

PROGRESS REPORT

Guinea: progress report, September 2025 – September 2026

Edition of 2026-09-08 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the base tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the base holds nothing on that indicator. **That is a statement about this base, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-09-01 to 2026-09-08.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Digital transformation strategy	Digital is pillar three of the national development programme , launched in November 2025 against a target of 20 per cent of gross domestic product. The pillar was launched at a continental summit the country hosted, digital having previously been named one of five pillars without a target of its own (pillar launch). No implementation plan, budget line or interim milestone for the target is held, so the base records an ambition stated at a summit and nothing measuring progress toward it.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	ICT strategy	The digital portfolio lost its substantive minister by decree in August 2026, six months after the ministry was merged and reshaped. The ministry was formed by merger in February 2026 and the minister held it unchanged through the July 2026 reshuffle (formation, reshuffle). He was dismissed by presidential decree made public on 21 August 2026 with no reason given, the ministry's secretary-general appointed interim head; named successors in circulation are publications' own speculation (dismissal, succession talk). A National Assembly committee on communication and information technology was constituted and held its first working session on 7 August 2026, naming mobile money, social-media regulation and network security as priorities on its chair's own statement, with no work programme or timetable published (committee).	REGRESSED
Strategies, plans and policies	Broadband strategy	Fibre-to-the-home is restricted and shared-Wi-Fi activity barred, contested by the operators' union with a strike threat. The union threatened to strike on 21 May 2026 over the restriction and the shared-Wi-Fi regime (dispute). The regulator had confiscated unlicensed equipment from resellers following a communique of 30 March 2026, which predates the dispute on the record (enforcement). No broadband plan, coverage target or licensing decision resolving either question is held, so access policy reaches the base as a licensing dispute rather than as a strategy.	REGRESSED
Strategies, plans and policies	Data storage / cloud strategy	Sovereign management of the country-code domain was reinstated in September 2025, alongside the first national data centre. The domain passed back under national management in September 2025 (sovereign management). No cloud policy, hosting rule or data-localisation instrument accompanies it, so sovereignty over infrastructure is asserted through a naming registry and a building rather than through a policy.	ADVANCED
Strategies, plans and policies	Data interoperability framework / roadmap		NO EVIDENCE
Strategies, plans and policies	AI strategy	A national AI roadmap for 2026-2035 was validated on 20 December 2025, in three phases. The ICT ministry announced on 20 December 2025 the validation of a national AI roadmap for 2026-2035, following a workshop with UNDP and built on an AI Landscape Assessment diagnostic the ministry says makes Guinea the first francophone country to adopt the AILA methodology. It runs in three phases: institutional, regulatory and technical foundations covering data, skills and infrastructure; progressive integration of AI into public services; then regional positioning on responsible use. The roadmap's own text was not reachable, so its legal status, wording and indicators cannot be read off the instrument, and the announcement itself was made on the ministry's Facebook page.	ADVANCED
Strategies, plans and policies	Data localisation policies		NO EVIDENCE
Strategies, plans and policies	Data governance policy	A national data governance strategy went into drafting on 19 June 2026, with no adoption date stated. The minister opened a stakeholder-engagement workshop on 19 June 2026 to draft a Strategie Nationale de Gouvernance des Donnees, led by the DNTIEN and covering data quality, security, interoperability and responsible use, framed within Vision Simandou 2040. This is the opening of a drafting process rather than an adopted framework, and the ministry states no adoption date.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Open data policy		NO EVIDENCE
Legislation and regulation	Data protection legislation	The 2016 cybersecurity and data-protection statute covers processing by individuals, firms and public institutions, and is held only as an image scan. The agency publishes it as a 57-page image-only scan with no text layer, so its provisions are the agency's summary rather than the statute's own words, and no promulgation date is published (the statute). It reached the base through a summit profile rather than through the gazette (profile). No implementing decree, supervisory authority, registration duty or enforcement action under its data-protection half is held.	NO CHANGE
Legislation and regulation	Cybersecurity legislation	The first conviction under the 2016 statute came in August 2026, and it ordered the deletion of the defendant's social-media account. A court of first instance convicted an activist and entrepreneur of insult and defamation by means of a computer system on 19 August 2026, sentencing him to six months of which five were suspended and a 40 million GNF fine, and ordering the deletion of his account; the conviction rests on article 363 of the penal code and article 29 of the cybersecurity law (conviction). The prosecution had sought a year and argued a conviction would set an example to other social-media users; the defence, which asked for acquittal, said it would consider an appeal. Deletion of an account as a criminal penalty is something the base holds no other instance of. The statute's cybercrime half reaches offences on national territory and those requiring collection of electronic evidence, again on the agency's summary rather than the text (the statute, in application). A presidential decree read on national television on 21 May 2026 made security audits compulsory every three years for every public and private body carrying on electronic transactions, an exceptional audit after a major incident, and a certificate of conformity on a passing audit; foreign firms serving Guinean residents are brought within it (decree).	ADVANCED
Legislation and regulation	Legislation covering digital id		NO EVIDENCE
Legislation and regulation	Digital payments legislation	There is no payments statute, and the national payment council that would sit under one is at terms-of-reference stage. Both the payments law and the council are at terms-of-reference stage under the donor programme, the law awaiting the lender's no-objection; the position comes from the central bank's own project register, which is undated and whose latest dated entry is January 2025 (project register). On virtual assets the central bank issued a warning rather than a regime: it states it has granted no licence or authorisation to any entity for crypto-asset trading or online financial placement, sets out seven warning signs of fraudulent offers, notes that registration with a foreign authority is not a domestic licence, and reserves the right to refer illegal fund collection, money laundering and fraud to the courts (communiqué). What stands instead of a statute is central bank regulation: instructions, conventions and rulebooks covering real-time gross settlement, cheque and bill clearing, Swift and the clearing house, among them Instruction No 74 of 9 October 2017 on the gross settlement system (regulatory framework). The page publishing them is an index, each instrument behind its own link.	NO CHANGE
Legislation and regulation	Legislation enabling data interoperability		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	AI legislation / regulations		NO EVIDENCE
Legislation and regulation	E-commerce legislation	An electronic signature decree signed in August 2026 completes a frame that has rested since 2016 on a statute the base can only read in summary. The 2016 statute frames electronic signature, digital archiving, certification of information systems, consumer information duties in online commerce and the related fraud and forgery offences; the agency publishes it as a 14-page image-only scan with no text layer, so the provisions are its summary rather than the statute's words (the statute). The 2021 implementing decree gives the telecommunications regulator supervision of electronic transactions including mobile money, with security oversight, data collection, administrative police powers and the power to levy charges on payment traffic; providers must hold a domestic or generic domain, a dedicated site and a secured transaction facility, and price in local currency inclusive of taxes and delivery (decree). The August 2026 decree gives an electronic signature the same probative force as a paper writing where it is authentic, unfalsifiable, non-reusable, unalterable and irrevocable, extends it to administrative, private-sector and person-to-person acts, and imposes duties on certification services; no certification authority is yet accredited on the record (signature decree). The regulator's mandate was widened again in May 2026, with powers of audit, control and certification over the information systems used in electronic transactions (widened mandate).	ADVANCED
Legislation and regulation	Statistics legislation		NO EVIDENCE
Legislation and regulation	Access to information legislation	The online legal gazette is free and carries more than 1,100 journals and 6,000 texts, and its index stops in April 2025. The gazette has been online and free to access since at least June 2025 (gazette). An acquisition attempt in August 2026 found the index carrying issues only to April 2025, so a publication channel that exists has stopped being current, and no access-to-information statute, request procedure or appeal route is held beside it.	NO CHANGE
Data protection	Data protection authority		NO EVIDENCE
Data protection	National data protection readiness		NO EVIDENCE
Regional collaboration	Regional policy collaboration	The regulator chairs the African council of regulators, and the continental summit it hosted in November 2025 has closed. Its director-general presided at the council's fifteenth meeting alongside the summit (chairmanship). The summit ran at Conakry from 12 to 19 November 2025 with 42 states and 14 memoranda, and is recorded closed (summit). None of the fourteen memoranda is separately held, so what survives the summit in the base is the hosting and not its output.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	Regional legal harmonisation	The continental cyber and data convention was ratified by decree in July 2017, and the country took the presidency of the regional audiovisual regulators platform in August 2026. The ratification decree's own gazette publication is held, alongside the promulgation decree for the authorising law, the law itself remaining unheld and cited only by its long title (ratification, promulgation). The African Union's own status list records ratification or accession in July 2018 and deposit in October 2018, and the two sets of dates measure different acts. No domesticating instrument or alignment review has followed in the nine years since. 2026-08-31 — the 12th General Assembly of the audiovisual regulators platform of the eight monetary-union states and Guinea opened in Conakry, and its presidency passed to Guinea, the head of the national communications authority taking its leadership. The two-day agenda was harmonising the legal and technical tools for regulating social platforms against cybersecurity and social-cohesion risks, including AI-generated disinformation and deepfakes, and strengthening the standing of regulators over digital platforms. The Justice Minister opened it arguing for a framework that protects without stifling and regulates without censoring, and calling cybersecurity a question of sovereignty rather than a technical one. No harmonised instrument, timetable or funding is announced, so what the base holds is a presidency and an agenda.	ADVANCED the country took the presidency of the regional audiovisual regulators platform on an agenda of harmonising platform regulation
Regional collaboration	Shared regional infrastructure	A free-roaming protocol with Sierra Leone was signed in November 2025, on a border interconnection raised to 100 Gbps. The protocol was signed at the regulators' council meeting; no implementation date or tariff is on file (protocol). The backbone interconnection between the two countries was raised from 42.5 Gbps to 100 Gbps under a 2024 bilateral pact (interconnection). The capacity is the base's only measured piece of regional infrastructure, and no traffic figure across it is published.	ADVANCED
Regional collaboration	Cross-border data transfers	Traveller biometrics synchronise outward with INTERPOL, IOM and United States customs systems from a border system donated in 2024. A secure personal identification comparison and evaluation system was inaugurated at the international airport in Conakry on 22 November 2024, a United States embassy donation, and it synchronises watchlist and immigration data with the IOM's MIDAS, INTERPOL and the United States automated targeting system (inauguration). The same embassy approved US\$1.8m for an IOM project, launched in September 2024, to install MIDAS control terminals at six land crossings (border terminals). Nothing governing what leaves the country in these exchanges is held: no data-transfer agreement, adequacy finding or oversight arrangement is on the record.	NO CHANGE
Standards	National interoperability standards		NO EVIDENCE
Standards	National quality standards		NO EVIDENCE
Standards	Adoption of international standards	An open government-stack standards workshop was held under the donor programme, with no standard adopted on the record. The workshop is the whole of the record on standards adoption (workshop). No conformance profile, building-block selection or compliance requirement has followed it, though the two interoperability platforms later presented to the prime minister are built in that programme's frame.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	Non-governmental contribution to national policy		NO EVIDENCE
Public debate and participation in policymaking	Open discussion of government policy	Facebook, YouTube and TikTok have been restricted since 28 July 2026 with no authority acknowledging it and no official explanation held. The blocking was measured from 28 July and was still running on 7 August 2026, while the President was abroad (measurement, still running). A consumer union additionally reports one messaging service restricted and bandwidth broadly reduced for several months, with internet providers and mobile operators stating the decision was not theirs (union account), and businesses report disruption (disruption). A total two-hour national outage on 7 August 2026 was traced to the state landing-station operator, whose officials and the regulator both declined to explain it (outage).	REGRESSED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	Sustainable domestic financing of digital transformation	A 3 per cent compliance fee on foreign digital services was decreed in May 2026 to finance a new digital sovereignty fund. The fee runs at a flat 3 per cent for twelve months and then 1.5 to 7 per cent by service category, with an exemption below 250m GNF of annual taxable revenue, given in the source as roughly US\$28,600 (decree); a six-month transition precedes enforcement (decree). The same decree creates a digital sovereignty fund financed primarily from the fee, with no capitalisation, governance or first disbursement published, and a digital analysis and regulation platform to monitor foreign digital services, which is not on record as operating. No domestic budget appropriation for digital transformation is held at any date, so a hypothecated levy on foreign providers is the only financing instrument the base can see.	ADVANCED
MoUs and other agreements	Strategic relationships	An international card network opened talks with the finance ministry in April 2026 toward a central-bank memorandum. Nothing is signed on the record (talks). It is the only strategic commercial relationship in the base that is not a construction contract or a donor credit, and no scope, value or timetable is published for it.	ADVANCED
New investments	Mobilisation of non-state finance	Tracked non-state finance stands at US\$543m across five deals for 2023 to 2025, compiled rather than published. The aggregate is drawn from the deal records held rather than from any published statement, and carries no source of its own (aggregate). No investment promotion figure, private capital commitment or sector-level series exists against which to read it, so the number is a floor on what has been found rather than a measure of what has been raised.	NO CHANGE an aggregate the wiki compiled rather than a published figure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	Development-partner project financing	The US\$60m regional digital credit is under implementation, with a rescue consultancy tendered for its collateral registry in July 2026. The programme carries the payments law and the payment council at terms-of-reference stage, and tendered a rescue consultancy for the movable-collateral registry on 27 July 2026 (programme). It is the only donor operation the base holds in implementation for the sector, and it is also the vehicle for the interoperability platforms, the standards workshop and the registry, so a delay in it stops several workstreams at once. A second operation is at application stage: the government asked the World Bank Group on 28 April 2026 for a US\$50m credit for a financial-sector project under the economy, finance and budget ministry (financing application).	ADVANCED

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Mobile penetration	The state holds 87.5 per cent of the second mobile operator, transferred at the end of 2024, on about 3m subscribers. The transfer was made official on 30 December 2024 (transfer). No regulator subscription series, penetration rate or market-share figure is published at any date, so a single operator's subscriber count carried in a transfer report is the whole of the connectivity measurement the base holds.	NO CHANGE
Connectivity	Internet usage		NO EVIDENCE
Connectivity	Mobile affordability	Mobile internet cost was reported down 25 per cent over 2025 in the ministry's sector review, with no baseline price published. The reduction is ministry-reported and carries no starting price, tariff basket or basis of comparison (sector review). No regulator tariff series, affordability index or income-share measure exists against which to read it, so the direction is stated and the level is not.	ADVANCED on the ministry's own figure
Connectivity	National fibre backbone	The backbone's first loop went from 200 to 400 Gb/s on 20 May 2026, with 600 Gb/s targeted by year end. SOGEB announced on 20 May 2026 that the first loop of the national fibre backbone had been raised from 200 Gb/s to 400 Gb/s with Huawei's technical support, the second upgrade in eighteen months after December 2024's step from 50 Gb/s to 200 Gb/s — a cumulative 700% increase — with both partners targeting 600 Gb/s across the whole infrastructure by the end of the year. The same account carries the regulator's traffic series, mobile internet traffic rising from 23.98 million GB in the second quarter of 2021 to 118.86 million GB in the second quarter of 2025. No utilisation figure against the upgraded capacity is held.	ADVANCED
Connectivity	International internet bandwidth	The single 2012 landing is saturated, and agreements are now signed or agreed for a second and a third cable. The cable has been the country's only landing for about thirteen to fifteen years and is named saturated (sole landing). A construction and maintenance agreement was signed in August 2026 to land a Mediterranean-anchored system at Conakry, with the state-majority landing party alongside a mobile operator; no timeline is given for the 8,700km, 19-landing-site system (second landing, agreement). Co-investment in a third system was agreed in Paris in June 2026 with no landing date published (third landing). No capacity figure, price or utilisation is published for the existing link or the two planned, so saturation is asserted and not measured.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Internet Exchange Points	The exchange point's executive secretary represented the country at the fifteenth continental peering forum, and the base holds no traffic or member figure for the exchange itself. The national internet exchange point was represented at the fifteenth African peering and interconnection forum in Kigali from 17 to 20 August 2026, supported by the communications, digital economy and innovation ministry through a regional digital integration programme, with the stated aim of strengthening its place in the continental interconnection network (forum). Attendance is what is recorded. No peering agreement, member count, traffic figure or local-traffic share is published for the exchange point, so whether domestic traffic stays in the country is not established.	ADVANCED
Connectivity	Satellite broadband licensing and availability	One satellite provider is stated not to be recognised in the country, and no licensing decision is on file. The operators' union made the statement in May 2026 in the course of its dispute over access licensing (union statement). No authorisation, refusal, framework or enforcement action on satellite broadband is held at any date, so the position is a third party's characterisation rather than a regulatory decision.	NO CHANGE
Data Storage	Local data centre capacity (all providers)		NO EVIDENCE
Data Storage	Local data centre capacity (national providers)	A national data centre certified to the third tier was inaugurated at Conakry in September 2025, the first in the country. It is in service and externally certified (inauguration). No rack count, power capacity, occupancy, tenant list or hosting policy is published for it, so the base records a building and nothing about what runs in it.	ADVANCED
Data Storage	Off-site backup capacity		NO EVIDENCE
Energy	Sufficient energy and water for data centres		NO EVIDENCE
Energy	Grid reliability		NO EVIDENCE
Energy	Rural electrification		NO EVIDENCE
Technical Capacity	Robustness of government hardware and software	A decrees and orders management tool and a mission-order system went into use, while the settlement system's message migration is stalled. The President stated on 14 August 2026 that he would personally oversee the decrees tool to speed administrative processing, tied to the national development programme; no throughput figure, custodian or publication rule is stated, and personal oversight by the head of state is not an institutional control (decrees tool). The mission-order system was launched on 13 August 2026 to control costs and improve accountability, with no custodian, coverage, cost baseline or saving target stated (mission orders). The real-time settlement system's migration to the international messaging standard has not been made, held by unpaid invoices to the supplier and prolonged customs clearance after a second equipment lot was delivered in January 2025 (project register). The central bank has an international tender open for a resilient messaging infrastructure, single lot, financed from its own resources, with bids due 31 August 2026 (tender, notice).	MIXED two administrative tools were launched while the central bank's core settlement migration stalled on unpaid invoices
Technical Capacity	Local capacity to maintain, manage and develop government systems		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Cybersecurity	National cybersecurity readiness	The country's index score rose from 20.53 to 56.55 between 2020 and 2024 while the agency behind it stays undocumented. It is named as an established agency in a summit host profile and no founding instrument for it is held (agency). No incident statistics, response team, sector designation or audit programme is published, so the agency that publishes the country's cybersecurity statute as an image scan is itself known only by name. The International Telecommunication Union's index put the country at 56.55 of 100 for 2024 against 20.53 in 2020, scored on legal, technical and organisational measures, capacity development and cooperation (index). The publisher's free tier carries those two values only; the pillar breakdown and the intervening years are paywalled.	ADVANCED on the index score while the agency behind it stays undocumented

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	National data exchange system	X-Road is named as the national interoperability platform and described as in progress rather than in production. The Prime Minister was shown the state of the national e-service portal and of X-Road, the national interoperability platform run by ANDE, whose function is to let public information systems communicate so users need not supply the same information repeatedly; he asked that the tools improve traceability and reduce fraud, and announced the forthcoming creation of an interministerial committee on state digitalisation. This is the first located account naming the platform. No decret, arrete or inter-agency protocol establishing it was found, and it is described as in progress, not in production.	ADVANCED
Data Exchange	Use of digital id in other systems		NO EVIDENCE
Data Exchange	Interoperability of health systems	A One Health steering committee signed a four-ministry data-sharing protocol in August 2026, on a health system still at workshop stage. Five health facilities in the Mamou and Dalaba districts now run a hospital information system with interoperability to the national health platform, and the Dalaba prefectural hospital reports consultations up (report). Five facilities is the extent the base can state. The health, higher education, environment and livestock ministries signed a protocol for shared data, joint epidemiological surveillance and coordinated response to zoonotic and environmental risk; no platform build, data-sharing rule, custodian or protection standard for the shared health and animal data is stated (protocol). The health information system's own interoperability work is a Conakry workshop and a maternity register piloted in 15 centres (workshop).	ADVANCED
Data Exchange	Interoperability of education systems		NO EVIDENCE
Data Exchange	Interoperability of social protection systems		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	Robustness of system	A unique personal identification number is stated to be being put in place, with no instrument, issuing authority or format on record. The statement was made by the territorial administration minister at a commemorative event in August 2026, alongside digitalisation of the civil-status system, and is not an instrument (statement). The unified social register has meanwhile operated since 2019 without a unique identifier, which is the concrete cost of the number's absence (social register).	ADVANCED
Digital Identity and CRVS	Registration of entire population	Biometric enrolment opened in one commune in March 2026 on a first phase of 2,000 certificates, after the predecessor project closed with about 8,000 identities. The earlier foundational project closed on 28 June 2024, two years early, having issued about 8,000 unique identities (closure). Enrolment for biometric birth certificates and national identity opened in Sanoyah commune as phase one (enrolment). Issuance was decreed free in February 2025, and the state contractor alleged in July 2026 that unprovided-for fees and pay-for-priority were being taken at enrolment centres, with no ministerial response on file (fees alleged).	ADVANCED
Digital Identity and CRVS	National maintenance of id and credentials systems		NO EVIDENCE
Digital Identity and CRVS	Authentication		NO EVIDENCE
Digital Identity and CRVS	Digital id from birth	Birth registration was put at 72 per cent for 2025 from 54 per cent in 2022, on a base where communes ran out of secured paper. The figures are the territorial administration minister's own, given in a ceremonial statement with no statistical source named (minister's figures). A civil-registration officer said on 7 August 2026 that the secured paper the digital birth certificate is printed on had run out, leaving communes across the capital and beyond unable to issue extracts for about a month; his own commune processes all applicants regardless of home commune and holds reserve stock for urgent cases (stockout). No ministry statement, restocking date or national count of affected communes is held.	MIXED the registration rate rose while the paper the certificate is printed on ran out
Digital Identity and CRVS	Interoperability of birth registration and digital id		NO EVIDENCE
Digital Identity and CRVS	Use by other systems	A biometric civil-service payroll audit confirmed about 130,000 of about 277,000 registered staff and reports 233bn GNF saved since 2024. The system has been in use since 2024 with no audit result published before this one (audit). The saving is about US\$26.9m at the reported date and is the government's own claim (audit); no methodology, payroll series or independent verification is held, and the audit confirmed under half of those registered.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	Governance role of central bank	NimbaPay launched on 22 July 2026 as the national instant and interoperable payment platform. NimbaPay was officially launched on 22 July 2026 under the Prime Minister's patronage, operated by the Guineenne de la Monétique under the central bank, letting any user send and receive money instantly between a bank, a microfinance institution and an electronic-money establishment. The governor said fragmented systems had been penalising inter-institutional transfers, and named digitisation of state payments and cross-border flows as the next steps. No transaction volume or participant count is held for the platform since launch.	ADVANCED
Digital Payments and Fintech	G2P functionality		NO EVIDENCE
Digital Payments and Fintech	Revenue collection	A public-payments gateway launched in December 2025 for state administrative fees by mobile, alongside social contributions at about 60 per cent online. The gateway entered service on 22 December 2025 (gateway). The social-security platform carries about 60 per cent of contribution receipts (contributions). No collection volume, value or fee arrangement is published for either, so the share of state revenue collected digitally is unmeasured.	ADVANCED
Digital Payments and Fintech	B2B and B2G functionality		NO EVIDENCE
Digital Payments and Fintech	P2P, P2G and P2B functionality	A national instant payment system opened in July 2026, interoperable across banks, electronic-money institutions and microfinance. It was built in 127 days on an open-source core by the national card company with a continental payments foundation and a technical partner, and went live nationwide on 22 July 2026 (launch, opening). The separate national switch project, memorandum signed in December 2024, is not operational as a switch in its own right (project register). No transaction volume, value or participant count has been published in the month since the system opened. Bank-to-wallet movement predates the instant payment system: an operator's account-linking service had seventeen banks connected by December 2025, giving balance enquiry, mini-statement and transfers in both directions, though a customer must go to a branch to link the two (account linking).	ADVANCED
Digital Payments and Fintech	Population uptake	Account access rose from 4% of adults in 2011 to close to 36% in 2024 on the central bank governor's account. At the NimbaPay launch on 22 July 2026 the central bank governor put access to financial accounts at 4% in 2011 and close to 36% in 2024, attributing the rise to electronic money. The figure is the governor's own, given in a launch speech; the base holds no survey series behind it and no breakdown by sex, region or income. The regulator's own count puts mobile financial services subscribers at 3.2 million at end-June 2025 against 1.9 million in June 2022, with one operator holding 92 per cent of them and the second 8 per cent (subscribers).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	Cross-border functionality	The country is a participant in the pan-African settlement system with no transaction recorded, and the regional payment project was withdrawn. Participant status carries no recorded transaction on the platform (project register). The regional integrated payment project was withdrawn from the central bank's 2025 strategic priorities after a single evaluation meeting in July 2024, with no visibility on next steps. Both readings come from the same undated register, so the country's cross-border position is established entirely by one internal document.	NO CHANGE
Digital Payments and Fintech	Consumer protection	A consumer union published twelve conditions on the new instant payment system the day after launch, and they are unanswered. Neither the regulator nor the operator has responded on the record (conditions). No complaints procedure, redress mechanism, tariff transparency rule or dispute statistic exists for digital payments anywhere in the base, so an unanswered civil-society list is the whole of the consumer-protection record.	ADVANCED
Registries	Population register		NO EVIDENCE
Registries	Civil register	An administrative census delivered secured civil-registry inputs to the population register, which is now the single official source for the electoral roll. Enumeration ran from 15 April 2025 and its outputs feed the population register and the census (census). A convention between the elections directorate and the civil-registry office institutionalised data sharing from the register to the roll, making it the roll's single official source (convention). No registration completeness figure, record count or update rule for the register itself is published.	REGRESSED
Registries	Address register		NO EVIDENCE
Registries	Business register	The movable-collateral electronic registry has software built and none of the institutional, legal or regulatory provisions it needs. A rescue consultancy was tendered under the donor programme in July 2026, opening on the 27th and closing on 17 August (rescue tender). Its security posture and user base are also not in place, so a system that exists as code has no legal effect, which is the clearest instance in this ledger of a build running ahead of its statute.	NO CHANGE
Registries	Social protection register	The unified social register has operated since a 2019 decree without a unique identifier. It was created by decree in October 2019 and its position is unchanged (register). No beneficiary count, coverage figure, update cycle or link to the civil registry is published, and the absence of an identifier is what the number now being announced would have to fix.	NO CHANGE
Registries	Electoral register	The permanent biometric electoral file held 6.95m electors across 23,681 stations for the May 2026 coupled elections. It stood at 6.77m at the September 2025 referendum (earlier file) and at 6.95m with 23,681 stations by April 2026 (current file). It is the base's most precisely stated register, and its precision comes from an election timetable rather than from a registry publication.	ADVANCED
Registries	Tax register		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	Land register	A first phase of the Systeme d'Information Foncier covering Conakry and thirteen towns was agreed in October 2025. The urbanism minister and Geo Consult International set the terms of the first implementation phase of the Systeme d'Information Foncier, covering Conakry and thirteen other towns, on five pillars: high-resolution aerial imagery, a structured parcel plan for Conakry, a multi-actor land survey campaign, the system itself, and the supporting technical infrastructure and training; financing for a national phase was under discussion with the Islamic Development Bank. Separately, mapping of State agricultural land began in Boke, Conakry, Kankan and Kindia on 6 October 2025 under the agricultural land reform, centralising areas and coordinates in a national database connected to a future e-Foncier rural platform. Both are first phases: no parcel count, coverage figure or completion date is held for either.	ADVANCED
Sectoral management information systems	Health	A private platform is deployed in 19 hospitals with more than a million users, and a blood-supply platform coordinates across the region. The hospital platform runs on a self-financed model and is being extended to Chad, the Democratic Republic of the Congo and Morocco; the figures are a private academy's own, with no ministry acknowledgement, patient-data protection arrangement or interoperability with the national health information system stated (hospital platform). A platform founded in 2022 coordinates blood donation and blood-bank logistics across West Africa from Guinea, to stop units expiring at one facility while another is short; no facility count, transfer volume, ministry relationship or health-data protection arrangement is stated (blood platform). Both are private, and the state's own health information system is at workshop and pilot stage. The state's frame for this is a national digital health strategy adopted for 2021 to 2025, co-financed by the European Union with German cooperation support and prefaced jointly by the health and digital economy ministers (strategy). Its period has ended and no successor is held.	ADVANCED
Sectoral management information systems	Education	A national admissions portal carries the public higher-education system and private institutions' programmes. The portal lists six universities, ten higher institutes and one higher school on the public side, alongside private institutions and their degree programmes, searchable by keyword (portal). It is an admissions layer: no student information system, enrolment figure, transcript service or published statistic sits behind it on the record.	NO CHANGE
Sectoral management information systems	Social protection		NO EVIDENCE
Sectoral management information systems	Justice	Fingerprint identification is automated for the one forensic department in the country, on the supplier's account. Criminal investigation ran on a paper fingerprint database of 7,500 records worked through by hand by a small number of trained forensic experts before an automated biometric identification system was built for it (case study). The account is the supplier's own, quoting the national police director-general; no ministry statement, deployment date, current database size or case-throughput figure is held. Nothing on case management for prosecutions or the courts is on the record, so the automation the base can see reaches identification and stops there.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	Tax		NO EVIDENCE
Sectoral management information systems	Customs	A foreign-trade single window takes formalities online, interconnected with the banks, the central bank, customs, the port and the shipping lines. The platform's director-general told a forum on 26 June 2026 that operators complete all their formalities online through a platform interconnected with the commercial banks, the central bank, the customs service, the Port autonome de Conakry and the shipping lines (forum). The results he claimed for it - simpler procedures, lower costs and delays, better quality of service and better secured state revenue - carry no published figure (forum). No date of entry into service, transaction volume or clearance time is held, so the base can say what the platform does and not when it began doing it or how far it has moved.	NO CHANGE a first account of the platform with nothing earlier behind it
Sectoral management information systems	Land		NO EVIDENCE
Other GovTech and e-Gov	e-government services	An e-procurement platform now digitises the full procurement cycle, with a decree of August 2026 fixing the rules for taking paper out of the process. The decree of 21 August 2026, made under article 56 of the 2019 procurement code, provides for a national electronic platform for public contracts and public-private partnerships managed by the finance ministry, mandatory registration of contracting authorities and bidders, and encrypted bid submission; it does not state whether the national platform is this one or a successor (decree, platform). A joint government mission went to Kigali in August 2026 for talks covering the platform's evolution (mission). An industrial-permits platform issues licences in 72 hours as successor to an earlier system (permits). 2026-09-03 - a second citizen-facing platform launched: a national platform for youth information, orientation, training, support and job placement, live on the web and on one mobile app store with the other to follow. No user count, vacancy volume, placement figure or funding arrangement is published. 2026-09-04 - the procurement platform was presented abroad as evidence: the anti-corruption agency took it and the mining cadastre to the United Nations convention review group at Vienna as evidence of transparency reform.	ADVANCED

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	ICT infrastructure for local government	Computer and solar kits were awarded for 21 local authorities and seven rural communes on 1 October 2025. ANAFIC awarded two lots under AFD C2D financing on 1 October 2025: computer kits for 21 local authorities – the 14 Conakry communes plus the Gouvernorat and seven communes of the interior – at GNF 836,500,000, and solar kits for seven new rural communes of the interior at GNF 781,060,000, both procured explicitly to run the commune accounting and financial management software. It is hardware and off-grid power rather than connectivity: no rural broadband programme, white-zones plan or rural digital-services document is held.	ADVANCED
Digitalisation of sub-national government	Digitalisation of local government records		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	Digitalisation of rural health clinics	Community health workers are equipped with tablets and portable diagnostics under a project running to December 2026. Rural community health centres are understaffed, run on paper and lack the diagnostic tools to detect and manage chronic conditions, with hypertension and diabetes rising and largely undiagnosed (project). A project running from November 2025 to December 2026 pairs trained community health workers carrying tablets and portable diagnostic devices with the centres, screening and following up patients who would otherwise travel to a town (project). It is foundation-funded and the account is the funder's; no facility count, patient number, ministry relationship or connection to the national health information system is stated.	ADVANCED
Rural digital data capture	Digitalisation of rural primary schools	A school connectivity plan targets 2,200 primary schools by the end of 2026, with 585 connected by January. The plan was launched on 5 November 2025 (plan) and 585 schools were connected by January 2026 (progress). No later figure is published, so a programme with a hard end-of-year target is last measured at about a quarter of it with eleven months gone.	ADVANCED
Rural digital data capture	Digitalisation of rural registry offices		NO EVIDENCE
Rural digital data capture	Digitalisation of rural police stations	Stations outside the capital send their material on paper to the single forensic department in Conakry. The forensic department in Conakry is the only one in the country with experts trained to collect, enrol, analyse and catalogue latent prints, and stations elsewhere submit material to it rather than enrolling it themselves (case study). No count of stations, connectivity provision or enrolment equipment outside the capital is held, and no programme to extend identification capacity to the regions is on the record.	NO CHANGE

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Use of AI in government administration		NO EVIDENCE
AI	Use of AI in sectoral management information systems		NO EVIDENCE
AI	Development of national / regional AI systems	A national programme entered its second phase with a Conakry manifesto signed in April 2026, and cooperation areas were identified with Rwanda. The first phase closed and the second launched with the manifesto's signature; the only account on file is from a wire outlet and no primary document, workplan or budget is held (programme). Artificial intelligence, electronic health, electronic commerce and electronic invoicing were identified for exploration with Rwanda at a Conakry meeting in July 2026, widening a cooperation previously limited to public-finance digitisation; nothing is signed (cooperation).	ADVANCED
AI	Control of AI abuse		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
ICT Industry	National capacity in DT-related production	A Guinea-founded cross-border payments firm operates in 36 countries, and is the only domestic technology firm the base names. It appointed a chief operating officer in April 2026 (appointment). No sector output figure, employment count, firm register or startup instrument exists anywhere in the base, so one company's country count is the entire measure of national capacity in production.	NO CHANGE
Innovation ecosystem	Technology hubs	Three Guinean organisations appear in the pan-African hub directory: an innovation centre, a digital-education hub and an incubator. The directory carries an innovation centre supporting projects in ICT, renewable energy and agribusiness, a hub working on mass digital education, and a non-profit incubator taking IT, renewable-energy and environmental startups and small firms through their early stages (directory). The count is a membership list rather than a census, so it records who has joined a continental network and not how many hubs operate in the country. No public hub programme, incubation funding line or count of firms supported is held.	NO CHANGE a first count with no earlier figure behind it
Innovation ecosystem	Tech startup ecosystem	The startup law was still a draft under relecture in April 2025, and no act has been published. The commerce ministry's secretary general chaired a relecture session on the draft startup law on 29 April 2025, with the higher education and telecommunications ministries, stating its objects as an adapted legal and fiscal environment, better access to finance and public-private partnerships, and stronger competitiveness for young innovative firms. No promulgated act, law number or Journal Officiel publication is held. A Guinean startup alliance was founded in October 2025, the SabouTech incubator is running, and a national innovation strategy was put out to tender in August 2026. No innovation fund instrument is held. The country ranked 133rd of 139 economies in the 2025 Global Innovation Index and 27th of 32 in sub-Saharan Africa, having stood 128th in the 2023 edition; the 2024 edition carries no ranking for it (index).	STALLED the startup law has been in draft since April 2025 with no act promulgated

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	Digital literacy (civil service)		NO EVIDENCE
Literacy	Digital literacy (general population)	A fourth FabLab Solidaire opened at Coyah on 3 June 2026, the first outside Conakry. The Fondation Orange Guinee, with the Agence Francaise de Developpement, inaugurated a fourth FabLab Solidaire at the Ecole Regionale des Arts et Metiers of Coyah on 3 June 2026, the first of the four outside Conakry; the network since 2022 runs at the Orange Digital Center de Ratoma, the Ecole Nationale des Postes et Telecommunications at Kipe and the SankuLab de Bellevue, with stated targets of training more than 125 women in green trades and digital technologies and at least 30% of beneficiaries developing an income-generating activity. This is a programme count and not a measurement: no digital-literacy rate for the population is held at any date, and the four labs are a private foundation's, not the state's.	ADVANCED on programme count alone
Training and skills	DT-related training in secondary education		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	DT-related university facilities and qualifications	A distance-learning institute was erected into a digital university by decree in July 2026, and a software-engineering campus opened the same month. The decree makes it a public scientific establishment with legal personality and an 11-member governing board, its mandate covering online higher education, continuing education and digital-pedagogy support, with implementation assigned to three ministers; no programme, budget or launch date for the online offerings is published (decree). A private software-engineering campus launched at Conakry on 16 July 2026 (campus).	ADVANCED
Training and skills	Graduates entering DT ecosystem	More than 10,000 people were reported trained in digital skills in the ministry's 2025 sector review. The figure is ministry-reported with no cohort breakdown, course list, completion rate or destination data behind it (sector review). No literacy measurement, employment outcome or baseline exists against which to read it, and the base holds no digital literacy programme or measurement of any kind.	ADVANCED on the ministry's own figure
Research institutions	Think tanks and academic departments contributing to DT policy	A West African mathematics institute is teaching a pilot cohort of 45 students inside the national university. The Institut Ouest-Africain de Mathematiques has been structured inside the Universite Gamal Abdel Nasser de Conakry, with two associate lecturers recruited from Benin and Senegal and a pilot cohort of 45 Guinean and foreign students already teaching ahead of the official opening. No research output, funding line or programme budget is held for it, and nothing states what it contributes to digital or data policy.	ADVANCED

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Citizen feedback portals	A civil-service housing registration platform opened in August 2026, its communique warning that payments made outside it engage no government responsibility. The ministry directed officials to use the official platform alone to complete an interest survey and to read the eligibility conditions, warning that no registration, fee or intervention made outside the announced arrangement engages the government's responsibility (communique). The warning is the notable part: it names the fraud the platform is meant to displace. A national vehicle-attestation platform was contracted to two foreign suppliers in August 2025 with no service date published (vehicle platform).	ADVANCED
Access to services	Citizen participation in policy		NO EVIDENCE
Access to services	Gender equity		NO EVIDENCE
Access to services	Inclusion of persons with disabilities		NO EVIDENCE
Access to services	Inclusion of refugees and IDPs		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital divides	Bridging of digital divides	Guinea is one of five states whose second submarine cable bids were evaluated at Abuja in July 2026. The evaluation committee meeting of 29 June to 10 July 2026 covers five member states under the regional digital programme, Guinea among them, and assesses bids for capacity on a second West African submarine cable. Domestically, the financing that reaches administrations outside the capital is the US\$81m local governance credit whose component split was confirmed in June 2025.	ADVANCED

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	National strategy for development of statistics		NO EVIDENCE
National statistics	Censuses and surveys	The fourth population census produced a population of 17,521,167, carried into the electoral file. The figure reaches the base through the electoral file's own account rather than through a statistical publication (census figure). No census report, survey programme or dissemination platform is held, so the country's population is established by the register that consumed it.	ADVANCED
National statistics	Statistics from administrative data	A public finance statistics committee was relaunched in August 2026 and still faces inconsistent data across the Treasury and the central bank. Created in 2023, it is sitting again and producing a regular statement of state financial operations against the 2014 international manual (relaunch). The account of the remaining inconsistency is the finance ministry's own, which makes it the base's only admission that two arms of the state hold different numbers for the same transactions.	ADVANCED
Open data	Use of open data	Loi L/2020/0027/AN requires proactive publication of sixteen categories of public information and makes re-use free by default; no portal implements it. The access-to-information law's Article 10 imposes proactive publication, refreshed at least quarterly, of sixteen categories including statistical, economic and social information, budget and public-finance data at central, regional and local level, national accounts, public debt and procurement projects, and Article 11 requires the site to carry the legal framework, request forms and appeal routes. Chapitre 3, Articles 27 to 32, governs re-use: public information may be re-used for other purposes, restrictions only on proportionate general-interest grounds, and re-use free of charge by default with cost-recovery fees only for commercial re-use. The statute is held and no national open-data portal implementing it is. Nothing states how many requests are received, how many are granted, or whether any refusal has been appealed.	NO CHANGE a standing statute the base holds for the first time
Use of satellite data	Agricultural use of satellite data	A connected-farmers cohort launched in August 2026 pairs field sensors and weather alerts with a state rural bank's 1,000-plus service points. The first cohort runs as a private partnership with a state-owned bank rather than as a public programme, and no cohort size, cost or coverage is stated (cohort). No earth-observation or satellite data programme exists anywhere in the base, so agronomic advice delivered through a bank's branch network is the whole of the record.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	Meteorological use of satellite data	A CREWS project rebuilt the meteorological service and put 28 stations on the WMO Information System. A US\$250,000 CREWS Accelerated Support Window project closed in October 2025, rebuilding the national meteorological service after the 18 December 2023 Conakry fuel-depot explosion destroyed much of its infrastructure: a website carrying WIS2box and a CAP composer, 113 warning bulletins published in CAP format for rain, storms and lightning, 28 stations revised and connected to the WMO database and Information System, and temporary premises and reliable internet for the agency. Guinea is the first African country onboarded by Google Public Alert. GBON compliance is stated as still to follow under a successor project, and no satellite data source is named for any other sector.	ADVANCED

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	USA / hyperscaler MoUs, engagements and commitments	United States providers of streaming, cloud, software and advertising services were brought into charge by the May 2026 decree. The decree requires a local representative to be appointed within 90 days and applies to streaming, cloud, software-as-a-service, advertising and electronic commerce (decree). It is the only instrument in the base that touches American technology companies, and it taxes them rather than partnering with them; no memorandum, investment or engagement with any of them is held.	ADVANCED
China activities	Chinese MoUs, engagements and commitments	Huawei raised the backbone's first loop from 200 to 400 Gb/s on 20 May 2026 and is in talks toward a comprehensive memorandum. The backbone operator SOGEB announced on 20 May 2026 that the first loop of the national fibre backbone had gone from 200 Gb/s to 400 Gb/s with Huawei's technical support, the second upgrade in eighteen months after December 2024's step from 50 Gb/s, with 600 Gb/s across the whole infrastructure targeted by year end. Huawei designed and built the roughly 4,300 to 4,500 km backbone and remains its technical partner on capacity. Talks in China on 3 July 2026 between the communication and digital economy minister and a Huawei vice-president covered network expansion, a national data centre, a sovereign cloud, rural connectivity, AI solutions, digital public services, intelligent monitoring, digital skills and technology centres, and are stated to be heading for a comprehensive memorandum and a framework agreement on priority projects. No memorandum or framework agreement is signed, and no contract value for any of it is held.	ADVANCED
EU activities	EU MoUs, engagements and commitments	A European co-financed cable reached a construction and maintenance agreement in May 2026 for a Mediterranean-anchored system. The agreement is the only European engagement the base holds (agreement). No programme, financing envelope or cooperation instrument accompanies it, so European involvement in the country's digital build reaches the record as one cable and nothing else.	ADVANCED
Gulf/UAE activities	Gulf MoUs, engagements and commitments		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
India activities	India MoUs, engagements and commitments	India's one Guinea-specific digital instrument is the e-VBAB memorandum with TCIL, signed in Conakry on 2 August 2019. Of three memoranda signed in Conakry on 2 August 2019 during the Indian president's state visit, one is between Guinea's higher education ministry and Telecommunications Consultants India Limited for participation in the e-VBAB Network Project, the technology upgrade of India's Pan-African e-Network tele-education and telemedicine satellite platform. It is the only Guinea-specific Indian digital instrument on the record, and nothing reports its operation, its outcome or any successor.	NO CHANGE nothing on the record since 2019

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Starlink market authorisation	An ARPT licensing decision, a published authorisation register, or a ministerial statement on Starlink market entry.	2026-09-04
Official explanation of the social-media restriction	Any published legal basis, ARPT decision or ministerial statement acknowledging the restriction on Facebook, YouTube and TikTok.	2026-09-04
Gulf-state digital investment in Guinea	Any Gulf-state investment, financing or memorandum covering Guinean digital infrastructure.	2026-09-04
Domestic budget appropriation for digital transformation	The Loi de finances or its annexes showing appropriation lines for MCENI, ANDE, ANSSI or the Digital Sovereignty Fund.	2026-09-04

ABOUT THIS DOCUMENT
