

PROGRESS REPORT

Somalia: progress report, August 2025 – August 2026

Edition of 2026-08-27 • 60 systems and instruments tracked

GOVERNANCE • FINANCE • ICT INFRASTRUCTURE • DPI • DIGITALISATION • TECHNOLOGY • CAPACITY •
INCLUSION • DATA • GEOPOLITICS • WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the base tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the base holds nothing on that indicator. **That is a statement about this base, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-08-01 to 2026-08-27.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Digital transformation strategy	A Digital Transformation Strategy 2025-2030 was in finalisation with international support, while domestic analysis names interoperability as the central risk. The strategy was in finalisation in October 2025 and no adopted text has entered the base since (strategy , context). A domestic analysis and the national digital public infrastructure summit communicate both name interoperability between government systems as the central risk; the analysis argues the danger is digitising the existing fragmentation rather than failing to digitise (analysis , summit). That argument is the sharpest domestic critique in this ledger, and it is aimed at a strategy that has not yet been published.	ADVANCED
Strategies, plans and policies	ICT strategy		NO EVIDENCE
Strategies, plans and policies	Broadband strategy		NO EVIDENCE
Strategies, plans and policies	Data storage / cloud strategy	Government data-hosting and cloud guidelines stand at their November 2022 baseline against an April 2028 target, recorded by the financing lender as not achieved. The guidelines are a results indicator of a regional digital integration project and the lender records them as not achieved (guidelines). They matter more here than the target date suggests: the ministry's stated rationale for a national data centre is to end reliance on storage outside the country, which is also its statement that government data was held offshore when it spoke. There is no rule governing where it sits.	NO CHANGE
Strategies, plans and policies	Data interoperability framework / roadmap		NO EVIDENCE
Strategies, plans and policies	AI strategy	A national artificial-intelligence readiness assessment gained a university participant in August 2026, with no methodology, participant list, score or publication date stated. The university joined the assessment in August 2026 (assessment). Nothing about the exercise is published beyond the fact of it. A readiness assessment is the usual first step toward a strategy, and no strategy, policy or guidance on artificial intelligence exists in this base for the country.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Data localisation policies		NO EVIDENCE
Strategies, plans and policies	Data governance policy		NO EVIDENCE
Strategies, plans and policies	Open data policy		NO EVIDENCE
Legislation and regulation	Data protection legislation	A Data Protection Act has been in effect since March 2023, and a regulatory framework under it was approved by the Council of Ministers in January 2026 and adopted the following month. The Act has been in effect since 23 March 2023 and its implementing regulations were reviewed (Act). The regulatory framework was approved on 8 January 2026 and adopted in February (approval , adoption). A statute in force since 2023 with regulations adopted in 2026 and an authority taking its first nationwide enforcement step in June puts this country ahead of several larger units in this frame on the sequence, if not on capacity.	ADVANCED
Legislation and regulation	Cybersecurity legislation	Parliament approved a Cybersecurity Law on 26 January 2026, against a fifth-tier international cybersecurity index score. The law was approved amid rising threats; the country ranked in the international index's fifth tier at 37.39 of 100 in 2024 and is a signatory to the continental cyber convention (law). The law's own text is not held, and no implementing regulation, commencement date or enforcement action is on record. What followed it in the same year — an incident response team in March, a risk management framework in July — is recorded separately and is institutional rather than legal.	ADVANCED
Legislation and regulation	Legislation covering digital id		NO EVIDENCE
Legislation and regulation	Digital payments legislation		NO EVIDENCE
Legislation and regulation	Legislation enabling data interoperability		NO EVIDENCE
Legislation and regulation	AI legislation / regulations		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	E-commerce legislation	A national e-commerce strategy stands at its November 2022 baseline against an April 2028 target, with the lender recording that no strategy exists. It is a results indicator of the regional digital integration project, and the lender records that no strategy exists in this country, in a neighbour, or at the regional body (strategy). Three parties to the same project have none between them. That is a regional gap rather than a national one, and it is the only place this base can say so.	NO CHANGE
Legislation and regulation	Statistics legislation		NO EVIDENCE
Legislation and regulation	Access to information legislation		NO EVIDENCE
Data protection	Data protection authority	The Data Protection Authority took its first nationwide enforcement step in June 2026, mandatory registration under the Act, and its independence is qualified by executive appointment and override powers. The authority was inaugurated in February 2024 and moved to mandatory registration of controllers and processors in June 2026 (enforcement , inauguration). Its independence is qualified by executive appointment and override powers, which is the standing limit on everything it does and is stated in the record rather than inferred. No registration count, penalty or completed investigation is published.	ADVANCED
Data protection	National data protection readiness	The regulator asked a messaging platform to delay usernames, on grounds of impersonation risk to mobile money and loss of phone-number traceability. The request was made in a regulator statement in July 2026 and restated by the minister later that month (request). The stated grounds are impersonation risk against the mobile-money system and loss of phone-number traceability in the campaign against an armed group. Both are traceability arguments, which is a state asking a platform not to reduce the identifiability of its users. No response from the platform, legal basis for the request or outcome is on record.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	Regional policy collaboration	An instrument of ratification for the continental free trade area is to be deposited in September 2026. The secretariat's own release dates the deposit; its standfirst gives 2 September 2026 while its body says only September, and the wider month is what is carried (accession). Accession has digital consequences the release does not address – the country has no e-commerce strategy, no adopted digital transformation strategy and no data-hosting rule – and none of those is named as a precondition anywhere on file.	ADVANCED
Regional collaboration	Regional legal harmonisation		NO EVIDENCE
Regional collaboration	Shared regional infrastructure		NO EVIDENCE
Regional collaboration	Cross-border data transfers		NO EVIDENCE
Standards	National interoperability standards		NO EVIDENCE
Standards	National quality standards		NO EVIDENCE
Standards	Adoption of international standards		NO EVIDENCE
Public debate and participation in policymaking	Non-governmental contribution to national policy		NO EVIDENCE
Public debate and participation in policymaking	Open discussion of government policy	A former prime minister published an opinion on resource governance, held because public argument of this kind is otherwise absent from this ledger. The piece is a signed opinion rather than a policy position (opinion). It is recorded because the alternative is to record nothing: no consultation response, civil-society submission or published critique of a digital instrument appears anywhere else in this unit, apart from the domestic analysis of interoperability risk.	ADVANCED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	Sustainable domestic financing of digital transformation		NO EVIDENCE
MoUs and other agreements	Strategic relationships		NO EVIDENCE
New investments	Mobilisation of non-state finance		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	Development-partner project financing	A regional digital integration project had its development-objective rating raised at mid-term, and private-sector investment mobilised stands at US\$0 against a US\$10m target; the identity rollout needs about US\$125m more. The mid-term review ran January to April 2026 and raised the rating from moderately unsatisfactory to moderately satisfactory. Private-sector investment mobilised in the country stands at US\$0 against a US\$10m target, and two of the project's own results indicators — cloud guidelines and an e-commerce strategy — are recorded as not achieved (project). Officials put the remaining cost of completing the identity rollout at about US\$125m in January 2026, inside a wider donor initiative for which digital identity is described as a major pillar (cost , initiative). Registration has since reached about 2m against a population estimated near 19.7m, so the funding gap and the coverage gap are the same gap.	MIXED a project rating raised at mid-term while private-sector investment mobilised stands at zero against its target

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Mobile penetration		NO EVIDENCE
Connectivity	Internet usage	Internet use and price were reported in October 2025, and the same account ranks the country 191st on online government services. The figures establish a baseline the base did not previously hold (use). The ranking on online government services sits alongside them in the same account, which is the useful pairing: connectivity and price are one problem, and what a connected person can actually do with government is another.	ADVANCED
Connectivity	Mobile affordability		NO EVIDENCE
Connectivity	National fibre backbone		NO EVIDENCE
Connectivity	International internet bandwidth	A first submarine cable landing technical working group was opened with an international financier in June 2026. The working group was opened in June 2026 to develop the landing and its regulatory framework (group). That the regulatory framework is being developed alongside the first landing rather than after it is the point worth recording: the country is setting the rules for cable landings while it still has the option to.	ADVANCED
Connectivity	Internet Exchange Points		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Satellite broadband licensing and availability	Satellite service became available nationwide in August 2025, four months after licensing, on a full foreign-ownership model without major public debate. The service was licensed in April 2025 and available nationwide from August, with a local reseller network following (availability , licence , reseller). Licensing on a full foreign-ownership model without major public debate is the fastest such accommodation on this base's West and East African record. No local-content, data-routing or emergency-access condition is published.	ADVANCED
Data Storage	Local data centre capacity (all providers)	A national data centre described as nearing completion in May 2025 was described as planned fifteen months later, and the record does not reconcile the two. The state minister restated it as planned in August 2026, having been toured in 2024 and described as nearing completion in May 2025 (plans , completion , tour). The ministry's stated rationale — to end reliance on data storage outside the country — is also its statement that government data was held offshore when it spoke. The one operating estate is a commercial operator's, reported as investing in further solar-powered domestic capacity, with no capacity, tenancy or customer figure published (operator , green).	NO CHANGE
Data Storage	Local data centre capacity (national providers)		NO EVIDENCE
Data Storage	Off-site backup capacity		NO EVIDENCE
Energy	Sufficient energy and water for data centres		NO EVIDENCE
Energy	Grid reliability		NO EVIDENCE
Energy	Rural electrification		NO EVIDENCE
Technical Capacity	Robustness of government hardware and software		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	Local capacity to maintain, manage and develop government systems	A national IPv6 migration was accelerated by the regulator through a dedicated national centre. The migration is being driven by the regulator and a national centre stood up for it (migration). No adoption percentage, milestone or completion target is published. It is an unusually technical piece of national capacity to find in a base that holds no cloud rule and no operating national data centre.	ADVANCED
Cybersecurity	National cybersecurity readiness	A National Cybersecurity Risk Management Framework launched in July 2026 after an April consultation, and an incident response team was opened in March. The framework launched on 21 July 2026 following a national consultation in April (framework , consultation). The incident response team was opened by the prime minister on 7 March 2026 (team). A statute, a framework and a response team inside twelve months is a complete-looking stack. No caseload, incident count, service level or budget is published for any part of it, so what it handles is unmeasured.	ADVANCED

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	National data exchange system	The Auditor-General's 2025 audit counted revenue and financial-management systems not integrated with the core system, and the seven systems are not named. The audit report itself is not held; the figures are as reported from it and the systems are not named (audit). Fragmentation inside public financial management, found by the state's own auditor, is the concrete instance of the risk the domestic interoperability analysis warns about in general terms. No remediation plan or response is on record.	NO CHANGE
Data Exchange	Use of digital id in other systems		NO EVIDENCE
Data Exchange	Interoperability of health systems		NO EVIDENCE
Data Exchange	Interoperability of education systems		NO EVIDENCE
Data Exchange	Interoperability of social protection systems		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	Robustness of system	A mobile identity application passed 50,000 downloads on a renewed adoption call, and a consent-based verification platform runs alongside it. The adoption call was renewed in August 2026 with the application past 50,000 downloads, against about 2m registrations (adoption , application , tools). The gap between registrations and downloads is the finding: the credential is being issued considerably faster than the means of using it is being taken up. A consent-based verification platform launched alongside the application and a certificate delivery system, and nothing has entered the base about it since (verification).	ADVANCED
Digital Identity and CRVS	Registration of entire population	About 2m people were registered for the national identity credential by April 2026, against an estimated 19.7m population of whom about 85 per cent held no legal identity at the 2022 survey. Registration passed one million in November 2025 and reached about 2m by April 2026, under a mass registration drive launched in September 2025 (registration , million , drive). At the 2022 household survey about 85 per cent of an estimated 19.7m population held no legal identity and fewer than 16 per cent a government one (survey , so the base against which this is progress is very low. Two member states have not adopted the national system, one operating its own identification authority, so the register is federal in name and partial in territory (member states , centre).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	National maintenance of id and credentials systems	Cabinet approved a third-generation electronic passport plan on 6 August 2026, having been cleared to adopt a regional passport standard in February. The cabinet approval came in August 2026 (plan), after clearance in February to adopt and print the regional bloc's electronic passport (clearance) and a stated overhaul target the previous September (overhaul). No cost, supplier, issuance target or personalisation site is published, and nothing states whether the passport draws on the national identity register.	ADVANCED
Digital Identity and CRVS	Authentication		NO EVIDENCE
Digital Identity and CRVS	Digital id from birth		NO EVIDENCE
Digital Identity and CRVS	Interoperability of birth registration and digital id		NO EVIDENCE
Digital Identity and CRVS	Use by other systems	The credential was enforced at the main airport for inter-state travel from March 2026, and a legal analysis holds the proclamation behind it exceeds the Act, which confers a right and imposes no duty. Enforcement began at the capital's airport in March 2026 (enforcement , overhaul). A published legal analysis holds that the presidential proclamation of September 2025 exceeds the identity statute, which confers a right to an identity credential and imposes no duty to obtain one. The two accounts have not been reconciled (analysis). Making a credential compulsory when about 2m of an estimated 19.7m people hold one is an exclusion question before it is a legal one, and no exception, appeal or alternative document route is published.	MIXED the credential made compulsory for inter-state travel while a published legal analysis holds the proclamation exceeds the statute

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	Governance role of central bank	The central bank set out the bank integration sequence for the instant payment system in July 2026, on a switch it deliberately chose to run as a joint venture rather than as central-bank infrastructure. The sequence was set out on 26 July 2026 (sequence , expansion , launch). The switch is a joint venture of the central bank and thirteen commercial banks, which the governor described as a deliberate choice over central-bank-run infrastructure. A national code-based payment standard is linked to it as the national standard (standard). No transaction volume, participant count or go-live date for the full sequence is published.	ADVANCED
Digital Payments and Fintech	G2P functionality		NO EVIDENCE
Digital Payments and Fintech	Revenue collection		NO EVIDENCE
Digital Payments and Fintech	B2B and B2G functionality		NO EVIDENCE
Digital Payments and Fintech	P2P, P2G and P2B functionality		NO EVIDENCE
Digital Payments and Fintech	Population uptake	Mobile money runs about 155m transactions a month worth US\$2.7bn against formal banking reaching about 15 per cent of the population. The dominant service was re-certified against the industry mobile money standard in August 2025 (certification). Nationally, mobile money runs about 155 million transactions a month worth US\$2.7bn on lender figures, against formal banking reaching about 15 per cent of the population (scale). That ratio is the whole payments picture here: a private mobile-money system carrying a monetary mass many times the reach of the banks, which is the system the instant payment rail and the identity credential are both being built to sit alongside.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	Cross-border functionality	The central bank set connection to the continental payment and settlement system as a target for before the end of 2026. The target was stated in July 2026 (target). No connection date, participating institution or corridor is named. It would sit above an instant payment system whose own bank integration sequence was set out in the same statement, so the domestic rail has to complete before the cross-border one can carry anything.	ADVANCED
Digital Payments and Fintech	Consumer protection		NO EVIDENCE
Registries	Population register		NO EVIDENCE
Registries	Civil register	A unified digital civil registration system was documented in January 2026, following a nineteen-district pilot. The unified system was documented on an open-source civil registration platform in January 2026 (system), after a nineteen-district pilot in 2025 (pilot) and an overhaul begun at the start of that year (overhaul). No registration volume, district coverage or link to the identity register is published, so whether a birth registered here produces an identity credential is unestablished.	ADVANCED
Registries	Address register		NO EVIDENCE
Registries	Business register		NO EVIDENCE
Registries	Social protection register		NO EVIDENCE
Registries	Electoral register	The electoral commission presented digital voter registration equipment in March 2025, and nothing has moved in the base since. The equipment was presented in March 2025 (equipment). No registration figure, roll-out district, timetable or relationship to the national identity register is published. Equipment presented and then unreported for eighteen months is not evidence of a register.	NO CHANGE
Registries	Tax register		NO EVIDENCE
Registries	Land register		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	Health	An electronic immunisation register is piloting in 14 facilities with scaling to more than 80 planned, and power and connectivity gaps force recording on paper and uploading later. The pilot runs in 14 facilities in the capital region with scaling to more than 80 planned (register). Power and connectivity gaps force recording on paper and uploading later, which is the operating reality behind every digitisation claim in this unit and is stated here rather than inferred. A pandemic-fund health information project launched in the capital in August 2026, with no budget, duration or surveillance-system specification published (project).	ADVANCED
Sectoral management information systems	Education		NO EVIDENCE
Sectoral management information systems	Social protection		NO EVIDENCE
Sectoral management information systems	Justice		NO EVIDENCE
Sectoral management information systems	Tax		NO EVIDENCE
Sectoral management information systems	Customs	A National Single Window is named as planned within a regional trade project, stated in an agenda piece rather than in an instrument. It was named in August 2026 by the national trade facilitation coordinator (window). No agency list, sequence, budget or date is stated, and the statement is an agenda piece rather than an instrument. It sits against an auditor's finding of seven revenue and financial-management systems not integrated with the core system.	ADVANCED
Sectoral management information systems	Land		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Other GovTech and e-Gov	e-government services	A national job portal launched as a centralised, domestically hosted platform, and a federal electronic visa is contested, with a fee exemption for one region under negotiation. The job portal launched in February 2026 as a centralised platform hosted in the country, which is the only service in this unit whose hosting is stated (portal). The electronic visa is in force and contested: a fee exemption for one region was under negotiation in August 2026, and no issuance count, fee schedule or outcome is published (visa). A federal digital service whose application to part of the territory is a matter of negotiation is the same territorial limit the identity register meets.	ADVANCED

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	ICT infrastructure for local government		NO EVIDENCE
Digitalisation of sub-national government	Digitalisation of local government records	Tariff-loaded revenue collection terminals were deployed at one member state's border checkpoints, with collections at equipped posts reported up 668.94 per cent. The terminals carry the tariff schedule and are deployed at state border checkpoints (terminals). The increase is measured at equipped posts in the first quarter of 2026 against 2020, and the figure comes only from the rollout's backers. A six-year comparison covering a period of conflict, reported by the parties who deployed the system, is not a controlled measure of what the terminals did. It is nonetheless the only local-government digitisation in this ledger with any outcome figure attached.	ADVANCED
Rural digital data capture	Digitalisation of rural health clinics		NO EVIDENCE
Rural digital data capture	Digitalisation of rural primary schools		NO EVIDENCE
Rural digital data capture	Digitalisation of rural registry offices		NO EVIDENCE
Rural digital data capture	Digitalisation of rural police stations		NO EVIDENCE

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Use of AI in government administration		NO EVIDENCE
AI	Use of AI in sectoral management information systems		NO EVIDENCE
AI	Development of national / regional AI systems	An artificial-intelligence product, Garad.ai, was launched in August 2026, and the record describes the launch rather than the product. No capability, language coverage, user base or hosting arrangement is stated (launch). It reaches the base through an account of a national data centre statement made on the same day, which is why the launch is dated and the thing launched is not described. That is the whole of the country's artificial-intelligence development record.	ADVANCED
AI	Control of AI abuse		NO EVIDENCE
ICT Industry	National capacity in DT-related production		NO EVIDENCE
Innovation ecosystem	Technology hubs		NO EVIDENCE
Innovation ecosystem	Tech startup ecosystem	A national startup network was launched at an innovation forum in July 2026, and the regulator signed a partnership with a technology hub the same month. The network was launched on 22 July 2026, and the same account states that intellectual-property legislation is being developed with no bill, text or timeline on file (network). The regulator signed a memorandum with a technology hub on 30 July 2026 (partnership). No member count, funding, programme or startup figure is published for either.	ADVANCED

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	Digital literacy (civil service)	Internationally certified cybersecurity courses were run for government technical staff across two cities from March to May 2026. The courses ran in the capital and in a neighbouring country's capital over three months (training). No participant count, certification rate or department coverage is published. A separate fixed asset management training was launched by one regional administration in August 2026 to strengthen public financial accountability (assets), and is the only training in this ledger delivered outside the federal government.	ADVANCED
Literacy	Digital literacy (general population)		NO EVIDENCE
Training and skills	DT-related training in secondary education		NO EVIDENCE
Training and skills	DT-related university facilities and qualifications		NO EVIDENCE
Training and skills	Graduates entering DT ecosystem		NO EVIDENCE
Research institutions	Think tanks and academic departments contributing to DT policy	The national university launched an artificial-intelligence centre in July 2026, and a research partnership on official microdata closed a technical workshop with three partner universities. The centre was launched in July 2026 (centre). The microdata partnership closed a three-day technical workshop with three partner universities in July 2026, opening official microdata to academic research (partnership). Neither states a staffing level, output or funding source. Together they are the country's entire research capacity on the record, and both were stood up in the same month.	ADVANCED

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Citizen feedback portals		NO EVIDENCE
Access to services	Citizen participation in policy		NO EVIDENCE
Access to services	Gender equity		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Inclusion of persons with disabilities		NO EVIDENCE
Access to services	Inclusion of refugees and IDPs		NO EVIDENCE
Digital divides	Bridging of digital divides	A smartphone financing programme launched in May 2026, against about 50 per cent of the operator's base still on feature phones and fourth-generation coverage above 70 per cent. The programme was launched by the dominant operator with a financing partner (programme). About half the operator's base still used feature phones against coverage above 70 per cent (devices), so the constraint is the device rather than the network — the same diagnosis several other units in this frame reach and few act on. No price, term, interest rate or uptake figure is published.	ADVANCED

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	National strategy for development of statistics		NO EVIDENCE
National statistics	Censuses and surveys		NO EVIDENCE
National statistics	Statistics from administrative data	An economic update reached its eleventh edition in May 2026, held as a primary with no digital-sector chapter broken out. The edition was published in May 2026 (update). It is a macroeconomic publication and no digital-sector chapter or indicator is separated out of it here. It is recorded because it is the only recurring statistical publication the base holds for this country, and because the figures this report uses for mobile money and for identity coverage come from lender and survey sources rather than from a national statistical series.	ADVANCED
Open data	Use of open data		NO EVIDENCE
Use of satellite data	Agricultural use of satellite data		NO EVIDENCE
Use of satellite data	Meteorological use of satellite data		NO EVIDENCE

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	USA / hyperscaler MoUs, engagements and commitments		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
China activities	Chinese MoUs, engagements and commitments		NO EVIDENCE
EU activities	EU MoUs, engagements and commitments		NO EVIDENCE
Gulf/UAE activities	Gulf MoUs, engagements and commitments		NO EVIDENCE
India activities	India MoUs, engagements and commitments		NO EVIDENCE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
National artificial intelligence policy	An adopted or draft national AI strategy, a ministerial mandate, or a government statement setting an AI position.	not yet probed
Earth observation or geospatial data programme	A national geospatial or earth-observation programme document, or an agency mandate covering satellite data.	not yet probed
Rural digital data capture	A pastoralist, agricultural or rural registry, or a field data-collection programme covering rural populations.	not yet probed
Public debate on digital policy	Published civil-society analysis, a parliamentary debate record, or a consultation response on a digital instrument.	not yet probed
Open government data	An open-data portal, a published dataset release policy, or an agency statement on publishing government data.	not yet probed
Digital literacy programmes	A national digital literacy curriculum, campaign or programme document.	not yet probed
Domestic budget appropriations for the digital sector	The federal appropriation act or budget statement showing the votes for the communications ministry, the regulator and the identity authority.	not yet probed
European Union digital cooperation with Somalia	A Global Gateway or EU delegation announcement, a financing agreement, or a programme document naming Somalia beyond the innovation project already held.	not yet probed
Chinese digital cooperation with Somalia	A bilateral agreement, vendor contract or financing arrangement naming Somalia.	not yet probed
Indian digital cooperation with Somalia	A bilateral memorandum, a line-of-credit agreement, or an India Stack or ITEC programme document naming Somalia.	not yet probed

ABOUT THIS DOCUMENT

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
