

PROGRESS REPORT

Burkina Faso: progress report, September 2025 – September 2026

Edition of 2026-09-10-2 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the base tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the base holds nothing on that indicator. **That is a statement about this base, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-09-01 to 2026-09-10.

Progress values. *Movement* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Digital transformation strategy	The digital ministry worked out its contribution to the 2026-2030 national plan in August 2026; the plan text, the digital component and any target are unheld. 2026-08-17 — a ministerial session considered what the digital transition ministry contributes to the RELANCE 2026-2030 national plan. No baseline was held before it. The plan text, the digital component, any budget line and any target are all unheld, so what the record shows is that the process is running and not what it will produce. What the country has instead of a published strategy is a list of twelve structuring projects, named across the ministry's own reporting and visible in this report as the data centres, the citizen service centres, the supervision centre and the white-zone programme. Each is traceable; the document that would tie them together is not. The territorial plan is being reworked. The authorities are revising the national plan for the digital development of the territory to a 2030 horizon, against an international telecommunications union figure putting about 70 per cent of the population off the internet in 2024. A revision under way, with no draft, budget, target or adoption date held.	MOVEMENT a process running with nothing published from it
Strategies, plans and policies	ICT strategy	The national digital economy strategy runs to 2027 on five programmatic pillars, and FCFA 9.1131bn of 2026 procurement was authorised in April for a twelve-project programme to 2030. The strategy of record is the national digital economy strategy for 2018-2027, whose existence and five programmatic pillars are recorded in the ministry's own maturity diagnostic of the public administrations. The strategy text itself is not held and no monitoring report against its pillars is published. 2026-04-16 - the council of ministers authorised FCFA 9.1131 billion of 2026 procurement for the digital ministry's twelve major projects to 2030, naming an elite information-technology programme, citizen houses, data centres, the state network and institutional capacity — the strategy moving from stated ambition to a funded line. What sits beside it is a strategy still being written: the digital ministry is working out its contribution to the national recovery plan, with no draft or adoption date held.	MOVEMENT
Strategies, plans and policies	Broadband strategy	The national digital development master plan was adopted by decree on 3 July 2019 with a 2030 affordable-broadband vision and operationalised on 24 October 2025 as a mapping platform. The plan is the medium and long-term national broadband and digital-infrastructure planning instrument, adopted by decree in council on 3 July 2019. No coverage target inside it has a published measurement against it. 2025-10-24 - a geographic information platform built from the plan was launched to map infrastructure and coordinate investment, and the observatory behind it runs eight functional objectives covering network mapping, infrastructure sharing and reduction of duplicate investment. 2026-09 - the plan itself is being revised to a 2030 horizon to narrow the divide, so the instrument in force is one the authorities have said is out of date.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Data storage / cloud strategy	The government cloud built 2015-2019 became a localisation doctrine: two national data centres are in operation and the agency's board made data repatriation its 2026 priority. The programme began as a distributed private cloud for the public administration built between 2015 and 2019. What it is now is a sovereignty policy with infrastructure under it: two modular data centres inaugurated at Ouagadougou under a zero-data-abroad programme to host, operate and secure all public data and to repatriate data still stored outside the country. 2026-03-24 - the agency's board set repatriation of government and institutional data to those centres as its priority objective for the year, moving the programme from build to migration. The rule underneath is not in the platforms decree: a prime-ministerial circular requiring national hosting is in force and applied when hosting requests are assessed. 120 platforms are inventoried and the inventory is expressly still incomplete.	MOVEMENT
Strategies, plans and policies	Data interoperability framework / roadmap	The national interoperability framework is left by the platforms decree to a prime-ministerial order, and no held source states its content, publisher, version or status. Article 7 of the 2024 platforms decree leaves the national interoperability framework to be adopted by prime-ministerial order, and article 6 conditions a platform's go-live on conformity with it. No held source states its content, publisher, version or status. So a decree makes conformity with a framework a condition of service, and the framework is not on the record. It is the central missing object of the exchange layer: every platform reported in this document went live under a test whose terms are unpublished, and an order adopting the framework would settle it.	NO CHANGE
Strategies, plans and policies	AI strategy	A national artificial-intelligence roadmap for 2026 to 2030 was validated in June 2026, its text unpublished, and a regional community strategy was commissioned. 2026-06-17 — a national roadmap for 2026 to 2030 was validated at a national workshop under an artificial-intelligence-for-all banner, aligned to the national recovery plan, reported the same day, against no national strategy and drafting not yet begun a year earlier. The document itself is not held and formal adoption or publication is not established. 2026-07-14 — a regional commission undertook to prepare and adopt a community artificial-intelligence strategy in a very short time, building on the four member states that already hold national strategies, Burkina Faso among them. No timetable, drafting body or budget is stated. A validated roadmap whose text nobody outside the workshop has seen is the weakest form of instrument this frame records, and the dedicated regulation it anticipates is reported under control of artificial-intelligence abuse.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Data localisation policies	A prime-ministerial circular requires national hosting and is applied when hosting requests are assessed, and large firms must build headquarters in-country. 2026-03-03 — a prime-ministerial circular requiring national hosting is named as the operative instrument and is applied when hosting requests are assessed, since local hosting does not appear explicitly in the platforms decree. Neither the circular's date, number nor text is held, so the country's central localisation rule reaches this base only as a description of itself. 2026-02-12 — a decree requires firms above a revenue threshold to build headquarters in-country, with building standards set by revenue band. It is the built-environment counterpart to data localisation and it reaches the three mobile operators. The doctrine is being executed rather than legislated: the repatriation of 120 externally hosted platforms, reported under data storage, runs on a circular nobody can read.	MOVEMENT
Strategies, plans and policies	Data governance policy	The reform went through the legislature: the council of ministers sent a constitutional revision merging the two regulators, an amendment of the 2021 data law and an organic law on 20 November 2025, and all three were voted in August 2026. 2025-11-20 - the council of ministers agreed to transmit to the legislature a constitutional revision merging the broadcasting regulator and the data-protection commission, a bill amending the 2021 personal-data protection law, and an organic law for the resulting regulator. It is the step that turned a stated policy intent into the legislative process. 2026-08 - the new data-protection law was voted, prohibiting and sanctioning processing without consent, indexing administrative fines to turnover, and prohibiting transfer of sensitive data abroad, and the organic law creating the single merged authority was voted alongside it. Neither is promulgated, so the 2021 law remains the operative text — a law whose enforcement decrees were never issued in the five years it ran.	MOVEMENT
Strategies, plans and policies	Open data policy	There is no open-data policy; the nearest is the statistics council's diffusion mandate, set by decree of 26 August 2025, over a portal whose hostname no longer serves a public catalogue. 2025-08-26 - the statistics council was reorganised by decree and tasked with proposing national statistical policy and diffusion priorities and coordinating the national statistical system. The diffusion mandate names publication as a duty without setting a licence, a format or a release calendar. The open-data programme that did exist has decayed. The joint ministerial order founding the open data initiative names the technology agency as executing body and sets the objective of releasing non-sensitive public data for re-use; the instrument is held and the portal hostname no longer serves a public catalogue. The access statute is worse placed still: its number, date and text are not held, so a right of access exists in report and not on the base.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Data protection legislation	A new data protection law was voted on 3 August 2026 awaiting promulgation, after the 2021 statute ran five years without its enforcement decrees. 2026-08-03 — the legislative assembly voted a new law prohibiting and sanctioning processing without consent, indexing administrative fines to turnover and scaling them by gravity, prohibiting transfer of sensitive data abroad, requiring prior consent for commercial prospecting, and leaving private video-surveillance lawful but framed where it faces the public highway, reported the same day. No text, number or gazette reference is held and it must clear conformity review before promulgation. Until then the 2021 law remains the operative text, and it ran its whole life without teeth: the commission was still pleading with the Prime Minister for the implementing decrees in March 2025, and they were never issued in the five years the law ran. The lesson the new law has to answer is its predecessor's: a statute with sanctions and no implementing machinery is not an enforcement regime, and publication of the decrees, or their express abrogation, would settle it.	MOVEMENT
Legislation and regulation	Cybersecurity legislation	Two application decrees were adopted on 30 July 2026, classifying critical-infrastructure bodies and fixing periodic audits and auditor accreditation under the 2024 security law. 2026-07-30 — the Council of Ministers adopted a decree identifying, classifying and setting obligations for critical-infrastructure bodies, defined as any entity housing installations indispensable to society's vital functions and expressly spanning energy, water, health, telecommunications and finance, and a second decree fixing conditions for periodic audits and vesting auditor accreditation in the national cyberspace control body. Before them the 2024 law asserted an auditor-accreditation duty with no procedure attached. Two things the decrees do not close. The accrediting body is named by function rather than by institution. And the technical approval and homologation regime for security products, provided by articles 7 and 9 of the law and carrying fines of FCFA 2m to 100m for importing or selling without approval, is still left to a regulation that has not been made. The mapping instrument lands just before the mass biometric enrolment it will have to cover, reported under registration of the population.	MOVEMENT
Legislation and regulation	Legislation covering digital id		NO EVIDENCE
Legislation and regulation	Digital payments legislation	A new banking regulation law was adopted unanimously on 26 June 2026, transposing the union's uniform banking law and extending its scope to financial technology companies and to payment and electronic-money operations. 2026-06-26 - the legislature adopted the law unanimously, transposing the monetary union's 2023 uniform banking law and expressly extending its scope to financial technology companies and new payment and electronic-money operations. It moves the domestic payments framework beyond the central bank's instruction and onto a domestic statute. It was not promulgated at the date of the account, and no implementing text is held. What operates underneath it is already regulated in fact: the regional instant-payment rail is live with nine domestic institutions authorised by February 2026, and the country holds 9.53 per cent of the union's 248 million electronic-money accounts.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Legislation enabling data interoperability	A Prime Ministerial order of 23 May 2018 adopted the Referentiel general d'interoperabilite. The Referentiel general d'interoperabilite was adopted by Prime Ministerial arrete of 23 May 2018, fixing the rules ensuring compatibility between public administrations' information systems; a training seminar on it was held in October 2019. This is a secondary account: the framework's own text could not be fetched from the ministry's server. Nothing states which administrations comply with it, or whether any system has been certified against it.	NO CHANGE a standing instrument the base holds for the first time
Legislation and regulation	AI legislation / regulations	No dedicated instrument: the justice minister told deputies the new data-protection law covers artificial intelligence, notably through the prohibition on transferring sensitive data abroad, while a roadmap to 2030 was adopted in June 2026. The country's own statement to an international dialogue confirms what exists: the national artificial-intelligence roadmap for 2026-2030 was adopted in June 2026, built on a six-part ethics framework and four operational pillars covering sovereign infrastructure, human capital, data and language groundwork, and proof of concept. A roadmap is not a regulation, and the roadmap's own text is not published. 2025-08-27 - the process opened with a situational-analysis workshop convening public institutions, the private sector, universities, research centres, civil society and financial partners into thematic sub-groups. 2026-08 - the justice minister told deputies that the new data-protection law covers artificial intelligence, which is the state's own account of why no dedicated instrument is being prepared.	MOVEMENT
Legislation and regulation	E-commerce legislation	Loi 045-2009, adopted 10 November 2009, is the principal electronic-transactions statute. Loi 045-2009 was adopted on 10 November 2009 and promulgated on 4 December by Decret 2009-824, covering information-society services, electronic signatures, electronic commerce and distance-contract consumer protection. No implementing decree, enforcement record or case under it is held.	NO CHANGE a standing statute the base holds for the first time
Legislation and regulation	Statistics legislation	The 2021 organic statistics law is in force, requiring a ministerial statistical visa before any collection of individual data; its council was reorganised in August 2025 and a five-year master plan set for 2026-2030. The organic statistics law of December 2021 governs statistical activity and requires a statistical visa from the minister before any collection of individual data — a licensing rule over data collection that reaches well beyond official statistics. 2025-08-26 - the statistics council was reorganised by decree and tasked with proposing national statistical policy and diffusion priorities and coordinating the national statistical system. 2025-12 - the council issued its fifth five-year master plan for 2026-2030, evaluating its predecessor and setting the national statistical system's new strategic axes. No budget line or financing plan for it is held, and the statistics institute's own strategic plan for the same period runs alongside.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Access to information legislation	The access to public information law was reported dormant in February 2025, and its number, date and text are not held. A press-freedom body reported the access to public information law dormant, and no held source records any movement since. The law's number, date and text are not on the base, so what is recorded is an instrument known only by its inactivity. Nothing else supplies the function. There is no open data portal, no dataset catalogue and no publication licence, reported under open data, and the data-protection authority's own statutory annual report has not been published since 2020. Transparency in this record runs through budget documents and ministry review meetings rather than through any right to ask.	NO CHANGE
Data protection	Data protection authority	The commission was superseded by a merger vote on 3 August 2026 having never had repressive powers, its appropriation down 43% over two years and no annual report published. 2026-08-03 — an organic law voted the same day merges the broadcasting regulator created in 1995 and the data-protection commission instituted in 2004 into a single authority with its own rule-making power and staggered renewal of its first college, placed under the revised Constitution of January 2026, reported as a merger of the two bodies. No commencement, seat or leadership is stated, and nothing on file establishes how its independence, budget or appointment route is secured. What it replaces never worked. The commission operated with no repressive powers, its standing borrowed from a prime-ministerial compliance campaign, and it was superseded having never received the enforcement decrees it asked for. Its 2024 report was validated in plenary in June 2025 and still not found published a year later, against a statutory duty. The money moved the same way: FCFA 490m for 2026 against FCFA 857m in 2024, a 43% fall over two years while the remit expands.	MIXED a successor authority with rule-making power voted while the existing commission was superseded without ever receiving its enforcement decrees
Data protection	National data protection readiness	The non-profit register gained a retention period for the first time, while an electronic travel form centralised border data for risk profiling with no retention rule stated. 2026-07-23 — the non-profit register decree was replaced under a 2024 anti-money-laundering law, fixing for the first time a retention period for the data it holds after dissolution and adding donation declarations and intervention-theme fields. A surveillance register acquiring a data lifecycle is a real improvement, and it is the only retention rule this ledger records. 2026-04-08 — against it, airport embarkation and disembarkation forms moved online, with the border-police director stating that centralised data opens intelligence uses including movement analysis, anomaly detection and risk profiling, and neither account states a retention rule or an access control. The pattern runs through this whole report: collection instruments arrive with stated analytical purposes and no stated limits, and the supervisor that would test them is mid-merger with no enforcement decrees behind it.	MIXED a surveillance register gained a retention rule while a new border data collection launched with none

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	Regional policy collaboration	Six francophone states adopted common non-binding artificial-intelligence governance guidelines in July 2026, complementary to national strategies. 2026-07-06 — common guidelines on artificial-intelligence governance were adopted by six states, led by an advocacy organisation, non-binding and complementary to national strategies. Nothing of the kind existed before, and the text itself is not held. Non-binding guidelines led by an advocacy body are the weakest instrument in this section, and they are also the only multilateral digital-policy act the country joined in the window that is not about identity documents or radio frequencies. The regional commission's own community strategy, reported under artificial-intelligence policy, is the instrument that would carry weight, and it has no timetable.	MOVEMENT
Regional collaboration	Regional legal harmonisation	Eight member states approved a draft land registration harmonisation directive in June 2026. The directive approved by ministers at Ouagadougou in June 2026 harmonises the rules governing land registration and property titling across the union, and covers the establishment of land information systems in urban areas. It is an approved draft rather than a transposed rule: nothing in the base records domestic implementation in any member state.	MOVEMENT
Regional collaboration	Shared regional infrastructure	A frequency coordination protocol was signed with three neighbours in November 2025, and a regional incident response centre was named as a 2026 ambition. 2025-11-21 — a protocol with three neighbours set preferential frequencies for operators, interference-prevention mechanisms and 15 km coordination zones either side of the borders, signed alongside a separate free-roaming agreement and following cross-border interference with one of them earlier in the year. No baseline was held. 2026-03-23 — a regional incident response centre was announced as an ambition for the confederation, with no host, financing or timetable stated, alongside a stated intention to pool digital infrastructure across it. The identity card reported under digital identity is the confederation's one delivered shared asset; everything else at that level is a communique.	MOVEMENT
Regional collaboration	Cross-border data transfers	The three confederation states' data-protection authorities signed an operational roadmap for their coordination framework on 18 November 2025, while the law voted in August 2026 prohibits transfer of sensitive data abroad. 2025-11-18 - the data-protection authorities of the three states signed an operational roadmap for their coordination framework. It is the only practical cross-border personal-data mechanism the base holds, and it creates no adequacy finding, authorisation route or technical transfer channel. The direction of national law runs the other way. The data-protection law voted in August 2026 prohibits transfer of sensitive data abroad, and the hosting doctrine already in force requires national hosting and is applied when hosting requests are assessed. Nothing states how transfers are authorised in practice, how many have been, or what happens to the data already held on the 120 platforms inventoried abroad.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	National interoperability standards	A procedures manual for ministerial information-systems directorates was validated in September 2025, under a decree requiring three sequential consents before a public platform goes live. 2025-09-23 — a harmonised reference framework for ministerial information-systems directorates was validated at a workshop, against a regulatory duty that had stood on every public service for more than twenty years with no manual in existence. Formal approval by joint ministerial order is not recorded as signed, and signature would settle it. The governing instrument is unchanged: the platforms decree requires a prior favourable technical opinion before development or acquisition, a security non-objection before go-live, and assignment of the full source code and current documentation by the supplier or in-house team before a platform enters service, with the same regime restated in 2026. The source-code assignment is the unusual clause and it is what makes the in-house builds reported elsewhere durable rather than vendor-locked.	MOVEMENT
Standards	National quality standards	The national standardisation, metrology and quality agency holds the mandate under statutes approved by decree in May 2016. No catalogue of the standards it has issued is held. The decree approves the agency's statutes and establishes it as a public administrative body with legal personality holding the national mandate for standardisation, certification, quality control and promotion, metrology and accreditation. That is the institution; the corpus of standards it has issued is not on the base, and no information-technology or data standard among them is identified. The one standards act the base does hold is an addressing one: the agency and the electronic communications regulator signed a framework convention on 4 February 2026 establishing a national object-identifier regime.	NO CHANGE a standing position the base holds for the first time
Standards	Adoption of international standards	A national object-identifier regime was established by framework convention on 4 February 2026, with a joint letter of recognition issued to the international telecommunications and standards bodies. 2026-02-04 - the standards agency and the electronic communications regulator signed the convention, designating the regulator's secretary executive as national object-identifier registration authority and issuing a joint letter of recognition to the international telecommunications union and the international standards organisation. It is the clearest instance the base holds of a national addressing standard aligned to an international framework. It is also load-bearing for something else: the regulator allocated an object-identifier sub-arc to the national cybersecurity agency in February 2026 as a building block for a public-key infrastructure, certificates and electronic signature. Elsewhere, adoption is asserted rather than evidenced: the interoperability reference framework was adopted by prime-ministerial order in May 2018 without a published conformance test, and no accreditation of the national standards body by an international peer is held.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	Non-governmental contribution to national policy	Two documented instances, both in the state's own record: parliamentary hearings with the internet society chapter and the digital-sector federation in June 2024, and an artificial-intelligence roadmap validated with non-state actors in June 2026. 2024-06-11 - the legislature's sustainable development commission held formal hearings over two days with the internet society chapter, the federation of digital-sector associations and independent specialists, alongside government bodies, during drafting of the information-systems security law. It is the base's clearest evidence of non-state input into a bill. 2025-08-27 - the artificial-intelligence roadmap opened with a workshop convening public institutions, the private sector, universities, research centres, civil society and technical and financial partners into thematic sub-groups, and was validated on 17 June 2026 having mobilised the same constituencies plus the diaspora. Both are consultations the state convened. No standing mechanism, register of submissions or published response document is held, and the regulator of public communication is being folded into a merged authority whose consultation duties are not stated.	MOVEMENT
Public debate and participation in policymaking	Open discussion of government policy	Broadcast-content regulation and data-protection supervision pass to one college under the August 2026 merger, the regulator holding powers over social-media users with 5,000 or more followers. The broadcasting regulator exercises powers over social-media users with at least 5,000 followers under an organic law whose operationalisation began in 2024. It is the only social-media-regulation instrument the base holds for the country, and nothing records any change to it. 2026-08-03 — its regulation of public communication passes to the merged authority, putting broadcast-content regulation and data-protection supervision under a single college. The merger removes the separation that let one body act as a check on the other, which is what makes this a regression rather than a reorganisation. The protection that might have offset it has not arrived: a whistleblower protection law was in preparation by the justice ministry in February 2025 and no held source records adoption or any further step in the eighteen months since.	REGRESSED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	Sustainable domestic financing of digital transformation	Tracked domestic digital appropriations fell to FCFA 9,609m for 2026 from FCFA 13,563m, while FCFA 9,113m was authorised for the ministry by fast-track route in one April sitting. Six tracked lines total FCFA 9,609m for 2026 against FCFA 13,563m for 2025, back below the 2024 level; the total is this base's own compilation across the enacted volumes rather than a published aggregate. Within it, the digital transformation programme falls to FCFA 1,916,611,000 with the chapter named after a foreign software vendor gone and the ministry's whole domestic capital down 72.7%, the connectivity programme to FCFA 1,187,169,000 in a third consecutive fall, the cyber agency to FCFA 489,236,000 and identity documents, the largest tracked line and the one funding mass biometric enrolment, to FCFA 5,025,702,000. Procurement runs beside the budget rather than through it. FCFA 9,113m of specific projects was authorised for the ministry in April 2026, five times its whole 2026 domestic capital, after FCFA 5,895m in July 2025, and the fast-track route's conditions of recourse were tightened by decree at the same council that used it again. Which credits these draw on is never stated. Execution reporting diverges: 78.05% physical at 30 November 2025 with no financial rate for the year, against 10.80% financial and 43.61% physical at mid-year, on a review that is not a settlement account.	REGRESSED
MoUs and other agreements	Strategic relationships	The standing relationship is with one financier: the legislature unanimously ratified the credit agreement financing the five-year digital acceleration programme at CFAF 92,752,319,800, and a regional fund workshop followed in August 2026. 2024-06-12 - the legislature unanimously ratified the credit agreement with the international development association financing a five-year 2024-2028 digital programme costed at CFAF 92,752,319,800, with sixty-nine deputies voting and five components named. The appraisal behind it funds a national public-data interoperability platform alongside broadband connectivity, public-service digitalisation and skills, and the operation is now framed at about US\$170m with national counterpart, funding coverage of 1,000 localities in 2026. 2026-08 - a second relationship is forming: a joint development-bank fund of 71 billion FCFA for digital modernisation of public administrations across the eight monetary-union states was presented to Burkinabe public administrations at a two-day workshop. The European relationship ran the other way: cooperation ended on 31 December 2024, the Commission recording that conditions for a medium-to-long-term framework are no longer met.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	Mobilisation of non-state finance	A binding memorandum to acquire 51 per cent of a regional telecom group with Burkinabe operations was announced on 4 June 2026, with financial terms expressly undisclosed. 2026-06-04 - a United States listed company announced a binding memorandum to acquire 51 per cent of a Ghana-headquartered group operating telecommunications and messaging-gateway infrastructure across six West African countries including Burkina Faso, with financial terms expressly not disclosed and closing subject to due diligence and to regulatory approval in two other states. The country-by-country operations are not detailed, so what it means for the domestic network cannot be read from it. The mobilisation that is measured runs through the connectivity programme: a cumulative FCFA 75bn white-zone envelope, half from the state through the universal-access fund and the acceleration project and half from the three operators, with lots allocated by reverse auction. Operator commitments for 2025 were delivered in full at 200, 200 and 150 sites.	MOVEMENT
New investments	Development-partner project financing	The digital acceleration project funds coverage of 1,000 localities in 2026, a 71 billion FCFA regional modernisation fund opened to administrations, and a financial-inclusion project closed on its targets. A US\$150m operation approved in January 2024 and closing November 2028 is framed at about US\$170m with national counterpart and funds coverage of 1,000 localities in 2026, expected to reach one and a half to two million people; the latest status report was archived in December 2025. Two sizings sit in the base and neither is reconciled. 2026-08-18 — a joint development-bank fund of 71 billion FCFA for digital modernisation of public administrations across the eight monetary-union states was presented to Burkinabe administrations at a two-day workshop, with eligibility terms of a 24-month maximum, a ceiling of 2,500 million FCFA, obligatory state co-financing and an interest rate the fund states at 2.2% where a trade account reports 2.77%. No national allocation, application or award is on record. 2026-06-24 — a seven-year financial inclusion project closed with 81% of indicators met or exceeded, 280,000 people given digital financial education against a 275,000 target and 17,858 transaction-account users against 9,300, on a digital-payments component of US\$28.3m. The white-zone envelope sits outside all of it: FCFA 75bn cumulative, half from the state and half from the three operators, allocated by reverse auction, not traceable to any line in the enacted finance-law volumes.	MOVEMENT

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Mobile penetration	Operators delivered their 2025 site commitments in full at 200, 200 and 150 sites, against 800 planned for the year across the fund and the acceleration project. 2026-06-21 — the three operators' 2025 commitments were delivered in full at 200, 200 and 150 sites, and for 2026 one operator is at about half of 100 planned while another has five live, twenty installing and 125 in build, against 800 new sites planned for 2025 across the universal-access fund and the acceleration project with the tender then in progress. The 800 planned and the 550 committed-and-delivered are never reconciled in any held source, so a programme that reports full delivery is reporting against a smaller number than the one announced. No subscriber total, penetration rate or regulator connection series appears anywhere on this ledger, so towers are counted and users are not. Power is the standing constraint on the towers themselves, reported under energy.	MOVEMENT
Connectivity	Internet usage	800 towers are planned to connect 1,000 white-zone localities by 2027. The government plans 800 telecom towers, 250 through the Digital Transformation Acceleration Project and 550 through the Universal Access and Service Fund, to connect 1,000 white-zone localities by 2027. The regulator's own figures put attacks on telecom infrastructure at 106 in 2022 against 11 in 2019, cutting network coverage by 10 to 20 per cent. The plan is the largest structural expansion on the record and it has no contract, budget or site list behind it. The coverage the towers would restore was lost to attack, not to underinvestment.	MOVEMENT
Connectivity	Mobile affordability	Consumer rules became enforceable after a court ruling, extending balance validity to 180 days, with the regulator reporting standard mobile-internet prices down 28 to 45%. 2025-12-02 — rules adopted in 2023 but suspended and unenforceable became enforceable after a court ruling: main-balance validity extended from 90 to 180 days, promotional credit usable across networks and a minimum one-month validity on data bundles, with the regulator reporting standard mobile-internet prices down 28 to 45%. What consumers had asked for was lower prices, which is not what the rules address; the price movement is reported alongside them rather than attributed to them. 2026 — an interconnection catalogue for 2026 to 2028 is in force with call-termination tariffs revised, known only through an operator's half-year filing. The catalogue itself is not held, so the wholesale terms underneath retail prices reach this base through the accounts of a party to them.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	National fibre backbone	More than 11,292 km is reported deployed with 270 km more programmed, and the wholesale price of a 10 Gb service fell from about 90m to about 35m FCFA a month. 2025-12-30 — more than 11,292 km is reported deployed with 270 km more programmed for 2026. No earlier cumulative figure is on file, so the increment is not derivable, and the figure does not reconcile with the other lengths the base carries. 2026-08-18 — the operating company's director general puts the wholesale price of a 10 Gb service at about 35 million FCFA a month against about 90 million in 2023, on three years running the state-built backbone. The figures are his own in an interview, no published tariff schedule is held, and the 3,000 km he describes does not reconcile with the 307 km first phase in service at 1,600 Gbit/s, itself the first stage of a stated EUR 175m and 5,740 km programme with no phase-two status on file. The other completed build is dual-purpose: 650 km of backbone plus 150 km of city links, 900 surveillance cameras and 300 video-surveillance sites on a Chinese concessional loan of RMB 560m, reported complete in August 2025 on two records that disagree about completion.	MOVEMENT
Connectivity	International internet bandwidth	Nigeria proposed connecting its planned 90,000 km fibre network to Burkina Faso's borders. At a bilateral meeting of the two digital-transformation ministers on 12 August 2026, Nigeria proposed connecting its planned 90,000 km open-access national fibre network to Burkina Faso's borders to improve internet resilience, quality and affordability, alongside cooperation on artificial intelligence, digital public infrastructure and talent. It is a proposed corridor and not a live link: no agreement, route, capacity or date is held, and the Nigerian network it would connect to is itself planned rather than built.	MOVEMENT
Connectivity	Internet Exchange Points	The exchange point runs at a 6 Gbit/s peak with local latency of 15 to 20 milliseconds against over 300 before peering. The exchange has operated since June 2015 at a 6 Gbit/s peak, keeping local traffic flowing through subsea cable cuts, and 2026-05-25 — local latency is reported at 15 to 20 milliseconds against over 300 before peering. The capacity figure has not moved and no update has been published since May 2026. For a landlocked country whose international transit runs through neighbours' coastlines, keeping domestic traffic domestic is the cheapest resilience available, and 6 Gbit/s is a small ceiling against the service estate this report describes. No address-protocol migration plan exists to sit beside it: operators and the regulator again called for a roadmap with a timetable in July 2026, with individual operators migrating on their own schedules.	NO CHANGE
Connectivity	Satellite broadband licensing and availability	The satellite operator is still unlicensed with a ministerial decision pending, after the regulator declared terminal sales irregular. The regulator declared terminal sales irregular under the 2008 telecommunications law, and 2026-07-26 — the operator remains unlicensed, with ministry negotiations reported advancing and the minister saying she hopes to rule soon. The position is unchanged across the window. The operator's own continental map still listed the country as available from 2026 without a licence, so an unlicensed service is being marketed into a market whose regulator has said the terminals are illegal. No second satellite operator, no capacity purchase and no institutional use of satellite backhaul appears on this ledger, which matters for the white-zone programme reported under digital divides: the localities it targets are the ones terrestrial backhaul reaches last.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	Local data centre capacity (all providers)	A domestic commercial hosting provider launched in July 2026 with more than 600 domain names and more than 196 web hostings, where no wholly domestic provider was on record. 2026-07-31 — a commercial hosting provider launched under ministry patronage, operating with more than 600 domain names, more than 196 web hostings and 98% availability at launch, offering services from domain registration through virtual and dedicated servers to colocation, framed as a digital sovereignty asset. No wholly domestic commercial hosting provider was on record before it. Capacity, tier, certification and continuity are unstated, and the wholly-local claim is unverified. It matters because the localisation doctrine reported under policy obliges public bodies to host nationally, and until this launch the only national capacity on the record was the government's own — so the private half of a localisation policy is one provider, three weeks old at the window's close.	MOVEMENT
Data Storage	Local data centre capacity (national providers)	Two modular government data centres entered service in January 2026 at about 3,000 terabytes, ten times the prior capacity, carrying a government cloud with a bigger centre announced for 2028. 2026-01-23 — two modular data centres were commissioned at about 3,000 terabytes combined, ten times the prior capacity, with more than 7,000 virtual machines at 100 to 300 per ministry, at FCFA 16bn and run by national teams, against construction with cost then given as over FCFA 15bn. Projected savings are stated two ways, about FCFA 30bn over five years and 85 to 95bn over ten. The same day, the government cloud entered operation on those facilities, to host, operate and secure all public data and to repatriate data still stored outside the national territory, with no capacity, operator or cost published by the government itself. 2026-01-27 — a national big data centre was announced for 2028 to repatriate public and private data, with no cost, siting, tier or procurement on record, the modular pair explicitly framed as the interim step to it.	MOVEMENT
Data Storage	Off-site backup capacity	The distributed baseline was about ten mini data centres and eight cloud nodes at roughly 440 TB, 13 TB of memory and 4,900 CPUs; the state estate is now about 3,000 terabytes across two national centres. The agency's own account of the pre-2026 position is about ten mutualised or sectoral mini data centres and eight distributed cloud nodes totalling roughly 440 terabytes of storage, 13 terabytes of memory and 4,900 processors, running 492 virtual machines. That distribution is what off-site resilience rested on. 2026-01 - the replacement is about 3,000 terabytes combined, ten times the prior capacity, with more than 7,000 virtual machines at 100 to 300 per ministry, at FCFA 16bn and run by national teams, in two centres at one city. Private capacity arrived alongside: a scalable modular data centre of 10 to 40 racks at 5 to 8 kW a rack was delivered to Ouagadougou by road from a Ghanaian port in August 2025. No backup, replication or recovery arrangement between any two of these is stated, so capacity is held and off-site backup is not established.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	Sufficient energy and water for data centres	Two thermal plants entered service seventeen days apart, 50 MW at Pabre on 21 July and 26.4 MW at Bobo 2 on 7 August. Nothing states what any data centre draws. 2026-07-21 - a 50 MW emergency thermal plant was inaugurated at Pabre, built in 90 days at FCFA 18 billion and framed by the head of government as a step toward national production exceeding demand, with a further 120 MW plant broken ground the same day. 2026-08-07 - a 26.4 MW plant was commissioned at Bobo 2, raising that site from 60 MW to 86.4 MW at over FCFA 33 billion financed entirely from national funds and presented as reducing supply interruptions. Neither is tied to a digital load. No data centre's connection, guaranteed supply, tariff or water use is published, and at the other end of the network power is repeatedly named as a structural constraint on white-zone towers with no instrument behind the ministry's statement that it is improving site energy access.	MOVEMENT
Energy	Grid reliability	The regulator's 2024 activity report is the primary document and the capture stops before its interruption indicators, so no reliability figure is held; two plants added 76.4 MW in July and August 2026. The energy regulator publishes an annual activity report covering its legal framework, institutional structure, regulatory approvals and technical and economic oversight of the national utility's production, transport and distribution assets. The capture stops before the chapters carrying interruption frequency and duration and the sector supply-demand deficit, so the base holds the document and not the numbers in it. What is dated is capacity, not reliability. A 50 MW plant at Pabre entered service on 21 July 2026, built in 90 days at FCFA 18 billion, and a 26.4 MW plant at Bobo 2 on 7 August, presented explicitly as reducing supply interruptions and stabilising power for its region. Adding generation is the state's stated answer to interruptions. Without a published interruption series, whether it worked cannot be tested.	MOVEMENT
Energy	Rural electrification	Power is repeatedly named as a structural constraint on white-zone towers, with no named programme, budget line or target for powering sites. Power is repeatedly named as a structural constraint on white-zone towers, and the ministry says it is improving access to energy for sites, but nothing names an instrument. The same constraint sits inside the twelve-site, 2,000-zone framing of the coverage programme. No fund, project document, procurement or target for site powering is on file, and none was at the start of the window. It is the binding physical constraint on the country's largest connectivity programme: the white-zone tranches reported under digital divides put equipment into localities whose power supply nothing on this ledger addresses, and a fund or project document specifying site powering would settle it.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	Robustness of government hardware and software	The replacement administration network has its architecture complete and suppliers' bids under evaluation, the existing network having run since 2007. 2026-07-26 — the architecture of the replacement public-administration network is complete and equipment procurement is in evaluation among pre-selected suppliers, with the existing network operating since 2007, against network reinforcement and further interconnection named as a priority with 38 structures interconnected in the first half of 2025 and about 100 further buildings connected across the year. The 2025 building count is given as 88 in one source and about 100 in two others. A network nineteen years old is carrying the tax interconnection, the treasury platforms and the ministry portals reported elsewhere in this document, and its replacement is at bid evaluation with no award, cost or date published.	MOVEMENT
Technical Capacity	Local capacity to maintain, manage and develop government systems	The data centres are run by national teams, and the official-travel platform was locally developed; the treasury built its own platforms in-house. Three points of evidence. The two government data centres are run by national teams. The official-travel platform is locally developed. And the treasury's teleprocedures platform and its round-the-clock online banking were both built in-house, financed under a World Bank project. Against them sits the standing rule that protects the position whoever builds: the platforms decree obliges the supplier or in-house team to assign the full source code and current documentation before a platform enters service. No headcount, skills audit, retention position or salary scale for government technical staff appears anywhere on this ledger, so capability is evidenced by artefacts rather than by people.	MOVEMENT
Cybersecurity	National cybersecurity readiness	The regulator allocated an object-identifier sub-arc to the national cybersecurity agency in February 2026. The regulator allocated an object-identifier sub-arc to the national cybersecurity agency, a technical building block for a public-key infrastructure, certificates and electronic signatures that underpins any future digital-identity authentication service. A national cyber-incident agency had been created in Council in July 2024. The allocation is a foundation, not a service: no operating certification or signature service is reported, no incident response team is constituted, and no advisory from either body is on the record.	MOVEMENT

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	National data exchange system	The interoperability reference framework was adopted by prime-ministerial order in May 2018 and the exchange platform under it was still a funded project rather than an operating layer in December 2023. The rules exist: the reference framework fixes the rules ensuring compatibility between public administrations' information systems. The platform does not yet: the financier's appraisal of December 2023 funds implementation of a national public-data interoperability platform under the digital transition ministry, which establishes it as a project investment still to be built rather than an operating government-wide exchange layer. 2026-05-05 - what did arrive is a front door rather than a back end: version 2.0 of the national public-services portal centralising administrative procedures behind a single interface, carrying 1,672 information sheets, 95 dematerialised procedures and 183 public institutions. The source does not itself establish interoperability between the systems behind it. No API register, no list of connected systems and no exchange volume is published at any date.	MOVEMENT
Data Exchange	Use of digital id in other systems	Identification against the national card is a mandatory precondition for activating a subscriber card under a decree of 31 December 2018, and a security-service identification platform was approved on 5 February 2026. The telecommunications case is the clearest: a decree of 31 December 2018 makes identification against the national identity card a mandatory precondition for activating a subscriber card, described by the government to the legislature in March 2023, which recommended strengthening it. No enrolment or rejection figure under the regime is published. 2026-02-05 - the council of ministers approved the development-operation record for a platform building on the computerisation and interconnection of five internal-security modules — judicial police, detainee management, civilian arms tracking and a mobile client — to pool identification data among security actors. It is approved and not built: no vendor, cost, timetable or data-protection assessment is held. Underneath both, the unique electronic identifier is stated not to replace other administrative identifiers but to form their common digital base, with mass registration organised through committees run entirely by public structures so that fingerprint and iris data stay sovereign.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	Interoperability of health systems	Interoperability is a stated objective of the health ministry's own procedures manual rather than a finished state; a community-health data roadmap was co-created in September 2025. The manual defines the national health information system with a central data warehouse as its store and expressly tasks the statistics directorate and other central structures with achieving interoperability between other databases and that warehouse. Naming it as a task is the strongest statement the base holds. 2025-09 - the health ministry with three partners co-created a national roadmap to integrate community health worker data from rural areas into the warehouse. 2024-2025 - the biennium's health-system work implemented the eleventh revision of the international disease classification in four national referral hospitals, a step toward mortality surveillance and data quality feeding the national system rather than a claim of completed cross-system interoperability. At the collecting end the gap is physical: rural clinics keep paper consultation registers which health workers summarise monthly onto paper forms for district teams to key in.	MOVEMENT
Data Exchange	Interoperability of education systems	The unique student identifier platform is a two-province pilot rather than a completed national interoperability layer, with national generalisation set out in a strategy. The platform enrolls pupils, handles transfers and end-of-year decisions and tracks learners across public and private schools, presented as a two-province pilot rather than a completed nationwide education-data interoperability platform. It issues school identity cards, with national generalisation and interoperability set out in a strategy supported by the regional identity programme. 2025-04 - a financier's appraisal authorises a centralised digital student-management platform and a centralised education-data platform as separate subcomponents — two platforms whose relationship to each other is not stated. 2025-06 - a regional working group meeting in Ouagadougou reviewed a year of work on strengthening sub-national education-data collection and integrating promising sub-national tools into national frameworks, stressing that interoperable data flow from schools to national systems is what avoids fragmentation and duplication. Fragmentation is named as the risk; nothing states it has been avoided.	MOVEMENT
Data Exchange	Interoperability of social protection systems	Funded and being designed: a financier will integrate the single social register with the unique identifier, the safety-net project, the health insurance fund and the displaced-persons database through an interface on the state payments platform, on financing approved 15 June 2026. The register exists: 362,698 households and 2,217,518 people, of whom 1,191,859 women, across 99 communes in ten regions, with about fifty further communes prepared for 2026. 2026-05-22 - the appraisal confirms the register and finances its planned interoperability with the unique identifier programme, the productive safety-net project, the health insurance fund and the displaced-persons database via an application interface on the state payments platform. It is design and funding, not a completed exchange. 2026-06-15 - the financing, US\$100 million of credit and US\$20 million of grant, was approved, expressly to expand the register's coverage and promote its integration with other key databases including those for internally displaced persons and health insurance. The identifier the integration turns on is stated not to replace other administrative identifiers but to form their common digital base.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	Robustness of system	A fifth-generation regional biometric card entered mass production in January 2026, issuable from age five and required from thirteen, at FCFA 3,500 with ten-year validity. 2025-12-02 — the card was launched with the head of state's own enrolment and has been in mass production since January 2026, issuable from age five and required from thirteen, at FCFA 3,500 with ten-year validity, carrying both national and confederal marks, and adopted by a second member state in March 2026, against harmonised regional specifications validated by three security ministers in November 2024 with the older card still in issue. No enrolment or issuance total has ever been published, so a credential required of everyone over thirteen has no coverage figure attached at any point in its life. It is a document rather than a digital identity: the electronic identifier that would authenticate its holder against a system is reported below and is not yet enrolled.	MOVEMENT
Digital Identity and CRVS	Registration of entire population	The Council of Ministers adopted the decree organising nationwide biometric enrolment on 30 July 2026. The Council of Ministers adopted on 30 July 2026 the decree organising nationwide mass biometric enrolment for the unique electronic identifier of the natural person under the WURI project, with fingerprint and iris collection under public control, moving the 2024 identification statute, adopted on 11 October and promulgated by Decret 2024-1261 of 28 October in thirty-four articles, from legal framework toward rollout. No enrolment has been reported started, and no target population, timetable or budget is held.	MOVEMENT
Digital Identity and CRVS	National maintenance of id and credentials systems	The identification office created by decree of 15 December 2004 manages, updates and secures the centralised national identity database; the credential it issues is being replaced by a confederation card adopted on 6 November 2025. The institution is an administrative public establishment responsible for national identification, issuance of the national identity card, and the management, updating and securing of the centralised national identity database. That is the maintenance function, and no staffing, budget or system-refresh statement for it is held. 2025-11-06 - the council of ministers adopted the decree instituting the confederation's biometric identity card, available from age five and valid ten years, with a five-year transition period for withdrawing existing national cards across the member states. Enrolment opened at Arbinda in August 2026. Alongside it a second credential programme runs: a vendor was recruited for the unique electronic identifier and mass registration organised through committees run entirely by public structures so that fingerprint and iris data stay sovereign. Nothing states how the two enrolments relate.	MOVEMENT
Digital Identity and CRVS	Authentication	The identification office holds and secures the centralised national identity database. No authentication or verification service against it is on the record. What the base holds is the register and the credential: an administrative public establishment responsible for national identification, issuance of the national identity card, and the management, updating and securing of the centralised national identity database. Verification against it happens in at least one sector — identification against the national card is a mandatory precondition for activating a subscriber card — but nothing describes the mechanism: no authentication service, no application interface, no verification volume and no assurance level is published. The card is meanwhile a requirement for most aspects of economic life, so the checking is being done and the base cannot see how.	NO CHANGE a standing position the base holds for the first time

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	Digital id from birth	The 2025 family code assigns a unique electronic identifier to every natural person from birth registration, leaving the modalities to an implementing decree the base does not hold. 2025-09-01 - the 1,113-article code creates a national digital civil registry and assigns a unique electronic identifier to every natural person from birth registration or from entry into that registry, leaving operational modalities to a subsequent implementing decree. It was adopted unanimously and mandates digitisation of civil-status records. The mechanism it formalises already exists in one form: every newborn receives a bracelet carrying a unique code that links to their digital birth certificate. 2026-06 - registry agents in a rural commune were trained on the national civil-registration software, moving that commune from digitised archives toward active digital registration. Against that, 60.65 per cent of births were registered within the two-month legal deadline in 2024, so nearly four in ten children start outside the deadline the identifier attaches to.	MOVEMENT
Digital Identity and CRVS	Interoperability of birth registration and digital id	The code ties the unique electronic identifier to birth registration, and the civil-registration strategy reports 3,710,617 records digitised across 30 communes by end-2025. The legal join is made: the code mandates digitisation of civil-status records and the creation of personal identifiers, laying a basis for a civil-registry identity reference usable across public data systems. 2026-06-25 - the civil registration strategy's steering committee reported for 2025 that the national registration software was deployed in 30 main and 140 secondary centres with 78 main centres networked, 3,710,617 civil-status records digitised across 30 communes, and 128,051 birth certificates issued to previously undocumented and vulnerable people; financial execution ran at 81.83 per cent against physical execution of 45.55 per cent. That gap between money spent and work done is the strategy's own account of itself. The identity side is at a different stage: the decree organising nationwide mass biometric enrolment was adopted and a vendor recruited. No source states that a birth registration yet produces an identifier the identity system recognises.	MOVEMENT
Digital Identity and CRVS	Use by other systems	Two systems consume it: subscriber-card activation requires identification against the national card, and the universal health insurance scheme began issuing about 3,000 cards a day from 1 February 2026. 2026-02-01 - the universal health insurance scheme began paying benefits, requiring beneficiary registration and card issuance at a stated rate of about 3,000 cards a day at the managing fund, starting with civil servants in two regions before a phased national rollout. No cumulative enrolment figure is published. The telecommunications case runs on a decree of 31 December 2018 making identification against the national card a mandatory precondition for activating a subscriber card. The general position is broader than either: possession of the national identity card is a requirement for most aspects of economic life, which makes issuance coverage an exclusion measure and not only an administrative one. What is missing is any statement of how a system checks the card — no verification service, interface or volume is published.	MOVEMENT
Digital Payments and Fintech	Governance role of central bank		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	G2P functionality	The state payments platform consolidates treasury, tax and customs channels across bank cards, mobile money and transfers, and the social security fund launched a mobile application on 28 October 2025. The rail exists. The government-built multichannel platform is interconnected with bank cards, mobile money and bank transfers and consolidates the treasury, tax and customs payment channels for payments to central government, local authorities and public establishments. 2025-10-28 - the social security fund launched a mobile application extending its web platform, letting insured workers consult accounts and request pensions and payments and letting employers pay contributions by bank transfer or mobile money. 2026-06-15 - the register that identifies who should be paid is being wired to the platform: financing approved to expand the single social register's coverage and promote its integration with other key databases, the interface running on the state payments platform. No transfer volume, beneficiary count or digital share of government-to-person payment is published on any of it.	MOVEMENT
Digital Payments and Fintech	Revenue collection	A certified electronic invoice launched in January 2026, and the national payments platform became the collection rail for automated traffic fines. 2026-01-06 — a certified electronic invoice entered operation, with control modules for firms already running invoicing software and invoicing units for those that do not, replacing a 2017 paper standard as the traceability instrument. No mandatory date and no adoption figure is stated. 2026-08-01 — the national payments platform, which already carried stamp duty, taxes and duties by application, web and short code, gained payment links for automated traffic fines, with vehicle immobilisation for non-payment within a month. That is the first case on file of a domestic payment rail carrying a coercive state obligation: the same channel that collects a tax now enforces a penalty, interconnected to the vehicle database and the enforcement cameras.	MOVEMENT
Digital Payments and Fintech	B2B and B2G functionality	Electronic tax filing and payment run under a 2021 arrete fixing their legal and technical conditions, and certified electronic invoicing becomes mandatory from 1 July 2026. The government-to-business leg is the older one: an arrete of 2021 fixes the legal and technical conditions for electronic filing and electronic payment of taxes, duties and charges, and the state services portal confirms the platform in operation for online filing, payment, case tracking and electronic tax certificates. No filing volume or digital share is published. The business-to-business leg is being made compulsory. Certified electronic invoicing was launched on 6 January 2026 and becomes mandatory from 1 July 2026, with certified invoicing systems going on sale from 7 September 2026 — eight months after the launch and two after the mandate, which is the sequence a business has to live with.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	P2P, P2G and P2B functionality	The regional instant-payment rail is live with nine domestic institutions authorised, and connection deadlines were pushed to September 2026 and June 2027. The rail was in a real-condition test phase with a union launch announced for September 2025 and became operational at the union launch. 2026-03-08 — nine domestic institutions were authorised by February 2026, with 80 institutions connected union-wide by June 2026. 2026-07-07 — connection deadlines were pushed to September 2026 for banks and payment institutions and June 2027 for microfinance. The extension is a union-wide decision rather than a domestic one, so the slippage is not the country's alone; it is still slippage against a rail that domestic uptake depends on. No domestic transaction count or value on the rail is published.	MOVEMENT with connection deadlines slipped
Digital Payments and Fintech	Population uptake	The country holds 9.53% of the union's 248 million electronic-money accounts, fourth of eight states, and a local application aggregating all three operators passed 400,000 downloads. 2026-01-01 — the regional central bank's 2024 report puts the country at 9.53% of the union-wide 248 million electronic-money accounts opened at end-2024, fourth of the eight member states, with the national treasury one of only two treasuries among the 69 issuing initiatives. The report publishes the country share rather than a national account total, so the level has to be inferred and the base does not infer it. 2026-03-27 — a locally built application aggregating all three operators and five mobile-money wallets reports more than 400,000 downloads and a high store rating, on the developer's own figures in a promotional account. A treasury issuing electronic money is the distinctive feature here: the state is a participant in the payments market it also taxes through, reported under revenue collection.	MOVEMENT
Digital Payments and Fintech	Cross-border functionality		NO EVIDENCE
Digital Payments and Fintech	Consumer protection	A financial inclusion agency created in 2025 is explicitly not a regulator, and consumer education runs through a partnership with an operator across four cities. 2026-07-28 — an agency created in 2025 by merging three bodies is operating and explicitly not a regulator, its director general arguing that account counts conceal absent savings, credit and insurance. The base holds no creation decree and no budget line for it, and it also carries the project-results reporting for the closed inclusion programme. The education work is delivered with the market it educates about: a partnership with a payments operator running since 2025 and extended in 2026 to four cities, with 72-hour sessions on budgeting, savings, credit and consumer protection and participants acting as community relays. Consumer protection for a payments market delivered by a promotion agency and an operator, rather than by the financial regulator, is the arrangement the record describes, and no complaint, redress or sanction figure exists against it.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	Population register	There is no continuously updated population register; the base figure is the fifth census, enumerated in 2019 and published in June 2022 at 20,505,155 residents. The definitive census results put the resident population at 20,505,155, enumerated in November and December 2019 and published in June 2022. It is a periodic count, not a register, and it is the figure against which any dynamic register would be measured. What would become one is at the enrolment stage: the decree organising nationwide mass biometric registration was adopted and a vendor recruited, with committees run entirely by public structures so that fingerprint and iris data stay sovereign. No enrolment total against the census population is published.	NO CHANGE a standing position the base holds for the first time
Registries	Civil register	Thirty communes hold fully digitised registers and 121,000 acts were issued to displaced people in 2025 against a 65,000 target, with 60.65% of births declared within the legal deadline. 2026-02-02 — thirty communes hold fully digitised registers, and 121,000 civil-status acts were issued to internally displaced people in 2025 against a 65,000 target, against 3,391,907 acts digitised across 54 communes and 145,655 birth certificates issued in 2024. The two ends count different things, so no rate of progress can be derived from them. The coverage figure is the one that bites: 60.65% of births were registered within the two-month legal deadline in 2024, leaving nearly four in ten births undeclared in time. The figure is the modernisation directorate's own, carried in a partner programme document. Delivering acts to displaced people at nearly twice the target, in a country where two fifths of births miss the deadline, is the shape of a system doing well at recovery and badly at capture.	MOVEMENT
Registries	Address register	No national digital address register exists; a municipal programme had numbered streets and doors in three of the capital's twelve arrondissements by April 2025. There is no national digital address register, and an externally financed municipal programme had numbered streets and doors in three of the capital's twelve arrondissements by April 2025. Nothing has moved since, and a national addressing instrument, or a register covering more than one commune, would settle it. The absence is load-bearing. The land and cadastre platform, the social register and the enrolment committees reported elsewhere all locate people and property, and none of them can reference a national address. The statistics institute's locality information system, reported under administrative statistics, is the nearest substitute and is still in validation.	NO CHANGE
Registries	Business register	A compulsory estate-agency register launched in July 2026, applied for and tracked wholly online with a queryable public register and commissions capped. 2026-07-21 — a compulsory national card for property brokers launched under an April 2026 interministerial order, applied for and tracked wholly online, with a legally recognised virtual card issued on validation, a register the public can query, and commissions capped. Before it, brokering private residential leases required no licence and no register. No count of cards issued or applications received is published, so the register's coverage of the trade is unknown a month after launch. It is the clearest example on this ledger of digitalisation used to formalise an informal trade, and it sits against a business census finding that 96.5% of the country's economic units operate informally.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	Social protection register	The single social register holds 362,698 households and 2,217,518 people across 99 communes, with about fifty further communes prepared for 2026. 2026-01-06 — the register holds 362,698 households and 2,217,518 people, of whom 1,191,859 women, across 99 communes in ten regions, after extension to 24 new communes during 2025, with about fifty further communes prepared for 2026. It is stated to interoperate with the unique identifier to prevent duplicates. That is the largest population database on this ledger with published figures, and it is being built to interoperate with an identifier that has not yet been enrolled — so the de-duplication it promises is prospective. No data-protection basis, retention rule, appeal route or eligibility formula is published for it, and the supervisor that would examine those questions is mid-merger, reported under data protection.	MOVEMENT
Registries	Electoral register	The Electoral Code establishes a biometric national electoral register built from permanent, annually revisable communal and provincial lists. The commission it names was dissolved in 2025. The consolidated code establishes the independent national electoral commission, a biometric national electoral register built from permanent, annually revisable communal and provincial lists, and the national identity card or a birth certificate as the elector's proof of identity. The text held runs through the 2012 amendments and does not reflect the commission's dissolution in 2025, so the institution the code names no longer exists in the form it describes, and the base holds no instrument putting the register in anyone else's hands. No register size, revision record or annual revision result is published at any date.	NO CHANGE a standing position the base holds for the first time
Registries	Tax register	Every user of the tax administration holds a financial identifier recorded in the taxpayer register and required for banking, customs and public procurement; the register now issues the tax clearance certificate online within 48 hours. The register is the identifier: an eight-digit-plus-letter number assigned to every user of the tax administration and recorded in the taxpayer register, a prerequisite for banking, customs and public-procurement transactions. No count of registered taxpayers is published. 2025-06 - the register was extended into document delivery: a platform for online delivery of administrative tax documents starting with the tax clearance certificate within 48 hours, with those requests exclusively online from 1 September 2025. 2026-01-06 - certified electronic invoicing was launched, becoming mandatory from 1 July 2026. The systems behind it are interconnected over the state network around a single taxpayer identifier, with an action in the 2025-2027 operational plan to upgrade the interface with the national statistics system.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	Land register	The land and cadastre platform became the operating layer of a reformed land regime, with development now verified from satellite imagery without a site visit. Land-occupation titles have been issued online since March 2025, with a cadastral extract in a day and a definitive title in sixty. 2026-06-29 — an October 2025 law and a March 2026 decree give the platform statutory footing as the operating layer of a reformed land regime, with physical files no longer circulating between administrations and falsified titles rejected by the system. The same decree changes how development is proved: the tax administration verifies development from satellite imagery without a site visit, instructing a file in a day, and the development period is extended from five to eight years. Those two sources are the entire satellite-data holding for this country. No figure for titles or extracts actually issued through the platform is published. Beside it, the computerised mining cadastre is being modernised and expanded by its supplier under a World Bank-financed land and mining governance project, with no delivery date or contract value stated.	MOVEMENT
Sectoral management information systems	Health	Rural clinics keep paper consultation registers summarised monthly onto paper forms for district teams to key into the health information system, tablets running alongside rather than replacing them. 2026-01-20 — a data-quality study records rural clinics keeping paper consultation registers which health workers summarise monthly onto paper forms for district teams to key into the district health information system, with tablet-based tools running in pilot districts alongside the paper registers rather than replacing them. The study measures district-level data quality, not national coverage. That is the whole of the health information record for the window, and it describes a national reporting system whose input is hand-copied twice before it is typed. The one health service that did move is administrative rather than clinical: the establishment-authorisation portal reported under electronic services.	NO CHANGE
Sectoral management information systems	Education	A national pupil registry enrols pupils and issues school identity cards, with generalisation and interoperability set out in a strategy and no enrolment total published. 2025-06-27 — the pupil enrolment project was under examination, enrolling pupils and issuing school identity cards, with national generalisation and interoperability set out in a strategy supported by the regional identity programme. No baseline was held before it and no enrolment total is published. It is the only education system on this ledger. Nothing records a school census platform, a teacher registry, an examinations system or school connectivity, and the registry's stated interoperability target is the unique electronic identifier that has not yet been enrolled, reported under registration of the population.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	Social protection	A solidarity platform launched in June 2026 carrying assistance requests, complaint handling, appeals, contributions and statistical monitoring. 2026-06-02 — the platform launched carrying assistance requests and tracking, complaint handling, solidarity appeals, financial contributions and statistical monitoring for social policy, against a position in which vulnerability alerts were reported late and information was dispersed across actors. No user, case or contribution figure has been published. It sits above the single social register reported under registries, which holds the household data, and nothing states how the two connect. In a country where the register's own coverage is 99 communes of several hundred, a request-and-alert channel is the part of a social protection system that can work before the data layer is complete.	MOVEMENT
Sectoral management information systems	Justice	Three justice services launched in December 2025 — online criminal complaint and case tracking, prison visit permits and an online commercial register. 2025-12-15 — online criminal complaint and case tracking, a prison visit permit service and an online commercial register service launched under a World Bank-financed 2025-2027 programme run jointly by the justice and digital transition ministries, joining an existing national electronic criminal-record service. No case volume, resolution time or user figure is published for any of the three. What the ministry does publish is issuance from its older platforms, reported under electronic services: certificates in the hundreds of thousands, against a rural access rate a fraction of the urban one. A complaint that can be filed online, in a country where most rural households have no internet access, is a service whose reach is bounded by something outside the justice sector.	MOVEMENT
Sectoral management information systems	Tax	Tax administration sites are interconnected over the state network around a single taxpayer identifier, with an action to upgrade the statistics-institute interface. Certified electronic invoicing systems go on sale from 7 September 2026 (communiqué), moving the regime from rule to equipment. Tax administration sites are interconnected over the state network around a single taxpayer identifier, and the 2025-2027 operational plan sets an action to upgrade the interface with the national statistics institute. That was the position when the window opened and nothing reports a change. The single taxpayer identifier is the only working shared key on this ledger — the unique electronic identifier for persons is not yet enrolled — and the plan's interface upgrade is the one stated instance of administrative data being routed to the statistical office. No collection figure, filing rate or system availability measure is published. The revenue movement in the window is on the invoicing and payment side, reported under revenue collection.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	Customs	The customs system is in advanced testing with production described as imminent, and the trade single window's operator was converted into a state company. Procurement of an intelligent customs solution was authorised at FCFA 3.313bn, entirely state-budget financed, with nothing built; 2026-06-24 — the system is in advanced testing with production imminent. No go-live date is stated. 2026-07-23 — statutes converting the trade single window's operator into a state company were approved, on the stated ground of improving the governance of strategic digital tools. The platform has operated since February 2016 under a company wholly owned by the chamber of commerce; this is an ownership change to trade infrastructure rather than a platform change. Both moves point the same way — the state taking direct control of the systems that clear goods — and neither publishes a clearance volume, a processing time or a revenue figure.	MOVEMENT
Sectoral management information systems	Land	The cadastre and domains platform issues attribution certificates, cession decrees and cadastral extracts online, and design of a wider national land information system started on 9 December 2025. 2025-03 - the head of government launched the platform, which lets users request and obtain online a parcel-attribution certificate, provisional and definitive cession decrees, and cadastral extracts, while the centralising electronic land book remained a work in progress at launch. It is now the operating layer of a reformed land regime, with physical files no longer circulating between administrations and falsified titles rejected by the system. 2025-12-09 - design, development and deployment of a national land information system started at a kick-off meeting, funded under a land and mining governance project and intended to centralise land data and its traceability beyond the cadastre platform. The account is the vendor's; no cost, timetable or architecture is published by the state. The mining register runs separately, with the computerised mining cadastre under modernisation and expansion by its supplier, and a union directive harmonising land registration and titling was approved in June 2026 with no domestic transposition held.	MOVEMENT
Other GovTech and e-Gov	e-government services	A central portal carries 1,672 information sheets, 95 procedures and 183 institutions, against a ministry count of 146 procedures live of 272 platforms initiated. 2026-05-05 — a central gateway launched with 1,672 information sheets, 95 online procedures and 183 public institutions, partly to counter fraudulent administrative websites. Its 95 do not reconcile with the ministry's count of 146 operational procedures out of 272 platforms initiated since 2023, reported against objectives contracts at 91%. Volume is real: over 600,000 criminal-record certificates and nearly 70,000 nationality certificates issued through justice platforms, against internet access of 72% urban and 27% rural. 2026-09-07 - the enforcement system's first month is measured, and the gap is collection: 19,910 offences recorded between 1 and 31 August 2026 generating CFA146.559m in fines, of which CFA16.1m had been recovered at the 4 September review. A motorised police brigade was created on 2 September specifically to trace drivers who do not pay. Barely a ninth of the month's fines were collected, and no appeal or contested-notice figure is published.	MOVEMENT

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	ICT infrastructure for local government	Two citizen service centres are under construction, the first inspected at 20% complete in August 2026, against a contract for twenty spaces over five years. 2026-07-26 — two pilot citizen service centres are under construction, the first intended to bring postal, financial and digital services closer to the population, with architectural studies under way for a further city, eight regional capitals and fifty rural communes, against a state and postal-service contract for twenty spaces over five years, where a plan was being drafted with no site under construction. 2026-08-07 — the first is 20% complete on a ministerial inspection, one of twelve structuring digitalisation projects the ministry names, and the 20% figure covers this site and the supervision centre together rather than either alone. No location, service catalogue, cost, completion date or beneficiary count is published. These are the physical answer to the rural access gap reported under digital divides: services delivered at a counter because they cannot be delivered down a line.	MOVEMENT
Digitalisation of sub-national government	Digitalisation of local government records	One portal per region launched in June 2026 across all seventeen regions, with an electronic document-archiving system. 2026-06-16 — a portal for each of the seventeen regions launched, built jointly by the territorial-administration and digital ministries, with an electronic document-archiving system. Nothing existed before it. It is an information and archiving channel rather than a transactional service: no procedure can be completed on it, and no usage, content or archiving volume is published. Complete coverage of every region on the day of launch is unusual on this ledger, and it is the coverage of a template rather than of a service.	MOVEMENT
Rural digital data capture	Digitalisation of rural health clinics	Rural clinics still keep paper registers summarised monthly onto paper forms; a two-district pilot was assessed in May 2026 with seven of eight digital tools in active use. The standing position is paper: rural clinics keep paper consultation registers which health workers summarise monthly onto paper forms for district teams to key into the national warehouse, with tablet-based tools running in pilot districts alongside. The ministry's digital health strategic plan for 2025-2029 documents what exists, including the national warehouse and a childhood-illness register reaching 84 per cent coverage, and plans digitalisation of peripheral facilities including rural clinics. 2025-09 - a national roadmap was co-created to integrate community health worker data from rural areas into the warehouse. 2026-05 - the pilot minimal digital ecosystem across primary-care facilities in two districts was assessed with seven of its eight digital tools in active use and high-performing facilities nearly doubling from 23 to 44 of 72, with a recommendation to consolidate toward a national health intelligence centre.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	Digitalisation of rural primary schools	Two village digital access points opened in February 2026 with computers and satellite internet, used by pupils for schoolwork in areas with no prior digital access. 2026-02 - pilot digital access points opened in two villages, equipped with computers and satellite internet and explicitly used by pupils and students for schoolwork research in areas without prior digital access. Two villages is the whole of what is held: no programme document, financing line, usage figure or expansion plan is published. The system-level work is about data rather than devices. A financier's appraisal authorises a centralised digital student-management platform and a centralised education-data platform, and the unique student file enrolls pupils and issues school identity cards, with national generalisation set out in a strategy. Nothing states how many primary schools have power, connectivity or a device, so the rural school estate cannot be sized against either.	MOVEMENT
Rural digital data capture	Digitalisation of rural registry offices	1,553 birth registers spanning 1950 to 2025 were digitised in one rural commune in October 2025 and agents in another were trained on the national registration software in June 2026. The commitment behind it is the country's own open government undertaking to digitalise civil-registry production and management and create secondary civil-status centres in health facilities including in underserved and rural areas, on a timeline running to mid-2025. 2025-10 - 1,553 birth registers spanning 1950 to 2025 were digitised in the rural commune of Safane by the national civil-registry modernisation directorate — archives converted, not registration moved. 2026-06 - registry agents in the rural commune of Koloko were trained on the national civil-registration software, moving that commune from digitised archives toward active digital registration. The distinction between the two is the whole of the progress. Nationally the platform reaches 30 communes with fully digitised registers, against 351 communes in the country.	MOVEMENT
Rural digital data capture	Digitalisation of rural police stations	Digital capture reaches border posts rather than police stations: four posts equipped with a migration-data system were handed over in March 2024 and a fifth inaugurated on 29 October 2025. 2024-03-31 - four rural border police posts equipped with a digital migration-data and document-scanning system were handed to the authorities, built by the international migration agency. 2025-10-29 - a further post at Galgouli was inaugurated with the same system and five equipped patrol vehicles. It is a border-identity programme whose posts happen to be rural, not a rural policing programme. No total of equipped posts is published and no ordinary rural police station appears on the record at all. What may change that is an approved and unbuilt platform: the internal-security identification and analysis platform builds on the computerisation and interconnection of five modules including judicial police and detainee management, with no deployment plan stated.	MOVEMENT

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Use of AI in government administration	Automated traffic enforcement went live in the capital on 1 August 2026, detecting 1,099 offences in twelve hours with five fines paid. 2026-08-01 — automated enforcement went live in the capital for four offences after a pilot from April, with automated plate reading, interconnection to the vehicle database and the payments rail, a national supervision centre, and vehicle immobilisation for non-payment within a month. The prior position was a 2023 system that allowed digital payment of fines an officer had written. 1,099 road offences were detected between midnight and noon on the first day, with five fines paid, implying roughly 2,200 automated offence records a day in one city on the ministry's own count. Neither account reports a legal basis, a retention rule or a data-protection authorisation. This is the largest automated decision-making system on the ledger, it produces a coercive outcome, and it started in the month the data-protection supervisor was voted out of existence pending a merger.	MOVEMENT
AI	Use of AI in sectoral management information systems	A health-management system deployed in 86 per cent of primary health centres uses artificial intelligence to control data quality and detect early signs of outbreaks; the two ministries signed a convention to build more on 29 October 2025. The one operating case is in health: a digital health-management system deployed in 86 per cent of primary health centres by the end of 2022 that explicitly uses artificial intelligence to control data quality and detect early signs of disease outbreaks within the national health information system. It is a management information system with artificial intelligence as a feature, not an artificial-intelligence programme. 2025-10-29 - the digital transition and health ministries signed a formal collaboration agreement to design artificial-intelligence tools for the health management information system, naming diagnostic imaging support, epidemic prediction and a planned national health intelligence centre. No model, evaluation or deployment date for any of the three is published. Elsewhere in the state the use is enforcement rather than management: automated traffic enforcement recorded 19,910 offences over August 2026 with CFA146.559m issued and CFA16.1m recovered.	MOVEMENT
AI	Development of national / regional AI systems	A sovereign language-model corpus is being built for four national languages, beside a research centre on competitive grants and a private institute. 2026-03-25 — a corpus build for four national languages was launched at a linguistic-formalisation workshop, funded through a digital-transformation framework and named as a pillar of the national roadmap. No dataset, size or release date is published. The institutional base is thin and static. A research centre of excellence began a second competitive grant phase in April 2025 on about CAD 1m, after a first phase from 2021, recorded as a research award, and the base carries no account of it since. A private institute launched in July 2025, costed by its founder at about FCFA 100m, has nothing on file since August 2025 with its incubator and research centre still being structured. A corpus for national languages is the right first asset for a country whose service estate is francophone and whose rural connectivity is the weakest part of this report.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Control of AI abuse	No dedicated instrument exists: the justice minister told deputies the new data protection law covers artificial intelligence, notably through the prohibition on transferring sensitive data abroad. 2026-08-03 — the justice minister told the assembly that the newly voted data protection law covers artificial intelligence, notably through the prohibition on transferring sensitive data abroad, with the roadmap intended to become dedicated regulation later. None was published before and none is published now. A data-residency rule doing service as artificial-intelligence governance is a category error with a practical consequence: it constrains where a model runs and says nothing about what a decision it makes may do to a person. The test case is already live and domestic. The automated enforcement system reported above issues coercive penalties from camera evidence with no stated legal basis or retention rule, and the authority that would supervise it is being merged into a new body whose independence and appointment route nothing establishes.	NO CHANGE
ICT Industry	National capacity in DT-related production	One firm is identified as the country's first domestic assembly unit for computers, telephones and tablets. No output, employment or local-content figure is published. The evidence is a July 2026 equipment-access partnership with the public finances institute, which identifies the firm as the country's first domestic assembly unit for electronic equipment — computers, phones and tablets. That is the whole of the national production capacity the base holds. No output volume, employment figure, local content share or plant description is published, and no second firm is named. The sector's share of the economy is not measured either: no information-technology share of output or sector employment figure is on the base.	NO CHANGE a standing position the base holds for the first time
Innovation ecosystem	Technology hubs	The only count is a continental study identifying ten active hubs in October 2019; two were added in 2026, a private innovation hub in May and a third operator digital centre in July. The landscape document is a continental study of a hundred hubs identifying ten active hubs in the country as of October 2019. It is a 2019 baseline rather than a current census, and nothing has replaced it. 2026-05-23 - a privately run innovation hub focused on artificial intelligence and cybersecurity training opened, alongside the launch of an innovation competition, whose first edition closed having taken 600 submitted projects from 23 African countries down to ten finalists. 2026-07-31 - an operator inaugurated its third digital centre at a university in Koudougou, extending the network beyond the two largest cities with artificial intelligence, cybersecurity, coding and incubation facilities; the network is five years running with device-repair courses and a cloud-skills programme. No occupancy, cohort or survival figure is published for any hub.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Innovation ecosystem	Tech startup ecosystem	An innovation platform for inventors and diaspora projects was announced in October 2025, and the innovation ranking stands unchanged at 129th of 133. 2025-10-24 — a platform for inventors and diaspora innovators to register projects toward local manufacture was announced by the head of state, routed to an incubator described as under construction. No operational statement or user count has followed in ten months. The country stood 129th of 133 economies and 23rd of 27 in sub-Saharan Africa on the last innovation index profile held, and no 2025 or 2026 profile is on the base, so the only comparative benchmark this section has is two years old. The firms that do appear on this ledger arrived without either instrument: a hosting provider, a payments aggregator and a multi-operator wallet application, reported under storage and payments.	MOVEMENT on an announced platform with no operating statement behind it

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	Digital literacy (civil service)	Senior managers took a second artificial-intelligence ethics session in July 2026, and about thirty lawmakers were trained on artificial-intelligence fundamentals and policy. 2026-07-13 — a two-day session on management tools for ethical and responsible artificial intelligence ran for senior managers at the Prime Minister's office, following a first round for all staff. 2026-07-16 — about thirty assembly members were trained on artificial-intelligence fundamentals, applications and policy, to prepare review of future legislation, reported the day before. Both fall in one month and both concern artificial intelligence rather than general digital capability, which matches where the policy attention is. Neither publishes a curriculum, an assessment or a headcount beyond the session; and the deputies trained in July voted the data protection law and the merger in August.	MOVEMENT
Literacy	Digital literacy (general population)	No adult digital-literacy rate, financial-literacy baseline or school digital-skills figure is held. No adult digital-literacy rate, financial-literacy baseline or school digital-skills figure is on the base, and none was at the start of the window. The one output figure the base ever held came from a project that has now closed: 280,000 people given digital financial education against a 275,000 target, reported at the project's end. Its successor is a promotion agency running sessions in four cities with an operator, reported under consumer protection. So a state that has put criminal complaints, pension files, land titles and traffic fines online has no measurement of whether its population can use any of it, against the rural access gap reported under digital divides.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	DT-related training in secondary education	The education ministry's own orientation document records curriculum, teacher training and distance-education infrastructure as unfinished; 500 secondary-education actors were trained across three regions in December 2025. The adopted instrument is the ministry's January 2024 orientation document on digital education and distance learning, which records the existing and unfinished state of curriculum development, teacher training and distance-education infrastructure across basic and secondary education. 2025-10 - the second edition of a ministry and operator programme closed having given 167 secondary-school-aged girls over 5,000 hours of hands-on training in programming, electronics, automation and video-game development. 2025-12 - the secondary education ministry trained 500 secondary-education actors in three cities in responsible and secure use of digital technology, on a cascade strategy stated to target about one million learners nationally. The cascade is the claim; nothing measures what reached a learner. No curriculum coverage figure, equipped-school count or trained-teacher total is published, and the national skilling output the base does hold is 169 young women trained in digital trades and 214 information-technology staff recruited into ministry directorates.	MOVEMENT
Training and skills	DT-related university facilities and qualifications	A technology academy's statutes were approved by decree in July 2026 to allow operationalisation, with no intake, curriculum or budget on record. 2026-07-23 — a decree approving the statutes of a technology academy was adopted to allow its operationalisation. No intake, curriculum or budget is on record, and nothing preceded it on this ledger. It is the only tertiary or specialist training institution the base holds for the country. Against it, the recruitment figures reported under graduates entering the sector are in the low hundreds a year, and the operator-run centre described there is five years old — so the state's own formal training capacity, in the year it began mass biometric enrolment and automated enforcement, is a set of statutes.	MOVEMENT
Training and skills	Graduates entering DT ecosystem	169 young women were trained in digital trades and 214 technology staff recruited into ministry directorates in 2025, with no 2026 equivalent published. 2025-12-30 — 169 young women were trained in digital trades and 214 information-technology staff were recruited into ministry directorates, at 30 November 2025, reported alongside the 2026 project earmarks. No 2026 equivalent had been published by the window's close. The private contribution is one operator's centre: five years running, with device-repair courses and a cloud-skills programme, operator-reported with no enrolment or placement figure in the base. The route into work is thinner still: the public employment agency's platform replaced pre-selection by lot in June 2021 and is connected to neither a government data exchange nor any labour-market information system, so the state cannot see what happens to the people it trains.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Research institutions	Think tanks and academic departments contributing to DT policy	An interdisciplinary artificial-intelligence research centre at the virtual university carries over fifty doctoral students and public-sector risk analysis; an international conference was hosted with a national university in June 2026. The standing institution is the interdisciplinary artificial-intelligence centre hosted at the virtual university, with over fifty doctoral students and active projects in fundamental and applied research, training and public-sector risk analysis. The base carries no account of it since April 2025. 2025-10-29 - a private university held an inaugural conference on artificial intelligence and African development under the digital transition ministry's patronage. 2026-06 - the ninth international conference on emerging technologies for developing countries was held in Ouagadougou, co-organised with a national university and indexed by an international publisher. Conferences and a centre are what the base holds. No research funding line, publication count or commissioned policy input is on it, and the roadmap the universities were consulted on has not published its text.	MOVEMENT

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Citizen feedback portals	Two channels opened within a week: a national citizen-petitions platform on 5 May 2026 and a security reporting application on 11 May with trackable follow-up. 2026-05-05 - a national digital citizen-petitions platform launched alongside the fuller public launch of the state services portal, whose own relaunch had come on 20 February 2026 with improved search, life-event guides and a full administrative directory. The portal itself now carries 1,672 information sheets, 95 dematerialised procedures and 183 public institutions. 2026-05-11 - the security ministry's application taking text, voice or call-based incident reports with trackable follow-up became operational, replacing untraceable telephone denunciations. Traceability is the stated point of it. No petition or report count, response duty, resolution rate or safeguard against malicious reporting is published for either.	MOVEMENT
Access to services	Citizen participation in policy	A national digital citizen-petitions platform launched on 5 May 2026. No threshold, response duty or outcome is published. The platform is the one standing participation channel the base holds: a national digital citizen-petitions platform launched on 5 May 2026 by the digital transition ministry. Nothing states what number of signatures obliges a response, who must answer, or whether any petition has been answered. Participation of the organised sort runs through consultations the state convenes: formal parliamentary hearings with the internet society chapter and the digital-sector federation during drafting of the information-systems security law, and an artificial-intelligence roadmap validated with the private sector, universities, research centres, civil society and the diaspora. The regulator of public communication is meanwhile being folded into a merged authority whose consultation duties are not stated.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Gender equity	The only gender-and-digital instrument on the base ended in 2025 with no evaluation, outturn or beneficiary count. A EUR 2.25m grant programme for girls and women in digital ran from 2021 to 2025 and is recorded closed, with no evaluation, outturn or beneficiary count in the base. It is the only gender-and-digital finance instrument held for the country, and it has ended without a published result. What remains is a training line: 169 young women trained in digital trades in 2025, inside a general skilling programme rather than under any gender instrument. No access, usage or ownership figure is disaggregated by gender anywhere on this ledger — the urban and rural access gap reported under digital divides is explicitly not broken down that way — so the closure removes the only dedicated instrument from a field with no measurement.	REGRESSED
Access to services	Inclusion of persons with disabilities	The 2010 disability statute's article 39 guarantees access to public communication and online services; a project scaling accessible digital learning to 48 visually impaired pupils and 34 teachers launched in August 2025. The statute is the legal basis: the foundational disability-rights law whose article 39 expressly guarantees persons with disabilities the right to access public communication services and online services. Sixteen years on, no accessibility standard, audit or compliance figure under it is held. 2025-08 - a project launched targeting 48 visually impaired pupils and 34 teachers with accessible digital content, tablets and digital-library access, scaling up a 2023-2024 pilot, run by an international disability organisation with the national association for the blind. Forty-eight pupils is the whole of the measured provision. No national count of people with disabilities reached by any digital service is published, and the state's own platforms carry no stated accessibility conformance.	MOVEMENT
Access to services	Inclusion of refugees and IDPs		NO EVIDENCE
Digital divides	Bridging of digital divides	White-zone equipment is ordered for delivery before end-2026, while real fourth-generation coverage fell from 53% to 33% and access runs 72% urban against 27% rural. 2026-04-04 — service orders were signed and equipment ordered for the first white-zone tranche, most localities identified, with delivery targeted before end-2026, against a tender dossier for 750 localities finalised and the project not yet launched; a second lot of 750 localities was announced for 2027 with no separate financing line. The zero-white-zone-by-2027 framing sits against a 2030 horizon for full coverage of about 2,000 zones. The universal access fund co-finances half the state's FCFA 37.5bn white-zone contribution, levied at 2% of operator turnover, with no fund account published for any year from 2024 to 2026. Against the build, real fourth-generation coverage fell from 53% to 33% on insecurity, on a figure whose earlier reading no held source dates. Internet access stands at about 72% urban against about 27% rural, not repeated or disaggregated by gender anywhere, and the only household survey instrument the base names dates from 2013. One donor project closed: a 2021 to 2026 Sahel connectivity project serving more than 3,650 users including refugees published its report, with US\$1.2m from one European state, on a pledge made in January 2025.	MIXED a white-zone programme moved into delivery while real coverage fell from 53% to 33% on insecurity

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	National strategy for development of statistics	The statistics institute formulated a 2026-2030 strategic plan integrating census and administrative data, under an organic statistics law requiring a visa before any collection of individual data. 2025-10-01 — the statistics institute's 2026-2030 strategic plan was formulated, to integrate census and administrative data for territorial planning, where no statistical development strategy was on file. The governing statute is older and stricter than it looks: an organic statistics law of December 2021 requires a statistical visa from the minister before any collection of individual data. It defers its operating detail to regulation at least five times, which is the same pattern as the data protection law reported under legislation, and with the same consequence — a duty asserted without machinery. Nothing states whether the visa requirement has been applied to any of the enrolment, registry or platform collections described in this report.	MOVEMENT
National statistics	Censuses and surveys	The 2024 business census counted 389,172 economic units, 96.5% of them operating informally, with definitive results restituted in May 2026. 2026-05-06 — definitive results of the 2024 general business census were restituted: 389,172 economic units counted, 96.5% of them operating informally, published by the statistics institute. The base holds no earlier census to compare against. The informality figure is the single most consequential number in this report. Every formalisation instrument described here — the estate-agency register, the certified electronic invoice, the trade single window, the taxpayer identifier — addresses the small formal remainder, and the census is the only measurement of the rest. No population census, household survey or repeated access survey appears on this ledger for the window.	MOVEMENT
National statistics	Statistics from administrative data	A geospatial locality information system is being built by the statistics institute, its geospatial analysis report in validation. 2025-09-23 — a geospatial locality information system is being built by the statistics institute, with its geospatial analysis report in validation. No baseline was held. It is the nearest thing on this ledger to a national geographic reference, and the country has no address register to sit beside it, reported under registries. The statistical plan's stated aim of integrating administrative data, reported above, has this as its most concrete piece of work; the tax administration's interface upgrade to the institute is the only other named route from an administrative system into official statistics.	MOVEMENT
Open data	Use of open data	A joint ministerial order of 10 November 2015 founded the Burkina Open Data Initiative; its portal no longer serves a catalogue. The joint ministerial order founding the Burkina Open Data Initiative names ANPTIC as executing agency and sets the objective of releasing non-sensitive public data for re-use. The instrument is now held and the thing it founded is not working: the national portal hostname serves a data-engineering console rather than a public dataset catalogue. No dataset count, release schedule or licensing statement is held, and no access-to-public-information statute has been located beyond a 2015 text in the broadcasting regulator's library.	MIXED the founding instrument is held and the portal it founded no longer publishes datasets

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	Agricultural use of satellite data	Satellite-derived biomass and water-balance alerts were wired to pre-arranged humanitarian funding triggers for drought in two regions in April 2026. None of the three uses held is run by a national agency. A food and agriculture agency report analyses cultivated agricultural land from 2018 to 2024 by remote sensing for food security. 2026-01 - a humanitarian organisation converted three satellite programmes' imagery into province-level pastoral biomass anomaly and vulnerability maps for the 2025 rainy season, with a 2026 outlook warning that insecurity restricts access to the areas with the best forage. 2026-04-17 - an anticipatory-action framework links satellite-derived biomass and water-balance alerts to pre-arranged humanitarian funding triggers for drought in two regions, which moves the data from monitoring into automated decision-making. All three are run by external agencies. The one national use the base holds is fiscal, not agricultural: the tax administration verifies land development from satellite imagery without a site visit, instructing a file in a day.	MOVEMENT
Use of satellite data	Meteorological use of satellite data	The meteorological agency acquired stations giving real-time third-generation satellite imagery at ten-minute intervals, and a flood early-warning system launched on 23 September 2025. 2025-08-30 - the national meteorological agency acquired two regional programmes' reception stations, giving it real-time third-generation satellite imagery at ten-minute intervals for weather forecasting and climate services. It is the base's only statement of national satellite reception capability. 2025-09-23 - a flood and flash-flood early-warning system was officially launched, converting real-time hydrometeorological station observations into forecasting products and multichannel alerts, financed under a hydrometeorology project. 2026-04 - a meteorological organisation update records that system, the modernised observation networks and the forecasting platform transitioning from donor-funded investment to national operational ownership — the step that decides whether any of it survives the projects that built it. No forecast accuracy, alert reach or station count is published.	MOVEMENT

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	USA / hyperscaler MoUs, engagements and commitments	A United States training initiative on digitalisation and artificial intelligence was announced for 2026 in three cities, with no delivery, cohort size or start date reported. 2026-01-28 — the United States ambassador announced a major training initiative on digitalisation and artificial intelligence for 2026, to run in American-run spaces in three cities, against digital-cooperation talks at a preliminary stage with no agreement signed. No delivery, cohort size or start date has been reported in the seven months since. It is the only United States digital engagement on this ledger, it is a training announcement rather than an instrument, and no hyperscaler, cloud provider or American vendor appears anywhere in the record for the country.	MOVEMENT

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
China activities	Chinese MoUs, engagements and commitments	A ministerial delegation was received at a Chinese broadcaster's Beijing headquarters in August 2026 to examine audiovisual and digital broadcasting partnership. 2026-08-22 — the communications minister and a delegation were received at the Chinese broadcaster's Beijing headquarters at the chief executive's invitation, to examine partnership in audiovisual and digital broadcasting, with the exchanges going to the terms of collaboration with the national broadcaster and the national transmission company, reported the day before by a regional outlet. Nothing existed before it and no memorandum, commitment, value or timetable is stated. The substantive Chinese engagement on this ledger is older and already delivered: the concessional loan behind 650 km of backbone, 900 surveillance cameras and 300 video-surveillance sites, reported under the fibre backbone. A broadcasting partnership would put a second Chinese vendor inside the national transmission estate.	MOVEMENT
EU activities	EU MoUs, engagements and commitments	The European country programme ended on 31 December 2024, the Commission recording that conditions for a medium-to-long-term framework are no longer met. The multiannual country programme ended on 31 December 2024 by Commission decision, the Commission recording that conditions for a medium-to-long-term cooperation framework are no longer met, replaced by a EUR 238m envelope for countries in complex settings held inside the regional programme and shared with three other states. The original programme had carried digitalisation as a cross-cutting theme with no allocation of its own, and the 2025 to 2027 allocations it reserved to a later decision were never supplied. So the country lost a bilateral framework in which digital had no money, and gained a share of a regional envelope in which it has none either. What activity there is runs through member-state channels instead, and the Sahel connectivity project reported under digital divides was funded that way.	REGRESSED
Gulf/UAE activities	Gulf MoUs, engagements and commitments	A Gulf memorandum signed in September 2025 covers artificial-intelligence skills, digital infrastructure, electronic-government consolidation and cybersecurity, with nothing reported since. 2025-09-22 — a memorandum was signed covering artificial-intelligence skills, digital infrastructure, electronic-government consolidation and cybersecurity. It is the only Gulf technology instrument the base holds, and nothing existed before it. No project, value, timetable or delivery has been reported in the eleven months since signature. Its four subject areas are precisely the four this report shows the state building on its own account — the roadmap, the data centres, the services portal and the security decrees — and no source connects any of that work to this memorandum.	MOVEMENT
India activities	India MoUs, engagements and commitments	India's one dated, valued commitment is a US\$25m rural electrification line of credit signed on 29 March 2013. India's Ministry of External Affairs country brief records a 1994 Joint Commission agreement, ITEC and ICCR training cooperation, several lines of credit, India-Africa Forum grant projects, trade figures and recent high-level visits. The one with a stated amount and signature date is a US\$25 million line of credit for rural electrification signed on 29 March 2013. None of the instruments is digital: no Indian supplier contract, technology programme or digital line of credit naming Burkina Faso is held.	NO CHANGE several instruments and none of them digital

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
National address-protocol migration roadmap	a regulator or ministry decision adopting a dated migration plan would settle it; probed 2026-08-05, coordination is delegated to the domain association but no regulator or ministry decision adopting a dated plan exists; the 2024, 2025 and July 2026 forums are all still calling for one	2026-09-04
Energy supply for rural telecom sites	a fund or project document specifying site powering would settle it; probed 2026-08-05, no project document specifies site powering for the white-zone programme; the only powering detail anywhere is a reported solar pilot	2026-09-04
Enforcement decrees under the 2021 law	publication of any implementing decree, or its express abrogation, would settle it; probed 2026-08-05, a June 2022 council of ministers communique records adoption of the decree organising the data-protection commission, but the decree text is unpublished and the gazette route is dead	2026-09-04
Data-protection authority annual report	publication on the authority's site would settle it; probed 2026-08-05, the authority's own annual reports page carries a heading and nothing behind it, so the statutory publication duty is not met on its site	2026-09-04
Access to public information law	probed 2026-08-05, the 2015 access to information law located in the broadcasting regulator's text library; the access authority it creates was never stood up for want of an implementing decree	2026-09-04
Adult digital-literacy rate	the one financial-education output figure in the base comes from a project that has now closed; probed 2026-08-05, no published rate exists; digital literacy is a stated government priority with no measured baseline attached	2026-09-04
Repeated household access survey	probed 2026-08-05, the harmonised household living conditions survey is the repeated instrument, carrying household ICT access by region and setting across two rounds	2026-09-04
National digital address register	a national addressing instrument, or an address register covering more than one commune, would settle it; the only addressing work on file is an EU-financed municipal programme covering three of Ouagadougou's twelve arrondissements as at April 2025	2026-09-04
