PROGRESS REPORT

# AI: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *54 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has* **No evidence** *on it in its own report.*

USE OF AI IN GOVERNMENT ADMINISTRATION · USE OF AI IN SECTORAL MANAGEMENT INFORMATION SYSTEMS · DEVELOPMENT OF NATIONAL / REGIONAL AI SYSTEMS · CONTROL OF AI ABUSE

**Progress values.** *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

*The place reports do not share one window; the period above is the range they span.*

## Use of AI in government administration

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Algeria** | The national assembly oversaw a technical presentation of artificial-intelligence transcription for its proceedings in March 2026.<br><br>2026-03 - the president of the national assembly oversaw a technical presentation of an artificial-intelligence transcription capability for parliamentary proceedings. No adoption, supplier or language coverage is published.<br>2026-05-25 - a government meeting chaired by the prime minister was devoted to examining the draft national artificial-intelligence strategy; no text or adoption follows on the record.<br>2026-09-08 - a coordination meeting on the strategy programmed an AI-based tax administration system and a multisectoral national AI system for the short term. None of the three is reported in operation. | MOVEMENT |
| **Angola** | The president authorised US$6 million and a public tender for an artificial-intelligence platform for the public administration, the repository's first record of money committed to one.<br><br>A presidential order of 27 August 2026 authorised expenditure of six million United States dollars for the acquisition and implementation of an artificial-intelligence platform for the public administration, and opened a public tender procedure for it (order).<br>The order authorises money and a procurement. What the platform is to do, which bodies would use it, on what data, and under what governance are not stated in the announcement, and no strategy or policy instrument on artificial intelligence in government is held to read it against: a governance framework for digital government and for artificial intelligence in the public sector was put out to consultancy in March 2026, and nothing on its scope, drafter or timetable has been published since. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Benin** | A generative-artificial-intelligence compliance regime for public agents came into force on 1 June 2026, starting from an admission that agents already used such tools outside any framework.<br><br>2026-06-01 — the regime starts from an admission that public agents already use generative tools on personal accounts outside any framework, and calls for a census of those users and migration to secured arrangements, a binding harmonised charter, and provider contracts carrying clauses forbidding any use of administration data to train or optimise models, reversibility and a prohibition on transfer to extraterritorial jurisdictions, set out as the framework for artificial intelligence in the administration.<br>It then concedes what most such instruments do not: contractual terms do not close the sovereignty risk, because the model, the infrastructure and the jurisdiction remain another party's.<br>No census result, charter text or contract list has been published since. The candour is the notable part — a state instrument that names its own limit is rare on this ledger. | MOVEMENT |
| **Botswana** | The Chief Justice stated that the judiciary had resolved to train judges in artificial intelligence and emerging technologies; no programme, budget or date is on record.<br><br>2026-01-22 — the Chief Justice stated that the judiciary had resolved to train judges in artificial intelligence and emerging technologies, against cases involving artificial intelligence and digital evidence. A commitment is stated and no programme, budget, date or filing rollout is on record. It is the only state-side artificial-intelligence commitment the repository holds for the country, and it is a training resolution rather than a deployment. No government system on this ledger uses artificial intelligence, and no national policy, strategy or regulatory instrument is held at any date. | MOVEMENT |
| **Burkina Faso** | Automated traffic enforcement went live in the capital on 1 August 2026, detecting 1,099 offences in twelve hours with five fines paid.<br><br>2026-08-01 — automated enforcement went live in the capital for four offences after a pilot from April, with automated plate reading, interconnection to the vehicle database and the payments rail, a national supervision centre, and vehicle immobilisation for non-payment within a month. The prior position was a 2023 system that allowed digital payment of fines an officer had written. 1,099 road offences were detected between midnight and noon on the first day, with five fines paid, implying roughly 2,200 automated offence records a day in one city on the ministry's own count.<br>Neither account reports a legal basis, a retention rule or a data-protection authorisation. This is the largest automated decision-making system on the ledger, it produces a coercive outcome, and it started in the month the data-protection supervisor was voted out of existence pending a merger.<br>2026-09-11 — the statistics institute announced an observatory using satellite, mobile-phone and web data with AI to produce indicators for all 351 communes; no timetable or operator data agreement is stated. | MOVEMENT |
| **Burundi** | Public data is described as under-used and often unfit for advanced analytics.<br><br>A synthesis of country readiness assessments carries the analysis for Burundi: institutions produce more data but it remains largely under-used and often unfit for advanced analytics, and strengthening those foundations is set out as a precondition for reliable adoption.<br>The one artificial-intelligence deployment the repository holds sits inside a health workflow run with an external partner, not inside an administration. | NO CHANGE |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Cameroon** | The social insurance fund described biometric identification, automated pension-file processing, automated customer response and an electronic wallet already running inside it — the only deployed use the repository holds.<br><br>2026-02-17 - at a telecommunications ministry workshop for public administrations, the fund's director general set out artificial intelligence already deployed inside the institution: biometric identification, automated pension-file processing, automated customer response and an electronic wallet. It is a self-description at a workshop, with no evaluation, model or error rate published.<br>2025-07 - a government artificial-intelligence showcase was presented at a public administration trade fair.<br>2026-07-17 - the public service ministry and a North African counterpart explored use cases for automating repetitive tasks and reducing processing times for pensions and reclassifications through the biometric payroll system: stated intent, no implementation date or instrument.<br>The strategy that would govern any of it is still being developed a year on, with ten priority areas for AI in scientific research and an implementation roadmap tabled at cabinet and no adoption instrument published, and the payroll system it would run through flagged more than 53,000 fraudulent claims by June 2026. | MOVEMENT |
| **Cape Verde** | The justice sector is where it is happening: 226 professionals enrolled in a first national training from 22 September 2025 and an integrated assistant was demonstrated a month later.<br><br>2025-09-22 - the justice modernisation institute and the justice policy directorate started the first national training on artificial intelligence for justice professionals, 226 enrolled over thirty hours covering fundamentals, intelligent management of judicial proceedings, ethics and data protection, and practical applications in law, with United Nations sponsorship.<br>2025-10-23 - the institute's president presented the justice portal and demonstrated an integrated artificial intelligence initiative, a platform centralising judicial services and information incorporating a chat built to help citizens reach information and digital services. The ministry describes a demonstration rather than a confirmed production deployment, and nothing since states that it went live; the institute reported in September 2026 that 110 judges, prosecutors and court officers had been trained in artificial intelligence.<br>The frame around it is still absent. The digital economy strategy carries implementation of an artificial intelligence strategy as a measure yet to be taken, the national strategy is in drafting, and the one procurement of scale, a US$9 million contract for artificial-intelligence-assisted scanning equipment at the national ports, is stated to be under way with no award record. | MOVEMENT |
| **Central African Republic** | No model runs in a state service. What exists is external research: machine learning on subnational food prices and a language model for the national language.<br><br>The repository carries an explicit finding that no artificial-intelligence system is deployed in state service, and nothing in the window changes it. The two working applications are research artefacts produced outside government: machine learning applied to subnational food price monitoring, and machine translation for the national language published on a model repository.<br>Institutional participation is real and thin: national participation in the continental artificial-intelligence community, with the national policy or strategy still in development. | NO CHANGE |
| **Chad** | A directorate-general for artificial intelligence was created inside the ministry in October 2025 — the first standing state structure for it.<br><br>The presidential decree of 21 October 2025 creates the directorate-general inside the telecommunications, digital economy and administrative digitalisation ministry and names its director-general (decret).<br>Uptake inside public bodies is training rather than deployment: staff of the public-works school were trained in generative artificial intelligence in April 2026 and recommended a usage charter and a digital cell (training), and the food-security office trained its division heads in August 2026 with no system deployed (training).<br>No artificial-intelligence system is in production in any Chadian administrative process. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Comoros** | No artificial-intelligence system is deployed in government administration; the readiness evaluation due in June 2026 has published nothing.<br><br>The digital agency's own account describes the field as at its earliest stirrings in the country, the assembly helping the agency grasp it and advise government.<br>2026-03 - the government's answer was an assessment, not a deployment: a six-month evaluation of institutional, technical and regulatory readiness, the interior ministry added to the committee on national-security and data-governance grounds, due to conclude that June. No conclusion is on file.<br>2026-08 - the investment agency took a gold-partner role in a national event on artificial-intelligence innovation and uses for business, held in Moroni on 25 and 26 August 2026. Sponsorship of an event is not a system in the administration. | NO CHANGE<br>an evaluation of readiness rather than a system in use |
| **Congo** | Judicial operators were trained on AI and the rule of law, and drafting of the national AI strategy opened.<br><br>2023-12-08 — Congolese judicial operators were trained on artificial intelligence and the rule of law at Brazzaville.<br>2026-05-20 — a workshop opened the drafting of the national AI strategy, recommending a national ethics committee.<br>Training and a strategy in drafting. No AI system in use in any government administration is recorded. | MOVEMENT |
| **Cote d'Ivoire** | A government assistant went live in March 2026 on messaging platforms and a toll-free line, covering civil status, tax and ministerial guidance.<br><br>2026-03-18 - the assistant went live on messaging platforms and a toll-free line, covering civil status, tax and ministerial guidance and carrying a citizen reporting channel, presented as a first for the administration.<br>No usage, accuracy, cost, vendor or underlying model has been published. An assistant answering civil-status and tax questions is making statements a citizen may act on, and nothing on file states who is accountable for a wrong answer, what the service does with what is typed into it, or how the reporting channel is triaged. | MOVEMENT |
| **Djibouti** | A first national AI strategy was presented in September 2026 and an AI weather system runs in a public agency.<br><br>2026-01-22 - the digital economy ministry opened preparatory diagnostic work on a first national artificial-intelligence strategy; its main lines were presented at the national forum on 3 September 2026.<br>The one system running inside the administration is the meteorological one: version 2.0 was handed over in July 2026, forecast resolution improved from nine kilometres to three with three-day forecasts refreshed six-hourly, after the first deployment was commissioned in December 2025.<br>2026-07 - the communications minister took the administration-modernisation agenda to two summits in Geneva. | MOVEMENT |
| **DR Congo** | A state guarantee fund launched an assisted business-plan platform, and the employment agency put AI modules out to tender.<br><br>2026-02 - a state guarantee fund launched a public platform giving step-by-step business-plan drafting, financial projections, export and direct submission with real-time file tracking, built by a domestic firm. No usage figures, model or vendor disclosure and no data-protection arrangement are stated.<br>2026-08-01 - the national employment agency's existing platform went out to tender for artificial-intelligence modules to be developed, integrated and deployed, offers due 7 September 2026. It is procured by a foreign development agency rather than by the state, and no contract value, award or delivery date is on record.<br>2026-09-18 - the central bank set out a position rather than a deployment: its governor told a conference convened by the Kenyan central bank that integration would be progressive and prudent, with an internal audit of the country's financial system before any major deployment. No instrument, budget or timetable accompanies it. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Egypt** | A centre for responsible artificial intelligence was established inside the ICT ministry at the end of 2025.<br><br>The centre did not exist at the window's opening. It was established inside the ministry to support safe use of artificial intelligence within government bodies and to develop regulatory models; no mandate document, budget, staffing or output is held, and the date is padded because the source says end of 2025 without a day.<br>It is the only body on this ledger whose remit is how the state itself uses these systems, and nothing published states what it has reviewed, approved or refused - while a regulator unit already acts on manipulated content and a national model is being offered as a base layer for government services.<br>2026-09-25 - government procurement guidelines for AI systems and generative-AI guidelines for government were reviewed by the national council, with no adoption date stated. | MOVEMENT |
| **Equatorial Guinea** | The cabinet approved the state operator's programme carrying artificial intelligence service bots and biometric checks in May 2026.<br><br>The administration's own computerisation plan carried nothing of the kind: the 2024 action plan names a data centre, a fibre ring and e-mail, with no artificial intelligence component.<br>The first approved deployment is in a state-owned operator rather than a ministry: the cabinet-approved modernisation programme of May 2026 carries artificial intelligence service bots, biometric know-your-customer checks, fifth-generation service and a zero-paper target. | MOVEMENT |
| **Eritrea** | One deployment, in agriculture: an expert system for agricultural strategic information. No administrative use is recorded and no policy governs it.<br><br>The single instance on the repository is sectoral and five years old: an agricultural expert system reported in 2021. Nothing records a model used in administration — no case triage, no register matching, no document processing in any ministry.<br>The governing position is empty in both directions. A legal-status review of June 2026 records that neither an artificial intelligence law nor a strategy exists. Where AI appears in public life it is as training: an institute reports about 50 graduates in 2026 from new introductory courses, some producing animation videos for children. | NO CHANGE |
| **Eswatini** | The Auditor-General launched a 2026-2030 strategic plan integrating artificial intelligence, and the plan text is not held.<br><br>The plan was launched in August 2026 (plan, integration).<br>No tool, data access, assurance standard or safeguard for audit use of artificial intelligence is stated. A supreme audit institution adopting the technology is consequential — it is the body that would otherwise audit its use elsewhere in government — and the country has no artificial-intelligence strategy or statute at all.<br>2026-09-07 - the office took the question regionally, hosting a week-long peer programme at which supreme audit institutions across the region weighed the use of artificial intelligence in government audit. No tool, pilot, audit methodology or procurement is named on either occasion; what the repository holds is the intention and the forum. | MOVEMENT |
| **Ethiopia** | The state artificial intelligence institute, established in 2020, built the unified service platform and anchors the state's capability claim.<br><br>The institute has operated since 2020 and is credited with building the unified public-service platform, which is the state's principal claim to applied artificial intelligence capability (the institute).<br>Nothing else is held: no inventory of models in government use, no procurement, no evaluation of any deployed system and no policy on automated decision-making within administration. | NO CHANGE |
| **Gabon** | Two officials of the forward-planning directorate were trained in Lusaka on using artificial intelligence to monitor and report the continental plan's second ten-year implementation phase (training).<br><br>Two officials of the forward-planning directorate were trained in Lusaka on using artificial intelligence to monitor and report the continental plan's second ten-year implementation phase (training). Two officials trained is the whole of what the repository holds. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Gambia** | The centre the state broadcaster called an AI centre describes itself as staffed by human analysts.<br><br>The state broadcaster reported the launch as West Africa's first artificial intelligence centre to fight fake news, built by a named local firm.<br>The centre's own page describes a fact-check hotline with a public audit trail worked by human analysts rather than an artificial intelligence system. The gap between the two accounts is the finding. Elsewhere the revenue authority's strategic plan schedules artificial intelligence piloting for 2026-27 and records it as unfunded. | NO CHANGE |
| **Ghana** | A disaster-management chatbot was handed to the national agency in May 2026, the finance ministry adopted a legal AI tool in August, and automated traffic enforcement goes to full enforcement on 1 October.<br><br>From September 2026 more than 47 traffic offences are to be enforced by face, mobile, in-vehicle and handheld cameras and radar, captured for review in a back-office control room before an electronic notice is sent to the offender's phone, with officers to stop checking licences, seatbelts and insurance by hand; no procurement, cost or appeal route against an automated notice is stated (traffic enforcement).<br>2026-09-15 — the police set 1 October 2026 for full automated traffic enforcement, with notices by SMS and fines through Ghana.gov, after a pilot that issued about 120,000 caution notices.<br>2026-08-27 - the finance ministry adopted a legal artificial-intelligence tool across its legal directorate, reported as the first team-wide deployment of legal AI in a government legal department; no contract value, seat count or evaluation is on file.<br>2026-10-02 - the communications minister announced a centralised technical review of every AI system bought by public institutions.<br>2026-10-04 - a commentator's account puts the start of fining back a month, to 1 November 2026; the technology partner's annual report holds its stake in the operating joint venture at 40%. | MOVEMENT |
| **Guinea** | No instrument governing or deploying artificial intelligence inside the administration was reachable; what is dated is four regulator cadres trained on big data and artificial intelligence in March 2024.<br><br>The finding is negative and worth stating plainly: no ministerial chatbot, predictive model or automated administrative decision could be identified, and the digital platforms the state does run are described by their own official sources as digital and automated, not as artificial intelligence.<br>2024-03-19 - what the repository holds is preparation to regulate rather than use: the telecommunications regulator sent four senior staff, including its director of information systems, its legal director, its director of regulation and a cybersecurity engineer, to a regional session on big data analysis and artificial intelligence covering data processing, confidentiality, ethics and the development of sector policy and regulatory frameworks.<br>The policy layer above it is moving faster than any deployment: a programme and manifesto were launched in April 2026 with no published workplan or budget, and the national roadmap validated in December 2025 is not published. | NO CHANGE<br>a standing position the repository holds for the first time |
| **Guinea-Bissau** | No artificial intelligence is recorded inside Guinean government administration.<br><br>Nothing in the repository names an artificial intelligence tool, pilot or procurement inside a Guinean ministry or agency.<br>Where officials have engaged with the subject it has been abroad and at forum level: the public works ministry joined an artificial-intelligence-in-infrastructure capacity forum under the Sino-Lusophone framework among more than 120 delegates in June 2026. | NO CHANGE |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Kenya** | A national computing platform is to be established at the technopolis with graphics-processor infrastructure for researchers, universities and startups.<br><br>Progress was agreed with a development agency in July 2026, and no processor count, cost, capacity or commissioning date is published (platform).<br>No deployed government AI system or model inventory is held; the one procurement on file is the health ministry's enterprise-system tender making a phased generative-AI module mandatory.<br>The interior minister announced on 28 August 2026 that an artificial-intelligence and data-analytics system would decide police deployment nationwide by the end of the year, alongside a digital occurrence book linked to police systems (announcement). No procurement, supplier or safeguard is named.<br>2026-09-11 - a Letter of Agreement with the UN development agency commits to operationalising sovereign AI infrastructure at the Konza Data Centre, still with no capacity or cost published.<br>2026-08-27 - the ICT cabinet secretary put up a platform on his official website for an assistant meant as a single entry point to government information, to launch only once its routing and review safeguards are in place. | MOVEMENT |
| **Lesotho** | The AI Policy of 2025 is the stated foundation; the one named tool is a planned chatbot for farmers.<br><br>2025-10-30 — the ministry's principal secretary described a planned government chatbot for farmers, with an implementation plan for 2026.<br>2026-06-11 — digital policies were signed at a ceremony that also confirmed the innovation studio operational.<br>2026-07-07 — the government told the UN global dialogue that the 2025 policy is its AI governance foundation.<br>No AI system is described as running in government administration. The repository holds a policy, a plan and a pilot.<br>2025-04-01 — the revenue authority reported completing the purchase of a customer relationship management system it describes as AI-based, meant to unify client correspondence and measure service across channels. No go-live is reported. | MOVEMENT<br><br>at policy and pilot stage |
| **Liberia** | A legal-learning system over Supreme Court opinions from 1861 to 2026 launched in July 2026, built by a private law library.<br><br>It also covers statutes and regulations and was built with support from a United Nations human-rights office (system).<br>Every claim is the developer's own: no accuracy or evaluation figure is given, no model or vendor is named, and the corpus is a private compilation rather than an official publication of the country's law. | MOVEMENT |
| **Libya** | The one working case is a municipal assistant in pilot; the strategy's targets for administrative use are stated rather than measured.<br><br>BaladiyaBOT, in pilot in one Tripoli municipality since April 2026, is the only artificial-intelligence tool on file in day-to-day administrative use (assistant).<br>The National Artificial Intelligence Strategy adopted in June 2026 sets 80 per cent of government entities using artificial intelligence and half of government transactions automated as targets (strategy). Neither is measured, and no baseline for either is published. | MOVEMENT |
| **Madagascar** | A partnership with Egypt on artificial intelligence in public administration was reported in August 2026, with no signature date, text or figure.<br><br>The partnership was reported by the press with no date of signature given (report).<br>No text, figure or workstream is held, and no artificial-intelligence system is recorded in use in the country's general administration, so the record here is an intention and the working uses sit in customs instead. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Malawi** | Government activity is at readiness and validation stage; no artificial-intelligence system in the administration is on record.<br><br>2026-02 - a national validation workshop on the draft digital transformation and artificial intelligence strategies was held over 18 and 19 February 2026. The draft strategy remains pre-adoption with no adoption date on record.<br>2026-03 - a high-level training session on artificial intelligence for principal secretaries was held on 5 March.<br>2026-07 - the science and technology commission, with the education ministry and the cultural organisation, took the readiness assessment to a multistakeholder validation workshop on 22 July.<br>Three events, no adopted strategy, no governance institution and no deployed system: the administration is preparing to decide rather than deciding.<br>2026-09-28 - the communications regulator recommended AI cameras with number-plate recognition and a central command centre for Blantyre, with police as a partner; no cost, supplier, timeline or rule on footage is published. | NO CHANGE<br>a readiness assessment and a draft strategy with no system in the administration behind them |
| **Mali** | The artificial intelligence and robotics centre was created by ordinance in August 2023 and inaugurated in September 2026 on FCFA 3.3bn of national budget; no staffing or output is held.<br><br>The founding text is now held (ordinance), and the campus was inaugurated on 21 September 2026, financed from the national budget at FCFA 3.3 billion; it is a research and training site, not a system in government use.<br>An annual national forum on artificial intelligence was launched in April 2026 and the head of state's position was carried to the inaugural global dialogue on artificial-intelligence governance in July (forum, dialogue). No forum output, declaration or commitment is recorded, and no artificial-intelligence system in government administration is on the record at all. | NO CHANGE |
| **Mauritania** | The competition for 3,000 state officials was run end to end through the services portal, with artificial intelligence used in preparing and marking it.<br><br>The digital minister said in February 2026 that the whole recruitment process would be digitised (direction), and candidates interviewed after sitting it praised the transparency of the process (competition).<br>How artificial intelligence was used in marking is not set out, no error, appeal or audit arrangement is published, and the candidate reaction is reported rather than surveyed - so what is established is that the tool was used and not how well. | MOVEMENT |
| **Mauritius** | An AI-enabled water leakage reporting service launched on the government superapp in July 2026.<br><br>The service launched on the government superapp in July 2026, the first artificial-intelligence service the repository holds inside a citizen-facing government channel (launch).<br>The superapp itself soft-launched in January 2026 (launch).<br>The 2026 pay research report carries a dedicated section on digitalisation and artificial-intelligence readiness across conditions of service (report). No usage figure for the service is published. | MOVEMENT |
| **Morocco** | The country rose fourteen places to 87th on a government artificial-intelligence readiness index, and signed a cooperation agreement on artificial-intelligence tools for corruption-risk prevention.<br><br>The 2025 index edition puts the country 87th globally and eighth in its region, up fourteen places, attributed in the account to the national roadmap and a regional data-for-sustainable-development hub developed with UNDP; the index is not named in the record held and the starting position is derived from the reported change (index).<br>A cooperation agreement with the anti-corruption authority was signed in May 2026, aiming at transparency through advanced information systems and artificial-intelligence tools for corruption-risk prevention (agreement). No deployed administrative system using the technology is separately recorded.<br>2026-04-16 - the road safety agency was preparing AI and camera monitoring of driving-licence tests, including a test car developed with UM6P that detects driving faults without an examiner; no start date is given. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Mozambique** | A national artificial-intelligence commission was created by decree in April 2026, and the draft national strategy went to public consultation the following month.<br><br>2026-04-17 — a decree created a national artificial-intelligence commission subordinate to the Council of Ministers, with the ICT institute as its executive secretariat and a mandate spanning public-sector AI policy, ethics, sectoral application and the national strategy. It is the binding founding act, not an announcement.<br>2026-05-04 — the ICT institute opened a month-long public consultation on the first draft of a national artificial-intelligence strategy, moving the subject from preparatory agenda to formal policy process.<br>2026-07-13 — the institute and the national health institute agreed a digital health laboratory complex and a public-health AI regulatory sandbox to test and validate solutions before deployment in the national health system.<br>Governance is moving faster than use. No AI system in operational government administration is named anywhere in the record. | MOVEMENT |
| **Namibia** | A donor-funded artificial-intelligence citizen support pilot of the central bank and communications regulator has onboarded more than 2,000 regulated entities.<br><br>The pilot routes consumer complaints about scams and redress through messaging, web chat and voice to the appropriate regulator or financial institution, with local-language support; more than 2,000 regulated entities are onboarded (pilot).<br>In March 2026 ten agencies - the revenue agency, the communications regulator, the financial supervisory authority, the ombudsman, the pension fund, the social security commission, the roads authority and the mines and energy ministry among them - discussed converting it into a shared service, each running its own assistant on common software, hosting and models, with personally identifiable data kept on sovereign servers while domestic data centres build accelerator capacity (session).<br>The sponsoring programme closes in 2030. No procurement, contract, budget line or agency onboarding since March is on record, and the account is the vendor's own. | NO CHANGE<br>a first position on this indicator with nothing earlier behind it |
| **Niger** | An artificial-intelligence programme applied to human security completed one training round of 140 cadres in June 2026, run with the interior ministry and the statistics institute.<br><br>One training round is complete, run by a United Nations coordination office with the statistics institute, the digital agency and the interior ministry (programme).<br>No system, model or deployment follows it. Artificial intelligence applied to human security by an interior ministry, with no national strategy or governance instrument behind it, is the position the cell records. | MOVEMENT |
| **Nigeria** | A generative assistant runs across the federal civil service, a public-services chatbot answers in four languages, and a state automated its own agency operations on an open model.<br><br>The civil-service assistant has been in service since February 2025 (assistant).<br>The public-services chatbot runs on an open foundation model in English and three Nigerian languages, pitched at rural, low-literacy and multilingual users, though poor rural broadband limits reach (chatbot).<br>A state technology agency reports modifying and training an open-source model to automate its own operations end to end and says it is exploring replication across state government; the account is the agency's own and no model, evaluation or measured saving is published (automation). A state survivor-support chatbot has been live since February 2025 (survivor support).<br>2026-09-24 - the electoral commission said it has begun deploying AI checks inside results management to flag errors before final validation, each subject to human audit, under an AI Division and an AI Roadmap and Governance Framework. The account is the commission's own and the framework text is not held.<br>2026-10-07 - an opposition movement called on the electoral commission to abandon AI verification of results until its governance framework is published. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Rwanda** | A three-year memorandum with a frontier developer gives public-sector teams model access, and about 41 officials graduated a six-month data science programme.<br><br>The memorandum signed on 17 February 2026 gives public-sector developer teams access to a frontier model and its coding tools over three years, covering health and education use cases (announcement).<br>A six-month data science and artificial intelligence capacity programme graduated its first cohort of about 41 public-sector officials in January 2026 (graduation).<br>Access and capacity are the two preconditions. No deployed administrative system using artificial intelligence is documented, and the risk-assessment and harms-monitoring body the ledger records as absent was re-searched and remains so.<br>2026-10-01 - the statistics institute built a model that codes survey responses in three languages, 96 per cent automatically in one test run. | MOVEMENT |
| **Sao Tome and Principe** | An AI access-to-justice platform is being built with the justice ministry, against a data strategy that treats AI as an opportunity to explore rather than anything in operation.<br><br>The strategy sets objectives for responsible and ethical data use and data-based decision-making, and treats artificial intelligence as an opportunity to be explored using public data rather than as something already operating in the administration (strategy).<br>An implementing partnership was agreed to build a platform for the justice ministry carrying a legal-information chatbot trained on national legislation and grounded through retrieval-augmented generation, plus two encrypted reporting modules routing to the judicial police (platform).<br>A two-day training on digitalisation and artificial intelligence for the public administration ran in April 2026 (training). The first deployment is public-facing and in justice, ahead of any internal administrative use the repository can see. | MOVEMENT |
| **Seychelles** | The state's AI is in classrooms: a national framework for AI in education governs pilots launched in six primary schools.<br><br>The ministry's framework for 2026-2030, endorsed by the World Bank, establishes a National AI in Education Steering Committee, school-level AI leads and approved and prohibited tool lists, and names the Smart Classroom, Teacher Coach and Student Tutor initiatives already under way (framework).<br>The Teacher Coach and Student Tutor pilots launched in May 2026 at a workshop for primary educators from six named schools (pilots).<br>Nothing held records artificial intelligence used in any other part of the administration, so the only governed deployment is in one sector and one is the number of frameworks that exist. | MOVEMENT |
| **Sierra Leone** | An artificial-intelligence-in-government partnership signed at the 80th UN General Assembly delivered cyber and artificial-intelligence training for senior civil servants in March 2026.<br><br>The electoral commission publicly considered the use of artificial intelligence for the 2028 elections (report). Nothing states what function is contemplated or what safeguards would apply.<br>The national security office has since warned that tools producing realistic fake audio, images, video and documents are a serious risk to public trust and to the integrity of those elections; no incident count, detection capability or countermeasure is named beside it.<br>The memorandum was signed on 30 September 2025 at the 80th UN General Assembly, and training for senior civil servants followed in March 2026 with the cyber coordination centre as a delivery partner (training).<br>No system, deployment, cost or evaluation is published. The partnership is running ahead of the national strategy that would frame it, which is in development.<br>2026-10-05 - the judiciary and the attorney-general's office are to draft a national AI roadmap for the justice sector with UNESCO; no timetable is published. | MOVEMENT |
| **Somalia** | A national AI centre founded in October 2024 names policy advice and public-sector deployment among its objectives; no operational government system is documented.<br><br>The centre's own institutional statement describes it as a governmental institution for artificial-intelligence research, education and industrial application, founded in October 2024, with objectives including advising on ethical policy formulation and deploying solutions in critical sectors (statement).<br>A university launched a centre of the same name at its campus in July 2026, attended by four other universities and the prime minister's office (launch).<br>No deployment inside a government administrative process is documented. The readiness assessment that would set a governance framework was still recruiting in October 2025 (call). | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **South Africa** | A public-service chatbot launched on 31 July 2026, the revenue service automates all verifications and 88.41% of complex audits, and travel screening by machine learning is intended.<br><br>2026-07-31 — the public service department launched a citizen and public-servant chatbot built on an open-weight model family under a partnership with the model's owner and a local supplier, as decision support with no decision-making authority.<br>2026-07-27 — the revenue service reports automated selection covering 100% of verifications and 88.41% of complex audits. At the border, 85% of travel-authorisation applications are assessed automatically against a 24-hour target and 40 document-authenticity parameters, with no appeal route, accuracy rate, disparate-impact testing or human-review threshold stated. The department has stated an intention to screen travellers for fraud using machine learning, with no system or legal basis published.<br>2026-09-21 — the content regulator has approved a digitisation and AI strategy and plans to explore generative AI for monitoring, classification and case management over three to five years; none of it is yet in use.<br>2026-09-30 - the financial conduct regulator's annual report states that a framework for its own responsible use of AI is being developed, the one outstanding item under its technology-governance principle. No date is given.<br>2026-10-02 - the home affairs department said the travel authorisation makes automated, risk-based decisions by machine learning, with human review of anomalies. | MOVEMENT<br>and ahead of any rule governing it |
| **South Sudan** | The ministry's own position is that infrastructure, data centres and trained people come first; the one deployment is a public e-learning platform.<br><br>Speaking at a regional summit, the ministry set out three pillars - infrastructure, data centres and trained human resources - as prerequisites, and described no operational system in administration, only planned donor-funded training and fibre groundwork (pillars).<br>A national e-learning platform launched in June 2026 by the mobile operator with an education organisation and two ministries, zero-rated on that operator's network and carrying artificial-intelligence-supported content (platform).<br>A government-partnered public service, not an internal administration system. Nothing inside government runs on it. | MOVEMENT |
| **Sudan** | A data and artificial intelligence authority was created by decree in November 2025, mandated to let the state use AI in decision-making and services.<br><br>The prime minister's decree established the authority under the communications ministry, evolved from the National Information Center, explicitly mandated to regulate national data management and to enable the state to employ artificial intelligence to support decision-making and develop public services (decree).<br>In March 2026 the prime minister directed that strategic projects be brought onto a national projects-management platform, alongside directives on AI in higher education and hospital digitisation (directives).<br>No deployed administrative AI system is documented. The mandate and the directive are the whole of the record. | MOVEMENT |
| **Tanzania** | A ports authority enquiry chatbot carries the only measured outcome attached to a public-sector artificial-intelligence deployment anywhere in this repository.<br><br>It reaches the repository through a design-and-evaluation study published in a peer-reviewed journal (chatbot).<br>Fifteen domain experts is a usability study rather than a deployment audit, which is why the measurement is worth recording and worth bounding in the same sentence.<br>2026-08-31 - the e-government authority approved a governance framework for public institutions adopting emerging technologies and AI standards that require every public institution to identify and evaluate the AI systems it already runs. No inventory under them is published.<br>2026-10-06 - the state power utility launched an AI-powered customer channel and a portal for large customers. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Togo** | An AI-driven fraud-detection platform went into service on 12 March 2026, run from a joint tax and customs command centre.<br><br>The platform uses artificial intelligence and data analysis to detect suspicious transactions and abnormal behaviour and to analyse data in real time under the mandatory secure fiscal-marking reform, staffed jointly by tax, customs and commerce ministry services. A completed commissioning, not an announcement.<br>The government's own laboratory was scaled by a US$2 million partnership announced in December 2025 — compute clusters at two universities and a programme training 27 data specialists across all ministries, against a two-year expectation of 70 government data scientists.<br>At the first data-infrastructure conference on 19 February 2026 its director named geospatial data and artificial intelligence essential to delivering public services; no completed integration is reported.<br>2026-09-17 - a public-service assistant reachable by web, mobile and voice was strongly prioritised among uses for country-hosted compute, owned by the digital ministry with the state digital agency and the AI laboratory, its procedures and data still to be prepared. No build or date is stated.<br>2026-09-28 - the national AI laboratory put its local-language public-services platform to a public user test, piloting Kabiye, Ewe and Moba.<br>2026-10-06 - the local-language AI pilot opened paid public contributions of voice and text with UNDP support. | MOVEMENT |
| **Tunisia** | Customs announced a machine-learning module in its risk-targeting system in May 2026 and said in October that the integration should enter operation at the end of November.<br><br>Customs formally integrated a machine-learning module into the national selectivity system for risk targeting, by communique of 16 May 2026.<br>Customs said on 6 October 2026 that with artificial intelligence in the risk analysis since May the share of declarations sent to the red channel fell from 4.7% in 2025 to 2.6% in 2026, and on 9 October that the integration, built in-house, should enter operation at the end of November 2026.<br>At a finance ministry seminar on 29 September 2026 a customs risk-targeting system, Sanad 2, and a tax-directorate chatbot were named among projects to be announced, customs presented a simulated risk model on 2025 data that found about 96.9m dinars in additional amounts at a 49.23% detection rate, and the ministry's computing centre put a one-year big-data tax-audit project at the bid-receipt stage; a finance ministry document on the 2027 budget rests resource mobilisation on countering tax evasion with artificial intelligence.<br>A state-linked institute published the first Tunisian study on artificial intelligence as a lever for the social role of the state in December 2025, with 143 recommendations.<br>No inventory of artificial-intelligence use across the administration, and no accuracy or contestability statement for the customs module, is published. | MOVEMENT |
| **Uganda** | A homegrown language model was launched in October 2025 to widen access to government services, and a readiness assessment was validated in May 2026.<br><br>The civil aviation authority has moved Entebbe airport's car parks onto AI-assisted number-plate recognition and mobile-money payment, reported 9 October 2026, and says it keeps vehicle registration records, timestamps and payment logs indefinitely, releasing them to security agencies under statutory guidelines.<br>2025-10 - the ICT ministry launched a homegrown artificial-intelligence language model, framed as widening citizen access to government services.<br>2026-03 - nationwide stakeholder consultations on a National AI and Emerging Technologies Strategy ran across the country, including at university innovation hubs.<br>2026-06 - a readiness assessment prepared with UNESCO was validated at a workshop in Kampala on 26 May 2026, feeding the same strategy. What is absent is deployment. No government administrative process in this repository is recorded as running on artificial intelligence: the police chatbot is planned, the strategy is unpublished, and the readiness report itself is not held - so what exists is a language model and a set of documents about intent. | MOVEMENT |
| **Zambia** | An implementing partner published a first-hand account of artificial-intelligence automation at the National Assembly, and the same finding is reported from two other African parliaments.<br><br>That the same finding appears in three parliaments makes it a pattern rather than an incident (parliament).<br>An artificial-intelligence for public good challenge closed applications in August 2026; it is a call for applications, with no award value, cohort size or deployment commitment by any of the five institutions stated (challenge). | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Zimbabwe** | Cabinet approved the AI strategy in October 2025, a national challenge is running its delivery arm, and Parliament asked for AI-assisted tender adjudication.<br><br>Cabinet approved the National Artificial Intelligence Strategy 2026-2030 on 14 October 2025, the founding governmental act behind adoption in public administration (approval).<br>A private member's motion moved in the National Assembly on 29 April 2026 asks the procurement regulator and the finance ministry to introduce artificial-intelligence assisted systems in government tender adjudication with human oversight, citing persistent allegations of corruption, delay and inconsistency; no instrument or pilot follows it (motion).<br>The strategy's grand challenge is being delivered by the telecommunications regulator with the International Telecommunication Union, the ICT ministry and the high performance computing centre, over data, design, development and deployment tracks, with public service delivery named among its target sectors (challenge).<br>No artificial-intelligence system is recorded in production in a government administrative process. | MOVEMENT |

## Use of AI in sectoral management information systems

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Algeria** | AI-assisted fire prediction ran in the 2026 forest-fire campaign, and an AI learning-pathway assistant and marking model is announced for 2026-2027.<br><br>Nothing of the kind existed at the window's opening. It is announced for the 2026-2027 academic year, steering module allocation and marking student answers, with no appeal route, accuracy claim, disclosure duty or human-review threshold reported.<br>It is the first use of automated decision-making on individuals the repository records for this country, and it lands in the same year an ethical-artificial-intelligence law was reported in preparation with no draft text. A student marked by a model would have, on the evidence held, no published route to contest it.<br>A second sectoral use is operational rather than announced: the forestry and civil protection directorates built artificial-intelligence-assisted prediction and early warning into the 2026 fire campaign, with thermal-camera drones flying day and night, on a detector the state research centre first produced in 2023 (campaign). | MOVEMENT |
| **Angola** | The tax authority's machine-learning risk-analysis system began testing in 2024 with first taxpayer notices due from June 2026, built in-house.<br><br>2026-02-11 — the tax authority reported machine-learning testing begun in 2024 and first taxpayer notices due from June 2026, on a system it states it builds and feeds in-house. No baseline was published before it and the system is not in service.<br>No model, supplier or accuracy figure is published, and no taxpayer-facing safeguard is stated beyond a right to be heard — against a draft artificial-intelligence law that would give a right to explanation and to refuse decisions made by artificial intelligence, and which has not been tabled.<br>It is the only use of artificial intelligence inside a government sectoral system on this ledger. No health, education, justice or social-protection system reports any. | MOVEMENT |
| **Benin** | An artificial-intelligence, drone and geospatial malaria programme reports incidence down 38% and mortality down 39% across 2022 to 2024, on US$2.3m of foreign financing.<br><br>2026-07-03 — a US$2.3m programme with Japanese financing combining artificial intelligence, drones and geospatial mapping reports malaria incidence down 38% and mortality down 39% across 2022 to 2024. Nothing of the kind existed before it on this ledger.<br>The attribution is the caution: the outcome figures cover a period beginning before the programme is dated and no source separates its contribution from the rest of the malaria response. What is established is that an analytical layer is operating over health geography, and that it sits beside a health information system, reported under health, that has published no data-quality measure of its own.<br>A health ministry contract awarded to a South Korean supplier is to put twenty AI-assisted malaria diagnostic units into the main public referral hospitals, the national malaria programme having classified the device as a point-of-service diagnostic. The supporting evidence is the vendor's own report of a 2025 evaluation in 211 children, and the award date is not established. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Botswana** | Sectoral pilots are named in the policy process and a real-time health data platform is due; nothing is in production.<br><br>2025-01 — the readiness assessment is the repository's most authoritative statement on whether AI governance exists at all.<br>2025-08-13 — pilots were named in agriculture, remote-area health diagnostics and machine-learning-assisted digitisation of licensing and social welfare.<br>2026-03-05 — a national health intelligence centre was announced as a real-time platform running from community health workers to tertiary hospitals.<br>No sectoral system is described as using AI in production, and no procurement for one is held.<br>2026-09-15 - a US clinical decision-support platform was announced for extension to Botswana through the Botswana-UPenn Partnership, with no timetable, site count or cost. | MOVEMENT<br>at pilot and announcement stage |
| **Burkina Faso** | A health-management system deployed in 86 per cent of primary health centres uses artificial intelligence to control data quality and detect early signs of outbreaks; the two ministries signed a convention to build more on 29 October 2025.<br><br>The one operating case is in health: a digital health-management system deployed in 86 per cent of primary health centres by the end of 2022 that explicitly uses artificial intelligence to control data quality and detect early signs of disease outbreaks within the national health information system. It is a management information system with artificial intelligence as a feature, not an artificial-intelligence programme.<br>2025-10-29 - the digital transition and health ministries signed a formal collaboration agreement to design artificial-intelligence tools for the health management information system, naming diagnostic imaging support, epidemic prediction and a planned national health intelligence centre.<br>No model, evaluation or deployment date for any of the three is published.<br>Elsewhere in the state the use is enforcement rather than management: automated traffic enforcement recorded 19,910 offences over August 2026 with CFA146.559m issued and CFA16.1m recovered. | MOVEMENT |
| **Burundi** | A malaria diagnostic tool entered pilot in two provinces, and work is under way on a national malaria data warehouse.<br><br>2024-10 — a development agency, the health ministry and the malaria programme introduced an artificial-intelligence reading of malaria rapid diagnostic tests, with a demonstration workshop and a pilot in two provinces. It is the one evidenced case of artificial intelligence in operational use inside a Burundian sector workflow.<br>2026-03 — work with the health ministry, the malaria programme, the health information directorate and the sector's IT directorate is building a national malaria data warehouse, with the diagnostic tool described as still at pilot stage.<br>Two years on, still a pilot. The warehouse is the more consequential half: a sectoral data layer is what a model would have to run on, and it is the thing the readiness assessment says is missing. | MOVEMENT |
| **Cameroon** | A forward-detection system is in service on locomotives, and the secondary-education ministry adopted generated simulations.<br><br>2025-11-24 - a forward-detection system was presented as deployed on locomotives, detecting people, obstacles and crossings to 2 km against a 1.5 km maximum braking distance; no fleet count or contract value is published.<br>2026-08-17 - the secondary-education ministry formally adopted generated simulations for use in schools, saying it produced more than 250 in under a month at no cost, with teacher demonstrations in chemistry, biology, languages and industrial techniques. The production count and the zero-cost claim are the ministry's own, and no pedagogical evaluation, accuracy check or distribution route to schools without connectivity is published.<br>The intelligent customer portal announced for first-quarter 2026 delivery, with a wagon-allocation decision algorithm as its centrepiece, has nothing on record after November 2025. | MIXED<br>a rail detection system entered service and school simulations were adopted while the rail customer portal's target quarter passed with nothing on record |
| **Cape Verde** | A US$9m contract for artificial-intelligence-assisted port scanning is stated to be under way.<br><br>2026-01-09 - the Finance Minister stated at the Praia customs house that a US$9m contract for artificial-intelligence-assisted scanning equipment at the national ports is under way, inside a stated programme for a fully digitised national revenue directorate built on artificial intelligence and data management.<br>Its signature date and counterparty are not established, and the figure is stated in dollars by the announcing minister with no escudo equivalent and no conversion date. It is the only artificial-intelligence deployment of any kind the repository records for this country, and it is a procurement statement rather than a system in service. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Central African Republic** | A development bank's price platform imputes missing subnational food-price observations by machine learning; no state system uses it.<br><br>The clearest instance of machine learning inside a sectoral information system is a development bank's real-time prices platform, which uses a machine-learning approach to impute missing subnational food-price observations for the country. It is run outside government and imputes what the national system does not collect.<br>A continental research body's model, run on remotely sensed satellite data, projected the 2025 cassava production on the same pattern - a figure produced abroad about a domestic sector.<br>No ministry system on this ledger is stated to use artificial intelligence at all. | NO CHANGE<br>a first stated position with no earlier account behind it |
| **Chad** | Two health pilots run: AI tuberculosis screening flagged 589 abnormalities in 7,116 screened, and Vacci360 layers over DHIS2.<br><br>A mobile computer-aided tuberculosis screening strategy screened 7,116 people and took 6,357 X-rays, flagging 589 abnormalities of which 112 were confirmed and all started on treatment, with algorithms tailored to nomadic, internally displaced and refugee groups (screening).<br>Vacci360, launched on 2 April 2026 in Lac, Kanem and Hadjer Lamis, adds an analytical layer over the existing health information system: geographic accessibility, automated micro-plan optimisation, mobility indicators including herd movements, and a conversational assistant for querying the data (pilot).<br>Both are in health and both are partner-run. No other sector's management information system carries an artificial-intelligence component. | MOVEMENT |
| **Comoros** | Predictive modelling is being integrated into the national health platform for malaria early warning, the only such use on file.<br><br>The starting point is a statement of absence: the digital agency described artificial intelligence as at its earliest stirrings in the country in 2024.<br>2026-05 - a research contribution applied machine-learning and deep-learning methods to routine malaria case data from the national health platform to model spatio-temporal dynamics and forecast incidence, accepted as a conference poster.<br>2026-07 - the platform's country profile records the country integrating climate data and predictive modelling for malaria early warning to support more timely and targeted interventions.<br>One sector, one disease, and no published forecast, accuracy figure or intervention it has actually changed. The health platform is the only sectoral system in the repository with any modelling attached. | MOVEMENT |
| **Congo** | The certified electronic invoicing system is in service, and health logistics received computing equipment.<br><br>2026-03-31 — the certified electronic invoicing system is in service.<br>2026-07-18 — computing equipment was delivered for the health logistics management information system, against a health cooperation strategy for 2025 to 2028.<br>These are management information systems and none of the records establishes an artificial-intelligence component in any of them. | MOVEMENT |
| **Cote d'Ivoire** | An agricultural e-voucher and crop-management platform is being deployed, and a smart-agriculture platform has preliminary approval.<br><br>2025-10-22 - a digital agriculture project with the agriculture ministry deploys an e-voucher system to identify and register farmers and distribute seed and fertiliser equitably, alongside a crop-management platform to stabilise and predict harvests. It is a vendor announcement with no enrolment or coverage figure published.<br>2026-05-19 - a plot-mapping, crop-monitoring and input, yield and weather platform was given preliminary ministerial approval, the minister asking for closer cooperation on national deployment; no contract, cost, pilot or timetable is stated, and the stated driver is cocoa and cashew traceability under tightening European environmental rules. | MOVEMENT |
| **Djibouti** | A weather early-warning system entered service in version 2.0, forecasting at 3 km resolution against 9 km.<br><br>The first system was supplied in July 2025 and not yet in service. 2026-07 - version 2.0 was handed over on the sidelines of a Shanghai conference and is in service, with forecast resolution of 3 km against 9 km, a three-day horizon and six-hourly updates.<br>It is supplied by the Chinese meteorological administration throughout. No accuracy assessment, warning count or user figure is published, and it operates in a country where no instrument governs artificial-intelligence systems in public use - so an early-warning system on which safety decisions rest has no published audit route. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **DR Congo** | An award citation records artificial intelligence used to mark the 2024-25 state examination, alongside electronic diplomas.<br><br>The only sectoral use on file is artificial intelligence used to mark the 2024-25 state examination, named among the education ministry's reforms alongside electronic diplomas and decentralised scanning centres.<br>It reaches the repository as an award citation. The marking belongs to the 2024-25 session and no date is established for it; no scope, vendor, model, accuracy figure or human-oversight arrangement is held. A national examination marked by machine with no published accuracy check and no appeal route stated is the position as the repository holds it. | MOVEMENT |
| **Egypt** | A national Arabic large language model was announced as public digital infrastructure, with a teaching application named.<br><br>2026-02-11 - a national Arabic large language model was announced as public digital infrastructure, with named applications built on it including one for secondary Arabic and history teaching. No parameter count, training corpus, licence or evaluation is published.<br>The governance around it is further along than the deployments: the council adopted the strategy's implementation plan with 56 sub-indicators and required quarterly achievement reports from government entities, and a readiness assessment identifies scaling computing as a constraint.<br>No ministry system on this ledger is stated to run a model in production. | MOVEMENT |
| **Equatorial Guinea** | The statistics institute pressed for artificial intelligence in health statistics at the United Nations in March 2026; no system operates.<br><br>The institute's head spoke for the African Group at the United Nations statistical commission in March 2026, pressing for artificial intelligence in health statistics under rights-respecting governance.<br>It is a position taken abroad rather than a system at home: nothing in the repository records artificial intelligence inside an Equatoguinean sectoral information system. The national artificial intelligence forum of May 2026 is likewise discussion rather than deployment. | MOVEMENT |
| **Eritrea** | One agricultural expert system, described by the ministry as part of artificial intelligence, gives farmers guidance when extension workers are unavailable (account).<br><br>The agriculture ministry's strategic information system division, established in 2019, includes an agricultural expert system that the ministry itself describes as part of artificial intelligence, used to give farmers guidance when extension workers are unavailable (account).<br>It is the only documented instance of a named artificial-intelligence component inside an Eritrean sectoral management information system, and the account is the ministry's own with nothing testing its use or effect.<br>The repository holds no later statement of whether the system still runs. | NO CHANGE<br>a first statement of the position and the only such system on the repository |
| **Eswatini** | Three platforms were launched with an operator covering agriculture, health and the creative economy.<br><br>The three platforms launched together in June 2026 (platforms).<br>No user count, data arrangement, custodian or public-sector role is published for any of them.<br>Three sectoral platforms delivered through a commercial operator, in a country whose government systems its own assessment finds not interoperable, is a delivery route that works and does not connect to anything. | MOVEMENT |
| **Ethiopia** | Artificial intelligence entered sectoral systems in agriculture, health and cross-government monitoring (platform).<br><br>A national conference reported a unified digital monitoring and evaluation platform across more than 113 public institutions, with an AI-powered survey dashboard (platform).<br>Ethiopia OpenAgriNet launched in February 2026, an AI-powered agricultural platform built on open standards with consent-based data governance, developed by the Agricultural Transformation Institute with partners (launch).<br>The research institute and the health ministry completed training on AI-PRESCRIBER, a clinical decision support system, with specialists from 13 hospitals each delegating one expert (training).<br>These are launches and trainings. The repository holds no usage figure, no accuracy or safety evaluation, and no statement that any of them has changed a sectoral decision. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Gabon** | The readiness assessment establishes a near-absence: adoption remains at its beginnings and the public administration has not yet adopted artificial intelligence significantly.<br><br>The country profile built on the completed readiness assessment is the authoritative dated statement, and what it establishes is an absence: adoption remains at its beginnings and the public administration has not yet adopted artificial intelligence significantly, with what movement there is sitting in the private and parapublic sectors — education, research, production and consumer applications.<br>No artificial intelligence is evidenced inside any sectoral management information system, and no use-case register is held.<br>Two years on the framing has moved and the deployment has not: the country places inside a continental governance ranking's top thirteen on stated commitments, the account itself putting a wide gap between those and what exists, and no compute capacity is held. | NO CHANGE<br>a standing position the repository holds for the first time |
| **Gambia** | The revenue authority's 2025-2029 plan schedules artificial intelligence piloting for 2026-27 and records it as unfunded.<br><br>The corporate strategic plan is the only sectoral instrument in the repository naming artificial intelligence inside a management system, and it schedules the pilot for 2026-27 without funding.<br>The authority's core systems remain the customs and tax administration platforms.<br>No other ministry names artificial intelligence inside an operating system, and the national policy is still in drafting. | NO CHANGE |
| **Ghana** | A health artificial-intelligence policy was being developed in August 2026, and customs valuation attributes more than US$300m to its own system.<br><br>The health policy in development is anchored on the Constitution's health provision and covers approval, procurement, validation, human oversight, monitoring and accountability across public and private facilities, holding that patient data should not be stored outside the country without appropriate safeguards; the ministry's own survey reports 44 per cent of respondents already using or piloting the technology and 88 per cent concerned about patient data privacy, and the ministry names unreliable electricity and connectivity among four risks (health policy).<br>The finance ministry's mid-year review attributes to the customs system monthly revenue of US$73.44m, US$51.63m, US$72.51m, US$55.84m and US$35.17m to 17 July 2026. The figures are unaudited, the series declines after March, and the attribution is asserted rather than demonstrated.<br>A United Nations project on using the technology to improve health outcomes while addressing human-security risks convened its steering committee in August 2026, with no budget, duration or milestone published (health project).<br>2026-09-11 - the development bank launched an AI advisory and lending-intelligence platform for farmers after a pilot of more than 8,500 queries; no lending outcome is published.<br>2026-09-16 — the revenue authority put customs collections at up to US$450m a month, on its own figure. | MOVEMENT |
| **Guinea** | Customs runs risk scoring in production: 78 per cent of declarations selected through dynamic selectivity in the first quarter of 2022 against 12.5 per cent previously, and 93 per cent of those identified found non-conforming.<br><br>The one case documented as actually running inside a sector system is customs. The programme and the national customs service built a dynamic selectivity mechanism that calculates the risk of fraud for each declaration from historical data, deployed at the main port in April 2021, with a simplified interface for creating and updating selectivity criteria and analytical reports generated automatically to assess criteria efficiency. Two honest qualifications: the compendium describes risk scoring from historical data, and the machine-learning label attaches to the product line rather than being asserted of this installation.<br>2025-11-04 - the clearest in-window commitment is a funded one, not a deployment: a US$131.30 million education and skills operation will support data-driven governance through an enhanced management information system and introduce weather event early warning systems using artificial intelligence and analytics, against a stated problem of fragmented ministerial responsibilities, low digitalisation and limited use of data.<br>For tax, health, education, agriculture and the electoral file, nothing algorithmic is evidenced in production. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Guinea-Bissau** | A grant places Guinea-Bissau among seven countries receiving climate and health data tools for the health platform.<br><br>The grant confirmed in December 2025 is the only instance in the repository of analytic tooling being added to a Guinean sectoral system, and it is one of seven countries in a single programme rather than a national initiative.<br>No tool is recorded in use, and the platform's own priorities are set externally: health data use for decisions named among seven priorities in the 2026-2027 cooperation plan. | MOVEMENT |
| **Kenya** | Nearly 45 per cent of commercial banks use the technology in credit risk assessment, on a central bank figure with no published document behind it.<br><br>The account's own non-performing loan series is internally inconsistent, so only its March 2025 figures are relied on (banking use).<br>One bank adopted its own policy during 2025 and is piloting a proprietary agent for deepfake detection at account opening; all figures are the bank's own and none is independently verified (bank policy).<br>Both readings are from the financial sector, and neither the health, education nor revenue systems on this ledger records a deployment of its own.<br>2026-09-22 - the central bank published its survey finding half of surveyed institutions had adopted AI, credit risk assessment the leading use, and said a guidance note will follow. | MOVEMENT |
| **Lesotho** | Computer-aided screening is in use in tuberculosis case-finding, the one production system the repository holds.<br><br>2025-06-04 — a peer-reviewed study confirms computer-aided chest X-ray screening operating in tuberculosis case-finding.<br>2026-05-11 — the agricultural research department was validating content for an extension chatbot ahead of a pilot.<br>2025-12-12 — an academic proposal was published for a Lesotho-specific health diagnostic model.<br>The screening tool is a donor-supplied clinical device rather than a component of a national system; no sectoral management information system is described as using AI. | MOVEMENT |
| **Liberia** | An automated decision system specifying machine learning is at procurement inside the climate information project.<br><br>The environmental agency's consultancy notice of April 2026 is the only located Liberian government instrument specifying artificial intelligence and machine learning inside a sectoral information system: a cloud-based automated decision management system for the US$11,431,969 climate information project, with a minimum viable product in pilot counties before a 15-county rollout. It had been advertised in January 2026 as well. It is a procurement at design stage, not an operating system.<br>The agriculture ministry's generative-AI workshop of 1 October 2025 is exploratory design with no platform, procurement or budget attached, held against the ministry's own ratio of one extension officer to more than 40,000 farmers. | MOVEMENT |
| **Libya** | The medical supply platform in pilot is described as artificial-intelligence-enabled, with no statement of what the component does.<br><br>The platform entered pilot on 17 August 2026 as an artificial-intelligence-enabled national system for pharmaceutical procurement, inventory and distribution (pilot).<br>What the artificial-intelligence component does is not described, no model or supplier component is named, and no other sectoral information system in the country is recorded using one. | MOVEMENT |
| **Madagascar** | A customs data and artificial-intelligence centre has operated since May 2025 with a risk-targeting system and a data warehouse.<br><br>The centre was launched within the customs administration in May 2025 and operates an enhanced risk-assessment targeting system and a data warehouse; a multilateral institution selected the administration as its African pilot for artificial intelligence in customs operations that year (centre).<br>No later account or performance figure is held, so the repository records the most advanced sectoral use of the technology in the country and nothing about what it has caught or changed. | NO CHANGE |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Malawi** | A university commissioned an artificial-intelligence fertigation system automating irrigation and fertiliser application from real-time crop data.<br><br>The system was commissioned in July 2026 at the university's Thyolo campus with an assisted smart tree nursery, under a continental agricultural-universities programme (facility).<br>It is a single university facility rather than a national system, and no cost or funding source is stated. It is the only working sectoral use of the technology in the repository for the country. | MOVEMENT |
| **Mali** | No sectoral system uses a model. The research centre and an operator assistant are the repository's only deployments.<br><br>Artificial intelligence in Mali is institutional and commercial rather than administrative. The research centre was created by ordinance in 2023 and featured at the 2026 digital week; an operator launched a customer assistant; and Mali took part in a francophone West African governance initiative.<br>Nothing records a model used inside a health, education, tax or social protection system. The national strategy is still planned, and the sectoral systems that would host one — education and health — are themselves still being built. | NO CHANGE |
| **Mauritania** | An artificial-intelligence agrometeorological early warning system was worked through at Rosso in January 2026 with a UN development agency.<br><br>The workshop was run by the meteorological office with the development agency (workshop); a separate hydrometeorological early warning system for the Senegal River valley is described by its developer as artificial-intelligence powered (system).<br>Neither account states what the models do, what data they use, who receives the warnings or whether either system is in operation. | MOVEMENT |
| **Mauritius** | The 2026 pay research report assesses readiness across conditions of service; no sectoral system uses artificial intelligence on the record.<br><br>Section 15 of the 2026 pay research report is dedicated to digitalisation and artificial-intelligence readiness (report).<br>The national data strategy sets the data foundations such use would rest on (strategy).<br>The report is a conditions-of-service review rather than a capability assessment, and quotes no readiness score. No health, education, tax, land or justice system in the repository is recorded as using artificial intelligence in production. | NO CHANGE<br>a readiness review with no system in production |
| **Morocco** | The tax directorate is piloting artificial-intelligence property valuation in two cities, replacing auditor discretion.<br><br>Three sectors carry a deployment on the record, tax, health and labour intermediation, and each sits inside an existing service rather than beside it. The tax directorate is piloting artificial-intelligence property valuation with a private partner in Rabat and Casablanca, replacing auditor discretion; the health ministry has deployed artificial-intelligence ultrasound in two rural clinics and breast-cancer screening in the capital.<br>The governing arrangement is being built alongside: a ministry and protection commission pact for a sovereign Moroccan-language model platform for citizens and administrations, and the minister's presentation of the government artificial-intelligence project and a research institute to Parliament in June 2026.<br>2026-09-10 — the national rail operator tendered a MAD 1.08 million design study for a national AI-assisted video-surveillance system due by 2030; no overall budget or deployment timetable is announced.<br>Labour intermediation carries one as well: the employment agency launched Veille+ with the ILO in May 2025, a labour-market intelligence platform giving jobseekers a digital coach, automated CVs and emerging-occupation mapping. No usage figure is published. | MOVEMENT |
| **Mozambique** | A public-health AI regulatory sandbox was agreed in July 2026 with international technical support confirmed for the cross-sector mechanism.<br><br>2026-07-13 — the ICT institute and the national health institute agreed to create a digital health laboratory complex and a public-health artificial-intelligence regulatory sandbox, to test and validate solutions before they are deployed in the national health system.<br>2026-05-15 — the international telecommunications body confirmed technical support for establishing the regulatory sandbox as a cross-sector testing and governance mechanism, ahead of the national artificial-intelligence and digital transformation strategies.<br>The commission's mandate expressly covers sectoral application in health, agriculture, education and finance. What the repository does not hold is any sectoral management information system actually using artificial intelligence: the sandbox exists to test what does not yet run. | MOVEMENT<br>a sectoral testing mechanism was agreed with no system yet through it |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Namibia** | Cabinet ordered a N$39.5m artificial-intelligence crop-monitoring contract cancelled in August 2026, weeks after the one-year contract was reported.<br><br>The contract, in effect from June 2026, was to build a national crop-monitoring system using satellite imagery, geospatial analysis and artificial intelligence to map agricultural land, monitor crop and pasture health and forecast five crops, with software, models and technical expertise transferred to the ministry and officials trained to run it independently (contract).<br>Cabinet ordered it cancelled in the week of 17 August 2026 and the agriculture ministry is weighing action against the official who authorised it; government did not attribute the cancellation to the technology, the value is reported as N$39.5m and N$40m in different accounts, and the review itself is not published (cancellation, block, account).<br>The award had drawn public objection over transparency and local participation, and no procurement route or text of the data-ownership terms was published.<br>2026-09-14 — the cancelled crop-monitoring contract turned into a claim: the supplier demanded N$13m for completed work and reputational damage. The government's answer is not held. | REGRESSED |
| **Niger** | The multisectoral crisis-anticipation platform certified 100 professionals to use its analysis tools in June 2026, moving it toward operational use.<br><br>An applied training held from 1 to 12 June 2026 certified 100 professionals from the peace-consolidation authority, the interior ministry, the planning directorate, the food-crisis unit, the statistics institute and the information society agency, plus partner agencies and civil society, to use the platform's assistant and analysis tools for data synthesis, briefing notes and reporting.<br>The platform itself was launched at an inaugural technical group meeting on 23 October 2025, integrating ethical artificial-intelligence tools for predictive crisis anticipation across the same institutions.<br>Nothing else qualifies: the July 2025 statement of intent names education, health, agriculture and natural-resource management as target sectors, and no operational artificial-intelligence module inside a named sectoral management information system was located. | MOVEMENT |
| **Nigeria** | Fraud detection was made mandatory in June 2026, 87.5 per cent of surveyed fintechs already use it, and one firm scores the unbanked from payment traces and sells the output to lenders.<br><br>Artificial-intelligence and machine-learning fraud detection was made mandatory in June 2026 (mandate).<br>A responsible artificial-intelligence in finance hub is proposed over an installed base: 87.5 per cent of the fintechs the central bank surveyed already use the technology for fraud detection, so production use is at near-saturation in a licensed sector under no national instrument and no model-risk rule (hub).<br>One firm builds credit scores for people without bank accounts by reading payment traces, and sells the output to lenders; there is no published model-risk rule, no accuracy or adverse-impact measure and no route for a person to contest a score built this way (scoring). | MOVEMENT |
| **Rwanda** | A primary-care artificial-intelligence health pilot was announced in January 2026 with this country first, on the announcing parties' own figure.<br><br>The pilot was announced on 22 January 2026 under a US$50m commitment across African health systems, with this country the first (pilot, horizon).<br>The figure is the announcing parties' own. No deployment site, patient count, evaluation design or clinical-governance arrangement is published, and it lands in a health system whose national medical record is still a blueprint. | MOVEMENT |
| **Sao Tome and Principe** | An AI vector-control system piloted for malaria operations in 2022 covered more than 160,000 people; nothing records it since.<br><br>The entry describes a system that plans, assigns, executes and monitors anti-malaria operations, with the model analysing satellite imagery to locate houses and probable breeding sites and climate data to recommend timing, and field data uploading back into it (entry).<br>It lists the country as active and records a 2022 pilot covering more than 160,000 people (entry).<br>The page carries no publication date and the year is inferred from the pilot it reports.<br>It is an operations system rather than the national health management information system, which is a separate platform (platform). No later source records the pilot continuing, ending or scaling. | NO CHANGE |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Senegal** | A risk-scoring algorithm selected half the corporate audit programme and detected less evasion than the inspectors it was tested against.<br><br>The justice ministry judged the pilot's first results satisfactory at a meeting with the UN agency on 9 October 2026, naming staff recruitment and the regular feeding of the court platform as the open challenges.<br>The field experiment ran across tax offices with the tax directorate, half the annual corporate audit programme selected by inspectors and half by an algorithm built on newly digitised micro data. It reports that inspector-selected audits were 18 percentage points more likely to be conducted and detected 89 per cent more evasion, that algorithm-selected audits were less cost-effective and did not reduce corruption, and that even a model retrained on audit outcomes would have raised aggregate detected evasion only moderately. Two other sectors are at experiment stage: the cadastre states that using artificial intelligence to build a mass-valuation system aimed at widening the property-tax base is under experimentation with its own internal staff, alongside an automated parcel-identifier platform in test across its offices, and the health ministry launched a systematic review of artificial intelligence in health on 23 September 2025 that produced a strategy document with recommendations rather than a deployed module. | MIXED<br>an algorithm ran half a live audit programme and underperformed the inspectors while two other sectors reached experiment stage |
| **Seychelles** | AI in sectoral systems is education pilots plus an ocean-policy tool demonstrated to the fisheries ministry in February 2026.<br><br>The Teacher Coach and Student Tutor pilots launched in six primary schools in May 2026 under a framework that requires alignment with approved tool lists (pilots, framework).<br>In February 2026 the fisheries and blue economy ministry hosted a webinar at which an international ocean-sustainability platform demonstrated an AI-driven rapid response service for ocean-governance policy insights (webinar); it is described as a demonstration, not an adopted system.<br>No health, tax, customs or social protection system in the repository carries any AI component.<br>2026-10-01 - the tourism minister said a forum's discussions are to feed a Seychelles Tourism Digital and AI Agenda; no text or timetable is stated. | MOVEMENT |
| **Sierra Leone** | An AI support tool for school quality assurance officers is in use, with a user feedback report published in March 2026.<br><br>The report covers feedback from the officers using the tool in the field (report).<br>This is the only sectoral system in the repository with artificial intelligence in production use. No model, vendor, data source or evaluation against inspection outcomes is named, and no other sector has an equivalent. | MOVEMENT |
| **Somalia** | Two systems are running in the field: a Somali-built climate early-warning system with a state ministry, and a predictive food-security platform used in Burhakaba.<br><br>The early-warning system, built by a Somali organisation, monitors environmental and climate data and is deployed with a state ministry of humanitarian affairs and disaster management as part of its preparedness infrastructure rather than as a pilot (feature).<br>The food-security platform, released in April 2026, was used in Burhakaba district to detect deteriorating malnutrition earlier, informing food assistance to 48,000 people and nutrition support to 3,000 women and children (account).<br>Both sit in climate and humanitarian response. No sectoral ministry system in health, education or revenue carries an AI component on the repository. | MOVEMENT |
| **South Africa** | One bank reports over 39,000 staff, 72% of its workforce, as active generative-AI users; another, a chatbot handling over 100,000 queries a month from about 1.6 million users.<br><br>2026-08-17 - a large bank reported more than 39,000 staff, 72% of its workforce, as active generative-AI users on a platform hosted on a foreign cloud provider.<br>2026-08-20 - a different bank reported an agentic chatbot handling over 100,000 queries a month from about 1.6 million users in the first half of 2026, alongside more than 3,800 staff-built automation agents.<br>Both are the banks' own adoption figures, not comparable with each other and not measures of automated decisions, and neither states a model inventory, an assurance process or customer disclosure. The country holds no AI incident or assurance register.<br>2026-09-10 - the largest mobile operator says it uses artificial intelligence for revenue assurance, detecting traffic tunnelled through zero-rated sites. No leakage or recovery figure is published.<br>2026-09-15 - the state airports company's annual report sets a five-year plan to 2031 bringing AI into check-in, security, baggage handling and parking, with patrol robots and a metaverse proof of concept, inside a R21.7bn capital pipeline that also covers wider modernisation. No sum is attributed to the AI components. | MOVEMENT<br>on the banks' own figures |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **South Sudan** | Two algorithmic systems run in production - a malaria prediction pilot inside the national health instance and a monthly food security model.<br><br>A custom dashboard began piloting climate-informed predictive modelling and automated malaria outbreak alerts inside the national health instance in July 2026 (dashboard).<br>The food security monitor is a monthly sub-national early warning system combining conflict, price, climate and exchange-rate data through calibrated transformations and a weighted generalised linear model to raise alerts and estimate populations at risk across the 78 second-level administrative areas (monitor).<br>Both are built and run by external partners on donor systems. Neither is owned by the ministry whose sector it covers. | MOVEMENT |
| **Sudan** | A school-detection model reached 95 per cent accuracy from satellite imagery, and an education AI roadmap is 70 per cent complete.<br><br>A deep-learning model detecting school locations and boundaries from satellite imagery was built at 95 per cent accuracy across Sudan by 52 engineers over six weeks, designed for integration into a school-connectivity mapping system (case study).<br>A project running from January 2024 to December 2025 to build official capacity and develop a roadmap for integrating artificial intelligence and information technology into literacy and out-of-school education programmes stood at 70 per cent progress in the fourth quarter of 2025, on a USD 20,000 budget (project).<br>Both sit in education. No other sector's management system carries an AI component on the repository. | MOVEMENT |
| **Tanzania** | The revenue authority is committed to applying artificial intelligence and blockchain, four years after a health-sector framework found use extremely limited.<br><br>The founding sectoral policy of February 2022 proposes a centre for digital health and records that routine use of artificial intelligence in the health management information system was then extremely limited.<br>The 2026/27 national budget commits the revenue authority to use artificial intelligence, big data and blockchain and to integrate the property register with the revenue system for direct data exchange.<br>Four United Nations agencies separately signed a joint programme linking machine-learning agricultural extension services to an agriculture ministry data-sharing framework and interoperable database, targeting 500,000 farmers.<br>All three are commitments rather than deployments; no operating model, accuracy figure or evaluation is held for any of them. | MOVEMENT |
| **Togo** | The one documented case is the pandemic-era targeting model, and it carries its own limit as a stopgap.<br><br>The discussion paper of September 2023, co-authored by the responsible minister, documents a supervised machine-learning model trained on survey data and anonymised call detail records, combined with satellite imagery, to estimate consumption and prioritise beneficiaries.<br>It is decisive against the wider reading: the model was a stopgap for the absence of a dynamic social registry, so it is not evidence that the registry or any permanent sectoral system embeds artificial intelligence.<br>What has moved since is capacity rather than deployment — satellite-based crop-yield forecasting in the government laboratory, and a conference that named no sectoral system and reported no completed integration. | NO CHANGE |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Tunisia** | Machine learning entered customs risk targeting and electricity demand forecasting within two months of each other.<br><br>Customs integrated a machine-learning module into its national selectivity system for risk targeting of declarations in May 2026.<br>The electricity utility and the Japanese cooperation agency presented an automated machine-learning demand forecasting system in June 2026 as a closing result of the grid decarbonisation project, moving a core network-management function onto machine learning.<br>Crop-disease and precision-agriculture tools are separately being piloted under a European research project.<br>Neither state deployment publishes an accuracy figure against the method it replaces, and neither sector's regulator has stated a position on automated decisions in its own system.<br>The health minister named a Tunisian company as building tele-radiology artificial intelligence, alongside a computerised medical record he put past 95 per cent implementation (account). No deployment site or date is given.<br>2026-10-06 - customs said the share of declarations sent to the red channel fell from 4.7% in 2025 to 2.6% in 2026, with artificial intelligence in the risk analysis since May. | MOVEMENT |
| **Uganda** | A directive on artificial intelligence in medical curricula was issued to training schools with no curriculum standard, syllabus, teaching capacity assessment or funding attached.<br><br>The directive was issued in August 2026 (directive).<br>Directing every medical training school to teach a subject, with no standard, syllabus, capacity assessment or funding, is the whole of the record. The national strategy that would frame it has been due by the financial year's end at both ends of the window. | MOVEMENT |
| **Zambia** | A clinical system consolidated 12 million patient records across 2,000+ facilities as an artificial-intelligence foundation.<br><br>2026-10-12 — the technology ministry is piloting an artificial-intelligence career-guidance platform in the technical and vocational training system, expected to reach more than 17,000 young people.<br>2024-04 — the agricultural research institute launched an application using artificial intelligence to diagnose and forecast crop pests and diseases for smallholder farmers — the repository's first operational deployment inside a Zambian sectoral system.<br>2026-03 — the technology ministry signed a memorandum for an adaptive-learning pilot in secondary schools and vocational institutions.<br>2026-04 — a clinical system consolidated 12 million patient records across more than 2,000 facilities, framed by the state technology institute as the data foundation for artificial intelligence in the health management information system. The record layer arriving before the models is the right order, and it is the largest health dataset the repository holds for the country. | MOVEMENT |
| **Zimbabwe** | Artificial-intelligence remote monitoring and a digital twin are described as advancing in a company trading update for the quarter ended May 2026.<br><br>It is company-reported (monitoring).<br>A digital twin of a tower estate is the most technically specific artificial-intelligence deployment claim in this unit, and it is a listed company's own trading-update language with no measure attached. | MOVEMENT |

## Development of national / regional AI systems

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Algeria** | An operator launched a sovereign artificial-intelligence cloud in April 2026, and a virtual-education innovation centre opened.<br><br>2026-04-30 - a mobile operator launched a sovereign artificial-intelligence cloud platform; no capacity, tenant or service figure has followed.<br>2026-06-08 - a virtual-education artificial-intelligence innovation centre opened and is operating, with no intake, output or budget stated.<br>2026-04-15 - talks with a vendor on artificial intelligence, graphics processing and the digital economy were reported, with no agreement, instrument or value stated. The national strategy's own priority of sovereign open-source government models and national high-performance computing has no compute figure attached anywhere on file. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Angola** | An operator launched a web version of its AI assistant in July 2026, and no held source states any installed accelerator capacity or named AI facility.<br><br>2026-07-22 — a subscription web assistant pitched at student research launched at a trade fair, replacing a text-message version, offered by an operator reporting seven million clients across five provinces. The source confirms a prior version but does not date it, and no usage figure and no model provenance is published — so what is built locally, if anything, is not established.<br>Underneath it there is no compute. No held source states an installed accelerator capacity, an AI cloud or a named AI facility, and the readiness assessment's own infrastructure case rests on fibre, one satellite and data centres rather than on anything AI-specific.<br>The government data centre reported under storage is the only national compute estate on the ledger, and nothing states that any of it is allocated to this. | MOVEMENT<br>one commercial assistant, with no installed compute behind it |
| **Benin** | The first voice-to-voice artificial intelligence in Fon began development at a regional lab co-led by three countries, and a strategy co-author published a frugal-artificial-intelligence argument.<br><br>2025-06-30 - development of the first voice-to-voice artificial-intelligence model in Fon began at a lab co-led by three countries, for mother-tongue access. It is the inclusion mechanism the rest of this ledger lacks: every other service reported here assumes literacy in French.<br>2026-07-29 - a co-author of the national strategy published a book on building a language model from scratch, arguing for frugal domestic artificial intelligence against a scarcity of processors that would make it a luxury good.<br>No usage figure, funding or institutional home is published for either, and the presidential programme commits to national supercomputers.<br>The national edition of the continental machine-learning meeting opens a track on large language models and low-resource African language corpora, at Cotonou from 10 to 12 September 2026.<br>2026-09-08 - the training material is being built before the models are. A national-language project has collected 700 hours of Fongbe audio from 2,400 contributors across more than 20 zones in a few months, run by the state digital systems agency with an inclusive-digital institute.<br>What happens to the data once the voices are recorded is the account's own question: no licence, consent basis or release plan is published. | MOVEMENT |
| **Botswana** | Adoption sits at 0 to 0.40 chatbot visits per internet user a month on a 0 to 2.6 scale, among the lowest measured.<br><br>2025-12-12 — a readiness framing puts artificial-intelligence adoption at 0 to 0.40 chatbot visits per internet user a month on a scale to 2.6, among the lowest adopters, in a band covering about 45% of Africa. It is a reference study, cited and not absorbed, and the source is paywalled after two paragraphs.<br>Nothing on this ledger records a model, dataset, laboratory or application built in the country. The compute that would host one is being built for export rather than for domestic research: the solar campus reported under data storage is targeted at hyperscale and artificial-intelligence workloads and remains a memorandum.<br>An offer of cooperation arrived from outside, reported under geopolitics, and no national response is on file. | NO CHANGE |
| **Burkina Faso** | A sovereign language-model corpus is being built for four national languages, beside a research centre on competitive grants and a private institute.<br><br>2026-03-25 — a corpus build for four national languages was launched at a linguistic-formalisation workshop, funded through a digital-transformation framework and described as a cornerstone of the national AI strategy. No dataset, size or release date is published.<br>The institutional base is thin and static. A research centre of excellence began a second competitive grant phase in April 2025 on about CAD 1m, after a first phase from 2021, recorded as a research award, and the repository carries no account of it since. A private institute launched in July 2025, costed by its founder at about FCFA 100m, has nothing on file since August 2025 with its incubator and research centre still being structured.<br>A corpus for national languages is the right first asset for a country whose service estate is francophone and whose rural connectivity is the weakest part of this report. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Burundi** | Two local artificial-intelligence builds were named at a July 2026 workshop, with no funding, user base or public deployment on file.<br><br>2026-07-27 — two local builds were named at a governance and data ethics workshop, where nothing had been held before. No funding, user base or public deployment is recorded for either. They are the whole of the country's artificial-intelligence production on this ledger, against a strategy validated three months earlier that names innovation and incubators as one of its six pillars and about fifteen health and agriculture pilots. None of those pilots has been reported as starting, and no national computing capacity exists for any of them to run on.<br>2025-11-28 — a national artificial-intelligence roadmap was begun at an assessment workshop. No text, budget or timetable is published. | MOVEMENT |
| **Cameroon** | A national high-performance computing centre was named to cabinet as a priority, while the sovereign language model has no build, budget or partner.<br><br>2026-07-30 - cabinet was told of a national high-performance computing centre among ten priority areas, with no site, cost, operator or timetable published, and of a sovereign scientific database on a dedicated national platform and a centre for the digitisation of scientific and technical information, neither with a cost, site or timeline.<br>The sovereign large language model for national languages, named in the roadmap's third pillar, has no build, budget, partner or corpus named in any held source since July 2025. The GPU hosting node announced in February 2025 for a second-quarter start is confirmed in service by no held source, and the company's May 2026 profile does not mention it - the only domestic compute of its kind in the repository. | MIXED<br>a high-performance computing centre and a sovereign scientific database were named as priorities while the sovereign language model and the GPU hosting node did not move |
| **Cape Verde** | The Health Minister proposed the country as a lusophone laboratory for artificial intelligence in health at a global conference.<br><br>2026-07-16 - the minister proposed the country as a lusophone laboratory for artificial intelligence in health, hosting pilot projects integrating it with telemedicine, and called for cooperation on skills, digital infrastructure, interoperability and an ethical and regulatory framework.<br>No pilot, partner, budget or instrument is held. It is a ministerial proposal at an international conference rather than a domestic programme, and it was made while the national artificial-intelligence strategy that would frame it was still at kick-off stage with no draft text. | MOVEMENT |
| **Central African Republic** | An independently built translation system for the national language is the first such system the repository holds, and it is not the state's.<br><br>2026-05-13 - a production translation system for the national language uses vocabulary-augmented prompting over a 581-entry verified lexicon. It is independently built and non-governmental.<br>2026-08 - a national representative's own account records the country represented at the continent's main machine-learning gathering and a national artificial-intelligence pioneers grouping introduced; no membership, funding or output is published.<br>Both sit against a national strategy that has been in elaboration since November 2024 and has produced no text. | MOVEMENT |
| **Chad** | An interdisciplinary AI research laboratory was created inside the national research centre in August 2026 with a national research-plan mandate.<br><br>Arrete n. 095 of 3 August 2026 creates the laboratory inside the national development research centre with a mandate to draw up a national artificial-intelligence research plan (arrete).<br>It follows the first national artificial-intelligence scientific days held at the same centre from 29 December 2025, with plenaries, thematic round tables and research presentations (scientific days); the centre already carries an artificial-intelligence team spanning health, farming, education and governance (centre).<br>No system built in Chad is held. What exists is a directorate, a laboratory and a research plan not yet written. | MOVEMENT |
| **Comoros** | A Shikomori text-to-speech model went to first public trials, privately built.<br><br>2026-08 - the model launched for first public trials, live for Shikomori only, with the translation component still experimental and extension to the three other island languages slowed for want of translators and validators. The developer states no Shikomori speech-synthesis model existed before it. It is the work of an individual developer, and the named constraints are processor cost and paired text and audio data volume.<br>The state's own strand is procurement: an artificial-intelligence preparedness component is named in the e-government notice with no design, budget line or contract award held. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Congo** | The research centre joined an international alliance, with foreign financing for its third and fourth phases under negotiation.<br><br>The centre was created by law in May 2024 with statutes approved in council in July 2025, built with a Chinese counterpart and showcased at a summit.<br>2026-04 - it was integrated into an international alliance, with Russian financing for phases three and four under validation through a debt-conversion mechanism and a university memorandum carrying a three-year action plan. Dual-patron construction, Chinese and Russian, in a programme framed domestically as digital sovereignty; no research output, staff count or budget is held.<br>A joint artificial-intelligence laboratory was announced as a component with no source recording it built, staffed, equipped or operating. | MOVEMENT |
| **Cote d'Ivoire** | The digital transition ministry signed a strategic partnership with a European model developer (partnership).<br><br>The development-bank-supported acceleration programme of about FCFA 49bn including a data centre was launched alongside the strategy handover in March 2025, with no disbursement, milestone or completion figure.<br>2025-07-01 - the ministry's transformation director said work was under way to establish a national artificial-intelligence agency. Thirteen months later no decree, name, budget or staffing appears in any held source, and the coordination role has in practice been taken up by the cyber agency.<br>2026-05-12 - the virtual university signed a protocol with a Gulf artificial-intelligence group to strengthen training and research capacity. No value or student number is published.<br>2026-09-10 - the minister named the gap himself. Opening the second national AI conference at Abidjan-Cocody under the Prime Minister's patronage, he called for a move from strategy to execution, saying it now falls to the country to deploy solutions concretely for people's benefit. It closed on 11 September with 77 priority use cases selected and a roadmap due within three weeks.<br>2026-09-14 — government and business signed a national artificial-intelligence alliance pact to accelerate development and adoption. No workplan, funding or target is published.<br>2026-09-23 - an Ivorian research centre joined a GBP 4.4m microscopy and machine-learning programme. | MOVEMENT |
| **Djibouti** | A cross-border data corridor is provided for in the compute memorandum, against a readiness score of 24.5 out of 100.<br><br>The corridor did not exist at the window's opening. It is provided for in the compute memorandum and named by the signing minister as a success indicator, alongside full national jurisdiction over data generated on the territory, with nothing built.<br>The national readiness position is an estimated 24.5 out of 100 on a diagnostic described as an emergent level, against an information and communication technology development index of 61.6 attributed to the submarine cables landing here and to the data centres. The assessment report is not held and neither index's methodology is named, so the gap between the two scores is the finding rather than either number.<br>2026-09-07 - the first national forum carried a first national AI prototyping competition, presented as an opening move to bring the country's youth into AI development rather than leaving them as users. No entrant count, prize or follow-on support is published.<br>2026-09-17 — the readiness assessment was cited again as the operator certified 35 of its engineers in artificial intelligence: run on UNESCO's methodology, it credits engaged digital transformation, strategic infrastructure and a nascent academic base, and finds room to improve on skills, governance and research. The report itself is still not held. | MOVEMENT |
| **DR Congo** | A Lingala training-data collection project launched in August 2026, and a student facility was announced.<br><br>2026-08-06 - the digital economy ministry launched a project with UN development programme support to build Lingala training data for artificial-intelligence models; no corpus size, licence, host or publication date is stated.<br>2026-02-20 - a student artificial-intelligence facility was announced alongside state-data migration and a government cybersecurity centre, with no design, budget line, site or date established and the event date itself unestablished.<br>Both are announcements. No compute, model, dataset or research output exists anywhere on this ledger, so the country's artificial-intelligence capability is a strategy, an academy on paper and a language corpus not yet collected. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Egypt** | An Arabic large language model tops international evaluation platforms in its parameter classes and runs inside domestic data centres.<br><br>The repository carries no statement on the model before June 2026. 2026-08-24 - the minister stated it now tops international evaluation platforms among Arabic models in the thirty-billion and forty-billion parameter classes; it is built by retraining the latest global open-source models on curated Egyptian and Arab published data rather than from scratch, run inside Egyptian data centres as a stated matter of digital sovereignty, handles both Modern Standard Arabic and Egyptian colloquial, and is intended as a base layer for education, legal guidance, government services, translation and language learning. A conversational assistant built on it launched in pilot, stated to answer from verified, audited sources, with no user numbers, availability or evaluation result published for the assistant itself.<br>The compute behind it is a continental programme Egypt is one of five stated sites in, about US$720m with a first phase of some 3,000 processors in South Africa. On 8 September 2026 the communications minister attended a Cairo signing at which that company, Vodafone Business and Elsewedy Electric undertook to establish the country's first sovereign artificial-intelligence data centre (signing). No site, date or capacity for it is stated. | MOVEMENT |
| **Equatorial Guinea** | The country holds a state secretariat and a director-general for artificial intelligence, neither with a published mandate, budget or workplan.<br><br>The secretariat was first named at secretary-of-state level in August 2024 and changed hands in July 2026 under a decree of 23 June (first appointment, current decree, handover).<br>A director-general for the technology sits within the transport and telecommunications ministry, again with no published mandate, budget or workplan for the directorate (directorate, public-sector programme).<br>Two named offices, a draft law and a proposed authority, and no deployed system, dataset, compute facility or use-case register anywhere in the repository. | NO CHANGE |
| **Eritrea** | Eri-Chat, an offline AI application built by a ministry developer, launched in April 2025 and was shown at an Asmara diplomatic event in October.<br><br>2025-11-01 — a profile of the developer Naod Goitom Isaac describes Eri-Chat, an offline AI application launched in April 2025 and shown to ambassadors and UN officials at an Asmara UN Day event on 24 October 2025. It works in English only; local-language support waits on training data the developer says does not exist in sufficient quantity.<br>It is one application written by a single software developer at the Ministry of Information rather than a national programme, and it is the only AI system of any kind on this ledger. | MOVEMENT |
| **Eswatini** | The ICT ministry announced a national AI strategy for 2024/25 at the first AI indaba; two years on it is still not held.<br><br>The ministry and the academy of sciences held the country's first artificial-intelligence indaba in November 2024, at which the ministry announced it would develop a national artificial-intelligence strategy and a fourth industrial revolution strategy in that financial year (indaba).<br>A reviewed science, technology and innovation policy and a combined fourth and fifth industrial revolution strategy went to stakeholder validation in February 2026 (validation). Neither document is held.<br>At continental level the African Union signed a memorandum with a hyperscaler under its own artificial-intelligence strategy, with no Eswatini-specific commitment under it (memorandum).<br>The national artificial-intelligence strategy was probed and not found. What the country has built instead is training: a university academy has put more than 400 professionals through a generative-artificial-intelligence course. | STALLED |
| **Ethiopia** | Generative artificial intelligence services are sold as bundles through a mobile wallet, and no nationally developed model is held.<br><br>Bundles for generative application, website, game, video and music creation went on sale in July 2026 through the challenger's wallet, bought with mobile money and redeemed by voucher (service bundles).<br>The repository holds no nationally or regionally developed model, no training dataset, no compute facility and no research output, so what is recorded is the distribution of services built elsewhere. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Gabon** | A protocol with Morocco of April 2026 covers exchange of artificial-intelligence expertise, and an operator's voice assistant went into service in August 2026.<br><br>It was signed as an outcome of a technology exhibition at Marrakech in April 2026 and is the only instrument in the repository whose stated subject is artificial intelligence (protocol).<br>2026-08-21 - a mobile operator presented MIA, a voice artificial-intelligence assistant reached by dialling 333 from an ordinary phone with no internet connection; no user count or language coverage is published.<br>No national artificial-intelligence strategy or policy, no compute capacity and no use-case register exists anywhere in the repository. | MOVEMENT |
| **Gambia** | A memorandum with a regional mathematics institute of December 2025 maps a satellite centre, with no site or funding yet.<br><br>The higher education ministry signed the memorandum on 10 December 2025 setting a roadmap toward a satellite centre for advanced mathematics and artificial intelligence. No site and no funding are attached.<br>Domestic capability is being assembled on the teaching side rather than the systems side: the national university offers six-month diplomas in artificial intelligence, cybersecurity and data science. No Gambian-built model or system is on the record. | MOVEMENT |
| **Ghana** | US$250m was announced for a national compute centre at the strategy launch, with no site, operator, procurement route or date.<br><br>Visiting the atomic energy commission on 9 October 2026, the science minister said its proposed AI data centre must operate under human oversight to protect sensitive nuclear information, and asked for governance arrangements to be built into the plan. The repository holds no capacity, cost or date for it.<br>It is the larger of two dollar commitments totalling US$270m made that day, the other being US$20m earmarked for short-to-medium-term implementation with no appropriation, disbursement or managing body named (announcement); neither is the strategy's own GHS 5bn fund (announcement).<br>The compute centre was reaffirmed at the July 2026 summit, at which a United Nations official called unfunded, unexecuted artificial-intelligence strategies shell documents from the same platform (summit).<br>2026-09-15 — money was attached to the plan: the minister put US$250m for an AI computing centre and US$200m for digitalisation against gaps a UNESCO readiness assessment identified. Nothing is procured, sited or dated.<br>2026-09-23 - university researchers built a working Ghanaian Sign Language translation model trained on Ghanaian datasets, for hospital consultations and not yet deployed. | MOVEMENT |
| **Guinea** | A national programme entered its second phase with a Conakry manifesto signed in April 2026, and cooperation areas were identified with Rwanda.<br><br>The first phase closed and the second launched with the manifesto's signature; the only account on file is from a wire outlet and no primary document, workplan or budget is held (programme).<br>Artificial intelligence, electronic health, electronic commerce and electronic invoicing were identified for exploration with Rwanda at a Conakry meeting in July 2026, widening a cooperation previously limited to public-finance digitisation; nothing is signed (cooperation). | MOVEMENT |
| **Guinea-Bissau** | No Guinean artificial intelligence system, model or product is on the record.<br><br>Nothing in the repository records an artificial intelligence system built in or for Guinea-Bissau.<br>The country's engagement is participatory: a Bissau forum on artificial intelligence, ethics and disinformation in November 2025, a training session covering digital content, artificial intelligence ethics and online safety for 22 youth-network leaders, and the Macau capacity forum. | NO CHANGE |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Kenya** | The country is one of five governments pooling datasets for an open-source African-language template, and hosts a sovereign artificial-intelligence cloud.<br><br>No national funding commitment, language list or delivery date is stated for the pooling (launch, declaration).<br>A platform marketed as the country's first sovereign-hosted cloud for such workloads runs them without sending data offshore, with no customer count, capacity or revenue figure published (sovereign cloud, partnership context).<br>A proposed centre of African excellence for applied artificial intelligence with a bilateral partner is still at preliminary-consultation stage with no formalised agreement and nothing on file since February 2026 (centre).<br>A digital media city and an artificial-intelligence data centre at the technopolis had a foreign export-import bank complete a due-diligence mission in August 2026, with no commitment amount, financing instrument or construction date stated (due diligence, earlier agreement).<br>2026-09 - the Kenya Medical Research Institute is a partner in a four-year, GBP 4.4m programme led from Cape Town pairing open-source microscopes with machine-learning image analysis for infectious-disease research; no Kenyan budget share or installation date is stated.<br>2026-09-24 - a Maseno University team began onboarding Dholuo speakers for a speech dataset, with no size or release date.<br>2026-09 - a defence-sector AI centre of excellence is in development; no site, budget or date is published. | MOVEMENT |
| **Lesotho** | A Sesotho word bank is being compiled to train locally relevant AI systems.<br><br>2025-01-21 — a 73-page draft implementation plan sits behind the AI policy; the plan itself is not published.<br>2026-02-18 — the ministry, a development agency and the national university are compiling a Sesotho word bank to train locally relevant AI systems.<br>A language resource is the foundation a small-language country needs before anything else can be built locally. No model, dataset licence or compute arrangement is on the record.<br>2026-09-23 — the prime minister told a UN meeting that planning was complete and Phase One of a National Compute Roadmap to 2029 had begun; the roadmap is not published. | MOVEMENT |
| **Liberia** | Lorpu AI is a deployed Liberian-market service reachable by text message without a smartphone or data.<br><br>The service launched in July 2026 charges L$0.5 a subscription and is reached by sending a keyword to a short code, so it works without a smartphone or a data plan. It is an operator product rather than a state system, and the schools tie-in is a pledge rather than an agreement.<br>The state's own AI work is upstream of deployment: a design pack for a first master's programme produced in November 2025 and a first structured training programme for government officials.<br>No nationally developed model or system is on the record. | MOVEMENT |
| **Libya** | LIBIGPT launched in October 2025 as the country's first domestic generative artificial-intelligence system.<br><br>The system was launched on 28 October 2025 and is presented as the first generative artificial-intelligence system built in the country (launch).<br>No user count, model description, training data statement or funding source has been published since, and no second domestic system has appeared in the repository. | MOVEMENT |
| **Madagascar** | An operator group was named a founding partner of an African-language artificial-intelligence partnership in July 2026, with no Malagasy model or dataset released.<br><br>The founding partnership was announced in July 2026 (partnership).<br>No Malagasy-language model, corpus or dataset has been released under it, and the country holds no national artificial-intelligence strategy against which the work could be set. | MOVEMENT |
| **Malawi** | A low-resource language data trust is assembling licensed Chichewa content as artificial-intelligence training data, with no dataset or licence terms published.<br><br>The initiative was launched at a national workshop in Lilongwe in June 2026, supported by a development bank and a foundation, and is developing core frameworks alongside the content (trust).<br>No dataset, licence terms, governance structure or release is published. A data trust holding licensed language content raises rights and consent questions the announcement does not address.<br>2026-09-17 - a UNDP programme reported country-hosted GPU capacity installed and activated with public institutions, with a Chichewa language model proposed and a farmer advisory service held back by incomplete soil and disease data. No capacity figure or host is stated. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Mali** | A state artificial-intelligence and robotics centre was inaugurated in September 2026 on FCFA 3.3bn of national budget, and an operator launched an assistant in June 2026.<br><br>The centre is operating and has one demonstration on record, of a locally built intrusion-detection technology shown on 1 August 2026 (centre).<br>2026-09-21 - the centre's 50-hectare campus at Kati Sirakoro Niare, with a fabrication and assembly workshop for intelligent systems and financed entirely from the national budget at FCFA 3.3 billion, was inaugurated.<br>An operator launched an artificial-intelligence assistant in June 2026, operator-reported (assistant). Neither carries a model description, dataset or evaluation, and no national language model for the country's languages is recorded. | MOVEMENT |
| **Mauritania** | Two open repositories carry language data for the country's languages, and the draft national strategy runs on five priorities and thirty measures.<br><br>A Hassaniya dialect dataset collection was published on a model-hosting platform in January 2026 (datasets) and an open natural-language hub for Pulaar, Soninke and Hassaniya on a code-hosting platform in May (hub); both are community repositories rather than state assets and neither is named in the strategy.<br>The draft strategy covers skills, research, international collaboration, data governance and ethical use, with sector projects in health, education, agriculture, fisheries, transport, energy and defence (strategy). The repository holds a draft and no adoption instrument. | MOVEMENT |
| **Mauritius** | A sovereign artificial-intelligence platform is in service, an AI registry went live in July 2026, and a Mauritian Creole voice model was presented in August.<br><br>The registry is live as a discovery and trust directory of locally relevant models, agents and skills that does not host what it lists, each entry carrying provider identity, local-context relevance and any institutional validation; the stack is open-sourced and is being offered to other operators (registry).<br>The operator's chief executive set out a cloud partnership with a hyperscaler, sovereign data centres and a plan to train 50,000 people (interview).<br>A voice model for Mauritian Creole was described by the incumbent operator as the first built for the language; the account is the chief executive's in an interview and no user count, evaluation or release detail is held (model). | MOVEMENT |
| **Morocco** | Four artificial-intelligence institutes were established by gazette in August 2026, after a founding institute and four regional or thematic agreements.<br><br>Four public-interest institutes were established by publication in the official gazette, covering research and sovereign systems, education, industrial automation and smart cities, with no budget, staffing or opening date stated (establishment).<br>A founding institute launched in January 2026, and four regional or thematic institutes had been constituted by protocol or founding agreement between April 2025 and March 2026 (founding, industry institute).<br>The regional protocols were signed nine months before the founding institute, and no statute, legal form, campus, governance structure or intake was published for any of them until the gazette (Dakhla).<br>2026-09-08 - the four institutes held their general assemblies and moved to operations.<br>2026-09-30 - the digital ministry and a French AI company announced a Darija dialect classifier and a Darija speech-recognition model as the first open-source tools of their partnership; the release does not fix when they become available. | MOVEMENT |
| **Mozambique** | Mozambique is a founding member of a world artificial-intelligence cooperation body and is named as implementing a regulatory sandbox.<br><br>The establishment agreement was signed at Shanghai in July 2026, with the country one of twenty-nine signatory states and one of ten African ones; no ratification step, entry-into-force date or contribution is stated (membership).<br>The country is named among African states already implementing an international artificial-intelligence sandbox initiative, with no start date, scope, participant or output held (sandbox).<br>No domestic model, dataset, compute facility or research output is recorded, so the country's artificial-intelligence position is entirely institutional.<br>The artificial-intelligence association's launch and the swearing-in of its leadership executive were one ceremony in Maputo on 26 August 2026, on the venue host's own account, not an inauguration on the 27th as the trade report had it. No constitution, membership, funding or work programme is published. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Namibia** | A National Artificial Intelligence Institute with a datasets centre was launched in September 2026, and Namibia took a seat on the ITU's AI for Good Global Commission (announcement).<br><br>The information and communication technology minister announced on 28 August 2026 that Namibia holds a seat on the ITU's AI for Good Global Commission (announcement).<br>The initiative was launched at a continental telecommunications conference with the ICT ministry a named partner, scaling an existing national model template; the stated commitment is ministerial support rather than a named contribution, and no Namibian funding, dataset or deliverable is published (initiative, declaration, account).<br>A voice-data repository for Namibian indigenous languages is being built through a development programme sprint with the national science and technology university; no language count, corpus size, licence or release date is stated, and who owns the collected speech and on what terms it can train models is not addressed (repository).<br>2026-09-23 - the ICT minister launched the National Artificial Intelligence Institute in Windhoek, with software development, datasets, innovation and research centres; no budget or staffing is stated. | MOVEMENT |
| **Niger** | A strategy is in preparation and a training programme has reached 100 professionals. The law already imposes a declaration duty on developers.<br><br>The regulation arrived before the systems. The consolidated data protection law defines artificial intelligence at article 57, requires developers, manufacturers and service providers operating from Niger to declare to the protection authority, and restricts fully automated decisions and profiling at article 52 — a declaration duty on an activity no source on this repository records anyone performing.<br>What is happening is capacity. A programme on artificial intelligence applied to human security trained 100 professionals by June 2026 after launching in November 2025, and reached 140 officials. The national strategy is in preparation, with regional capacity work in Dakar in January 2026. No nationally developed system is named. | MOVEMENT |
| **Nigeria** | A sovereign multilingual model covers four Nigerian languages, a code-switching speech model follows speakers who change language mid-sentence, and an analysis agent is distributed through universities.<br><br>The sovereign model is open-source and multimodal across three Nigerian languages and Nigerian-accented English, built on an open foundation model and fine-tuned on more than 400m tokens; the country has more than 500 native languages (model).<br>A domestically built speech model was released to follow African speakers who switch languages mid-sentence, where most recognition systems transcribe the English and drop the other language; no accuracy benchmark against a named baseline, language list or deployment figure is published (speech).<br>A spreadsheet-analysis agent is distributed through universities, co-working spaces and professional communities, its first partner bundling premium credits into member subscriptions; the governance point is that the co-working operator becomes the party mediating which tools its members meet and on what data terms (agent). | MOVEMENT |
| **Rwanda** | A code-switching African voice model covers the country's languages but was built elsewhere, and an artificial-intelligence scaling hub has a funding total and no dated commitment.<br><br>The voice model was built outside the country and is named here for the languages it covers; no local deployment, accuracy benchmark or user figure is published (model).<br>The scaling hub reaches the repository as a single secondary mention carrying a funding total with no dated commitment behind it (hub).<br>A continental artificial-intelligence fund was announced at the capital's summit in April 2025 and nothing has moved on it since (fund). Against a country that convenes the continent's artificial-intelligence diplomacy, the repository holds no model, cluster or dataset built here. | MOVEMENT |
| **Sao Tome and Principe** | A national access-to-justice platform with a chatbot trained on the country's own legislation was agreed in June 2026 with the justice ministry.<br><br>The implementing partnership covers a platform carrying a legal-information chatbot trained on national legislation and grounded through retrieval-augmented generation, plus two encrypted reporting modules routing to the judicial police, under a peacebuilding programme (platform).<br>Training a model on the national statute book is the first instance in this unit of an AI system built around domestic material rather than deployed as a foreign product (platform).<br>The consulate-reported citizenship-fund contract names an AI factory and an AI academy among its planned builds, on that page's own claims with no counterparty document located (contract).<br>Nothing held records either as begun. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Senegal** | A national artificial-intelligence factory was presented in Tokyo, and a Wolof and French tutor delivered by phone call was presented at a national prize ceremony.<br><br>The programme was presented to an international artificial-intelligence process meeting; the topics the delegation discussed — trustworthy-artificial-intelligence governance, compute infrastructure, innovation financing and partnerships — are the things the programme is not yet reported to have (factory).<br>The tutor works over a phone call in Wolof and French, so it reaches users without smartphones or data. No user, pricing, call-cost, contract or evaluation figures are given, and the education ministry's role is asserted by the vendor rather than confirmed by it (tutor).<br>KOICA issued an international project-management tender on 31 August 2026 for a Senegal AI transformation centre and digital capacity-building project, with bidding opening on 18 October and closing on 20 October. The factory moves from presentation to procurement; no contract value for the Korean-financed centre is on the record. | MOVEMENT |
| **Seychelles** | The science and innovation institute, statutorily mandated to develop AI strategies, got a chief executive with effect from 1 June 2026.<br><br>The Office of the President announced the appointment of a chief executive of the National Institute for Science, Technology and Innovation, established by Act 24 of 2025, with effect from 1 June 2026 (appointment).<br>The statutory instrument bringing the Act into operation was published on 28 April 2026 (commencement).<br>The institute also backs a business, technology and innovation incubator whose 2026 cohort opened for applications in August (incubator). No national AI strategy, research programme or system built in Seychelles is held. | MOVEMENT |
| **Sierra Leone** | The first national artificial intelligence strategy is being drafted with a financier, alongside a draft readiness diagnostic and a four-sector consultation.<br><br>The strategy work is the window's substance. The communications ministry states that it is developing the country's first national artificial intelligence strategy with a financier, that a draft readiness diagnostic assesses the country's readiness to adopt it, and that it convened media organisations, civil society, government and the private sector over three days on the strategy, including local languages and culture. It is recorded as under development rather than adopted.<br>Two deployments run ahead of it. A partnership on artificial intelligence in government trained civil servants in March 2026, and a support tool for school quality assurance officers reached a user feedback report. Neither is a nationally developed system. | MOVEMENT |
| **Somalia** | An artificial-intelligence product, Garad.ai, was launched in August 2026, and the record describes the launch rather than the product.<br><br>No capability, language coverage, user base or hosting arrangement is stated (launch).<br>It reaches the repository through an account of a national data centre statement made on the same day, which is why the launch is dated and the thing launched is not described. That is the whole of the country's artificial-intelligence development record. | MOVEMENT |
| **South Africa** | A university began a four-year, GBP 4.4m AI microscopy programme with three African partners in September 2026, beside a distributed national AI research network that publishes no funding or output figure.<br><br>A distributed national research network in artificial intelligence is hosted across universities with a national coordinating centre, the standing public research capability in the field. The page is undated and carries no funding, headcount or output figure.<br>No national model or dataset built in the country appears on this ledger.<br>A comparative study of national artificial-intelligence strategies places the country's policy position; the policy itself was withdrawn.<br>A continental index published in July 2026 places the country eleventh in Africa on capacity to govern artificial intelligence, scoring 2.10 of four against Rwanda on 3.25 (index); earlier editions are not held, so no direction can be read from it.<br>2026-09-17 — a UNDP programme reported GPU capacity procured, installed and activated with public institutions in six countries, the higher-specification training capacity concentrated in Kenya and South Africa. Its South African use case, crop observation from satellite and research data, waits on access to data held across institutions; no capacity figure or host is stated.<br>2026-09 — the University of Cape Town launched a four-year, GBP 4.4m (about R101m) Wellcome Trust programme with partners in Kenya, Uganda and Côte d'Ivoire, pairing open-source microscopes with machine-learning image analysis for infectious-disease research. | MOVEMENT<br>a research programme rather than a national system |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **South Sudan** | No national strategy: the country adopted the regional AI declaration and the regional strategy went to validation.<br><br>The ministry stated in 2024 that the country was working on establishing its own roadmap alongside other African states (roadmap).<br>As one of eight partner states the country adopted the East African Community Declaration on Artificial Intelligence at a regional conference over 30 March to 1 April 2026, committing to a regional fund, shared infrastructure, harmonised curricula and integration of artificial intelligence into development planning (declaration); the draft regional strategy for 2026 to 2031 went to a two-day validation workshop in Kampala on 4 and 5 May 2026 (strategy).<br>The national position is entirely carried by regional instruments. | MOVEMENT |
| **Sudan** | Sudan became a founding member of a world AI cooperation organisation in July 2026 and directed work to begin on a national AI degree programme.<br><br>The ambassador in Beijing signed the founding agreement of an organisation established on 17 July 2026, making Sudan one of 35 founding member states, for international cooperation, capacity building, research and technology transfer (signature).<br>The prime minister directed the communications ministry to begin technical infrastructure preparation for a national artificial-intelligence bachelor's programme and curriculum integration (directives).<br>A joint university protocol signed in August names artificial intelligence among priority fields (protocol).<br>No national model, dataset or compute facility is held. | MOVEMENT |
| **Tanzania** | A Kiswahili large language model is described by the minister as a commitment written into the 2050 vision rather than something under construction.<br><br>The minister's text describes it as something the vision sets out, not something being built, and no held source connects a 61-million-word database to the model (model, achievements).<br>University artificial-intelligence prototypes were shown at a national agricultural exhibition; they are student prototypes, self-reported, and admitted deliberately without a hub line (prototypes).<br>Reading a vision commitment as a build is the specific error this cell is written to avoid. | MOVEMENT |
| **Togo** | A national-languages speech and translation project was presented in July 2026 with four data competitions carrying US$40,000 in prizes, run by a government laboratory funded for compute clusters at two universities.<br><br>The project carries targets only: no collected-hours figure, no released model and no completion date is on file (project).<br>The laboratory running it was scaled under a US$2 million partnership announced in December 2025, funding high-performance compute clusters at the universities of Lome and Kara (partnership); in September 2026 it was recruiting a technical lead for public-sector artificial-intelligence projects, applications closing 2 October 2026 (recruitment). No budget, project list or delivery date for its work programme is published.<br>On 3 September 2026 the United Nations Development Programme's country office sought an international consultant to draft a regional guidance note on the governance of artificial-intelligence infrastructure, for a mission running to January 2027 (notice).<br>No source states how the language project relates to the continental coalition the ministry co-founded. | MOVEMENT |
| **Tunisia** | The country's first high-performance computing system was inaugurated in July 2026, donated and installed by Chinese firms.<br><br>The El-Khawarizmi computing centre inaugurated the country's first high-performance computing system on 23 July 2026, a Chinese donation installed by SOHO, ZTE and DSHELL, intended for artificial intelligence, big data and simulation across the higher-education and research system.<br>The national strategy that would say what it is for exists in outline only, presented to a restricted ministerial council in August 2026 with no adopted text, cabinet decision, budget or roadmap published.<br>No Tunisian-developed model, dataset or national artificial-intelligence system is held. The compute arrived before the strategy, and nothing states how access to it is allocated. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Uganda** | Open-source language models for African languages were released under a permissive licence, and the developer records unreliable factual recall and weak handling of informal language.<br><br>They were released in October 2025 by a not-for-profit developer with the national university; the benchmark claim is its own, and it records unreliable factual recall and weak handling of informal language (models, coverage).<br>A wire report of another outlet's reporting states a later model was built on a Chinese open-weight base; no user count, licence terms or evaluation is held, and the same report puts Chinese open-weight models at 17.1 per cent of global downloads against 15.8 for American ones over the year (base model).<br>2026-09-05 - a domestic model reached a continental prize rather than a deployment: a startup building credit scoring for smallholder farmers without collateral took US$50,000 in growth funding at a Kigali food-systems summit. No user count, lender partnership or model documentation is published.<br>2026-09 — Mbarara University of Science and Technology leads the data-pipeline and machine-learning work in a four-year, GBP 4.4m Wellcome Trust microscopy programme led from Cape Town. | MOVEMENT |
| **Zambia** | A feature-phone artificial-intelligence voice service is the only such application on file reaching people directly, and an international laboratory is on offer with no agreement signed.<br><br>The voice service is cited as a deployed feature-phone application and is the only artificial-intelligence application on file reaching people directly (service).<br>The laboratory was disclosed as an opportunity with no agreement signed; it is the only national-level artificial-intelligence institution on offer, and no domestic body exists (laboratory).<br>A country whose only direct-to-citizen artificial-intelligence service runs over feature phones, and whose only institutional option is an offer, is where the record stands.<br>2026-09-17 — a UNDP programme reported country-hosted GPU capacity installed and activated with public institutions, with a critical-minerals application the highest-prioritised use in its six-country cohort and data access still to be confirmed. No capacity figure or host is stated, so the compute inventory stays unsettled. | NO CHANGE |
| **Zimbabwe** | An indigenous-language corpora programme is committed with universities to lead and part-financing from the universal services fund, and an artificial-intelligence literacy campaign is introduced in the strategy.<br><br>The corpora programme is committed with universities leading and part-financed from the universal services fund (corpora).<br>The literacy campaign is introduced in the strategy (campaign).<br>Both draw on a fund whose balance is unpublished and whose Auditor-General report gives no disbursement figure, which is the constraint under every artificial-intelligence commitment in this unit.<br>2026-09-06 - the first indigenous-language models in service are commercial rather than national: the dominant operator's artificial-intelligence subsidiary is phasing in a Ndebele-speaking customer-support assistant from September 2026, trained on thousands of hours of recorded Ndebele speech, alongside a Shona assistant it says already resolves more than 70% of enquiries. The resolution rate is the operator's own and no dataset, evaluation or error rate is published; these corpora sit outside the committed national indigenous-language programme. | MOVEMENT |

## Control of AI abuse

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Algeria** | The data-protection authority convened a study day at which artificial intelligence was one theme; no rule or enforcement follows.<br><br>2025-11-24 - the data-protection authority convened a study day at which artificial intelligence was one of several themes discussed. Its own compliance guide describes an operational portal for controllers, and neither carries a deliberation or guidance on artificial intelligence.<br>The one artificial-intelligence law on this ledger is an ethical-AI law held separately, and the trust-services law of February 2026 makes no mention of artificial intelligence across its 116 articles.<br>No enforcement action, complaint or prohibited use is recorded anywhere. | NO CHANGE<br>a first stated position with no earlier account behind it |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Angola** | No supervisory authority exists: the draft law provides for a competent authority and leaves its designation, powers and seat to a future regulation.<br><br>The draft artificial-intelligence law provides for a competent authority at article 61 and leaves its designation, powers and seat to a future regulation. No authority exists, and the bill has not been tabled.<br>The same review notes that the draft repeals no existing legislation and that its financial assessment is not costed, so nothing states who would fund or staff the body it provides for.<br>Control of abuse currently runs through instruments written for other purposes: the false-information law reported under public debate reaches platforms and application providers, and the data-protection authority reported under data protection has the only enforcement record on this ledger. Neither addresses automated decision-making, and no case involving an AI system has been recorded by either. | NO CHANGE |
| **Benin** | The data protection authority adopted a dedicated artificial-intelligence policy with strict purpose limitation, and six francophone countries adopted shared artificial-intelligence governance guidelines.<br><br>The state digital agency presented a national cybersecurity reference framework for AI systems to the administration's information-systems directors on 8 October 2026: four risk tiers from minimal to unacceptable, an AI officer and an ethics committee, and traceability of system decisions. The repository holds no adopting instrument for it.<br>2026-05-16 — the authority adopted a dedicated artificial-intelligence policy with strict purpose limitation, one of the few African data-protection authorities to hold one. Nothing preceded it.<br>2026-07-09 — Benin and five other francophone states adopted shared artificial-intelligence governance guidelines, submitted to the United Nations global dialogue.<br>Neither is binding law. The authority's own report names the absence of algorithmic-audit tooling and of budget as its gaps, so a purpose-limitation policy exists without the means to test compliance with it — and no dedicated artificial-intelligence legislation is in force or in draft, reported under legislation. | MOVEMENT |
| **Botswana** | The readiness assessment was validated and a minister warned publicly about harm to children; no control framework exists.<br><br>2025-11-03 — the minister told the UNESCO General Conference that Botswana had validated the readiness assessment methodology, calling it a key milestone toward a governance and regulatory framework.<br>2026-07-22 — the communications minister warned that chatbots had given harmful advice to children and called for stronger governance and developer accountability.<br>No AI-specific Act, regulation, code of practice or complaints route is held. The absence was searched on 31 August 2026. | MOVEMENT<br>on diagnosis rather than control |
| **Burkina Faso** | No dedicated instrument exists: the justice minister told deputies the new data protection law covers artificial intelligence, notably through the prohibition on transferring sensitive data abroad.<br><br>2026-08-03 — the justice minister told the assembly that the newly voted data protection law covers artificial intelligence, notably through the prohibition on transferring sensitive data abroad, with the roadmap intended to become dedicated regulation later. None was published before and none is published now.<br>A data-residency rule doing service as artificial-intelligence governance is a category error with a practical consequence: it constrains where a model runs and says nothing about what a decision it makes may do to a person.<br>The test case is already live and domestic. The automated enforcement system reported above issues coercive penalties from camera evidence with no stated legal basis or retention rule, and the authority that would supervise it is being merged into a new body whose independence and appointment route nothing establishes. | NO CHANGE |
| **Burundi** | The only governance activity on record is one workshop, run by an alumni association rather than a regulator, whose finding was that the country holds information rather than usable data.<br><br>2026-07-27 — the first documented workshop on artificial-intelligence governance and data ethics was run by an alumni association rather than by a regulator, and found that the country holds information rather than structured, consented, usable data.<br>No supervisory authority, code of practice, procurement rule or incident is on record. The national strategy names governance and ethics as its first pillar and no instrument has followed it, so the position is unchanged: the ethics of automated decision-making are being discussed by volunteers, and the data protection authority that would have jurisdiction has not been constituted. | NO CHANGE |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Cameroon** | A civil-society initiative launched on 9 July 2026 addresses deepfakes and voice cloning alongside other cybercrime. No rule on synthetic media exists.<br><br>2026-07-09 - three foundations launched an initiative to help victims of cybercrime speak out, addressing deepfakes and artificial-intelligence voice cloning specifically alongside other cybercrime, with a telecommunications ministry representative attending. It is civil-society-led and carries no legal instrument.<br>There is nothing above it. No rule on synthetic media, no takedown route and no prosecution is on the record; an artificial-intelligence authority and presidential council are still not created and absent from the ten priority areas set out at cabinet in July 2026, which carry only adaptation of the legal framework.<br>The general data-protection statute is in force with no supervisory authority operating, which leaves no regulator to apply it to generated content. | MOVEMENT |
| **Cape Verde** | The regulator subscribed on 27 February 2026 to a joint declaration of 61 authorities on AI-generated images, while stating that the country needs legislation to regulate artificial intelligence.<br><br>The binding rule is a data-protection one: the 2021 amendment defines profiling, prohibits discriminatory profiles, limits decisions taken solely by automated processing where they produce legal effects or significantly affect the data subject, requires transparency about the decision logic, and requires impact assessments for high-risk technologies. No artificial-intelligence statute exists.<br>2025-10 - at an African governance workshop the commission's member set out the data protection provisions that bear on artificial intelligence and stated the regulator's position that the country needs legislation to regulate it.<br>2026-02-27 - the commission published that it had subscribed to the joint declaration on AI-generated images issued four days earlier by 61 data protection authorities, which sets requirements on developers and users of generative systems covering security measures against non-consensual intimate imagery, transparency about system capabilities and permitted uses, accessible takedown mechanisms for harmful content involving personal data, and reinforced safeguards where children are depicted. It is regulator guidance and not national legislation, and no enforcement action under it is held. | MOVEMENT |
| **Central African Republic** | The broadcasting regulator asked for tighter identification against deepfakes and artificial-intelligence disinformation in June 2026. No instrument answers it.<br><br>The window produced a request and no rule. The broadcasting regulator asked for tighter identification in response to deepfakes and artificial-intelligence disinformation in June 2026 — the first time a Central African regulator has put the question on the record.<br>Nothing exists to answer it. The national artificial-intelligence policy is in development, the data protection law of 2024 has no authority to enforce it, and the cybersecurity and cybercrime law predates generated media. A separate identification measure is being pursued for a different reason: tracing through mobile subscriber cards. | MOVEMENT |
| **Chad** | No instrument reaches artificial intelligence. A directorate-general was created and the strategy is still in development.<br><br>Chad has begun building artificial-intelligence institutions and has enacted nothing that would control its misuse. A directorate-general for artificial intelligence and an interdisciplinary research laboratory were created in August 2026, the government took part in governance discussions in Geneva in July, and the national digital transformation and artificial intelligence strategy for 2026 to 2031 is in development.<br>What would bite on abuse is absent: the general data-protection law is planned with none enacted, no authority supervises processing, and no provision addresses synthetic or manipulated media. The 2015 cybersecurity law predates the question. | NO CHANGE |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Comoros** | Labelling of artificial-intelligence content became a legal obligation in February 2026, with sanctions to one million francs.<br><br>The standing instrument was general: the cybersecurity and cybercrime law promulgated on 18 January 2022 carries an offence and penalty regime for illegal access, data and system integrity and fraud, and names no artificial-intelligence technology.<br>2026-02 - the amended communication code introduced at article 231 an obligation to label content generated or heavily modified by artificial intelligence, with graduated administrative sanctions to one million Comorian francs, and the regulator launched an awareness campaign behind it.<br>2026-05 - a regional colloquium in Moroni on 5 and 6 May was convened for around 150 participants from about twenty African delegations against disinformation, hate speech and algorithmic manipulation, to close on a declaration and a regional roadmap.<br>No enforcement action under the obligation is on file. | MOVEMENT |
| **Congo** | Five days of conferences closed with priorities for a national strategic framework for digital and artificial-intelligence regulation.<br><br>2026-01 - conferences at Brazzaville closed with priorities for a national strategic framework for digital and artificial-intelligence regulation, capacity-building for regulators and administrations, and a standing public, private and academic collaboration framework, the regulator having convened the seminar.<br>The outputs are recommendations rather than instruments. No rule, complaint route, audit power or penalty exists for any artificial-intelligence system operating in the country. At the close the minister referred to a data-centre inauguration and a fifth-generation launch as accomplished facts, both asserted in passing and in no primary the repository holds. | MOVEMENT |
| **Cote d'Ivoire** | Six states adopted common guidelines on algorithmic-bias mitigation, data protection and digital sovereignty; they bind nobody.<br><br>2026-07-06 - common guidelines on transparent and inclusive artificial intelligence, data protection, algorithmic-bias mitigation and digital sovereignty were adopted by six francophone West African states, complementing rather than replacing national strategies. They were led by an advocacy organisation rather than by a regional body, and they create no obligation on anyone.<br>Nothing else on file addresses abuse. No national statute, regulator remit, complaint route, audit power or penalty exists for an artificial-intelligence system operating in the country, including the government's own assistant. | MOVEMENT<br>on a non-binding regional guideline with no national statute behind it |
| **Djibouti** | No law dealing specifically with artificial intelligence was in place as at August 2026; the Digital Code's data and cybercrime provisions are what reaches such abuse.<br><br>This is a searched absence. The Digital Code's books cover personal data protection, electronic communication, cybersecurity and cybercrime - the operative framework capable of reaching abuse through an artificial-intelligence system - and the national readiness diagnostic found no law dealing specifically with artificial intelligence.<br>2026-01-22 - a consultative workshop discussed and refined the draft national strategy, covering data governance, digital sovereignty and ethics ahead of adoption. Its main lines, presented on 3 September 2026, put data and AI governance first among six axes; no text is held.<br>No procurement rule, transparency duty, impact assessment or oversight body for automated decision-making in public administration appears on file. | NO CHANGE |
| **DR Congo** | Officials say bodies acting across digital, research, data, cybersecurity and regulation have roles not yet articulated in a common steering architecture.<br><br>2026-07-23 - the digital economy ministry convened a governance, ethics and regulation panel at which officials went on the record that bodies already acting across digital, research, data, cybersecurity and regulation have roles not yet sufficiently articulated in a common steering architecture.<br>The repository carries no statement of the country's artificial-intelligence governance position before that date, so the direction is withheld and what is stated is where it now stands. No rule, complaint route, audit power or penalty exists for any system operating in the country, including the machine marking of a national examination. | NO CHANGE<br>a first statement of the institutional position with nothing earlier behind it |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Egypt** | A national governance framework reached edition 2.0, and a bill would address deepfakes.<br><br>2026-03-15 - a national artificial-intelligence governance framework was approved for publication at edition 2.0, its version history running from an August 2025 drafting committee through public consultation, and the council adopted the strategy's implementation plan with 56 sub-indicators and required quarterly achievement reports from government entities.<br>2026-04-22 - a private member's bill would amend the 2018 crimes law to address artificial-intelligence-generated deepfakes and tie fines to the benefit obtained.<br>A framework and an unpassed bill is the whole of the control the repository holds; no enforcement or prohibited use is recorded.<br>2026-09-25 - the council reviewed Safe Use Guidelines for AI Applications for Children, covering harmful content, exploitation, bias and privacy and grounded in the Child Law and the data protection law; they are not stated as adopted or published.<br>2026-10-06 - a newspaper reported that Egypt led the Human Rights Council to adopt by consensus a resolution on artificial intelligence and human rights. | MOVEMENT |
| **Equatorial Guinea** | The 2024 social media and cybercrime law names no artificial intelligence and no synthetic media.<br><br>The law of 23 December 2024 criminalises computer fraud, identity theft and false news online, which is the frame any synthetic-media case would have to be brought under.<br>The government reasserted the law's full force in July 2026 amid rising complaints, naming neither artificial intelligence nor deepfakes. No AI-specific rule or prosecution is on the record. | NO CHANGE |
| **Eritrea** | AI-generated war imagery circulated widely and was documented by external fact-checking (fact check).<br><br>A fact-checking service documented AI-generated images and videos through 2026 — tanks entering Assab, the president pursued by a foreign army chief, troops surrendering — circulating from both pro-Ethiopian and pro-Eritrean accounts, drawing large engagement and inflaming war narratives (fact check).<br>The response on the record is entirely external. Eritrea has no artificial-intelligence law, no national strategy and no regulator (review), and no data-protection authority to which a person depicted could complain (redetermination).<br>There is no domestic mechanism of any kind on the repository for identifying, labelling or removing synthetic media. | NO CHANGE<br>a first statement of the position and the only response on the record is external |
| **Eswatini** | The regulator urged broadcasters to manage artificial intelligence and deepfakes ethically and transparently.<br><br>The guidance was issued in November 2025 (guidance).<br>It is guidance to a single sector, urging rather than requiring, and it is one of the two instruments that carry artificial-intelligence rules in a country with no artificial-intelligence instrument. The other is the online media guidelines. | MOVEMENT |
| **Ethiopia** | A security-clearance directive reached new and emerging technology products, and an AI readiness assessment was used to identify governance gaps (directive).<br><br>Directive 1135/2026 creates security clearance, permit and monitoring procedures for restricted and prohibited information technology products and provides for designating new or emerging products (directive).<br>UNESCO reported that a creative-industries forum in Addis Ababa in June 2026 surfaced findings from Ethiopia's AI readiness assessment, used to identify governance gaps and reform priorities for responsible artificial intelligence (report).<br>The governing instrument remains the 2024 National Artificial Intelligence Policy, a Council of Ministers policy rather than binding law (policy).<br>The repository holds no rule on automated decision-making, no complaint or redress route for an AI-caused harm, and no enforcement action. | MOVEMENT<br>on import control and diagnosis rather than on any rule addressed to AI harms |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Gabon** | No instrument reaches artificial-intelligence-generated content. The ordinance reorganising the communications authority names neither artificial intelligence nor generated content.<br><br>The nearest content-regulation instruments in force are two ordinances of 2026, and neither reaches synthetic media. The first reorganises the high authority for communication and extends its remit, naming artificial intelligence nowhere in its text.<br>The second is about age rather than authorship: fifty-five articles in eleven chapters fixing digital majority at sixteen and barring account creation below it, obliging editors to block publication, sharing and social interaction functions for minors, on a twelve-month compliance clock.<br>What the authority has done with its powers is suspend rather than regulate: a decision suspending social media has been in force nearly five months, the presidency calling it temporary and conservatory, and nine civil-society organisations call it unconstitutional and beyond the authority's remit.<br>The first domestic system such a rule could reach is commercial, an operator's voice assistant presented in August 2026; no artificial-intelligence system in production inside a public administration is held.<br>2026-10-06 - the presidential spokesman said on radio that he uses a virtual private network to get round the social-media suspension, which was reported still in force. | NO CHANGE<br>a standing position the repository holds for the first time |
| **Gambia** | A misinformation response centre runs a fact-check hotline with a public audit trail; no rule addresses synthetic media.<br><br>The centre's own page describes a live hotline with a published audit trail, worked by human analysts. The state broadcaster's account of the same body calls it an artificial intelligence centre.<br>The response elsewhere is training rather than regulation: a media workshop on AI-driven election disinformation in June 2026, and ministers of The Gambia and Guinea-Bissau pledging joint action as artificial intelligence accelerates the spread of unverified information. No instrument exists. | MOVEMENT |
| **Ghana** | A cyber and information security directive launched in March 2026 is the first comprehensive governance framework for the technology in financial institutions.<br><br>It carries cloud-security rules, proportionality by size and risk and mandatory board-level accountability, replacing an earlier directive whose text and date are not held, and the governor states the industry was consulted before issue (directive, governor).<br>It is the only binding instrument in the repository that governs the technology's use in any sector, against a national strategy, an implementation plan and an emerging-technologies bill that are all outside the financial sector and none of them in force (framework).<br>What the directive requires of a regulated institution using a cloud service is set out in a practitioner guide: board approval before use, alignment with recognised security practices, end-to-end encryption in transit and at rest with keys held by the institution rather than the provider, incident reporting to the central bank with a post-incident review within seven days, and exit arrangements covering retrieval, migration and secure deletion. The directive text is not held, and the guide draws partly on a 2025 exposure draft rather than the issued instrument.<br>2026-10-08 — the governor said a directive on artificial intelligence in finance is in drafting. | MOVEMENT |
| **Guinea** | The cybersecurity agency mapped manipulated media onto the existing statute book on 12 September 2025, and the broadcasting regulator banned media outlets from carrying such content in November.<br><br>2025-09-12 - nine days before a constitutional referendum, the agency issued an alert against the manipulation and illicit circulation of artificial-intelligence-generated images and videos targeting public figures including the head of state, asserting civil and criminal liability including takedown and compensation, penalties of five to ten years' imprisonment with heavy fines, and protection of privacy, honour and dignity, and stating it has the technical means to trace online activity and pursue offenders. It applies existing law rather than announcing a new instrument, and the primary alert was posted to a social network whose text was not retrievable.<br>2025-11-28 - the broadcasting regulator prohibited media outlets from carrying artificial-intelligence-generated content — a sectoral ban on carriage rather than a rule on generation.<br>Neither is a general instrument, and no prosecution under either is on the record. The national roadmap that would frame one is validated and unpublished. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Guinea-Bissau** | Ministers of Guinea-Bissau and The Gambia pledged joint action on misinformation as artificial intelligence accelerates it.<br><br>The response so far is cooperation and framework rather than rule: ministers pledged joint action in June 2026 as artificial intelligence accelerates the spread of unverified information, and a regional framework adopted the same month commits fifteen West African states to information-integrity laws for 2026-2036.<br>The domestic instrument that exists names no technology: the law against the dissemination of false information online, passed by a transitional council that had blocked four platforms nationwide six months earlier. | MOVEMENT |
| **Kenya** | A constitutional petition challenges automated payments decisioning for offering no guaranteed route to a human agent and no disclosure of decision logic.<br><br>It also alleges algorithmic discrimination in credit scoring; respondents had not filed responses at publication and nothing is on file since (petition).<br>Pre-parliamentary proposals would amend the sexual offences statute to cover sextortion, stalking, voyeurism and artificial-intelligence-generated or altered intimate imagery, with an institutional duty to report; no bill text, sponsor or timetable is on the record (proposals).<br>2026-09-11 - a model provider disclosed and removed a domestic actor's account mass-producing election posts praising the energy minister and targeting the opposition; the minister denied any ministry role. No Kenyan authority is on record investigating it.<br>2026-09-14 — the scale of ungoverned automated lending was stated: 256 licensed digital credit providers have disbursed 8.37 million loans worth over KES 150bn, decided by models rather than credit officers, with no rule on how they are built, tested or appealed.<br>2026-09-24 - Kenya co-hosted the launch of a 2026-2027 roadmap for children's rights and protection in the age of AI, backed by 23 states; no national instrument implementing it is held.<br>2026-09-22 - the central bank said its AI survey will feed a guidance note for the banking sector on data and AI governance, risk mitigation and third-party vendors; no draft is published. | MOVEMENT |
| **Lesotho** | The Data Protection Act is the strongest legal safeguard reaching AI-processed personal data; the cyber law is still a Bill.<br><br>2025-08-31 — a government press statement warned the public about AI-generated deepfakes impersonating the King and the Prime Minister, naming the absent cyber law as the enforcement gap.<br>2026-01-13 — a meeting between the ministry and the regulator linked AI-enabled cyber threats to the stalled Cybersecurity Bill.<br>2012-02-22 — the Data Protection Act is the binding statute reaching AI-processed personal data.<br>The head of state has been impersonated and the government said in its own statement that it lacked the law to act. That Bill was still awaiting approval a year later. | MOVEMENT<br>on warnings rather than powers |
| **Liberia** | No AI-specific rule exists: a court and the executive both met synthetic media with ordinary machinery.<br><br>At Criminal Court A on 19 December 2025 the defence played an alleged AI-generated recording to argue that social-media audio is inadmissible without forensic corroboration; the judge sustained the prosecution's objection on disclosure grounds, and no AI-specific rule was applied.<br>In July 2026 the presidential press secretary warned of the increasing circulation of fabricated and AI-generated documents falsely attributed to the government and asked citizens to authenticate through official channels — an authentication appeal, not a rule, an investigation or a prosecution. | NO CHANGE |
| **Libya** | The prime minister adopted an AI Ethics Charter on 1 June 2026 committing the state to human decision-making over automated systems in sensitive sectors.<br><br>The charter was adopted at an official ceremony alongside the artificial intelligence strategy and commits the state to justice, transparency and accountability, safeguards individuals' digital rights and centres human decision-making over automated systems in sensitive sectors (charter).<br>It is a reference for government, private and academic bodies rather than a binding instrument.<br>No enforcement body, complaint route or sanction is named, and no statute on artificial intelligence is in force. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Madagascar** | The judiciary adopted an ethics charter in June 2026, the most specific safeguard against misuse the repository holds.<br><br>The binding provision is in the data-protection law: its article 3 prohibits judicial, administrative and private decisions based solely on automated profiling, and its article 4 establishes the oversight commission (law).<br>That commission became operational in August 2025 (operationalisation).<br>Eighty-five magistrates adopted an ethics charter in June 2026, developed with the Council of State, the magistrates' school and the data-protection commission, defining authorised and prohibited uses in the courts (charter). No artificial-intelligence statute, regulator or enforcement action exists. | MOVEMENT |
| **Malawi** | The defence force intends to adopt artificial intelligence in military operations and to learn it from the Chinese army, with no doctrine, oversight body or civilian-control provision on file.<br><br>The intention was stated by the defence minister at an anniversary event in Lilongwe, in a relationship stated to extend past exchanges into specialised training, equipment supply and institutional development, with further equipment, capacity building and command-level training under discussion (intention).<br>No Malawian doctrine, oversight body, budget line or civilian-control provision for military artificial intelligence is on file, and the draft national strategy as reported does not cover it. That gap is the finding. | MOVEMENT |
| **Mali** | The media regulator took part in a continental conference of regulators on artificial intelligence in June 2026.<br><br>More than fifteen presidents of African regulatory bodies attended, the national regulator's president among them (conference).<br>No regulatory instrument, guideline or enforcement power on artificial-intelligence content follows from it on the record; a freedom of expression organisation separately published a briefing on civic space in December 2025 (briefing).<br>2026-09 - a model provider disclosed that its model was used to build a surveillance platform for the state security agency monitoring about 25 million SIM cards, with a warrant step removed. No Malian response is on record. | REGRESSED |
| **Mauritania** | A European-supported programme ran a session with the audiovisual regulator on deepfakes and synthetic media in July 2026.<br><br>The session was held in Nouakchott with the audiovisual regulator (programme).<br>No regulatory instrument, guideline or enforcement power on synthetic media follows from it on the record, and the account is the implementing organisation's own. Awareness work is what the repository holds and a rule is not. | MOVEMENT |
| **Mauritius** | The FAIR guidelines carry mandatory bias audits in financial services and gaming and locally-based-representative duties on foreign providers, non-binding but on a stated legal trajectory.<br><br>The guidelines govern by impact rather than geography, which is what lets them reach a foreign provider serving the country (guidelines).<br>They are non-binding on a stated legal trajectory, so what the repository records is an obligation the state intends to make enforceable and has not yet. No audit, complaint or enforcement action under them is published (launch).<br>2026-10-02 - the ICT ministry and Meta are to discuss a framework agreement on online safety on 6 and 7 October 2026; nothing is signed.<br>2026-10-08 - the ICT ministry held its working session with Meta on faster content removal, Kreol moderation and proposed amendments to the Cybersecurity and Cybercrime Act, with no framework yet signed. | MOVEMENT |
| **Morocco** | A national responsible-artificial-intelligence platform was agreed between the ministry and the data-protection commission in September 2025, with nothing built eleven months later.<br><br>The agreement commits the two bodies to build national platforms on large language models incorporating Moroccan language, culture, legal framework and digital identity (agreement).<br>No platform, budget or delivery date is on record eleven months after signature, so the country's principal instrument for governing the technology in use is an undertaking between two institutions rather than a working control.<br>The regulator is also preparing rules: a law firm's March 2026 practice guide reports that the CNDP is drafting a decision on artificial intelligence and personal data, with no AI-specific regulation in force. No draft is published. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Mozambique** | A National Commission for Artificial Intelligence began advising government in 2026, an observatory is proposed, and the Prime Minister warned on deepfakes in elections.<br><br>The commission was created by decree of 10 March 2026 and is an advisory body under the Council of Ministers chaired by the communications minister with the defence and education ministers as vice-presidents, issuing opinions on policy, legal instruments, funding, research and workforce questions; the decree number is not stated in any held source (commission, framework).<br>A National Artificial Intelligence Observatory was named in August 2026 as expected to support transparency, build trust and measure impact; no establishing instrument, host, membership, funding or method is on record (observatory).<br>The Prime Minister welcomed artificial intelligence while warning of the dangers of deepfakes in elections; no detection capability, electoral rule or platform obligation follows it (statement). | MOVEMENT |
| **Namibia** | Two deepfake incidents drew official responses in late 2025, against an assessment confirming there is no artificial-intelligence regulatory framework.<br><br>The ICT minister warned in September 2025 against circulating an artificial-intelligence-generated video promoting a fake government investment scheme (warning), and in November the Presidency denounced a viral deepfake audio and video impersonating the President (fact check).<br>No prosecution, takedown or regulatory action followed either on the repository.<br>The readiness assessment launched in August 2025 confirms the absence of a formal artificial-intelligence regulatory framework (assessment), and legislation is announced as following the strategy, which is itself under development.<br>The instruments that would bite — a data protection Act and a cybercrime Act — are both still Bills. The state's response to two impersonations of itself was to issue statements. | MOVEMENT |
| **Niger** | The data protection authority was abolished in June 2026 as a strategy against manipulated content was still being prepared.<br><br>The consolidated 2022 data protection law defines artificial intelligence at article 57, requires developers, manufacturers and service providers operating from Niger to declare, and restricts fully automated decisions and profiling at article 52; it names neither deepfakes nor algorithmic disinformation.<br>The government abolished the authority holding those powers in June 2026, transferring its prerogatives to the justice and interior ministries.<br>The ministry had installed technical committees in October 2025, one to prepare a national information-integrity strategy covering fact-checking and detection of manipulated content. A manipulated video of the justice minister circulated in February 2026 and was publicly denounced; no prosecution or takedown is on record. | MIXED<br>a declaration duty and profiling limits stand in law while the authority that enforced them was abolished |
| **Nigeria** | An above US$470m surveillance estate is the continent's largest with little evidence it reduces crime, and a state facial-recognition network was approved with no lawful basis stated.<br><br>A research mapping puts spend on facial recognition and number-plate tracking above US$470m with about 10,000 smart cameras, and researchers found little evidence it reduces crime and minimal use of footage in prosecutions (estate).<br>A state approved a first phase specified after engagements with a Chinese vendor, carrying facial recognition, plate recognition and violence detection across intersections, government precincts, coastal communities and a highway, feeding a command centre in the state security adviser's office; no lawful basis, retention rule or oversight arrangement for the face and plate data is stated anywhere in the announcement (network).<br>A maritime surveillance system built for the navy is being pitched inland for banditry, with neither funding nor a political decision behind it, and its claimed returns are the vendor's own (maritime).<br>A concessioned transport databank would put at least 250 gantries carrying plate recognition on the roads with traffic centres in every state (databank).<br>The transport ministry inaugurated the concession committee in August 2026: a second plate-recognition estate, again with no lawful basis, retention rule or oversight arrangement stated.<br>2026-10-05 - the technology agency published an advisory warning against entering identity numbers, bank details or confidential data into public AI tools. | REGRESSED |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Rwanda** | No national artificial-intelligence risk-assessment and harms-monitoring body is held, on engagements run from November 2025 to March 2026.<br><br>The finding rests on qualitative workshops rather than a survey, and the report claims no representativeness for them (engagements, landscape).<br>The country holds an artificial-intelligence policy, is standing up an agency and co-chairs a global commission, and the function that would identify and monitor harms domestically is the one with no body attached. | NO CHANGE |
| **Sao Tome and Principe** | There is no AI law and no national AI ethics body; the data protection law and its authority are the only anchors, and the identity institute's guidelines carry no force of law.<br><br>The country profile states that no AI-specific laws or regulations govern development, use or deployment, and that there is consequently no national AI ethics commission or dedicated governance structure (profile).<br>It names the personal data protection framework and its authority as the relevant anchors and notes that the identity institute can issue strategies and guidelines that do not carry the force of law (profile).<br>The readiness assessment recommends an AI law by 2027 or 2028 (assessment). The first public-facing AI system is meanwhile in build (platform), so the sequence here is deployment first. | NO CHANGE |
| **Senegal** | The data protection commission condemned generated videos and images of public figures published without consent; no artificial-intelligence statute exists.<br><br>The regulator's communiqué records the circulation of generated videos and images featuring public figures, religious leaders and ordinary citizens without their consent, condemns the practice and states that those responsible are exposed to the sanctions the law provides, naming mass collection without knowledge, identity usurpation, information manipulation and reputationally damaging deepfakes as the risks. The commission's own page serves no article body, so a press report stands in its place.<br>The sanctions it points to are technology-neutral. The press code forbids distorting a text, document, image or sound, requires image, sound and archive montages to be flagged, forbids journalists from manipulating images to falsify them, and makes publishing a montage of a person's words or image without consent an invasion of privacy. It names neither artificial intelligence nor deepfakes, and its scope is the press and audiovisual and online communication.<br>No dedicated artificial-intelligence legislation is on file. | MOVEMENT |
| **Seychelles** | An eight-week video-enforcement pilot repurposes the public camera estate for automated offence detection and remote ticketing, with no data-protection basis stated.<br><br>The pilot was announced in July 2026 with a foreign technology partner (pilot).<br>No data-protection basis is stated on record. That matters more here than in most units, because the country's data protection Act is fully in force and its regulator has published that it has no clear power to enforce its orders — so the safeguard exists in statute and not in practice.<br>Repurposing an existing camera estate for automated enforcement is a change of purpose for data already collected, which is exactly the kind of processing the Act would govern. | MOVEMENT |
| **Sierra Leone** | A deepfake and digital misinformation campaign that ran across seven towns from May 2026 has been relaunched nationally, in two phases across all 16 districts, with no legislative or platform-facing instrument accompanying it.<br><br>The campaign ran across seven towns from May 2026 (campaign), and was relaunched nationally in Freetown on 16 September 2026 as a two-phase plan covering all 16 districts, led by the science, technology and innovation directorate with the communications and information ministries and funded through the financier's digital transformation project. No budget, audience target or evaluation method is published.<br>No legislative or platform-facing instrument accompanies it: public literacy is standing in for regulation. That is the same substitution the fraud response makes, where consumer education runs while no rule allocates the loss. | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Somalia** | No instrument names artificial intelligence. The 2023 data protection act is what would reach automated processing, and no policy exists.<br><br>Somalia has a data protection statute and no artificial intelligence instrument. The 2023 data protection act is the primary legislation, and its articles on cross-border transfer prohibit transfer outside Somalia absent adequacy or an approved safeguard — the general law under which automated processing of personal data would be challenged. A public-sector data protection regulation was approved in January 2026 and an authority enforces registration.<br>No policy sits above it: a readiness assessment is being prepared and the national policy is recorded as not held. No takedown route, platform agreement or provision on synthetic media is held. | NO CHANGE |
| **South Africa** | The medicines regulator requires every AI-enabled device to be authorised before use, while the police service is tendering for body-worn cameras that must do facial recognition.<br><br>2025-09-26 - the medicines regulator issued requirements for AI and machine-learning enabled medical devices: every such device must be authorised before use and its importer licensed. Registration has not commenced, so the rule exists and its gate is not yet open.<br>2026-07-16 - in finance, supervision moved before rulemaking: the prudential authority embedded AI, cloud, cyber and data-offshoring into bank supervision. A dedicated framework is expected within 2026 and is not published.<br>2026-09-10 - the state is buying the capability the framework does not yet govern. State IT agency tender documents require that police body-worn cameras must be able to conduct facial recognition and integrate with various security platforms, under a three-year contract RFB 3286-2026 whose bids close at 11am on 29 September 2026. No contract value, matching database, retention period or authorising legal instrument is published.<br>2026-09-22 — a large bank published a responsible-AI framework written with a university data-science school, setting life-cycle rules for human oversight and accountability. It is voluntary; no audit or enforcement is stated.<br>2026-10-06 - a consultancy partner said half of 903 South Africans surveyed had bypassed an employer's restrictions on AI tools. | MIXED<br>supervisory practice moves ahead of any published framework while the state procures facial recognition with no framework at all |
| **South Sudan** | A national cyber-security task force was stood up in July 2026 to enforce a statute with no AI provision.<br><br>The Cybercrime and Computer Misuse Act 2026, signed on 18 February 2026 and enforceable on signature, is technology-neutral - hacking, identity theft, cyberstalking, cyberbullying, false or misleading information - with no artificial-intelligence or deepfake provision (explainer).<br>The justice minister publicly dismissed a circulating investigation report as an artificial-intelligence fabrication and warned of prosecution for creating or sharing it (case), and under a presidential directive a multi-agency task force and steering committee held its first operational meeting on 16 July 2026 to enforce the Act ahead of the December elections, including against false and misleading information (task force).<br>A general offence of false information, enforced by a task force, in an election year. | MOVEMENT |
| **Sudan** | The information ministry reserved legal action over a manipulated image of the prime minister, under a statute that is not AI-specific.<br><br>The ministry stated it reserves the right to act against those producing, publishing or promoting a fabricated, AI-manipulated image of the prime minister (statement). No provision is named.<br>The instrument reached for is the 2020 cybercrime amendment, which increases penalties across the 2018 law's computer-misuse and false-news offences and carries no AI-specific provision (gazette).<br>A partner project launched in November 2025 pairs an AI detection tool for manipulated narratives and bot amplification with local narrative analysis and Arabic-language resources (project). | MOVEMENT |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Tanzania** | AI-generated content is prohibited online, and public-sector AI standards approved in August 2026 ban fully automated decisions with significant outcomes.<br><br>A 2025 amendment adds unethical, fabricated and artificial-intelligence-generated content to the prohibited online content list and requires service providers and platforms to filter and remove it.<br>A board-approved government application standard of February 2026 requires secure development-lifecycle controls, vulnerability testing, audit logs and privacy by design for government applications including artificial-intelligence-enabled ones.<br>Tanzania's own statement to the United Nations global dialogue acknowledges the legislative gap and that artificial-intelligence-specific liability and oversight rules were still being developed.<br>Until August 2026 control ran to content and to government software.<br>2026-09-03 - the only movement is in the argument, not the rule: technology, academic and creative voices backed digital watermarking of machine-generated content as a way to restore accountability, after the European transparency duties that took effect on 2 August 2026. No domestic proposal, consultation or instrument follows from it.<br>2026-08-31 - the e-government authority approved standards binding every public institution's AI systems, existing ones included, prohibiting fully automated decisions with significant outcomes made without human control and the scoring of individuals on their behaviour. They are a standard under the e-government statute, not an AI law, and no compliance count is published. | MOVEMENT |
| **Togo** | Control runs through the data-protection authority, which opened its first compliance procedure in March 2026. There is no AI-specific instrument.<br><br>The 2019 statute bars decisions with legal effect taken solely on automated profiling, and the organisation decree gives the authority control and inspection powers and competence to issue reference frameworks including prior risk assessment. There is no artificial-intelligence-specific Togolese statute; this technology-neutral framework is what stands.<br>On 27 March 2026 it put declaration of video-surveillance systems online with an electronic receipt and a regulatory pictogram.<br>At the internet governance forum on 19 June 2026 it set out compliance duties on data controllers and announced forthcoming sectoral practical guides — the most recent evidence that the route runs through this authority. | MOVEMENT |
| **Tunisia** | A replacement data-protection bill was heard in committee in February 2026, and artificial-intelligence rules are only in drafting.<br><br>The rights and freedoms committee heard the government's legal counsel and the data-protection authority on the personal-data protection bill on 25 February 2026; the bill names algorithms among the domains the 2004 law leaves uncovered and remains pending in committee.<br>The communication technologies ministry has begun drafting legal and regulatory frameworks for responsible artificial-intelligence use, covering data protection, privacy and digital sovereignty, and no artificial-intelligence law, decree or gazetted instrument exists.<br>Meanwhile the state has put machine learning into customs risk targeting and electricity forecasting. Nothing on the record states how an automated decision can be contested. | NO CHANGE<br>the only instrument that would reach an automated decision is a bill in committee |
| **Uganda** | The government's own assessment finds no legal or regulatory framework for artificial intelligence; the response to election deepfakes was a published warning.<br><br>The baseline is the ministry's own finding with the International Telecommunication Union that no legal or regulatory framework for artificial intelligence exists, and that has not changed.<br>2026-01 - three weeks before polling, the ministry's permanent secretary published a warning on artificial-intelligence deepfakes and disinformation ahead of the electoral season. It names no takedown mechanism, monitoring arrangement, offence or platform undertaking, and nothing on file records any action taken under it.<br>2026-06 - the readiness assessment validated in May identifies regulation and governance gaps rather than closing them.<br>A warning is what a state issues when it has no instrument, and that is the position at both ends of this window. | NO CHANGE<br>warnings issued against an assessed absence of any framework |

| COUNTRY | DEVELOPMENTS | PROGRESS |
|---|---|---|
| **Zambia** | A closed-circuit television bill and a national security command centre are on the record in civil-society monitoring, and the cyber agency artificial-intelligence remit is the first defined state mandate on file and is defensive.<br><br>The bill and command centre are recorded in monitoring current to late December 2025 (bill).<br>Artificial-intelligence-enabled trafficking and online scams were placed inside the cyber agency's response; it is the first defined state artificial-intelligence mandate on file, it is defensive, and it sits with the cyber regulator because no artificial-intelligence institution exists (remit, surveillance).<br>The capital is listed among Chinese-supplied surveillance deployments in an eleven-country mapping; a widely quoted billion-dollar figure is a 2023 total across five countries, not a national figure and not current (safe city, mapping). | MOVEMENT |
| **Zimbabwe** | A nationwide expansion of artificial-intelligence traffic cameras was announced under a smart policing programme, and a separate municipal traffic system is rolling out across the capital's central business district amid entrapment concerns.<br><br>The national rollout's supporting figure — an annual crash cost — is the transport ministry's, given in support of the rollout (national).<br>The municipal system is distinct from the national police programme and is reported alongside entrapment concerns (municipal).<br>An earlier capital traffic management system is reported in operation and described as developed by the state operator, with every claim in the source relayed second-hand (earlier). Three overlapping camera programmes, none with a stated retention rule or legal basis.<br>2026-09-27 - the police said 20 AI cameras had logged more than four million violations, up from 2.3 million in mid-August, and offenders are being contacted to pay fines before the system is formally commissioned; no appeal route or retention rule is published. | MOVEMENT |
