

## STATUS REPORT

# Mauritius: status report

Edition of 2026-08-14 · 65 systems and instruments tracked, 9 of them not held

Compiled 2026-08-14 from the Data Landscapers source base, from [outputs/reports/MUS/ledger.csv](#) (65 systems and instruments, 9 of them **Not held**). Each section opens with its ledger; specific events are covered in the monthly updates. Figures are dated because most are time-varying.

**Status values.** *Implemented* — in operation or in force. *Piloting* — running with a limited user group or in a controlled environment. *In development* — build or drafting under way, not yet operating. *Planned* — announced or provided for, no build or draft on record. *Enacted* — an instrument passed into law; pair with a qualifying clause for its in-force date. *Under review* — a law or policy currently being reconsidered. *Discontinued* — closed or superseded. *Not held* — the base carries no reliable statement of status; these are the gaps to fill and are listed again at the end.

## Summary of position

Mauritius has an unusually complete digital policy stack and a thin published record of what it delivers. A [national AI strategy](#), a [national data strategy](#), a [fintech strategy](#), a [critical-infrastructure cyber regime in force](#) and a [119-page omnibus amending 58 Acts](#) all sit on the record; no user figure has been published for the Mobile ID wallet since it launched in 2024, and none for the national payment switch at all.

The data-protection regime is genuinely strong — [about 3,000 enforcement actions a year](#) and an [EU adequacy bid](#) — and sits alongside a [state interception apparatus described in Parliament as running since 2017 without judicial oversight](#), for which no reform instrument has been published. The year's legislative volume arrived as a budget instrument, and the Data Protection Act 2017 is not among the Acts it amends.

## Infrastructure

### Connectivity

| SYSTEM OR INSTRUMENT                      | STATUS ↗ source  | MILESTONE                                                      |
|-------------------------------------------|------------------|----------------------------------------------------------------|
| America-India Connect cable participation | PLANNED ↗        | Non-disclosure agreement signed, terms still under negotiation |
| International submarine cable landings    | IMPLEMENTED ↗    | LION and LION2 carrying most international traffic             |
| Mauritius Telecom 2026-2029 strategy      | IN DEVELOPMENT ↗ | Four-corridor strategy published, January 2026                 |
| Satellite broadband authorisation regime  | IMPLEMENTED ↗    | Regulator's decision issued 22 May 2025                        |
| T4 and SEACOM 2.0 landings                | PLANNED ↗        | Named in the operator's 2026-2029 strategy                     |

## Data Storage

| SYSTEM OR INSTRUMENT           | STATUS ↗ source | MILESTONE                                                             |
|--------------------------------|-----------------|-----------------------------------------------------------------------|
| Data-centre estate             | IMPLEMENTED ↗   | Ten operating facilities across five locations                        |
| Rose-Belle Tier IV data centre | IMPLEMENTED ↗   | Certified Tier IV and inspected by the ICT minister, 29 December 2025 |

## Energy

| SYSTEM OR INSTRUMENT                             | STATUS ↗ source | MILESTONE                                     |
|--------------------------------------------------|-----------------|-----------------------------------------------|
| Saudi Arabia energy and cybersecurity memorandum | PLANNED ↗       | Cabinet approved the memorandum for signature |

## Technical Capacity

| SYSTEM OR INSTRUMENT                                               | STATUS ↗ source | MILESTONE |
|--------------------------------------------------------------------|-----------------|-----------|
| Domestic technical capacity to operate the national digital estate | NOT HELD        | —         |

## Cybersecurity

| SYSTEM OR INSTRUMENT                       | STATUS ↗ source | MILESTONE                                                                           |
|--------------------------------------------|-----------------|-------------------------------------------------------------------------------------|
| Critical Information Infrastructure regime | IMPLEMENTED ↗   | Designation regulations in force 1 June 2026, with a twelve-month compliance window |
| Cyber forensic laboratory                  | PLANNED ↗       | Funded at Rs 13m in the 2026-2027 budget                                            |
| Cyber Threat Intelligence Sharing Platform | PLANNED ↗       | Provided for in the omnibus bill introduced 24 July 2026                            |
| Postal sector threat sharing               | PLANNED ↗       | Capacity-building workshop with the Universal Postal Union, 29 July 2026            |

Hosting is the country's strongest asset. [Ten data centres operate across five locations](#), and the [Rose-Belle Tier IV facility](#) is the sovereign-hosting anchor: it carries e-health, the government portal, the Mobile ID wallet, the penalty-points system and government artificial-intelligence workloads, and gives the ageing Government Online Centre the disaster recovery it lacks.

International capacity is ageing and its replacement is not contracted. [LION and LION2 still carry most international traffic](#), and SAFE retires around 2027. Against that sits a [prime-ministerial commitment to join the America-India Connect system](#), behind which is a signed non-disclosure agreement and unfinished negotiation, and [two operator-planned landings](#) with no contract.

Satellite is regulated but not authorised. The [2025 decision on non-geostationary broadband](#) requires service through a locally licensed provider, a local point of presence with Mauritian-geolocated addresses, real-time terminal dashboards and provider-retained terminal ownership, and no service has been authorised under it. Domestic opinion is [divided on whether it matters](#) given existing coverage.

Cybersecurity is where 2026's law took effect. The [critical-infrastructure designation regime came into force on 1 June 2026](#) with a twelve-month compliance window and [penalties up to 25 years' imprisonment and Rs 2m](#); before it, no framework existed to designate and regulate operators of critical systems. Beside it, the July omnibus would let the [central bank compel financial institutions, and others it specifies, into a threat-sharing platform](#) — with the perimeter set by the central bank rather than the cyber authority.

## Digital public infrastructure

|-----------------------|-----------------|-----------|
| Use of satellite data | NOT HELD        | —         |

Identity is delivered and unmeasured. The [Mobile ID wallet launched on 4 September 2024](#), billed as the first African wallet built to the international standard, on the [legal basis of regulations made the same year](#); no user figure has been published in the two years since. It sits on a [complete civil-registration base](#), which is what makes it unusual: most states here are building register and credential at once.

Payments are the same pattern. The [MauCAS switch is a mature interoperable rail](#) publishing no national transaction volume; the adoption evidence comes from one bank, which [reported QR payments up 67% in 2025 and cash falling from 30% to 27% of consumer spend](#). Around that rail the state is building governance: a [fintech strategy of June 2026](#) and a [governance committee given statutory form from 1 September 2026](#), minister-chaired and expressly not a body corporate.

The cross-border ambition runs ahead of the corroboration. The [India payment link of February 2024](#) is the one established corridor; a [Seychelles corridor was announced as launched](#) with no corroboration from the partner or either central bank, and Mauritian participation in the [Southern African settlement system reaches the record through a South African spokesperson](#) rather than through the Bank of Mauritius.

The welfare state is being digitised in bulk: [10.5m benefit documents scanned](#) into a future platform serving about 800,000 payments a month.

The plumbing under all of it is old: the standing interoperability instrument is [a framework published in 2002](#) and the standing health strategy [one from 2015](#), neither with a published successor.

## Governance and regulation

### Legislation and regulation

| SYSTEM OR INSTRUMENT                                            | STATUS ↗ source  | MILESTONE                                                            |

### Public debate and participation in policymaking

| SYSTEM OR INSTRUMENT                              | STATUS ↗ source | MILESTONE                                      |
|---------------------------------------------------|-----------------|------------------------------------------------|
| Public argument on what digital investment is for | IMPLEMENTED ↗   | Named-analyst argument published 2 August 2026 |

Open data

| SYSTEM OR INSTRUMENT        | STATUS ↗ source | MILESTONE                                                       |
|-----------------------------|-----------------|-----------------------------------------------------------------|
| Freedom of Information Bill | PLANNED ↗       | Announced as in preparation by the data-protection commissioner |

The data-protection regime is among the most active on the continent: [about 3,000 enforcement actions a year, 99% resolved without proceedings](#), mandated chief data officers and administrative fines being added; [regulations promulgated on 12 June 2026](#) formalise data protection officers from 1 January 2027; and the commissioner has confirmed the country is [pursuing European adequacy](#).

Against that sits the conduct of the state itself. [Parliamentary revelations describe large-scale interception since 2017](#) — calls, internet traffic and messaging platforms — wired into major operators, accessed by counter-terrorism and national security units without judicial oversight, with the Prime Minister confirming illegal wiretapping. No reform instrument or judicial-authorisation requirement has been published since, and [leaked recordings continue to test the framework](#).

The year's legislation arrived as a budget instrument. The [omnibus introduced on 24 July 2026](#) amends 58 Acts and repeals one, on a staged commencement from 1 September 2026, carrying the fintech committee, the AI City Scheme, the threat-sharing platform, a digital travel authorisation and a virtual-asset solicitation rule that presumes any publicly accessible communication targets Mauritius. Its companion [Finance Bill widens what the statistics office may share with the finance ministry](#). The Data Protection Act is not among the Acts amended.

Two commitments stand unfulfilled, neither with a text or a date: a [Freedom of Information Bill announced in January 2026](#), and a [National Data Governance Strategy with Data Protection Act amendments committed in July](#).

The sharpest domestic objection is to the priority rather than the substance: a [named analyst argues that contract enforcement, not technology, is what limits growth](#), prescribing digitalised case management alongside a small-claims process.

Artificial intelligence and the technology sector

AI

| SYSTEM OR INSTRUMENT                        | STATUS ↗ source | MILESTONE                                                                             |

## China activities

| SYSTEM OR INSTRUMENT                       | STATUS ↗ source | MILESTONE |
|--------------------------------------------|-----------------|-----------|
| Chinese digital cooperation with Mauritius | NOT HELD        | —         |

Mauritius put governance before deployment. The [national strategy and its guidelines launched on 9 April 2026](#) govern by impact rather than geography: vendor-neutral, border-agnostic, with mandatory bias audits in financial services and gaming and duties on foreign providers to keep a local representative. They are [non-binding and read as a third model](#) beside the scale-first and penalty-first approaches elsewhere.

What the state operator has built is a platform layer rather than a compute one. The [AI Registry went live on 9 July 2026](#) as a directory of Mauritius-relevant models, agents and skills that does not host or sell what it lists, its stack open-sourced. The [enterprise platform's school pilot was deliberately narrowed](#) from a student tutor to a teacher assistant after teacher and parent resistance — a rare documented retreat on pedagogical rather than technical grounds. The [certification work the operator co-chairs](#) is defining a framework that does not yet exist.

The compute underneath is an assertion: installed accelerators are the operator's own claim, and a [domestic critique argues the infrastructure-first sequencing risks obsolescence on delivery](#).

The legal frame is an incentive scheme, not a governance one: the [AI City Scheme and an AI Founder permit at US\\$1m invested](#) certify a hub and expedite immigration. And the country has [no measured baseline of enterprise adoption](#) — commissioned by a chamber of commerce in July 2026, after the strategy and after the budget. Information technology contributes [about 5.4% of gross domestic product against an ambition of 10-12%](#).

What is contracted with the hyperscalers is skills and confidentiality: the [Amazon memorandum carries no disclosed value and no binding deliverable](#), its training running initially in rented premises, and [Google already operates a ground station at Baie-du-Jacotet](#).

| National AI training programme | PLANNED <a href="#">↗</a>       | Target set in the 2026-2027 budget |

The 2026-2027 budget sets the year's clearest training commitment: a [50,000-trainee target](#) for artificial intelligence skills — 25,000 professionals, 12,000 pupils, 8,000 teachers and 5,000 civil servants in one year — with no published enrolment figure and no measure of the base it starts from.

Inclusion has one named sub-national commitment: a [ministerial mission to Rodrigues in May 2026](#) set a cybersecurity working framework, a youth awareness project, and integration of the national sign-on through post office agents.

## Finance

### New investments

| SYSTEM OR INSTRUMENT                       | STATUS <a href="#">↗</a> source | MILESTONE                                            |
|--------------------------------------------|---------------------------------|------------------------------------------------------|
| China Eximbank preferential buyer's credit | IMPLEMENTED <a href="#">↗</a>   | Recorded in the finance ministry's own annual report |
| Cross-border payments gateway business     | IMPLEMENTED <a href="#">↗</a>   | Operator figures for 2024 to 2025 reported May 2026  |

### Domestic budget appropriations and expenditure

| SYSTEM OR INSTRUMENT                                 | STATUS <a href="#">↗</a> source | MILESTONE                  |
|------------------------------------------------------|---------------------------------|----------------------------|
| Digital and AI measures in the 2026-2027 budget      | IMPLEMENTED <a href="#">↗</a>   | Budget presented June 2026 |
| Budget 2026-2027 tax and revenue measures as enacted | NOT HELD                        | —                          |

The 2026-2027 budget is the year's clearest financial commitment to the digital programme: it names [artificial intelligence 35 times](#), funding a Rs 25m national AI learning platform, an investment tax credit of 15% a year over three years, a special economic zone of 83 arpents with preferential data-centre power, e-gates, e-visa and e-judiciary, and a Rs 13m cyber forensic laboratory.

External financing is old: the largest digital-sector commitment on record is a [US\\$73.7m Chinese preferential buyer's credit from 2018](#), with no repayment or completion statement published since. The commercial money movement runs the other way: one payments gateway [reports its Mauritian volume up over 300% year on year](#), crediting the country's exit from the financial action task force grey list.

## Gaps to fill

| SYSTEM OR INSTRUMENT                                                      | WHAT WOULD SETTLE IT                                                                                                                                                                                                                                                                                           | LAST PROBED    |
|---------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>Domestic technical capacity to operate the national digital estate</b> | A staffing plan, skills audit or operations report covering who runs the ten-facility data-centre estate, the payment switch and the identity wallet.                                                                                                                                                          | not yet probed |
| <b>Use of satellite data</b>                                              | An earth-observation, maritime-domain or land-monitoring programme using satellite imagery, which a state with a five-million-square-kilometre exclusive economic zone would be expected to run.                                                                                                               | not yet probed |
| <b>Rural digital data capture</b>                                         | An agricultural, fisheries or land data-collection programme operating in the field.                                                                                                                                                                                                                           | not yet probed |
| <b>Digitalisation of local government</b>                                 | A district or municipal digital plan or service platform. The Rodrigues Regional Assembly's roadmap is the only sub-national instrument held and it is a territory, not a local authority.                                                                                                                     | not yet probed |
| <b>Budget 2026-2027 tax and revenue measures as enacted</b>               | The 128-page Finance Bill 2026. Three fetch paths into the National Assembly's bills library returned an HTML shell rather than the document; the library is script-rendered and exposes no static file path, so this needs a browser rather than an automated fetch.                                          | not yet probed |
| <b>National sovereign compute capacity</b>                                | Vendor or independent confirmation of installed accelerators. The state operator's chief executive stated in July 2026 that its data centre already hosts NVIDIA H200 units with B300 due by end-2026; no corroboration is on file, and this is precisely the compute-timing bet a domestic critique disputes. | 2026-08-09     |
| <b>Enterprise artificial-intelligence adoption</b>                        | The results of the adoption, readiness and governance study launched on 27 July 2026 by the chamber of commerce, the outsourcing association and a third partner, commissioned because no picture exists of adoption levels, affected sectors or available skills.                                             | not yet probed |
| <b>Chinese digital cooperation with Mauritius</b>                         | A bilateral agreement, financing or vendor arrangement in the digital sector. The only Chinese-linked item held is a 2018 buyer's credit.                                                                                                                                                                      | not yet probed |
| <b>Digital literacy of the population</b>                                 | A skills survey, a literacy programme evaluation or a national measure of digital competence. The 50,000-trainee target is an input commitment, not a measure of the base it starts from.                                                                                                                      | not yet probed |

Six are subject areas with nothing on record: technical capacity to run the estate, satellite data, rural data capture, local-government digitalisation, Chinese cooperation, and any measure of digital literacy.

The other three sit under things the country announces confidently: what compute the state operator holds, how many Mauritian firms use artificial intelligence, and what the budget's tax and revenue measures say — the Finance Bill being a browser-only download that three automated fetch paths could not retrieve.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
