

MONTHLY UPDATE

Registries (population, land, address, etc.): monthly update, July 2026

Edition of 2026-08-27 · compiled by Claude Opus from the documents in the Corpus repository

42 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.

ANGOLA · BENIN · BOTSWANA · BURKINA FASO · CAMEROON · CENTRAL AFRICAN REPUBLIC · CHAD · COMOROS · CONGO · COTE D'IVOIRE · DJIBOUTI · DR CONGO · EGYPT · ESWATINI · GAMBIA · GHANA · GUINEA · GUINEA-BISSAU · KENYA · LIBERIA · LIBYA · MADAGASCAR · MALAWI · MALI · MAURITANIA · MOROCCO · NAMIBIA · NIGER · NIGERIA · RWANDA · SAO TOME AND PRINCIPE · SENEGAL · SIERRA LEONE · SOUTH AFRICA · SOUTH SUDAN · SUDAN · TANZANIA · TOGO · TUNISIA · UGANDA · ZAMBIA · ZIMBABWE

The place reports do not share one window; the period above is the range they span.

Angola

Identity delivery moved on the printing side. From 1 July all 21 provinces print the identity card locally, ending centralisation at a single production centre, with two to three printers per province planned and a 24-to-48-hour issuance target; one province reports issuance under 24 hours against one to two weeks before June. Against that, [more than 120,000 issued cards were awaiting collection](#) nationwide as at 15 July, prompting a civic campaign enlisting churches and traditional authorities. Two days later the Secretary of State for Justice [put the stock at more than 100,000 and said registration levels still fall short of the targets set](#), with the uncollected cards measured against general elections due in 2027; the two statements are two days apart, on different roundings, and neither sits in a series.

A single social register was launched in the week ending 25 July, and the ministry's own account of the launch supplies what the first reports of it did not. The register is [instituted by Decreto Presidencial n.º 136/19 of 10 May 2019 and this phase is a modernisation and expansion of it, adding interoperability between public institutions, integration of databases and better information quality](#), underpinning the Kwenda cash transfer — put at more than 1.3 million households and about 6.5 million people — and the national school-feeding programme. Its delivery systems are financed by a [US\\$27m component of a World Bank social-protection and human-capital operation targeting about 1.5 million households and 7.4 million people](#). What remains unstated is the data-protection basis for a register built to be read across institutions, and any count of who is actually on it.

The electoral register, updating since 15 June against a universe of 16.7 million citizens, acquired its first national enrolment figure in August and it came from the opposition rather than the administration. Four parties [put the count above 730,000 and demanded an independent audit of the electoral database, alleging administrative discretion, uneven deployment of registration brigades and recurring biometric-system failures](#), and said the administration refuses to release enrolment statistics disaggregated by province, municipality and commune. At

provincial level the Lunda-Norte government [reported over 40,000 residents updated and pressed mining-sector workers to register through the one-stop service desks](#). None of the allegations has been adjudicated, and because no official series exists there is nothing to test them against - which is itself the complaint.

Benin

On 16 July the identity agency's director general set out the birth-registration gap and the single-window remedy at ten maternities.

Botswana

Against those two, one registry system entered testing this month. The electoral commission's [elections management system is built and under extensive testing, replacing platforms developed in the 1990s, for deployment at the 2029 general election](#); no supplier, cost or acceptance date is held, and the commission's secretary separately states as personal opinion that Botswana do not want electronic voting machines.

Burkina Faso

An estate-agency register launched on 21 July with a compulsory card applied for and tracked wholly online and commissions capped.

Cameroon

The [national civil-status registry platform was reported deployed in pilot councils on 16 July](#); the source names no councils and gives no target. The one delivery figure on the record for the wider programme comes from outside government: the national human rights commission, [calling for a modernised and interoperable civil registry on 10 August, put birth-certificate cases processed under a World Bank-backed programme at over 49,000](#).

Central African Republic

Against the Bangui memorandum, the cadastre itself has no delivery record: the 2026 medium-term framework carries [FCFA 625,000 for updating the mining cadastre and FCFA 650,000 for a petroleum database](#), FCFA 1,275,000 between them for the year.

Chad

Civil registration is where Chad's month has both its clearest instrument and its largest gap. [48.33 per cent of new births are registered within the three-month legal deadline, with about 2.95m under-fives undeclared and 829,000 pupils in school with no document attesting their legal existence](#). Against that a [six-month campaign to December targets at least a million children from four months to seventeen years across twelve provinces](#), by household enumeration and a schools drive, with community teams using smartphones feeding the biometric register; no enrolment achieved so far is reported, and one account puts the household component in twelve provinces while another says every province. It runs inside a [moratorium signed on 2 February suspending court fees for supplementary birth judgments for that age range until 2030](#) — a four-year legal window around a six-month campaign — whose own text is not held. The civil-registration application has been [deployed since 2021 with no coverage, site count or throughput figure published](#), and new monthly *paper* collection forms were introduced in August to improve transmission of birth, marriage and death data to the centre.

Comoros

The Registre social unique (RSU) reported [62,000 households enrolled as of 10 July 2026](#), a figure the World Bank's Comoros representative, Amada Aida, called the most complete socio-economic database ever built in the country. The registry was created by decree n°20-090/PR of 23 June 2020 and is intended as the reference base for targeting social-protection programmes. No participation rate against a national household count and no completion date is stated in the account. The civil-registry programme beside it was priced rather than advanced: a consultant recruited by the children's fund [put the residual financing need for the reform at EUR 9,009,900 at a presentation in Moroni on 14 August](#), ahead of an international resource-mobilisation mission and a partners' conference. None of it is committed on the record.

Congo

The minister recorded on 10 July that the [regulator has run the postal addressing project for two years and the ministry has not taken it up for deployment](#), his own framing being that without the handover the work has not had the expected impact. The registry that does have a system waiting for it went before the Senate. On 7 August the interior minister [said ministry and municipal staff are themselves among those running networks selling forged civil-status documents, and announced investigations to dismantle them](#), naming the integrated civil-status system as the structural fix; the ministers [set out the platform as the way to centralise birth, marriage and death records](#). Its three modules were validated in February and its deployment is still unfunded, so what changed this month is the case made for it rather than its build state.

Cote d'Ivoire

Civil-registry software is [installed with hardware in every municipal and sub-prefecture civil-status centre for digital recording of births, marriages and deaths, financed by the European Union](#). Supervision is assigned to sub-prefects rather than to registrars, and the reform is framed as anti-fraud rather than as access.

The identification office marked African Civil Registration Day by putting figures and hardware behind the access side of it. The national civil-status system now [covers 699 centres and has digitised more than four million records, and on 11 August the office handed 283 digital birth-registration terminals to health workers in the Tonkpi region](#) to link maternities directly to civil-registry offices, under a programme it calls zero invisible child. The counts are the office's own, and no registration-rate outcome is attached to them.

Djibouti

The same 23 July account reports [birth, marriage and death archives being digitised in parallel](#) with the identity-stack work above, staffing and archive space again the named constraints and no date given.

DR Congo

Business formalisation was inspected on 28 July: the portal proposes a legal form and tracks a file in real time and the application [issues sole-trader attestations in under 48 hours, while full online company creation is not possible](#).

Two further registers were announced as part of a financial-sector package rather than as builds. A [modernised credit-risk registry and an electronic movable-collateral registry are to be built with the central bank, alongside a new deposit-guarantee fund](#), in a World Bank programme to expand financing for small and medium firms that also carries a rollout of 10,000 point-of-sale terminals and agent networks. No instrument, custodian, timetable or access rule is stated for either registry, and no data-protection provision is reported for the credit file.

The registry ground also drew a vendor. A Kenyan platform operator [pitched the digital economy ministry on 12 August on digital company registries, beneficial-ownership traceability and real-time state-revenue tracking](#), citing its own deployments in Malawi and South Sudan; the minister asked officials to continue talks toward a partnership. It is a sales meeting, and the claims in it are the vendor's.

Egypt

On 4 August the state-land regularisation platform was reported at [more than 302,000 applications received against about 1,700 contracts drawn up](#).

Eswatini

On identity, a proposal to [require DNA testing before issuing birth certificates was costed at about E126m a year, roughly 46% of the Home Affairs budget](#) — about E4,300 per test across about 29,400 births.

Gambia

The country published its first unified land policy, and it is the month's clearest statement of intent about a public register. The [National Land Policy 2026-2035 mandates a digitalised National Land Administration System, a centralised Land Information System and digitised land registration](#), alongside new Certificates of Customary Ownership, and carries a costed ten-year implementation roadmap. It is a mandate rather than a build: no supplier, budget line, custodian or start date is stated for either system, and no data-protection provision for the land record is reported — in a year in which the Personal Data Protection and Privacy Act 2025 came into force.

A register the country already runs was disputed in the same week. Opposition parties put it to the electoral commission that [212,095 supplementary registrations had been announced against 179,445 records on the data distributed to them](#), a gap the commission attributed to unverified processing outputs. No reconciled figure has been published, and a presidential election is due this year.

Ghana

Business registration is [in pilot for end-to-end filing from name search to certification with no physical submission](#), integrating with national identification for verification, with a companion beneficial-ownership verification service piloting with banks on a subscription basis. Launch is given only as the coming months.

Guinea

The [terms of reference for the RETSSM movable-collateral registry, opened 27 July under IDA Credit No. 74440GN](#), set the objective as guaranteeing the availability, security, reliability and adoption of an operational registry — with the first work package finalising the institutional, legal and regulatory provisions it needs to function at all.

The register that already works stopped working for the most basic reason there is. A civil-registration officer in Ratoma said on 7 August that the [secured paper the digital birth certificate is printed on had run out, leaving communes across Conakry and beyond unable to issue extracts for about a month](#); his own commune processes all applicants regardless of home commune and holds reserve stock for urgent cases such as exam-result travel and medical need. No ministry statement, restocking date or national count of affected communes is held, and the absence is now recorded as a gap. Officials marking African civil-registration day three days later [named information gaps and material shortages as the remaining barriers to civil-status access](#), the identification office's director general calling for tighter integration between health, civil-registration and statistical systems.

Guinea-Bissau

The register moved without the electorate changing. The electoral support office [handed the updated register to the elections commission in physical and electronic form for the 30 August referendum, recording 966,152 registered voters — unchanged from the last update, having also issued 25,146 replacement voter cards in a 30-day nationwide operation from 13 July to 11 August through 51 brigades covering every region](#). So the month's work was replacing credentials rather than adding registrants, and no audit or de-duplication statement accompanies the handover.

Kenya

The registry movement in the window is a proposal rather than a build. The National Qualifications Framework (Amendment) Bill, 2026 [proposes a national database of qualifications established, maintained and published by the qualifications authority, extending to foreign qualifications recognised in Kenya, with awarding institutions required to notify the authority within 90 days of issuing a qualification](#). What it would add to the register estate is a verification route for a credential, which the base currently has no instrument for. The Bill itself is now on file, [gazetted on 24 July 2026 as National Assembly Bills No. 53](#). Nothing is settled beyond that: it is a bill, with no enactment date, hosting arrangement or access rule on record.

Liberia

Speaking on 21 July, the Posts and Telecommunications Minister said [rollout of a national digital postal address system had begun across all fifteen counties](#), with no completion date or budget line given.

The central bank is preparing a register of a different kind. It announced on 14 August that it is [extending the 2010 movable-assets collateral registry to cover immovable property such as land, buildings and fixed machinery](#), as part of a wider financial-sector reform. No launch date, registration volume, fee schedule or relationship to the land registry is stated.

Libya

On 3 August the interior and labour ministries [agreed in Benghazi to create a unified national database of expatriate workers](#) and a dedicated electronic platform, citing Labour Relations Law No. 12 of 2010 and Law No. 24 of 2023, together with joint ministerial committees and joint inspection campaigns drawing in passport investigations.

Madagascar

The day after the biometric-registration review, the electoral commission [opened a full reconstitution of the electoral roll at Talata Volonondry](#) — a rebuild rather than the routine revision — running four months to 24 November 2026, to produce the single roll for all elections and referendums scheduled in 2027. The trigger is stated: the previous roll drew sustained contestation and is named as a source of tension at earlier polls. Registration runs through five channels, at fokontany level on presentation of a national identity card. The commission states that an unregistered citizen may not observe polling in their own place of residence and may not lodge a complaint or contest results.

Malawi

[About 8,000 landlords were registered for rental income tax.](#)

Mali

A national digital directory of diaspora skills was launched at a ceremony in Washington on 22 August 2026, run by the Malian embassy to the United States and registering professional profiles across economic, administrative, academic, private-sector and emerging fields so that ministries can identify expertise against specific needs. The minister described it as an accreting database whose usefulness depends on take-up and on profiles being kept current; questions at the ceremony went to registration terms and to how the recorded data would be used, and no data-protection basis is stated.

Mauritania

The consular-services platform launched 9 July 2026 [built a unified digital consular registry](#), compiled by diaspora engineers after consultations in 22 countries.

Morocco

The month's registry work is a membership audit rather than a build. The interior ministry [launched a wide screening and update of the membership rolls of collective land communities, with circulars sent to community delegates through local authority officials from 22 August 2026, beginning in two regions and open to extension nationwide](#). Each listed member is to be verified for actual affiliation, legal majority and residence under law 62.17 and its implementing decree, on a single methodology so that criteria stop varying from one community to another.

Namibia

The business and intellectual property authority [offers online name search, name reservation and application-status verification](#), with no transaction or uptake figure published and no publication date on the capture. The civil registration statute is unchanged and was [read by officials on 25 July as permitting institutions to accept either the physical card or its digital version, with disclosure conditional on the holder's consent](#). Its commencement date is not [established](#) and the held record summarises rather than reproduces it.

Niger

Three differently based birth-registration series are now on record and none is reconciled to another. The [WURI-Niger account records that 66% of births are declared](#); the territorial administration ministry [put the figure at 79% against 53.48% in 2022](#) at the launch of the population register's enrolment tour and restated it [at Dosso on 14 August](#); and the same ministry [gave 80% in 2026 against 60% in 2023](#) at the African civil-registration day five days earlier.

That day also produced the first count of how far registration has been computerised: UNICEF's Tahoua office said it had [contributed to computerising 68% of communes nationwide](#), and put the Tahoua region's own registration rate up from 69% to 75%, with four communes still uncovered. It is UNICEF's account of its own contribution; no ministry count is held.

The register's public campaign ran through the window. It [opened at Tahoua on 11 August](#) to make the governing legal texts and the intermediate enrolment operations known, and was [launched officially at Dosso on 14 August](#), where the interior ministry set out the statutory basis — ordonnance n°2026-21 on the civil-status regime, décret n°2026-242 creating the ANEI and décret n°2026-243 approving its statutes — and described the register as a central secure database assigning each citizen a unique identifier, interoperable with civil-status management, the biometric national card and travel documents.

Also on 29 July, the Diffa regional civil-status directorate reported [173,109 birth certificates issued between July 2023 and July 2026](#), of which 109,382 were timely declarations, with the timely rate rising from 56% in 2022 to 88.04% in 2025.

On 29 July the foreign minister closed the second diaspora forum by [undertaking to build a bank of priority diaspora projects and a data bank of diaspora experts](#); no enabling instrument, custodian, data-protection basis or timetable was named.

The population register's public campaign is running ahead of the register itself. A national civil-status and identification sensitisation tour [reached Tillabéri as its third region](#), with officials citing the 2026 civil-status ordinance and describing a forthcoming national population register whose first enrolment phase opens at Niamey ahead of a 2027 rollout to other regions. No enrolment target, budget, supplier or start date accompanies it, so the campaign precedes anything a citizen can yet enrol in.

Nigeria

[Civil registration](#) went nationwide from 1 July on a platform run as a public-private partnership, a private contractor carrying availability and security duties over the register of births and deaths.

Rwanda

Business registration moved entirely online in January and now runs at [incorporation in 24 to 72 hours at a cost among the continent's lowest](#). The prior state is inferred from the source's own wording rather than stated in it.

The civil register acquired an outside account of what it now carries. Case studies published on 13 August [describe civil registration as digitised and integrated with the national identity system, giving real-time identity verification and data sharing across hospitals, government agencies and businesses and supporting access to around 200 services, on a network of thousands of registration points that replaced a centralised, travel-dependent process](#); the same account puts [about 85% of public services digitised as at 2024](#). The figures are those of the advocacy organisation that has worked on the system since 2016, and no government statement of them is held.

Sao Tome and Principe

[The National Electoral Commission opened a 1–8 August 2026 public-consultation window](#) on a provisional roll of 146,510 registered voters, ahead of the 27 September elections, after finding the automatically-compiled roll had omitted 1,860 eligible voters through a process failure — alongside 1,976 newly-eligible 18-year-olds added in the ordinary course. Address and polling-station changes can only be made in person or via WhatsApp; there is no online self-service channel, a gap the roll's own automatic-derivation design has not closed. [The Direção da Proteção Social reported the Cadastro Social Único covered about 12,500 households](#), roughly a quarter of the population, and stated explicitly that registration does not equal a poverty diagnosis — a distinction the agency drew unprompted, suggesting the figure was already being read the other way in public discussion. This update follows a mass population-registration exercise the government ran in January and February 2026, though no source held gives that earlier exercise's own separate coverage figure for a direct year-on-year comparison against it.

Senegal

On 28 July an audit mission [launched across 74 communes, 59 already audited and fifteen selected on risk analysis](#); no findings are stated. On 30 July the mines ministry and the deposits fund [signed a convention commissioning professional cards and a nationwide database of artisanal gold miners](#), with no enrolment target, host or data-protection provision reported.

The digitisation the audit is measuring has its own figures. The civil-status agency [puts 471 of 629 centres digitised, 43% activation of the citizen portal and 15,352,830 records centralised on pilot data at 13 July](#), with a remediation push at Kaolack from 10 to 20 August before extending to Kaffrine and Tambacounda. The figures are the agency's own and no national completion date is stated; the gap between three quarters of centres digitised and two in five citizens activating the portal is the one the remediation is aimed at.

Sierra Leone

The registry the state has least of is the one for deaths. The national public health agency [opened supplier engagement on 7 August for an Integrated National Digital Mortality Surveillance, Registration and Certification System](#), with the health ministry and the civil registration authority, aligned to WHO ICD-11 and built on a national health information hub established in January 2026 — against a gap in which only 13.4% of deaths are fully registered. No cost, supplier, timetable or coverage target is stated.

Two days later the civil registration authority and its partners marked African civil-registration day by [calling for an integrated, decentralised, digital birth-to-death registration system, with UNICEF costing US\\$1.16m of strengthening needs over three years](#), and the electoral commission and the central bank naming the 2028 elections and financial inclusion as what depends on it. What a citizen pays for the document at the end of that chain is contested: a civil-society account [questions whether people can afford the national identity card at NLe140 now that it is central to linking identity numbers to SIM registration](#).

South Africa

Home Affairs reported [377,060 identity numbers still blocked](#) and stated it could not trace approximately 400,000 of those affected, against a court deadline extended to March 2027.

South Sudan

The same World Bank diagnostic put [approximately 90% of births going unrecorded](#), recording that civil registration is largely non-operational.

On 28 July the civil-registry directorate [set out a plan under which health facilities would notify births rather than issue certificates, the directorate would become the sole issuing authority, births, deaths, marriages and divorces would sit in one national database, and death registration would become compulsory](#). It is stated as intent only: no law, budget, timetable, vendor or platform is named.

Sudan

[The traffic police reported a restored vehicle-registration register on 20 July 2026](#): 2,124,750 registered vehicles and 3,161,599 driving licences, credited to backup data centres built inside the states and abroad; the Salem e-renewal service now serves 16 countries, up from six, and a laser-secured ownership-transfer platform, Ansab, is being introduced.

Tanzania

At an agricultural exhibition on 4 August the e-government agency stated that [more than 6,000 cooperative societies are registered](#) on its management system. No user counts, spend or timeline were given.

Birth registration gained a fourth estimate. The constitutional and legal affairs minister [put under-five registration at 65%, against 55% in 2020](#), attributing the rise to sustained investment and awareness campaigns. The base already holds estimates of [about 60% for 2022](#) and a [five-year range of 61 to 76%](#) on different bases, and does not reconcile them to one series.

Togo

The [second national birth-registration catch-up campaign opened at Agbandi on 31 July](#), targeting a further 6,461 children across 25 communes and taking the two campaigns to 11,461. The same report [carries the funder's figure of nearly 7,400 for the same campaign](#), and the two are not reconciled.

Tunisia

The [business register went fully digital with access requiring a digital identity](#) for individuals, companies and regulated professions, paper filing discontinued and electronic documents given the same legal value as paper, from 1 July 2026.

At one hospital a first national births-declaration platform had registered 202 births as at 27 July 2026, assigning an identifier automatically at birth and wiring it into civil-status registers and social-affairs platforms.

Uganda

The alien register issued its first cards. The identity authority [began issuing Alien ID cards to legally resident foreigners, having enrolled 1,875 since registration opened on 10 June, with the US\\$100 card required for SIM registration, banking and business access but conferring no vote](#). About 2m registered foreigners are in scope and roughly 1.95m of them are refugees or asylum-seekers, so ten weeks of enrolment has reached under a tenth of a percent of the population the fee falls on. No waiver, instalment route or alternative for a resident who cannot pay is published, which leaves the card a precondition for a bank account and a SIM with no stated way round it.

Zambia

A [national carbon registry went live on 8 August](#) in its first phase, with every carbon-credit transaction in Zambia required to pass through it, administered by the environmental agency and linked to the national monitoring system and the UNFCCC accounting platform; a second phase is to add voluntary-market registration. No address, operating rules, access terms or naming of the legal instrument is published, and the counts given at the launch — more than 90 projects at stages of approval, and bilateral agreements with Sweden, Norway and Switzerland — are the permanent secretary's own. A [national spatial data infrastructure policy and portal were launched](#) on open-source software, cited as underpinning land mapping and artisanal mining licensing, with no dataset count, licence terms or usage figure held and the policy document itself not held. The land administration system is unchanged, and the Minister of Lands told Parliament that its [predecessor ran with no maintenance contract from 31 March 2022, creating a conduit for corruption](#).

Zimbabwe

The same registrars-general meeting heard that all ten provinces and 63 districts are computerised for civil registration but only more than 20 of 209 sub-offices ([meeting account](#)).

The transfer of voter registration and roll management from the electoral commission to the registrar-general, begun under the third constitutional amendment, is under way, with no date, transition plan or safeguard stated ([Senate account](#)).

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
