PROGRESS REPORT

ICT Industry: progress report, October 2025 – October 2026

Edition of 2026-10-12 · compiled by Claude Opus from the documents in the Corpus repository

> *54 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has* **No evidence** *on it in its own report.*

Progress values. *Movement* — some form of progress, however minor, has been recorded. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the repository holds a standing position and nothing in the period touched it. *No evidence* — the repository holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

The place reports do not share one window; the period above is the range they span.

National capacity in DT-related production

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The state electronics firm was accredited to maintain all payment terminals nationwide, and a state firm's consortium signed a digital-infrastructure protocol for a Congolese new city. 2026-05 - the firm reported 1.6m payment terminals produced. 2026-07-31 - an interbank accreditation widened it from its own-brand devices to installing and maintaining every terminal on national territory whatever its brand or origin; the accreditation's own date is not stated, only the report of it. 2025-09-16 - a national technology hub agreement was signed by the sovereign fund with an operator and three technology firms, with no capitalisation, timetable or launch held. 2026-09 - a state electronics firm, in a consortium with two other companies, signed a protocol for digital technologies, electronic payment systems and an innovation centre covering cybersecurity and applied artificial intelligence in a new-city project in the Democratic Republic of the Congo; no amount is stated.	MOVEMENT
Angola	Information and communication was the fastest-growing activity in the fourth quarter of 2025, up 65.67 per cent, contributing 0.45 points to annual growth of 3.13 per cent. The statistics institute's quarterly national accounts give the sector's weight for the first time on this repository: information and communication up 65.67 per cent year on year in the fourth quarter of 2025, ahead of accommodation and food services at 18.00 per cent and manufacturing at 16.46 per cent, and contributing 0.45 percentage points to annual growth of 3.13 per cent — the largest single-activity contribution of the year. A second official statement puts the sector up 14.3 per cent in the second quarter of 2026. Both measure the sector's output, not domestic production of equipment or software: no manufacturer, assembler or licensed equipment supplier appears on the repository, and the incumbent's share offering is the only industry structure event.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Benin	A home-grown payment aggregator carries more than 13,000 merchants, and a domestic platform checks text, images, audio and video for manipulation. 2026-05-19 — a domestic payment aggregator carries more than 13,000 merchants on a home-grown rail — a rare Beninese-owned layer in a regionally supplied stack. 2026-07-27 — a content-verification platform founded in 2025 checks text, images, audio and video, including material generated by artificial intelligence. Both are small and both are locally built, which is the point: almost everything else on this ledger of scale is a regional rail, a foreign vendor's platform or a donor-financed programme. Neither publishes revenue, headcount or user figures, so the sector's size is not measurable from this record.	MOVEMENT
Botswana	The state wholesale operator's revenue fell to P376m from P485m and the incumbent's profit fell 45% to P146.2m, both against rising service volumes. 2026-08-13 — the state wholesale operator's first integrated report puts revenue for the year ended 31 March 2025 at P376m against P485m the year before, alongside 71% national broadband penetration, 206 villages connected to the backbone, 17,586 homes covered with fibre to the home, 1,272 public wireless premises and a fifth consecutive year of profitability without government subvention. It manages access to three international submarine systems and escalated two material risks to its board: disruption from low-earth-orbit satellite operators, and liquidity pressure from declining wholesale revenues. The financial statements are audited; the non-financial disclosures are not. 2026-07-06 — the listed incumbent's profit before tax fell 45% to P146.2m on revenue of P1.47bn, down 1.6%, against a prior year in which data and broadband demand pushed revenue up. Two state-linked operators carrying the national network, both with falling returns, is the industrial position underneath every connectivity figure in this report.	REGRESSED
Burkina Faso	One firm is identified as the country's first domestic assembly unit for computers, telephones and tablets. No output, employment or local-content figure is published. The evidence is a July 2026 equipment-access partnership with the public finances institute, which identifies the firm as the country's first domestic assembly unit for electronic equipment — computers, phones and tablets. That is the whole of the national production capacity the repository holds. No output volume, employment figure, local content share or plant description is published, and no second firm is named. The sector's share of the economy is not measured either: no information-technology share of output or sector employment figure is on the repository.	NO CHANGE a standing position the repository holds for the first time
Burundi	A Burundian company is reported to have built and deployed a crop-disease diagnosis tool covering 37 diseases across seven crops. A Burundian company is reported to have built and deployed a machine-learning crop-disease diagnosis and prediction tool covering 37 diseases across seven crops. It is taken as evidence of national capacity in digital-technology production — a domestically built software product — rather than as evidence of artificial intelligence inside a government system, which is recorded separately and is absent. The account is a single trade report whose own two date lines disagree; no user count, revenue figure, accuracy measure or independent evaluation is held, so what the repository can state is that the capacity exists and not how widely it is used.	MOVEMENT
Cameroon	Sector revenue reached FCFA 1,022bn in 2024, up 18%, with investment up 35%, and a local software suite launched. The regulator's 2024 observatory records FCFA 1,022bn of sector revenue, up 18%, investment of FCFA 194.5bn, up 35%, 3.16% of GDP and 31.5m active mobile subscriptions. The account is secondary; the regulator's own report is not held. 2026-06-10 - a locally built software suite launched with a browser and mail service available and a media service still being finalised, two years' build at a stated FCFA 20m and more, hosted on domestic infrastructure. The cost is promoter-reported, and no user, download or revenue figure is published.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cape Verde	Both technology park campuses are in operation with 23 companies and 311 professionals, and phase two went to tender. The campuses were inaugurated in May 2025, with a data centre and a disaster-recovery site across Praia and Mindelo, on a EUR 51.85m project of which EUR 45.5m is bank financing, with 23 companies from seven countries, 311 professionals, full occupancy of 52 office spaces against capacity for up to 1,500, and training programmes up from 6 in 2023 to 50 in the first quarter of 2025 with 2,769 people upskilled. No later figure is held. The park is a special economic zone carrying VAT exemption, reduced import duties and a corporate tax rate of 2.5%, with no uptake figure or list of admitted firms held; a Portuguese information-security firm present since 2007 is the first international company in both campuses. Phase two went to open international bidding on 29 July 2026 with the contract value unpublished. The incumbent operator is state-controlled: the state bought back PT Ventures' 40% of Cabo Verde Telecom in May 2019, leaving the social security institute with 57.9%.	MOVEMENT
Central African Republic	A locally built school-management platform is the clearest instance of domestic production; the authoritative diagnostic dates from 2020. The authoritative account of the digital economy including the firms that build and sell digital products is a development bank assessment of 2020, and nothing has replaced it. 2025-10-10 - a company's own announcement records a locally built school-management software platform - the clearest instance of domestic digital production the repository holds, and a first-hand account rather than an independent one. 2026-09-16 - the regulator put operators' combined revenue above FCFA 41.68bn including tax in the first half of 2026, 57% of it from mobile telephony and 36% from internet. No employment figure, firm count or export figure is published, so beyond operator turnover the position is one named product and a six-year-old diagnostic.	MOVEMENT
Chad	Privatisation of the state telecommunications operator was re-announced with a 60 per cent stake offered and no advisory bank appointed. The re-announcement was made in February 2025; staff were cut from about 10,000 to under 500 after a sale and subsequent nationalisation, and the account is a named analyst's (privatisation, strategy). No advisory bank has been appointed and no process is on record. A state operator reduced by that much, offered for sale with no adviser, is the industrial capacity this country has.	NO CHANGE
Comoros	A digital commerce platform launched nationally in April 2026, and a locally built business software product was launched. 2026-04-29 - a commerce platform launched across the three islands with a technology partnership and chamber of commerce backing, free to professionals to 31 May 2026. No merchant count, transaction volume or post-free-period pricing is held. At the artificial-intelligence forum, an enterprise resource planning product built in the Comoros was officially launched, with no user, revenue or deployment figure held - a diaspora-built private product with no entity page in the repository. The incumbent operator reported KMF 17,035,000,000 of revenue for 2024, up 0.91 per cent, against a 2025 growth target of 11.09 per cent; no 2025 outturn is published, so the target is untested.	MOVEMENT
Congo	The state operator held meetings in the neighbouring capital on interconnection, wholesale capacity trading and international roaming. 2026-06 - a state-operator delegation held meetings in the neighbouring capital on interconnection, wholesale capacity trading and international roaming, with no interconnection agreement, financing commitment or capacity contract on file. The account is a wire item reading as corporate communications and is company-reported throughout. The transit-hub ambition rests on a backbone the operator has just taken onto its balance sheet and on a single submarine cable whose outages the regulator has been trying to route around since January 2026.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Cote d'Ivoire	A commercial security operations centre opened and an electric fleet was delivered, while the industry 4.0 strategy did not move. 2026-05-19 - a commercial monitoring centre opened at Cocody-Angre, presented as the first with artificial intelligence integrated in the country, private and distinct from the state agency's own operations centre; no customer count, coverage or pricing is stated. 2026-07-18 - 100 fully electric vehicles were handed to ride-hailing driver-partners, the first half of a 200-vehicle programme on drive-to-own repayment over three years; the operator's energy-cost benchmarks are its own. The national industry 4.0 strategy, handed to the commerce and industry minister on 26 February 2025, has no adoption, budget, implementing body or activity on file seventeen months later.	MIXED a commercial security operations centre and an electric fleet were delivered while the industry 4.0 strategy sat unadopted for seventeen months
Djibouti	A process to create a national federation of digital enterprises was launched in December 2025, with no constitution published. The federation did not exist at the window's opening. Its creation process was launched in December 2025, the country having been named a founding country of a continental federation under a declaration signed at Marrakech, with no constitution or membership published. Nothing since reports a member count, a statute, an office or an activity. It is the only industry body on this ledger, and no sector revenue, employment or firm-count figure is published by anyone.	MOVEMENT
DR Congo	Two regulators began work on a common reading of the subcontracting texts and coordinated inspection teams, with scope beyond telecoms. 2026-07-22 - a first working session at the telecommunications regulator's headquarters worked towards a common reading of the legal texts, coordination between inspection teams and closer checks on large operators' compliance with subcontracting rules, with scope stated beyond telecoms to digital services and electronic commerce. No written protocol, order or joint communique is held and the account is a news report of the meeting. No inspection has been conducted, no reporting obligation is established, and nothing records an enforcement action since. It is the only instrument on this ledger addressed to what is produced domestically rather than to what is imported or licensed. The state's own operator is in structural crisis: a directorate-general communique states that on current finances the company could theoretically pay salaries only every four months, management saying rigour has brought the cycle to every two to two and a half months, after the telecoms minister, proposing a national conference in October 2025, named the sector the state's second-largest revenue source and asset spoliation a problem to fix.	MOVEMENT
Egypt	Handset output reached 10 million by end-2025 from 3 million in 2024, and the sector is stated at about 6% of national output. Handset production went from 3 million in 2024 to 10 million by end-2025, with ministerial targets of more than 15 million during 2026, a 30 million capacity by 2028 and local content of about 45%. Sector growth was 15.2% in FY2022/23 contributing 5.1% of output and is now 24.3% in the fourth quarter of FY2025/26, described as the sector's highest on record. Outsourcing exports went from about US$2.4bn in 2022 to a 2025 outturn put at US$4.8bn and US$5.2bn and then at US$5.1bn, against a target of US$8bn by 2028 - three unreconciled ministerial figures for the same year. The ministry and its IT industry agency count 252 offshoring companies employing more than 195,000 specialists. 2026-09-10 - an Egyptian enterprise AI company expanded into Bahrain with a local operator; a Jordanian education platform acquired an Egyptian maker of tutoring-centre software, price not stated; and on 17 September a US outsourcing firm opened an AI-powered delivery hub in Cairo, planning to grow from about 135 staff to 1,365 over three years. A Sokhna optical-fibre cable factory was 92% complete in October 2022, with no production start on record.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Equatorial Guinea	Parastatal directorships were filled by competitive interview, and the second state operator's merger is halted pending an audit. Article 16 of the public enterprises law was invoked to remove supervising officeholders from parastatal boards, and director-general posts at four state companies were filled by competitive interview against stated criteria (appointments, incompatibility regime). The state infrastructure operator is now led by a new director-general and deputy after that process, replacing one of thirteen years' standing; the new leadership's first recorded act was a meeting with its Chinese equipment supplier on collaboration strategies, with no contract, scope or value attached (new leadership, handover). The second state operator, announced at about US$50m with 260 towers and 90 per cent coverage, has had its merger with a foreign group halted until an audit establishes the assets, liabilities and debts of the company being merged (halt).	MIXED board appointments were opened to competition while a second state operator's merger was halted for an audit
Eritrea	The 1998 proclamation makes developing national communications capability an objective. Twenty-eight years on, no manufacturer or licensed supplier is named on the repository. The legal basis is the founding sector law: the communications proclamation makes the ministry's communications department sole regulator over telecommunications, broadcasting and post, and sets the establishment of technical standards and the development of the country's communications capabilities, industries and skills among its objectives, through operator licensing, equipment supplier and installer permits and a rural telecommunications fund. What has been produced under it is software rather than hardware, and small: a developer group publishing Tigrinya-language educational applications and a virtual-reality rendering of national heritage. No manufacturer, assembler or licensed equipment supplier appears anywhere on the repository.	NO CHANGE
Eswatini	A provisional banking licence was granted for a transition to a full digital bank. The provisional licence was granted and the transition is under way (licence). No capital, timetable, customer base or launch date is published. It is the only domestic digital-industry item in this ledger apart from platforms delivered by a mobile operator.	MOVEMENT
Ethiopia	The repository names one domestic engineering firm and one foreign entrant with a local partner, with no measure of national production. An Addis Ababa engineering services firm founded in 2021 is the only named domestic producer on the record (engineering firm). A South African financial-technology firm entered the payments market in August 2026 with a local engineering partner, aligning onboarding, fraud-management and workflow-automation tools with the national payments strategy, with no commitment value, customer or deployment date disclosed (market entry). 2026-08-26 — a technology group and a bank signed an agreement to digitise the agricultural supply chain, with no scope, value or launch date stated. No industry survey, employment figure, export value or firm count is held.	NO CHANGE three firms named and no output measured
Gabon	A ride-hailing platform began recruiting drivers at Libreville in August 2026, entering a market one competitor has held since 2021. The platform works as a pure intermediary with no fleet or drivers of its own, in partnership with a local transport operator, and has announced no launch date, cities, tariffs or regulatory framework (market entry). Electric taxis were deployed in late 2025 under a state-backed project, and no regulatory framework for the entry is stated. The repository holds no measure of the digital sector's economic weight against which to read any of it.	MOVEMENT
Gambia	A domestically built payments platform was signed into government revenue collection in July 2026, distributed through the postal service. No go-live date, volume, fee structure or list of connected banks is published, and no text of the memorandum is held (memorandum). It is the only domestically built system the repository names in any sector, against an identity system produced with a foreign supplier, a data centre built with a foreign vendor and a mobile network to be modernised by a foreign investor.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Ghana	The sole satellite account puts ICT gross value added at GHS 2,489.3m in 2014, on a share of output falling every year of the series. The share fell from 3.1 per cent of gross domestic product in 2010 to 2.2 per cent in 2014 (satellite account); the study reports gross value added exceeding the published sector total, which it calls a plausible underestimation, carries no employment figure and was never repeated (satellite account). Live firms the repository names include a micro-enterprise tax platform deployed nationwide with the revenue authority targeting about 530,000 small enterprises in its first year on the vendor's own projections (tax platform), a freight platform handling booking, payment, tracking and customs formalities with no volume or revenue figure stated (freight platform), and a commercial security and digital-forensics centre operating since May 2025 with no client count or incident figure published since (security centre). A domestic firm has sued the dominant operator over authorship of the mobile-money platform, dating its claim to a 2007 commission; the case is live before the commercial division and no monetary figure is pleaded (claim, filing).	NO CHANGE the only measurement of the sector ends in 2014
Guinea	A Guinea-founded cross-border payments firm operates in 36 countries, and is the only domestic technology firm the repository names. It appointed a chief operating officer in April 2026 (appointment). No sector output figure, employment count, firm register or startup instrument exists anywhere in the repository, so one company's country count is the entire measure of national capacity in production.	NO CHANGE
Guinea-Bissau	No domestic technology production is recorded; equipment is tendered and imported. Nothing in the repository records Guinean production of hardware, software or digital services for sale. What is documented is procurement: the employment and vocational training agency tendered a framework agreement for computing equipment in May 2026, and the identity card production network is a contractor's estate.	NO CHANGE
Kenya	1,108 content-moderation and annotation jobs were cut after a platform ended its contract, while the state platform's operator pitched its registries abroad. 2026-09-15 — ownership of the largest telco was unsettled: the High Court voided the government's KES 204.3bn sale of a 15% stake as unconstitutional, three months after it closed. 2026-09-16 — Vodacom and the Treasury both said they would appeal the ruling voiding the stake sale. 2026-09-16 — the amounts are four and not one: KSh204.3bn for 6,009,814,200 shares at KSh34 each in a single block trade, a further KSh40.2bn drawn as an advance on dividends from the retained 20 per cent, KSh244.5bn the two together, and the infrastructure fund the proceeds went into. Petitioners valued the shares at KSh70 against the KSh34 paid, and the court ordered the six billion shares back to the state. Kenya has the densest developer population on the continent at 11.9 accounts per 1,000 people, within a total of 9,338,511 in the first quarter of 2026 (report, summary). The state paid KSh6.12bn for an investor's 60% of Telkom Kenya on 5 August 2022 without the Attorney-General's opinion; in June 2026 the purchase still faced a High Court petition and a London arbitration claim. 2026-10-07 - the device financier completed its US$8m acquisition of a Finnish device-locking software company.	MIXED the platform operator is exporting and a fibre operator is moving up the stack while the data-labour sector lost more than a thousand jobs
Lesotho	A Lesotho firm built the capital's permit system with a Kenyan partner, and two local firms hosted an executive cloud and security workshop. Computer Business Solutions of Lesotho built the Maseru City Council permit system with Web Masters of Kenya under World Bank funding (system). The same firm and DNS Technologies hosted an executive workshop in Maseru on 30 May 2026 on ransomware, cloud security, data sovereignty and immutable backup (workshop). Those are the only two records of domestic technology production or service capability in the repository.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Liberia	A domestic firm won the national startup competition on domestic data custody, and a ports memorandum covers automated terminal operations. The firm was selected to represent the country at a global final, projects a US$20m return over five years and plans a domestic security operations centre (winner); it reports that over 95 per cent of local graduates at its competition lacked practical international-standard defence skills, a vendor claim rather than an independent audit (winner). A non-exclusive memorandum with a French port operator covers all four seaports across five areas including automated terminal operations, with no commitment amount, implementation date or named system (memorandum).	MOVEMENT
Libya	A Libyan firm supplies Niger's biometric passport system, while banks build their digital services with foreign vendors and a national satellite sits at design stage. Al Itissan Al-Jadeed won Niger's biometric passport and national identity contract in June 2025, a rare identity-technology export, and no delivery milestone has been published since (contract). Tadamon Bank was reported building with JMR Infotech, and Seraj Islamic Bank with Network International, in April 2026, on vendor accounts (build-outs). The scientific research authority discussed a national earth-observation satellite at design stage in August 2026, with no budget, timetable or launch partner stated (satellite).	MIXED an identity-technology export against bank systems bought from foreign vendors
Madagascar	The telecommunications branch growth forecast was raised to 12.2 per cent for 2026, attributed to outsourcing and network expansion. The revised 2026 finance bill forecasts the post and telecommunications branch to grow 12.2 per cent against 9.5 per cent in the initial law, attributing the revision to business process and knowledge outsourcing, network coverage expansion and two structuring digital projects (bill). An outsourcing training programme opened applications in January 2026 for 1,300 young people over four cohorts, with a placement pathway into four named employers (programme); its second cohort certified 99 of 111 trainees on 24 September 2026, with no placement figure published. A bank launched what it describes as the country's first free, locally developed payment platform in April 2026, connected to 767 merchant points (launch).	MOVEMENT
Malawi	Additional operator licences are under consideration, while one licensee missed a 2023 launch target and another licensed in 2022 has announced no date. The minister told Parliament that the President had authorised the ministry to identify an investor able to build a network without delay, conceding that foreign-exchange shortages constrain incumbents' equipment imports and that earlier licensees who took spectrum without launching had licences revoked, ending in litigation; no bid timetable, licence terms or spectrum allocation is stated (round, competition, pressure). One licensee targeted a late-2023 commercial launch, was delayed by macroeconomic conditions and has announced no new date (first); another licensed in 2022 has announced no launch date either (second). A third operator licensed in 2007 holds a small share available mainly in major cities and has not significantly challenged the duopoly (third).	STALLED two licensed entrants have never launched and a third has never mattered, with a new licensing round only announced
Mali	The state raised its holding in the incumbent operator from 49 to 56 per cent for FCFA 160bn in June 2026, cutting the foreign partner to a minority. The purchase took the state to 56 per cent, put the foreign partner into a minority and came with a licence renewal (purchase); it is about US$277m and comes seventeen years after the 2009 privatisation (purchase). It is the largest single act on the country's digital industry in the repository, and it is a change of ownership rather than of capability: no manufacturing, software export or domestic supplier capacity is separately recorded.	MOVEMENT
Mauritania	The mobile market went from three operators to four at the 5G award in April 2026, the first change in the market structure on record. A new entrant was licensed alongside the three incumbents at the provisional 5G award (award). No domestic manufacturing, software production or supplier capability is recorded anywhere in the repository, so the country's industrial position in this sector is the number of licensed operators and nothing else.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritius	The sector is put at about 5.4 per cent of gross domestic product against a stated ambition of 10 to 12, and an adoption and readiness survey was commissioned because no picture exists. The share was stated by the minister in July 2026 against an ambition of 10 to 12 per cent (share). An adoption, readiness and governance study was launched on 27 July 2026 by the chamber of commerce, the outsourcing association and a third partner, commissioned because no picture exists of adoption levels, affected sectors or available skills; its results are not held (study, launch). A country doubling its sector share is a policy ambition; a country that cannot say what its firms have adopted is a measurement problem, and both are on the record here. A pan-African investment fund took a minority stake in a Mauritian digital transformation consultancy. No consideration, stake size, use of proceeds or holding period was disclosed.	MIXED the sector at about half its stated ambition while no picture of enterprise adoption exists at all
Morocco	Digital offshoring stood at 148,500 employed and MAD 26.2bn of exports at end-2024, with three agreements targeting 270,000 jobs by 2030. The end-2024 outturn is 148,500 employed and MAD 26.2bn of exports, and no newer figure has been published (outturn); no official statistical release on the sector is held at all (outturn). Three agreements signed in Rabat in January 2026 cover a training incentive, territorial attractiveness and specialised offshoring hubs, on a stated 2030 target of 270,000 jobs and nearly MAD 40bn in exports (agreements); the texts are not held (agreements). A vendor inaugurated a regional research and development office at Agadir in June 2026, with no headcount or investment figure published for it, and a Casablanca centre announced in 2025 with 1,000 jobs claimed has no outturn on file (office, announcement). 2026-08-26 - video-game companies were made eligible for the industry ministry's Innovation Support Fund for 2026-2028, which covers up to 70 per cent of a prototype's cost to MAD 1m per project; no total allocation or first award is on file.	MIXED a large offshoring base whose last published outturn is for 2024, against new agreements targeting 2030
Mozambique	A technical team was formed to sell part of the state stake in the loss-making incumbent, and a private group notified a purchase taking it to exclusive control of a fixed operator. The government formed a technical team in August 2026 to negotiate the sale of part of its stake in the incumbent, which carried a US$400m debt in 2023; no buyer, share, valuation, timetable or treatment of the debt is stated. A private group notified the competition authority in July 2026 of the purchase of the incumbent's residual 30 per cent in a fixed operator and its network-engineering arm, taking it to exclusive control, with no amount disclosed (merger). Between them these move a fixed operator and its engineering capability out of state part-ownership and put the incumbent's ownership in play; no domestic manufacturing, software or supplier capacity is recorded anywhere in the repository. 2026-09-12 — the government invited expressions of interest within 15 days in a strategic partnership, including a possible partial sale of its shares; no stake size or valuation is stated. 2026-09-17 — documentation prepared for the partner gives the fullest account of the operator's position on the record: 1.79 million active mobile customers at the end of 2025, up 62.1 per cent, on 1,303 sites and about 6,500 km of backbone. The figures are the seller's, not a regulator's.	REGRESSED the state moving out of both the incumbent operator and a major fixed operator in the same year
Namibia	The first privately owned mobile network launched in September 2025 on N$600m of investment, against a dominance determination naming the state operator dominant in all four priority markets. The network is live on long-term evolution and 5G, with N$600m invested in the preceding year and N$1.42bn in Namibian network infrastructure since 2018, company-reported (launch, announcement, investment, record). The 2024 determination names the state fixed operator dominant in all four priority markets, alone in wired end-user access and jointly elsewhere, with termination treated as a natural monopoly; the regulator describes its approach across all three exercises as one of minimal intervention (determination).	MOVEMENT
Niger	An electronics assembly plant for smartphones, computers and tablets was inspected at more than 60 per cent complete in August 2026 and is due in service by the end of October. A ministerial delegation inspected the plant on 20 August 2026 and put it at 63 per cent completion, due in service by the end of October 2026 (inspection); no capacity, cost, ownership or offtake arrangement is published (inspection). A second account of the same visit puts the facility, in the Tillabery region, at more than 60 per cent built after six months against 57 per cent of its overall timeline, and frames locally assembled devices for citizens and public institutions as a way to cut dependence on imported equipment (account); no investment value, capacity or opening date is stated (account). The two accounts of one inspection give different completion figures, which the cell carries rather than picking between.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Nigeria	Telecommunications reached 9.19 per cent of GDP, the country-code domain passed 300,000 registrations, and the sector's own institute says it has no register of its software producers. The country-code domain passed 300,000 registrations in 2025, and 13,500 towers moved to a single infrastructure owner in a 2025 consolidation. An operator has run domestic spam detection since March 2025, and a publication calculates about US$41m due to the state from a US$406m operator dividend, with no government confirmation of receipt held. 2026-09-10 - the software industry's own professional institute says it will launch a National Software Industry Registry within six months to document software achievements and developers, its president criticising the loss of record of milestones achieved by Nigerian practitioners. It is an institute's commitment, not a government instrument. 2026-09-14 — the minister put the sector's contribution to GDP at about 21 per cent, from about 16 per cent three years earlier. The figure is a speech's, not the statistics office's. A continental count put 9,338,511 developer accounts across Africa in the first quarter of 2026, with committers up 18 per cent over 2025 and Nigeria among the three countries profiled (report, summary). No national figure is published separately. 2026-09-21 - a consultancy was tendered to build a knowledge-process outsourcing export industry around a 1,000-graduate academy.	MOVEMENT
Rwanda	The dominant operator returned to profit in the quarter to March 2026, and information and communication employment is the fastest-growing sector in the labour force survey off a very small base. The results are the operator's own reported figures and the held body is a partial capture (results). Employment in the sector grew fastest of any in the second-quarter labour force survey, off a very small base — which is the qualification that decides how much the growth rate means (employment). There is no domestic manufacture, assembly or hardware production of any kind in the repository for this unit. Rwanda is one of three countries profiled in a continental count of 9,338,511 developer accounts in the first quarter of 2026, with committers up 18 per cent over 2025 (report, summary).	MOVEMENT
Sao Tome and Principe	The business census counts six enterprises in information and communication, 0.6 per cent of the total, employing 209 people. The statistics institute's second business census puts section J, information and communication, at 6 enterprises, 0.6 per cent of the total, and its employment table captioned 2019 gives 209 persons at service in that section, 152 men and 57 women (census). That is the domestic information and communication industry as the country's own statistics office measures it (census). No earlier count is held, so no direction can be stated. Set against it, the accredited higher-education register carries four computing and telecommunications degrees (register) and the university graduated at least 94 students across all fields in the window (graduation) - a training pipeline feeding a sector of six firms.	NO CHANGE a first count with no earlier figure behind it
Senegal	A first fabrication laboratory was announced for inauguration in April 2026, aimed at reducing imports of digital products. The laboratory announced for inauguration on 27 April 2026 at a Diamniadio university, built with United Nations development support, houses facilities for manufacturing phone shells by three-dimensional printing and software modelling and for developing agriculture and health solutions, with the stated objective of reducing imports of digital products by building local design and manufacturing capacity. The network is to extend to the country's eight economic poles, with further laboratories announced for two cities. It evidences a scheduled opening rather than a completed one. What the state has built in-country is infrastructure rather than manufacture: 4,500 km of fibre, three data centres and more than 400 administrative buildings connected. No production volume, employment figure or import-substitution measure is published for any of it. 2026-10-01 - the telecommunications ministry is pooling public equipment demand so local assemblers can win state contracts, visiting a unit with a pilot capacity of about 7,500 computers a year. 2026-10-06 - the telecommunications ministry signed a US$150m partnership convention for local production of electronic devices; no financing schedule is stated.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Seychelles	Information and communication contributed 0.4 percentage points to 3.4 per cent real GDP growth in 2024 — an operating sector of unstated shape. The national accounts bulletin identifies information and communication as a distinct economic activity contributing 0.4 percentage points to real GDP growth of 3.4 per cent in 2024 (accounts); it does not disaggregate software, hardware or exports. India's February 2026 press statement records a Digital Transformation memorandum under which India will share its experience with Seychelles, alongside a USD 175 million package covering e-mobility among other sectors (statement) — a cooperation commitment rather than evidence of production capacity. No firm count, employment figure or export figure for the sector is held.	NO CHANGE
Sierra Leone	The state operator was relaunched as a mobile virtual network operator on an Africell partnership in May 2026. The President relaunched Sierratel on 6 May 2026, presented as a stronger public-private partnership in the telecoms sector (relaunch); the ministry set out the arrangement as the relaunch of a national asset (ministry). Running as a virtual operator on another network is the opposite of production capacity: the state asset now sells service over infrastructure it does not own. No subscriber target, revenue figure or term for the partnership is published.	MOVEMENT
Somalia	A technical training and service facility was agreed in May 2026, and a graduate placement programme put 150 final-year students into four technical tracks. The sector baseline is the 2019 policy's own account: five major mobile operators employing about 25,000 people in a largely Somali-owned sector that grew through the civil war, with mobile money at 150 million transactions a month and 36 per cent of GDP (policy). No later sector-wide figure exists. A partnership announced in May 2026 will establish a standards-aligned technical training and service facility in Mogadishu, training youth in electrical equipment servicing and information-technology hardware and networking (partnership). A programme launched in August placed 150 final-year students into software, artificial intelligence, cloud and analysis tracks (launch).	MOVEMENT
South Africa	The third operator reported R12.64bn revenue and R4.16bn profit and a payments group its first full-year profit since 2022, while the sector's B-BBEE council had its chair replaced after being found dysfunctional. 2026-10-09 - the largest bank signed to invest in a Nigerian payments platform ahead of its New York listing; no amount is stated. 2026-08-19 - a listed payments company consolidated a division selling item-level data on the informal retail economy, from a network of over 90,000 spaza shops and taverns. 2026-09-10 - that company turned a group net profit of R47.3 million against a R1.63 billion loss a year earlier, and the state signal distributor cut its net loss to R60 million from R246 million. 2026-09-15 — the largest domestic operator lifted its effective interest in the Kenyan incumbent from 35 to 55 per cent on 30 June 2026, through a state share sale a Kenyan court has since voided. A bank-operated virtual network reports R28.6bn of customer value and sales, R3bn of gross revenue and 1.02 million subscriber identities (account). 2026-09-18 — two fibre operators confirmed they are assessing a merger that would form the third-largest fibre network. 2026-09-30 - the Competition Commission recommended conditional approval of the largest operator group's acquisition of a tower company; the Tribunal has not ruled. 2026-10-05 - the domain registry counted 1.5 million active registrations across its four commercial namespaces, a first measurement.	MIXED operators and a payments group returned to profit while the sector's transformation council was found dysfunctional
South Sudan	No domestic hardware base and a nascent software sector, against a 2,400 kilometre fibre backbone announced for construction. The country diagnostic documents a nascent digital business sector - ride-sharing, information technology support firms, technology-enabled agribusiness - with no domestic hardware manufacturing base, severe skills and infrastructure gaps and no national fibre backbone (diagnostic). Construction of a 2,400 kilometre national backbone reaching the Indian Ocean through Kenya was announced to begin in December 2025 (backbone), and a Juba-headquartered company launched a multi-currency payments application in March 2026 (application). One application on an app store is the repository's clearest instance of domestic software production.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Sudan	Domestic production is a licensable category — technical support for basic infrastructure manufacturing — with no licensee, output or employment figure held. The regulator's licensing framework includes a technical support licence category explicitly for basic infrastructure manufacturing, alongside licences for value-added digital services, internet applications, automated tracking and payment services (framework). That establishes production as a regulated, licensable activity. It does not establish that anyone is doing it: no register of holders of that category, and no production figure, was located. The nearest thing to industrial evidence in the window is the launch of the national payment switch as domestic financial infrastructure (launch).	NO CHANGE
Tanzania	ICT manufacturing sits at 0.004 per cent of manufacturing output, with technology parks still among budget priorities. The ministry's own investment prospectus puts information and communication technology manufacturing at 0.004 per cent of manufacturing output and presents a local device-assembly venture and technology parks as pending investment projects. The 2026/27 ministry budget of 222.589 billion shillings names technology parks among eight priorities alongside backbone strengthening and rural connectivity. The sector's contribution to national output is separately put at about 1.5 per cent for 2022/23 against a target of 3 per cent by 2029, with no intervening annual figure held. A prospectus is a pitch; the pending projects in it are still pending two years on.	NO CHANGE
Togo	A fuel marking and traceability system launched with the obligation already in the regulations from July 2026, and a digital toolbox for small enterprises was launched with donor co-financing. Neither the contract amendment nor the marking regulation is held, and no contract value, duration or data-ownership term is published for the traceability system (traceability). The enterprise toolbox was launched during a national small-enterprise week, built with German development cooperation and co-financed by three European partners, with no user or enterprise count published (toolbox). Data ownership in a national fuel traceability system is the kind of term that decides who can audit the revenue it protects, and it is unpublished.	MOVEMENT
Tunisia	Sector value added rose to 4,894 million dinars in 2025 from 3,469 million in 2020, with two foreign engineering centres expanding. The national accounts put gross value added of the information and communication branch at 4,894.4 million dinars at current prices in 2025, against 3,469.1 million in 2020. The series is at current prices, so it carries inflation as well as growth and no volume measure is published beside it. An American automotive supplier's Tunisian hub, its only one for the Middle East and Africa, has passed 100 million dollars of cumulative investment with nearly 200 software engineers against a target of 500, and extended its factory by 20,000 square metres. An Indian mobility-technology firm committed 1.52 million dollars to a software-engineering centre at Sfax serving global carmakers. No employment or export series for the sector is held.	MOVEMENT
Uganda	An operator completed a US$63m acquisition of a regional connectivity group's parent, all regulatory approvals cleared. Completion was announced in the capital in November 2025 (acquisition). It is the only market-structure transaction in this ledger, and no regulator statement, condition or market-share analysis accompanies it. 2026-09-10 - a domestic banking-software firm passed into foreign ownership. A Nigerian technology company acquired it, bringing every stage of credit from verifying the borrower's identity to repayment onto a single platform, the companies saying the combination lets African financial institutions assess loan applications faster. No consideration is disclosed and no revenue, customer count or headcount is published for either party.	MOVEMENT
Zambia	The regulator annual market performance report for 2022 is the latest market sizing held, with the article's own dollar conversions undated as to rate. It is the regulator's 2022 annual report, reaching the repository through a news account whose dollar conversions carry no stated rate date (report). Four years without a newer regulator market report, in a unit whose usage figures otherwise come from foreign compilers, is the measurement gap at the base of this whole ledger. 2026-09-15 — the regulator removed an operator: network and service licences were revoked for persistent regulatory, operational and financial failures.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Zimbabwe	A locally built enterprise platform already running in 83 local authorities was commercially launched in July 2026, and a laptop assembled in Zimbabwe in May. A Zimbabwean-built enterprise platform was formally launched at a university technology expo in July 2026; its developer already carries systems across 83 local authorities and government projects including a mines export permit system, a service delivery standards platform and the citizen engagement platform, with stated plans to expand into Zambia, Botswana and Ethiopia (launch). A laptop assembled in Zimbabwe through a partnership between a private technology firm and an associate of the state fixed operator was launched in Harare on 14 May 2026; no production volume, unit price or order book is held (laptop). The standing diagnostic remains a United Nations assessment across seven policy areas, closing on an action matrix (assessment). The passive infrastructure the sector runs on went the other way: it was transferred as a going concern into a separately listed company in February 2026.	MOVEMENT
