtech position here.	MOVEMENT
Angola	A digital platform linking the cadastre, the tax authority and the property registry targets 40,000 properties legalised by end-2026, with no progress published since. 2026-04-17 — a digital platform linking the cadastre, the tax authority and the property registry was set a target of 40,000 properties legalised by the end of 2026, aimed at cutting duplication and enabling mortgage access. No progress figure against that target has been published in the four months since, and no source states whether the platform is in service, which agency operates it or how the three registries it links exchange data. A target with no reporting against it is the same shape of evidence as the digital transition agenda's project count: a number the government publishes about its own intentions. It is the only land or property system on this ledger.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Benin	The national cadastre records 445,695 parcels with the registration certificate mandatory for any transaction, and a land governance programme finalised its operations manual. 2026-03-26 — 445,695 parcels are registered nationally and a decree makes the cadastre registration certificate mandatory for any transaction, legalising sales without a full title but only through the platform, against 491,420 parcels across twelve communes in February 2025. The two figures are not comparable and the repository does not net them: the earlier is a commune-level count and the later a national one. What is unambiguous is the legal change — the platform is now the only lawful route to a transaction, which converts a registry into a gate. 2025-10-17 — a national land governance programme finalised its operations manual, run by the land agency with World Bank support, sitting alongside the cadastre platform rather than replacing it.	MOVEMENT
Botswana	The deeds registry remains substantially manual on a workload of 9,000 to 30,000 transactions a year, with no digitisation programme, budget line or date on the record. 2025-10-15 — the deputy registrar described a registry that is substantially manual, carrying 9,000 to 30,000 transactions a year since the 2017-18 land Acts with no added resources. Nothing has moved it since, and no digitisation programme, budget line or date appears. About 70% of the country's land is tribal land, brought into registration by the 2018 Tribal Land Act, so the workload the manual registry carries is the product of a deliberate widening of what must be registered. It is the clearest untouched administrative system in this report: every other registry described here is either being built, tested or funded, and this one is not on anybody's list.	NO CHANGE
Burkina Faso	The land and cadastre platform became the operating layer of a reformed land regime, with development now verified from satellite imagery without a site visit. Land-occupation titles have been issued online since March 2025, with a cadastral extract in a day and a definitive title in sixty. 2026-06-29 — an October 2025 law and a March 2026 decree give the platform statutory footing as the operating layer of a reformed land regime, with physical files no longer circulating between administrations and falsified titles rejected by the system. The same decree changes how development is proved: the tax administration verifies development from satellite imagery without a site visit, instructing a file in a day, and the development period is extended from five to eight years. Those two sources are the entire satellite-data holding for this country. No figure for titles or extracts actually issued through the platform is published. Beside it, the computerised mining cadastre is being modernised and expanded by its supplier under a World Bank-financed land and mining governance project, with no delivery date or contract value stated.	MOVEMENT
Burundi	Land titles are digitised, with about 123,000 holders to be secured, and a mandatory electronic-title fee drew objections on cost and deadline. Land services were digitised on an integrated platform in June 2025, and 2026-06-12 — the minister's stock-take put about 123,000 title holders as those to be secured digitally. 2026-04-01 — an ordinance making the electronic land title fee mandatory drew objections on its cost and on the shortness of its deadline. No response, revision or enforcement figure has followed. 2026-08-25 — the finance ministry's procurement plan provides BIF 2.69bn for a GNSS/CORS positioning network, a national geospatial data infrastructure and cadastre modernisation, and BIF 1.67bn for a secure network linking four land offices to a central data centre. No award is held. It is the most complete register on this ledger and the only one charging the public directly to use it. No count of titles actually converted, no processing time and no dispute figure is published.	MOVEMENT with the mandatory fee contested
Cameroon	A memorandum of 28 April 2026 covers about 200,000 land files and a digital possession certificate, while the budget line fell. 2026-04-28 - a memorandum was signed to digitise about 200,000 land files at Douala, with a digital possession certificate, and no budget, timeline or start date published. The money went the other way. The lands ministry's cadastre modernisation programme was tabled at FCFA 874,046,000 for FY2026 against FCFA 1,567,500,000 appropriated for FY2025, a 44.2% cut and below the FY2024 level, at proposed stage only. It is the only digital line outside the sector vote, so the cut is the whole of the state's own cadastre financing story.	MIXED a Douala cadastre memorandum was signed while the lands ministry's own cadastre line was cut 44.2%

COUNTRY	DEVELOPMENTS	PROGRESS
Cape Verde	LMITS is functioning and used for most land transactions on four islands. An independent evaluation published on 1 November 2022 found the Land Management, Information and Technology System functioning, integrated into the transaction process and used to process most land transactions; it was built under the US$17.5m Land Management for Investment project inside MCC's US$65.6m Cabo Verde II Compact, covering Sal, Boa Vista, Sao Vicente and Maio, and the national land management institute has continued the cadastre work since the compact closed. The territory institute runs the property cadastre as a service of its own. No national cadastral coverage figure is held, and nothing states the position on the six islands the compact did not cover.	NO CHANGE a standing position the repository holds for the first time
Central African Republic	122 tokenised plots sold for about US$38,308 by November 2025, while the cadastre carries FCFA 625,000 for the mining register and FCFA 650,000 for a petroleum database. Tokenised land concessions opened in June 2025 under presidential decree over 1,700 hectares, and 122 plots had sold for about US$38,308 by November 2025 at a fixed price of about US$314 each, with a flagged expansion to mineral rights not recorded as happening. The terms are unreconciled between the two accounts, which agree on location but not on pricing. The registry underneath has not been built. A US$1.6m agreement of April 2024 covered a second phase of public-administration digitalisation including an electronic cadastre, no cadastre delivery record is held, and the 2026 framework carries FCFA 625,000 for updating the mining cadastre and FCFA 650,000 for a petroleum database — FCFA 1,275,000 for the year between them. 2026-07-31 — a memorandum with a Gulf counterparty adds land-administration modernisation to the stated programme, with no commitment figure or governance arrangement.	MIXED land was tokenised and sold while the cadastre it would rest on has no delivery record
Chad	The 1967 land law still governs; 261 state reserves were registered in August 2026. The 1967 law is the operative instrument: registration is the procedure by which ownership is established, the titre foncier is the registered title, and custody of deeds and inscription of transfers sit with the conservateur (law); unregistered land is presumed state-owned. An interministerial committee reported 261 state reserves recovered, enumerated and registered in August 2026, the only in-window registration count found, and ordered clearance of the eighty-metre strips and the green belt within three months (committee). A joint arrete of 17 August 2026 instituted a coordination mechanism putting cadastral and technical land data in front of the judges hearing land disputes (mechanism).	MOVEMENT
Comoros	The land directorate is mandated for cadastre, digitisation and a digital land database; a new director general took it in September 2025. The decree of 2 May 2023 creates the national land and property directorate with nationwide scope and island offices, and assigns it at article 4 title registration, land conservation, cadastre and topography, the digitisation and electronic archiving of land documents, and the digital land database under the national property registration programme. 2025-09 - the president appointed a former regional director of taxes and domains as director general by decree of 19 September 2025, a large land-sector reform announced as forthcoming without its text or funding being named. A mandate and a reorganisation are not a register. Nothing states how many titles exist, how many are digitised, or whether the database has been built.	NO CHANGE a new director general over the same mandate and no digitisation figure
Congo	Registration creates a land title inscribed in the property register under the 2000 statute, and customary land was recognised by order at Oyo. The 2000 land property statute is the founding instrument: registration creates a title inscribed in the property register. 2026-06-04 — orders recognised customary lands at Oyo, which brings land into the register that was previously outside it. No count of registered parcels or titles issued is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cote d'Ivoire	The urban land system now records and tracks every land application in real time, and the first electronic rural land certificates were signed. At the Abidjan land days of 5 to 7 October 2026 the cadastre director presented the e-Cadastre platform as part of moving cadastre procedures and land-tax payment online by stages. The repository holds no count of parcels or users on it. The urban system was created by decret n 2021-862 of 15 December 2021 and is now the central platform on which every land application - definitive concession order, subdivision, transfer - is recorded and tracked in real time, holding each parcel's history and connecting the tax, land and urban-planning administrations, with an electronic signature in use since January 2024, reported again in a land and urban-planning programme. Its parcel identifier was instituted by decret n 2019-221 of 13 March 2019. 2026-03-12 - the first five electronic rural land certificates were signed by the prefect of the Moronou region. The rural land information system created by ordonnance n 2025-85 of 12 February 2025 has nothing on file on what has been built, and no count of parcels or files processed is published for either system. 2026-06 — eight member states approved a draft regional directive harmonising land registration and urban land information systems; no domestic transposition is recorded.	MOVEMENT
Djibouti	The digitised land books are the register's operative legal form; a draft national land policy went to a validation workshop in December 2025. The standing position is a 2018 amendment to the 1991 property law, which gives legal effect to digitised land books and a centralised electronic database as the operative form of the register, requires every registered private parcel to be mapped and recorded, and lets the register cross-check identity documents against the national population database. 2025-12-06 - a validation workshop at Tadjourah reviewed the draft national land policy, covering tenure security, land-use planning and access for women, youth and vulnerable groups. No count of parcels registered or digitised is published, so how much of the territory the register covers is not established.	MOVEMENT
DR Congo	Loi 25-062 on the land and property regime came into force in December 2025, with a national land plan to 2040. Loi 25-062 on the land and property regime was enacted on 30 December 2025. A national land plan for 2026 to 2040 followed in June 2026, a national land and property register went to Senate reform discussion, and digitalisation of the land registry was reported in August 2026. No parcel count, coverage figure or completion date for the digitalisation is held. 2026-10-08 - the land affairs minister said implementation of the land law had begun, with digitisation directorates created, more than 350 officials trained and three of Kinshasa's nine land districts in the first phase.	MOVEMENT
Egypt	Less than 10% of real estate is formally registered, and the property identifier law has no implementing decree. The legal barrier was cut before the window: Law 9 of 2022 amended the Real Estate Registration Law 114 of 1946, removing the chain-of-title requirement that had effectively prevented millions of owners from registering. The state-land platform records more than 302,000 applications received against about 1,700 contracts drawn up and 350 plots recovered, while on the older statutory track the committee reports more than 124,000 regularisation contracts delivered. The property identifier law was approved by the House on 27 April 2025, making a unique digital identifier a prerequisite for registry or notary registration and for utility connections; no decree naming the overseeing authority and no commencement date are on record fifteen months later, though on 9 September 2026 the ministry said national numbers have been produced for every building in the country. One survey section's title register was deferred by a year to 1 July 2027, the country moving section by section under a 1964 statute.	MIXED nearly 30 million properties now carry a digital identifier while under 10% are legally registered, the state-land platform cleared under 1% of its intake and the property identifier law still has no implementing decree
Equatorial Guinea	The first house-to-house cadastral census began at Bata in June 2026 under the 2025 cadastre law. Title has rested on the 2009 land law's concession basis, with registration of customary tenure optional, and on an 1906 survey statute that the cadastre bill approved by deputies in May 2025 replaces. Field work started in June 2026 at Bata, house to house. The consequences are already reaching households: residents along one highway were given a year to regularise title as the register forces case-by-case checks.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Eritrea	Land registration rests on the 1997 proclamation establishing the cadastral office, with no statement of its operational extent (proclamation). The 1997 land registration proclamation established the Cadastral Office under the land, water and environment ministry, responsible for registering all land, rights over land and transfers of property, following the 1994 change of tenure under which all land belongs to the state with allocable private rights (proclamation). The proclamation establishes the office and not the register's reach. The repository holds no parcel count, no coverage figure and no statement that the register is held digitally.	NO CHANGE
Eswatini	The deeds registry is still manual, with the registrar stating an intention to move to a fully electronic system after two study missions in five months. A delegation from the deeds registry and the science and technology park made a five-day study visit to a neighbouring land registry in August 2025, the second such mission in five months, the first having been led by the principal secretary for natural resources and energy (mission). The registrar stated that registration and storage of deeds remain manual and that the country is working to upgrade them into a fully electronic system (position). No system, procurement, budget line or date for that upgrade is on record, and no parcel or title count is published.	MOVEMENT
Ethiopia	A cloud-hosted land services platform integrated with the national identity and payment systems is in use in Bishoftu, Adama and Shagar. The platform carries document upload, electronic signature and online payment, is integrated with the national identity and payment systems, and offers a mobile interface for citizens and officials (platform). Its own site is the held record, retrieved from a web archive after the domain failed to resolve. No parcel count or operator is established, though the site lists Bishoftu, Adama and Shagar as the cities using it, and a land platform whose domain does not resolve is itself the finding.	NO CHANGE
Gabon	A proposal for an integrated urban land management system was submitted in December 2025, against about 1,200 cession decisions signed that year. The proposal was submitted with drone purchases announced alongside it, and no system, contract award or delivery date is held (cadastre proposal, modernisation). Ministers told public television on 30 November 2025 that about 1,200 cession decisions were signed in 2025, with about 3,000 beneficiaries owing about FCFA 14bn in unpaid fees (cession figures). A proposal was received rather than awarded, so no engagement, signature or value is established, and the cession figures are a television statement rather than a register return. 2026-09-14 — three ministers met SNEDAI Groupe on digitalising land tenure and civil registration, with prefinancing offered; no contract is held. 2026-09-17 — the cadastre programme took a partner: the housing and cadastre ministry signed a protocol of agreement with an Ivorian group on digitalising land and cadastral procedures, the group framing the work as better mapping and parcel identification feeding a structured land database, fewer disputes and a wider tax base. No contract, sum or delivery date is published.	MOVEMENT
Gambia	The first unified national land policy mandates a digitalised land administration system and a centralised land information system. The policy for 2026 to 2035, published in August 2026, requires digitised land registration alongside new certificates of customary ownership, backed by a costed ten-year implementation roadmap (policy). 2026-09-04 — consultants supported by the lender are drafting the land information system, with the draft due at the end of September 2026, and the lands minister puts land disputes at 62% of court cases. What it starts from is a parliamentary finding of leases taking up to five years and no land policy behind laws dating from the 1990s. 2026-09-22 — the lands minister told the National Assembly that contracts for the World Bank-supported digitalisation had been awarded and leases would issue within three days once it is fully operational. No contractor, value or go-live date is stated.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Ghana	A US$85m mapping contract announced in 2023 had no confirmed signing by June 2026, while a commission portal handles applications, payment and receipts. 2026-06-08 - the US$85m five-year agreement with a private land-administration company, announced in September 2023 to map the country digitally and build a national spatial data infrastructure, was still in legal review in February 2024, with no signing confirmed since; the lender-backed acceleration project carrying the land workstream has made no disbursement since September 2024. Two decades of successive platforms have left manual processes running alongside the digital ones. The commission's own portal is live for checking the status of an application, paying for land services other than stamp duty bills, generating an electronic receipt and estimating costs, with no usage or uptime figure published. In the space the state register has not filled, a member of parliament launched a private land acquisition and management platform on 22 October 2025; a petition dated 9 January 2026 accuses him of using it as cover to appropriate land in a neighbouring municipality. The dispute is unresolved on the record. The planning system is separately being redeveloped into a web-based platform for spatial planning, development control and street addressing, inside a sub-programme appropriated GHS 36,454,968 for 2026 from which no digital share is separable, with no launch date or contractor published.	MIXED transactional services are live while the financing behind the cadastre has not moved for two years
Guinea	A first phase of the Systeme d'Information Foncier covering Conakry and thirteen towns was agreed in October 2025. The urbanism minister and Geo Consult International set the terms of the first implementation phase of the Systeme d'Information Foncier, covering Conakry and thirteen other towns, on five pillars: high-resolution aerial imagery, a structured parcel plan for Conakry, a multi-actor land survey campaign, the system itself, and the supporting technical infrastructure and training; financing for a national phase was under discussion with the Islamic Development Bank. Separately, mapping of State agricultural land began in Boke, Conakry, Kankan and Kindia on 6 October 2025 under the agricultural land reform, centralising areas and coordinates in a national database connected to a future e-Foncier rural platform. Both are first phases: no parcel count, coverage figure or completion date is held for either.	MOVEMENT
Guinea-Bissau	Eight states approved a draft directive harmonising land registration in June 2026; no domestic register is described. The repository holds no account of a Guinean land register, cadastre or titling system. The movement is regional and prospective: eight member states approved a draft directive harmonising land registration and titling rules across the union in June 2026. No domestic transposition or register is recorded.	MOVEMENT
Kenya	The land platform announced a further outage on 21 September 2026 with no restoration time, after being unavailable from 1 September with no cause or timeline given. The platform went down on 1 September 2026 and the advocates' professional body demanded its restoration, saying conveyancing and land transactions had stalled with no adequate communication on the cause or on when services would resume; it asked for an explanation of the outage's nature and extent, a restoration timeline, contingency measures for time-sensitive transactions, an assurance that users incur no penalties or loss of priority, and an incident-notification protocol (outage). The body notes that the State migrated essential land services to the platform while in some instances restricting manual alternatives, so the outage has no fallback (outage). No county-rollout update has been on file since July 2025 and no national coverage count is held (rollout). 2026-09-21 - the platform announced a further system outage limiting searches, transfers, title and lease registration, stamp duty and land-rent payments, with no restoration time given.	REGRESSED
Lesotho	The land authority is taking register services into the districts, with new offices planned. 2010-06-15 — the Land Administration Authority Act charges the authority with maintaining a complete land-holding database. 2025-08-05 — district outreach expanded access to register services, with new district offices planned. 2025-08-27 — the authority put its 2026-2029 strategic plan out to tender, prioritising technology adoption for registration services. No parcel count, coverage figure or registration time is published. The Land Regulations 2011 are in force as the procedural rules under which land is registered.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Liberia	The land authority took a national spatial data infrastructure to a United Nations geospatial session in August 2026, seeking partnerships and technical support. It would build a coordinated geospatial framework for land administration, mapping and national planning (approach). It is an approach for support rather than a programme: no funding, custodian, standard or timetable is stated, and no land register, title count or digitisation figure appears anywhere in the repository.	MOVEMENT
Libya	Land registry services at Benghazi resumed in part after more than fifteen years. The registration authority has issued certificates only, with substantive registration suspended since 2011, and cadastral mapping covers two-thirds of the country on a fragmented spatial data infrastructure. In April 2026 the Benghazi office resumed limited administrative transactions including mortgage and ownership transfer despite the suspension. Municipalities are building their own holdings alongside: a mayor reviewed registry records for a state-property inventory that month. The authority issued its first electronic real estate certificate in April 2025, covering only registrations already on record. The registration authority announced the partial resumption on 25 April 2026, on instructions from its presidency and a legal-department opinion, after a stoppage dating from decision 102 of 2011. The Benghazi and Green Mountain branches were directed to resume discharge of a mortgage, mortgage of a property and transfer of ownership to heirs - the administrative work the stoppage does not bar. No transaction count, timetable for full resumption or statement on the registry's digitisation is given, so what is held is that a paper service restarted, not that a register was built.	MOVEMENT
Madagascar	A national diagnostic of 524 communes in 2026 found 911,744 certificates recorded and 65 per cent of offices still on paper. The national land programme records, as at February 2024, 35 land services, 594 communes with a decentralised land office, 699,816 land titles and 1,518,000 land certificates, and states that no integrated national land information system yet exists (programme). A ministry diagnostic run from February to May 2026 across 524 communes recorded 911,744 certificates nationally, with 65 per cent of offices still paper-based or off-grid, an average processing time of 3.5 months and 51 per cent of certificate disputes reaching the courts (diagnostic). An urban development project approved in 2026 carries registry components (project).	MOVEMENT
Malawi	The Land Information Management System has been live since February 2024, and which transactions remain on paper is still unpublished. The web-based system links lands, surveys and physical planning, allowing parcel viewing, document submission, notifications and payment of ground rent and application fees; the scope of remaining manual transactions is not published (system). The ministry convened a workflow review in August 2026 to design digital procedures for transactions still on paper; which transactions remain manual, when revised workflows will be implemented and current processing times all remain unpublished.	NO CHANGE
Mali	A land information system and one-stop land office launched in March 2025 and no transaction figure has been published. The system and the one-stop office launched together on 18 March 2025 (launch). No parcel count, transaction figure, coverage area or link to the payment service launched the same day is published, so the repository records that the office exists and not what passes through it.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritania	A decree of 27 August 2026 creates a national digital cadastral reference with a unique identifier for every parcel, where no integrated cadastral system existed. The government's cadastre digitisation was publicly criticised as a route to silent dispossession in a country where land is at the heart of social conflict (critique). The critique is one outlet's; what the repository does not hold is any safeguard, appeal route or consultation record attached to the digitisation. The Council of Ministers adopted a decree on 27 August 2026 establishing a national digital reference for land and cadastral data as the state's authoritative source, with a permanent, unique, non-duplicable identifier for every parcel independent of administrative divisions, the land minister stating that no integrated cadastral survey system meeting these requirements has existed (decree). The decree states expressly that neither the reference nor the cadastral certificate creates or extinguishes any real property right. 2010-03-31 — the statutory base for land titles is decree 2010-080 applying the 1983 land reorganisation ordinance, later amended in 2014.	MOVEMENT
Mauritius	A disaster recovery solution was implemented for the electronic registry in March 2026, with deed e-submission in the budget annex. The registry operates under a statute of 1864 (Act), and the department reported on its performance for 2024-2025 (report). A disaster recovery solution was implemented for the electronic registry system in March 2026 (communique). Electronic submission of land deeds is carried in the 2026-2027 budget annex (annex). The registry is digital and resilient; the statute beneath it is 162 years old.	MOVEMENT
Morocco	The interior ministry began a nationwide screening of collective land community rolls in August 2026, on a single methodology for the first time. Circulars went to community delegates through local authority officials from 22 August 2026, beginning in two regions and open to extension nationwide (screening). Each listed member is to be verified for actual affiliation, legal majority and residence under law 62.17 and its implementing decree, applying one methodology so that criteria stop varying from one community to another. No count of communities, members or corrections is published. Formal title covers a minority of land: a UN-Habitat snapshot puts around 30 per cent of land in the formal registration system, mostly urban (2024), and the land agency reports 6,750,000 land titles and cadastral plans at the end of 2021, with digital cadastral maps covering the whole territory.	MOVEMENT
Mozambique	The land information system had recorded 563,765 land-use right requests, 77 per cent processed and 68 per cent delivered to beneficiaries. The system digitises land-use right application processing, with 563,765 requests recorded, 77 per cent processed and 68 per cent delivered (system). The figures come from a 2019 review report and nothing later is held, so the country's only quantified registry position is seven years old and the gap between processed and delivered is the part worth watching.	MOVEMENT
Namibia	The deeds register runs under a 1937 statute restored by court order, and a Land Bill tabled in September 2025 proposes the largest restructuring of the framework. A government notice of June 2021 restored the Deeds Registries Act of 1937 as the operative law after a High Court order (notice). The agriculture minister tabled a Land Bill in the National Assembly in September 2025, the largest proposed restructuring of the register framework on this repository (statement). A gazette of June 2026 exempted qualifying townships and subdivisions from standard lodging periods, an operational change inside the existing regime (gazette). Business and intellectual property registration is offered online with no transaction figure published. Nothing on the repository states whether the deeds register itself is digitised.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Niger	A national steering committee for the electronic cadastre was installed in December 2025, on a decentralised rural register dating from 1993. The information society agency announced the committee's installation and its own role as delegated technical lead in December 2025, presenting the unique parcel identifier platform as the infrastructure layer for a progressive national cadastre. The ministerial meeting of 16 September 2025 that preceded it recommended accelerating cadastral digitisation as a tool for land security. The base register underneath is the rural code of March 1993, which institutes in each commune a land commission and a rural file — a rights map and individual rights sheets, opposable to third parties without being a land title. Regionally, eight member states approved a draft land registration harmonisation directive in June 2026, which is an approved draft rather than a transposed rule.	MOVEMENT
Nigeria	More than 90 per cent of land is unregistered, locking an estimated US$300bn as dead capital, while a mortgage registry is described as ready for deployment. The national land registration and documentation programme is under way against more than 90 per cent of land unregistered, on the housing minister's figure (programme). A national mortgage registry is described as ready for deployment with no launch date, custodian arrangement or data-protection basis stated, and its governing policy is still a draft under stakeholder validation (registry). One state has a live compensation and valuation land system (state system). 2026-04-08 - Lagos State commissioned a data centre inside its new geographic information service office to host its digitised land records; no capacity, tier or cost is published.	MOVEMENT
Rwanda	Electronic titles replaced physical deeds, and a district correction exercise concluded in June 2026 with the fee waived. The e-Title system issues titles electronically on the registrar's approval, for download from the land portal, discontinuing physical deeds; the Rwf 5,000 printing fee is now payable only where an owner asks in writing for a printed copy, and non-notarial transactions run on the national services portal (e-Title). The registry beneath it holds the 11 million parcels registered over 26,000 square kilometres under the 2009 to 2013 regularisation programme, against a prior state in which more than 90 per cent of land lacked documentation (case study). The district exercise concluded on 17 June 2026, part of a national correction in which 222,423 boundary errors were corrected across 825 villages with the fee waived (exercise, disputes). The scale of the correction is the finding: a digitised cadastre that needed errors fixed at that volume was carrying them before the exercise, and nothing on file states how they arose. The registry's capacity rests on a twinning arrangement with a foreign cadastral agency running 2022 to 2027, with nothing published on delivery (twinning).	MOVEMENT
Sao Tome and Principe	The property registry system held 105,535 entries at March 2024 against a year-end target of 133,151, of an estimated 200,000 records to be catalogued. The status report names the new information system, records 105,535 real estate and vehicle registries entered as at 15 March 2024 against a December 2024 target of 133,151, and states that the registries are estimated to hold about 200,000 records, 162,000 property and 38,000 vehicle, with at least 65 per cent to be digitalised and cataloguing ongoing (status report). It also flags a risk that the IT investments financed may not be sustainable without more skilled staff (status report). The directorate's own page lists the registrable acts on buildings and land and the certificates the registry issues, with fees by turnaround (services). No later count is held, so whether the December 2024 target was met is unestablished.	MOVEMENT
Senegal	832,526 parcels were surveyed at 30 June 2026, against 673,000 mapped at the November 2025 supervision. The steering committee puts the register at 832,526 parcels surveyed, 634,861 carrying a cadastral identifier, 550,072 deliberations validated and 441,315 parcels approved at 30 June 2026, with more than 70,000 women holding an occupancy title. That is up from the supervision mission of November 2025, which recorded 673,000 parcels mapped, 469,000 assigned a cadastral identifier and 351,899 occupancy titles recorded in the land information system against 174,680 at 31 May 2025 — and zero municipal land bureaux yet equipped and operational with system access against a target of 120. Two dated deliveries followed: 60 further communes signed second-phase conventions in May 2026 under a $40 million additional financing, and one commune received 10,318 occupancy titles approved in the identifier system on 9 July 2026.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Seychelles	The land register runs on the 1967 Act; a land search system is announced as coming soon. The Land Registration Act of 1967, consolidated to 30 June 2014 and still the operative framework, establishes the Land Registry, the Land Register and the office of Land Registrar and governs registration, dispositions, searches and fees (Act). The lands and ICT departments tendered in November 2024 for a Land Management Administration Information System interfacing with the National Population Database, the digital identity, Immigration and the Registration Division, on a nine-month delivery from award (tender). The Registration Division announced a new land search system as coming soon in 2026 (announcement). No award, commissioning or completion statement for either is held.	MOVEMENT
Sierra Leone	Customary land registration has begun chiefdom by chiefdom, under the National Land Commission Act 2022. Registration commenced in Bekeh Loko chiefdom (registration), parcel maps were validated by Rogbere Section 1 landowners in Maforki (validation), and land committees in both chiefdoms were pre-sensitised with the commission and FAO in May 2026 (orientation). The statutory basis is the 2022 Act establishing the National Land Commission (Act), and the project's implementation status report of December 2025 is the supervision record (report). Two chiefdoms is the extent of what is registered. No parcel count, no national register, and no timetable for extension beyond the pilot chiefdoms is held. 2026-09-15 — cabinet approved a nationwide land title certificate system, with the minister saying registration and certification will be free and parcel registration systematic; whether it helps those without documentary claims is contested. Parliament's approval is outstanding. No land right had been recorded at March 2024, against a target of 500,000 by July 2028 (status report).	MOVEMENT
Somalia	No national register or cadastre exists, and buying or selling land legally is described as virtually impossible for want of one. The responsible ministry's five-year plan, cover-dated October 2024, sets out its land-zoning and land-management mandate under a 1962 decree law and two later statutes and treats cadastral system development as a priority still to be undertaken (plan). A first bi-annual land sector coordination meeting in Mogadishu in September 2025 revised terms of reference for a national coordination platform (meeting). A December 2024 sector snapshot puts the consequence plainly: with no functioning land and property registration system, buying or selling land legally is virtually impossible, and South West's urban land law provides for a State Land Registry that has not been stood up (snapshot). What exists instead is subnational and built for revenue rather than tenure (snapshot).	NO CHANGE
South Africa	Sections of the deeds amendment came into operation in September 2025 and the fee schedule was replaced in February 2026, on a 2019 electronic registration statute. The Electronic Deeds Registration Systems Act of 2019 is the statute creating an electronic deeds register. 2025-09-01 — named sections of the 2024 amendment came into operation, moving the amended registration framework into effect. 2026-02-27 — the schedule of deeds office fees was replaced, setting a R52 lodgement fee and revised transfer-fee bands effective one month after publication. Seven years after the electronic statute, no source states how much of the register is actually electronic. The one piece of evidence that back-scanning had been completed anywhere came from a fire, reported under rural registry offices.	MOVEMENT
South Sudan	The Land Act 2009 provides for cadastral and systematic registration; no digital land register has been built under it. The Land Act 2009 defines the register as the official repository of records of interests in land and provides for cadastral, sporadic and systematic registration and for title deeds issued from it (Act). Nothing digital has been built on that basis. The only statement on record is one expert's advocacy for a central digital land database, published in June 2025 in the context of land fraud (advocacy). A personal identity card is required for land transactions, so the register that would record those transactions does not exist while the credential to conduct them does.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Sudan	Offices are reopening and the electronic system is being restored, while a six-month freeze blocks dealings in reconstituted parcels. The registrar general states the electronic system across state and locality offices was disrupted by the war, offices reverted to paper, and restoration is under way with field preparation for renewed network linkage (statement). In March 2026 he ordered a six-month freeze on sales and ownership transfers for parcels whose registers had just been reconstituted, after Khartoum offices were burned and forgers were found selling absent owners' land (order). The Jabal Awliya office reopened in April under a 2025 settlement law and a chief justice regulation covering record reconstruction (reopening). Registration has sat with the judiciary since 1909, across 106 branches (administration).	MIXED offices reopening under a freeze on transfers
Tanzania	Digital payment proof became mandatory for land transfers from 1 July 2026, with 3.13 million citizens using digital land services. The consolidated land registration statute requires a land registry and a land register and provides for a Registrar of Titles. The lands minister's 2026/27 budget presentation reports continued nationwide expansion of the digital land system and 3.13 million citizens benefiting from land and housing registration services. From 1 July 2026 verified digital-payment records became a mandatory condition for land, building and motor-vehicle ownership transfers processed by the lands ministry, the revenue authority and the business registration agency. The 3.13 million is a services figure from a budget speech, not a count of registered parcels, and no parcel count is held. 2026-09 - a National Land Data Infrastructure project is building a central land database and access platform on new aerial imagery, with no financier, cost or completion date stated. 2026-09-12 — the land-services system reached Kigoma, with officers from four councils trained on it. No count of councils live or transactions processed is published. 2026-09-20 - the land-services system lets citizens sign title deeds from any region and is in use in five named regions and several councils; no count of titles signed remotely is published.	MOVEMENT
Togo	Eight member states approved a draft land registration harmonisation directive in June 2026. The directive approved at Ouagadougou harmonises land registration and titling rules across the union and covers the establishment of urban land information systems. It is a draft approved by ministers, not a transposed rule, and nothing in the repository records Togolese implementation of it. The fifth agricultural census found that 78 per cent of 677,692 farming households hold no form of land security, and that 4 per cent irrigate (census). It is the clearest measure held of what the land registers do not reach.	MOVEMENT
Tunisia	Compulsory registration opens in six governorates from November 2026, and processing time fell from 40 days to 8. Compulsory land registration runs under a 1964 decree-law dividing roles between the land tribunal, the survey and cadastre office for surveying and plans, and the national land property office for inscription on the livre foncier. Six ministerial decisions gazetted in August 2026 open compulsory cadastral survey and registration of unregistered unbuilt property, from 1 November 2026, in named zones of the Kasserine, Mahdia, Jendouba, Medenine, Sfax and Gabes governorates. The land property office reported its second-generation processing system networked across all 22 regional directorates, average request processing cut from 40 days to 8, and about 120,000 online service requests received since March 2022. What share of national territory is registered at all is not held.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Uganda	44,425 freehold titles were handed out across 13 districts under systematic titling, and two separate digital land registries were announced with no procurement behind either. The statutory basis is the Registration of Titles Act, requiring a registrar of titles and a register book in which certificates of title are recorded, unchanged. 2025-08 - the lands ministry began handing over 44,425 freehold titles to landowners in 13 districts under a systematic titling programme. 2026-03 - the land commission announced a nationwide geographic-information-based digital registry of government-owned land, to protect public land from encroachment and raise revenue. 2026-04 - a month later the lands ministry announced blockchain and artificial-intelligence systems to cut transaction fraud, alongside mass titling. Two announcements of digital land registration in a month, from different bodies and covering different land, with no procurement, supplier, budget or date attached to either, and nothing on file relating them. No national count of titled parcels is held.	MOVEMENT
Zambia	The integrated land administration system went live in May 2023, and the minister told Parliament the predecessor ran with no maintenance contract from March 2022, creating a conduit for corruption. The system went live after data migration from the predecessor (system, clearance, gateway, expansion). The minister's statement that the predecessor ran unmaintained for over a year, creating a conduit for corruption, is a government account of its own prior failure and is the most specific such statement in this ledger. The denominator is now on record and it is the finding: fewer than 450,000 of an estimated 1.2 million numbered properties hold registered title deeds, and about 45,000 owners pay ground rent, yielding roughly K157 million a year against more than K1.2 billion if compliance improved. That 1.2 million excludes customary land entirely, so the untitled share of the country is larger than the ratio suggests.	NO CHANGE
Zimbabwe	A live cadastre portal carries property search and cadastral services, and a two-week validation pilot with sixteen law firms ended with no result on file. The cadastre portal is live, carrying property search, electronic maps, cadastral and geodetic services and account registration, with surveyor modules behind a requested profile; the page carries no date of its own (portal). The instrument text on securitised deeds is not held; all three accounts of it are law-firm-authored and one firm has a commercial interest in validation volume (instrument, guide, discussion). The pilot ran two weeks in April 2026 and is reported by one of the sixteen selected firms, with no result on file (pilot). Naming the commercial interest of the only sources describing a deeds-validation regime is what a reader needs to weigh them. A public portal exists; what it has issued does not. 2026-09-09 — the justice minister told Parliament the digital land platform becomes the sole authoritative property register in July 2027, after which unvalidated paper deeds cannot be used in formal transfers, at a validation fee of US$215.	MIXED the cadastre platform advanced while the deeds digitisation programme drew public allegations of fraud
