

MONTHLY UPDATE

Access to services: monthly update, August – September 2026

Edition of 2026-09-09 · compiled by Claude Opus from the documents in the Corpus repository

39 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.

ALGERIA · ANGOLA · BOTSWANA · BURUNDI · CAMEROON · CENTRAL AFRICAN REPUBLIC · COMOROS ·
COTE D'IVOIRE · DJIBOUTI · DR CONGO · EGYPT · EQUATORIAL GUINEA · ERITREA · ESWATINI · ETHIOPIA ·
GHANA · KENYA · LIBERIA · LIBYA · MADAGASCAR · MALAWI · MALI · MOROCCO · MOZAMBIQUE · NAMIBIA ·
NIGER · NIGERIA · SAO TOME AND PRINCIPE · SENEGAL · SEYCHELLES · SIERRA LEONE · SOUTH AFRICA ·
SOUTH SUDAN · TANZANIA · TOGO · TUNISIA · UGANDA · ZAMBIA · ZIMBABWE

The place reports do not share one window; the period above is the range they span.

Algeria

Consumer cloud storage prices were [raised for new subscribers from 27 July 2026](#), in this market alongside two others on the continent. One provider's consumer tariff is thin evidence for affordability, and the account gives no local subscriber base against which to read it. It is recorded because it is the only dated consumer cloud price the base holds here, and a price that moves is more use than a market with no price at all.

The social card's working group reached its fifth session, [setting the card's indicators and data and building towards a unified database, with the President's June 2026 three-month deadline putting delivery before the end of September](#). The deadline is the President's rather than the project's, and no delivery, data-sharing instrument, beneficiary count or governing decree is published — so a database that is to unify social data is three weeks from a deadline with nothing published about what it will contain.

Angola

The identity-card universalisation programme is being reported by throughput: [more than 4,000 cards issued in one municipality in sixteen days](#), with no national total, backlog figure or target date beside it.

The telecommunications ministry [opened further computer rooms and free public internet points in Luanda and Icolo e Bengo](#). No national count of sites, users or budget line is on file behind the programme.

Botswana

The Ministry of Youth and Gender Affairs [describes the Department of Gender Affairs as secretariat to the National Gender Commission](#), the standing institution behind this subject. Nothing else in the inclusion ledger moved in this window; the gender-based violence programme and the one-stop centres both date from earlier in the year.

Burundi

A rural community digital hub [opened at Shombo](#). It is a single site reported by its own organisers; no programme, national count, funding line or usage figure stands behind it.

Cameroon

The entitlements behind disability inclusion were set out in public, and the online harms alongside them. The social affairs ministry [described National Disability Cards issued through the ministry and its regional delegations, carrying income-tax and salary-tax exemption under the 2026 finance law and, under a joint ministerial decision, a 50 per cent higher-education fee waiver and free school enrolment for children living with disabilities](#); the same session heard that unguided adoption of short-video platforms exposes disabled users to targeted cyberbullying, hate speech and algorithmically reinforced stereotypes. No card count or take-up figure is published.

Central African Republic

Registration and feedback for displaced people moved, and it moved outside government. An operational update for the second quarter records [37,389 registered Sudanese refugees, card-based registration, and a complaints and feedback system that had received 535 complaints](#).

It is the clearest instance on this ledger of a digital feedback channel reaching a displaced population, and the state's own centralised portal, launched in December, still carries no described feedback function at all.

Comoros

The justice ministry's site carries a [live contact form letting a citizen select a complaint as the object of a request, alongside administrative information, case follow-up and document access](#); it was built under a French-financed justice project. It is the widest general-purpose citizen feedback channel in the base, and no response time, case count or escalation route is stated. The page is undated and is dated by the day it was retrieved.

Cote d'Ivoire

Access moved by putting the counter where people already are. The civil-registry agency [opened an office inside a Yopougon shopping centre on 14 August](#). It is one site, with no opening hours, service list or plan for further locations published.

On 4 September the national coordination of disabled people's associations and the incumbent operator [signed a partnership at Abobo Sogefiha for training in digital tools toward autonomy and employment, a first office-skills course already running at the coordination's headquarters, refurbished and equipped under the initiative](#). It is an operator foundation's programme rather than a public one, and the base holds no state instrument on digital accessibility against which to read it.

Djibouti

The urban rehabilitation agency runs [a complaint-management portal that routes recovery and technical problems to named internal divisions](#). It is the only digital citizen-feedback channel the base holds, and it covers one agency's own business: no whole-of-government mechanism, service standard or complaint volume is published.

The corridor programme put training against formalisation rather than connectivity: [forty women traders took export-readiness training at Bishoftu on 30 and 31 July 2026 under a EUR 32m European corridor programme, covering business formalisation, product standards, export documentation and customs procedure](#). The training was delivered on the Ethiopian side of the corridor and no Djiboutian cohort, customs-system component or digital element is separately costed.

DR Congo

On 23 July a state bank and the payroll monitoring committee settled the technical and organisational terms for [paying civil servants in rural territories, scoped to three named territories and others where no other bank operates](#). August 2026 was named as a target, with the bank's director-general calling a fixed date premature and the state contract unsigned. What subscribers pay moved the other way. Users and resellers in Bukavu say a [1GB bundle that ran 48 hours at 1,500 Congolese francs now expires in 24 at the same price](#), and a 2GB 48-hour bundle at 2,000 francs has been replaced by 1GB over 72 hours; subscribers across the eastern provinces [report the same pattern across four operators and have asked a consumer body to intervene](#). Both ends are subscribers' accounts; no operator or regulator has stated anything.

Accessibility entered the record as an argument about a process rather than a system. A tribunal set out [six levers for deaf participation in the national dialogue relaunched on 17 July 2026 – interpretation, captioning, accessible documents and the rest – on the ground that a democracy that speaks without being understood has already excluded part of its citizenry](#). No public data on deaf access to state processes is held, which is what makes the piece the base's only statement on the question.

Egypt

The month's clearest inclusion move was a reopening rather than an extension. From 24 July the state accepted ration-card grievance and data-update forms at 500 post offices on Friday afternoons and Saturday mornings, alongside the online route that had until then been the only channel for appeals against the 2026 eligibility criteria, with a daily adjudication committee, results notified by text message and every case checked against official databases.

The only outcome measure the base holds for refugee assistance is the delivering agency's own. Its [year-end monitoring of 2024 multi-purpose cash assistance interviewed 393 of 434 sampled households and found 99% able to buy items they could not previously afford](#). It is a self-evaluation on a sample rather than the caseload, and it reports purchasing ability rather than any outcome – which is worth stating plainly beside the asylum regulations now in force.

Equatorial Guinea

The refugee agency's rights mapping put an absence on the record this month: [Equatorial Guinea has acceded to the refugee treaties and enacted no domestic status determination law](#), so no registration or documentation system follows from one. It sits alongside the state's own periodic review report, which [names no disability statute either](#).

Eritrea

One digital feedback channel is on the record, and it belongs to the operator rather than the state. The sole state telecommunications provider [runs a live web form for internet-connectivity, website-access and web-application complaints, with telephone and email alternatives](#). No whole-of-government complaint route is recorded, and no volume of complaints made or resolved is published.

Eswatini

The country's second innovation hub opened at [Macetjeni in the Lubombo region on 7 August, extending digital-skills and small-business support to a rural community](#), built by the small enterprise development company with the communications commission and UNDP under a youth empowerment programme, and following the Piggs Peak hub of 2025. No financing figure was disclosed for the facility, and no user, training or enterprise-support count is published for either.

What firms say they need is not more hubs but a network that stays up. At a Mbabane panel on 7 August, logistics, renewable-energy and creator-economy speakers [argued that unreliable connectivity is now a direct cost to business, outweighing any saving from cheaper data](#), describing real-time fleet tracking, remote solar-system monitoring and social-platform market access as core to operations, and urged investment in rural connectivity to widen economic participation. It is a panel of interested parties, and the base holds no reliability series to test it against.

Ethiopia

The month's movement on access is participation rather than service. The National Dialogue Commission [reports that its conference ran from 15 July to 22 August 2026, with around 4,000 participants deliberating eight national agenda items and recommendations submitted to the Commission](#). It is the Commission's own account, and nothing in the record held states which recommendations were taken up. Nothing moved this month on digital access to public services, on refugee inclusion or on device affordability.

The corridor programme put training against formalisation rather than connectivity. [Forty women traders took export-readiness training at Bishoftu on 30 and 31 July 2026 under a EUR 32m European corridor programme, covering business formalisation, product standards, export documentation and customs procedure, against a stated 94% of the traders concerned operating unlicensed](#). That 94% is the programme's characterisation of its own target group rather than a national measure, and no digital component of the corridor programme is separately costed.

Ghana

The mid-year fiscal review of 23 July recorded GH¢485m paid to cash-grant beneficiaries in the first half of 2026 and named no allocation at all to the communications ministry, the access fund, the coders programme or the artificial-intelligence strategy.

Kenya

The Auditor-General's findings on the Hustler Fund entered the record on 23 July: [104,631 loans worth KSh 116.5m](#) were issued to borrowers whose national identity details were missing from the customer database, against a 15% default rate and state funding down to KSh 300m in the year to June 2026.

A measure of harm arrived where the base had none. A UN children's agency report found [about one million internet-using Kenyan children exposed to unwanted sexual content online, a rate of 20.1% and the third highest of 21 countries surveyed behind Uganda and Ethiopia, with most child victims knowing their abusers personally, WhatsApp the platform most used to target them, and about 1% of cases reported to police](#). The findings rest on nationally representative household survey data collected between 2020 and 2025 from children aged 12 to 17. The report itself is not held, only a newspaper account of it.

Liberia

Two institutions moved outward in the same week. The telecommunications regulator [opened its first service centre outside Monrovia, at Buchanan in Grand Bassa County, on 4 September, handling consumer complaints and community-radio compliance](#) – the first time the base records regulatory redress being available anywhere but the capital, with no staffing, opening hours, caseload target or programme of further centres published. And the information commission, with a transparency organisation, [ran freedom-of-information compliance visits from 11 August to 2 September covering the national identification registry, the statistics institute, the community empowerment agency and the water and sewer corporation, with three more agencies scheduled for 8 to 10 September](#). No findings, compliance scores or enforcement actions from the round are published, and it is a partnership exercise rather than a statutory inspection regime – which is the difference between visiting an agency and being able to make it answer.

Libya

On 5 August a Central Bank source told Libya Herald that cash distribution to commercial bank branches would begin on 9 August under an August operational plan, with [withdrawal limits starting at LD 3,000 per customer and LD 4,000 in the south](#), subject to increase as liquidity allows.

Madagascar

The month's only market measurement came from an operator: MVola's director general put the whole Malagasy mobile-money market at [six to seven million active users against a population of about thirty million, with rural areas under-served](#), and set doubling or tripling that as the five-to-ten-year test.

Malawi

The first usable figure for how many Malawians are online came from the operators' own trade association rather than from the state. Its report [puts 80% of the population offline despite 87% 4G population coverage, and estimates MWK 1.1 trillion of economic value and 490,000 jobs by 2030 from closing the usage gap](#), setting out six policy priorities for the government and the regulator. The gap it identifies is usage and not coverage, which is a finding the base had no measurement for; the value estimate is modelled by an interested party, and among the six asks is cutting the mobile-service taxes its members pay. Against it stands [a presidential target of 80% internet usage by 2026](#) that has never had a published baseline.

Mali

The month's one measure of what connectivity costs a Malian is a comparison with the neighbour. About [1.5GB of mobile data in Bamako buys what 25GB buys in Dakar](#) – a ratio of roughly 25 to 1, which critics attribute to weak market oversight by the regulator, the duopoly of the two incumbent operators, and the years since a new operator licence was issued. It is a press comparison rather than a regulator or operator tariff series, and neither the basket nor the date of the prices compared is stated; taken at its own weight it still sits awkwardly against the digital-sovereignty case the same month's fora were built around.

Morocco

A national survey put a number on the gap between owning a phone and being online. Preliminary results of the third national disability survey [put prevalence at 8.7 per cent of the population, up from 6.8 per cent in 2014, across 20,412 households, with the employment rate among people with disabilities at 12.7 per cent - 23 per cent of men](#)

and 4 per cent of women - and only 20 per cent reporting internet access despite most owning mobile phones. Officials caution that the 1.9-point rise partly reflects broader detection rather than an equivalent rise in disability. The base holds no accessibility standard, audit or enforcement mechanism to read the access figure against.

Mozambique

The central bank's Financial Inclusion Report 2025, reported on 24 July, counted 482,359 financial access points, up 36% on 2024, of which 446,604 were non-bank agents against 315,005 the year before, while automated teller machines fell from 1,391 to 1,383 and card terminals from 35,486 to 32,236 ([report account](#)). Mobile money reached 1,313 accounts per thousand adults against 337 bank accounts, and the national Financial Inclusion Index held flat at 36.4 points. Agent growth was fastest in the least-served provinces, and the report set that against a widening credit gap: women's participation in credit rose from 31% to 34% while men's rose from 59% to 66%, even as women's mobile money holding rose 24%.

August added the price side of the same picture. A standard data package [fell from 9.4% of monthly gross national income per head in 2022 to 2.67% in March 2026](#), on World Bank Digital Acceleration Project figures released with the coverage map. The basket behind the standard package is not defined in the record held.

What none of these measures reaches is what the money does. A study of 900 households published on 7 August finds that [mobile money improves household welfare through active use rather than account ownership, reducing reliance on own food production and strengthening resilience through remittances, with women gaining financial autonomy and young people using it to stabilise consumption](#). It is a single academic study of a sample, not a national series, and it is the only evidence of outcome the base holds against the access counts above.

A commercial bank [opened its mobile banking application to customers without consuming their mobile data balances or packages](#). Zero-rating a single private application raises a net-neutrality question the base holds no ruling on, and no user count or operator agreement is published behind it.

Namibia

The central bank's deputy governor told the payments association's annual general meeting on 28 July that financial inclusion rose from 78% in 2017 to 86% in 2025, and named continued cash reliance, limited rural access, informal-sector barriers and the digital divide as the persistent constraints ([central bank account](#)).

Education added a channel built for the same margins. The education ministry and UNICEF [launched a Namibia Learning Passport, a digital and offline learning platform aimed at rural, remote and underserved young people](#), at the international youth day event in Keetmanshoop. No user target, content catalogue, device requirement or offline distribution route is stated, which matters most for the audience the platform names.

What that looks like in one region was put to the parliamentary ICT committee on 11 August: [21 of Kavango West's 188 schools have workable connectivity, leaving 55,002 learners without digital teaching tools](#), and health officials told the same committee that clinics there still struggle with unreliable mobile coverage. The figures are the regional education director's own, and they sit against a target of full telecommunications coverage by 2030.

Niger

A national digital-skills caravan reached the country's far east. About sixty young people [took part over two days in the university's computer room at Diffa, on training covering digital tools, occupations and opportunities](#). It is one stage of a caravan for which no national total, stage list, curriculum or funder is published.

Disability inclusion produced recommendations rather than an instrument. A national review closing on 5 August called for a [disability-inclusion strategy, disability-responsive budget lines, better disability data collection and faster issuance of the equal opportunity card](#). Every item on it is a thing not yet built.

Nigeria

A [digital self-care platform went live for University of Lagos students](#), routing to free contraceptives through the state health ministry and UNFPA supply chain, with expansion to other Lagos campuses planned.

Away from the campuses, German cooperation [opened a tender on 4 August for the IT equipment of rural job centres in Ogun and Plateau States](#), under a youth-employment project. A procurement notice fixes the equipment stage and nothing else: how many centres, at what cost, and when they open are all unstated.

The accessibility requirement is not reaching the platforms it binds. [None of eight public websites audited in May 2026](#), among them the admissions board, the identity commission, the revenue service and the disability commission itself, had implemented baseline accessibility features; an earlier assessment of all 36 states and the Federal Capital Territory found 26 non-compliant with the technology agency's website guidelines and 14 sites unusable for people with disabilities; and the Nigeria Web Design Standards, launched in July 2025 with a toolkit promised within eight to ten weeks, had published none by August 2026 with no evidence of Federal Executive Council approval or of implementation. The commission's own estimate is 35 million Nigerians with disabilities.

Sao Tome and Principe

Two communities turned resident-identified priorities into completed works in six and a half months through pilot participatory budgeting exercises: [a paved stretch of the Estrada da Oficina in Alges, Cantagalo district, and a new water capture and distribution system with a decanting process at Ribeira Palma Praia, Lemba district](#). The project was a partnership between two civil-society organisations and the two district councils, with support from a Portuguese municipality and the European Union, and residents took part at every stage from identifying the problem to delivering the investment. The publisher is the partner municipality rather than a Sao Tomean body, and the source describes pilot experiences rather than a national participatory budgeting system.

Senegal

The flagship access programme is under investigation. The National Assembly [voted 129-0 to open a commission of inquiry into about 48 billion FCFA committed since 2017 under the student-computer programme, over alleged procurement breaches and 800 defective machines stored unused at the country's largest university](#). Nine years in, the programme publishes no delivery total, unit cost or student-reach figure, so the inquiry's envelope is the only quantity the record holds about it.

Seychelles

The same survey puts a number on demand for open government, which the Access to Information Act reform has been drafted against since November 2025 without a Bill reaching Parliament. [62% say the public should have access to government information, against 25% who say it is for officials only](#); support is strongest where the information is fiscal — [84% for district-administration budgets and 82% for bids and contracts on government projects](#) — and falls to 47% for the salaries of district administrators and teachers.

Sierra Leone

Financial inclusion is put at [about 40% of adults for 2025](#). It is a named analyst's assessment rather than an official series, and the base holds no state measurement to set beside it.

The cost of the handset is being financed rather than reduced. An operator and a commercial bank [opened a 24-month device-financing scheme to individual and business customers, on top of their existing prepaid card relationship](#). No price, interest rate, eligibility test or uptake figure is stated.

South Africa

The South African Social Security Agency [set 350,000 grant reviews for 2026/27](#) against a projected R1.5bn saving, while beneficiaries flagged from September 2025 [reported continued non-payment](#). An account of the digitalised grants system published on 25 July set out the [bank-account means test applied across eight grants](#), which remains in operation under appeal, with the Supreme Court of Appeal hearing set for 25 August 2026. Gold Cards were confirmed to [cease functioning after 31 August](#); the position of beneficiaries who miss the deadline was not stated.

One cooperation arrangement addressed a group the grants system serves and the data rarely describes. South Africa and China [agreed a seven-point plan on disability-inclusive data, universal design and artificial-intelligence-enabled assistive technology](#), anchored in a proposed centre of excellence working with the national statistics office. No instrument, funding, timetable or data-sharing arrangement is published for cooperation that names the statistics office as a partner.

The state's own IT agency was told why it cannot deliver. The Public Service Commission's investigation of government IT procurement over 2020 to 2025 found [86% of managing-director roles held on an acting or interim basis, board tenures too short for strategic continuity, and irregular expenditure above R2bn across four audited years read as control failure through absent deterrence](#); the agency told Parliament in August it is finalising executive recruitment, naming no appointment or date, while some of the hundred-plus departments it carries look elsewhere.

The grant-review audit reached [105,600 of 352,000 targeted reviews with an estimated R450-million saved](#), while suspending lawful beneficiaries' payments without effective notice. The saving is the agency's own estimate; the suspensions are reported against it.

South Sudan

Access got dearer and the machinery for questioning it got weaker, in the same week. A published account reports [internet subscription tariffs rising by approximately 15 per cent across both operators](#) at a time the writer describes the economy as already struggling - an opinion column is the whole of the evidence, with no tariff schedule or regulator approval on file. Separately the state's own human rights commission [rated the country weak on transparency and participation and very weak on accountability, said access to public information remained limited, and heard that the body responsible for access to information lacks the staff and capacity to enforce the law](#).

Tanzania

Access moved for a group the digital estate rarely reaches. The central bank [launched Braille editions of its publications in Dar es Salaam on 20 August](#). It is a print accommodation rather than a digital one, and no equivalent screen-reader or accessible-format commitment for the bank's online material is on the record.

Togo

A service was built for people who cannot rely on a connection. A pilot of [LébéNam, an offline-capable platform for reporting gender-based violence and routing victims to the nearest care point](#), was run this month. Designing for intermittent connectivity is the notable part; no case volume, coverage or referral outcome is in the record held.

Documentation for the displaced is the larger operation. A [grant of US\\$1 million approved on 4 August funds registration and documentation of 5,000 new arrivals in the Savanes, a region now hosting more than 55,000 refugees and close to 16,000 internally displaced people](#). None of it runs through the national identity register: refugees are documented on a separate system.

Tunisia

The month's inclusion movement was a marketplace rather than an access measure. The family and women's ministry [launched a national digital marketplace for women's and girls' products, with payment and delivery agreements with the postal service and a partnership with the handicrafts office](#), putting home-based craftswomen in reach of national markets without an intermediary. It is a concrete service mechanism rather than a policy statement, which is the more common form here; no seller count or transaction volume has followed it.

Uganda

At a readiness inspection on 27 July, [six of nineteen planned one-stop service centres were recorded as operational](#), with three pilots funded through the Uganda Digital Acceleration Project and centre throughput made contingent on the fifth phase of the national backbone.

An [ICT hub for persons with disabilities was commissioned in Kasese](#), reported on 1 August, offering computer literacy, vocational skills and digital-empowerment programmes and open to the wider community. No commitment value was published, so the base carries no finance record for it.

The commercial route to a connected device is credit. Buy-now-pay-later schemes run by five providers [put smartphones in the hands of more than 500,000 Ugandans in a year, against about 22% of Ugandans using mobile internet despite 96% network coverage, with financed devices costing 30 to 50% more than the cash price](#). It is a trade analysis rather than a regulator series, and no default, repossession or total-cost-of-credit figure is published for the schemes.

A six-year donor digital-inclusion programme [ended, with stakeholders urging the government to take over what it was doing](#). No successor instrument, budget line or transfer of assets is on file, which makes the closure a stated exposure rather than an inference.

Zambia

The citizen support portal reached a ministry that has no offices in much of the country. Labour and social security staff [were trained to handle labour cases through the portal, extending it to districts with no physical office](#). Where a portal substitutes for a counter that was never there, the question is what happens to a claimant without connectivity — and no fallback, case volume or resolution figure is published for it.

Zimbabwe

The health minister told the National Assembly on 17 July that more than 400 health facilities had received satellite kits with 300 more to be added, but that subscriptions had not been paid because the fees were too high ([National Assembly account](#)).

At a payments conference on 24 July a research firm reported that 95% of transport payments remain cash, that 56% of respondents found digital systems complicated with people with disabilities particularly affected ([conference account](#)).

A media institute's August review sets the country's headline connectivity figure against what it costs. It records [internet penetration at 84.55% on the regulator's fourth-quarter 2025 data, many households spending more than 10% of income to be online against the United Nations' 2% benchmark, and only 62% of the population with reliable electricity](#), and asks whether the 2026-2030 artificial-intelligence strategy can be delivered on those foundations. The penetration figure counts active subscriptions rather than individual users, which is the gap the affordability finding sits in.

A larger round of the regulator's disability training ran, and it reached teachers rather than learners: a [five-day workshop at Chiredzi for 37 teachers with visual impairments and their assistants and aides, drawn from all ten provinces, covering assistive technologies and accessible digital platforms](#), facilitated with the same civil-society internet chapter as the June cohort. The Act that would give any of this a statutory footing was passed in November 2025 and still awaits commencement.

ABOUT THIS DOCUMENT
