Finance

ALL FINANCE · PUBLIC BUDGETING AND EXPENDITURE · NON-STATE FINANCE

All finance

Morocco's digital finance from both sides: what the state budgets from its own money, and what development financiers, foundations, vendors and operators commit. Figures are in millions of US Dollars. The two are added together as they are counted below them.

TOPIC	-2022	2023	2024	2025	2026	TOTAL

All topics	1,050	225	517	467	1,617	3,875

US$m, by topic and year: budget lines by the year the fiscal year starts in, commitments by the year they were made. A budget is one year's money and a commitment may span several, so a year's total is a sum of both, not a measure of spending. '-2022' aggregates every year before 2022. An empty cell is a year with nothing recorded, not a zero.

Public budgeting and expenditure

What Morocco budgets for digital from its own money, read from its own budget documents. Figures are in millions of US Dollars, converted at the IMF annual average rate for the year the fiscal year starts in. Each line counts at the latest stage held: audited, else spent, released, revised, enacted or proposed. A line that is only partly digital, or whose scope is unclear, counts at 50% of its value, because its digital part cannot be separated; the full table gives every line's scope and its full figures in the local currency.

Non-state finance

Commitments to Morocco's digital sector from financiers other than the state — development finance, foundations, vendors and operators. Figures are in millions of US Dollars, converted from the announcing party's own currency at a rate dated to the year of announcement. They are commitments, not disbursements, and a multi-year commitment sits wholly in its start year. A commitment that is only partly digital, or whose scope is unclear, counts at 50% of its amount; one where digital is incidental to another purpose is left out.
