

MONTHLY UPDATE

Research institutions: monthly update, July 2026

Edition of 2026-08-14 · compiled from the Data Landscapers source base

10 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.

Burundi

The research capacity the AI strategy assumes showed itself once this month, [outside the state](#).

Cameroon

Two research builds were tabled in the same cabinet review list — a [sovereign scientific database on a dedicated national platform and a centre for the digitisation of scientific and technical information](#) — with no cost, site or timeline for either.

Cote d'Ivoire

The cyber agency and a technology school validated curricula for two cyber-security master's degrees on 28 July, with enrolment stated for the September 2026 academic year and no intake size or funding published.

Equatorial Guinea

[GITGE's deputy director-general presented doctoral findings](#) at the AVANTE forum on 22 July on big data, interoperability and digital identity in the public administration, arguing that the constraint is structural gaps and elapsed time rather than technology.

Ethiopia

The FY2026/27 federal budget ratified on 7 July carries *Artificial Intelligence University Construction* as a single named capital project at ETB 5,000,000,000 — domestic money, appropriated rather than pledged, and large enough to dominate the year's digital total on its own. A national AI policy was adopted in 2024 and the AI institute has operated since 2020.

Nothing moved on the national AI policy itself, on the model-development side, or on which foundation models the country runs.

Libya

On 4 August the Libyan Authority for Scientific Research's scientific committee [approved an integrated cloud platform for higher education and scientific research](#), described in the authority's own account as using Microsoft 365.

Mozambique

At the university data centre's inauguration the communications minister proposed transferring management of the research and education network from his own ministry to the universities, naming no date, instrument or governance model ([ministerial account](#)).

Senegal

The council of ministers of 29 July [proposed a national research and innovation fund alongside applied research laboratories](#). Neither is an adopted instrument, and no budget or date attaches to either.

Somalia

The Somali National Bureau of Statistics closed a three-day technical workshop on 30 July under a [university research partnership, training researchers from three partner universities in methodology, statistical analysis and scientific writing, and in working with the bureau's own household budget and labour force microdata](#). It is a pilot funded by the Swiss development agency with no amount stated. What it implies about the constraint is the substantive part: official statistics exist and are being offered to domestic researchers, which puts the limit on evidence-based policy at national analytical capacity rather than at data collection.

Zambia

The revenue authority signed a research memorandum with an international tax and development centre on 17 July, accompanied by a non-disclosure agreement, so whether taxpayer microdata moves is not disclosed.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
