PROGRESS REPORT

Cybersecurity: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *54 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has* **No evidence** *on it in its own report.*

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

The place reports do not share one window; the period above is the range they span.

National cybersecurity readiness

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	A 2025-2029 security strategy was presented in March 2026 and a sectoral incident-response centre established. An information systems security agency operates under the Ministry of National Defence with no establishing instrument held, its first attested act in March 2026. 2026-03-03 - it presented a 2025-2029 national strategy approved by the President, the text not held, reported in the trade press. 2026-06-15 - a sectoral incident-response centre for posts and telecommunications was inaugurated, with the Korean ambassador citing KOICA support for national detection and response capacity, reported the same day; a child online-protection cell and green line opened on 1 June; and a cybersecurity memorandum with a Russian vendor was signed in late 2025 with no implementing project held. 2026-08-18 - a wilaya warned that unlicensed platforms are impersonating its institutions as fake ticketing storefronts built to harvest card details, with no takedown or prosecution published. State media reports security and network operations centres monitoring the national digital infrastructure round the clock, with no date, operator or incident figure.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Angola	A strategy, a council and a cyber centre were created by decree, none with an operating record, while an attack took the incumbent's services down for nine days. **The instruments arrived together.** A national cybersecurity strategy was gazetted on 3 December 2025 with six strategic objectives and a two-phase legislative reform, a consultative national cybersecurity council chaired by the President was created by decree the same day, and a national cybersecurity centre was constituted as a public institute with regulatory, supervisory, inspection and sanctioning powers, an emergency response team and a round-the-clock operations department, retaining 30% of the revenue it collects, fines included. None has an operating record: no source records the council convening or the centre exercising any power, and in August 2026 the responsible minister was still describing the centre's launch in the future tense. The cybersecurity fund its statute presupposes is created by no instrument on file. **The operational test went badly.** An attack on the incumbent from the early hours of 28 July 2026 took voice, messaging, mobile data and internet down nationwide until 5 August, nine days, with full restoration declared on 21 August bar one feature and automatic compensation to customers. Every account is the operator's own; no regulator finding, attacker, vector or outage cost is published. Analysts argued afterwards that telecommunications should be designated critical infrastructure; no designation instrument exists.	MIXED a strategy, a council and a centre created on paper while the budget was cut and a national outage ran nine days
Benin	The security stack has run since 2020 with a response team, public-key infrastructure and forensic laboratory, and a first national vulnerability report published 878 findings. A national digital-security strategy has run since 2020 with a national response team, a national public-key infrastructure, a forensic-analysis laboratory and a critical-infrastructure protection policy, with a stated commitment to implementing the Malabo and Budapest conventions. 2025-07 — more than 230 public services moved online are framed by the agency as a wider exposure, with about 40 priority public and private structures in close security cooperation, while an expert roadmap to 2033 urges a sovereign cloud and a national cyber authority, neither of which exists. **Enforcement reaches outward:** the country was among those in a regional takedown producing 651 arrests. A vendor telemetry count of 631 ransomware detections in 2024 is the only exposure figure held, on an unpublished denominator. 2026-09-26 - information-security officers founded a professional club with an 11-member board to share incident lessons and train members. 2026-10-03 - the national digital investigations centre opened three complaint points outside Cotonou, at Porto-Novo, Abomey and Parakou.	MOVEMENT
Botswana	A four-day national cyber drill was held and a vendor security portfolio entered the market; no national strategy or authority exists. An international police assessment flagged cyber threats against both institutions and individuals in Botswana (assessment). 2026-03 — a four-day national cyber drill was held, opened by the regulator's chief executive, where none was on file at the start of the window; the repository separately records an inaugural drill in the same season. 2026-05-13 — an integrated security framework and cloud services became available to Botswana customers, on a company announcement with no customer, revenue or capacity figures. **The measured position is good and thinly sourced:** 0.9% of consumer transaction attempts were flagged as suspected digital fraud in 2025, the lowest of the African countries analysed, on a vendor study paywalled beyond its opening paragraph. What is missing is the institutional half. No national cybersecurity strategy document, date or version is on file, and the authority that would own one is created in law and not established, reported under legislation.	REGRESSED
Burkina Faso	The regulator allocated an object-identifier sub-arc to the national cybersecurity agency in February 2026. The regulator allocated an object-identifier sub-arc to the national cybersecurity agency, a technical building block for a public-key infrastructure, certificates and electronic signatures that underpins any future digital-identity authentication service. A national cyber-incident agency had been created in Council in July 2024. **The allocation is a foundation, not a service:** no operating certification or signature service is reported, no incident response team is constituted, and no advisory from either body is on the record. 2026-09-14 — the loss was quantified: the cybercrime unit puts FCFA 906m lost on more than a thousand complaints in the first half of 2026, against about FCFA 1.7bn for 2025. Nothing is held on recovery or prosecution.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Burundi	Regional central bank governors flagged financial-system cyber risk as needing stronger common measures; no national instrument or common measure exists. 2026-07-27 — East African central bank governors flagged financial-system cyber risk as requiring stronger common measures. No common measure has been adopted and no baseline was held before it. That single regional mention is the whole of the country's cybersecurity record on this ledger. No national strategy, no law, no computer emergency response team, no agency and no reported incident appears — at a point when an instant payment system, an online tax platform and a biometric identity programme have all entered service or are about to.	NO CHANGE
Cameroon	The incident response team was equipped in January 2026, while DNSSEC validation sits at 56.60% against a target that has passed. 2026-01-20 - intrusion-detection and prevention hardware and software were commissioned for the national incident response team at about FCFA 735m under the national connectivity project; the team ingests about 200GB a day and runs the national key infrastructure, while Kaspersky reported 19m threats identified and blocked in Cameroon in 2024. The national zone has been cryptographically signed since April 2025. 2026-09-04 - the gap between the statute and the threat was measured from outside government: a policy institute's brief puts cyberattacks up 156% between 2020 and 2023, financial losses from digital fraud above US$45m over the same period, and the national ICT agency's cybercrime unit at 23% of its establishment, arguing that cybersecurity belongs in the national development strategy as industrial policy. The figures are the institute's own. 2026-09-29 - the ICT agency reported 17,500 cybercrime complaints in 2025 with 5.8 billion FCFA of declared losses, and 39 attacks on public-administration websites since January 2026, on its own figures.	MIXED the incident response team was hardened and the national zone stays signed while the DNSSEC validation target passed unmet and IPv6 has no target at all
Cape Verde	A national security operations centre and incident response team were launched in October 2025, five years after the decree providing for them. The 2021 decree established the cybersecurity legal regime and created the national response team, with no budget line at any grain of the FY2024 or FY2025 volumes and the money sitting inside the state operator's trading account; the instrument itself is not held and is known only through the budget and operator records that recite it. 2025-10-30 - both bodies were launched inside the state's private technological network, built by the operator with World Bank involvement, the operations centre for real-time detection and the response team as a national alert-and-response point. No incident count, staffing figure or service catalogue has been published since. A technical mission to South Korea covering data governance, service digitisation and cybersecurity produced no formal agreement. 2026-09-08 - the first named phishing campaign in the repository, and the warning came from the target rather than from a response body. The national postal operator warned customers about fraudulent messages sent by people impersonating its staff, asking recipients to click a link that is not its own. No message volume, victim count, loss figure or law-enforcement referral is published.	MOVEMENT
Central African Republic	The national cybersecurity agency appears in no estimates volume for a third year, and the 2026 programme budget carries FCFA 6,000,000 in total for network security and digital trust. The agency was created by the January 2024 cybersecurity law under joint supervision, to secure information systems, handle alerts and regulate the sector, with no establishment record. It appears nowhere in the 2024, 2025 or 2026 estimates under any wording; a search for the word cyber returns nothing across 602 pages of estimates and 183 pages of programme budget. What is appropriated is FCFA 4,000,000 for network and information-system security and FCFA 2,000,000 for digital trust — FCFA 6,000,000 for the whole country for the year, against FCFA 1,600,000,000 transferred from the same ministry to the regulator. The one capability the repository can point to as delivered rather than announced is a cybersecurity and electronic-certification platform listed in a funder's delivered scope at the backbone inauguration, with no operator, uptake or certificate-issuance record, and no held source names it again. A 2022 appraisal found the country had no strategy, response team or operations centre. 2026-09-29 - a memorandum with a data-infrastructure and AI company provides for a national computer emergency response team and a security operations centre; neither is recorded as built, and no cost or timetable is published.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Chad	A national cybersecurity strategy launched in December 2022 has no adopted text, and a tripartite audit and certification agreement covers the national data centre. The strategy is known only from a single relayed sentence; no document, launch date or adoption record is held (strategy). The audit agreement was signed between the digital agency, the security agency and a private firm. A United States firm separately offered to audit and certify the same facility in May 2026 and no source connects the two mandates (agreement, security). A comparative study of online job scams published in August 2026 is the only measure of harm in this ledger; it surveys respondents rather than reporting a crime series, and carries no sample size or national total (scams). 2026-09-25 - one ministry banned official documents on WhatsApp and other messaging apps, making a breach a disciplinary fault; the secure channels it prescribes are not described.	NO CHANGE
Comoros	The digital agency's cybersecurity directorate is the competent authority under article 6 of the 2021 law; no response team exists. The directorate's own page names it the competent authority for the security of information systems and networks and for trust services, organised into a security-technologies department and a security-audit department. The law it stands on was promulgated on 18 January 2022 and its text names the same directorate. Nothing on file records a budget, a headcount, an incident handled, an audit performed or a report published by it, at either end of the window. No national computer emergency response team exists, searched at 31 August 2026: a designated authority is not an operating capability, and the 2018 strategy that costed a national cybersecurity apparatus has nothing on file saying what was built. 2026-09-17 — a Russian embassy delegation took up with the telecommunications minister the information-security memorandum the two governments had already initialled, covering professional training, skills-building and action against cybercrime, with the Comorian side proposing a further document on training trainers. No signature date, text or funding is published.	NO CHANGE a designated authority with no operational record and still no incident-response team
Congo	The agency gained a statutory levy-share basis in the 2026 finance law, while the national strategy is only now out to tender. The regulator dismantled two further telecommunications traffic-fraud sites at Massengo (operation). The agency, created by law in October 2019, had FCFA 800,000,000 stated for 2025 operations on trade reporting alone, tied to no instrument and with no agency line in any appropriation or execution document. It now holds a statutory levy-share basis alongside the four resource streams of its founding statutes, and its largest operational mandate arrived through tax legislation: the invoicing decree and orders put it into joint homologation of every terminal, software and enterprise module, awarding the security label and taking 15% of homologation fees. The strategy is out to open international tender with bids due 2 September 2026, seven years after the agency was created. An audit-provider qualification standard is a consolidated draft with no adoption instrument, and a national operations centre and response team are named as a roadmap programme with no standing-up instrument.	MOVEMENT
Cote d'Ivoire	The agency commissioned a national root of trust and launched an administration security network, while the national strategy expired without a successor. The agency runs a national security operations centre, the public-administration security-officer network, the national public key infrastructure and auditor certification. The root of trust was commissioned in July 2026 as the trust anchor for every certification authority in the country, under the 2013 electronic transactions law and its 2014 and 2016 decrees, and the security-officer network was launched over 10 to 11 June 2026 for shared watch, early warning and incident coordination, with no membership figure stated. Against that, the 2021-2025 strategy expired with no successor adopted, its 2026-2030 draft still to be finalised. The 2024 cybercrime report recorded 12,100 complaints and 338 arrests; no 2025 edition is on file. The cybercrime platform is stated as created in the government's 2011-2025 security record alongside 11 forensic-police branches, a self-report with no caseload attached. And the only separable cyber-security appropriations in the budget went down: FCFA 1.618bn for the treasury information system in FY2026, roughly halved from FCFA 3.268bn. 2025-12-19 — the 2026 finance law assigned the agency 2% of the tax on telecommunications and money-transfer companies; no receipt is held.	MIXED a national root of trust and an administration security network entered service while the national strategy expired unsucceeded and the cybercrime report stopped

COUNTRY	DEVELOPMENTS	PROGRESS
Djibouti	A statutory cyber authority became operational in December 2025, and its response team took part in a regional exercise. There was no statutory cyber authority at the window's opening, only a pre-statutory label and a directorate inside the digital agency. A law carried in the official journal of 15 December 2025 created an autonomous public establishment under the Presidency, operational from December 2025 with a director-general named, after the bill advanced in November. 2026-06-26 to 30 - its incident response team took part in a regional exercise and is reported to have placed first in both simulation scenarios; the placing is the state daily's and the organiser has published no result. The 2024-2030 five-pillar strategy is unchanged.	MOVEMENT
DR Congo	A presidential ordinance of 16 May 2026 creates the national cybersecurity agency. Ordonnance 26-033, signed on 16 May 2026 and published in the Journal Officiel, creates the Agence Nationale de Cybersecurite under the 2023 Digital Code, with powers to audit public institutions and operators of vital importance and to certify and homologate cybersecurity products and services, and tasks it with standing up a national security operations centre and a CERT; covered entities must notify it of attacks and intrusions. It is the clearest movement from legal framework to institution the repository holds. Neither the operations centre nor the CERT is reported operating, and no incident report or advisory from the agency is on the record.	MOVEMENT
Egypt	The 2023-2027 second-edition strategy is being implemented with a third in preparation, and the country holds a full score on the global index. The second edition covers 2023 to 2027 and sets out programmes for awareness, specialised training, research and industry support, a cybersecurity industry development fund and a legislative build-out, with performance indicators. It is being implemented through projects to protect digital infrastructure and build cyber defences, a third is being prepared, and the national emergency readiness centre is being developed to use artificial intelligence against cyber threats. No third-edition text, timetable or adopting decision is held. The readiness centre operates under the telecommunications regulator and is a delivery partner in the national cyber-skills academy, with no incident statistics, mandate document, budget or reporting obligation held. The global index standing of 100% and a first-tier place among twelve states was restated in June 2026, but both readings refer to the same 2024 edition, so it is a static reading rather than movement.	MOVEMENT
Equatorial Guinea	The cybersecurity agency created by statute has no premises, staffing, budget or activity on record. 2026-10-09 — the Vice-President alleged that a registry official extracted several years of the Presidency's administrative files on the pretext of an archive digitisation project. The account is the government's own and no judicial finding is on file. It was created by the December 2024 law under the Presidency (creation). No incident response team, sector designation, audit programme or national strategy exists anywhere in the repository, so an agency named in a statute is the whole of the country's cybersecurity institutional record.	NO CHANGE
Eritrea	There is no public national cybersecurity strategy; the one recorded incident is a government announcement. A country profile records that Eritrea has no public national cybersecurity strategy. The single incident on record is the state's own account of it: in May 2024 the government publicly announced that the country's internet system had been hit by what it called a massive cyberattack, repelled without service interruption. No incident detail, attribution, response body or computer emergency response team is named, and nothing independent corroborates either the attack or its repulse. That is the whole of what this repository holds on cybersecurity for the country - one stated absence and one unverifiable claim.	NO CHANGE a first stated position with no earlier account behind it

COUNTRY	DEVELOPMENTS	PROGRESS
Eswatini	The ICT minister said the ministry had begun reviewing the National Cybersecurity Strategy, and the prosecution service reported a Cybercrime Unit at its headquarters; a regional cybersecurity framework was finalised and approved at a subcommittee hosted in-country. The regional framework was finalised and approved by a central bank governors' subcommittee at a meeting in the country in July 2026 (framework). Neither is a national instrument. The country has no cybersecurity statute — one was named as forthcoming a year ago — no incident response team on record, and no incident, caseload or capability figure anywhere in this ledger. Enforcement has a unit behind it: a police digital forensic unit and cyber task team had made 87 arrests and submitted 528 dockets to the prosecutions director by October 2025, working on mobile money fraud, fake wallet schemes, online loan scams and rental scams. Over E8.5 million was involved in cyber-related crime in the twelve months to 30 September 2025. 2026-10-01 - the ICT minister said the ministry had begun reviewing the National Cybersecurity Strategy. 2026-10-01 - the Director of Public Prosecutions said her office had set up a Cybercrime Unit and trained prosecutors on the 2022 Act. 2026-10-01 - the 2026 awareness month was launched by the ICT minister. 2026-10-08 - the cybersecurity agency held the country's first national cyber drill, a multi-sector ransomware simulation facilitated by Lesotho's regulator.	MOVEMENT
Ethiopia	Cybersecurity foundations are named in the national strategy, and the dominant state bank is moving to a zero-trust architecture. The December 2025 strategy makes the security agency's cybersecurity work one of the foundations of the national programme (Digital Ethiopia 2030). The dominant state bank reported in August 2026 that it is moving its information-systems architecture to a zero-trust model supported by artificial intelligence (financial sector threats). No national readiness assessment, incident statistics, emergency response team disclosure or sectoral audit is held, so the record is a stated intention and one institution's own account. 2025-12 - the draft payments strategy proposes a dedicated cybersecurity and fraud directorate at the central bank; no source records it being established. 2026-09-29 - the security agency and the central bank established a jointly chaired financial-sector cybersecurity forum for threat-information sharing and coordinated incident response; its membership and terms of reference are not published.	MOVEMENT
Gabon	No national strategy is published, and a June 2026 attack collapsed 95 per cent of a utility's information systems. A national strategy was named as an objective of the second national forum, by a vendor rather than the agency, and a January 2026 regulator workshop restated resilience gaps without producing one. A security bill of material launched in June 2025 has published no asset count, coverage or output since, and a national cybersecurity architecture is in design, on a single trade account. A sabotage attack in June 2026 collapsed 95 per cent of the electricity utility's systems and knocked out prepaid-meter top-up, billing and payment restored in the capital and seven interior centres by 4 August on the company's own statement, with no forensic or cost report on file. 2026-09-08 — more than 900,000 intrusion alerts were recorded over sixty days and the government raised its vigilance level; the agency said the count shows a system able to see threats, not one submerged by them. The number confirmed as incidents is unpublished.	MIXED an architecture and an asset inventory are being built while no strategy exists and a utility lost most of its systems
Gambia	The cybersecurity strategy for 2022 to 2026 runs out at the end of this year, with no successor, mid-term review or implementation report held. Its four pillars are legal and regulatory strengthening, identification of critical information infrastructure, child online safety, and compliance with international standards and treaties, and its training and awareness uptake target was dated by 2023 (strategy). The same document is the only source for the country's incident-response arrangements, and it describes an institutional design rather than a capability: a national response team operating a cybersecurity centre with a security operations centre inside it, a coordination directorate, a commission, an advisory board, sectoral focal points, sector response teams and a police cybercrime unit. Nothing held states that any of those bodies is standing, and no incident report, budget line or annual report naming any of them exists.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Ghana	The national response team handled 3,363 incidents between January and June 2026, the first incident count the repository holds for it, while digital fraud rose 98 per cent between 2022 and 2025. The team is a unit of the cyber security authority with a constituency of eight sectoral response teams and the general public, affiliated to the Budapest Convention; its published profile is five years old and records its own policies as under review. 2026-10-05 - the authority put incidents recorded between January and July 2026 at 3,876, about 47% online fraud. 2026-10-08 - the communications minister said 13 critical information infrastructure sectors are designated and about 200 institutions identified as owners, with compliance mandatory. 2026-10-09 - the Cyber Security Authority said Ghana, not the United States Federal Bureau of Investigation, led the operation that arrested eight suspects and rescued 120 suspected trafficking victims at cybercrime centres in Greater Accra. 2026-10-08 — the central bank announced thematic reviews of how banks have implemented its revised cyber and information security directive, whose text is now held.	MIXED the response team published its first incident count while digital fraud incidents rose 98 per cent over three years
Guinea	The country's index score rose from 20.53 to 56.55 between 2020 and 2024 while the agency behind it stays undocumented. It is named as an established agency in a summit host profile and no founding instrument for it is held (agency). No incident statistics, response team, sector designation or audit programme is published, so the agency that publishes the country's cybersecurity statute as an image scan is itself known only by name. The International Telecommunication Union's index put the country at 56.55 of 100 for 2024 against 20.53 in 2020, scored on legal, technical and organisational measures, capacity development and cooperation (index). The publisher's free tier carries those two values only; the pillar breakdown and the intervening years are paywalled.	MOVEMENT on the index score while the agency behind it stays undocumented
Guinea-Bissau	A cybersecurity strategy sits in a draft decree and its agency is only committed to. 2025-01-22 — the government presented the results of studies on cybersecurity and committed to a National Cybersecurity and Data Protection Agency. 2025-07-10 — the Council of Ministers approved the draft decree for a national cybersecurity strategy. Neither instrument is confirmed gazetted or in force, and both predate the twelve-month window. Nothing in the window moved either. No computer emergency response team, no cybercrime prosecution, no reported incident and no critical-infrastructure designation appears on this ledger, so readiness is a study, a draft strategy and a promised agency, with no operational capability recorded behind them.	NO CHANGE
Kenya	A national cyber security agency was established as an autonomous state corporation, against 2.36 billion threat events in the quarter to June 2026. Its mandate covers critical-infrastructure audit and certification, an operations centre and incident coordination, where cyber duties had been split across four bodies; the inaugural non-executive chair was announced on 24 August 2026, and whether the delegated legislation committee approved before the ministry announced it is contested (chair, approval, contest). The regulator logged 2,355,938,192 threat events in April-June 2026, down 30.03% on the previous quarter, while web application attacks rose 43.68% to 17,406,495 with state systems and internet service providers the primary targets (regulator report). KSh 457.2m was appropriated for cyber space management plus KSh 382m for programme cybersecurity (appropriation), a EUR 3m European-funded project runs to 36 months (project), and a bilateral partnership runs with nothing funded, deliverable or dated (partnership). 2026-09-07 - the standards under the new agency were put to their users: the technology authority tested the National Information Security Framework's audit, risk-management and certification mechanisms at a Nairobi workshop to establish whether they are practical for national implementation, ahead of certifying critical information infrastructure. The framework text and the certification criteria are not published. 2026-10-07 - the national incident response centre's forensics laboratory had received more than 200 requests, most involving online abuse.	MIXED a dedicated agency was established while web application attacks on state systems rose 43.68%

COUNTRY	DEVELOPMENTS	PROGRESS
Lesotho	An interim national response team launched in July 2026 and a security operations centre is being stood up, against no national strategy at the last review. LesComCSIRT launched in Maseru on 29 July 2026 and operates on an interim basis, ahead of the statute intended to establish it (launch, account). A national security operations centre was reported being stood up the same month, having been budgeted as a Government Security Operations Centre in the 2025/26 budget speech; no host, operator or date is published (centre, budget). A capacity maturity review of March 2023 rated the strategy dimension at start-up and confirmed no official national cybersecurity strategy, and none has been published since (review). 2023-12 — a ransomware attack reached the central bank's primary and disaster-recovery sites, services took nine working days to restore, and the bank began setting up a round-the-clock security operations centre.	MOVEMENT
Liberia	The cybersecurity strategy is published and its scheduled council, act and operational deliverables are all unheld two years past their dates. Its action plan dated deliverables from the fourth quarter of 2024; the cover reads July 2024 for a 2025-2029 period while every running header reads a draft for 2024-2029, and whether the posted file is the adopted final text is not established from the document (strategy). The national cybersecurity council it scheduled for the fourth quarter of 2024 has no constituting instrument, membership or meeting record; the repository holds no record of establishment rather than a stated non-delivery. A House investigation was ordered in February 2026 into an alleged breach of about 2m citizens' data across the revenue, electricity and insurance bodies, with no findings published; the revenue authority denied the breach, and the probe cited the absence of a national cybersecurity strategy (investigation).	STALLED
Libya	The central bank was breached in June 2026 with data later published on a dark-web site, while the interior ministry signed a cooperation agreement in August. The Central Bank of Libya isolated systems in June 2026 and a sample of bank data was later published on a dark-web site (incident, context). The interior ministry and the national telecommunications company signed a technical cooperation agreement reported on 12 August 2026 covering cybersecurity, shared platforms and equipment at ministry sites, with no value, duration or delivery date published (agreement). The last cybercrime caseload published is 135 cases and 188 devices seized in the first quarter of 2025 (caseload). No national readiness assessment, incident-response body or breach-notification duty is held. 2026-09-20 - the unity government began work on an integrated national cybersecurity plan with the heads of three cyber and information authorities, covering emergency plans, early warning, incident response and a joint monitoring mechanism. No text or deadline is published. 2026-10-01 - the Attorney General's Office ordered two National Oil Corporation officials into pre-trial detention over oil-sector data that passed to a foreign company; an investigation, not a finding.	MIXED a central bank breach and a caseload unpublished since early 2025 against a new interior ministry cooperation agreement
Madagascar	A multisectoral national cybersecurity strategy was launched at a December 2025 workshop on a three-month delivery target, and no document has been published. The strategy was launched with a three-month delivery target and financed through the governance and identification programme; members of parliament flagged the 2014 cyber law as needing an update at the same workshop (launch). Eight months past that target, no strategy document is published. The repository holds no national response team, no incident count and no readiness assessment for the country.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Malawi	The response team sits inside the regulator with no incident statistics held, donor assistance was announced, and a state oil company was defrauded of K700m. The response team operates within the regulator with no establishing instrument, timetable, budget, staffing or incident statistics held; the only source is a two-paragraph trade report (team). Technical assistance covering critical-infrastructure security, legal and regulatory frameworks, data-protection systems and regional capability was outlined at a Blantyre meeting, with no amount, financing instrument, duration or workplan stated (assistance). The state oil company was defrauded of K700m after attackers hijacked email from a foreign contractor and supplied false banking details, the company instructing its bank in April 2026 to wire US$403,605 to a fraudulent account (fraud); it attributed the control weakness to a procurement model introduced before operational and cybersecurity procedures were in place (fraud). The country is separately the only one of five studied to have rejected a foreign safe-city surveillance package (rejection). 2026-09-15 — the regulator said prisoners are behind up to 90 per cent of reported mobile-money scams.	MIXED a response team and donor assistance in place against a state company defrauded of K700m and no strategy or incident statistics at all
Mali	A National Cybersecurity Strategy 2026-2030 was adopted in December 2025, an agency created to implement it, and a criminal chamber began hearing cases. The strategy was adopted by the Council of Ministers on 9 December 2025 (strategy). The information-systems security agency was created by Council of Ministers texts in June 2026 to implement it, with no budget or staffing published (agency). The criminal chamber of the national cybercrime pole began hearing cases on 21 May 2026, opening with four cases and eight accused (chamber). The same pole is the venue in which a journalist was prosecuted, so the institutional build and the speech concern recorded elsewhere in this ledger are the same machinery.	MOVEMENT
Mauritania	The cybersecurity strategy ran out in 2025 with no successor and the response team it provided for was never built, while a central-bank platform detected more than 10,000 threats. The project unit issued a national tender on 9 October 2026 to set up the national response team and a security operations centre for the administration's intranet, with bids due 17 November 2026. The 2022-2025 strategy's period has ended and no successor, evaluation or response team is on record; the strategy text itself is not held (strategy). The national computer emergency response team is planned, with no establishing instrument, staffing or premises on record (team). A central bank digital reputation protection platform detected more than 10,000 electronic threats in the first half of 2026, of which 470 were confirmed and removed, with 20 digital identities protected (platform). The country's only operating detection capability sits inside one institution and covers that institution's own exposure. 2026-09-16 — the Internet Society puts resilience at 43 per cent, with 3 per cent of the most-visited websites served locally.	MIXED the national strategy expired with its planned response team never built while a central-bank platform detected threats at scale
Mauritius	A critical information infrastructure regime came into force in June 2026 across five sectors, a threat-sharing platform is provided for, and a forensic laboratory is funded. The designation regulations are in force across financial and banking, public service, information technology and broadcasting, energy and water, and transport, with a twelve-month compliance window and non-compliance carrying up to twenty-five years' imprisonment and fines up to Rs 2m (regime, framework). The omnibus bill would empower the central bank to establish a cyber threat intelligence sharing platform and to require financial institutions, and other institutions it specifies, to participate on terms it determines; participation is compulsory and the perimeter is set by the central bank rather than by the cyber authority (platform). A cyber forensic laboratory is funded at Rs 13m alongside an information-security management system across the administration, with no site, staffing or opening date published (laboratory), against more than 4,000 reported cyber incidents since January 2026 (incidents). 2026-10-07 — figures presented at a government workshop put reported security incidents at 6,073 in 2025 against 5,221 in 2024, with cyberbullying up from 491 to 702 cases.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Morocco	A national cybersecurity strategy to 2030 sets four pillars and sixty actions, above a security directive in force since 2023 and a response centre issuing advisories. The strategy carries four pillars, eleven objectives, twenty-six initiatives and sixty actions, succeeding the country's first strategy of 2012; its workforce commitments carry no numbers, and the fiftieth-place ranking claimed for it is from a 2020 index edition (strategy, naming). The repository had carried a 2023-dated account of a separate strategy; the full document confirms one instrument rather than two (reconciliation). The national response centre issued a June 2026 advisory naming Moroccan institutions among about 75,000 devices affected in about 200 countries (advisory); the repository carries no dated record of the centre's creation (advisory), and the security directive covering state bodies and vital infrastructures has been in force since January 2023 (directive). 2026-08-27 - the police and domestic intelligence directorates denied any intrusion into their systems after a hacking group published what it presented as records of 70,000 security personnel, attributing the data to insurance and social-cover databases; no third party has verified the data or its source.	MOVEMENT
Mozambique	A successor cyber strategy is in preparation and a national risk assessment rates nineteen of twenty-nine critical systems very high risk, against a regional index placing the country first among its language group. The minister said on 7 October 2026 that a national network of response teams now has teams in government, the cyber defence unit, the research network, the regulator, the telecoms sector and four provinces, with more being set up. The 2021-2025 policy ran six pillars and twenty-five projects; its successor is under revision, adding safeguards against artificial-intelligence risks, with no adoption date (revision, predecessor). Its period ended before its successor was drafted. The incident response team was created in statute and seated in the ICT institute, which named consolidating it the immediate priority; fourteen national specialists hold an international maturity certification (team). The first national cyber risk assessment, published in May 2025 on a foreign methodology, rates 19 of 29 systems across 18 institutions very high risk, 6 high and 4 moderate; it names no operator and no system, so it publishes a risk distribution without a register of what is at risk (assessment). A Cyber Security Fund is provided for at articles 67 to 71 of the new statute, financed by a levy on licensed providers and state appropriations; its operating rules are left to a regulation not yet made (fund).	MIXED the legal framework advanced while an assessment found public services outrunning it
Namibia	The national incident response team completed its three-year plan and publishes an annual landscape report, while detected vulnerabilities rose 39.8 per cent in a quarter. Namibia launched DigiNam, its national public key infrastructure, with the communications regulator as root certification authority (launch), and the root authority is now live at the top of the country's digital trust chain (report). The team operates under the regulator, was officially launched in April 2025, completed Phase 3 of its implementation plan in the 2025/26 year; about US$1m is allocated to cybersecurity for 2026/27 (team, surge, growth). 2026-09-03 - the trust chain acquired its first link below the root: the regulator accredited the home affairs, immigration, safety and security ministry as the country's first certification service provider, on a four-year accreditation. No second provider is on the record. 2026-09-20 - a ransomware group listed the Namibian Defence Force among its victims and published an evidence pack it says shows access to its systems, with a message saying the IT department had concealed the incident. The national incident response team confirmed unauthorised activity on the Ministry of Defence and Veterans Affairs network, attributed it to RansomHouse and is coordinating the response under the national incident guidelines, without saying what was accessed or whether data was taken. 2026-10-03 - the regulator appointed an executive to lead the incident response team.	MOVEMENT
Niger	A national cybersecurity centre with a response team, a forensics laboratory and a national strategy are all planned or in elaboration, with nothing built. The centre with its operations centre and response team was enumerated by the critical-infrastructure committee in July 2025 and nothing on record has been built (centre). A forensics laboratory was enumerated at the same meeting, also unbuilt (laboratory). The elaboration of a national strategy was listed among the government's structural reforms at a regional symposium in July 2025 (strategy). A country that has just accepted a national data centre and a cross-border backbone has no response team to defend either.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Nigeria	A Cyber Resilience Framework binds every licensed provider on a clock ending February 2027, and the central bank now calls for a collective defence across an interconnected financial sector. A ministerial advisory council was announced with no membership or terms of reference published (council), and a bilateral partnership is rated more than 90 per cent implemented by the national coordinator (partnership). 2024-06-25 — a critical national information infrastructure designation and protection order was gazetted; only a scanned image is held. 2026-09-07 - the police cybercrime centre's caseload reaches the repository as about 146,000 reports logged and about 58bn naira in recovered assets, against N8.82bn recovered in 2024; the cumulative period behind the newer figures is not stated. 2026-09-10 - the financial supervisor took the same position for its own sector, warning that a vulnerability in one institution or technology provider can cascade through an interconnected financial system. No rule change accompanies it, and the repository holds one bank's own figure of more than N6 billion a year and no sector aggregate. 2026-09-15 — the national response team recorded a rise in high-impact incidents driven by phishing, ransomware and business email compromise, enabled by cybercrime-as-a-service and AI techniques. 2026-09-22 - the response team warned of an escalation of Phobos ransomware attacks on managed cloud service providers whose clients include government agencies, banks and telecommunications firms.	MOVEMENT
Rwanda	A national cyber security authority is budgeted under the presidency for a third year, and the standards and skills line executed at 11.5 per cent in 2024/25, the weakest of the country's digital programmes. Reported cases of fraud involving digital payments fell 30% while electronic transactions rose (report). The figure is reported cases, not losses, and reporting rates are not stated. The authority is budgeted inside the presidency rather than a ministry, and its establishing law and enforcement powers are not held (authority, cyberspace). A national computer security incident response team published a profile in 2022 under the 2017 authority law; team membership is not public and no caseload or service-level figure is published (team). The standards and skills appropriation executed at 11.5 per cent in 2024/25, the weakest execution among the country's digital programmes, and was appropriated again for 2026/27 (skills, prior). A centre of excellence was inaugurated in October 2025 with no enrolment, throughput or funding figure published since (centre). 2026-10-04 - the prime minister said reported fraud complaints fell about 30% in the second quarter of 2026 from 4,128 a year earlier.	MOVEMENT
Sao Tome and Principe	The national cybersecurity strategy for 2024 to 2028 was finalised in December 2023 and went to public consultation in September 2025, twenty-one months later. The final text, version 2 of 15 December 2023, sets five strategic objectives: coordination through a Cybersecurity Committee and a national incident response centre, CERT-STP; awareness and a security culture; national capability through training and curricula; consolidation of the legal structure, which it records as lacking any specific legislation on protecting children online; and adoption of good practice, including international standards in software and hardware procurement (strategy). The regulator put the strategy and its action plan to a 30-day public consultation in September 2025 under the digital project (consultation), and a lender mission listed launching the response team's materialisation as an objective (mission). The cybercrime statute has been in force since 2017 and requires a permanent police contact point for international cooperation (statute). So the law is old and operative, the strategy is written and unapproved almost three years on, and the response team is a mission objective. The action plan's own tracking grids are blank templates in the document, and no incident, capability assessment or exercise is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Senegal	A national computer emergency response team is provided for in a bill and does not yet exist, and the procurement route is where the state's own diagnosis locates the blockage. A named expert stated in February 2026 that the country has neither a national cybersecurity agency nor a national response team, and no evidence was found that either has since been established; the team is provided for in a bill before the Assembly (team). The state's own diagnosis locates the blockage in procurement rather than in budget or capability, and a memorandum with a foreign cybersecurity supplier was reported in August 2026 whose text, scope and value are not published (memorandum, procurement). The international cybersecurity index score held is the 2024 edition, a reference figure cited and not absorbed, and it predates the entire breach run (index). Police cybercrime figures are reported alongside an international estimate of Africa-wide losses, with neither the recording basis nor a clear-up rate stated (offences).	MIXED a critical-infrastructure law adopted while the country still has neither a national cybersecurity agency nor a national response team
Seychelles	The National Assembly unanimously approved a motion to accede to the Budapest Convention, and a national cybersecurity coordination committee has a thin record with no founding instrument held. The accession motion was approved unanimously in July 2026; the body of the source is paywalled beyond its opening (accession). The coordination committee reaches the repository through a press-freedom day workshop it ran on artificial intelligence, ethics and cybersecurity. No founding instrument or mandate document is held (committee). So the country is acceding to the principal international cybercrime instrument while its own coordinating body exists in the record only through a workshop it hosted. 2026-10-06 - the national response team designed and delivered the third national cyberdrill itself for the first time.	MOVEMENT
Sierra Leone	The regulator confirmed ongoing cybersecurity incidents in a July 2026 public notice, and six offences under the Cyber Security and Crime Act 2021 were mapped onto the mobile-money scam in a published analysis. The public notice confirming ongoing incidents was issued on 30 July 2026 (notice), and a coordination centre is named as a delivery partner in senior civil-service training (centre, strategy). A published legal analysis maps six offences under the 2021 Act onto the scam (offences). No prosecution under any of them is on record. The regulator ran a consumer education campaign on online fraud from July 2026 (education). Awareness is doing the work the statute is not. The coordination centre has its own budget head, voted almost wholly for salaries in FY2026 (estimates). 2026-10-05 - the road safety authority disclosed an unauthorised intrusion into the systems used to produce vehicle licences, with five arrests. 2026-10-09 - the communications ministry confirmed that 44 website addresses were hit on 25 September 2026 by unauthorised access to the system that administers the national internet domain, restored the same day.	MIXED a coordination centre and a public notice on live incidents while the statute in force is being read against a fraud wave rather than applied to it
Somalia	A National Cybersecurity Risk Management Framework launched in July 2026 after an April consultation, and an incident response team was opened in March. The framework launched on 21 July 2026 following a national consultation in April (framework, consultation). The incident response team was opened by the prime minister on 7 March 2026 (team). A statute, a framework and a response team inside twelve months is a complete-looking stack. No caseload, incident count, service level or budget is published for any part of it, so what it handles is unmeasured.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
South Africa	A bulk water utility supplying more than 16 million people was breached and moved to its recovery site, while the national CSIRT publishes no incident statistics. 2026-05 — the national high-performance computing centre suffered unauthorised access and the deployment of crypto-mining malware, attributed in an August written reply to vulnerabilities in the legacy system. A remediation and resilience programme has since run across access controls, privileged-access management, network segmentation, patch management and monitoring, with an internal accountability review still running. The account is the department's own. 2026-08-04 — the national CSIRT is operating, coordinating and routing reports rather than resolving them, on weekdays from 08:00 to 16:30 with no published out-of-hours capability. As at that date it published no incident statistics, advisories archive, annual report or data downloads. The national measurement has not been repeated: the 2024 surveys remain the last, on breaches and on the skills gap. One firm's caseload put ransomware dwell time at 18 days in 2025 against 117 in 2024, not a national series. 2026-09-14 — the capacity added was commercial, not state: a 40-desk security operations centre opened in Cape Town under a R55m investment, serving customers across Africa and internationally. 2026-09-18 — fine scams quoting motorists' correct number plates led the traffic infringement agency to consider investigating a possible breach of the national vehicle database. No finding is published.	MIXED a critical-infrastructure operator running from its recovery site while the national CSIRT publishes no incident statistics
South Sudan	A Digital Financial Services Security Lab is being stood up with the regulator, the central bank and an international body, while no national incident response team is established. The lab's team took nine days of hands-on training in March 2026, a step toward creating and operationalising it (lab). No national computer security incident response team is established, recorded as such by the lender in June 2026 (team). So the country has a sector-specific security capability for payments in preparation and no national one, a year after enacting its first computer-crime statute.	MIXED a financial-services security lab being stood up while no national incident response team exists
Sudan	A Cybersecurity Authority was established by decree, cited alongside a fourth-tier international cybersecurity score of 48.17 out of 100. The authority was created by the same prime-ministerial decree as the digital transformation and data authorities, and the tier-four score was cited alongside its creation (authority). The country sent experts to a regional cybercrime meeting in July 2026 (meeting). No incident-response team, caseload, budget or enforcement power is published for the authority, and the statute that would give it powers is still in redrafting.	MOVEMENT
Tanzania	Registration of critical ICT infrastructure was directed with no criteria or deadline published, and reported fraud cases fell 69 per cent to 7,334 between September 2023 and June 2026. The registration direction was given in August 2026 (register), and cybercrime investigation centres were stated to Parliament with the 2026/27 budget with no cost line, timetable or staffing figure. An international cybersecurity index placement is cited and not absorbed, with the underlying edition and its date not established (index). A national cybersecurity forum held a fourth edition in April 2025 with no 2026 edition recorded, and a Zanzibar cybersecurity capacity memorandum was signed with no value, term or deliverable named. 2026-09-10 - the first national count of the harm reaches the repository: 7,334 mobile fraud and online scam cases reported nationally, of which 2,495 or 34 per cent in Rukwa and 2,079 or 28.4 per cent in Morogoro, published alongside a three-day regulator awareness campaign in Morogoro. 2026-09-25 - the regulator's director general put reported cases at 23,328 in September 2023 against 7,334 in June 2026, a 69 per cent fall, and said awareness campaigns may have raised reporting. Stakeholders in the worst-affected region want the response at enrolment, proposing a 24-hour waiting period before a person may register another line and closer regulator work with other agencies.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Togo	A cybersecurity agency and a response team operate under a strategy for 2024-2028 whose text is not held, and handled incidents rose from 39,168 in 2021 to 181,088 in 2024. The agency is created at article 6 of the cybersecurity statute of 7 December 2018, amended on 24 June 2022 (statute, amendment), and its director-general was on the record in July 2026 (agency, training). The response team issued a high-severity alert on an active account-compromise campaign in August 2026; no incident-response profile, incident report, annual report or count of affected accounts is held (team, alert, defence). The incident figures are endpoint years given by the agency's director-general with none for 2022, 2023 or 2025, no definition of an incident and no primary (incidents); the strategy running 2024 to 2028 is held at year precision with no document and no adoption date (strategy). On 27 August 2026 the agency called for expressions of interest to build a national pool of cybersecurity professionals, closing 30 October 2026; no target size, budget or engagement terms are published (call).	MOVEMENT
Tunisia	A head-of-government circular of 2 September 2026 sets a security baseline across public sites, platforms and state messaging; the agency itself issued a public advisory on an SMS phishing campaign in July 2026. Circular n. 5 of 2 September 2026 requires encrypted connections, mandatory renewal of security certificates, two-factor verification for administrator access, protection against traffic-saturation attacks and hosting on state-approved servers, bans the use of messaging apps and social media for official documents, and requires regular audits, immediate reporting to the national cybersecurity agency and an end to shared credentials. It binds the administration, not the wider economy, and carries no compliance deadline, audit schedule or list of approved hosts. The advisory on a short-message phishing campaign was issued in July 2026 (advisory). The attack and ransomware figures come from the interior ministry and the agency, cover different periods and are not a series; no definition of a recorded attack and no incident-reporting obligation behind the count is stated (figures). An agency that publishes consumer advisories and no incident statistics of its own is the readiness position here.	MOVEMENT
Uganda	A National Information Security Framework 2026 was launched under the donor project with the document itself not held, and cyberattack volume was cited at the launch with base period and absolute counts unpublished. The framework was launched by the ICT ministry in July 2026 and the document is not held (framework). The attack-volume figure was cited at that launch without a base period or absolute counts (volume), and the only recorded cybercrime case figure is a police count for calendar 2024, with both ends predating the progress window (cases). An anti-piracy coordination framework is exploring dynamic address and name-system blocking, and participants flagged the dual use of blocking infrastructure built for piracy (piracy) — which is the same infrastructure question the election-period suspension raises. Legitimate pay-television subscriptions fell on the figure cited at that convening (subscriptions). The criminal investigations directorate told a parliamentary committee that its Crime Data Centre is now targeted for March 2027 and that integrating government and security databases would first need agreed legal and policy frameworks for access (directorate). A national computer emergency response team exists: the World Bank project's June 2025 restructuring lists mobile forensic kits for its forensic laboratory among its cybersecurity activities. It is the only record of the team the repository holds; its mandate, staffing and incident figures are not held.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Zambia	The cyber security agency moved to new premises and issued a post-election warning, and 43,500 subscriber cards were deactivated for mobile-money fraud in six months. The drug enforcement commission reported the arrest of 79 cybercrime suspects over a digital laboratory it says targeted government systems (report), and the cyber security agency issued a public advisory on rising online disinformation after the electoral period (advisory). The agency's director general accounts for the move by saying it had been housed in the state institute's offices where space limited staff accommodation and key functions, and that the new premises let the whole team work together with access to its tools — which dates the constraint rather than measuring what it cost. No incident-response capability, staffing figure or service level is published before or after (warning, offices, trafficking). The card deactivations cover January to June 2026 and are held as a paywalled lede (deactivations). A company survey reports consumers targeted by digital fraud, with the comparison base shifted from one quarter's fieldwork window to another's (fraud).	MOVEMENT
Zimbabwe	The national cybersecurity strategy was announced complete in October 2025 and described by the same minister as being finalised in July 2026; no text is held at either date. The ICT ministry announced on 15 October 2025 that the National Cybersecurity Strategy had been completed, presented as the overarching framework for protecting national digital assets (announcement). Nine months later the same minister said the ministry is finalising a National Cybersecurity Strategy for 2026-2030, anchored on a proposed national cybersecurity authority that would coordinate incident response and protect critical information infrastructure (July 2026). Both accounts are the minister's own, and no strategy document is held at either date. A national computer incident response team project is recorded with the International Telecommunication Union as implementing agency (project). An artificial-intelligence and cybersecurity fusion centre is proposed for real-time threat detection and remains proposed. The central bank has flagged vulnerabilities in third-party payment providers.	MIXED a strategy announced complete in 2025 and described as still being finalised in 2026, against an incident response capability that has moved
